OXFORDSHIRE DOWNS.

FROM THE FLOCK OF HIS GRACE THE DUKE OF MARLBOROUGH.

The Blenheim flock of Oxfordshire Down Sheep was established by the late Duke of Marlborough, upwards of thirty years since, and has been improved by the present Duke, with the assistance of his able bailiffs, who have from time to time judiciously selected the best rams, regardless of cost, from famous flocks of that breed, such as those of Mr. Gillett of Cote; Mr. Bryan, Southleigh; Mr. Wallis, Old Trafford; Mr. Druce, Eynsham; Mr. Roberts, Caswell; and Mr. Treadwell, Winchendon.

The sheep possess eminently all those qualities which good breeders so much admire and strive to obtain. The Blenheim sheep possess such recommendations as hardi-

hood, symmetry, and aptitude to fatten, with close and heavy fleeces; while they produce mutton which essentially constitutes them butchers' sheep.

The Wethers in our Engraving took the first prize in their class at the last Smithfield Club Show; while at the Show of the Club in 1872 a pen from the Blenheim flock took the Champion Plate as the best pen of sheep in the show. They have also been very successful about the country. We hear, however, that the Home Farm has been let, and that the stock will be dispersed in the autumn.

TENANT-RIGHT IN THE HOUSE.

In the Commons the other evening, on the resumption of the sitting, an attempt was made to count the House, but "fortunately forty members were found to be present." Everybody of course knows what this means: some honourable gentleman has given notice that he shall speak and move on a subject, in itself, so dull, dreary and unprofitable that it is to be hoped no one will care to listen much less to reply. In a word the count-out implies the most contemptuous indifference to a matter not worth talking about—and that is a big word, too, in the Commons' House of Parliament. But as the question was not the monks and the monasteries, nor the Claimant and his trial, fortunately forty people were found to be present, and the debate proceeded, as this turned on so trivial a theme as English Tenant-Right. Mr. Seely, who opened the business, proposed that, "with a view to improved cultivation, the Government should introduce a measure for giving increased security for capital to be invested in the soil by agricultural tenants." And having thus as it were defined the principle, Mr. Seely proceeded to damage so far as he possibly could the only means by which this can be really extended and effectually carried out. His speech was mainly an attack on Messrs. Howard and Read's Bill of last Session: "it contained provisions which were highly objectionable, and amongst them was that which prohibited freedom of contract between landlord and tenant. It was clearly the landlord's interest to give compensation," and so forth. And what warranty had Mr. Seely for all he said and thought in this way? Manifestly the most direct answer was to be gathered from the audience he was addressing. From a composite body of many hundreds of men, where the land-owners, whenever they so choose, are sufficiently numerous to rank as a majority, how many were so far alive to their own "interest" as even to be present? There were in all barely forty people before him, and had Mr. Seely pressed his motion to a division it would have been seen that the lauded proprietors and county members were as contemptuously indifferent to their own "interests" as to the nuns' wrongs or Sir Roger's rights. On the face of it, by the manner in which they met, or rather avoided the question, it is "clear" that the landlords will not of their own will take up the principle of Tenant-Right. Indeed, if they will do so, where can be the necessity for Mr. Seely's prayer for speedy legislation? Or, as Mr. Barclay put it with much force and some sarcasm: "If the landlords were all as enlightened, just, fair, and honourable, and the tenants as intelligent, shrewd, and independent as the honorable member had pictured them to be, there was no occasion for the interference of Parliament in the matter. It was, however, a fact that in a small part of England only was there any settled arrangement existing between landlords and tenants as to compensation for permanent, durable, or even temporary improvements effected on the farms. The conviction of men practically acquainted with the subject, including the honorable member for South Norfolk, was that if an Act of Parliament dealing with it did not in some way interfere with freedom of contract, it would be worthless." And Mr. Barclay went on to say "the bill of the honorable member for South Norfolk and Mr. Howard was a fair attempt to deal with the question;" while Mr. Pell, on the contrary, "did not agree with the bill which the honorable member for South Norfolk had introduced;" and Mr. Disraeli said that "in the next session of Parliament the consideration of the House may be called to the

matter in a manner that may not realise the views which some honourable gentlemen have expressed to-night, but which may promise the practical solution of a question of great national importance."

Now what does this mean? A measure *may* be introduced in which the compulsory clause *will not be embodied*; as this is as clear as if the Premier had said so much in so many words. On the other hand we have heard Mr. Sewell Read declare that he "would not walk across a room to support a bill from which the compulsory clause was struck out?" As we have already shown, Mr. Read was actually attacked through his measure by such agricultural authorities as Mr. Seely and Mr. Pell, but he sat by and made no sign, although, as we had understood, Tenant-Right was a question on which he was "unfettered." At the dinner of the Royal Agricultural Benevolent Institution last week Mr. Read said, "having accepted a responsible post, he was bound as a good soldier to know and carry out the requirements of discipline and duty. Certain duties which devolved upon him in his present position were extremely pleasant. He liked his work, he was well contented with his 'wages.'" This is all very well so far as it goes, but if the "wages"—the word is Mr. Read's and not ours—compel him to keep silence while men like Mr. Seely, Mr. Chaplin and Mr. Pell are speaking on subjects of the first importance to farmers, we should be inclined to think there must be certain conditions attached to the "present position" which were "extremely unpleasant." In truth, from the able and zealous advocate of a cause Mr. Read would look to have ripened already into the mere official, as we fail to see how he can claim to be unfettered if he cannot deliver himself on subjects over which his brother agriculturists come to turn to him for advice and assistance.

It does not appear that Mr. Seely was acting in concert with any man, or any body of men; and from the injury he contrived to do to a good cause, we can only the more regret that Mr. James Howard was no longer in his place in the House to answer for his own bill. It is very manifest that Mr. Seely is not qualified to fill the vacant post, even if the Government, with Mr. Sewell Read amongst them, should accede to his request, and "introduce a measure."

On the resumption of business at nine o'clock, in the House of Commons, on Friday evening, June 19th, an unsuccessful attempt having been made to count out the House,

On the motion for going into committee of supply,

Mr. SEELY proceeded to move—"That, in the opinion of this House, her Majesty's Government should, with a view to improved cultivation of the land, introduce, with as little delay as possible, a measure for giving increased security for capital to be invested in the soil by agricultural tenants." Having reviewed the unsuccessful attempts which had been made in 1847 and subsequently by Mr. Pusey to legislate in the direction of providing that compensation should be granted to tenant-farmers for unexhausted improvements, the hon. gentleman observed that little or nothing had been done in regard to the matter since 1850 until three or four years ago, when the formation of Chambers of Agriculture led to the subject being taken up so strongly that it had now occupied a more prominent place than even the question of local taxation or the repeal of the Malt-tax. The present state of the law was that where there was no custom such as existed in Lincolnshire giving tenant-farmers compensation, and that custom existed only in a very small degree throughout England, and when there was no agreement with the landlord when the tenant-farmer quitted his holding, he left all that he had put into the soil behind him. For instance, he might have spent £3,000

or £4,000 in chalking his land, and have derived no benefit from it himself, as its good effects would not be felt for the first twelve months; but as the law now stood, if he quitted his farm the incoming tenant would reap the benefit of his expenditure. There were special cases in which the tenant-farmer was put to even greater inconvenience and loss. He might enter into an agreement, giving him compensation, with his landlord, who was the life owner of the estate, but if the life owner died the tenant could not claim compensation from his successor. Again, if a landowner having the fee simple entered into an agreement with his tenant to give him compensation, and subsequently sold the estate, unless that agreement was endorsed on the title deeds the tenant could not claim one farthing from the purchaser. As two-thirds of the land of England was under settlement in this way it might easily be imagined how great a number of cases of hardship might arise. The results of this state of the law were that the farmer was deterred from spending money in fertilising the soil, and he complained that annually he had less profit, and that when he quitted a large portion of his capital was taken away from him; the labourers justly complained that the state of the law prevented them from obtaining that demand for labour which they otherwise would have, and the public complained that in consequence of capital not being employed freely in the cultivation of the soil food was less in quantity and higher in price, and that consequently the local rates were on the increase. The law might be changed to the benefit of the farmer, the labourer, and the public without injury to the landowner, for the latter must be benefited by any law which increased the fertility of the soil, and therefore the value of his property. Lincolnshire presented a notable example of the effect of Tenant-Right in increasing the wages of the labourer; for, for many years past, the average rate of the wages of the Lincolnshire labourer had been 2s. or 3s. per week higher than those of the labourer in the southern counties, where there was no Tenant-Right. The hon. member urged in favour of the view he took the report of the Select Committee on Mr. Pusey's Bill of 1847, which stated that the system of Tenant-Right seemed to be highly beneficial, and to tend to a great increase in the productiveness of the soil, and extended employment for the rural population. In the debate upon Mr. Pusey's Bill the late Sir Robert Peel said that to the principle of promoting the application of capital to land in order to secure better improvements, and of providing just compensation to tenants there could be no objection whatever. He (Mr. Seely) questioned whether there would be any opposition to the principle of giving compensation to tenant-farmers in the absence of any agreement to the contrary, and the real point was how far that principle should be extended. Upon that there might be a great difference of opinion. The custom of granting compensation varied in different countries. But in the greater part of England there was no custom or usage whatever on the subject. It might be said that leases for 19 or 20 years would be all that was necessary, but there was this objection—that in the later years of the lease the farmer, not expecting a renewal of it, would scourge the land. It was, therefore, in the interest of the tenant, and especially of the public that compensation should be given in order that the land might be continued to be cultivated during the last year of the tenancy. Last year an attempt was made to settle the question by the hon. members for Bedford and South Norfolk, and many of the provisions of their bill were excellent, so far as they gave compensation to farmers, but he objected to that part which prevented freedom of contract. In any future legislation on the subject he hoped nothing would be done to interfere with that. Another point—a rather serious point—in the bill of the member for South Norfolk occurred under clauses 26 and 27.

Sir G. BOWYER asked whether the hon. member was in order in arguing on a bill that was not before the House.

The SPEAKER ruled that the hon. member was in order in discussing matters that were relevant to the question he was bringing before the house. Mr. SEELY said he not only wished to have a law passed which should alter the present law in favour of the tenants, but likewise wished to do justice to all parties, and not to have a law which would injure any other class. With that view he was calling the attention of the house to what he considered to be the defects of the bill that was before the house last year. Another of these defects, as he conceived, occurred under clauses 26 and 27, by which

great injustice might be done to the parties who would come after the tenant for life. He was no particular advocate for the law as it stood, but if the law of entail was to be abrogated, and the law of settlement was not to be any longer in practical force, let it be done away with fairly, manfully, and openly, and not by a side wind. There was a farther objection he took to the bill of last year. He objected to the Government finding money for farming purposes. The plea urged in favour of that course was that it tended to improve the cultivation of the land and increase the production of food; but, if that rule were to be acted upon, where were we to stop? He objected to that proposal because, among other reasons, it gave to farmers a preference over other classes of the community. The only other defect in the bill of last year to which he would allude was an omission. He referred to the case of the labourer, whose rights ought to be cared for as well as those of the tenant. The bill as drawn would not have given to the labourer compensation for his garden produce in the event of his quitting. All these were defects which he hoped would not reappear in any future measure. The Government was the proper party to bring forward such a measure, and the experience of last year must have convinced everybody of the difficulties which private members must encounter in attempting to deal with the subject. Mr. M'LAGAN seconded the motion. He would suggest that the notice to quit should be extended to at least two years, because a farm tenant was not like an ordinary householder, and might require time to find another farm. He objected decidedly to any interference with the freedom of contract between the landlord and tenant.

Mr. BARCLAY failed to see from the speeches of the two hon. gentlemen that there was any occasion for the interference of parliament in this matter. At the present time there was nothing to prevent a farmer making contract about permanent improvements, but nevertheless it was a fact that only in a very small portion of England did arrangements exist between landlord and tenant with respect to permanent or temporary improvements. The greater part of the hon. mover's speech was a criticism of the bill of the hon. member for South Norfolk, which was introduced last session, and he thought there was considerable inconvenience in discussing now the details of a measure which was not immediately before them. The principle of that bill was that tenant-farmers should be compensated at the termination of their holdings for permanent improvements, and that principle was just and equitable in the interest of landlords and tenants. The hon. member for Lincoln had deprecated any interference with freedom of contract, as if that freedom had not been over and over again interfered with by parliament. He need only refer to the Truck Act and the Shipping Acts to show that the legislature had again and again interfered with bargains as regarded labour. The hon. gentleman had spoken of this question as principally affecting the tenants on a farm, but it was in reality a question which affected very largely and materially the general public interests of the nation. The farmer had not benefited by the free-trade policy which had been so advantageous to the landlord and the public; and the increase in the prices of produce had not been at all commensurate with the increased cost of production. This state of matters could not continue, and either there must be a reduction in grants of farms or an increased production from the soil. The former remedy was undesirable, because it would be only an alleviation and not a cure, and to effect the latter the tenant must be given some security with regard to compensation for his improvements. Such a course would stimulate the investment of capital in the soil and would be productive of highly advantageous results not only to the farmer but also to the landlord and the public generally. The tenant-farmers of England looked to her Majesty's Government for a measure dealing with the question. He supported the resolution of the hon. member for Lincoln, though he could not agree with his speech.

Mr. PELL said the hon. member for Lincoln had given very little assistance upon the question of the improvement of land, and had directed his whole efforts against the bill of last year. He ventured to assert that there was no European country which approached us in what we got out of land. With regard to the bill of last year, he objected to the 12th clause because it restricted contracts and could not be carried into effect. Where the landlord and tenant were unable to contract freely all legal impediments should be removed, but that was a lawyer's question rather than one for the Legislature. He should be sorry if any Ministry attempted by any central operation to

oster or nurse the cultivation of the land. In the north they had a cry for the abolition of the law of primogeniture and of entail, and the consequent splitting up of estates into fractions, but they did not want that. This was a subject which should be dealt with by the Government at a proper time, and not towards the end of the session.

Mr. C. GARNIER said that, as the law stood, the tenant unless protected by express stipulation or the custom of the country, could not claim compensation for unexhausted improvements to which it was clear he had a moral right. He thought it was desirable that the Government should deal with the question next year on the basis of the measure of last session, but without the 12th clause relating to freedom of contract.

Mr. DOWNING said he had come down to make a house for the member for South Lincoln, but was greatly disappointed, as the hon. gentleman's speech, so far from being in favour of his resolution, went directly against it. He had expected, too, to hear that the English farmer was oppressed, but the English farmer had been represented as a well-to-do gentleman, who had a seat in the House, who rode his horse with the hounds, and had nothing to complain of with respect to his landlord. We did not deal with the subject in Ireland as they had dealt with it in Ireland, because here we had manufactures, mineral districts, and other occupations to which the populations when turned out could turn themselves.

Mr. DISRAELI said that he had come down to help to secure a House for those members who had motions to make, and also to hear the speech of the member for Lincoln, but he did not share the disappointment of the member who had just sat down with respect to that speech, which he thought was an extremely sensible one. There were provisions in the bill of last year, so ably criticised by the member for Lincoln, of which he confessed that he did not himself approve, but the subject was not one of such simplicity as some hon. gentlemen appeared to suppose. It had been before the House more or less now for a great number of years—during the

long period in which he had sat in that House. When he recollected it being first discussed there we were told by those who complained of the position of the farmer with respect to compensation for unexhausted improvements that there was only one cure for the existing evils, and that was that there should be a lease, and not only a lease, but a long lease, and Scotland was held up as a model in that respect; but the member for Forfarshire, speaking for the tenant-farmers in Scotland, had warned the House that the Scotch system was of all others the one most to be avoided. The contrary opinions which had just been expressed by hon. members showed the difficulty of the question, and he must disclaim on the part of the Government any intention of dealing precipitately with a subject of the kind. The subject, however, was one which deserved the consideration of the Government, and if they remained upon those benches, as he hoped it might not be presumptuous to expect, a sufficient time to give them an opportunity of fulfilling their engagements, they should give it the consideration it deserved. He objected to the motion of the hon. member for Lincoln from his dislike to abstract resolutions, but he recognised the general concurrence of opinion in favour of tenants receiving *bona fide* compensation for unexhausted improvements, and he hoped that a measure might be introduced next session which, if it did not realise all the views expressed by hon. members that evening, would at any rate offer a basis for a practical solution of the problem.

Mr. FAWCETT said it seemed to him, considering the difference of opinion expressed even by the supporters of the motion, that they could scarcely expect anything more than what had been said by the Prime Minister. He thought that public opinion had not advanced sufficiently to enable them to deal with the question at the present moment.

Mr. CHAPLIN trusted the hon. gentlemen would not press his motion to a division.

The resolution was then withdrawn.

THE SURREY PRIZE LEASE.

The following are the principal terms in the lease adjudged to be the winner of the prize of £10 as best suited for the county of Surrey. The author is Mr. J. L. Hewett, of Puttenham, Guildford, a partner in the firm of Hewett and Lee. The judges were two land-owners, two land-valuers, and two tenant-farmers.

Usual description of land and premises.

USUAL RESERVATION, WHERE RIGHT OF SHOOTING IS RESERVED.—That the lessor reserves to himself the right of sporting over the aforesaid lands; but the tenant may enjoy the joint right equally with him of killing or destroying the ground game from the 1st October till the 1st April.

And, moreover, shall and will, every year during this demise, fodder his their and horses in the stables, yards, and gate-rooms belonging to the said demised premises, and house and stack on the same, and use and consume on the same so rented as aforesaid all the hay, straw, haulm, clover, and fodder arising from the same, save and except that the lessee shall at any time during the continuance of this term, except the last two years, have power to sell any quantity of hay or straw, bringing back an equivalent manurial value in dung, artificial, or other good manure; the manure or compost arising from the last crop but one to be left in the yards or gate-rooms of the said demised premises, cast into proper heaps, and to be paid for as hereinafter mentioned; and also that all the hay, straw, and haulm grown in the last year of this tenancy should belong to the tenant, unless the landlord should elect to take the same or any part thereof at market price before the expiration of the aforesaid term.

And that the lessor should, at all times, cultivate the said farm and lands in a good and husbandlike manner according to the custom of the country and rules of good

husbandry, and will, particularly during two of the last four years of this demise, and as near as the nature of the soil and size of the fields will permit, cultivate the said farm and lands on the four-course system.

Not to underlet without consent.

AGREEMENT TO KEEP IN REPAIR, BEING FOUND MATERIALS.—Tenant being allowed to remove any erections he has himself made at his own expense, if not taken to by landlord, making good all dilapidations.

And the lessee shall and will find and bestow upon the said demised premises or on some part thereof for the improvement of the same all the compost soil, muck, and dung arising from the crops of the year next preceding the year of the expiration of the term, being paid as hereinafter mentioned.

And likewise will at the expiration of the term before granted leave one-fourth of such arable land in summer fallow for roots, as hereinafter mentioned, and one-fourth part in barley or oats, not less than half of which must be sown with clover or other proper grass seeds, one-fourth clover ley or peas, or bean rush, properly hoed and clean, and fit for a wheat season, and one-fourth wheat.

LANDLORD'S COVENANTS.—Allow Land-Tax and Property-Tax. Landlord to find materials for repairs. That the lessor shall and will allow unto the lessee such tiles for draining as shall be found necessary, the lessee doing the labour of draining the land, in a proper and workmanlike manner, at his own expense, subject to the supervision of the lessor, but in case of the draining being done by the landlord, the tenant to pay 5 per cent. on such outlay.

That the lessor shall and will allow unto the lessee for the seeds and sowing, fallows, dung, compost, and manure, and it is hereby understood and agreed that in

order to maintain and continue the improvement of the land the lessor will pay and allow for the fallows according to their sufficiency and cleanliness, and not by the labour professed to be done for the dung, compost, and manure, whether made from corn, oilcake, or not, at its market value; also for all corn or oilcake fed on the land the two last years of the tenancy, the manurial value of such oilcake not to exceed 25 per cent. the last year, or 10 per cent. the last year but one, on the market value of the oilcake; for bones, if used the last two years; lime, chalk, and marl the last five years. Draining done at the expense of the tenant within the last ten years of such tenancy—all the same to be valued by two competent valuers, chosen in the usual way, at what they consider the unexhausted value of the same, taking into consideration the nature of the soil, and whether properly applied or not, the loss of proof of any or all the aforesaid items to be on the tenant, and to be clear and undoubted before they are allowed for.

Provided always, and this covenant is with this express condition, that the tenant should be held strictly liable for all neglects or defects of cultivation, dilapidations, want of cleanliness, breaches of covenants, on all or any part of the farm, the same to be deducted from his valuation, as the valuers in their judgment may direct, the aforesaid valuers being competent, indifferent persons—one chosen by the lessor and the other by the lessee; and if failing to agree, to be settled by their umpire, chosen in the usual way, whose judgment shall be binding and conclusive.

Have use of portion of the premises at expiration of the term for thrashing and clearing off his grain.

Covenant for quiet possession.

Re-entry in case of bankruptcy, &c.

Determination of lease at end of years by giving two years' previous notice.

THE INTERNATIONAL AGRICULTURAL EXHIBITION AT BREMEN.

[FROM OUR SPECIAL CORRESPONDENT.]

When the International Exhibition at Bremen was first started, the provisional committee issued a circular, stating that the International Exhibition at Vienna was a universal one, but that held at Bremen would be confined to the following divisions, viz.:

I. Breeding animals: 1, Horses; 2, Cattle; 3, Sheep; 4, Pigs; 5, Goats and Rabbits.

II. Cattle for fattening—fatted cattle.

III. Poultry and Singing Birds.

IV. Fishery.

V. Rearing of Bees and Culture of the Silkworm.

VI. Management of Forests and the Chase.

VII. Agricultural Products and technical manufacture.

VIII. Cultivation of Gardens, Fruit Trees, and Vines.

IX. Agricultural Machines and Implements.

X. Results of scientific studies in the above departments.

The objects of the proposed exhibition were no sooner made known than the citizens of the Hanseatic town of Bremen and the landowners and farmers of the neighbourhood very quickly subscribed no less sum than £15,000 as a guarantee fund, and every encouragement was given to the project by the Emperor and Empress of Germany, the King of Saxony, Prince Albrecht of Prussia, Prince Frederic Charles of Prussia, the Grand Duke of Oldenburg, and the Grand Duke of Mecklenburgh Schwerin, and each offered a special prize of considerable value.

Bremen is a free city on the Weser, with a population of about 75,000. It is divided by the river into old and new towns. The fortifications have been destroyed, and the ground on which they stood has been converted into public gardens, with running water and sheltered roads and walks. The well-grown trees standing in the grounds are now in beautiful foliage, and must go a long way in giving a favourable impression of the place to foreign visitors. The hotels are large, well fitted, and seem to be well-conducted, and a really good dinner may be had at the table-d'hôte, at the best houses, for from three to four shillings, including dessert; but the dinner-hour is as early as two o'clock. We may further speak of the admirable arrangements made for providing visitors with apartments, and such as might be adopted with advantage to the public at the towns where the Royal Agricultural Society holds its meetings. We are aware there are generally lodging

committees, but they do not, as a rule, seem able to keep the price of lodgings within reasonable limit. We will give our own experience of lodgings at Bremen, and leave our readers to form their own opinion as to whether we ought not to be satisfied. More than a month before the exhibition we wrote to the proprietor of Hillman's Hotel, who answered that the rooms at that house had all been taken some weeks previously, as they had also been at the other hotels; whereupon we wrote to the lodgings committee, and by return of post received a card giving the address of a room that had been taken for us, and filled up, with the notice that for a bedroom and breakfast the charge was to be "five shillings a day." Now we naturally thought (having in our mind what we have paid in our own country) that the bedroom would be dirty and wretched, and the breakfast such as we should not care to have. It was known that we could not arrive at Bremen before 3 a.m., and imagine our surprise when even at that early hour we were kindly received by a ladylike person, who asked if she should prepare us breakfast; but being very tired after two days and two nights' travelling, we were glad to go to bed. Imagine how agreeably surprised we were to be shown into a room 21 feet by 15 feet, and at least 16 feet high, and furnished in a way that any nobleman attending our English meetings need not be dissatisfied with, and more particularly (if he had been of a musical turn of mind) as he could have had the use of what seemed to be a good piano-forte, which stood in the room. The room did not look into a noisy street, the two French windows opened on to a large balcony, on which were growing orange and lemon-trees, in pots, and beyond there was a square, charmingly planted with shrubs and flowering plants. We are more minute in our description than may seem necessary, but we want our home lodging-house keepers to know what the good people of Bremen did for their visitors. Ours was no solitary instance, for we heard of others equally well cared for, and it will be imagined that there were a good many private lodgings taken when we state that our card was numbered 3,163. We must do the lodging committee justice by saying that in all matters they had to do with they were most kind and obliging—a thing not always to be found in England with men in authority.

The exhibition was held in the Bürger, or Citizens, Park,

comprising about one hundred acres, and is within three-quarters of a mile of the town. The grounds are neatly laid out in roads, grass, water, and spaces are planted with forest-trees, shrubs, and flowering plants. The buildings for the machinery, horses, cattle, sheep, pigs, and horticultural, &c., specimens, are erected at different places about the grounds, and it is no easy matter getting round to them all, and particularly as several of the sheds are so hidden by the young plantations that it is necessary to get up one's geography of the place in order to save our legs by cutting off the corners. A siding has been laid from the railway, and the cattle, &c., are run quite up to the shedding. We could not but be struck by the difference in unloading cattle here and at Vienna last year, where everything seemed in confusion, and after the greatest possible noise and gesticulation the poor half-maddened animals were generally allowed to go out of the trucks with a rush, and in several instances getting free from the persons in charge. At Bremen everything was differently managed. A troop of infantry, in dress uniform, was told off for the work, and most admirably they performed their duties, all being done without noise or confusion. No sooner were the cattle-trucks run down to the shedding than twelve of the soldiers (six on each side) placed one end of an unloading ladder on the side of the truck, and the other end, securely fastened, on the ground. The door of the truck was then opened, and the officer in command gave the word, when in marched two or three men, as the case might be, and took hold of the animal that was pointed out to them. There seemed no thought or fear in the minds of the men as to what the animals might do; and it really seemed as if the quiet firmness on the part of the men impressed the cattle with the desirability of also taking things coolly, for there were but few instances of open rebellion; and in these cases the equanimity of the soldiers' minds did not appear to be the least disturbed, and when the animals were safely placed in their stalls the men turned quietly away as though everything was a mere matter of every-day work with them. The crates containing sheep had to be conveyed some distance from the trucks, out of which they were no sooner lifted than they were hoisted on to the shoulders of six soldiers (three on each side), who marched with a military step to the spot where the sheep had to be placed, and then, with what sounded like a kind of *one, two, three!* the crates were carefully placed on the ground, without any apparent jolt or loss of the perpendicular. There can be no surprise at success attending the united efforts of an army composed of men so admirably trained.

The shedding for the cattle, sheep, and pigs, and the stables for the horses, are substantially erected, and in some respects the plans are good. The entire covered width of the cattle-sheds is about from thirty-nine to forty feet, and there is a walk of nine feet wide down the centre, so that visitors may pass down between the cattle, which are tied with their heads to the passage. The faults of these sheds are the centre walk being raised nearly level with the top of the feeding-troughs, so that the cattle are "looked down upon" by the visitors, and there being no rail in front of the head of the beast there is every chance of a wild animal attempting to jump over the trough. All the sheddings are well constructed and perfectly water-proof.

The sheds for the sheep have a covered width of 34 feet, with a seven-foot passage down the centre. There are two rows of pens on each side of the passage. The pens are close boarded, which prevents the sheep seeing each other and makes them restless, and it is also objectionable in hot weather.

The stabling for the horses is of an hexagonal form,

and is most admirably constructed. The loose boxes are spacious and boarded nine feet high, and to every four boxes there is an eight-foot passage with folding doors, and at the other end of the passage is a lock-up hay and corn place. The stalls struck us as being too narrow. They were only five feet in width, while the length was as much as ten feet. Within the ranges of stabling the trial-ground was prepared, having spacious and really good galleries all round, with six divisions raised higher than the rest, these elevated and more carefully-prepared places being intended for some of the grand people who are expected to visit the exhibition, for the committee and representatives of the press. Persons who had obtained admission to the general exhibition were admitted to the galleries free of extra charge.

The general exhibition was opened to the public on Saturday morning, the 13th instant, at six o'clock, at a charge of ten marks, equal to ten English shillings per head, and as the awards of the jurors were, with some exceptions, made on that day, not less, we think, than upwards of from three to four thousand persons availed themselves of the opportunity of seeing the public judging, which in all the departments was going on at the same time. The morning was an unfortunate one, inasmuch as it was very windy, with a drenching rain, which, however, happily cleared off about 11 a.m., and then became delightfully fine, and the more agreeable from the rain having settled the clouds of dust which had previously been flying about.

When we visited the show-ground on the Thursday previous, it seemed almost impossible that all could be ready by the morning of the 13th, when, however, everything appeared to be completed, and the numerous flags, decorations, with plants and flowers gave a varied and very charming effect to almost every part of the extensive grounds, which was very much assisted by several small and handsome erections for seats in many parts of the grounds.

The exhibition of horses was a grand one, and has rarely, we were told, been exceeded in Germany, as we doubt very much whether it could be in any country. The classes comprised English thoroughbred stallions and mares, half-bred horses for hunting, riding, and soldiers' purposes—there being classes for heavy and light cavalry—light and heavy carriage horses, and horses for agricultural and artillery work, hackneys, and ponies. The general character of the horses exhibited was remarkably good, and, taking them all round, we never saw a better lot. There was frame, bone, and style, and the action of some of the horses was really grand to look at. There was no attempt at equestrian "show-off" on the part of the persons in charge of the horses. All was done in a sober, business-like way, and the minds of the men appeared to be wholly concentrated upon doing all they could to develop the powers of the animals which they had in charge. The judges went about their work in a quiet, matter of every-day kind of way, and seemed to get through their heavy duties expeditiously, and we should think satisfactorily. There were pairs of horses shown in carriages as well as teams of four. The horses so exhibited were generally beautiful animals, and shown in fine condition, and did credit to their owners as well as to the grooms who had charge of them.

There were fewer weedy, worthless animals than might probably have been expected. The grooms were generally dressed in light blue tunics, white breeches, and Wellington boots, and wore the Prussian military-shaped cap. Several of the grooms wore soldiers' medals. We were struck by the way the military training helped them in what looked like being a serious affair. A thoroughbred stallion broke away and made a savage rush at another horse, and both went away into the grounds at a furious pace, and were quickly lost to sight

amongst the trees and shedding. The grooms at once threw out skirmishers, and in a very short time the horses were secured and taken back to their places, while the men did not appear at all excited by what had occurred.

We should like to have given the prize-winners in the horse classes, but they were not issued before we left the show-ground. There were no English judges for horses, so far as we could learn.

To follow the catalogue-numbers of the live-stock sections is rather a difficult matter as the entries are arranged, and more particularly is this so to those who, like ourselves, are not very well acquainted with the German language, and hence it is we are necessarily compelled to generalise our remarks more than we should otherwise do.

In many classes a bull and cow are entered together, and appear in the same class and under different numbers. There is a large entry of Holland and Oldenburg cattle, and many very good animals are exhibited. The bulls show a good deal of what we may call improved shape and quality, and the cows while retaining their milk-producing properties seem to be gaining greater flesh-bearing qualities. There is a large class of local cattle, and many really fine beasts are exhibited. It may be clearly seen where a Shorthorn bull has been at work by the increased frame and improved appearance of their produce.

There are classes for Hanoverian, Holstein and Hamburg, Schleswig, and Danish Holstein cattle, and many excellent bulls and cows are exhibited; while, of course, there are others with small pretensions for merit in a show-yard.

The sandy-and-white Swiss cattle are fairly represented, and amongst the entries there are some fine specimens of their breed. At Vienna last year the herdsmen generally appeared in their national costumes, which gave the exhibition more of an international character. At Bremen there is no particular peculiarity in the dress of persons in charge of cattle or sheep. The classes for English and foreign-bred pedigree Shorthorns is not very well filled, and but for the large entry of most excellent animals made by that spirited and energetic gentleman Mr. Edward Lübben, of Stürwürden, near Rodenkirchen in Oldenburg, who, by the way, was a pupil some years ago of Mr. Henry Overman, of Norfolk, the Shorthorn breed of cattle would have been badly represented. As it was, Mr. Lübben came to the rescue with an entry of four bulls of different ages and thirteen cows and heifers, and of a character, style, and quality that would have been creditable to any exhibition in England. He deservedly received five first prizes and gold medals, six second prizes and silver medals, and two third prizes and bronze medals. The first-prize white four-year-old bull Snowdrop by Prince Teck is a massive animal, of good frame and well-proportioned fore-quarters, and handled nicely. The second-prize white 1 year and 10 months old bull Fairfax by Prince Teck is an animal of much promise. The first-prize young roan bull, Royal Mark by Royal Broughton, and dam Castanet 3rd, is a really good animal, with excellent forequarters and good skin and hair, and will make his mark in future showyards, or we shall be much mistaken in our estimate of his merits. This bull cannot fail to do a great deal for the improvement of Mr. Lübben's herd. The first-prize cow, Leila, by 3rd Duke of Geneva, dam Laura, is a roan of great substance and evidently a heavy flesh-bearer, and has a good skin; she is now heavy in calf. The second-prize cow, Charmer, by Hildebrand, is shown with her calf by her side; and although the cow is low in flesh, having been sent direct from the pasture, she has much to recommend her. The other prize cows and

heifers have many good points, but time will not admit of our particularising each animal. In the fat cattle class Mr. Lübben takes two first prizes for pure-bred steers, and a first and second prize for cross-bred steers, as well as the special prize given by the Duke of Brunswick for the best lot of fat cattle in the exhibition. Baron Magnus, of Drehsa, Saxony, took a second prize with his useful bull "Bismarck," and a first prize and gold medal for a really nice heifer, which well earned the honour she obtained. There were two or three other persons who received third prizes, but their animals had nothing very particular to recommend them.

There was a class for what is called "common-bred Shorthorns," in which Mr. John Brown, of Hull, takes a first prize and gold medal. There were only two entries for Ayrshire bulls and cows, and both belonging to German breeders. There was a class for other English breeds, and there were only five animals to select from, and three of these were from Mr. Walter Farthing, of Stowey Court, Somersetshire, and he had the first prize for his sixteen months-old Devon bull, and the first prize for his seven-year-old cow of the same breed.

The various classes of Merino sheep are well filled, and received much attention from persons interested in this breed. We see an improvement in the general character of Merino sheep since we first attended an international exhibition on the continent of Europe. There appears to be an increase of size, improvement in shape, while the character and quality of the wool is not deteriorated. Nothing could be finer than the wool of some of the animals we examined. The sheep are shown in better condition than they used to be, and we fancy that there must be a corresponding increase in the weight of wool.

The classes for Southdown sheep were also well filled, there being 32 rams and 16 pens of ewes. It was said by the German breeders that Lord Walsingham never sent such good rams and ewes to Germany. Mr. George Sandy, of Holmepierpoint, and two German gentlemen acted as judges for short-wooled sheep, and they awarded to Lord Walsingham two first prizes and two gold medals, with two second prizes and two silver medals for rams, and two first prizes and two gold medals for shearing ewes. Mr. G. Stahlschmidt, of Canca, in Silesia, received the two third prizes, and, singularly enough, for rams bred from a Merton ram bought at the Altona International Exhibition. Mr. Stahlschmidt's two rams were really good animals and such as would have done no discredit to any exhibition in our own country. Lord Sondes, of Elmham, sent three shearing and three two-year-old rams, but they were distanced for the two third prizes by Mr. Stahlschmidt's rams, and failed to receive even a commendation. But we were glad to see his lordship get a second prize for his pen of yearlings, and a third prize for two-year-old ewes, the second prize being awarded to a nice-matching pen of two-year-old ewes belonging to Mr. W. L. Wedesneyer, a German breeder. Lord Walsingham's first-prize yearling ram and the two pens of prize ewes were sold to Baron von Schenemarek of Silesia, who bought the prize ewes at the Hamburg International Exhibition some years ago. The first-prize and gold medal two-year-old ram was an animal of great substance and of true Southdown character, and was, as well as two other rams, quickly sold to Herr von Tagow, of Rühstadt, near Wilsnack. It is worthy of note that the prize ram was not exhibited last year, and was hired in a comparatively lean state by Mr. Henry Fookes, of Whitechurch, Blanchford, who could evidently see what the animal would grow into. There were a good many entries in the class for Shropshire and Oxfordshire sheep. Mr. T. Fulcher was awarded the first and second prizes for two really good

Oxford Rams, bred by Mr. Charles Howard of Biddenham, near Bedford; while Mr. J. W. Smidt, who lives near Bremen, had the first prize for a pen of matching fine ewes bred by Mr. Henry Overman of Weasenham, Norfolk. Mr. Fulcher received the third prize for a pen of Oxford ewes, which were very badly matched, one having a black, another a grey, and the third a terribly speckled face; and we were told that the Germans criticised them a good deal, and facetiously wanted to know why three different breeds of sheep were shown in the same pen. This gentleman also sent two pens of Shropshire Down ewes bred by a Mr. Watson. As specimens of a breed they had not much to recommend them, and we fear they would give a bad impression of the merits of Shropshire Down sheep. In the section for Leicester, Cotswold, and Lincoln sheep, Mr. E. Lübben takes two first prizes for some capital rams from Mr. Hugh Aylmer of West Dereham, as well as the second prize for ewes; while the Cirencester College farm, obtains a second prize for rams and Mr. Fulcher a third. He has also a first and second prize for Cotswold ewes, and the College a third prize. With the exception of the sheep Mr. Lübben had from Mr. Aylmer, we cannot say the other entries were really good. They were just passable, and this is as much as we can say. Messrs. Russell, from Horton Kirby, Kent, sent some useful Hampshire Downs, which obtained the first and third prizes for rams and the first prize for ewes. Some German breeders sent long-wool sheep of considerable merit, and it is quite clear to us that these international exhibitions are doing very much for the improvement of cattle and sheep on the Continent. Mr. J. H. Yeomans, of Stretton-court, acted with two Germans as judge of longwooled sheep.

There is a good entry of pigs, and Messrs. Duckering of Lincolnshire and Mr. E. Lübben pretty well sweep off the prizes. Mr. Duckering has five first, one second, and one third, while Mr. Lübben receives two first, two seconds, and a third. The Cirencester College has a first and second prize. There are many good animals exhibited, and some of Mr. Duckering's pigs were of enormous size. We saw a great Hungarian pig at Vienna last year which was so ugly that we thought it must be the connecting link with *something else*, but at Bremen there is a boar which is too terribly ugly to have a connecting link with anything. It is said to be a wild boar for hunting purposes. Now if "pig sticking" is an amusement it must be (in the case of such animals as we saw) in the kill required to strike such a shadow with the spear. It seemed to have two deep sides and no back or belly to separate them. The brute was savage enough for all purposes, for when a curious person attempted to touch the animal with his umbrella, it was, although seeming to be asleep, up in a moment and made a nasty rush at the side of the high boarded pen in which he was confined, and the consequence was that the visitor stepped back so quickly that there was a flooring like nine-pins of some persons behind him.

The class for goats and rabbits was interesting, so far as it gave an idea of what extraordinary animals are in existence. There were many singular varieties, and such as we had never seen before. The goats were represented by a male animal of great size and two white females; their condition being as wretchedly bad as it could well be, and the man who could send such things to an exhibition must have queer ideas if he thought any person would commend him for the way he had kept his goats.

The exhibition of poultry and singing-birds must be written as a comparative failure. The entries were by no means large, and the birds in bad plumage. There were no birds of any especial merit. There were a good many pigeons, and the carrier variety were good and seem to be well cared-for.

The section for fishery was found to be so difficult and impracticable that it was given up.

The exhibition of matters connected with the culture of bees and the silkworm cannot be called a success. The articles exhibited were chiefly models of bee-hives, wax, and specimens of honey obtained from different varieties of trees and plants; and as for silkworms, we could not see any or any of their work, so we supposed they were "out on strike."

There is a separate building for articles connected with forestry and the chase, in which were tastefully arranged numerous specimens of guns and rifles, traps of various kinds, and some of enormous size, heads of animals, polished wood, patterns of inlaid, wood flooring, and many things of great interest, making altogether an attractive part of the exhibition.

The seventh division—for agricultural products—had much to recommend it. There were specimens of crushed bones, artificial manures, feathers, wool, hemp, manufactured hemp, spirits from roots grown on farms, corn and flour, sugar, tobacco-leaf in various stages of growth and manufacture, and a large display of peat fuel. There was peat earth in its soft state and when manufactured; and in this state it is comparatively speaking as hard as a stone indeed, there were specimens which had been polished, and had a face almost like black marble. The prepared peat is very largely used for the stoves in the best houses in North Germany; and hundreds of poor persons are employed in getting and preparing the fuel. No wood or other kind of kindling is used for lighting the hard dry lumps of peat. A little petroleum oil is thrown over it, and when a light is applied the flame from the oil quickly ignites the peat. There were specimens of fuel prepared from the sphagnum moss. It is a good deal used, but it burns rather quickly. From what we could see of the peat fuel at Bremen we think that the system of preparing it may with considerable advantage be carried on in England.

The judges in these sections have recommended the Council to grant honourable mentions for valuable objects sent to the Exhibition by the President of the Venezuelan Republic, by Messrs. Gildemeister and Co., or Lima, and by the Mercantile Society of Bremen. A silver medal has been granted to Dr. Ernst, of Caracas, for his scientific arrangement of Venezuelan produce.

The section for the cultivation of gardens, and fruit, was very interesting, being in two divisions—one for the exhibition of preserved fruit and vegetables, and also for fruit and vegetables in a fresh state; and the other for palms, tropical plants, orchids, ferns (tropical and native), as well as greenhouse plants. The fruit and vegetables were by no means equal to what we have seen in England. There were many magnificent specimens of plants, and amongst others, we especially noticed an enormous plant of the *Musa Paradisiaca* (bread fruit), with abundance of fruit on it of great size. There was a fine plant of coffee with a heavy crop of berries on it. The glonias were remarkably fine, and appeared to be greatly admired by persons well up in these things. We believe the committee judged wisely in combining flowers and other matters with the cattle exhibition, because it is not everybody who will be content to spend a day in looking at horses, sheep, and cattle. As it is now, there is sufficient to interest most persons, whichever way their tastes may lie.

There was a very fair exhibition of agricultural implements and machines. The German makers were largely represented, and at many of their stands there were implements which, in an English point of view, were more curious than useful. Probably, however, many of the articles we should not think of using in this country may have their peculiar advantages on the Continent.

Certainly some of the ploughs looked strong enough to plough up a paved street in any town, and the depth they must enter the soil is something astonishing to think of, and it must of necessity take a good many horses to work them. The following prizes were awarded :

The first prize for the best steam plough and the first prize for the best steam machinery for ploughing waste lands to Messrs. John Fowler and Co., Leeds. Gold medals for agricultural machinery and implements to Messrs. James and Frederick Howard, of Bedford; Walter A. Wood, of Hoosick Falls, New York; Marshall, Son, and Co., of Gainsborough; Clayton and Shuttleworth, of Lincoln; Ransomes, Sims, and Head, of Ipswich; and Messrs. D. M. Osborne and Co., of Bremen. Silver medals for the same objects were granted to the Maldon Ironworks Company; Rennie and Co., Lincoln; Richmond and Chandler, Salford; Aultmann, Miller, and Co., Akron, Ohio; the Reading Ironworks; Nalder and Nalder, Wantage; Gooday, Stanstead, Essex; Samuelson and Co., Banbury; Davy, Paxman, and Co., Colchester; Woods, Cocksedge, and Co., Stowmarket; James Smyth and Sons, Peasenhall; C. Burrell, Thetford; Willsher and Co., London; Hornsby and Sons, Grantham; E. R. and F. Turner, Ipswich; and the Johnston Harvester Company, Brockport.

We were glad to see that the English exhibitors did not open their stands on Sunday, and we hope they will be rewarded for this by obtaining good and satisfactory orders.

The tenth and last section of the original programme was the "Results of Scientific Studies in the several departments." We tried very hard to make out what this was intended to mean, but were unable to do so, unless it was, as one of the committee said, the good that persons might derive from well studying the various products they were enabled to examine, and in seeing how far they could improve upon them.

Taken as a whole the exhibition must be said to be a success. We find that on Saturday, the 13th inst., when the price of admission was ten marks (a mark being equal to an English shilling), 5,000 persons entered the exhibition. On Sunday, the 14th, 15,188 persons entered, paying two marks each; and on Monday, the 15th, 16,300 paid three marks each. There was a large attendance on Tuesday, but we could not learn the number of persons who entered on that day. The price for admission will be three marks for every day except the last day, viz., Sunday, the 21st inst., when it is to be reduced to one mark. A very great number of visitors were expected on Friday and Saturday, the 19th and 20th inst., as the Crown Prince of Prussia, the King of Saxony, and other persons of rank are to attend the exhibition on those days, and during their stay at Bremen they are to be the guests of the merchant prince Herr H. H. Meier, who has been the moving spirit in getting up the exhibition. Without the energy and personal attention he has given to the whole matter from the very beginning the exhibition could not have been carried out as it has been. We believe that Herr Meier visited England twice for the purpose of making inquiries and for personal consultation with persons who were thought to be able to give him advice and assistance. We think however that the persons he consulted should have impressed upon him the desirability of having the catalogue numbers so arranged as to enable persons to understand them, whereas there was as much difficulty in following out the classes as there used to be at the Essex show, and this is saying a good deal! There was also great and unnecessary delay in putting up the prize cards, and many had not been fixed when we left the show ground on the evening of Tuesday the 16th.

Soldiers from the seventy-fifth regiment of the line in

full uniform were employed as police in the exhibition grounds, and each had a steel plate with a large "P" pierced through it, hung round his neck and lodged on the chest, which showed at once that the men were acting under authority. The men were placed at every entrance and outlet, in the cattle sheds, and in various parts of the grounds. The men did their duty courteously and quietly, and assisted very much, no doubt, in keeping the really good order which generally prevailed. There were letter boxes in different parts in the grounds, and a telegraph office with military operators; and we know from experience that there was no time lost in sending off messages nor, indeed, in letting one have a reply, for we had occasion to send to England and Austria, and were called up at one o'clock in the morning to receive an answer to a message we sent late in the day. The refreshment department was well organised, and most extensively patronised, and the consumption of food, wine, beer, coffee, and tobacco was of itself a sight to see, while the continual and peculiar "sissing" call to the waiters kept up, as it were, a "phizzing" fire in every "restauration." The good burghers of Bremen right loyally did the best in their power to give a hearty welcome to visitors, and, so far as our experience went, there was no attempt at extortion at the hotels or elsewhere, and we can only express a hope that foreign visitors to English exhibitions may receive as much fair and considerate treatment as we and other Englishmen received at Bremen.

SUNDAY, June 21.—The following additional awards, have been announced: Nicholson, Newark, silver medal for haymaking machines; Ruston, Proctor, and Co., Lincoln, gold medal for steam engines and thrashing machines; Garrett and Sons, Saxmundham, gold medal for agricultural machines; Platt and Co., gold medal for mowing machines; Singer, gold medal for sewing machines.

THE STURDY—AN OPERATION.—The disease in cattle and sheep called *Coenurus cerebri*, or more popularly known as gid, sturdy, turisick, is one of the most prevalent, but at the same time one of the least understood by breeders and owners of stock. With regard to the usual form of sturdy, it depends on the presence of hyatid in one of the hemispheres of the cerebrum or brain proper. Under its influence the sheep turns right or left according to the hemisphere affected. The first severity of the attack seems to pass off, but the relief is more apparent than real, the disease becoming more intensified, the cerebral disturbance more marked, causing giddiness, finally paralysis sets in, followed by prostration and death. Having learned from a gentleman largely interested in sheep-breeding that Mr. William Hyslop, of Stretton House Private Asylum, Church Stretton, successfully deals with cases of sturdy amongst his own and his neighbours' flocks, we waited for an opportunity of witnessing an operation for the disease on a sheep of the Stretton Hill breed. We may premise that the *coenurus* is in a kind of bladder, provided with a variable number of exsertile heads, and it is believed that the nervous substance may be excited by the heads which protrude from the bladder, and penetrate the brain substance nearly two lines in depth. The operation, like that of Columbus's egg, was exceedingly simple, but very ingenious withal. The sheep being firmly held by an assistant, Mr. Hyslop felt for the softened part of the skull, and having hit upon the precise spot he wanted, he pierced the brain with an instrument called a borer. He then drew off a large quantity of liquid from the cyst of the parasite, through a canula, by means of a syringe. He then extracted the bladder, which contained the agents of the disease, and announced that the animal would be entirely well in a few days. We have been at some pains to explain the disease, and the operation for its cure, in order that those who have sheep afflicted with it may know where to look for a remedy.

—*Shrewsbury Free Press.*

THE NORFOLK AGRICULTURAL SOCIETY.

MEETING AT NORWICH.

The chief feature of the show was the Shorthorn section, many of the entries, including Lady Pigot's team, now as usual on circuit, coming direct from Bristol, while further interest was given to the awards by Lord Exeter sending two or three of the Telemachus family the old Burginley bull now beating off the Suffolk Oxford which so unexpectedly was declared the champion bull at the Essex show of last year. The full prize list will also tell of some other corrections, more especially amongst the younger stock, where Mr. How, from Broughton, beat the Branches herd. There was a strong show of the native red-polled cattle, where Lord Sondes was still in front, and a fair entry of Southdowns, backed by some capital Cotswolds. Almost all the pig prizes went out of the county, as did many of those for horses; Mr. Garrett's Suffolk three-year-old, however, of which so much was thought at Woodbridge in the spring, being beaten by a roan from Lynn; while another Cup-bearer was the best two-year-old. On the whole, the horse show was but moderate—perhaps more especially of hunters and other lighter breeds.

PRIZE LIST.

JUDGES.—CATTLE: J. C. Foot, Beaulieu Wood, Dorchester; J. K. Fowler, Aylesbury. **NORFOLK CART HORSES:** J. H. Plowright, Manea, Cambs; J. Warth, Sutton, Ely. **CART-HORSES OF ANY BREED:** T. Plowright, Pinchbeck; J. Nix, Chatteris, Cambs. **THOROUGHBRED AND HUNTING HORSES:** W. Whitehead, Wollaston; W. T. Sharpe, Horncastle. **HACKNEY AND RIDING HORSES AND PONIES:** H. Thurnall, Royston; J. E. Bennett, Rugby. **SOUTH-DOWN SHEEP:** W. Bennett, Chilmark, Salisbury; H. P. Hart, Beddingham, Lewes. **LONG-WOOLLED SHEEP:** W. Dudding, Panton, Lincoln; T. Horley, The Fosse, Leamington. **PIGS:** J. S. Turner, Chyngton, Sussex. **IMPLEMENTS:** T. Everett, Creake; C. B. Mason, Beechamwell; H. Overman, Weasenham.

CATTLE.

SHORTHORNS.

Bull, above three years old.—First prize, £10 and silver medal, and the Prince of Wales' prize of £10 10s., the Marquis of Exeter, Burginley, Stamford (Telemachus); second, £7, C. Beart, Westhead, Stowbridge (Master Blythe). Reserved, N. Catchpole, Bramford, Suffolk (Oxford Prize).

Bull, two and not exceeding three years.—First prize, £10 and silver medal, W. Linton, Sherriff Hutton, York (Sir Arthur Ingram); second, £7, J. Wortley, jun., Swaffield (Captain Hopful).

Bull, above one and not exceeding two years.—First prize, £10 and silver medal, the Marquis of Exeter (Telemachus 6th); second, £7, N. Catchpole (Thiers); third, £4, G. J. Day, Horsford, Norwich (Charon). Reserved, Lady Pigot, Branches-park (Rapid Rhone).

Bull-calf, not exceeding twelve months old.—First prize, £5 and silver medal, N. Catchpole (The Shah); second, £3, T. Rose, Great Melton (Bright Knight).

Cow, in calf or in milk, above three years old.—First prize, £10, and silver medal, Lady Pigot (Victoria Victrix); second, £7, the Marquis of Exeter (Moll Gwynne); third, £4, J. J. Sharp, Broughton, Kettering (Julia 9th). Commended: W. Crickmore, Seething (Virginia).

Heifer, in calf or in milk, two and not exceeding three years.—First prize, two premiums of £5 and silver medal, Lady Pigot (Rose of Wytham); second, £7, N. Catchpole (Bramford Rose); third, £4, T. Rose (Brunette).

Heifer, one and not exceeding two years.—First prize, £8, and silver medal, J. How, Broughton, Hunts (Lady Butterfly); second, £5, Lady Pigot (Princess of Witham); third, £3, Lady Pigot (Rose of Lincoln). Highly commended: J. J. Sharp (Julia 11th). Commended: N. Catchpole (Whitton Rose).

Heifer calf, not exceeding twelve months old.—First prize, £5, and silver medal, R. Parker, North Creake (Daisy); second, £3, Lady Pigot (Moorish Captive). Highly commended: W. Angerstein, Weeting-hall (Musical 17th). Commended: R. J. Chaplin, Ridgewell, Halstead (Ridgewell Rose).

NORFOLK AND SUFFOLK RED-POLLED.

Bull, above three years old.—First prize, £10, J. J. Colman, M.P., Norwich (Powell); second, £7, Lord Sondes, Elmham (The Palmer).

Bull, two and not exceeding three years.—First prize, £10, J. F. Palmer, Wilby (Young Major); second, £7, Lord Sondes (Edgar); third, £4, T. Brown, Marham (The Beau). Reserved: A. Taylor, Starston (Sir Edward 1.).

Bull, one and not exceeding two years.—First prize, £10, and silver medal, Mr. J. J. Colmar, M.P. (Elmham Duke); second, £7, H. Birkbeck, Stoke Holy Cross (Suffolk); third, £4, J. J. Colman, M.P. (Easton Duke). Highly commended: J. J. Colman, M.P. (Royal Duke).

Bull-calf, not exceeding twelve months old.—First prize, £5, and silver medal, T. Brown (Charlie); second, £3, J. J. Colman, M.P. (Baron Easton). Highly commended: Lord Sondes (Longham). Commended: T. Brown (Benedict).

Cow, in calf or milk, above three years old.—First prize, £10, R. E. Lofft, Troston (Minute 3rd); second, £7, B. Brown (Thursford Countess); third, £4 and silver cup, value £5 5s., J. J. Colman, M.P. (Handsome 3rd). Reserved and commended, Lord Sondes (Skelton).

Heifer, in calf or in milk, two and not exceeding three years old.—First prize, £10 and silver medal, Lord Sondes (Fanny); second, £7, H. Birkbeck (Wave); third, £4, B. Brown (Non-prieel). Highly commended, Lord Sondes (Kate); commended, H. Birkbeck (Alycinth).

Heifer, one and not exceeding two years.—First prize, £8, Mr. Hudson, Castleacre; second, £5, J. J. Colman, M.P. (Rosabelle); third, £3, Sir Willoughby Jones, Crammer-hall (Belle). Highly commended: H. Birkbeck (Spouse) and Lord Sondes (Theresa).

Heifer-calf, not exceeding twelve months old.—First prize, £5 and silver medal, Sir Willoughby Jones (Graceful); second, £3, Lord Sondes (Lady Constable). Reserved, H. Birkbeck (Wealth).

Best collection of Norfolk and Suffolk Red Polled animals exhibited in classes 9 to 16 inclusive.—Cup or plate, Lord Sondes. Reserved: B. Brown.

COWS AND HEIFERS.

Best adapted for dairy purposes, of any breed, not being Shorthorn, or Norfolk and Suffolk Red Polled.

Cow in calf or in milk above three years old.—First prize, £10 and silver medal, W. Johnson, Walpole St. Peter; second, £7, J. Plowman, Great Melton (White Rose); third, £4, W. Johnson. Reserved and highly commended, W. Allen, Little Ellingham (Polled).

Heifer, in calf or in milk, two and not exceeding three years.—First prize, £10 and silver medal, W. Johnson, Walpole St. Peter; second, £7, W. Johnson. Reserved: J. Smith, Hethersett (Dolly Varden, cross-bred).

Heifer, one and not exceeding two years.—First prize, £8 and silver medal, W. Welcher, jun., Ashwelthorpe, Wymondham (Lady Jane); second, £5, R. C. Rising, Costcesey, Norwich (Beauty); third, £3, J. Smith (Nell Gwynne).

FAT STEERS, COWS, AND HEIFERS.

Steer of any breed, above three years.—First prize, £10 and the Prince of Wales' prize of £10 10s., E. Wortley, Ridlington, Uppingham; second, £7, R. Wortley, Sulfield. Highly commended: T. and J. B. Fresiney, Saltfleet, Louth, Lincolnshire (Saltfleet).

Steer of any breed, not above three years.—First prize, £10 and silver medal, J. How; second, £7, R. Wortley.

Cow or heifer of any age.—First prize, J. Chapman, North Walsham; second, £7, Duke of Grafton, Enston hall (Spotless).

HORSES.

NORFOLK CART HORSES

Brown, Bay, or Black).

Stallion, not under four years.—First prize, £15, H. Stanley, Bury St. Edmund's (Champion); second, £7, J. N. Waite, Martham (Major); third, £4, Rev. J. N. Micklethwait, Taverham-hall (Prince of Wales).

Stallion, three years old.—First prize, £10, C. Marsters, Saddlebow, Lynn (England's Glory); second, £7, T. Brown (The Orphan); third, £4, J. Newman, Priory, Hickling (Samson).

Stallion, two years old.—First prize, £8, and silver medal, T. Bettinson, Walsoken, Wisbeach (Honest Tom); second, £5, J. Martin, Littleport, Ely (Ploughboy); third, £3, G. Gowing, Hellesdon (Young Major).

Yearling entire colt.—First prize, £7, J. Tomlinson, Long Sutton (Conqueror); second, £4, B. W. Ground, jun., Whittlesey.

Mare and Foal.—First prize, £10 and silver medal and cup, value £5 5s., J. Tomlinson (Beauty); second, £7, C. Beart (Star); third, £4, W. Wilson, Searning (Braz).

Mare, not under four years old.—First prize, £10, the City of Norwich premium of £10, and Messrs. J. Geldart and Son's premium of £10 10s., H. Purser, Wellington Manor, Bedford (Honest Lass); second, £7, T. Calver, Burnham Thorpe (Blossom); third, £4, J. N. Waite (Depper).

Gelding, three years old.—First prize, £7 and silver medal, R. Horsley, Ashill (Duke).

Filly, three years old.—First prize, £8 and silver medal, T. Humphrey, Walpole St. Peter (Dora); second, £5, J. Broom, Moulton, Acle (Gipsy); third, £3, H. Little, Wiggenhall, (Gipsy).

Filly, two years old.—First prize, £8, W. Durrant, Brunstead-hall; second, £5, J. Tingey, Little Ellingham (Depper); third, J. Tingey (Brisk).

Yearling filly.—First prize, £8 and silver medal, H. Purser (Grand Duchess); second, £5, B. W. Ground; third, £3, J. N. Waite (Duchess).

PAIRS OF CART HORSES.

Pair of cart horses, whether mare or gelding, without restriction as to colour, best suited for agricultural purposes in Norfolk, and which have been so used in the county for twelve months next before the exhibition.—First prize, £10, W. How, Tottington (Brisk and Lawyer); second, £7, J. Tingey (Brag and Dodman); third, £4, J. Tingey (Doughty and Depper).

CART HORSES OF ANY BREED.

Stallion, not under four years old.—First prize, £10, R. E. Loft (Young Cupbearer).

Stallion, three years old.—First prize, £8 and cup, value £15 15s., C. Marsters (England's Wonder); second, £5, R. Garrett, Carleton-hall (The Claimant).

Stallion, two years old.—Prize, £6 and silver medal, R. Garrett.

Mare and foal.—First prize, £10, E. S. Trafford, Wroxham (Bunny); second, £7, J. Brown, Bawburgh (Diamond).

Mare, not under four years old.—First prize, £10, H. Wolton, Newborne-hall (Diamond).

Filly, two years old.—First prize, £5 and silver medal, W. Wilson, Baylham second, £3, W. Wilson.

THOROUGHBREDS.

Adapted for Breeding Hunters.

Stallion.—First prize, £20, J. Bloomfield, Warham, Fakenham (The Primate).

HUNTERS.

Mare or Gelding, adapted for 14 stones.—First prize, £15, W. Hudson, Quarles (Steed); second, £8, W. Wright, Fring (Cock Robin).

Mare or Gelding, adapted for hunting, not equal to carry 14 stones.—First prize, £10, B. W. Cooper, Euston (Gazette); second, £5, J. G. Nelson, Sparham (Cupid). Highly commended: R. J. Kendle, Weasenham (Three per Cent).

Colt or Filly, three or four years old.—First prize, £10, Major F. Barlow, Hasketon (Cornishman); second, £5, B. W. Cooper (Grimalkin).

Brood mare, adapted for breeding hunters.—First prize, £10, and silver medals, J. Tomlinson (Sloughby); second, £5, W. Brandford, Godwick (Phoebe).

HACKNEY AND RIDING HORSES.

Stallion, for saddle and harness.—First prize, £15, and silver medal, W. Giddens, Walpole St. Peter (Alonzo the Brave);

second, £8, J. Griggs, South Creake (The Little Model); third, £5, J. Groat, Woodbridge (Quicksilver). Reserved and commended: F. Branwhite, Long Melford (Defiance).

Riding mare or gelding, above 15 and not exceeding 15 hands 3 inches high.—First prize, £10, J. Rowell, Magdalen, Lynn (Robin).

Hackney mare or gelding, above 14 and not exceeding 15 hands high, and in the possession of the exhibitor for three months previous to the exhibition.—First prize, £10, and silver medal, W. How (Favourite); second, £5, H. W. Allen's Executors, Saddlebow.

Hackney brood mare, to be certified to have produced a living foal subsequent to 1st of January, 1874.—First prize, £10, and silver medal, C. Cook, Litcham (Bell); second, £5, J. W. Hunn, Hunstanton (Twopenny). Reserved and commended, W. Mitchell, Whittingham (Eva).

HARNES HORSES.

Mare or gelding, not under 14 hands 1 inch, nor above 15 hands 1 inch, to be shown in harness.—First prize, £8, and silver medal, W. Durrant. Highly commended and reserved, J. Abel, Norwich.

Mare or gelding, not under 15 hands 1 inch, nor above 15 hands 3 inches high, adapted for single or double harness, to be shown in hand and ridden.—Prize, cup, value £10 10s., W. Giddens (Giddy Girl). Reserved: W. Jex, Burgh St. Peter (Forty Colours).

COBS.

Stallion, adapted for breeding high-stepping cobs.—Prize, £5, G. Body, Haverigland (Young Prickwillow). Commended: Major F. Barlow (King of the West). Commended and reserved: T. and A. Dyball (Little Wonder).

Cob, carrying (while being judged) at least 15 stones, saddle and bridle included, and not less than 13 hands 3 inches, nor more than 14 hands 3 inches high.—First prize, £10 and silver medal, — Charles (Cock Robin); second, £7, F. Branwhite (Pretty Girl); third, £4, T. H. Edwards, Keswick (O'Connell). Commended and reserved: A. Taylor, Starston (Gay Lad).

PONIES.

Pony, not under 13 nor above 13 hands 3 inches high.—First prize, £8, C. Beart (Tom Thumb); second, £5, F. Low (Queen of Spades); third, £3, S. A. Goodwyn, Leiston-hall (Quicksilver). Reserved: J. Baly, Hardingham (Sir Roger).

Pony, not above 13 hands high.—First prize, £5, B. Hook, Norwich (Tommy Dodd); second, £3, W. Birkbeck, Thorpe. Highly commended: H. W. Owles, Norwich (Flo). Commended: J. Emms, Thetford (Jenny).

Pony, not under 12 nor above 13 hands 3 inches, to be shown in harness.—Prize, £5, S. Gardiner, Wheatere (Mingay). Commended and reserved: T. Patrick, Sutton Wymondham (Match Box).

SHEEP.

SOUTHDOWN.

Shearling ram.—First prize, £10, and silver medal, and silver cup or plate, value £10 10s., J. J. Colman, M.P.; second, £7, Prince of Wales; third, £4, J. J. Colman, M.P.

Ram of any age.—First prize, £10 and silver medal, J. J. Colman, M.P.; second, £7, Prince of Wales; third, £4, Lord Sondes.

Pen of five shearling ewes.—First prize, £10 and silver medal, Lord Sondes; second, £4, J. J. Colman, M.P. Reserved: Prince of Wales.

Pen of ten ewe lambs.—Prize, £5 and silver medal, Lord Sondes. Reserved: Prince of Wales.

Pen of ten wether lambs, bred by the exhibitor from a flock of not less than five score ewes, size and quality to be taken into consideration.—Prize, £5 and silver medal, Lord Sondes; Reserved: J. J. Colman, M.P.

LONG-WOOLLED.

Shearling ram.—First prize, £10 and silver medal, T. Brown; second, £7, T. Brown; third, £4, T. Brown. Highly commended: T. Brown.

Ram of any age.—First prize, £10 and silver medal, T. Brown; second, £7, T. Brown; third, £4, T. Thornton, Cavenham House, Wreham. Highly commended: T. Brown. Commended: T. Brown and T. Thornton.

Pen of two ram lambs.—First prize, £8 and silver medal, T. Brown; second, £5, T. Brown. Commended and reserved: F. Ellis, Chesterton, Cambs.

Pen of five shearing ewes.—First prize, £7 and silver medal, T. Gunnell; second, £4, F. Ellis.

Pen of ten ewe lambs.—First prize, £5 and silver medal, F. Ellis.

SHEEP OF ANY BREED.

Pen of ten ewe or wether lambs.—First prize, £10 and silver medal, C. Middleton, Holkham, Wells; second, £7, C. Middleton; third, J. B. Ellis, jun., West Barsham, Fakenham. Highly commended and reserved: Mrs. Hudson. Commended: The Corporation of Norwich, Kirby Bedon.

Pen of three shearing wethers of any breed.—First prize, £7, C. Crawshay, Hingham; second, £4, C. Crawshay. Highly commended and reserved: G. Cooke, Horseheath, Cambs. Commended: The Corporation of Norwich.

Pen of ten ewes of any age or breed, from a flock of one less than five score, having brought up a lamb or lambs.—First prize, £10 and silver medal, T. Gunnell, Milton, Cambs; second, £5, Mrs. Hudson. Reserved: J. B. Ellis, jun.

Pen of ten ewes of any age or breed, not being Southdown or longwooled, having brought up a lamb or lambs.—First prize, £10, and silver medal, Mrs. Hudson; second, £5, G. Cook. Reserved and commended, J. P. Case, Testerton.

Pen of twenty shearing ewes of any breed, without restriction as to clipping.—First prize, £10, and silver medal, Lord Sondes; second, £7, Mrs. Hudson.

PIGS.

LARGE BREED.

Boar above twelve months old.—First prize, £5, J. Dove, Bristol; second, £3, R. E. Duckering and Son, Northorpe, Lincolnshire.

Boar not above twelve months old.—First prize, £5, and silver medal, J. Dove; second, £3, R. E. Duckering and Son.

Breeding sow.—First prize, £5, J. Dove; second, £3, R. E. Duckering and Son. Highly commended: R. E. Duckering and Son. Commended: G. M. Sexton, Whierstead Hall, Ipswich.

Three breeding sows not above seven months old.—First prize, £5, and silver medal, R. E. Duckering and Son.

SMALL BREED (BLACK OR BERKSHIRE).

Boar above twelve months old.—First prize, £5, R. E.

Duckering and Son; second, £3, J. N. Waite. Highly commended: G. M. Sexton.

Boar not above twelve months old.—First prize, £5, and silver medal, Lord Rendlesham, Rendlesham Hall, Suffolk; second, £3, G. M. Sexton. Highly commended: G. M. Sexton.

Breeding sow.—£5, and silver medal, G. M. Sexton; second, £3, Lord Rendlesham. Highly commended: R. E. Duckering and Son; J. N. Waite.

Three breeding sows not above seven months old.—First prize, £5, and silver medal, G. M. Sexton.

SMALL BREED (WHITE).

Boar above twelve months old.—First prize, £5, and silver medal, Lord Rendlesham; second, £3, G. M. Sexton. Commended: R. E. Duckering and Son.

Boar not above twelve months old.—First prize, £5, and silver medal, Lord Rendlesham; second, £3, Lord Rendlesham. Highly commended: G. M. Sexton and J. Dove.

Breeding sow.—First prize, £5, and silver medal, R. E. Duckering and Son; second, £3, Lord Rendlesham. Commended: J. Dove and H. A. Kilham, Tydd St. Mary, Wisbeach.

Three breeding sows, not above seven months old.—Prize, £5, and silver medal, R. E. Duckering and Son.

IMPLEMENTS.

Stacking or elevating machine for straw, hay, or sheaf corn.—Prize, £10, Holmes and Sons, Norwich. Exhibitors: Hambling and Son, East Dereham; Holmes and Sons; Murton and Turner, Kenninghall; Roby and Co. (Limited), London; S. G. Soame, Marsham; Wallis and Stevens, London.

Turnip hoe or thinner, for ridge or flat work.—Prize, £7, and silver medal to inventor, Holmes and Sons. Exhibitors: J. W. Branford, East Dereham; T. Chambers, Colkirk; Holmes and Sons; Hambling and Sons; Murton and Turner; F. Mote, March; T. F. Salter, Attleborough.

Thrashing machine drum guard, for the most simple yet effectual plan for protecting the drum against accidents.—Prize, £3, F. Savage, Lynn. Exhibitors: Garrett and Sons, Leiston; Holmes and Sons; F. Savage; Woods, Cocksedge, and Co., Stowmarket.

THE COMMERCIAL PRINCIPLE.

Ever remembering that in this Journal the business on the mart and the work in the field receive equal attention, it may not be out of place to look a little into the commercial principle as applied to agriculture. There are well-meaning men who hope never to see the two come together, as any such union would only tend to disturb the good feeling existing between landlord and tenant. There are others, on the contrary, who maintain that we shall never hold our position or achieve any satisfactory progress until the commercial principle is brought to bear alike upon the investment of the occupier and the interest of the owner. Thus, at the meeting of the Central Chamber of Agriculture the other day, Lord Hampton contended that "the arrangements between landlord and tenant should be conducted much more on commercial principles," by which of course his lordship intended to say that the two parties to a contract should set about arranging the terms "fair and square," neither possessing in the outset any unequal advantage over the other. On the face of it this would appear to be Lord Hampton's argument, but we gather from the context it is not so: he would have "no invasion of the great principle of freedom of contract;" or, in plain English, he would not wish to see the farmer in a better position to deal with the landlord: "Mr. Masfen would like to know how, if freedom of contract remained, an unwilling landlord was to be made to do his duty to his tenant? That gentleman, and others, had assumed that the tenant-farmer was the most helpless being in the world; and his reply to the question was that, if farmers had to take a

farm from such unwilling landlords as he referred to, they must guard their own interests." There can be no doubt but the time may come, perhaps sooner than expected, when tenants may be able to guard their own interests against "unwilling" landlords, that is by having nothing to do with such people; but so far Lord Hampton must know that he is speaking mere platitudes, as unless a man will do just as the unwilling landlord chooses as to game, capital, cropping, and so forth, the probabilities are the applicant will never get into the farm. Lord Hampton's idea of the commercial principle clearly dates some centuries back, and refers not so much to English customs as those of new countries, where a smart trader could purchase a small territory for a bottle of whisky, or half-a-dozen wives for a string of beads. The commercial principle as interpreted in such a case signified simply making a bargain on unfair terms, the one side exercising a stronger power than the other; as it is thus that Lord Hampton would maintain the law between landlord and tenant, the one having everything secured and the other nothing. Indeed, if Lord Hampton's theory possesses any force whatever, it is that the "unwilling" landlord's property should go gradually out of cultivation.

Then, again, at this same Chamber meeting the Honourable Mr. Stanhope declared that "the only cases in which that freedom was now interfered with were those of children, women, lunatics, and Irish tenants, and did the farmers of England wish to be placed in the same position as those classes of persons? The Lincolnshire tenantry were satisfied with the working of freedom of

contract, and not prepared to go in for compulsory legislation." Of course all this is not merely outrageous nonsense but at utter variance with facts. So far from freedom of contract being prohibited only amongst women, children, and lunatics, there is, as Mr. Sewell Read was not slow to show, scarcely a class but where the law interferes with or watches over the contracts made between a stronger and a weaker power, and thus enables the two to deal on something like terms of equality. Further, what does Mr. Stanhope mean by the freedom of contract with which the Lincolnshire tenantry are satisfied? So far as we understand it, Tenant-Right in Lincolnshire is not so much a matter of contract but a custom which has all the strength of a law, and one which our aim is to extend. It is a nice question, in fact, whether the "unwilling" landlord—that is, the man who objected to

the Tenant-Right—could live in a district where this right was recognised; and if such an incubus upon the soil should not be permitted to infest one part of the country, why should his baneful influence be suffered in another? It is sufficiently clear how, when Lord Hampton speaks of commercial principles and Mr. Stanhope of freedom of contract, that neither of these honourable gentlemen knows what he is talking about; and as we said last week of the Esrick steward, who sneers at Philip Pusey and Sewell Read and James Howard, and who in the fulness of his heart would not disturb "amicable relations," it would be well if such people could be educated up to the times in which they live. If the Central Chamber of Agriculture will undertake such a duty it might really promise to be of some service.

LAVENHAM FARMERS' CLUB.

THE ECONOMY OF LABOUR.

At the last meeting, Mr. R. Hawkins in the chair, Mr. William BIDDÉLL read the following paper:

It has been the practice at the May meetings of this Club to have a little jollification, comprised mainly in drinking healths and flattering one another, occasionally enlivened by a good song. The Committee, after due consideration, have thought it better for us not to do away with the social tea, but instead of the usual kind of speechifying afterwards, to have a subject to discuss. I have consented to introduce one, which, unfortunately, I cannot do but at considerable length; but the inward man having been made comfortable, I am in hopes you may sit it out. The subject is one which sooner or later must have our especial attention, which it has not yet had, owing to the former state of the law, practically compelling us to employ labour, whether we wanted it or not. I shall term it the economy of labour in agriculture. Though I do not anticipate a scarcity of labour, it is as well to be prepared for it. Indeed, I think it probable that in a year or two we may have an excess. It is the unexampled prosperity of the last few years which has created such an enormous demand for labour, attracting it from the rural districts into the towns. We always have our ups and downs, and there are already symptoms that some of the great industries of the country are commencing the downward movement. Certainly we now present in our rural districts a very different aspect to what we did 25 years since. Then could be seen in nearly every parish one of the most melancholy of all sights—men able and willing to work, but having no work to do. For only 8s. a-week good labourers were glad to work, and work well; but even at that low wage the farmers were racking their brains how to profitably employ them, for they themselves were losing their capital. Assuming then what I do not anticipate, that wages are to be materially increased, where is the money to come from? Under the average of prices for the last 10 years, the farmer cannot afford to pay materially more, and what cannot be afforded will not last long. He will, therefore, take care to have the total sum paid on Friday night kept down. If no other way presents itself he will do it by employing fewer men, paying eight or ten what he has hitherto paid ten or twelve, and adapt his farming accordingly, leaving undone the least profitable work, no longer paying 1s. 6d. for extracting weeds, which if suffered to grow would do him only a shilling's worth of damage. This laudable pride of clean farming would soon cease. We shall fall back into the slovenly ways of farming which our continental competitors practise who pay so much less for their labour. Our rural population has been declining for some years. What effect a further great decline produced by emigration would have upon the general trades of the country I cannot now stop to inquire; but most certainly it would be the opposite if beneficial. Judging from the return home of many of our labourers, migration appears of little benefit to them. The emigrant's lot is often too highly coloured. We will trace a single specimen. We will suppose

he has attained to the position which appears to be the ambition of every Englishman—he has become owner of a few acres of land far from any town, miles off any doctor of either mind or body, or teacher of his children, all of which he has here for pretty well nothing, and are necessary for the well-being of any society. With an indifferent market for his produce, he finds his strength and the fertility of his land all he has to depend upon. Either failing, he is undone, and he comes to the conclusion that this "Crusoe" kind of life is much better in theory than practice, and that he had better have stayed at home, lamenting that he cannot tell his mind to those who on the most superficial information pressed him to emigrate, and thus render his lot worse. The only specimen of an emigrating labourer I am acquainted with returned home. He (to his credit) left his master on good terms, a correspondence being kept up between them, in which he at first pictured his new country (one of the Northern of the United States, I believe) in attractive colours, but all was summer then when high wages abounded. Presently the long winter of seven months came, which he found like the lean cattle of Pharaoh which ate up the fat of the others, no work being to be had. Alter a while he, to the great surprise of his master, turned up on his old farm again and asked for work, where he is now employed. As it is full time to conclude this long preface, I will now proceed to the more practical part of my subject, first considering it in its connection with the cropping of land and grazing. At starting I shall assume what I have no doubt will be correct, that landlords will assist their tenants to meet the difficulty of dearer labour by doing away with what to a good farmer is a financial cruelty—viz., the six months' notice, substituting for it one of a year and a-half or two years, and allowing tenants to farm as they please, until either party gives or receives notice of quitting. Before proceeding further I would remark that the suggestions I shall make will apply more especially to heavy, and not to light land. The most extensive crops for labour are the root crops we cart off. We grow them not for immediate profit, but as indirect feeders for the corn crops. Full half the manure we make from them is required to be carted back to restore the fertility extracted from the land by the roots themselves. Can we diminish our acreage of these? I think we can. The question will arise how we can best manurise (convert into manure) our straw. Our whole modern system is I think in fault in carting too much off, and consequently having too much to cart back to our land. Let us then by leaving higher stubbles take less straw off the land, and manurise part of it by summer grazing. This can be done by green food consumed in wide sheds and barns. The "Belstead Hall" and other experiments have shown that manure thus made under cover is far better than that made in uncovered yards. The green food would be cut from the layers, which I propose to let grow for two years. To avoid growing small seeds too frequently, we should now and then have to grow sanfoin or lucerne. To prevent loss of acreage of corn crops, these two-year-old layers would be succeeded by

a crop of wheat followed by barley. If the land is too poor to have profitable layers upon, then long fallow it for wheat and follow it by highly artificial manure for barley, making your manure by store beasts fed on straw and cake, which they will thrive very well upon. From Mr. Lawes' invaluable experiments it is conclusively shown that barley can be successfully grown from artificial manure. For 20 years he has grown it upon the same land, averaging 45 bushels per acre, and that with an outlay for manure not exceeding £3 per acre. I question if farmers of good barley lands can show a more profitable method than this constant barley growing, especially when we remember it is one of the least costly in manual labour of any of our crops. Mr. Lawes and his experiments appear to me far too little appreciated in the present day, but the time will come when he will be referred to as one of the greatest lights in agriculture we have ever had. In the tillage of land I am not looking for any great improvement. Steam cultivation is still too expensive to become general, but steam draining is a decided success, promising to supersede on fair soils all old-fashioned draining. The double plough, the revival of one of our best implements, is now so well appreciated as to require no further allusion. Treble ones are now I understand being made. It is a question whether we could not get our ploughing done cheaper by having a man work two sets of three horses on the double plough, keeping going all day. Where twelve horses are kept, there would be one man's work to feed and change them. We should require only three men under that system to feed and work twelve horses. With 10-inch furrows, ploughing could be done at about 1s. per acre for manual labour, whereas with single ploughs it costs about double. The work being put out, the horses would be kept going, and therefore would not require to be out so many hours, which is so hurtful to them under our present system. It would probably be best for each horse to go two journeys. Harrowing, if done with three horses and 5-yard harrows, would cost 2s. per cent. less for manual labour than it now does. Of course the land must be on the flat, which is now generally preferred. If on stetch work, the 4-yard is preferable to the 3-yard work. Furrows are convenient for horse-hoeing, drilling, and inasmuch as the horses walk much easier, for harrowing too. Horse-hoeing both for corn and roots is greatly on the increase. Roots as well as beans are, I think, easiest kept clean when on the ridge. Upon the lighter lands we shall, I expect, eventually see the roots set out by the horse-hoe, though they cost double for singling. There would no doubt be much less hoeing required if we always seeded upon stale land, harrowing it a fortnight before hand. Drilling upon farms of over 200 acres I recommend being done with 3-yard drills. Having to slip the drill through the gates is inconvenient, but gradually we should convert our nine feet into ten feet clear gateways, resting the gate-head on the hut when shut. Wide (say from nine to ten inches) drilling diminishes considerably the horse-labour, and in hoeing the manual labour as compared with the old 6-inch drilling. No improvement is likely to be made in rolls. I have sometimes found it an advantage to attach a very light harrow behind the light rolls, so that the surface of the land is somewhat pulverised, the better to keep out the drought, and absorb benefits from the atmosphere. As to haymaking when cut and made by machines, and gathered by an American rake or toppler, I do not see where we can economise further. The elevator spares much hard work, but it is at present too expensive for small farmers. Reckoning interest of money and repairs to justify purchasing they ought to be worth £6 or £7 a-year to a farmer. On large farms they are probably worth this. For harvesting the modern self-delivery reaper is a first-rate invention. The gain is not only in its speedy cutting, but in leaving the corn so much better for tying. As a gaveler, I think the toppler is too little valued, as it saves so much time and labour at a critical period. I have used them for eight or ten years, and have not observed that if handled with ordinary skill they knock out more barley in gaveling than when done by forks or rakes. If they cost three times what they now do, I should still use them. My father years back invented a revolving gatherer with three rows of teeth, which did very well. Yesterday I saw at Bury one which, carrying two swathes at a time, and being lighter, is an improvement on his. Thrashing is best put out to men at per comb, and should be so arranged that the machine comes upon the farm only half a-

dozen times a-year, as its removal away often costs in manual and horse labour from 20s. to 25s. On small farms, it is as well to place a wheat and barley stack together, so that they can be thrashed without moving the machine. For root storing it answers very well to fill a barn once with corn, thrash out early, then fill it with roots, having so placed a stack that when threshed the elevator can, through a window, cover them with straw. It is a good plan to clamp roots near a cornstack, so that when the latter is thrashed they can by the elevator be covered with eight or ten feet of straw, particularly if they be placed close to the root house, so as to require no further carting. Some farmers (and I am inclined to agree with them) think that chaff-cutting is now carried on to an excess. It is supposed the more chaff we, so to speak, smuggle into our cattle, the better. How so? Stock will not fatten upon it, and it prevents them cutting and masticating for themselves, which is more beneficial; particularly, I think, in case of cart horses. From them, where an excess of cut chaff is given, it can be seen to pass from them merely bruised and quite whole. I am led to form an unfavourable opinion of giving much cut chaff, from having observed bullocks do better on finger pieces of root than on minced. Fences are a great expense to keep neat and effective, and foul the land, hence we should have as few as possible. I am not sure whether clipped ones are not the cheapest, the clipping being put out by the score rods. It is best to put out work, but the changeableness of the weather renders it difficult at times to do so. Manure filling and spreading ought always to be done by the piece and stint. Hay carting and stacking might also in most cases be done by the acre. Unless men have been accustomed to take work they are generally indifferent judges of it, consequently the masters must rely very much upon their judgment in such matters. The suggestions I have made are rather those arising from recent thought on the subject than from my own practice. Most of them are open to discussion, which I now invite.

Mr. LEECH thought barley after fallow wheat bad farming, but barley after clover wheat was good farming. If they had three or four layers and ploughed them up just before harvest they would not want more than half the labour in keeping land clean.

Mr. BIDDELL asked Mr. Leech for his experience in reference to the two-year-old layers.

Mr. LEECH said he had had no experience as to that, but he was now beginning the system.

Mr. J. E. WRIGHT observed that the paper which had just been read contained many valuable hints, and one occurred to him as being very important, and that was the use of cut chaff. He (Mr. Wright) thought there was in the present day a deal too much used. He this year lost a valuable mare owing, he believed, to his man carelessly giving it too much cut chaff. If given at all it ought to be mixed extensively with other articles of food. With reference to the two-year-old layers, his experience was that no kind he had ever left on the land had answered but sainfoin. When red clover was left a second year he found the land got very foul. He thought it possible to economise labour if they reverted back to the old four-course system, sheep-feeding, &c.; and if wages continued to advance they would have to keep less horses and employ less manual labour. It seemed to him that they were now paying what he might term a fictitious price for their labour—they did not get value for their money. There were some good men who earned the money which was paid them, but there were some men who received 2s. 2d. or 2s. per day whose labour was not worth 1s. 6d. to the farm. They could no more go on at that rate than certain societies could go on paying men 9s. per week to wear a blue ribbon and do nothing.

Mr. VINCE remarked that the labour question had assumed a serious form. When he first went into business he calculated that 27s. per acre was all that he would have to pay, and he found he could manage it at that; but now he found that his labour cost him £3 per acre, which, upon an occupation of 450 acres, made all the difference, the amount being £900, whereas, at 27s. per acre it would be only about £600. Some of it was to be accounted for by the extra cropping. He agreed with the observation of Mr. Wright, that if they fell back upon the old four-course system they would be benefited, though the public might have to pay a little more for the produce. He (Mr. Vince) also thought that the two-years' green crop would not answer in anything excepting in sainfoin. He tried clover once, and then he found that it would not answer.

If they had more meadow land the expenses would be less, and so they would be if the Scotch system of growing three green crops before ploughing were adopted. He thought labour had reached its maximum price, and his belief was that there was a surplus of labour in almost every parish in the neighbourhood. He concurred in the remark that had been made, that farmers did not get the value for the money which they paid to the labourers. For his own part he did not mind paying a good man good wages, but it was necessary for farmers to look closely after their men.

Mr. W. BAKER complimented Mr. Biddell on the manner in which he had introduced the subject, and said that gentleman always brought a vast amount of practical ability to bear upon every subject which he introduced to the Club. As to the question of labour, he (Mr. Baker) was sure that if they fell back upon the four-course system they would find labour a much lighter item in their expenditure. He had adopted the five-course system; he had taken white straw after white straw, but he found in the long-run that he was money out of pocket. There was extra cleaning and other work to do, but the land could not be kept so clean as under the old system, and to that system, he, believed, they would have to revert. He considered that they had spent a good deal of money that might have been saved if they had laid down the principle followed by their forefathers. We might pride ourselves in being in advance of them, but the rules followed by our fathers were in the main the right ones; and whatever people might say about artificial principles it was impossible to make them succeed. It was possible to force a principle, but in the end it would not be successful. It had been said that the agricultural population was decreasing. In some of the outlying districts this might be so, but in centres like Lavenham and Melford there was actually a surplus. It must not be taken for granted that the agricultural population was diminishing. There was still ample labour for all agricultural purposes. He contended that there was greater elasticity in agriculture than many people suspected, and that if they studied economy of labour they could, if so disposed, create a surplusage of labour. He pointed out that something like 1,000 men who were in the militia had been called up, and they were not at all missed from the rural parishes; and he added, that for his own part, he did not employ so many men as he did a few years ago by four or five, and he actually found his work in a more forward state than when he carried on the five-course system. If higher wages were paid some men would be greatly benefited, but it must be at the expense of others, who would have to walk about in idleness. In the course of further remarks on the labour question, Mr. Baker submitted that the agricultural labourers had benefited as much by the increased prosperity of the country as any other class, and he instanced wages which were paid now, as compared with formerly. With respect to the use of cut chaff, he expressed his belief that to give large quantities of it to horses was very injudicious, and said the saving (if any) by the use of it was more than counterbalanced by the losses of animals which would be sure to ensue.

Mr. LEECH said he believed he used as much cut chaff as most people. He fed 65 score ewes on it, and a great many horses. The plan he adopted was to grind it with one of Maynard's machines, and allowed it to lay a long time, and mixed it with corn chaff, and if this were done no evil results would follow. He should like to cut barley straw directly after it left the machine. If it was left out all night, and there was any rain, it would be nearly spoiled. If cut chaff was used directly it left the machine it was then injurious.

Mr. BRAND said he did not agree with Mr. Biddell's suggestion as to letting out the ploughing. A good deal depended upon good ploughing. If land was not properly ploughed it cost more to clean it afterwards than if it was well done at the first. The men were paid so much per acre they would hurry over the work, and the horses would be unfairly taxed. He contended that it was the business of farmers to use two-year-old horses, and to work them till they were worth more money, and then to sell them. It must certainly be a wrong policy for a farmer to work a horse out—their business was rather to make them useful, and his fear was that if men were allowed to use young horses on piece-work they might spoil them. He agreed with what Mr. Biddell had said on the subject of fences. No doubt there were miles of useless fences in that country; they were a nuisance to everybody, to

master and men. The trees impoverished the land, and thousands of weeds were blown from the hedge-rows and scattered over the field. For his own part he believed it quite possible to have large fields on heavy land. If it was thoroughly well drained there could be large stretches, the larger the better. It was easy to fold sheep by means of iron hurdles, which until recently could be had at a moderate cost. It was better to fold them than to place them in a small field with ditches all round, for the stock were sure to be in the ditch half the summer time, and all the manure was washed away and spoiled. With regard to the question of leaving higher stubbles, he should like to know what was the object in doing that. He should like to know if that straw which would be left on the ground was worth as much to the ground as it would be if carted to the homestead. That straw was worth money, and he could not see the policy of leaving it on the ground. If they had more straw than they really wanted, why not sell it? But he did not find that he had more straw than he could use. With respect to storing mangolds, the plan he had adopted was to throw the roots into big heaps, and then to thatch them, and if kept water-tight he did not find that the frost hurt them. It was well to let the roots lie a little time before covering them up. In reference to the subject of economy of labour, many people seemed to think that if farmers could let their work the present difficulties would be overcome. He did not hold with farmers letting their work. They got more done no doubt, but the work was generally of a very indifferent kind. No doubt there were many useless jobs which the men were set to do, and many farmers kept three men where they had no business to keep more than two.

Mr. GARDINER said he could never see the policy of growing mangolds, considering the cost it involved. He knew a gentleman who was as good a farmer as any in the county. He was in the habit of growing fifty acres of mangolds. He had to put on twelve loads of manure per acre, beside some artificial. He had to go to the expense of carting them home, and to keep them; but what virtue was there in them to make corn grow? He (Mr. Gardiner) calculated that they cost £15 per acre, considering that the land was impoverished for several crops following.

The CHAIRMAN then summed up the discussion, remarking at the outset that they, as a Club, were greatly indebted to Mr. Biddell for his interesting and practical paper. There was one thing, however, that gentleman had omitted to refer to, and that was as to the use of agricultural machinery in economising manual labour. He (Mr. Hawkins) did not intend to argue that the use of machinery necessarily economised labour, but there was no doubt machinery had done very much for the farming community. If they could get their grass and their corn cut quickly it was a great advantage, but as to how far labour was economised in a financial point of view was quite another matter. In the course of the discussion which had taken place, it had been suggested that one way of meeting the labour difficulty was to revert back to the old four-course system. He did not agree with this, and for one was not prepared to advocate the plan of economising labour. They had the public to feed, and under the four-course system the land would not produce what it did under the system more generally followed. Besides, he did not now consider it necessary. Many landlords had been very kind, and had given leases to persons who worked the land fairly and consistently, enabling farmers to farm just as they liked. They could grow all they liked, and such farmers would hardly find it to their interests to economise labour in the manner suggested. The labourers had very greatly benefited by the system which had been of late generally pursued in the cultivation of the land. They now had opportunities which they had not enjoyed for, he might say, generations. One-fourth of the land was not now under fallow as formerly, but almost the whole of it was under cultivation, giving men the opportunity of being employed. Mr. Hawkins referred to other matters which had been raised in the course of the discussion, and he said he did not think that farmers would suffer so much from emigration and migration as many would lead them to suppose. He also spoke of the happy position the farmers were in just at the present juncture, owing to the very favourable season they had enjoyed for farming operations.

Mr. BIDDLEL then replied. He was very glad to find so practical a man as Mr. Leech agreeing with his views as to having two years' green crops and taking two years' corn crops,

if they had to pay a higher price for their labour, which he (Mr. Biddell) did not anticipate. One of the greatest arguments against it was the dryness of our climate. The grasses, &c., would not grow here as they did in those places where there was more rain; but at the same time he thought they might find it to answer their purpose to adopt that system. He argued that red clover would hardly do to lay two years, but he imagined that they could have layers composed of mixed grasses that would. A mixed layer would he thought grow profitably for two years. Mr. Vince had referred to the large increase which had taken place in the cost of labour since he had been in business. That fact alone must rebut a good deal that had been said of late about the labourer not having shared in the general prosperity of the country. The returns showed that there had been a decrease in the agricultural population, and this fact, coupled with the other that farmers paid a great deal more, was conclusive to his mind that the labourers had got on in "the world." The position of the labourer had been and might be benefited in this way, but he had no confidence in those artificial attempts which had been made of late to force up the rate of wages faster than was reasonable. Several speakers had recommended that farmers should go back to the old four-course system. That was the very thing he was getting tired of. When he recommended the two years' layer and the two years' corn crops, he did not of course recommend that the whole farm should be so treated; but he was convinced they would require much less manual labour under that system than under the four-course. With respect to Mr. Brand's remarks, a good deal that gentleman said might be perfectly correct provided everybody had nice level land as he had at Waldringfield, but the case might be different on the strong heavy lands such as were to be found in the neighbourhood of Lavenham. He (Mr. Biddell) had come to the conclusion that good horses were quite as cheap to work on land as colts. As to letting the ploughing, it should be borne in mind that the horses would not have to go the hours they now did, and to his mind the less the number of hours that horses were out the better, as they were often left standing about when they were hot, which was their ruin. If men were allowed to earn a good wage there would be nothing of the sort, as the men would keep the horses going, and they would go fewer hours than they did now. With respect to leaving tall stubbles, he remarked that it had been said by an eminent agriculturist that straw was worth 15s. a ton to plough in, and if that were so it was hardly right to cart off all they did, straw being so bulky a commodity that it could not be taken to a distant market with profit. It was hardly right to cart lots of straw off the land to make a lot of inferior muck to cart back again—it was certainly wiser to make better manure with less straw. The Chairman had charged him with having said but little on the subject of machinery. He was a thorough advocate for the use of reaping machines. Last year he spent something like £70, and as far as he could see the benefits were shared between him and his men. They had received just as much benefit from the machines as he had. How long farmers were to go upon that system he did not know. A vote of thanks was accorded to Mr. Biddell for his admirable paper.

THE ROYAL AGRICULTURAL SOCIETY'S MEETING AT BEDFORD.—This, by the entries, will be the largest show, alike of stock and implements, ever held; all the Cattle classes being capitally filled, and the nominations in the several sections of horses being something extraordinary.

THE BATH AND WEST OF ENGLAND MEETING AT BRISTOL.—Mr. B. St. John Ackers' white bull Cymbeline was highly commended in the old class of Short-horn bulls. It is alike discreditably and an act of injustice to exhibitors that the Bath Society does not issue an official and intelligible prize-list, after the manner of the Royal Agricultural Society.

AN ABERDEENSHIRE FARMER IN CANADA.—I have resided forty-five years in Canada. Thirty-five years I have been a farmer. I began in the woods two miles from a neighbour, and, I may further state, I am an exception to the general rule. I paid £100 for a half-lot of 100 acres. I had £150 in money, a strong healthy constitution, a wife and three infant children. There was no school or church, and we were 15 miles to a mill, 14 miles to a store, and I had to carry my flour on my back two miles, and had to go seven miles to buy a ham, and that through the trackless forest, with the wolf, the bear, and the deer. I bought a yoke of oxen, and lost one by death, and was cheated out of the other. My best cow got her leg broken, and I lost her. My wife was taken sick, and was so for three years, and could not wash a cap for her head. I had almost lost my life when rolling logs on a heap, had my neck almost broken and my teeth thrust out by the blow, and for one year was unable to work. I paid 42 dollars for two visits to an M.D. I have lost ten cows, besides oxen, sheep, and hogs. I have had crops. I have got 30 bushels of wheat to an acre, and at other times not two bushels. I paid 16 dollars an acre for clearing and fencing, and many a night have had to work until nearly morning fighting fire from my clearing. After all, I am considered one of the most successful farmers. When I look around, and see how few of my old neighbours are left, I am lost in wonder at seeing how many have died. There are just a few left, and our burying grounds are well tenanted. We had ten children, nine of whom are alive, but the money bills for medicine are incredible, and to tell you the truth no pen can do justice or portray the hardships of bush life. The winter is excessively cold, and to-day we may plough, but not sow. Summer is excessively hot. A labourer with you can work out off doors at all times. Not so here. We have six months steady winter, and about four months warm. The frost a few days ago was two feet deep, and our fall wheat is badly winter-killed. It won't be half a crop. There is no hay; the grasshoppers took it all, and the Colorado beetle ate all our potatoes. There is nothing we plant which will pay for the labour, and our youth are leaving and going South to the United States. And yet we pay idlers to go and tell what a fine country Canada is. Those who are persuading your people to come here are not your friends. They are paid to do so. I am not. I tell you, beware and look ere you leap. I may send you the report of the Crown Lands. There are nearly 70 townships surveyed, but beware, be not too confident. You gain little by coming to Canada, and lose much. If I made a mistake in coming here, I hope others may profit by my experience. I am from Aberdeenshire, and a graduate of the University. I am now the owner of five good farms, and would gladly sell to get away. For the farm I live on, I was offered a thousand pounds twenty years ago, and I cannot now sell at any price.—*SCRIBENDER in the Banffshire Journal.*

FOOT-AND-MOUTH DISEASE.—A supplement to the *London Gazette* of Tuesday contains the following Order, which may be cited as the Foot-and-Mouth Disease Order of 1874: Article 28 of the Animals Order of 1871 shall extend to authorize a local authority to make regulations for prohibiting or regulating the movement, as therein provided, of any animal affected with foot-and-mouth disease; but nothing in this Order, or in any regulation of a local authority thereunder, shall be deemed to authorize the movement of any animal in contravention of section 57, or of any other provision of the Act of 1869. Article 5 of the Animals (Amendment) Order of 1873 is hereby revoked. When an animal become affected with foot-and-mouth disease while exposed, or placed, or being carried, led, or driven as in section 57 of the Act of 1869 mentioned, it may, notwithstanding anything in that section, be, with a licence of an inspector of the local authority authorized to issue the same, but not otherwise, moved for purposes of feeding, or watering, or other ordinary purposes connected with the breeding or rearing of animals, to any land or building in the occupation of the owner of the animal, or for slaughter to the nearest slaughter-house, or some other slaughter-house approved by the local authority.

SALE OF THE COBIAN STUD YEARLINGS.—At the second sale the thirty-three lots realised 9,570 gs., or an average of 290 gs., which shows a falling off compared with last year's, when an average of 383 gs. was obtained for thirty-four lots.

EAST LOTHIAN FARMERS' CLUB.

THE CHEMICAL DEPARTMENT OF THE HIGHLAND AND AGRICULTURAL SOCIETY.

At the monthly meeting, held at Haddington,

Mr. GAUKROGER (Southfield), in the chair, said: The subject for discussion to-day is "What should the Highland Society do in regard to the chemical department in order to confer the greatest benefit upon the agriculture of Scotland?" It is not necessary to refer to the importance of a scientific education or of the establishment of an agricultural college for Scotland. As you will observe our discussion refers only to what we think the Society should do in regard to its chemical department. The matter we have to consider is of paramount importance to every person engaged in agriculture. Let anyone consider for a moment the amount laid out for artificial manures and feeding stuffs in this country alone, and he will find that in very many cases the sums paid for them is equal, if not above, the rent of the land. There are many gentlemen in this room who pay more, year by year, for these articles than they do for rent and taxes combined. If, then, this subject is so weighty to us in a given district or a county, it is necessarily more so to the agriculture of Scotland. I believe, moreover, that the sums paid by the farmers of Scotland over and above what the manures are worth from being deficient in quality is incalculable. Farmers do not generally get their manures analysed, but the facilities for doing so would be considerably increased and the cost trifling were the Highland Society to appoint a first-rate chemist, with headquarters in Edinburgh, and, if found necessary, appoint assistants under him in different districts. I am not at all clear that it would prove beneficial to the department or promote the interests of agriculture were the Society to endow a Chair of Agricultural Chemistry, as is advocated in some quarters. I have some misgivings in this respect. What I think we desiderate is a first-rate, active, energetic chemist, whose whole time should be devoted to, and position depend upon, the manner in which he does his duty to the Society. Supposing the Highland Society were to offer £400 or £500 a year as salary, and £100 each for two or three assistants, this would, with the large amount of fees collected, even were the fees on a very low scale, put this department in good and thorough working order. The Society is wealthy, and nobody will gainsay that one of the best purposes to which it could apply some of its funds is in providing a high-class and well-appointed chemist. With these few remarks by way of opening the discussion, I shall now be glad to hear what the members have got to say.

Mr. SMITH (Stevenson Mains) said: Since our last meeting, when this subject was proposed, a good deal has been said and written on it. To a certain extent, therefore, our discussion has been anticipated. However, as the directors have still to decide what form their efforts are to take, it can do no harm to talk the matter over here. A good many suggestions have been thrown out for the Society to adopt, some of which I approve, others I do not. That the Society should make arrangements and apply its funds for the purpose of having its elements of agricultural chemistry taught in our public schools, I do not approve of. I think this is matter for Government or for the country at large to see to. We have just had an Education Act passed, an Act that will by the carrying of it out entail great expense on the community at large, but I hope, and have no doubt, it will be the means of greatly improving the education of the people, and if, as I have suggested, the elements of agricultural chemistry are taught in all our public schools, it will be paid for by the people, and they will reap the advantage in course of time of that education being brought to bear on the progress of agriculture, which is a nation's wealth. Sir, it seems to me the Society ought to appoint a first-class man as chemist, and one who would devote his whole time to the interests of the Society and agriculture, and be paid a fixed salary for doing so. I would deprecate the Society's chemist being to a certain extent dependant upon fees for analysis of manures, &c., as part of his remuneration. Much harm has been done to the pockets of farmers by the facility whereby manufacturers of manures can have a chemist's analysis of the commodity they wish to sell written out in a form agreeable to their own requirements, and in a way in which they may mislead many

farmers who are not themselves acquainted with analysis. It is of the utmost importance that farmers should have the means of having the commodities they purchase, whether manures or feeding substances, tested by analysis, conducted by an able chemist who is independent of the fees drawn therefrom, and I see no better way of getting at this than through the agency of the Highland and Agricultural Society. Another very important duty of the chemist would be to bring the science of chemistry to bear on practical field experiments. By this means the cultivation of land may become more of a science than it is at the present day. For this purpose the Society would require the services of a practical farmer. These experiments I would have carried out on different farms in different parts of the country, and not on what is called a model farm. I anticipate there would be no difficulty whatever in securing ground in different localities for this purpose.

Mr. PATON (Standingstones) said: Before discussing the subject in question, perhaps we might look for a minute at what the Society has been doing in the past. I understand the Society was at first formed for the advancement of agriculture generally. At that time farming was not conducted on such scientific principles as it now is. Then there was no such thing as guano or nitrate of soda used. What are now called artificial manures were not even dreamed of. As the funds and membership of the Society increased, more money was given for the best animals and implements exhibited, and to such perfection have these animals been brought that it is doubtful if much more can be done in that direction. By-and-by bones and rape dust began to be used as manures. The former suited light soils, the latter told well on clay. It was found, however, that by applying acid to the bone they could be used profitably on heavy soils, as well as on light. Some farmers, a little more enterprising than others, made double the quantity they required themselves, and supplied their neighbours, and by-and-by, finding that supplying their neighbours paid even better than supplying themselves, made a business of it and left farming for good. However, after a little practice, the clever ones found that, with the help of a little acid and a pinch of guano, they could make artificial manure of any given thing, and the best of it all, at a handsome profit. Some, by accident or mistake perhaps, forgot to put in the bones or guano, and although the honest farmer did not know any difference, the turnips proved badly. Hence the value of a chemist to prevent such mistakes recurring. In recent years the chemist of the Highland Society, as well as many other chemists, have been invaluable to the farmers of Scotland. But is it not just possible that too much reliance may be placed in chemistry? Can it be trusted in every case that it takes in hand? We are almost inclined to think that, if relied too much upon, in some cases it is apt to mislead. Chemists tell you that if you apply ammonia and phosphates to almost any crop they will act like magic, especially if the soil be poor or the crop sickly, and practice corroborates this. But, again, chemistry will tell you that rapecake will feed a bullock as well as oilcake, or that the tops of turnips contain as much nutriment as the bulbs; but to this practice decidedly says, No. Or again, it is found by practice that a manure composed of dissolved bones and nitrate of soda, analysing the same as the best Peruvian guano, will not produce effects equal to the latter. On this account, I fear we have been trusting too much to theory alone, both as regards cakes and manures. We know that if we get pure guano, or pure oilcake, or a well-made manure containing so much ammonia and soluble phosphates, it is sure to show good results, if properly applied under favourable circumstances. To know if we obtain this, however, is the question, and the Highland Society's chemist has, at a comparatively moderate charge, been ready to assist farmers by analysis. Since the appointment of the late professor, however, the business done in manures and cakes has assumed such a gigantic form, and the adulteration has been practised, in many cases, to such an extent, that the Society ought now to have the best chemist that can be had entirely for itself. The Society is wealthy. The question is of the very utmost importance to the country

generally; therefore let the salary be liberal, and a good man will be got, seeing that such an enormous sum is spent every year by farmers on what is called artificial manures and cakes, and these, in ninety cases out of a hundred, the farmer knows little himself about. How can he? I doubt if even the chemist himself is very sure sometimes what to say about it. Such being the case, will the Society do what is right if it does not do its very best to protect the farmer and the honest dealer, and put down the rogue? One or two assistants, not apprentices, paid by the Society, would be also requisite to do the thing well. By attending the principal grain markets now, and then farmers would be able to consult them readily and get their advice, and by charging a small fee for such advice I have no doubt but they would make money by their visits. Farmers as a class don't care to send samples to Edinburgh, far less to go there and consult a chemist. Some may think this impracticable, but I hold that it would do more good to prevent farmers being victimised than anything that has yet been done by the Society. I hold also that by the chemists meeting and talking over matters with the farmers both would be greatly benefited; for how can any one be a thorough agricultural chemist unless he knows something practically about farming? The farmer and chemist must work together to attain the best results. Adam Smith, in his "Wealth of Nations," says, and I believe it has never been contradicted, that "no equal capital puts into motion a greater quantity of productive labour than that of the farmer." Seeing that since this was first written about three times the amount of capital is now required for the same extent of land, is it not to be deplored that the farmers of Scotland still go about their business in a very haphazard way, groping in many cases in utter darkness, and investing their capital in many things not the right ones? Farming is in this respect unlike other businesses. How would a corn merchant or a butcher succeed if he did not know to a nicety what he was buying from the farmer? Still, it is for no want of shrewdness that the farmer is so much at the mercy of the unscrupulous merchant. Let any retired successful merchant or tradesman begin farming, and he finds he is equally at sea when he goes to invest in manures or cakes for his farm. Hence the crying necessity for the directors of the Society exerting themselves to the very utmost to secure to the farmers of Scotland full value for their money. Here I would find fault with the Society in the past. Cases of the grossest adulteration came to the knowledge of their chemist, still that was kept quiet, and no names were given to the public. I ask if that was creditable to the Society, or was it fair to the farmer or the honest dealer? It almost showed a want of moral courage on the part of the Society. The Royal Society of England does very differently, and several such cases have been exposed. I hope in time to come that ours will do the same. I know the fair dealer wishes it, and it would only be a matter of kindness to the unprincipled dealer himself to be stopped in his ways of wickedness. The profits in many of these manures and cakes are sometimes tremendous. At all times they are good, and when an agent can be allowed in many cases from £1 to £2 per ton, it is not difficult to imagine what the maker's profits will be. The whole thing bears absurdity on the face of it. Go into any of the principal corn markets at present, and I am confident I am not overstating when I say that at least every third man and sometimes a larger percentage is in the manure, cake, or seed trade. This very circumstance shows that the trade is profitable. They must all do more or less business or they could not live. What we ask the Society to do, then, is to "save us from our friends." And again, I repeat, by having a chemist authorised by the Society appearing pretty often, especially in spring, at our markets, it would, I hold, be the most useful and best thing the Society has yet done for the benefit of the farmers of Scotland. A great deal of late has been written about education generally, and not a little about agricultural education. The other week we had a professor of agriculture, and also a factor, strongly recommending the appointment of an agricultural chemistry chair. To that I would just say, what might the average attendance be expected to be? Surely there are chemistry schools enough already, and any one who has a taste for such things can have his attention directed to any particular subject in the laboratory. I hold that there is little need for a chair of agriculture, and less for one of agricultural chemistry. Fifteen years' experience has proved what I say as regards the former

to be correct, as witness the very small attendance—not that there is anything to be said against the professor, very far from it, but it is found that more can be learned as regards practical farming from a shrewd rent-paying farmer in his every day work on his own farm than within the walls of a university. But some may say it is surely a good thing to be able to analyse your own purchases of manures, &c. True, but though some may be able to do that while at the classes, I doubt if any could trust themselves to do it after being one or two years busily engaged on a farm. Their chemical stuff get old, their minds are fully taken up with the practical work of the farm, and if they are keen farmers they would rather hand it over to the chemist, who is daily at it, than be bothered, and perhaps fail in the end. Besides, the merchant would not take the farmer's analysis. Then, again, an agricultural station or farm, under the direction of the said professors, have been spoken of—and near Edinburgh, of course, it would be. That might suit proprietors' sons or any who wished to make themselves a little acquainted with agriculture. I confess it is very pleasant to attend these lectures, but anyone who has been brought up on a farm, or who has been a year or two with a practical farmer, learns very little indeed. I speak here from experience, and I feel quite confident that for any young man to spend three or four years at an agricultural college, or on a farm connected with it, is not taking the best means to become a thorough practical farmer. Should he have a great taste for science or agricultural literature, he is almost sure to turn his attention to that, and when he gets a farm of his own he does not care for looking after the details, and is no likely to have a real interest in stock, and therefore will never farm with pleasure, and his heart will never be in his work; or should he not have a taste for his studies, then he is losing his time and money, is very apt to get fond of bitter beer and tobacco, and idleness, and perhaps set a bad example to those whose intentions were good. But supposing a model farm were started near Edinburgh, not one of the farmers of that district would change their present style of farming, and any experiments made there would be of little use to those living twenty or a hundred miles distant. So far as experimenting goes, to be worth anything it must be done in different districts by some practical rent-paying farmer who has a taste and a pleasure in conducting such experiments. In a word, I doubt if chemistry will do much more for some time to come than it has already done in unfolding the mysteries of the soil and vegetable and animal world, but it has come to a great height already, and it only requires that that knowledge be properly directed and brought to bear practically on agriculture. A farmer knows, or ought to know, something about most of what he buys, with the exception of manures, cakes, and seeds, but in all these he is often taken in. Therefore let us have good chemists always at hand, under the superintendence of the Highland Society. A premium was lately given by the Society for an essay on "What has Chemistry Done for Agriculture?" It strikes me forcibly that chemistry has done a precious deal more for the manure merchant and the lairds than it has done for the tenants, for were the farmers' profits not larger some thirty years ago, when £100 went as far as £200 does now in stocking a farm, when rents were little more than half what they now are, and when an artificial manure merchant of the present day would have been looked upon as a curiosity and a lunatic had he presented himself in Haddington market with his bottles and samples of

Calces o' fossils, earths, and trees,
True Salmarinum o' the seas,
The farina of beans and peas,
He has in plenty;
Aqua fortes—what you please
He can content ye?

Mr. SHERRIFF (Salteats) paid a high compliment to the attainments of the late chemist of the Society—Professor Anderson. How the society were to fill Professor Anderson's place was a difficult question to answer. He agreed with Lord Kinnaird's views on this subject, expressed in the letter sent by his lordship to Mr. Wilson, Eddington Mains, and published in the newspapers.

Mr. C. SMITH, Whittingham, said there could be no question about the practical knowledge of agriculture being of the greatest possible importance. There could be little question also that the man possessed of the scientific knowledge bearing on agriculture, when combined with practical experience, was

in a more advantageous position, was a superior man, and was more likely to be successful than the mere practical farmer. At this juncture they ought to express their opinions, and look to the future as well as to the present. No doubt at present the great interest with farmers was to secure unadulterated manures and feeding stuffs: but, keeping in view what was desirable for the future he held it was not enough that the Highland Society should simply procure a chemist of high standing. They should also endeavour to make provision for, and encourage the education and training of the young in the sciences bearing on agriculture. To the young they must look for the future of agriculture, and while it may have been that in former times men of ordinary qualifications were sufficient for developing and carrying through their farming operations with the then knowledge and the then use of implements and light manures, they were at a very different time of day now. It would be a retrograde movement altogether if they were in the least degree to slight anything calculated to forward or raise the educational and scientific attainments of all those connected with agriculture. Some men seemed to think there was no field for the mind in agriculture—that it was mere clod-hoppers who were engaged in it, and if a man wanted scope for the intellect he must turn himself to something else. That was a delusion. Of course if a man stuck merely to the practical, there might be something in the direction of the treadmill about it, but if he occupied his mind investigating day by day and studying the phenomena around him, he will find plenty of mental occupation about farming. They should give forth no uncertain sound on the question now before the club. So far as the Society's means and influence could go, scientific education should be encouraged. The Society's aid and influence could not be better bestowed. A man of science was apt to be rather ignored because he was not practical, but what was wanted was a combination of the scientific and the practical. If they got the young farmers thus trained, he was sanguine of great progress in agriculture.

Mr. SCOT-SKIRVING said he was glad he had proposed this subject to the Club, for it had elicited a very interesting discussion. The Highland Society had a capital of about £60,000; but it was not in their power to do so much as had been proposed. He would have them first to consider what chemistry had done in the past for agriculture. He had a profound veneration for science, and he might say he was profoundly ignorant of it; but, as a practical man, he protested against the statements that had been circulated by certain distinguished parties of late to the effect that science would increase the produce of the soil by from one half to one-third. He did not believe chemists or scientific men had so much to teach them as they said they had. Why, if they looked at the past, they would find that they were not indebted to chemistry for the application of bones to the land, which was one of their greatest improvements. They owed that to a Yorkshire farmer. He (Mr. Scot-Skirving) had found out how to make the grain crops grow, and he challenged all the chemists in Europe to tell him how to make these crops stand up. If they applied plenty of good manure they could make crops grow, but they could not make them stand. As he had already indicated, he had no wish to slight the importance of science, but the reverse; and he believed that gradually the scientific man and the practical man working together would result in a considerable increase in the produce of this country. As to the appointment of a first-class man as a chemist, he had no hope of getting such under £1,000 a year. Then the question came to be whether, having regard to the available funds of the Society, they would not have to fall back on the second-best class, and perhaps appoint three or four young men—stationing one at Edinburgh, one at Glasgow, and one at Aberdeen, and so on.

Mr. DURIE: One at Inverness.

Mr. SCOT-SKIRVING: Yes; perhaps one at Inverness. He objected entirely to Mr. Smith's proposal that the Society should educate farmers' sons for them. It was not the Society's duty at all to relieve the parents of this obligation. To show how much chemists differed themselves, he referred to a paper on milk adulteration lately read before the Physical Society, of which he was president, by Mr. Falconer King, analyst for Edinburgh, in which the author endeavoured to show that another man, whose name was longer and better known, knew nothing about the subject. He did not say which of the two was right, but the fact was that the one was anything but

complimentary to the other's professional worth. The science schools and colleges on the Continent and in America had been referred to as producing results far ahead of what could be found in Scotland. Well, it was only the other day that Mr. Saddler, an East-Lothian farmer, was asked to become a professor in one of those American colleges, and an East-Lothian farm-steward had just been offered a situation as practical manager of one of these institutions. He had been in most of the countries held up to them as examples in respect of scientific education, and he failed to see any such superiority in their agriculture as some recent writers and speakers would have them to believe. He was rather inclined to have a professor of agricultural chemistry in the University. Because, if they were to be such fools as to make their sons farmers—to keep them wasting their brains, time, and money making money for other people—the best thing to do was to give them a good general education, including everything that teachers and science could give them.

Mr. SHERRIFF observed that Mr. Scot-Skirving, being a director of the Highland Society, naturally wished to keep down expenditure. He denied that they were not indebted to science and chemistry for the successful application of bones to the soil, and he hoped it would not go forth as the opinion of this Club that they were not.

Mr. C. SMITH said he did not entertain the idea that the Highland Society was going to educate farmers' sons for them. Mr. Scot-Skirving had misunderstood him; he only meant that the Society should lend its influence and support as far as possible to the scientific teaching of the young.

Mr. HARVEY (Whittingham Mains) thought the Highland Society should take every available means to put down dealers in spurious manures—have them exposed. He did not care much about the appointment of a professor of agricultural chemistry. Nor was he particularly in favour of a model farm. The Highland Society should advertise for a first-class chemist for themselves, and he thought this Club might send a deputation to the directors of the Highland Society on the subject.

Mr. ROBERTSON (New Mains) thought if they gave a man £1,000 he would have enough to do to spend it. Surely they could get a good chemist for at least half that sum. Field experiments should be conducted in different parts of the country, and these ought to be reported on periodically by a practical as well as scientific man. They had among the manure dealers very respectable men, but there were also those who sold spurious articles. He knew one gentleman who was offered from 20s. to 30s. per ton commission for selling manures, the total price of which was only £6 a ton. He knew also an individual who was selling hundreds of tons of that very article in a county not far from Haddington.

Mr. DURIE said it was desirable that this Club should come to something like a finding on the subject. He moved: "It is the opinion of this Club that the appointment of chemists in Edinburgh, Glasgow, Inverness, and Aberdeen will be the greatest chemical advantage to agriculture; the principal chemist to be resident in Edinburgh, and small fees to be charged for analysis."

Mr. ELDER (Barford) seconded.

PROVOST BRODIE (North Berwick) suggested that a chemist should be appointed to inspect the manures, and he had no doubt the agents would be glad to pay the fees if the farmers would do their duty, and only purchase from those who showed the result of such an analysis.

Mr. STEVENSON (Gullane) believed the Highland Society would confer a benefit on agriculturists by publishing cheap reprints of valuable works on agriculture.

Mr. ADAM SMITH moved: "That the Highland and Agricultural Society should appoint a first-class man as chemist, who would devote his whole time to the interests of agriculture, and be paid a fixed salary for doing so, any fees charged for analyses to be paid into the funds of the Society, the duties of the chemist being to make an analysis of manures and feeding stuffs, &c., and, with the assistance of an experienced practical man to conduct field experiments in different parts of the country, thoroughly investigating and reporting on the same."

Mr. CHRISTIE (West Mains) seconded the motion.

After a good deal of discussion as to whether the discussion

should be adjourned or not, a division took place, when 10 voted for Mr. Smith's motion, and 4 for Mr. Durie's. Several members declined to vote, on the ground that the debate should have been adjourned. Mr. Smith motion was, however, declared carried.

The Game-law Bills are to be discussed at the next meeting.

FRAMLINGHAM FARMERS' CLUB.

OUR EXPENSES.

At the last meeting the following lecture was delivered by the Rev. Henry Hill, of Buxhall, Mr. F. S. Corrance in the chair.

The Rev. HENRY HILL said: At the time I was asked by your worthy President to read a paper at Framlingham, some letters were appearing on the subject of taking a small farm; hence my paper this evening, which I may say is not yet quite out of date. Perhaps the best advice to be given to such men—presumed to know nothing—would be that given by Mr. *Punch* to people about to marry—"Don't." But it struck me then, and still does, that the expenses of land are too heavy in proportion to those of money, as represented in any other form. I assume that land represents money, and that money in any shape is capital. The Government of a country is to be carried on by the taxation of that capital, while interior administration—county, borough, or parochial—is indebted for funds to local taxation, or, what is easier to understand, by rates, as opposed to taxes. If I am properly understood, one of the great questions of the day is, whether we farmers, occupiers—ratepayers in some form or other—do not pay more than we ought in strict fairness to be called on to pay, as compared with the other capitalists of the country? Mr. Read, I think, remarked that a farmer may get 8 per cent. for his money, the landlord may get 3 per cent., while the capitalist in trade or some profession gets 15 or 20 per cent. Not that I appeal *ad misericordiam*, but for justice, equity—simple fairness; for, looking at it in a commercial point of view, there is no reason to my mind why farming should be considered a worse investment than any other calling or profession. If you have the capital, and can depend on your own skill and judgment, you may do well, and need not ruin your neighbours. In fact, a farmer failing always reminds me of the gentleman in the "Ingoldsby Legends," who felt queer in the morning, after taking too much (Gladstone's) claret over night, and said that "salmon always made him so." I think, as the advertisements say, "there is many an opening for a young man of talent, with a little capital, in a gentlemanly profession, without much risk." It is not the risk so much as the certainty that takes the gilt off the gingerbread. One recently published letter wanted five rents for the land divided thus: 1. Landlord and tithe. 2. Labour. 3. Rates, taxes, bills, and sundries. 4. Cake, manure, etc. 5. Time, profit, interest. I do not think I should put it in that form, but for comparison or argument it will do very well. And first for comparison: the great Mechi tells us that in 1873—a very bad year—that for his farm of 170 acres, after paying all expenses, he had very nearly £700 for rent, interest, and profit—that is for items one and five (because his time is of course well paid for in Leadenhall-street)—but that is, or ought to be, one of the best farms in England, and any of you gentlemen will be able to calculate its value from the figures I give, and on the supposition I mention as easily as the value of your own farm. Well, gentlemen, No. 1. Landlord and tithe you will and must allow. 2. Labour is a difficulty that has increased since I wrote this paper, but will eventually settle itself. 3. Rates, taxes, etc., is a real difficulty. 4. Cake, manure, etc., depends on the man. 5. Time, profit, and interest is to be calculated according to the bank rate. No. 1. Rent and tithe are necessary evils of the present day, though perhaps in the far distant future the latter may be given up as a sop to the independent landlords of the country, but rely on it some new imposition will be found, in the same way that the giant Education-rate is now taking the place of the pigmy Church-rate. Still it is to be remembered that the tenants—not the owners—fix the rent of the land. We cannot let if you will not hire. No. 2. Labour is a very serious item for consideration. As you well know, it varies with the locality and description of land, so much so that I doubt if it is to be taken as the same as another rent. But

whatever its price, the amount employed is a sign of the prosperity of the concern. Mr. Walter, M.P., in *The Times*, Oct. 1, 1873, compared the body politic to the human body, and called, rightly, agriculture the trunk, and said that while it prospered, all the branches of trade, &c., would get on. But if one small wheel in an engine breaks the whole must stop—not for long—but all is out of gear for a time. So it is with labour. Every man has a right to ask his own price, but I need not buy the article. Still, for labourers or farmers to ask a third party what that price is to be, is opposed to political economy and common sense. I do not wish to be called in as an arbitrator, but I advise every man to do the best he can for himself, "and never mind the rest." The value of manual labour is variable, just as all engines are not of the same horse-power. It always will be money that keeps the world's engines going. If a fair amount of money is offered to the labourer, artisan, or mechanic, working for his daily bread, and refused, I doubt if after some few weeks in summer have used up the Union capital they will find the ratepayers willing to keep them in idleness, or even in work, for the short hours of winter. And yet it is said higher wages will reduce the poor-rate. Said, perhaps, by some one who pays neither the one or the other. The various devices for reducing farm labour is a subject of great importance; but I doubt if our machinists at present have done much more than hold out great hopes for the future, and if manufacturers' prices must go up, why flesh and bone will still be the most economical servant we farmers can use, as it has been since "Adam delved and Eve span." In short an engine, especially on small occupations, always reminds me of the boy on a farm—it takes two men to look after him. Mr. Beach, at the Highbere Agricultural Association, remarked "that men would obtain higher wages, not by agitation, but by the legitimate improvements in agriculture, the most important of these being the much larger introduction of machinery into operations" (*The Times*, Oct. 1, 1873). That means, in my idea, the more machinery you have the more money you will spend in labour. But I hope no one will imagine I think the farming will be the worse. Some of our would-be instructors tell us one way to reduce the labour bill is to increase the permanent grasses. I am not going into the question of initial loss and ultimate gain in that case, but will merely remark that leave to plough up grass is no uncommon request out my way; and I myself do not believe in leaving a clean fallow to grow thistles, etc., for the next tenant to keep his sheep on. One of our leading agriculturists, Mr. Read, M.P. for Norfolk, gives us very good advice, because he does it by example, and as a tenant-farmer. He says, since the rise in wages he has reduced his labour expenditure by £100 a year on a 400 acre farm. I can only say it looks as if he did not think much of his chance of getting compensation for those improvements, temporary, durable, and permanent, in which he and his co-operative partner, Mr. Howard, take so much delight. Following my unknown friend's letter, suppose we take expenses No. 3, rates, taxes, &c. (bills and sundries being beneath our consideration). Again, I say, here lies the difficulty. As I have remarked, taxes and rates are to be divided into two divisions—imperial, applying to taxes; and local, applying to rates. A man with £10,000 in the Funds pays income-tax on his actual income. A man with £10,000 in land pays on his rent, with no allowance for repairs, insurance, &c., in which the funds run no Fisk. It is Schedule A you pay under, whatever your capital consists of. Is the landlord to take a rack rent, and are the repairs to be done at the expense of the tenant, perhaps going out next year? Any ordinary mortal might imagine that a tax on land would be considered as an equivalent to a tax on money, but no such thing. Land pays right and left always, money once now and then, when wanted, as a War-tax say. And to prove the injustice of the Land-tax, any Government will allow you to redeem it at £8 to £9 below Consols, with an eye to the

future when all is redeemed. It was a happy thought to imagine the rent of a farm was all income, which could be taxed for the benefit of the manufacturing districts at the expense of us agriculturists. To get Schedule A in the case of those individuals who pay no rent, 15 per cent. is added to the rateable, or about $4\frac{1}{2}$ to the gross value. In this way the Imperialists (the Londoners) show some sense, for they assume the local authorities are better judges than themselves in the Land Question. If you are too highly assessed you must blame your neighbours at the Union Assessment Committee, but you must pay schedule A. Can it be said money, and land representing money, pay their fair share of the expenses? I do not think I need say any more about Schedule A in a company supposed to be occupiers (strictly speaking), but I may add it is a curious anomaly that there should be so many different assessments as to the value of the same property for different purposes. I can only suppose that as we are gradually drifting into decimal notation, we shall some day have a fixed set of figures for our assessment, and merely remove that "cussed" little dot according to the tax or rate that is being collected. Still, until the education of the country has become much more elementary than at present, we must carry on our dealings as we do our religion, in language "understood of the people." Let us then remove the dot (I need hardly say which way) to Schedule B. I suppose in merciful consideration of his other burdens, the occupier is found worthy of a deduction of one-eighth of rent and tithe, and so he compounds for good and bad years, his landlord needing no consideration under Schedule A. But in late years it has been found the landlords spend so much money on the farm houses, that occupiers are called on for House-tax, as of course every gentleman should be. There is one tax going to the Imperial Treasury, which I hardly like to mention to a meeting strictly non-political. I mean the Malt-tax. The great difficulty in its abolition is not the justice or injustice of its infliction on a class, but the enormous amount raised for the benefit of everybody else—not belonging to that class. And now I may pass from Imperial to Local Taxation; as occupiers we all—landlord and tenant—feel the pressure. Schedule A takes a moiety even from the Great Eastern Railway stock when you get a dividend. But do the Three Per Cents., railways, coal mines, ironstone, pay rates or local taxation like ordinary land. I have read somewhere, but cannot quote, that ironstone pays no rates. Then do we farmers pay more than we ought, in comparison? First I take Poor-rates. The country is divided into districts, and so the amount in the £ will vary—I was going to say according to the prosperity, but it perhaps ought to be the population of the land. The vicinity of large towns may have advantages to the farmer to make up for an increase in rates. But in many cases, the Poor-rate falls heavy on the ratepayer, while the tax-payer proper is exempt altogether. To show the increasing magnitude of the Poor-rate, Professor Levi found out by means of a calculating machine, or some boy educated under Government, that in 1863 the Poor-rate was 8s. 4d. per head, and in 1873 16s. 3d., while Imperial taxation in 1863 was £2 8s. 4d., and in 1870 £2 8s. 2d. *I.e.*, in some ten years the ratepayer's expenses on one item doubled themselves while the taxpayer's were somewhat reduced. But I doubt if Professor Levi caught the full sum total—perhaps he left out decimals! "W. F.," writing to *The Times* from Lincolnshire, December 29, 1873, says they pay high wages (I leave out the price of labour on purpose), and employ the old men on the roads. I do not say that no other county does the same. In this way a portion of the expense for maintaining the poor is charged on the Highway-rate, and the workhouse with its expensive organization is to a great extent useless. Surely it shows the Poor-rate does not include everything, or rather that we rob Peter to pay Paul. It has been remarked that the Poor-rate is an inheritance devolving on the land, but surely when it was settled that "each road should maintain its man," no bargain was made that the man should have a wife and family. Then why with our half-empty workhouses and large establishments do we keep large asylums with just as large establishments? Why do we keep up half-empty prisons to be filled with military invalids and deserters, to be maintained at the same expense to the ratepayers, and for the benefit of the tax-payers of the country? The question of lunatics is under consideration in another place, and we will leave it there. Well, then, we have a surveyor's rate, which I ought now-a-

days to call the highway-rate. The ratepayers—principally farmers—pay; and who use the roads? Why, the capitalists of the country, who will soon be able to drive the Four-in-hand Club from John o'Groat's to the Land's End, and a return ticket, without paying a decimal fraction towards the expenses of maintenance. I sometimes fancy the Highway Boards are a sort of feeler for the School Boards: if you cannot manage either yourselves, both can be carried out for you at your expense by Government officials. It is by no means a bad idea that the assessed taxes on locomotion should be employed to defray the maintenance of the highway roads, but then we know enough of Government officials looking after expenditure. It is paying a guinea to look after a pound, and yet a new Government relieves the rich at the expense of the poor by taking off the tax on horses. Surely a man that can buy a nag and keep a nag can pay tax for a nag. In Russia there are local provincial parliaments to control local taxation for roads and other purposes. We, as a country, are trying this system in a small way, with what result I leave you to guess who can and do read your county papers, and merely remind you of the proverb of the man who looks after his neighbours' business being able to take care of his own. But, gentlemen, I have not done yet, although I own the straws on our back get lighter as I proceed. There is the County-rate, not very serious perhaps, but so unsatisfactory that a new assessment in our case is talked of; so move the dot once more. In 1872 the assessment increased £1,637,354 on the last year, and I fancy the rate has increased in due proportion. One reason is the bridges have to be made strong enough for steam engines to pass over now-a-days. And the Police-rate. Do those ubiquitous gentlemen in blue simply look after the property of ratepayers, or is their leisure time appropriated to the benefit of taxpayers? The average rate is a mere song, but is it right? This question is also under consideration in another place. And then comes the militia. Why should we ratepayers keep up an almost permanent militia and the regular army be reduced to a minimum for the benefit of the taxpayer? Is the taxpayer to have the use of our best sinews of war for a few years, and then send them back on the ratepayers to support in uselessness their decaying years? And last perhaps at present, but by no means least, comes a rate I have already alluded to—the Education-rate—a fine healthy child that does not mean dying. I fancy our grandchildren will find the labourer just as anxious that the parson should write his name for him at his wedding as now-a-days, because he can handle his scythe easier and oftener than a steel pen—his hand shakes so. I have said item No. 3 was the difficulty, it remains for you to say if you agree with me. I now ask a few minutes as to Nos. 4 and 5. No. 4, cake and manure. The man who spends a rent on this proves himself to be well off in this world's goods, and I sincerely hope he will reap his reward; for if anyone deserve two blades of corn instead of one, such a man does. But I am rather inclined to think it is a case of that rare bird, the dodo. If that argument is not satisfactory, I hope someone better up to it than I am will take "Cake, manures, and the ceteras," as the subject of some future paper. No. 5, Time, profit, interest. We farmers are all as greedy as a Co-operative Association. Cheap articles and large remuneration we want. A man farming 100 or 200 acres could as easily look after double; therefore his time's cost is to be counted as bailiff's wages. Profit is to be counted by what you might get in another concern with the capital you have, or ought to have invested in your farm, and no bailiff is wanted. If you have to pay another rent for the capital, you and I know the profit will go with the interest—to the banker. Interest—as the great Duke said—small interest means good security. Let us hope a good valuation, with compensation for long-forgotten improvements, will make our books look better than we think of; and remember the capital once put into the farm is not lost by the cultivation of it. To sum up all this, gentlemen, both Box and Cox seem to think Local Taxation requires consideration; and without even hinting at the "ways and means" for granting relief to the ratepayer, I hope something will be done shortly. If your discussion on the subject should lead to anything, I am content with having simply drawn your attention to it. Mr. Hill also quoted the following figures from a Parliamentary return relating to the several counties of England, showing the valuation for the country and police assessments, the amount in the £ levied, the amount realised by Her Majesty's Treasury

subvention, the amount of loans effected on the security of the rates, and the loans outstanding at Michaelmas, 1872. The following are the figures relating to Suffolk and Norfolk :

	SUFFOLK.		NORFOLK.
	East D.	West D.	
Valuation for County Asst.	£907,360	} £521,441	£1,991,227
" for Police	£878,916		
County Rate (in the £) ...	1½d.	1½d.	1½d.
Police Rate (in the £) ...	1½d.	2½d.	1½d.
Amount of County Rate...	£6,624	£3,802	£14,022
" Police Rate ...	£5,494	£5,975	£12,464
Treasury subv. for Police...	£2,078	£1,621	£3,151
" for Criminals	£1,102	£656	£1,262
Fines, fees, &c.	£1,065	£933	£1,950
Total Receipts.....	£16,391	£13,250	£35,004
Total Expenditure	£17,167	£13,110	£35,063
Payments in Loans.....	£438	£256	£1,717
Outstanding Loans.....	£3,492	nil.	£14,967

And the following resolution passed by the Lancaster Chamber of Agriculture: "Inasmuch as the present operation of Local Taxation presses unfairly on the owners and occupiers of land and houses, it is the opinion of this Chamber that there should be such a revision as will ensure that every description of property should contribute its fair proportion."

The PRESIDENT, in opening the discussion, said it was his duty to invite discussion on that matter, of which they all knew a great deal practically, "our expenses." It came under a great number of heads, which Mr. Hill had put so ably before them. There were one or two points, and prominently was the question of labour. That was a question that they must touch upon with extreme delicacy. It was a subject in the discussion of which every incautious word would be sure, he feared, to carry its own punishment. He was almost inclined to think that as the question now stood, the less said about it the better; nevertheless, it was their duty to put their opinions before the public. He felt that it was a manifest injustice to the farmer, who felt that his dealings with his labourers had been fair, to be misrepresented, as they had been in many cases, and they ought to speak out to remove the false impressions thus raised. He felt that all that was said upon the subject ought to possess some practical value, derived from experience, because there could not be harm in stating the truth properly, and in a temperate manner, and it would be found to be a matter not wholly devoid of interest.

Mr. GOODWYN said the question introduced by Mr. Hill was certainly a most important one, for they found that their burdens were not lightened, but increased year by year. As they were all members of one body, he felt that each kind of property ought to bear its share of the burdens of Local Taxation. The question of the education rate was important to them, but he denied that in opposing this the farmers were actuated by a wish to keep the people in ignorance. He thought, however, that if the working-classes were to be benefited by education, and if they were to be led on by others to believe that they could have what wages they pleased, it was only right that they should also be taught to put their hands into their own pockets and educate their own children. He would rather leave the labour question, not because he had no opinions on the subject, but because he would wish rather to throw oil on the troubled waters if he could. He would, however, confine himself to a denial of what had been said so often and so strongly—that the farmers were attacking the men. It should be known whenever the question was considered, that the first attack came from the other side.

Mr. PAUL READ denied that the Malt-tax was a burden upon the farmers. Did the farmers really think that if the Malt-tax were repealed, they would be making such a price of their barley as at present? He looked upon the Malt-tax as one paid by the public entirely to keep up the price of the farmers' barley. This was the effect of the tax, as it kept out the foreign barley. As to the reduction of their expenses, he advised the farmers to farm their land so as to make it produce more, and then the expenses would be lessened in proportion. Lord Derby had said that the land of England would produce double what it now did if farmed differently, and if they made it produce double, their expenses in rates and taxes would only remain the same as at present.

Mr. GONNER would defy Mr. Read to explain how a

man could grow as much upon 100 acres as he did now upon 200.

Mr. W. KENT had heard the same quotation from the Earl of Derby's speeches, but he questioned whether such a statement had ever been made without some qualification. If the Earl of Derby did say that, he could not have meant acre for acre, but that the waste lands should be brought into cultivation.

Mr. CLUTTEN said that there could be no doubt as to there being some mistake in this, as even the best cultivated allotments did not produce more than one or two coombs per acre above the produce of an average farmer.

Mr. GONNER said that no system of husbandry could command the season. They might produce straw, but the corn must come from a higher Power.

Mr. PAUL READ said that all that was talked about was corn, but they might also produce more meat and poultry.

Mr. GOODWYN agreed with the remarks which had been made as to the use of artificial manures. He only regarded them as stimulants. As to the Malt-tax he was one of those who thought that the repeal of that tax would not be of benefit to the farmer. He thought they would not have the present price for their barley if it were not for the tax.

Mr. ROBERT GARRARD must protest against what had been said about the Malt-tax. He was a strong Malt-tax repealer, and he had no faith about the Malt-tax raising the price of barley. He thought that farmers had great interest in the repeal of that tax. As consumers, the repeal of that tax would be to them equal to a repeal of the Property-tax. As to the importation of foreign barley they must recollect that the Eastern Counties were peculiarly well situated for barley growing, and therefore they were interested in the repeal of the Malt-tax. He hoped it would not go forth to the country that the Framlingham Farmers' Club advocated the keeping on the Malt-tax.

Mr. GOODWYN: It will go forth that we are not unanimous.

A MEMBER: If barley was down to 20s. a coomb we should hear plenty about repealing the tax.

Mr. PATERSON said he did not agree with Mr. Garrard about the Malt-tax. He quoted Colonel Brise's letter on the labour question, and said that he agreed with the opinion there expressed as to making improvements in the Unions. The manufacturing interests had not been able to abolish the Unions, and there was great reason to doubt whether the farmers could prevent them. He did not think that the Unions had improved the condition of the labouring classes where they had been established.

Mr. GONNER said that the Union had caused more drunkenness in that town than ever they had before. He did not entirely blame the men for forming the Unions, and believed that if the masters had looked properly after the men in all cases, they would not have heard of the Union. He maintained that the labouring classes had been better cared for in this country than in any other. He did not say they had been as well cared for as they ought to be, but was certain that they were better cared for by the classes above them than the lower classes of mechanics.

The PRESIDENT, in closing the discussion, said, as a landlord he could not agree with Mr. Hill's advice not to take small farms, or with the division of the gross produce into five rentals. The good old-fashioned calculation was four. He also questioned the statistics of Mr. Mechi which Mr. Hill had quoted. Coming to the labour question, he was pleased with the manner in which it had been touched upon. They as farmers did not approve of the Union. In the first place, what had been said as to its incompatibility with hired labour of that sort was right, but there were other reasons which some excellent gentlemen philanthropically included seemed to have overlooked. The principle of all Unions was an equality of wages—the worst man to be paid the same as the best, and the young the same as the old—a principle which he would never agree to. If they affirmed the principle of Unionism they affirmed that principle. It was useless to talk about rules which could be altered any day. This was the principle upon which all Unions had been based. Whether they should proceed to such extremities as to lock-out was another question altogether; but they should do all in their power to discourage what they believed to be a vicious social arrangement; one which seemed to be entirely subversive of the present system under which England had been cultivated, and to be econo-

mically false and socially mischievous. The labouring classes hitherto had been socially dependent, and with the poor-rate and education rate they could never be called independent if the principles of Unionism were affirmed. Were he in the House of Commons he would immediately propose the abolition of the Poor-laws. He agreed in hoping for a speedy termination of the dispute, but could not see how, without incurring many of the difficulties he had mentioned, it could be done by arbitration. It was a fact that the labourers were the aggressors, and he believed if they withdrew the attack, the farmers would be contented to take the men back on the old terms without any reference to the Union. He recommended persistent agitation as to Local Taxation, and, as to the Malt-tax, remarked that in the face of a recent division it must be considered to be in abeyance.

Mr. HILL, in reply, said, in reference to the education question, that he was afraid the labourer would not take the trouble to retain what he learnt. Upon the Malt-tax he had not expressed an opinion. As to the quantity of corn which could be grown, there was no doubt that the more money spent on a farm the more crops would be grown, but it must be done in judgment. He agreed with Mr. Goodwyn as to manure, and he might say that Mr. Corrance's remarks on the labour question were most sensible. His advice about taking small farms was to those who did not understand farming. A man who knew his business would get on best on a small farm. Though not responsible for Mr. Mechi's figures, he hardly agreed with the Chairman's way of putting them.

THE FINANCIAL PROPOSALS.

At a general meeting of the Wisbech Chamber of Agriculture, the principal business was to consider the financial proposals of the Government so far as they relate to agriculture, Mr. A. S. Ruston in the chair,

Mr. W. C. LITTLE said that when the Council met some weeks ago, before the Chancellor of the Exchequer had brought in his Budget, it was thought that the Chamber would probably be glad of an opportunity of expressing its opinion upon the proposals of the Government, whenever they were made. They would observe that they were limited to the question so far as it regarded agriculture. They had nothing whatever to do with the general political question; they had nothing to do with estimates, whether they were inadequate or otherwise; but they had simply to accept the opinions of the Government and the Chancellor of the Exchequer as to the necessary amount to be spent and as to the means by which that amount was to be raised. Accepting those opinions, the question before them appeared to him to be this: What expectations had they formed before the Chancellor of the Exchequer announced his plan? He should like at the beginning to say that the agricultural interest, in considering this subject from their own point of view, had no desire to take a selfish or a class view; they had no desire, nor the slightest hope, that they should be greatly relieved by taxation, while other classes would have fresh taxation imposed upon them. The position of Chambers of Agriculture was this: They found that other classes of the community, by organization and by making a great deal of noise, had succeeded in getting relieved of taxation, while the agricultural interest had by means of increased local rates and continually increasing burdens been unfairly taxed. There was one point upon which agriculturists were unanimous, viz., that some relief should be given to ratepayers, and that local taxation was one of the first questions that required to be considered by the Government. Another subject which was thought of importance by a considerable section of the agriculturists, although it was not thought of so much importance in this part of the country, was the Malt-tax. He believed the farmers of England were by no means unanimous upon that point; for although a considerable number of them looked upon it as a heavy tax upon the producer, there were about as many who thought it fell upon the consumer. Therefore, so far as this Chamber was concerned, there would not be any great disappointment felt that the Malt-tax had not been dealt with by the Government. In considering the proposals of the Government they might look upon them first of all so far as they affected agriculturists in common with other classes. The remission of 1d. on the income-tax would certainly affect many classes besides themselves, but at the same time it would afford them considerable relief. When they remembered that farmers were assessed upon their full incomes, and that in no other business was it so difficult to arrive at an exact statement of profits and losses, it was evident that the farmer paid his full share of imperial taxation to the income-tax, and therefore he would receive his full benefit from any remission of that tax. The horse duty was not quite so clear a benefit to the farmer, because farmers' horses employed in agriculture were exempt from the duty, but still the farmer would derive some benefit from it, because there were few of them who did not keep a horse that paid

the tax. Then the horse-dealers' duty being taken off would remove some restrictions upon trade, and the farmers, as the breeders and rearers of horses, must derive some advantage from it. Besides, there were other reasons why they should accept these proposals of the Government. It was a question whether farmers who bought horses to graze for a short time and then sold them again were not liable to pay duty as horse-dealers, and in some cases the duty had been imposed upon them. They got rid of all liability upon that point, and they also got rid of a threat once thrown out by Mr. Lowe that he did not see why horses employed in agriculture should be exempt from duty. The concession made by the Government on local taxation was not a very large one, the amount to be given away being something less than $1\frac{1}{4}$ millions; but they would observe that it recognised the principle they had maintained ever since they had agitated the subject—that Government ought to contribute more largely than it has hitherto done towards those objects that are of national interest. With regard to the remission for the police, the Government had hitherto paid nominally one-fourth of the cost of the police, but practically it had been one-fifth. The total amount which the metropolis, which had an extra grant of one-third, would gain was £210,000 out of £500,000, the boroughs would gain £120,000, and the counties £150,000. But although the amount to be distributed among the counties was not very large, it would make a slight difference to their rates. He had obtained from the Treasurer of the Isle an account of the sums paid by the Government on account of the police, and it seemed that the average for the last four or five years had been slightly under £900 a year. They might assume that this amount would now be doubled, and that the county-rate would thereby be reduced $\frac{1}{2}$ d. in the pound per annum. With reference to lunatics, the Government proposed to contribute 4s. per head per week. The figures for the Wisbech Union gave an average for the last three years of 41 lunatics, who were maintained at a charge to the county of £1,163 a year. The Government allowance of 4s. a week would amount to about £418, or nearly $\frac{1}{2}$ d. in the pound, so that by these two Government contributions their rates would be reduced very nearly 1d. in the pound. That was not a very large remission, but, as he had said before, it accepted the principle they had for years contended for. While on the subject of lunatics he should like to point out that the average cost of maintenance throughout the country was 10s. a week. The Wisbech Union sent lunatic to two asylums—the one in Norfolk, where the average cost of maintenance was 9s. 6d., and the other at Cambridge, where the cost was 11s. 1d. He should like to draw the attention of the visitors of the Cambridgeshire Asylum to the fact, which was worthy of their attention, that the cost of maintenance in their asylum was 1s. 1d. a week more than the average throughout the kingdom, and 1s. 7d. more than that of the asylum at Thorpe, in Norfolk. But the remissions of taxation to which he had referred were not all that the Government proposed to do. They were the only definite proposals that had as yet been made, but every one who had read the report of the speech of the Chancellor of the Exchequer must have seen there was a desire on the part of the Government to examine into the question of local taxation, with the object of affording them substantial relief. There were some great sources of expen-

diture not dealt with at all, as, for instance, the administration of justice. That was a question of imperial interest, and one upon which no additional contribution was made. The Chancellor of the Exchequer stated in his speech that the subject was receiving the attention of a Royal Commission, and that he did not feel it would be right at present to make any proposal respecting it. Then there was the question of highways, upon which they thought they were entitled to ask for some relief, but it had not been dealt with by the Government at present. Therefore, taking the proposals of the Government as a desire on their part to afford them some relief—coupled with the expressions of sympathy that had fallen from the Prime Minister and the Chancellor of the Exchequer—he thought they might fairly congratulate themselves upon their present position. They had no right to accept those propositions as final, and they would scarcely be satisfied with them if they were to be considered as such. There were many ways in which the Government might give them greater assistance, but taking all the circumstances into consideration—that they had been in office only a few weeks, and had had no time to mature a plan—he thought that they would be doing wrong if they were to express their disapproval of their proposals. He would conclude therefore by moving the following resolution: “That this Chamber accepts provisionally the financial proposals of the Government, as admitting the principle that ratepayers are entitled to some relief on account of charges imposed upon them for objects of national interest, and trusts that so soon as the Government shall have completed that inquiry into the subject of Local Taxation, which they have promised, they will considerably extend the principle which they have thus admitted.”

Mr. W. L. OLLARD, in seconding the motion, said he should confine himself to the remission of the horse duty; and he perfectly agreed with Mr. Little that it was almost impossible for farmers to buy horses and graze them, and then sell them again, without making themselves liable to pay duty. He had a case in point; and an expression of opinion was given by magistrates that many persons who had no intention of becoming horsedealers in the ordinary sense of the word, ran the risk of having the penalty imposed upon them while carrying on their ordinary business pursuits. Then again cases frequently arose where persons might be made liable to the duty simply for rendering an act of kindness to their neighbours. He was glad these anomalies had been done away with by the remission of the duty, and throughout the country he thought there was but one opinion, that, considering the circumstances, the Budget was a very fair one to all classes, and that the Chancellor of the Exchequer had raised himself in public estimation by the manner in which he had dealt with the subject.

Mr. H. J. LITTLE agreed with his brother that if the proposals of the Government were to be considered as final, they would have a grievance against the Government, but he believed they were fully resolved to take the whole question of local taxation into consideration, and that the ratepayers might speedily look for a revision of the system. With regard to the Malt-tax, no doubt in many Chambers of Agriculture the Chancellor of the Exchequer would be severely censured for not taking something off it. He himself thought, when there was a surplus of five millions, that it would now become a question of dealing with the Malt-tax, but on reflection he appeared before them in the interesting character of a pervert, for after the experience of the last year or two he did not think the farmers had any grievance with regard to the Malt-tax. So long as he was a grower of barley, he considered it more as a grievance upon the agricultural labourer than upon the grower, for he felt that the labourer was entitled to have the beverage of his country at as cheap a rate and as wholesome as he could possibly get it; but the whole tendency of legislation had lately been to take off taxation from the necessities of life, so that tea, sugar, coffee, and such-like necessities had been enormously reduced in price. It now rested almost with the labouring man to say how much he was willing to give towards the taxation of his country. He was scarcely taxed for anything except for the beer which he drank; and if he chose not to tax himself in that respect he might go scot-free, but if on the other hand he chose to indulge to a considerable extent, as unfortunately too many of them did, he would contribute considerably to the revenue of his country. As one who had seen reason to alter his views with regard to this question, he thought he would give the reasons why he felt

they ought no longer to look to the Chancellor of the Exchequer for any alteration in the Malt-tax; especially as any alteration in the tax must lead to a great revision in the spirit duties, and they all knew that in the large towns any great decrease in the price of spirits would lead to greater habits of drunkenness among the lower classes.

Mr. H. SHARPE thought they might well afford to be indifferent with reference to the Malt tax, when the growers and the great consumers regarded it with so much apathy. He felt satisfied both parties in the House of Commons were prepared to go fully into the question of local taxation, and he hoped when another session had passed they would get all they wished.

Mr. BROWN remarked that the subject was too one-sided; they could not get up any opposition, and without opposition there could be no discussion. He acknowledged he had always been a Malt-tax repealer, and he thought it would only have been fair if with such a large surplus some remission had been made to the beer drinker as well as to the tea and sugar drinkers. A good deal had been taken off the free breakfast table, but no notice had been taken of the hard-working man who required his glass of beer. It had been said that the tax upon beer was almost the only one paid by the poor man, but it must be remembered that he very much enjoyed his pipe of tobacco, and no article of consumption was more heavily taxed or raised a greater amount of money than that. He did not know, however, that he should advocate such reduction of the duty on tobacco, for sometimes when he saw in the large towns boys under twelve years of age with cigars in their mouths before dinner, he thought tobacco was cheap enough.

The CHAIRMAN quite concurred with the remarks made by Mr. Little in introducing the subject, and he had come to the same conclusion as he had done. He felt that the Government, having had so little opportunity of maturing their scheme, could not go thoroughly into the question of local taxation, but as they had so clearly intimated their intention of giving the subject due consideration during the coming year, he thought they were free to suppose it would be dealt with in a comprehensive manner. As to the small relief that had been offered to the ratepayers, he thought they might take it as an admission of the principle; and if it was to become a question of the Malt-tax *versus* Local Taxation, he felt it would be to the interest of the towns as well as to the owners and occupiers that the reduction should be made in the shape of local taxation rather than the Malt-tax. Any remission of the Malt-tax must necessarily bring about a revision of the spirit duties, and it was a question whether that would not involve too large a sum of money to be thrown away in one direction. His own idea was that they should ask the Government to afford reasonable and just help to the ratepayers, which would be of much greater interest to the country at large, and therefore he was quite disposed to adopt the resolution as it stood before the meeting.

The motion was then put, and carried unanimously.

The CHAIRMAN then called upon Mr. G. F. Moore, secretary to the Chamber, to introduce the next subject: “The report of the Select Committee of the House of Commons on Locomotives on Roads.”

Mr. MOORE said his notes consisted chiefly on extracts from the report of the select committee, but his object was to show that the present law is anomalous and unsatisfactory and requires alteration. Some idea of the large amount of capital invested in this kind of machinery might be gathered from the statements made by two witnesses before the committee, that their firms alone had supplied about 1,500 self-moving engines for use in this country, of the total value of £700,000; besides which there were many other engineering firms who were large makers of them, and there was little doubt that if greater freedom were given to their use, before long the majority of thrashing and other heavy machinery would be moved from place to place by steam, especially as many of the existing portable engines could be converted at a little cost into self-movers; besides which the increasing cost of horses of their maintenance showed the national importance of the substitution of steam for horse-power wherever practicable. With reference to the danger to which horses and carriages would be liable from the use of locomotives on roads, Mr. Moore read extracts from the report of the committee showing that considerable difference of opinion existed among the witnesses upon this point, but they were almost unanimous in

saying that the inconvenience soon disappears, although there were, and probably always would be some few horses which would take fright at an engine, as at many other objects. We know (he continued) there are some few places in the country where, even in this year of grace 1874, the inhabitants play long whist, and have to go ten miles to a railway station, but the spot where locomotives have not been introduced at all must be the veritable *Ultima Thule*, and no legislation is likely to reach it. With regard to the damage done to the roads, evidence was taken before the committee showing that on ordinary well-made roads little or no damage is caused by the engine; and, on the contrary, it was stated that benefit results to the road from the consolidation produced by the pressure of the engine, and one witness informed the committee that he had successfully used the broad wheels of his engine as a roller in constructing a new road. On roads which are only slightly metalled, or which rest upon a bad or an insufficient foundation, as is the case in some of the occupation roads in this neighbourhood, there is no doubt damage would be done by the frequent passage over them of heavy locomotives; but the same result would be obtained by the use of horse-power. As to the bridges, the anomalous state of the present law was pointed out by the evidence given before the committee by Mr. Aveling, to the effect that, "If I send a boiler, weighing 15 tons, over the county bridge, drawn by 15 horses, and that boiler breaks through the bridge, I have nothing to pay; but if I send the same boiler over a bridge with an engine weighing eight tons, and the boiler breaks through the bridge, I have the whole expenses to pay." Almost all the witnesses examined before the committee admitted that agricultural engines have become a necessity in many localities, and in this immediate neighbourhood he (Mr. Moore) believed there were more self-moving engines than there are private carriages drawn by a pair of horses. Why then should not they be considered the ordinary traffic of the district? The recommendations of the committee as to roads and bridges were to the following effect:

1. No owner shall be liable for damage done to any bridge provided his engines does not exceed 20 tons weight, and provided no notice be affixed to the bridge.

2. If notice be affixed the owner shall be liable if the weight of his engine exceeds that named in the notice.

3. If the engine exceeds 20 tons, the owner shall be liable whether notice be affixed or not.

4. Any person taking an engine of more than 20 tons weight over any public road shall be liable to all damage caused to such road in consequence.

The Committee also recommend that except on narrow roads, the local authorities shall have no power to prohibit the passage of locomotives at any hour. Having read the recommendations as to speed, Mr. Moore concluded by moving the following resolution: "That it is desirable for the advancement and assistance of agriculture that the use of locomotives should be encouraged to the fullest possible extent, having due regard to the public safety and interests. Resolved, therefore, that this Chamber approves the Report of the Select Committee of the House of Commons on Locomotives on Roads, and the recommendations therein contained."

The CHAIRMAN suggested that as the Chamber had not as yet had the opportunity of reading the report of the Select Committee the latter part of the resolution should be omitted, as it would be unwise for them to approve a report of which they had only heard a few passages read.

Mr. MOORE concurred with the suggestion; and

Mr. SHARPE then seconded the resolution, remarking that he was afraid they were a little behind-hand in not having examined the report of the Select Committee. He pointed out the awkward position agriculturists were placed in, by certain districts being intersected with drains without the promoters being compelled to build the bridges of sufficient strength to bear the passage over them of steam locomotives, which were becoming indispensable to agriculture.

Mr. BROWN readily assented to the resolution, but he said there was no part of England where the subject ought to be approached with more care and consideration than in the Isle of Ely. The roads were intersected in every direction with rivers and ditches, the bridges over which were originally constructed to carry the ordinary traffic of the country, and he pointed out that if all these bridges were to be strengthened so as to allow the passage over them of locomotives weighing 20 tons, the county rate would be very considerably increased.

He did not wish to throw any obstacle in the way of advancement of agriculture, but he thought the interests of steam cultivation would be better served by the adoption of a lighter implement, which would be more suitable for private individuals, especially in the fen districts, than the large engines used by cultivating companies. He agreed with the first part of the resolution; but looking to the novelty of the subject he thought they ought to approach it with discretion, and he was not prepared to vote for the second portion.

Mr. W. L. OLLARD agreed with Mr. Sharpe that it was against all reason that any company should be allowed to intersect the country with drains and to build bridges over them so light that persons engaged in agriculture could not get their implements over them. He apprehended that every year would witness an increase in the use of steam agricultural implements, and unless they could be freely moved from one part of the country to another, the result would be that certain farmers would be prevented, from their isolated position, from using machines which their neighbours could use with profit and advantage; or else that every little area must have an engine of its own, which could not possibly travel beyond the limits of its own district. The subject resolved itself into the question whether or not steam implements are a necessity in agriculture; and if they are so the bridges must be so constructed that they can pass freely from place to place.

Mr. DESBOROUGH also made some remarks on the subject, from which he wandered on to the question of sewerage and docks, and concluded, amidst some amusement, with the sound observations that "those who want sewerage ought to pay for it, and those who want docks ought to pay for them."

The CHAIRMAN said the great difficulty in the matter was unquestionably the bridges. Everything should be done to encourage scientific agriculture, especially in a district like this, which depends so much upon agriculture; and if these locomotives were necessary for the successful cultivation of the land, every facility ought to be afforded for using them. At the same time there was a question as to what was the proper weight of the engines. He did not think it necessary to have them weighing 20 tons, but he thought engines from 10 to 14 tons would be quite sufficient for cultivating all lands requiring cultivation, especially in the Fen districts. In that case, the expense of strengthening the bridges would be much less, and he thought they would be of opinion that it was desirable to strengthen the bridges to that extent, and thus place every district in the Fens in a position to successfully cultivate its land.

Mr. MOORE, in reply, said it was necessary that the engines be from 10 to 12 or 14 tons weight, but 20 tons was put down as the maximum, and the owner of any engine above that weight would be liable for any injury that it might cause.

The resolution was then put to the meeting and carried.

A POTATO CASE.—In the Court of Queen's Bench, the case of *Havel v. Coupland*, involved a curious point, arising out of the potato disease. The defendant, a Lincolnshire farmer, had entered into a contract with the plaintiff in March to sell him "200 tons of potatoes, grown on his land at Whaplode," at the price of £3 6s. 8d. per ton, to be delivered in September. There were 65 acres of the defendant's land in course of cultivation, and 250 acres were actually planted at Whaplode, and it appeared that they would produce seven tons an acre, so that there was abundant land sown to raise the quantity contracted for. In August, however, the potato disease attacked the crop and destroyed it, so that the farmer was unable to complete his contract. The question was whether he was excused in law. Mr. Seymour, Q.C., and Mr. Waddy, Q.C., were for the plaintiff; Mr. Field, Q.C., and Mr. Beasley were for the defendant. After a long argument, which took up the best part of the day, the Court gave judgment in favour of the defendant, the farmer. Mr. Justice Blackburn said the effect of the contract was that the potatoes should be delivered out of the crop of the defendant's farm, so that it was to be the produce of particular land, and in that respect it resembled a contract for a certain quantity out of a particular cargo. So far, therefore, it was a contract for specific goods, and there was an excuse in law if they perished in the mean time, as in the present case, without any default on the part of the farmer. Mr. Justice Quain also said the potatoes to be delivered were to be potatoes grown upon

the particular farm, and no others could have been supplied; so that when that became impossible in consequence of the potato disease the performance of the contract became impos-

sible. Mr. Justice Archibald also concurred on similar grounds, observing that there was no default on the part of the farmer.

THE DISEASES OF STOCK IN 1873.

[FROM THE REPORT OF THE VETERINARY DEPARTMENT OF THE PRIVY COUNCIL.]

The Lords of the Council have not, during the year 1873, been required to exercise, by means of Orders of Council, the powers conferred upon them by The Contagious Diseases (Animals) Act, 1869, on many occasions; only seven Orders have been passed during the year. It has been considered advisable to give a reprint of these Orders in the Appendix. In considering these Orders it will be necessary to refer to the labours of the Select Committee of the House of Commons appointed to inquire into the operations of the Contagious Diseases (Animals) Act, 1869, the Cattle Diseases Acts (Ireland), and the Constitution of the Veterinary Departments in Great Britain and Ireland, as one of these Orders is based upon their recommendations. This Committee met for the first time on Thursday, the 6th of March, 1873, and continued its sittings until Friday the 25th of July, at which meeting the report, a copy of which will be found in the Appendix, was agreed to. The Lords of the Council, after having carefully considered such of the recommendations of the Committee as did not require fresh legislation, issued the Order of the 2nd of August, 1873 (No. 366), which makes the slaughter of cattle affected with pleuro-pneumonia compulsory, removes foot-and-mouth disease from the contagious and infectious diseases as regards the Orders of Council under the Contagious Diseases (Animals) Act, 1869, and relaxes the restriction contained in section 57 relating to foot-and-mouth disease. Besides this Order, their Lordships issued two Orders relating to foreign countries; the first, dated the 7th of January, 1873 (No. 363), relieved sheep brought from Germany to this country from the Order of the 31st of July, 1872, requiring their slaughter; the other, dated the 11th of June, 1873 (No. 364), relieved, under certain conditions, the cattle brought to this country from Schleswig and Holstein from the provisions of the fourth schedule of the Act. The effects of the relaxation of these restrictions upon our imports is not apparent. As regards German sheep there is a decrease in 1873 of upwards of 75,000 upon the import of 1872, although the restriction requiring the slaughter of these sheep was removed in January 1873, and although the total imports of foreign sheep increased in 1873 by nearly 39,000. And with regard to cattle from Schleswig and Holstein, the return show that in 1872, when more than five-sixths of these cattle were landed at Deptford, 35,730 cattle were received from these states; while in 1873, when none of them were landed at Deptford for slaughter, all being permitted to go to the Metropolitan Cattle Market, we only received 33,100, although the total import from Germany increased in that year. Of the other four Orders, one, dated the 30th June, 1873 (No. 365), declares "farcy" to be a contagious disease within the meaning of the Contagious Diseases (Animals) Act, 1869, and provides for the making by local authorities of regulations as to glanders and farcy; another, dated the 25th of September, 1873 (No. 367), relates to an alteration in the limits of the part of the port of Southampton defined for the quarantine of foreign animals not intended for slaughter; and two, dated the 13th of November, 1873 (No. 368 and No. 369), revoke previous Orders of Council which allowed cattle from scheduled countries to be landed at Liverpool and Shoreham. With regard to the Order relating to farcy and glanders, very little effect can, as yet, have been produced. Only seven local authorities have applied for power for making regulations as to glanders, and we have only been informed of regulations having been made by six of these; there being 404 local authorities in Great Britain. The Order of Council requiring the compulsory slaughter of cattle affected with pleuro-pneumonia only came into operation on the 1st of September, and does not, as yet, appear to have had much effect in checking this disease. The prevalence of pleuro-pneumonia is probably due to several causes—

First. To neglect of owners in giving notice of the disease. Nor is it likely that this notice will be given generally until

the compensation is increased to such an extent as to make it the owner's interest to do so.

Secondly. To delay in the slaughter of the diseased cattle.

Thirdly. To the want of efficient separation of cattle in the incipient stages of the disease before they are capable of giving it to others, from those which are not so diseased. The latest information from the Netherlands confirms this opinion, as the head of the veterinary administration of that country, Dr. Van Cappelle, states his experience to be that strict isolation is absolutely necessary, and he attributes the success with which the disease has been encountered in the Netherlands more to the isolation of suspected animals for three months, than to the slaughter of the affected animals only.

LEGISLATION SUGGESTED IN THIS COUNTRY.—Many important suggestions as to future legislation on the subject of the contagious and infectious diseases of animals were brought before the Select Committee of the House of Commons, and the result of their consideration of these suggestions is embodied in their Report. The action pursued by the Privy Council with regard to the importation of foreign animals was approved by that Committee, who did not suggest any change of legislation as regards this branch of the subjects under their consideration. With regard to the contagious and infectious diseases of animals, the suggestions of the Committee are arranged under the various diseases beginning with *cattle plague*. In this disease they recommended the power of slaughter contained in the Act to be extended; and there does not appear to be a doubt, if the experience of other countries is to be relied upon, that the extension recommended would greatly tend to check the spreading of this disease. They also recommended a higher rate of compensation generally. The Committee's recommendations on the subject of the necessity for isolation in *pleuro-pneumonia* do not differ materially from the regulations which are at present in force in the Netherlands. The time of isolation is, however, different; being two months in the case of the recommendations of the Select Committee, and three months in the Netherlands regulations. There does not appear to be a doubt that the longer the isolation is kept up, the greater will be the security; but there is no evidence to prove that even three months would give absolute security. The Committee recommended slaughter of animals suffering from this disease and compensation, and the Privy Council gave effect to this recommendation in their Order of the 2nd of August, 1873. The Committee also recommended that whatever compensation is paid should bear a certain proportion to the owner's loss rather than, as at present enacted, to the value of the animal, but as the Lords of the Council did not consider that they would be justified, without fresh legislation, in changing the principle upon which Parliament had based compensation, the payment was provided for in this Order in the same manner as is ordered by the Act as regards *cattle plague*. In the Order of the 2nd of August, 1873, the compensation in *pleuro-pneumonia* is therefore at present limited to the same amount as that ordered by the Act as regards *cattle plague*, and thus the owner, in the greater number of cases, does not realise through the local authority so much for the cattle as he might himself make for them. The result is, that in a great number of cases no notice is given of the existence of this disease. Nor is it likely that notices will be generally given until the amount of compensation renders the giving of the required notices a gain to the owner, instead of a loss. It would appear to be open to discussion whether a compensation of three-fourths of the loss sustained by the owner, as recommended generally by the Committee, would be a sufficient inducement to all owners of cattle suffering from *pleuro-pneumonia* to give notice of its existence. The length of time recommended by the Select Committee for the isolation of cattle which have been herded with animals affected with this disease has already been referred to; but the movement of

these cattle, recommended under the head of pleuro-pneumonia, paragraph (b), will require extreme care in drafting the regulations for isolation, or it will tend to the spreading of the disease. The recommendation of the chief inspector of this department is that those cattle which show an internal temperature of above 103 degrees Fahrenheit should be dealt with as infected animals, and should be kept separate from those which do not show such increase of temperature. The power proposed to be given to the inspector by paragraph (c) of the recommendations of the Committee would meet a difficulty which has long been felt, of not being able to apply the necessary restrictions in cases where the disease has not been detected until after death. Compulsory slaughter and compensation in sheep-pox were recommended by the Committee, and would doubtless help in stamping out this disease if it again appears in this country. The compulsory slaughter of horses affected with glanders and compensation to the value of the carcasses of the animals slaughtered, were also recommended by the Select Committee. This will require great caution in its application so long as the inspectors as a body are not qualified for the detection of the disease. It appears also to be the present practice throughout Great Britain to slaughter in this disease. 965 cases were reported during the years 1871, 1872, and 1873, and of these 896 were slaughtered, 48 died, and 20 are said to have recovered. The latter statement is, however, questioned by the inspectors of the department, and it is quite possible that errors in the returns may have been made, either in the disease or in the recovery, as of the 1,678 inspectors of local authorities in Great Britain during 1873, about 22 per cent. only were veterinary surgeons, and about 59 per cent. were members of the police force; whilst the other 19 per cent. consisted of persons who were neither veterinary surgeons nor policemen, nor does it appear that they were possessed of any special qualification for the duties entrusted to them. The Select Committee examined a large number of witnesses, to whose opinions, as regards foot-and-mouth disease, great weight must necessarily be attached; the result of which was that recommendations were agreed to which almost wholly interdict any interference for the purpose of checking it. The experience of other countries appears also to support these conclusions; but, so far as regards the information in the possession of this department, it remains yet to be proved that restrictions of a severe character would be ineffectual, as it does not appear that such restrictions have, as yet, ever been really carried into effect. The report also recommended the inspection of vessels engaged in the Irish and coasting, as well as in the foreign trades, and also of railways, fairs, markets, and fairs, and the employment of travelling inspectors for this purpose.

IMPORTATION OF ANIMALS.—The total number of live animals imported into Great Britain during the year 1873 exceeded that of 1872 by upwards of 200,000, there being an increase of more than 95,000 in the cattle, nearly 125,000 in the sheep, and a falling off of upwards of 15,000 in the swine. The latter may perhaps be accounted for by the increase in our imports of bacon and pork.

Foreign: Our imports of foreign animals during the past year show an increase upon 1872 in each class of animal; during the latter year we received 174,760 cattle, 810,551 sheep, and 16,084 swine, whilst in 1873 we imported 201,531 cattle, 849,286 sheep, and 80,042 swine. On referring to the table showing the foreign countries from which we have obtained our imports of animals for the last five years, it will be seen that great changes have taken place. Belgium and France, which together furnished us in 1869 with nearly 16 per cent. of our total supply of foreign cattle, in 1873 sent us little more than $\frac{1}{3}$ per cent. of such supply. On the other hand, Norway, Sweden, and Denmark, which in 1869 sent us less than 4 per cent. of our total foreign supply, in 1873 has supplied us with more than 21 per cent. of all our foreign cattle. And with regard to our imports of sheep, similar changes have taken place, although not of so marked a character. For instance, taking Denmark, Norway, and Sweden together, there appears to have been a steady increase in our imports of sheep during this period; these three countries sent us only 4,303 of these animals in 1869, whilst we received 27,455 from them in 1873. That France and Belgium should have sent us less cattle in 1870 and 1871 may have arisen from the restrictive Orders then in force on account of the cattle plague, but it is difficult to explain why such a

sudden increase of our import of sheep from France should have taken place in 1872, accompanied by a decrease in the import from Belgium, whilst in 1873 the increase occurs in sheep from Belgium, and the decrease in sheep from France. Variations of a similar nature may be observed in our imports of swine, although but little importance can be attached to this trade, as our total import is comparatively insignificant. Changes have also taken place in the amount of importation into the various ports. Thus, in 1869 nearly 71 per cent. of our foreign cattle were landed in the port of London; in 1873 only about 50½ per cent. were landed at that port. These changes in the course of trade might formerly have been accounted for by the difference of practice on the part of the various inspectors as to the examination of the foreign animals and the necessity for their detention, but of late years the examination has been uniform, and there does not appear to be any reason other than that of trading advantages to cause the transfer of the trade from London to the other ports. Animals brought from the Channel Islands are, under section 6 of the Contagious Diseases (Animals) Act, 1869, foreign animals, but are not so considered by the Customs. In the Appendix will be found tables showing the amount of our imports from these islands during the last two years. Similar information has not hitherto been published in the annual reports.

Irish: From Ireland the imports into Great Britain have increased during the past year by upwards of 68,000 cattle and 86,000 sheep, but the import of disease has decreased by upwards of 79,000. The latter may have been counteracted by a larger import of pork and bacon, but on this point no information can be obtained from the Customs, as they have ceased to keep any separate record of these imports from Ireland.

CONTAGIOUS DISEASES AMONGST ANIMALS.—Home: No cattle plague or sheep-pox has occurred amongst our home stock during the past year. Although the number of cases of pleuro-pneumonia reported during the year 1873 is nearly 15 per cent. less than in 1872, it is difficult to show that this is due to any of the preventive measures taken. Compulsory slaughter has been too short a time in operation to show its effects, and both slaughter and isolation have been so ineffectually carried out generally that no inference can be deduced as to its success or non-success in checking the spreading of this disease. On comparing, however, the returns for the last four months of 1873 with the same period of 1872, it will be found that although there is an increase during that period of last year in the number of outbreaks and in the number of cattle on the infected premises, yet the number attacked is less, being in 1870 nearly 17 per cent., and in 1873 a little over 12 per cent. In the last four months of 1872, only 49 per cent. of those attacked were killed; in 1873, 94 per cent. were killed. The average number of cattle attacked in the above-mentioned periods during each outbreak in 1872 was 3,313; in 1873 it was 2,369. Two local authorities, however, have reported that they have carried out the Orders, and that they have succeeded in checking the disease in the one case, and in stamping it out in the other; but the former state that they do not consider the result adequate to the outlay incurred. This outlay is in many cases very large from the fact that the carcasses of cattle slaughtered even in the early stages of the disease have been by some local authorities ordered to be destroyed as unfit for human food without examination. The Lords of the Council have been advised that the owner of any animal slaughtered on account of being affected with this disease has an absolute right to the carcase, and to dispose thereof, subject to the ordinary law, and with regard to the provisions of the second section of the Nuisances Removal Act for England (Amendment) Act, 1863 (26 & 27 Vict. cap. 117), it would appear that the medical officer or inspector of nuisances acting under the above-mentioned section is only authorised thereby to inspect and examine, and to form his opinion on the appearance presenting itself to him on that inspection and examination, and is not justified in basing his opinion to any extent on the history of the object inspected, and his own view of the facts of that history. There is no conclusive evidence that any injurious results have followed from the consumption of these carcasses, and it is known that very large numbers of them are sold for food. The official information with regard to foot-and-mouth disease is very small, but there does not appear to be a doubt that it has been less prevalent during the past year than it was in 1872. There is no

reason, however, to believe that the immunity from this disease will continue. A report on this subject by the chief inspector of the Department will be found in the Appendix. Sheep-scab is evidently on the decrease if reliance is to be placed upon the returns furnished to this Department. In 1872, the number of attacks was 60,354; in 1873, the number was only 41,104. But this does not represent the real decrease in those districts where it was most prevalent. Taking seven counties, in each of which more than 2,000 cases of this disease occurred in 1871, it will be found that the total number of cases in them for 1871, 1872, and 1873 are respectively, 34,702, 28,200, and 15,044, showing a decrease during the three years of more than 50 per cent. Nor does this show the full effect that may be anticipated from our legislation, as in the greater number of these districts the provisions contained in the Order in Council were only partially carried out. Thus, in the case of one county in which, according to information received, the permissive Order was carried out fully from August, 1871, the number of cases decreased from 2,951 in that year to 1,546 in 1872, and to 378 in 1873. It would therefore appear that the legislation as regards this disease, if effectually carried out, would be attended with a very beneficial result. The returns of cases of glanders in Great Britain during the last three years show a gradual increase from 204 in 1871 to 325 in 1872, and 436 in 1873. It is impossible to decide whether this increase is real or apparent; whether it is due to increased vigilance on the part of the inspectors, conscientiousness on the part of the owners, or a real increase of the disease. There is reason to believe that even now only a small percentage of the cases which occur are returned. Farcy has only been included under the meaning of contagious or infectious disease since the 2nd of July, 1873, and the number of cases reported is so small as not to require any further notice.

Foreign: Cattle-plague has existed during the year 1873 in between 90 and 100 different places in Austro-Hungary; in Germany, in the States of Bavaria and Silesia; in Greece, in the Islands of Corfu, Andros, Naxos, Joz, and Timos; in Russia and Poland; in Turkey in Europe and Turkey in Asia; in Egypt; in China, and in Japan. A reference to the appendix with show the names of the different places in these countries in which the disease existed. The importation of cattle from Russia being prohibited, and there being little probability of any importation from Greece, Turkey, Egypt, China, or Japan, the fact of the existence of this disease in Austro-Hungary, and in Germany during the past year appears to be the only one which requires particular attention. The risk of the introduction of cattle plague from Austro-Hungary direct is very small, as we receive no imports from the Austrian ports, and our risk of getting it indirectly is very much reduced since the adjoining countries have become alive to the necessity of immediate action. From Germany there is greater danger, but this will be reduced to a minimum when the international arrangements already referred to are completed. Then it is thought that the cattle plague will be confined to Russia, for if Russia does not succeed in stamping out rinderpest, it may be hoped that the disease will be prevented from extending beyond the neighbourhood of the Steppes. The outbreaks of the past year in Germany which occurred in Silesia and Bavaria, did not extend beyond those districts. In fact, for some years the undoubted outbreaks of cattle plague which have occurred in Germany, with the single exception of the Hamburg outbreak in 1872, against the recurrence of which special measures have been taken, have been confined to the States bordering upon Russia or Austria. Information has been received of the existence of pleuro-pneumonia during the past year in France, Prussia, the Netherlands, Switzerland, Turkey in Europe, Turkey in Asia, and in the United States. We have also received from Hamburg five cattle affected with this disease. There is no evidence to support the assertions which have often been made, that our foreign imports of cattle add to or keep up this disease in Great Britain. Foot-and-mouth disease has been reported to have existed during the past year in Algeria, France, Germany, Italy, Portugal, Switzerland, and Turkey in Asia. In addition to the above official information of the existence of foot-and-mouth disease, there is reason to believe that it existed in the Netherlands, as we received during 1873 three cattle from that country suffering from this disease. Sheep-pox is reported to have existed during the past year in Pomerania, Spain, and Turkey in Europe. We have not, however, received any foreign

sheep affected with this disease into any of our ports during the year 1873. As regards Spain this disease only existed in one of the Balearic Islands, and as we get no importation of sheep from Turkey, the only danger of its introduction into this country was from Pomerania, from which, however, we have had no direct importation of sheep during the past year. There is reason to believe that the immunity from this disease which we have enjoyed during the last few years is due rather to the regulations of Germany than to our port inspection, which, although it prevents the introduction of sheep actually suffering from this disease, would fail to detect it in the incubative stage. Reports have been received of the existence of sheep-scab and glanders from Germany only during the past year, but it may be assumed that sheep-scab also exists in Belgium and the Netherlands, as this disease has been detected in sheep brought from both these countries by the inspectors of the department at the ports.

INSPECTIONS.—Foreign: The inspection at the ports of the foreign animals brought to this country is still, as a rule, satisfactorily carried out, and there is no reason to believe that during the past year any diseased animals have been admitted. It has been found, however, that a considerable amount of the time of the inspectors has been occupied in examining store animals brought in vessels for the use of the crew or passengers. As these animals do not add any appreciable amount to our food supply, it would appear to be unjust that the expense of the inspection of them, which amounts to a considerable sum, should be paid by the public.

Irish: The inspection of Irish animals on landing in Great Britain has not hitherto been attempted, nor does there seem any advantage to be gained by such inspection, unless effective measures can be taken to detain the animals which are found to be affected with any contagious disease.

Home: The inspection of home animals in Great Britain has during the past year been performed by 1,678 inspectors, about 22 per cent. of whom are members of the Royal College of Veterinary Surgeons, about 59 per cent. are members of the police force, and the remainder are neither veterinary surgeons nor policemen, nor do they appear to possess any qualification entitling them to occupy this office. Neither do the local authorities as a rule appear to see the necessity for professional inspectors, for, although the number of inspectors has been increased from 1,450 in 1871 to 1,678 in 1873, yet the number of veterinary surgeons has decreased from 372 in 1871 to 367 in 1873. The number of police officers employed as inspectors has during the same period increased from 738 to 997. Although many of the local authorities do not appoint veterinary surgeons as inspectors, some of them allow their lay inspectors to call in professional aid.

Transit by Land: The Lords of the Council have not as yet appointed any travelling inspectors for the purpose of ascertaining that their Orders relating to the transit of animals and the disinfection of vessels and trucks, &c., have been carried into effect.

THE NEW CORN EXCHANGE AT CAMBRIDGE.—

At a cost of £6,000 the Cambridge Corporation are about to erect a new Corn Exchange, the foundation-stone of which was on Tuesday laid by the Mayor of Cambridge. It will form a room, 165 feet long by 55 feet wide, and 60 feet high to the ridge. On the south side there will be a transept 45 feet long by 28 feet wide. The whole will allow space for 220 merchants' desks, without crowding. At the luncheon Mr. Marten, M.P. for Cambridge, said he believed that Cambridge would become the eastern metropolis. He also spoke to the need of the new cattle market, that should be in close proximity to the railway station. Mr. T. V. Webb, chairman of the Cambridgeshire Chamber of Agriculture, in replying to the toast of "Success to agriculture," regretted there was disruption with the labourers; and if he might say a word of advice to the farmers, it would be that they should attempt a compromise. The combination on the part of the men was right and lawful, and he hoped that the farmers would accede to the propositions now put before them.

THE INFLUENCE OF COLD UPON THE PRODUCTION OF WOOL.

By DR. HECTOR GEORGE.

[TRANSLATED FROM THE FRENCH OF THE "JOURNAL D'AGRICULTURE PRATIQUE," EXPRESSLY FOR
"THE MARK LANE EXPRESS."]

Amongst the many products which the domestic animals supply to man, wool is one of the most valuable and the most in request by the manufacturer. Every means are employed to improve that of the indigenous flocks, and to introduce into our counties new species of wool-bearing animals—as the lama, the vicuna, the alpaca, &c. But a quite unexpected transformation has puzzled the breeders, namely, that the simple change of climate greatly modifies the character of the wool, and even causes it wholly to disappear. It is then replaced by a coat of another species, and of a commercial value much inferior to it, so that the object of the acclimations is completely baffled. This influence of the climate—or to speak more correctly, of the temperature—on the production and disappearance of the wool, has been proved by numerous observations which it is not without interest to recall in a few words.

In order the better to describe these modifications, we must not lose sight of this fundamental observation that the coat is composed of two kinds of hair, variable in their proportions according to the several species of animals, but which may be made to reappear at pleasure under certain influences, of which the principal is assuredly that of temperature. Of these two sorts of hair, one is rigid, shining, coarse, well fixed. It is the *jarre*, which exists nearly alone in the ordinary conditions of the horse and the ox. The other hair, hidden under the first, is distinguished by being more curled and tangled and more dull than the *jarre* and much finer. It is the *wool*, which exists nearly alone in the Merino sheep and in the Cashmere goats. It is well known that the wool is greatly preferred to the *jarre* by the manufacturer. The wool, in fact, is much finer, curls more readily, and is found bristling with little scaly asperities (due to its mode of development), which render it more preferable for felting and the manufacture of tissues. From the coats of sheep, goats, rabbits, &c., the coarse and rigid hair is carefully removed. We can already state that amongst our domestic animals (horses, dogs, cats, &c.) a new kind of hair has been produced at the beginning of winter, which grows between that of the *jarre*, in order to guarantee the animals against the cold. This winter-hair is wool, and it disappears in the spring with the return of warmth.

Let us take a few types of domestic animals, in order to follow in them these modifications of the temperature; we shall find the facts sufficiently curious. If we begin with the horse, we observe that in this country they have little coat except the *jarre*. But let us go farther north—to Norway, for instance, or Lapland, or Mongolia or Siberia, and we shall find the *jarre* has disappeared, being displaced by a wool as thick as that of a sheep, constituted of a curled hair, which is a true fleece. The same is stated of the wild horses of Asia and America; and if we should possess them for their wool only, we should soon be obliged to give them up; for when once taken and confined in a stable, they lose in a few months their abundant curled fleece, which is replaced by a bright and short coat of hair. This is the *jarre* which reappears alone. The wool, having become useless, has disappeared. Lastly, as we have often stated, the horses of India, clothed simply with the *jarre*, when they are taken to the mountains of Cashmere or Thibet, are soon covered

with wool, these like all other mountains being much colder than the plains. When they again descend into the plain the wool disappears.

It is the same with dogs; and the Indian dogs, when taken to the mountains of Thibet, are covered with wool. On the contrary, dogs that are kept for a long time in a warm country have eventually no coat; such is the Guinea dog, called alternately Egyptian, African, Turkish, Chinese, Calongo, &c. Of oxen some curious observations have been published by M. Routin in a voyage to America. The following was noticed by him in the Cordilleras, where he found oxen at nearly all altitudes. At a tolerably high level, where the average temperature is from 9 to 10 degrees, animals of the bovine species have a long close-pressed badly-laid coat—in fact, a true wool. Lower down, and in the warm plains, the wool disappeared, and the scanty hair which remains is straight. This is the *jarre* (these animals are known under the name of *pilones*). Lastly, with very hot regions, the skin becomes entirely naked (Calongos); and it is observed the animals with a naked skin are never found in the cold regions.

Even in France we can observe analogous modifications, which are transitory on account of the variations of climate, but which a prolonged influence might render durable. In Auvergne the farmers often send, during the summer, the calves to pasture in the mountains. Those which have passed six months in those high regions—very cold—and which descend in the middle of October, are clothed with a true wool, long, curled, and cottony, very different from the *jarre* of the calves remaining in the low countries.

We now go back to find the same effects on the sheep. Our ordinary breeds are, above all, furnished with wool, but they have still a little *jarre*: this has almost wholly disappeared amongst the Merino sheep, the fleece of which, since the fourteenth century, has produced the fine wools of Segovia of European reputation. These flocks of Spanish Merinos were *transhumants*—that is to say, they were led to pasture in summer upon the mountains; and if that fine breed has been successfully established in France, it is because our climate is very like that of Spain. But we must not ascribe this fleece wholly to the effect of climate. A proof of this is, that our European sheep transported into warmer climates (to Peru, Chili, the American valleys, Guinea, &c.) lose their wool at the end of a variable time, and it is then replaced by a short hair, bright, well established—the *jarre*, in fact—and the wool never after makes its appearance. We have observed the same changes in the Merinos transported by the English into some of the islands of the South Seas.

The goats also present analogous modifications, according to the climate. The most renowned of these—the cashmères—live in the mountains of Thibet, that is, in the very cold regions. Their coats are composed almost exclusively of an abundant and very fine wool, which is manufactured into shawls of unrivalled beauty. Amongst the coat there is scarcely any *jarre*. When these are brought down into the plains their wool diminishes and their *jarre* increases, which lowers the quality and the value of their fleece. In 1818, our celebrated manufacturer, Terneau, resolved to take from India the manufacture of these shawls; and he brought, at a heavy

expense, from Thibet a flock of goats, intended for the foundation of a race destined to supply the wool for the Indian shawls. But the Thibet goats quickly degenerated in France. Other attempts proved also fruitless, and it was found necessary to give up the idea of preserving in these goats the quality of their wool in a climate different to their own. The wool of these goats disappeared completely in the warm climates, like that of certain low and burning vallies of America; and it is then replaced by a short, bright, well-set hair, which is no other than the jarre—a very curious example of the influence of temperature on the production and predominance of one or the other of these two species of animal coverings.

From what has been stated, the breeders of animals may draw a very clear conclusion that whatever food and care they may bestow upon wool-bearing animals, they are

not the only condition proper to soften their fleeces. For exotic animals which we wish to acclimatise, it requires the nearest possible approach to the condition of the native climate; and for indigenous animals themselves the question of temperature has great importance. The jarre may be compared to summer clothing, and the wool to that of winter. Nature furnishes so much more abundantly the winter clothing that the animal may resist the most severe frost. It remains to determine the extreme degree of cold that an animal can support; and, when once that limit is known, it will be necessary to approach the nearest possible to it, in order to produce in the animal all that it can furnish of the best in quality and quantity of wool. The mountains offer, at different heights, all the climates desirable, and may become a fertile field of experiments of which all the known observations warrant the success.

THE LONDON MARKET FROM A FOREIGN POINT OF VIEW.

[TRANSLATED FOR THE MARK LANE EXPRESS.]

A pamphlet has recently been published in Rome, written by *Cavalier Olshen, Director of the Bollettino del Comizio Agrario*, which treats upon the cattle markets of the largest capitals in Europe, London, Paris, and Berlin. It may be interesting to know the author's opinion respecting the cattle market of the British metropolis. London, says the Cavalier, is not only the greatest city in Great Britain, but it is the greatest city in the world. The visitor from the rural districts, whilst he walks through the many streets, and observes the immense and increasing crowd of people, asks himself the question—by what means agriculture is able to provide for the nourishment of such a multitude of persons, and how are the products of agricultural industry brought to market to supply the wants of such colossal wealth. In respect to the consumption of meat, it is very apparent to any one who makes even a short stay in London and gives his attention to the subject, that these demands are enormous. Well, this large demand is supplied exclusively from a single slaughter market for cattle, from which the butchers of the metropolis make their purchases. Owing to the excessive growth of London, the former cattle market in the city became too restricted and altogether inaccessible, and there was opened in the northern part, in the suburb of Islington, in 1857, an immense new market called the Islington Cattle market. Here the arrangements, formed upon the best and most accurate results derived from long experience, excellent and simple of themselves, make this market a model for others, and the admiration of all visitors. The circumference of the piazza, or space occupied by the market and its approaches, covers 285,960 square metres; one half of this area is intended for the animals, and the other for the approaches to the market itself. Where the animals intended for sale are exposed is a quadrangular space of 63,832 square metres in extent, paved, and well drained by means of subterranean drains. Divers basins of iron provide the space abundantly with water. In the middle stands an octagonal building with a tower, which has a clock facing each way. This building, which is called the Bank Buildings, contains the offices of the employés of the market, certain rooms for banking purposes, an office for tickets, a postal and telegraph station. Upon one of the sides of this vast piazza one observes two great buildings covered in with roofs and open at the sides, with a pavement which is two feet above the level of the piazza. Here are exposed for sale the pigs and calves, and each of these buildings is able to accommodate 1,000

head of these animals. The space covered by the market is divided by a broad street into two parts—one being intended for the exhibition of the bovine race, and the other for the sheep. For the latter there are enclosures, where from 20 to 30 head can enter, and on the whole there may be collected 30,000 of these animals. For the cattle have been erected very substantially-built compartments and bars, to which the animals are bound by their horns and by the neck. The space intended for the cattle will contain 7,000 head. To shelter conveniently such of the beasts as arrive upon the piazza before the days of sale, as well as those which remain unsold, there have been constructed 12 great lairs on the western side and another 12 on the southern side. Those on the western are intended for the sheep, and contain space enough for 10,000 of these animals: those on the southern are intended for the cattle, and accommodate about 3,000 head. Upon one side these lairs are entirely open, and in their vicinity there are situated several slaughter-houses. In order to facilitate the business, the City of London, which has carried out all the arrangements for the market, has caused to be built in the immediate neighbourhood of the market itself five large hotels, where the buyers and the sellers of the animals are able to find accommodation and convenient lodgings. Twice in the week (on Monday and Thursday) the market is held; but the most important day is the Monday. On that day we found, for example, on sale, about 5,000 head of cattle, 24,000 sheep, 400 calves, and 400 pigs; whilst on the Thursday following there were only one-half that number. The sale of the beasts takes place in the market itself, and the commission agents who effect these sales receive accommodation, differing according to the description of animals. The auctions are held by an agent, who stands amongst the animals, upon a space which is limited by a cord, and he is assisted by a clerk, who makes a note of the sale. The butchers who are purchasers take their stand opposite to this enclosure. The management of the Metropolitan Cattle Market of London is entrusted to a director of the market, two controllers, and two inspectors, with a number of drovers specially employed to drive the cattle. These are persons whose ability and probity have been stoutly tested by the director of the market, nor can they exercise their calling without a special permission from the director himself. They do not receive, as the other employés named, a fixed salary, but they are paid by the persons who avail themselves of their services. The animals going to the

market are allowed to traverse the streets of London only at night after 12 o'clock, and the animals sold can be taken away from the market only in the morning until 11 o'clock, and then again after 7 in the evening. During the time of the prevalence of cattle disease, the Metropolitan Market was exclusively used for slaughtering purposes, and owners were not allowed to remove their animals to any other markets, but to slaughter within eight days. The butchers of London are divided into three classes—the wholesale, the retail, and the contractors. The wholesale butchers purchase live-stock upon the market, where they kill and dispose of the meat without dividing it or at the most quartering it. The sales are made at their own houses or at the meat market. These wholesale butchers often slaughter in a week 200 head of cattle, and more than 1,000 sheep, especially during the season when Parliament sits and at Christmas. The retailers slaughter a few animals, providing from the market the remainder of the meat which they require for sale. Besides this great market for animals, there takes place in London daily, with the exception of the Sundays and holidays, three great meat markets—the Metropolitan New Market, Leadenhall, and Whitechapel. All three are situated within the radius of the City. That of the New Metropolitan is of great extent and the most frequented.

At Leadenhall Market are also sold rabbits, poultry, and wild-fowl. All these markets are held under the control of the inspectors, whose duty it is to maintain order and to examine the meat which is brought thither for sale, and to seize any that is unwholesome. The quantity which is thus annually seized amounts to a considerable total, that is, from 90,000 to 113,500 kilos. According to statistical returns, there were consumed daily in the metropolis about 1,100 cattle and 5,200 sheep, or for the week 7,700 cattle and 36,400 sheep. It is evident that English agriculture is not able to suffice for such an enormous consumption, and London has therefore to look for provisions from other countries, where the competition is carried on very actively to supply this necessity. At the Islington Market, not only English, but beasts from all parts of the Continent may be seen, and how considerable is the share taken by the foreigners appears clearly from the fact that from the Continent are furnished annually to the British Isles, in round numbers, about 227,500 head of fat cattle, 55,700 calves, 914,000 sheep, and 132,900 pigs. The largest importations are derived from France, Holland, and Germany; then from Denmark, Portugal, and Spain; and even a few from Austria.

THE LUMBERING BUSINESS IN MICHIGAN.

TO THE EDITOR OF THE MARK LANE EXPRESS.

SIR,—I am inclined to believe that a sketch of Michigan stock in connection with the lumbering business will be interesting to your readers. At Millington station on the Bay City Railroad I was met by Mr. Murphy, jun., who conveyed me with a very substantial tram, that could go to the lumber camps of Messrs. Avery and Murphy. Here are thirteen thousand acres of land, owned by this company, from which they had sent the logs down Gooden Creek at high water into Cass River, from there boomed and rafted to the mill at Bay City. They have cut upwards of six million feet of lumber at this point for the past eight or nine years. There are two camps on the tract, and upwards of eighty men have been at work during the winter, thirty teams of horses, and nine yoke of oxen. Here I found some thoroughbred Shorthorns, and about forty-five very superior grades; also seventeen large heavy mares, which they bred to their large Clydesdale horse Young Richmond: these mares are all of a very superior character, and have been hauling logs all the winter, but have recently turned out to foal. There were seventeen yearlings thus bred, all from the Clydesdale, uniform in good quarters, short backs, and much substance, varying in colour. It would be difficult to find a better lot of colts in this country for heavy draught. They are destined for the lumbering business and other heavy work. I visited this establishment last winter, and it was pleasing to see with what system the business was carried on. From Millington I went to Port Huron, near which Messrs. Avery and Murphy own ten thousand acres of fine land, and the logs are conveyed in the same way by water to their mills at that place. Upwards of six million feet of lumber have been cut by them yearly at this point for the past twenty-one years. These mills are on a more extensive scale than those at Bay City. Here I met Mr. Stebbins, the agent for this company, to whom I am indebted for much kind attention. The stables are near the mills, and we were soon inside of them examining the Shorthorns. I found at the head of the herd Duke of Andrie 23rd, bred by Mr. Alex-

ander, of Kentucky, and purchased of him for 3,000 dollars. He is amongst the best of the Dukes; still, like all the rest of them, lacking in the crops; but he has a straight top and bottom, and is good in his thigh, twist, and rumps. Although I cannot admire these Dukes, this is the second best I have met with. The Miss Wileys 15th, 24th, and 25th are superior animals, all purchased at high figures. Welcome, bred by Mr. Joseph Beasley, Plifford Hall, England, is a very fine heifer, and her calf is very superior. Michigan Casket is a still better heifer, bred by Mr. Cruikshanks, Sityon, Aberdeenshire, Scotland. Michigan Daisy, bred by Mr. Kanillie, Scotland, is a very superior heifer, and will make a good show cow. The three last imported heifers are three years old each, and are hard animals to be beaten. There are some heifers of the Rose of Sharon tribe, which are much admired and valued by their owners; but I consider Miss Barnum 2nd preferable to either, and her heifer-calf is very superior; a cow with such quality, symmetry, and substance, proving an excellent breeder, although not ranking in the fashionable class of fancy, is one of the plums of the herd. She is descended from Mrs. Mott, therefore traces back to the importation of 1817, a family that are getting into better repute every day. The better they are known the more they are appreciated. This cow was bred by Mr. John Cunningham, of Kentucky. There are others in the herd with short pedigrees that are not to be despised. Mr. John B. Sauborn kindly invited me to view his herd, and we were conveyed there behind an excellent driving mare to see the Shorthorns. Mr. Sauborn ordered out some of the best, and they were tied in a row for close examination. It would certainly have been a grand feature in any state fair. At the head stood Highland Chief, and an excellent bull he is. I will not attempt to enumerate his good points for they were many, his deficiencies are but slight. This bull, as is asserted, was very superior to the two which triumphed over him at the last state fair. Mistakes of judgment in selecting animals for premiums are ruinous to good breeding. This bull was owned by Mr. G. F. Wastell at the time he met

with this inglorious defeat at Grand Rapids. Jenny Lind, bred by Mr. A. E. Hector, of Colly Hill, Scotland, perfect in symmetry, quality, and substance, short legs, fine bone, and I think is an animal that cannot be easily beaten in the showing. Golden Drop is a three-year-old bred by Mr. S. Campbell, Hamilton, Aberdeenshire, Scotland. It would be difficult to decide between Jenny Lind and this heifer, choice in colour men might prefer red to roan, or *vice versa*. This heifer's calf is a good one. Countess of Henton is another superior heifer. Miss Bell, bred by Mr. Robert Miller, Pickering, Canada, is a good heifer and has taken several first prizes. Mr. Sanborn has some Rose of Sharon heifers, which he values highly, and I think will neck well with Highland Chief. Duchess of Oakland he values highly, and there are

others of short pedigrees worthy of special notice. Earl of Oxford is a bull valued by those preferring the fashionable Duchess strain, but he having been injured when on the way from England, and in very low condition, could not be criticised. Mr. Sanborn paid a very high price for him, through the appearance of his produce; but I will back that of Highland Chief against him, notwithstanding his fashionable pedigree. I prefer the *true made* animals to pedigree, or fashion, when they breed uniformly good. My opinion is that Messrs. Avery and Murphy, and Mr. J. Sanborn will be difficult opponents for breeders to meet in the showing of next fall.

Yours., WM. H. SOTHAM.

Cass Hotel, Detroit, Michigan, May 10th, 1874.

M A N O R I A L R I G H T S .

In the Court of Error in the Exchequer Chamber, the case of SMITH *v.* SOWERBY has raised a question of some interest in rural districts. The point is as to the right of lords of manors to shoot over enclosed lands in their manors. The question has arisen repeatedly since Enclosure Acts became numerous, and in the case of Sir James Graham, some years ago, the House of Lords affirmed the right, by reason of the clause, always in some form inserted in Enclosure Acts, preserving the rights of the lord of the manor, including right of shooting over all the enclosed lands. In the present case the question was whether the lord has the right of shooting over all the enclosures from the waste of his manor. The plaintiff is the allottee of a piece of land formerly part of the waste of the Manor of Messingham, in the county of Lincoln. The defendant represents the lord of the manor. The plaintiff, an allottee, sued him for shooting over his allotment under the Enclosure Act. The defendant set up the usual clause reserving the rights of the lord, and the short question was this—Whether, by virtue of the Enclosure Act of 1798, the allottee of the waste land or the lord of the manor was entitled to sport over the waste land enclosed. Two Judges in the Common Pleas held that the allottee, and not the lord, was entitled; but Mr. Justice Honyman differed, thinking that the decision in the House of Lords decided the case. The question was whether it did—that is, whether there was any substantial difference in the present case from that of Sir J. Graham. The terms of the clause reserving the rights of the lord in this case were the following: "That nothing shall prejudice or lessen the right or interest of the lord of the manor in or to the seignior or royalties incident to the manor, but that he shall have all rights on liberties of hawking, hunting, coursing, fishing, and fowling within the manor, pertaining to the manor, or belonging to the lord, or which have been heretofore held or exercised by the lord or his ancestors." It was contended on the part of the defendant, who represents the lord of the manor, that this included the right of shooting over the waste land of the manor, and that, therefore, it is reserved over the enclosed portions of the waste. The Court of Common Pleas, by two Judges to one, decided against the lord, and the defendant, representing the lord, now appealed.

Mr. Field, Q. C., and Mr. Barker were for the defendant, the appellant; Mr. John Mellor and Mr. Jeune were against him.

On the part of the appellant, who set up the right of the lord of the manor, Sir James Graham's case was relied upon, and it was urged that the present case was substantially the same—it was part of the contract with the lord of the manor in cases of enclosure that his rights of sporting over the wastes should be preserved, and it was the object of the Legislature to preserve it. There was one, indeed, as the Judges observed, a notion that lords of manors had a right of shooting over all the lands within the manor, even though the private property of other persons; but this has long been exploded, and all that is now claimed on the part of the lords of manors is the right of shooting over the wastes of their manors. This right it was the object, it was said, of the Legislature to preserve to the lords of manors in Enclosure Acts. On the other side it was insisted that Sir James Graham's case was

different, because the Act gave the lord in express terms the right to shoot over the land to be enclosed; whereas here there was only a reservation of such rights as had existed over the manor, and, it was urged, the lord could not have any "right" in the waste of the manor except as incident to his right of ownership, which was gone. In short, it was urged that the right of shooting was not a manorial right, but a right of ownership, and only manorial rights were reserved. In reply, it was urged that the contract with the lord was that he should retain his rights of sport over the allotted lands; that this was clearly the object and intention of the Legislature, and that technical objections ought not to prevail against it. Surely, in common sense, the power of the lord of a manor to shoot over his wastes was a "right," and, if so, it was reserved?

The LORD CHIEF JUSTICE observed that if the words had been, as in Sir James Graham's case, that the lord should have the right of shooting "over the allotted lands," the case would have been free from doubt. As it was, however, there was room for doubt whether the Legislature had used language to carry out their assumed intention. But the question was, whether, looking at the scope of the Act, it could not be seen that the effect was substantially the same as in Sir James Graham's case, and that the effect was to preserve the lord's right of shooting over the lands enclosed from his waste.—At the close of the argument, the Court took time to consider their judgment.

THE HORSE'S WALK.—In all pictures, from the cartoon in *Punch* to the works of our ancient and modern animal painters, how seldom do we see a horse at a walk properly put upon paper or canvas! I have given this subject much attention, and must confess that it is one of the most difficult to draw accurately, if not the most difficult, an animal painter has to contend with. Without wishing to withhold merit from the very first-rate representations we see in the *Illustrated London News* of our many reviews and processions, what a sameness there is in the figures represented there of the "horse at a walk"!—three legs down and one in the air is the general rule. Again, look at the white pony in Sir E. Landseer's "Deer Stalkers Returning," with his nearfore foot and off hind foot off the ground together. A horse in starting to walk takes his hind foot up first, on whichever side he is made to "lead off with." The fore foot is removed to make room for it, and the moment it is placed in or nearly the same print, the other hind foot is taken up to replace the other fore foot, as in the first instance. "A horse at a walk" should be put upon canvas with the fore and hind foot under him, and the other two moderately extended. The best illustration I know of a "horse at a walk" is the frontispiece in Corbet's *Tales and Trails of Sporting Life*, drawn, I believe, by the author. Animal painters seldom study their profession in detail, and are not sufficiently close observers of nature—many, I have no doubt, could not tell you which legs a cow gets up on first, her fore or her hind ones.—MR. SEPTIMUS FIELD in *The Field*. [The sketch referred to in *Tales and Trails* is not by the author, but his brother, Edward Corbet, who is an animal painter.]

ROYAL AGRICULTURAL SOCIETY OF ENGLAND.

MONTHLY COUNCIL: *Wednesday, June 3.*—Present: Mr. Holland, President, in the chair; the Duke of Bedford; Earl Cathcart; the Earl of Powis, the Earl of Leicester; the Hon. W. Egerton, M.P.; Sir A. K. Macdonald, Bart.; Mr. Barnett, Mr. Bowly; Mr. Dent; Mr. Edmonds; Mr. Brandreth Gibbs; Mr. Horley; Mr. Hornsby; Mr. Bowen Jones; Colonel Kingscote, M.P.; Mr. Laws; Mr. Leeds; Mr. McIntosh; Mr. Masfen; Mr. Randell; Mr. Ridley, M.P.; Mr. Shuttleworth; Mr. Statter; Mr. Torr, M.P.; Mr. Jabez Turner; Mr. Wilby, M.P.; Mr. W. Wells; Lieut.-Col. Wilson; Mr. Jacob Wilson.

Lord Calthorpe was elected a Governor of the Society.

The following members were elected:

Allsopp, Samuel Charles, M.P., Marehington, Uttoxeter.
 Aish, Philip Elsieh, Bromfield, Salop.
 Butler, Frank, Childerditch Hall, Brentwood.
 Chadwick, James, High Bank, Prestwich, Manchester.
 Cheesman, Frederick Walter Morley, Northiam, Hawkhurst.
 Corcoran, James, High-street, Bedford.
 Crowther, James Firth, Knowl-grove, Mirfield, Yorks.
 Dean, Seth Ellis, Dowsby Hall, Folkingham.
 Easton, Richard, Stone House, Taunton.
 Egar, Samuel Wryde, Thorny, Cambs.
 Evans, Frederick, Sawston, Cambs.
 Exeter, the Bishop of, the Palace, Exeter.
 Faulkner, William, Rothersthorpe, Northampton.
 Firmstone, William Francis, Roekingham Hall, Hagley.
 Foster, John N., Sandy-place, Sandy, Beds.
 Franklin, John Liel, Gonalstone Hall, Nottingham.
 Giddons, William, Walpole St. Peters, Wisbeach.
 Haughton, David, Cosford, Shifnal.
 Hawkins, Edmund, Dint-hill Shrewsbury.
 Hawkins Robert Samuel, Broad-street, Oxford.
 Hawkshaw, Sir John, Hollycombe, Sussex.
 Hayward, Charles Cooper, Southill, Biggleswade.
 Hine, George, Oakley, Bedford.
 Horner, Edward, May-place, Crayford.
 Horsford, James, 7, Well-street, Bedford.
 Hunt, Frederick, Harmondsworth, Slough.
 Ivatt, Charles Edward, Rampton, Cambridge.
 King, John, Rowington, Warwick.
 Lees, Benjamin Christy, Sandon, Royston.
 Loney, Frederick, Waterbury, Maidstone.
 Little, William Outlack, Stags' Holt, Mareh, Cambs.
 Mather, Henry, 43, Deane-road, Liverpool.
 Macandrew, Henry Cockburn, Midmills, Inverness.
 Mott, William, Littleport, Isle of Ely.
 Munk, Harry, Holme Pierrepont, Nottingham.
 Nunnerley, William Belton, Whitechurch, Salop.
 Owen, William, Hendre Vaur, Abergelle.
 Parker, Banastre, Riccall Hall, York.
 Perry, William Henry, Syth House, Claverly, Bridgnorth.
 Richards, Richard, Glascoed, Llansilin, Oswestry.
 Richards, Westley, Ashwell, Oakham.
 Robinson, John Wright, Tilton Hall, Wyberton, Boston.
 Sharp, Francis B., Finedon, Wellingborough.
 Shaw, John, Normanton House, Derby.
 Shaw, the Rev. Morton, Rougham Rectory, Bury St. Edmunds.
 Sheraton, John Robinson, Ellesmere, Salop.
 Sibley, Charles Francis, Annables Farm, Harpenden, Luton.
 Slack, Alfred Soham, Ely.
 Sladen, Frederick St. Barbe, Hartsbourne Manor, Watford.
 Smith, Garland, Eaton Constantine, Wellington.
 Stanley, Lieut.-Col. the Hon. F. A., M.P., Witherslack Hall, Grange, Carnforth.
 Stone, Henry Robert, Bedfords, Haverine-atte-Bower, Essex.
 Tillyer, Richard Henry, Heathrow, Hounslow.
 Toller, James Blaxhall, Wickham Market.
 Topham, Joseph, Crown Farm, Great Staunton, St. Neots.
 Verney, Commander Edmund Hope, R.N., Rhianna, Menai Bridge, Anglesey.
 Vickers, Edward, Newbridge Farm, Billingshurst.

Warmington, Cornelius, Granville Hall, Kinton, Evesham.
 Welch, Bryan S., Gringly-on-the-Hill, Bawtry.
 Wilson, Porter, 3, Westgate, Louth.

FINANCES.—Colonel Kingscote, M.P., presented the report, from which it appeared that the Secretary's receipts during the past month had been duly examined by the Committee, and by Messrs. Quilter, Ball and Co., the Society's accountants, and found correct. The balance at the Bankers on May 31 was £3,162 lls. 6d., while £2,000 remains at deposit. This report was adopted.

JOURNAL.—Mr. J. Dent Dent (chairman) reported the recommendation of the committee that the editor of the *Agricultural Gazette* be allowed to have electrotypes of the woodcuts in the last number of the Journal at his own expense. Also that the Secretary be authorised to make a tour in Norway, Sweden, and Denmark, for the purpose of inquiring into the stock-farming of those countries with reference to the probable supplies of cattle from there to the United Kingdom. This report having been adopted, Mr. Dent gave notice that at the next meeting of the Council he would ask for a grant of £150 for the investigation referred to.

CHEMICAL.—Mr. W. Wells (chairman) reported that the committee had received Dr. Voelcker's Quarterly Report, and had ordered it to be printed for further consideration at the next monthly meeting. This report was adopted.

GENERAL, BEDFORD.—Mr. Shuttleworth reported the following recommendations of the Committee:

(1.) That the Home Secretary be asked to allow the Society the services of the usual number of London police. (2.) That the Bedford meeting be advertised at a cost not exceeding £700. (3.) That Professor Brown and Mr. Hunt be asked to act as Veterinary Inspectors at the Bedford meeting. (4.) That the pupils of the Bedford middle-class public school be admitted to the showyard at half-price on one of the shilling days. (5.) That the Royal Agricultural College Club having failed to obtain accommodation in the town, they be allowed to have their annual dinner in the steward's refreshment room. (6.) That the secretary be authorised to make arrangements for providing a turret-clock at the entrances. (7.) That Messrs. Hipwell and Sons be appointed purveyors of corn, meal, &c., at a tariff to be approved by the steward of forage. (8.) That a plan of Bedford be printed on the back of the showyard plan which is published in the catalogue.

This report was adopted subject to the following addition, which was moved by Mr. Dent Dent, seconded by Mr. Jacob Wilson, and carried with two dissentients: "That members' tickets admit to the stand at the Horse Ring." Mr. Shuttleworth then presented the report of the surveyor in reference to the showyard works at Bedford, which were stated to be in a forward condition, and on account of which the contractor was entitled to a payment of £1,200. This report was adopted.

EDUCATION.—The Duke of Bedford (Chairman) moved, on behalf of the committee, and in accordance with notice given at the monthly Council, "That the Education Grant for the current year be increased to the sum of £500, for the purpose of carrying out the examinations of pupils at middle-class schools, on the plan adopted by the Council at their last meeting." This resolution was seconded by Mr. Dent Dent, and carried unanimously. The following recommendations of the committee were also adopted: (1) That a syllabus of the examinations to be held in November be sent to the head masters of middle-class schools; and (2) That the secretary be instructed to advertise these examinations as soon as possible.

The Hon. WILBRAHAM EGERTON, M.P., then moved

that the following statements and recommendations be embodied in a communication from the President of the Society to the Lord President of the Privy Council: The Council of the Royal Agricultural Society are still of opinion that, in order to deal efficiently with the whole question of the contagious and infectious diseases of animals, there is urgent need of such recommendations as were made by them to the Right Hon. W. E. Forster, M.P., as Vice-President of the Privy Council, in December, 1872. Several of these recommendations would, however, require the sanction of Parliament to enable them to be put in force; and, in view of the pressing necessity of dealing immediately with the renewed outbreak of foot-and-mouth disease, the Council beg to make to the Government the following recommendations:

1. That sec. 4 of the Animals (Amendment) Order of 1873 be revoked. 2. That the orders relating to foot-and-mouth disease, enumerated in the first schedule of the Animals (Amendment) Order of 1873, be reissued. 3. That under the authority given in sec. 57 of the Contagious Diseases (Animals) Act, which makes the exposure or carriage of animals affected with a contagious or infectious disease an offence against the Act, the Privy Council should issue an order to facilitate the discovery of disease (especially foot-and-mouth disease) in lairs or other places, adjacent to or connected with a market or fair, or where horses or animals are commonly placed before exposure for sale (these being the words of the Act), with a view to preventing the movement of animals to fairs and markets from such lairs and other places where disease exists; and to the adequate punishment of offenders against this section of the Act.

The Council regret that they cannot accept the conclusions of the Select Committee of the House of Commons on the Contagious Diseases of Animals with reference to Foot-and-mouth Disease; and they are of opinion that the evidence of English agriculturists who were examined before the committee does not justify the conclusions of the committee with reference to that disease.

With regard to the scientific evidence taken before that committee, the Council think that too much stress was laid upon the impossibility of stamping out the disease without very stringent measures, and too little weight attached to the importance of limiting the centres of disease at the commencement of an outbreak.

The evidence of cattle dealers also largely influenced the decision of the committee respecting foot-and-mouth disease. The Council, however, submit that the interest of a cattle dealer in the animals which he buys or sells is limited to a few days, and that he has no interest in the suppression of foot-and-mouth disease; while, by the exclusion of that disease from the Animals Order of 1871, he escapes liabilities to fines for trading in diseased animals. The farmer, however, has to bear the great pecuniary loss which results from the animals of his farm being attacked by this disease. In the majority of cases the disease is conveyed to his home-stock by the purchase of extraneous animals, necessary for the purposes of his farm.

In moving this resolution, Mr. EGERTON stated that he was asking the Council to pursue the same policy as they had done on former occasions. The deputation from the Council which had waited upon the Lord President after the last monthly meeting had been requested to place the recommendations of the Council in writing; and the Lord President had also stated that until the Report of the Select Committee of the House of Commons on the Contagious Diseases (Animals) Act had been protested against by the Royal Agricultural Society and other agricultural institutions on behalf of English agriculturists, it must be taken to represent their opinions. Mr. Egerton contended, however, that the Committee had not been guided by the evidence of agriculturists, but by that of veterinary surgeons, and principally by that of cattle salesmen. The

Committee included only six English county members (representing Huntingdon, Norfolk, Leicester, Essex, Sussex, and Northumberland). Out of 47 witnesses examined, only seven were English agriculturists, and all of these who gave evidence with regard to foot-and-mouth disease were in favour of stringent regulations being enforced, as also were the Scotch farmers who were examined on the question. Mr. Egerton gave an analysis of the evidence of these witnesses, and then showed that the veterinary surgeons who were examined were very much divided in opinion, summarising their opinions as follows.

Professor Brown is in favour of leaving foot-and-mouth disease as it is in 57 and 58 sections of Act, unless much more stringent measures were taken for its prevention. Professor Simonds says that he would make it an offence to expose an animal affected with foot-and-mouth disease in any market or fair, or in any sale-yard, or any lair connected therewith. He is in favour of slaughtering fat animals when disease breaks out at ports, and sending store animals back.

Mr. Fisher would not allow any cattle to leave any farm without the farmer signing a declaration that the cattle to be removed were clear of the disease, and that they had not been in contact with diseased animals so many days.

Mr. Lepper, veterinary surgeon at Aylesbury, would keep animals affected with foot-and-mouth disease by themselves, and all animals which had been in contact with them. Would have every farmer report the foot-and-mouth disease when it broke out.

Mr. Thompson, veterinary surgeon, Aberdeenshire, would not leave it optional for the local authorities to adopt regulations for the foot-and-mouth disease. I would make it imperative for all local authorities to adopt the present regulations and the powers of the Privy Council Orders.

Mr. Goodlet, Forfarshire, thinks foot-and-mouth disease would certainly be abolished if the places where the disease broke out were declared infected, and farmers prohibited from removing infected animals and those in contact with them.

Morrow, Irish grazier and cattle exporter, approves of present restrictions, though opposed to any increase thereof.

Professor Brown, in an article in the *Royal Agricultural Journal*, on foot-and-mouth disease, says, "Much injury is produced by turning animals out of a market into adjacent lairs to wait till the next market day; such places become in times of prevalence of the disease centres of infection, which should be dealt with stringently, and regularly cleaned and disinfected under proper provisions." Asks the question, is foot-and-mouth disease an affection of such a serious character as to render a high degree of circumspection necessary or desirable? The answer must be left to the agriculturists: if they decide the object is worth the cost, there need be no difficulty in carrying out regulations which have been suggested.

In reply to the question whether the object is worth the cost, Mr. EGERTON stated that in Cheshire 130,000 animals had been attacked during the last four years, and the average loss per head was considered to be as much as £4, although only 2,000 animals had died in consequence of the disease; but such an enormous loss in one county alone showed that it was not only an agricultural but a public question.

In the unavoidable absence of Colonel Kingscote, C.B., M.P., Mr. JABEZ TURNER seconded the resolution. He referred to the fact that a deputation, stated to consist of butchers, cattle-dealers, farmers, and graziers connected with Liverpool, had waited upon the Duke of Richmond

asking for free trade in diseased animals, and they had taken care to get their arguments widely published, whereas the public were not informed of the enormous losses which they sustained in consequence of the attacks of foot-and-mouth disease.

Mr. RANDELL suggested that a paragraph should be added to the resolutions, stating the loss of meat to the public caused by this disease. He thought it could be shown that the loss sustained had been ten times as great from foot-and-mouth disease as from cattle plague; and he would advocate measures quite as stringent as those which prevailed during the cattle plague.

Mr. DENT DENT reminded the Council that when the subject was discussed at the last monthly meeting, he had urged that the recommendations to be submitted to the Lord President of the Council should be put on paper. It now appeared that when the deputation waited upon the Duke of Richmond, he had made a request to that effect, although the Council had no report before them of what had taken place at the interview which the deputation had had with the Lord President. He thought that Mr. Egerton had made a very able speech, which he should have delivered in the House of Commons, as it to a great extent reflected upon the Report of the Select Committee of the House of Commons, of which he (Mr. Dent) had been a member. He avowed that the immense divergence of opinion expressed by the numerous witnesses who gave evidence before that Select Committee, had led him to the conclusion, which he had arrived at with much regret, that the disease should not be interfered with except as provided in clause 57 of the Contagious Diseases (Animals) Act. With regard to the proposition of Mr. Egerton, he could not give support to it further than that he agreed with the proposal embodied in the third recommendation. As to the subsequent paragraphs, he considered that it was beyond the province of the Council to criticise a report of a Select Committee of the House of Commons, especially as he felt sure that not one member of the Council in ten had read the evidence upon which that report was founded. Much stress has been laid upon the loss which was caused by an attack of foot-and-mouth disease, and if these assertions were true they ought to be established beyond the possibility of a doubt; but the increase in the number of cattle in the country the last four years had led him to the opinion that the loss arising from the disease had been very much exaggerated. He gave the following figures to show the increase in cattle between 1869 and 1873 inclusive:

England	443,428
Scotland	97,140
Ireland	531,209
Total.....	1,071,777

It had been stated that the Select Committee had been influenced by cattle dealers; but, in fact, cattle dealers were a necessity, and could not be done without, therefore they should have their proper influence. Finally, he stated that, although he did not agree with the necessity of imposing additional regulations, he considered that if any were to be established they ought to be made uniform throughout the country. He therefore moved the following amendment: "That inasmuch as the issuing of different regulations by various local authorities in respect of cattle diseases has been proved to cause serious injury to trade, and has in no way checked the progress of disease, it seems to this Council undesirable that any discretionary power to make such regulations should be given to local authorities. And as any uniform regulations which would prove efficient must be of so stringent a character as to be almost unbearable, it is not desirable to make any further order with respect to foot-and-mouth disease; and that in the opinion of the Council it is de-

sirable that any Orders of the Privy Council with a view to the above objects should be uniform and compulsory, and not left to the discretion of the local authorities."

Earl CATHCART seconded the amendment. He held that desperate diseases required desperate remedies; and the question, therefore, arose, whether foot-and-mouth was a desperate disease or not, as he considered that the remedy required would be a desperate one indeed. With regard to this question he would take Mr. Egerton's own figures, and ask him whether the loss of £4 per head sustained by the county of Chester on 130,000 animals in the course of four years was at all comparable to the loss from cattle plague sustained by that county, when nearly the whole of their cattle were annihilated. Diverse authorities and half-measures could not possibly bring about any effectual remedy; and although he admitted that much loss of meat was caused by foot-and-mouth disease, as well as loss of milk and of offspring, in consequence of diminished fecundity, he held that they could not adopt the rigorous measures that would be required to check the disease effectually.

Mr. JACOB WILSON remarked that it should be remembered that foot-and-mouth disease had not been at so low an ebb for many years as during the cattle plague restrictions; and it was therefore only fair to assume that this fact was the result of those restrictions. While those restrictions were in force, fairs and markets were not held, and, in his opinion, very much to the benefit of the farmer, the dealer, and the consumer. He rarely buys an animal from a fair or market even now, but always, if possible, direct from a farm; and this was the universal and necessary practice during the cattle plague restrictions. So far as he was able to ascertain, the cattle dealers then made just as much money without fairs and markets as they do now; while it is certain that foot-and-mouth disease is fostered and kept active at the ports in England and Ireland, and at the localities of great fairs and markets, through the medium of the lairs and fields in the occupation of dealers. It is now well known that they employ veterinary surgeons to select those animals that are "safe" to be sent to the fair or market the day before the fair or market is held. The tainted animals which do not exhibit outward signs of disease are thus selected to be sent to the market, and to become centres of infection in the different localities to which they are sent, and where they develop the disease a few days or a week or more after purchase. The disease is kept up throughout the season in consequence of the animals consigned to these dealers being sent week after week to the same tainted ground, and in contact with animals which are visibly diseased, and which for that reason cannot be sent to a fair or market to be sold without entailing upon the dealer the infliction of a fine. He considered that the recent increase in the number of cattle was due to the fact that the fear of disease and the high price of stock had combined to make farmers breed more home stock instead of relying so much on purchases as they had hitherto done.

Colonel WILSON agreed with the first part of Mr. Dent's amendment, viz., that the regulation should be uniform and compulsory; but he disagreed with the latter part.

The Hon. WILBRAHAM EGERTON explained that this object was sought to be attained by the first paragraph of his resolution, which referred to the previous recommendations of the Council, upon which he by no means wished to turn his back. But as many of those recommendations could not be carried out without a new Act of Parliament, he was anxious to induce the Privy Council to do at once what lay in their power towards checking the spread of foot-and-mouth disease, without waiting for the result of further legislation, which he nevertheless hoped

would soon follow in the direction of the previous recommendations of the Council. With regard to the increase in the number of cattle, he observed that it had not been contended the foot-and-mouth disease diminished their number greatly; but that it diminished the production of meat and milk.

On a division Mr. Dent's amendment was lost by a majority of one, 11 members voting for it and 12 against.

Mr. DENT then moved the omission of the last three paragraphs of Mr. Egerton's proposition.

Mr. JOHN TORR, M.P., seconded this amendment, and took the opportunity of stating that he had attended with the deputation which had been referred to by Mr. Jabez Turner, and which consisted of butchers and cattle-dealers from Liverpool and graziers from Ireland. The people of Liverpool and its neighbourhood get nine-tenths of the meat consumed by 500,000 people from Ireland, and therefore they had good cause to represent their own view of the matter to the Lord President of the Privy Council. It must also be remembered that the cattle market of the town of Liverpool was not under the regulations of the Town Council, and there was, therefore, no power for the town authorities to order the slaughter of diseased animals. He thought that statistics should be obtained as to the damage done by foot-and-mouth disease; and if it was found to be great, that an adequate remedy ought to be provided; but whatever regulations were made ought to be compulsory on the local authorities.

The Hon. WILBRAHAM EGERTON reminded Mr. Torr that the action of the late Government in discontinuing the compulsory returns of attacks of foot-and-mouth disease had rendered it impossible to obtain statistics on the subject for the whole of Great Britain. However, he had no objection to withdraw the three paragraphs referring to the report of the Select Committee.

The remaining paragraphs were then voted upon *seriatim*.

The first paragraph was carried by 8 votes to 6.

The second paragraph was carried unanimously, subject to the following addition moved by Mr. W. E. Welby, M.P., and seconded by Col. Wilson: "And that these orders be made compulsory upon all local authorities."

The third paragraph was also agreed to, subject to the addition of the same words.

The question was then put that the communication as amended be sent to the Lord President of the Privy Council, and on a division was carried by 9 votes to 7, as follows:

The Council of the Royal Agricultural Society are still of opinion that, in order to deal efficiently with the whole question of the contagious and infectious diseases of animals, there is urgent need of such recommendations as were made by them to the Right Hon. W. E. Forster, M.P., as Vice-President of the Privy Council, in December, 1872.

Several of these recommendations would, however, require the sanction of Parliament to enable them to be put in force; and, in view of the pressing necessity of dealing immediately with the renewed outbreak of foot-and-mouth disease, the Council beg to make to the Government the following recommendations:

1. That sec. 4 of the Animals (Amendment) Order of 1873 be revoked. 2. That the Orders relating to foot-and-mouth disease, enumerated in the first schedule of the Animals (Amendment) Order of 1873, be re-issued, and made compulsory on all the local authorities. 3. That under the authority given in sec. 57 of the Contagious Diseases (Animals) Act, which makes the exposure or carriage of animals affected with a contagious or infectious disease an offence against the Act, the Privy Council should issue an order, compulsory on all the local authorities, to facilitate the discovery of disease (especially foot-and-mouth disease) in lairs or other places adjacent to, or connected with, a market or fair, or where horses or animals are commonly placed before exposure for sale (these being the words of the Act), with a view to preventing the

movement of animals to fairs and markets from such lairs and other places where disease exists, and to the adequate punishment of offenders against this section of the Act.

Mr. DENT DENT withdrew the motion of which he had given notice with reference to farm prizes.

Mr. SHUTTLEWORTH then moved the resolution of which he had given notice, and after a conversation it was amended, seconded by Lord CATHCART, and carried as follows:

"That the last paragraph in the last Report of the Implementation Committee be rescinded, and that a ring in the showyard be provided (under the direction of the stewards) for the exhibition of automatic implements worked by horse-power."

Letters were read from the Earl of Powis and the Secretary of State for Foreign Affairs communicating "Reports furnished to the Board of Admiralty and communicated to the Foreign Office in reference to newly-discovered guano deposits in Peru." The letter from the Foreign Office also requested that, considering the public interest exhibited upon this subject, the Secretary of State for Foreign Affairs should be informed whether the Council would wish to be furnished with a sample of the guano for the purpose of analysis. The Secretary was thereupon instructed to apply for samples of the guano from each of the deposits, and the whole subject was referred to the Journal Committee for further consideration.

The Earl of Powis also communicated a copy of the Supplement to *The South Pacific Times*, dated April 14, 1874, giving a report from Mr. Thierry, C.E., on these deposits, which lie to the south of Iquique, and one relating to the verification of that survey, by Mr. Hind'e, chief engineer of the department of Tarapaca. From these reports it appears that there exist the following workable guano deposits in this region:

Name.	Estimated quantity.
	Cubic metres.
Chipana.....	89,500
Huanillos.....	700,000
Punta de Lobos.....	1,601,000
Pabellon de Pica.....	5,000,000
Chanavaju.....	150,000
Patache.....	125,000
Patillos.....	15,000
Total.....	7,680,500

Mr. Thierry adds: "The guano dug from the various islands to the northward has always given the mean weight of one ton and a third per cubic metre; but after making some slight experiments, and remembering the dry state of the great deposits, I believe that prudence will not allow me to estimate the weight of the cubic metre at more than a ton. If we adopt then this number of cubic metres as that of tons, we find more than seven millions and a half of tons of guano in the different deposits already mentioned."

Mr. Joseph Hind'e observes on this point: "As regards the quantity of guano contained in this deposit, I think that Senor Thierry has calculated it as correctly as a slight survey would allow. In order to survey with some exactness months would be required, those of Huanillos and Punta Gorda, Lobos, Pabellon de Pica, from the difficulties they present, and without seeing it is impossible to judge, I think that until they are worked it will be impossible to determine the quantity they contain."

A letter was read from M. Drouyn de Lhuys, President of the Societé des Agriculteurs de France, announcing that a deputation from that Society would officially visit the Bedford showyard; and on the motion of Earl Cathcart the Secretary was instructed to send the members of the deputation cards of invitation, and otherwise to facilitate the object of their visit.

An application from Mr. C. Sturgeon, to be allowed to exhibit Merino sheep at Bedford, not for competition for prizes, and unshorn, was granted on the motion of Mr. W. Wells, seconded by the Earl of Powis.

Letters were also read from Mr. J. V. Gooch, on the de

struction by insects of coffee trees in Natal; and from Mr. E. A. Fawcett, in reference to the instructions to the stock judges for awarding prizes to breeding animals at the country meeting.

A letter having been read from the secretaries of the Meteorological Society, requesting the Council to nominate delegates to serve on a committee to organise observations on a systematic basis with reference to the connection between meteorological agencies and the development of vegetable life, it was resolved, on the motion of Mr. W. Wells, seconded by Mr. W. J. Edmonds, that Mr. C. Whitehead be requested to

act as one delegate, and to nominate and appoint his own colleague.

A suggestion made by Mr. T. Willson at the annual meeting, "That the election of members of Council be by means of voting papers sent to members of the Society," was considered, and the Secretary was instructed to inform Mr. Willson that the charter of the Society gave the privilege of electing members of Council to the annual meeting of members held on the 22nd of May, and that the Council had no power to deprive them of this privilege.

THE HIGHLAND AND AGRICULTURAL SOCIETY OF SCOTLAND.

At the monthly meeting of the directors, Captain Tod in the chair, it was agreed, on the motion of Colonel Innes, of Learney, to propose to the general meeting to memorialise the Committee of the Privy Council on Education to establish science, as applied to agriculture, as one of the subjects to be taught in primary schools. It was also resolved that the Society should offer a premium for a textbook on the application of science to agriculture.

On a report by the local committee, a silver medal was awarded to Messrs. Thomas Pirie and Co., Kinmudry, Longside, Aberdeenshire, for their patent heavy land cultivator, which was tried on the farm of Carsobony, near Stirling, on the 14th May. The report bears that "the implement is designed to cut the land in slices in order to secure the speedy and uniform breaking down of heavy soil, in such a way as to

retain the moisture in it, to ensure a braird of turnips, for which crop it is specially intended; and it seemed to the committee to accomplish its purpose so satisfactorily that they recommend the award of a medal or certificate of merit. At the same time, they considered that, with three horses employed, the work was slowly performed."

A patent potato planting machine, made by Mr. William Dewar, Kellas, Dundee, and exhibited by Mr. Thomas Wight, Perth, was tried at the same time. The committee report that they thought this a most ingenious implement, and one which they believe may, without much difficulty, be made of great practical use; but in its present state it did its work imperfectly, and they did not feel warranted in recommending the award of a prize or medal.

THE CENTRAL CHAMBER OF AGRICULTURE.

The last meeting of the Council of the Chamber of Agriculture prior to the summer and autumnal recess took place on Tuesday, June 2, in Salisbury-square, Mr. G. F. Muntz in the chair.

Captain CRAIGIE read the following report, which was received and adopted:

Since the Local Taxation Committee presented their last report, the chief Parliamentary matter of interest to ratepayers has been the introduction and second reading of the Valuation of Property Bill. This measure deals, not as might be inferred from its somewhat incorrect title, with the valuation of property already assessable, but with the extension of the rateable area to mines, woods, and game. It thus redeems the pledge given by the Government to bring these properties at once under liability to rates; and in this respect necessarily resembles Mr. Stansfeld's Rating Bill of last session, although your Committee are glad to observe that it does not reproduce the objectionable features of that measure. While admitting, as they have ever done, the impossibility of locally rating personal property, your Committee were last year compelled emphatically to condemn the attempt then made to convert the present temporary concession into a perpetual exemption in favour of personalty, unbalanced and unaccompanied by any compensation to the owners and occupiers of land and houses for the exceptional burdens thus thrown upon them. No such attempt is made in the present bill, which is wisely confined to the extension of the area of rating to certain exempted classes of hereditaments, and in no way prejudices any of those larger and more important questions which are reserved for the careful consideration they demand. It embodies also rules for the guidance of Assessment Committees in dealing with the new subjects of rating, which are for the most part founded on the practical amendments which, at the instance of your Committee, were substituted for the crude and impracticable provisions of last year's measure as originally introduced. Your Committee are therefore of opinion that, although one or two further minor amendments may still be necessary to ensure its ready acceptance by ratepayers, a general approval of the bill may be anticipated. Chambers of Agriculture, which have always contended for the justice of the extension of the local area of assessment now proposed, will be glad to see a measure of reform, however modest, which effects one of the objects for which they have agitated for many years. Especially will they approve of a proposal which comes not only as a practical improvement of the detail of our existing rating system, but which is at the same time accompanied by a distinct recognition of the real grievance under which ratepayers labour, and an earnest of relief from unfairly borne National charges. Your Committee called attention in their last report to the charges on

the rates for the purpose of registration. The second reading of the Registration of Births and Deaths Bill on the 14th ult. afforded the Chairman of your Committee occasion to object not only to any increase of expense, however small, which that measure might entail, but generally to the practice of imposing upon ratepayers a charge which, like that now incurred for the payment of registrars, is subject to no local limitation or control, but is fixed and determined by a central authority and is incurred for an object essentially and peculiarly national. Your Committee will continue to urge the removal of these fixed payments to the Exchequer on grounds not only of justice to the ratepayers, but as a means of facilitating the general reform of the existing system of registration. In the meantime, they are glad to report that the President of the Local Government Board has undertaken that the Chancellor of the Exchequer and not the ratepayers shall be called on to provide for the additional expenditure which the present bill may involve. The second reading of a Bill for discontinuing the election by Ballot of Municipal Auditors and Assessors, presented to your Committee an opportunity of raising the general question of an improved and effective audit of local accounts. The Chairman of your Committee, in objecting to the present measure, pointed out the real importance of the office of auditor, and showed how undesirable it was to remove the formality and publicity of an election to this post under the existing law. He showed the advantage to ratepayers of establishing a thorough and complete audit, urging an extension of the auditors' powers and the assurance of greater independence in these officers. Your Committee are glad to note that the Home Secretary on the part of the Government re-echoed these sentiments and protested against dealing piecemeal with a question of such interest. The Chairman of your Committee has accordingly given notice of motion for a committee to inquire into the subject. Few administrative changes are more required than a thorough reform in this direction. An effective audit and a consistent and complete system of account should prove of great value to all local ratepayers, and will render practicable an accurate general statement of local receipts and expenditure such as it has long been the aim of your Committee to secure.

The CHAIRMAN then read the report of the deputation to the Lord President of the Council, the Duke of Richmond, on the Contagious Diseases of Animals, in which the deputation expressed their great disappointment at the answer of the Lord President to the representations made to him, and moved "That the report be received."

Mr. C. S. READ, M.P., in seconding the motion, adverting to a part of the report relating to the slaughter of cattle affected with pleuro-pneumonia, said he wanted to know how

much longer the ratepayers of England were going to be victimised by the present injustice of the slaughtering of cattle in Great Britain when the practice did not extend to Ireland. They were told that if they wanted to get rid of a disease like that every leak in the bank must be dammed up; but there were the tidal floodgates open continuously in Ireland. It was not of the slightest use for those who lived in the Eastern Counties, which imported so many Irish cattle, to kill animals affected with pleuro-pneumonia in these respective localities unless the power of slaughter extended to Ireland, and he would add unless there were also carried out the recommendations of the Committee of last year that the Orders respecting cattle disease should be applied universally throughout the kingdom; that in order to ensure early discovery of outbreaks and to enlist the sympathy of stockowners for the local authorities, the amount of compensation should be extended to three-fourths instead of one-half the value of the animal; and that the period of isolation in the case of cattle which had been herded with infected cattle should be extended to two months. The loss which was now being sustained in Norfolk was at the rate of £600,000 a year, and the half measures now adopted with regard to pleuro-pneumonia and other infectious diseases were perfectly useless. Such measures imposed vexatious restrictions on owners of stock, but there was not the remotest chance of their stamping out disease.

Mr. BENNETT STANFORD, M.P., said, during the Whitsuntide recess there had been positive proof of the disastrous working of the present system, in the neighbourhood of the town of Shaftesbury, which he represented in the House of Commons. On the previous day he received a letter on that subject from the agent of the Dowager Marchioness of Westminster, who had an estate in that district. The hon. member then read the letter, which related to a serious outbreak of disease, which had been traced to cattle and sheep purchased at Wilton fair; and he added that he thought the deputation would have had more weight if they had been supported by a number of county and borough members.

Mr. T. DUCKHAM hoped that something would be done to convince the House of Commons that there were others to be considered besides those of the few Liverpool butchers and others, who had made adverse representations before the Select Committee.

Mr. JABEZ TURNER (Peterborough Chamber) informed the meeting that on the Monday preceding the day on which the deputation from the Chamber went to the President of the Council, his grace was visited by a deputation on the same subject from the Royal Agricultural Society, adding, that although his grace received that deputation with his customary kindness and courtesy, his reply was very similar to that just reported. He (Mr. Jabez Turner) said adversely, that disease in cattle was now trafficked in, that the quarantine measures were quite ineffectual, and that cattle imported at Bristol were spreading disease in all directions, and he would add, that the losses during the two last sessions in his own neighbourhood were almost ruinous.

After a few words from Lord H. THYNNE, M.P., the motion was agreed to.

The CHAIRMAN, after observing that the next business on the Agenda was to "receive the Report of the Committee on Unexhausted Improvements," said it would be perfectly impossible to consider it on that occasion, and he should, therefore, simply move, "That the Report now presented be received," the object of that motion being that it might be circulated, with a view to future discussion. He would, however, read the two concluding paragraphs, which were as follows: "The labour of your committee has principally consisted in preparing the Forms of Inquiry, and collecting, arranging, and tabulating the information communicated; and they must refer the Council to the voluminous details condensed in the Summary Schedules, it being impossible to convey in any general statement within the ordinary limits of a Report either a full knowledge of their contents or the comparisons and deductions which, it is hoped, will render them of great value. Your Committee having now completed their inquiry into the existing Agricultural Customs, suggest that they should be further empowered to consider and report upon the most desirable principles to be adopted in legislation for securing the respective interests of owners and occupiers in agricultural tenancies." The Chairman added that the Committee had not been able to complete the Schedules in time for presentation to that meeting, but that they would shortly

be placed in the hands of the members, adding that copies of them would be obtainable by others at a moderate price.

Mr. T. DUCKHAM seconded the motion.

In reply to Mr. T. Horley, the CHAIRMAN said the Committee were not responsible for the accuracy of the statements with regard to customs, the name of the authority being given in each case.

The motion was then agreed to.

The next subject on the notice paper being "Legislation with respect to compensation for unexhausted improvements,"

The CHAIRMAN observed that the resolutions passed by the Chamber having been sent to the various local Chambers, they had been adopted by the Chambers of Warwickshire, Worcestershire, Shropshire, Staffordshire, and Gloucestershire, and partly adopted by the Herefordshire and Leicestershire Chambers, and that in no other instance had there been so much unanimity as appeared to exist among the associated Chambers in relation to that question.

Mr. ADKINS said the Northamptonshire Chamber, which he represented, had also adopted the resolutions forwarded to them.

The CHAIRMAN said the counties which he had mentioned were the only ones from which replies had been received, but it might fairly be concluded that the feeling among the other counties was similar to that reported (cheers).

Lord HAMPTON then moved "That the present position of agriculture and the general welfare of the country demand early legislation respecting the tenure and occupation of agricultural land." His lordship said he thought every gentleman present would agree with him that that was not only one of the most important, but also one of the most difficult questions that would engage the attention of a representative body of agriculturists. He thought he might fairly assume that the agricultural world had arrived at two conclusions on that subject: first, that the present system of the tenure of land as between owners and occupiers was not satisfactory; and secondly, that owing to the delicate and difficult nature of the question, legislation upon it ought to be approached with the greatest degree of caution and moderation. He had said again and again, and now repeated, that the improved cultivation of land was to be regarded as a great question of public policy, involving the interest of the whole nation. The land could not be well and profitably cultivated unless the occupiers were skilful and well-trained agriculturists, and unless they were placed in such a position that they need not be afraid to apply their skill and their capital to the soil which they occupied. They had no right to expect an occupier of land to do that unless he could feel that his capital would be secure. He had always wished to see a tenant in a similar position to that of a tradesman who embarked his capital in any branch of trade or commerce with reasonable security for a fair return for the use of his ability and capital; and as a landowner he had long been of opinion that one of the best means by which occupiers could obtain that security to which they were fairly entitled, was a long lease guarded by carefully considered covenants (Hear, hear). There was, however, a great disinclination on the part of a large number of farmers to embark in a lease. Many persons were, he believed, afraid of the risks which they thought attended leases; but he believed that that apprehension existed chiefly among a class of persons who were not as skilful or as well provided with capital as it was desirable that farmers should be (Hear, hear). He wished to see the system of leases more generally adopted, believing that leases would afford the best security for the capital of the tenant-farmer; but he concurred in the opinion that whether with leases or without leases it was very desirable indeed that the Legislature should lay down and establish the principle of compensation in such a shape as to guard the interests both of landowners and land-occupiers, and he confidently hoped that, proceeding in a spirit of caution and moderation, they would be enabled to arrive at some proposal which might be sanctioned by the Legislature. He thought it best, however, frankly to own, and he hoped the majority of those present would share in the opinion, that he considered it most important that in any legislation on that subject there should be no invasion of the great principle of perfect freedom of contract (Hear, hear). He was strongly opposed to any violation of that freedom which he thought ought on all accounts to exist between landlord and tenant. In his opinion a great step would have been gained if the principle of compensation

were laid down by the Legislature in such a shape that it would be applied where no distinct agreement had been made between the parties on that subject. It would then become the guiding principle in arrangements between landlord and tenant, while there would be no invasion of the principle of freedom of contract.

Mr. CARPENTER (Herefordshire Chamber), in seconding the resolution, said he was not using a threat, but simply stating a fact when he said that there was a growing disposition on the part of the British farmers if their rights were ignored much longer by the country party to send tenant-farmers to Parliament to represent their interests (cheers). Vote by ballot had made a great alteration in their position; and he believed that unless they were treated differently from what they had been, they would send five per cent. of the county members from their own body, and he believed that in advocating the redress of their grievances on that subject, their representatives would be supported not merely by farmers, but by the community at large (Hear, hear).

Mr. BUTLER (Essex) believed that in the extension of the system of leases lay the settlement of the question of compensation for unexhausted improvements.

Mr. SPENCER STANHOPE, M.P., thought the Chamber should prepare a measure which might be introduced in Parliament next session if the question were not then taken up by the Government.

Mr. MASEN said his experience had led him to the conclusion that as a rule tenants were not afraid to accept leases, but landlords were averse to granting them (Hear, hear). He thought it would be found that in most cases where there was the greatest outcry for compensation for unexhausted improvements leases were but little known (Hear, hear). It was but fair that he who sowed should be able to reap, and not leave everything for his successor, and in the absence of a lease, which would give the occupier ample time to recoup himself for his outlay, the tenant-farmers of England ought to be placed by the Legislature in a position in which they would be able to obtain ample compensation for that which they must leave behind. For a long period he was as much opposed to legislation on that subject as anyone could be, hoping that some kind and indulgent landlords would propose a bill which would do justice to the occupiers of land, but he had, in common with thousands of his brother-farmers, looked in vain for such a measure. The country party were now in power, and he hoped they would long continue in power; but they might rely upon it that if they did not use their power to settle that question it would be dealt with in a rude manner by their successors. Lord Hampton had a great objection to interference with freedom of contract, as between landlord and tenant. He would ask his lordship whether he was prepared to suggest some scheme which would compel an unwilling landlord to do his duty towards his tenants (Hear, hear). The great fault of tenant-farmers was that there was a want of unanimity among them on that question (Hear, hear).

Mr. JASPER MORE said it appeared to him that according to Lord Hampton's view of the matter it would be lawful for any landlord to contract with his tenant that he should not be able to claim compensation (Hear, hear). The practical question raised was whether tenant-farmers were to have the substance or only the shadow. A still more practical question was when the question was to be introduced in the House of Commons, and he was happy to say that it would shortly be brought forward there by a gentleman on his right, Mr. Seely, quite irrespective of party, whether Liberal, Conservative, or any other (cheers).

Mr. T. DUCKHAM said he had never heard any farmer object to landlords being secured against a deterioration of their property, and he was astonished that landlords should object to fair compensation being secured to tenants.

Mr. GEORGE TURNER (West Kent) said it seemed to be forgotten that incoming tenants had a deep interest in that question. It almost invariably happened where compensation was paid that it was paid by such persons and not by the landlord, and the amount of capital demanded of them was already very burdensome.

Mr. T. HORLEY (Warwickshire) said the real question was whether legislation was to be compulsory or not. Freedom of contract had been constantly interfered with by Acts of Parliament, and if it was not to be interfered with in that case it would be better not to have any legislation at all (Hear, hear). He would like to know who would have paid the

property tax if it had not been enacted that it should be paid by the landlord? (Hear, hear.) If landlords were to be left in their own free will in the matter now under consideration it was not worth while to take up the time of Parliament with the question. As regarded leases he had never been able to understand the unwillingness of tenant farmers to accept them, believing as he did that they afforded the best security and were the best means of promoting that independent feeling that ought to exist between landlord and tenant. He had heard it said that with leases tenants might be a little too independent. He had a lease and he would not yield to any man in respect for his landlord.

Lord HAMPTON, in replying, said he had been in the habit of offering his tenants leases for several years past, and in several cases the offer had been accepted. It was uniformly the best farmers who took leases. During the last two months he had been pressing leases upon tenants, who were unwilling to take them. He hoped that, as the science of agriculture advanced, farmers generally would become more inclined for leases. Mr. Masfen said he should like to know how, if freedom of contract remained, an unwilling landlord was to be made to do his duty to his tenant. That gentleman, and others, had assumed that the tenant-farmer was the most helpless being in the world; and his reply to the question was that, if farmers had to take a farm from such unwilling landlords as he referred to, they must guard their own interests. He believed that, as agriculture advanced, landlords who were not inclined to do justice to their tenants would, from year to year, have increasing difficulty in finding tenants who were fit to cultivate their estates.

The resolution was then put and carried.

Mr. BOWEN JONES then moved the following: "That no legislation respecting the tenure of land will be acceptable to this Council which fails to give to tenants security for the existing value at date of quitting of the capital invested by them, and not removable from the farm, excepting tenures in which such value has been already provided for by compensation or consideration specified in a lease or agreement, subject always to the consent of the landlord in the case of permanent improvements." He said the practical question involved in that resolution was whether they were to have a permissive bill or a compulsory one. He found that there was a difference of opinion with regard to the true construction of the resolution previously adopted on that subject. One construction which had been put upon that resolution was that it would admit of a landlord's barring the compensation clause; while another was that if sufficient compensation were not given otherwise the Act should operate. He read the resolution by the light of the latter construction; but he thought the resolution now proposed would more clearly express the opinion that, if compensation were not given under private agreement, the Act must come into force (cheers). If the principle of that resolution were not embodied in the bill it would not be worth while to deal with the question. On the other hand, if they waited till the various customs had all been assimilated they must wait till Doomsday. What he desired was that the landlord and tenant should not be able to contract themselves out of the law.

Mr. LIPSCOMB, in seconding the resolution, said he wanted the plain English of those words to be carried out in any future legislation on the subject. An agreement which provided no compensation for unexhausted improvements could not operate if that resolution were embodied in a law. The class of men whom it was necessary to reach consisted of landlords who took their rents at stated periods and never went near their tenants, but left everything to a lawyer or agent, the result being that their property was an opprobrium to the country. There would be no use in legislation unless it met cases of injustice like those arising from such conduct as that. He protested against leases being made compulsory, because that would do away with small farmers, who formed about half the tenantry of the country.

Mr. CARINGTON SMITH said he, like Mr. Lipscomb, opposed in that room the twelfth clause of Mr. Howard's bill; but he entirely concurred in the opinion that legislation would be useless if the landlord and tenant could contract themselves out of it. He hoped it would not go forth to the world that Lord Hampton desired a permissive bill.

Mr. J. T. MENCE (Worcestershire Chamber) said his Chamber was of opinion that legislation was necessary, and that the Act should operate in the absence of any lease or

agreement. He hoped the compensation paid under any bill would be moderate, as otherwise tenants would not be able to take any farm at all.

Mr. PHIPPS, M.P., thought that to pass a bill on that subject which allowed landlords and tenants to contract themselves out of it would be perfectly childish (Hear, hear).

Mr. LITTLE (Wisbeach) thought that if the resolution were carried out in its entirety there might be claims for improvements made centuries ago. The bill of last years limited claims for ordinary improvements to ten years and for permanent ones to twenty years. He was for allowing as much freedom of contract as was desirable; but if the landlord and tenant agreed upon a moderate rent, that might be as good as direct money compensation, and he could see nothing improper in such an arrangement. He strongly objected to perfect freedom of contract, and if the result of that discussion should be to induce every landlord to enter into a written agreement on the subject he would be satisfied without legislation.

The Hon. E. STANHOPE said, in his opinion, the resolution was very obscure. Looking at it with the eye of a lawyer, he did not agree with those who thought that it did not bar freedom of contract. He thought that it distinctly did so. The only cases in which that freedom was now interfered with were those of children, women, lunatics, and Irish tenants (laughter), and did the farmers of England wish to be placed in the same position as those classes of persons? The Lincolnshire tenantry were satisfied with the working of freedom of contract, and not prepared to go in for compulsory legislation. He hoped the effect of delay would be that some measure would be prepared which would be satisfactory to agriculturists generally.

Mr. C. S. READ, M.P., said the last speaker had uttered a sentiment which he had often heard expressed before. It was a common thing for county members to go among their constituents, and after a very pleasant dinner say to them "You belong to the class of the jolly independent farmers of England, and will you suffer yourselves to be classed with the Irish farmers and the lunatics?" (Laughter). That was a very popular thing to say at a public dinner, but it did not really touch the question. The last speaker was greatly mistaken in supposing that there were at present only four classes of persons who were deprived of freedom of contract. What about master and servant, the employer and the employed, the mortgage and the mortgager, the carrier and the consignee, the lawyer and the client, the doctor and the patient? (Hear, hear). In all these cases there were statutes interfering with freedom of contract. "Freedom of contract" was a phrase that required to be understood. Freedom to contract to do wrong ought to be prohibited, and the resolution before the meeting was founded on this principle—that for the good of the nation, the good of the landlord, the good of the tenant, and above all for the good of the labourer, it was necessary that the tenant-farmer's capital should be protected, and that if he left a portion of it in the soil it should not, as a matter of course, belong to the landlord (Hear, hear). Lord Hampton had said, what of course would be said in both Houses of Parliament, that they ought to have freedom of contract, and that it would in many cases be dangerous to interfere with it. Take the case of game. By law game was entirely the property of the tenant. And what was the result of freedom of contract? Why that in nine cases out of ten the tenant bargained away his property to the landlord. In fact, the law of England might just as well be like that of Scotland, where the right of shooting game was inherent in the landlord. There was a most serious opposition in the House of Commons to the 12th clause of Mr. Howard's bill last year, and he daresay that not 50 members would vote for it now as it stood (Hear, hear). He doubted very much whether such a resolution as that proposed, the object of which was to secure to tenants a right to compensation, would be passed in the House of Commons. [A VOICE: "I am sorry for it."] He was sorry for it too, but he felt bound to tell them the truth. It was much easier to pass a resolution there than to get it embodied in an Act of Parliament. He believed that the bill of last year was founded on right principles, and that the 12th clause or some clause equivalent to it would alone meet the necessities of the case. As a tenant-farmer he should like to say one word about independence. It was one thing for a tenant-farmer to be told at a public dinner that he was a fine independent

fellow, and another thing for him to go into the landlord's study, or, what was still worse, into the lawyer's office, to sign an agreement. Independence was then entirely taken away from him. He had no other way than farming of getting his living. Unless the payment of compensation were made compulsory by Act of Parliament the law would become a perfectly dead letter, and though it might be of some use the amount of good would be so small that he should not himself care whether such a law was passed at all.

Mr. WHITTAKER (Worcestershire Chamber), with due deference to Mr. Read, must say that nothing would induce him to support, nor did he think the majority of his Chamber desired, a measure by which farmers would be deprived of the right to enter into an agreement for themselves. He concluded by proposing as an amendment to strike out the words after "excepting tenures" in the resolution, and to add "under lease or agreement."

Mr. STORER, M.P., seconded the amendment, and said he was opposed to interference with freedom of contract because he held that such interference would create the greatest revolution in the relations of landlord and tenant ever known in this country, and would play into the hands of persons who contended that the land belonged not to the nominal owners but to the State. He quite admitted that tenant-farmers were not as well represented in Parliament as they ought to be, but the fault rested with themselves.

After some remarks from Mr. T. Duckham, Mr. H. P. Price, Mr. T. Horley, and Mr. Bennett Stanford, M.P.,

Lord HAMPTON said agriculturists could do nothing more unwise than to fall out among themselves. No difficult question had ever been settled without a great deal of "give and take," and he hoped there would be less hereafter of laying down that legislation would be absolutely useless unless it were in the shape that one happened to like best (Hear, hear). He had long contended that the arrangements between landlord and tenant should be conducted much more on commercial principles than they had been yet. He should hold up his hand in favour of the amendment of Mr. Whittaker; but much as he differed from the mover of the resolution, he should have voted for it had there been no amendment, because he desired to see the principle of compensation for unexhausted improvements established. When the bill was before Parliament would be the best time to consider how the object might be best carried out; and he ventured to say that they would have done a very important work that day by declaring the necessity for legislation, and declaring that the principle of compensation for unexhausted improvements should receive the sanction of the Legislature.

Mr. GARDINER said as a representative of the Essex Chamber he would be sorry to see the amendment passed.

Mr. SMYTHIES said they were told on the one hand that if they had a bill prepared with compulsory clauses they could not get it passed, and they were told on the other hand that a bill without compulsory clauses would be useless. If that were the case what were they for? (Hear, hear). If they could not have anything like unanimity in favour of compulsion, it would perhaps be best in the first instance to go for a permissive bill, and if that were found to be of no use they might afterwards get something more. As practical men let them if they could not get a whole loaf try to get half a one.

Mr. STRATTON said farmers wanted legislation to protect them against spoliation, and there would be no use in legislation if they could not adopt such a moderate proposition as that before them.

Mr. MAY thought it would be wrong for the Council to separate without coming to a decided vote. As to the phantoms raised by Mr. Storer and other gentlemen, he believed the thing would settle itself rightly, and he could not understand landlords not wishing a bill to be passed which would increase the value of their land.

Capt. CRAIGIE contended that the resolution in no way interfered with freedom of contract; it would only compel parties to contract about compensation at the time when a farm was taken.

Mr. BOWEN JONES having replied,

Mr. SNELL (Corwall) said, having attended various meetings of farmers in the Western Counties at which that subject was discussed he felt certain that 95 per cent. of those who attended them would be satisfied with nothing short of compulsion. He never in his life signed a contract which he

approved or considered just. Necessity led him to sign in opposition to his judgment. He was always in the hands either of the landlord or of the steward, and if he suggested any amendment he was told that time was precious and that he must take the farm on those conditions or not at all. If he had refused to accept the conditions he must have ceased to farm in England, or at least in the West of England (Hear, hear). As to making the Bill permissive, good landlords would concede what was just now; it was unjust and narrow-minded men, and men who were behind the spirit of the age that they wanted to guard against.

Mr. WADLOW (Shropshire) supported the resolution. Mr. BOWEN JONES, in replying, explained that what he intended by the resolution was that legislation should be enforced only where a fair agreement providing an equivalent in some form or other did not exist. If a mild reform like that were not carried out landowners would find something much worse in store for them than a moderate Tenant-right, which would be beneficial alike to them and their tenants.

Mr. WHITTAKER having also said a few words in reply, The CHAIRMAN in summing up the discussion said he did not see how it could be maintained that a law which would prevent unjust or inequitable contracts would dispose of freedom of contract altogether (Hear, hear). As the chairman he did not wish to say any more than that.

A show of hands was then taken, and the numbers were

For the amendment	15
Against it	33
Majority	18

The result was received with loud cheers, and the resolution was then adopted almost unanimously.

On the motion of Mr. WILLIAMS, seconded by Mr. RIGBY, it was further resolved, with only two dissentients: "That no legislation respecting the tenure of land will be acceptable to this Council which fails to provide security for compensation to landlords for the damage or deterioration of their property caused by default of tenants."

It being after three o'clock the meeting then adjourned till the following morning at ten o'clock.

When the Council reassembled on Wednesday morning, at ten o'clock,

The CHAIRMAN (Mr. G. F. Muntz) reminded the meeting that on the previous day three resolutions were passed relating to the subject of compensation for unexhausted improvements, and added that it was competent to any gentleman present to propose any other resolution.

Mr. D. LONG said that he was unable to be present the day before when the division took place, otherwise he should have proposed that a committee should be appointed to assist Mr. Seely in drawing up the bill which that hon. gentleman intended to submit to the House of Commons.

Mr. C. S. READ observed that Mr. Seely's notice related not to a bill but only to a resolution.

Mr. BOWEN JONES then moved the following: "That the committee appointed to collect and prepare information on compensation for unexhausted improvements be requested and empowered to draft a Parliamentary bill embodying the principles of the resolution passed by the Council, and that they have power to add to their number."

Mr. JABEZ TURNER seconded the resolution, and it was agreed to.

The meeting then proceeded to resume the adjourned discussion on "Highway Legislation."

The CHAIRMAN, adverting to the agenda paper, reminded the meeting that the following propositions were before the April meeting, when the debate was adjourned. Mr. T. Horley's resolution: "That it is desirable before any definite resolution is passed by this Chamber that further information should be obtained as to the anomalies that exist, and as to the working of the Permissive Highway Act in districts where it is in operation, and to give time for a further discussion of this important matter by the provincial Chambers." Mr. Stratton's amendment: "That as the maintenance of all roads is rapidly becoming a charge on real property only, and as in many cases those who use the roads most pay the least towards the expense of them, it is the opinion of this Council that Government aid should be given as a substitute for tolls, by the appropriation of the licence duties on horses and carriages, or by such other means as may be determined by the wisdom of Parliament."

It was stated that Mr. Stratton, who moved the amendment, was not present.

Mr. T. HORLEY said, feeling that the provincial Chambers had not had sufficient time for considering the subject and that it would be unwise to adopt a hasty conclusion, he did not intend to press his resolution. Under the circumstances he would withdraw it, and propose that the question be adjourned till the meeting of the Council in November (Hear, hear).

Mr. C. S. READ, M.P., said, having served that year on the Select Committee of the House of Commons on the Turnpike Acts Continuance Bill, he would say with great sincerity and truth that he thought legislation was greatly needed (Hear, hear). The highway districts did not appear to be as popular as they were a few years ago. They had not been generally adopted throughout the country, and in places where they had been adopted strenuous efforts had been made to get rid of them and revert to the old system. In some of the Eastern Counties the number had been reduced very considerably. It was very important to consider how the great arterial roads could be best managed, and also who should pay for their maintenance, and he was quite sure that the whole subject required more mature consideration. Speaking as a subordinate member of the Government he wished to remark that he should be very much obliged to the District Chambers if during the recess they would take up that question and be prepared with some definite resolutions for the Council meeting in November. There was no chance of the Government doing anything this year beyond passing the Continuance Bill, but he did not see how they could tide over another year without some attempt at legislation on the subject. The state of some of the abandoned turnpike roads was fearful to contemplate. Roads which were in admirable order two or three years ago had now got into a hopeless state of disrepair, and it was a disgrace to the country that things were thus going from bad to worse. Something must be done, and he hoped the Council would be able to state at the meeting in November what that something should be.

Mr. MORRIS having risen to speak,

The CHAIRMAN observed that there was no resolution before he meeting.

Mr. HORLEY having withdrawn his resolution,

Mr. C. S. READ, M.P., moved that the debate be adjourned till November, and that certain questions which had been suggested by the Chairman should be forwarded to the different Chambers for replies.

The SECRETARY, at the request of the Chairman, then read the resolutions already received on the subject from the Chambers of Gloucestershire, Northamptonshire, Peterborough, South Wilts, Ripon, Herefordshire, Devonshire, Lincolnshire, Worcestershire, Warwickshire, Norfolk, the West Riding, and Essex, generally in favour of legislation.

Mr. GARDINER (Essex) proposed, "That as the maintenance of all roads is rapidly becoming a charge on real property only, and as in many cases those who use the roads most pay the least for the expense of maintaining them, it is the opinion of this Council that a general reform of road management and maintenance is necessary."

Mr. BUTLER (Essex) seconded the amendment.

The CHAIRMAN having remarked that it was necessary, as a matter of order, that Mr. Stratton's amendment should first be disposed of, it was put and negatived.

After a desultory discussion, Mr. Read's proposal for adjourning the debate, which was seconded by Mr. LIPSCOMB, was submitted and adopted in the following amended form, the amendment not being pressed: "That this Council, before passing any resolution with reference to the character of the legislation desired, requires further information as to the anomalies which now exist, and therefore requests the local Chambers to consider and reply to the following questions at the November meeting: 1. Is an entire reorganisation of our road system in England, including the management and maintenance of turnpikes and highways, desirable? 2. Is a re-classification of all roads needed? 3. How many different classes of roads should be established under a new system? 4. How should the funds be raised, and from what sources, for the maintenance of each class of roads? 5. What should be the constitution of the governing body of the whole, or of any one class of roads?"

The meeting then proceeded to consider the subject of

"Locomotives on roads, together with the Report of the Select Committee of the House of Commons thereon."

Mr. C. S. READ, M.P., observed that the bill then before Parliament was introduced by a private member, Mr. Cawley, and that the object was to regulate the travelling of traction engines over common roads so as to ensure safety. Many highways were not adapted to bear the weight of large engines of that kind. In Norfolk, for example, there were many roads on which they were utterly destructive. Power was given by the bill to local authorities to determine on what roads they should be allowed to go.

Mr. BONFORD moved, "That all traction engines used for agricultural purposes should be exempted from tolls." He had used traction engines, he said, for the last twelve years without ever paying any tolls, and he did not wish to be taxed now.

Mr. HENLEY seconded the motion.

Mr. C. S. READ, M.P., observed that the Council had decided that those who use the roads ought to pay for them, adding that he thought it was high time that Mr. Bonford did so (laughter).

The CHAIRMAN deprecated the passing of such an important resolution when so few persons were present.

Mr. WHITAKER said it would, in his opinion, be a hardship if a new burden were imposed for thrashing machines.

The CHAIRMAN then counted the members present, and found that the number was only nine, ten being required to form a quorum.

This terminated the proceedings, which occupied about two hours and a half.

T E N A N T - R I G H T.

At a special general meeting of the Staffordshire Chamber of Agriculture, at Stafford, to consider legislation with respect to compensation for unexhausted farming improvements, and to transact general business, Mr. Carrington Smith, president of the Chamber, in the chair, the resolutions, which have been adopted by the business committee of the Central Chamber of Agriculture, were submitted to the meeting.

The Right Hon. Sir C. B. Adderley, M.P., president of the Local Government Board, sent the subjoined letter:

Board of Trade, S.W., May 22.

DEAR SIR,—I am sorry I am unable to get away to attend the meeting of the Staffordshire Chamber of Agriculture on the 30th. I have always thought the only useful agreement with tenants is one for securing to them the value of unexhausted improvements agreed on. This is the only plan for encouraging yearly tenants to lay out capital, as leases encourage the Scotch to an enormous extent, greatly increasing the value of the land, both to the owners and to the public as consumers, probably drawing out twice the produce, both in crops, in tenants' profits, and landlords' rents. All agreements about mode of culture are useless to my mind, fettering a tenant, who is under the sufficient control already of yearly tenancy.

The CHAIRMAN, in introducing the subject of compensation for unexhausted farming improvements, said that the parliamentary representation of the counties was at present in the hands of the owners and occupiers of land; but the time was fast coming when it would be at the disposal of those lower than the landlords and farmers. At this day the tenants were only giving to the landowners a gentle push in the direction of improvement to the existing system of land tenure, for they were anxious that the owners of the land, whom they looked upon as their natural leaders, should lead them in this question. But he thought that, unless the question was satisfactorily settled before the franchise was again extended in counties, the classes below them would give the landlords a stronger and perhaps a rough push in the direction of improvement of land tenure. Referring to the second resolution which the meeting had before it, he said that there was considerable doubt as to the meaning of the words "existing value at date of quitting," and he explained that they were not intended to favour any claim for money spent on land unless increased value had actually resulted. Thus landlords would be carefully protected from any injudicious outlay by tenants. With regard to the third resolution, he had no hesitation in saying that no law ensuring compensation to tenant farmers could possibly be passed unless accompanied by a clause protecting landlords from deterioration of their estates through the tenants' neglect. He had heard it said by a tenant farmer that the Landlord and Tenant Bill would have been bad for some farmers. So it would, for bad farmers; and the law ought to be a terror to evil-doers and the support of those who did well.

The Earl of HARROWBY moved the first resolution. He said that anybody who looked from a distance at the system of the occupation of land in England would say at once that it was the most absurd possible. It would be said that landlords were expecting gentlemen to invest their capital in improving other men's land, without any security whatever for being allowed to continue in possession of it beyond a single year and half-a-year's notice. And it would be said

that it was absurd to expect, under such conditions, any good cultivation of the land, especially of the expensive kind usually found necessary in this country. But this was just one of the many questions which showed how, after all, a system which appeared in the abstract a bad one worked well on the whole. When we looked round, we found that, instead of England being the worst cultivated country in the world, it was one of the best. Therefore it was not so clear that the agriculture and general welfare of the country demanded the immediate legislation proposed. In many cases the character of the people who carried out a system was more valuable than the system itself; and the characters of the English occupier and landlord were such that great outlay was made by the former without, practically, any risk. At the same time, while they noted this for their comfort, and as a warning against action founded on abstract propositions, and without reference to facts themselves, they must consider whether what was good in itself could not be amended. The responsibility of the English landowner and occupier was increasing. He (Lord Harrowby) alluded to the responsibility owed to public opinion by everybody who held property or power, that that property or power should be made the best use of possible. It was impossible that every landlord should himself cultivate and improve his land. Such a course would be incompatible with the enjoyment he had a right to expect; but his business was to call into use the capital of those around him, and the demand and security was not unreasonable when viewed from the tenants' point of the question. This demand, however, was not to be settled off-hand; but no man could object to the principle that no tenant should be compelled to leave his land without compensation for real improvements. He (Lord Harrowby) emphasised the words "real improvements" because money might be so badly spent that the result could only be falsely described as improvements. As to the word "immediate" in the resolution which he was proposing, he said that if it meant that immediate attention should be called to the subject in hand, so that next year we should be nearer to a decision on it than at present, he had no objection to it. Respecting compensation to the landlord for injury done to the land from the fault of the tenant, he (Lord Harrowby) did not think that a law to enforce it would be of much practical value; but it would be well to recognise the principle.

Mr. R. H. MASFEN seconded the Earl of Harrowby's motion. He said the landlords would not need compensation for deterioration to their estates if all their tenants did their duty, and this would be the case if tenants had security for any capital which they might invest on the land. Farmers had always looked upon the Conservative party as their friend, and he trusted they would always find reason to do so. The time to put on the spur in order to reach their object was now; for their friends, from whom they had expected something, are in office. While the present system of land tenure remained in force, farmers were practically being invited to take out of their land, during the last few years of their tenancy, all that they had previously put into it in the way of improvement. The remedy for this state of affairs was a law to enforce compensation for unexhausted improvements.

The resolution was unanimously adopted.

Mr. J. M. MAY moved the second resolution. He remarked that landlords were bound to let their land, if they

let it at all, on terms which would encourage the tenant to improve it.

The Rev. E. C. PERRY, Vice-president of the Chamber, seconded the proposition. He said that the result of a law to enforce compensation for unexhausted improvements on land would be increased production. A very large area of the land of this country was capable of producing more than at present, and the passing of a bill such as tenant farmers wanted would give to this country's agriculture an impetus such as had never yet been experienced. Increased production signified provision for an increased population, and it probably meant cheaper meat and corn. A bill on the subject of land tenure should require at least twelve months' notice to quit to be given, because six months' notice was found to be unsatisfactory in every respect.

Mr. W. T. CARRINGTON expressed a conviction that a great part of Staffordshire could be made to yield, if farmers had security for the outlay of their capital, nearly double the amount of agricultural produce which it gives now.

The resolution was passed unanimously.

Mr. T. NEVILLE moved the third resolution. He said that many of his hearers would have been acquainted with cases in which tenants who had a very bad feeling and little capital had been on the point of leaving their farms in such condition that the landlords would have been losers to a large extent. It might be said that the landlords had their remedy; but that remedy was the vexatious one of an expensive lawsuit. Under the law such as that Chamber desired, cases like those he had mentioned would never occur, because tenants would know that they would receive compensation for any improvements which they made in the land occupied by them.

Mr. JOSEPH BOOKER seconded the motion. When the Chamber was first formed it was hoped and supposed that it would be the means of bringing landlords among their tenants more frequently than before. But this had not been the case; and he was sorry to say that landlords did not mix much with the farmers.

The resolution was agreed to without opposition.

CROP PROSPECTS IN AMERICA.

After an unusual winter it is not surprising that the estimates of the condition of winter wheat should greatly vary. The faculty of making accurate calculations of this character is possessed by comparatively few persons, and this truth is nowhere better illustrated than in the conflicting reports as to the condition of the growing crops, and the promise of those now in process of seeding or the sowing of which is just completed. For the better realisation of the purport of the synopsis which follows it will be well to remember the States in which the largest amount of winter and spring wheat is grown. The main production of winter wheat is in Ohio, Indiana, Illinois, Pennsylvania, Michigan, Missouri and New York, these States producing about five-sevenths of the total yield, and their several proportions being in the order in which they are placed. The spring wheat growing States are California, Iowa, Wisconsin, Minnesota, and Illinois, producing proportionately in the order named, and in the aggregate about nine-elevenths of the whole crop.

In Ohio, Pennsylvania, Indiana, Missouri, New-Jersey, and Texas, the condition of winter wheat is declared to be favourable. Three-fourths of the principal counties of Ohio report the promise of an average or a superior crop. In Pennsylvania, the outlook is favourable, the crop upon undrained clay lands only being injured. The same is true of New York. In Kentucky the indications are promising for an immense yield. In Maryland, 14 counties report a fair to extra condition, and in Delaware the crop will be above an average. From Illinois the reports are contradictory, probably on account of local differences. Thus in the Fall wheat districts in the southern part of the State we hear of an increased area and of a generally better condition than usual; with this the reports mainly agree that the harvest will be the earliest known for many years, while in the northern or Spring wheat counties reports are the reverse of favourable. In the Southern States, the crops of wheat, although of small account comparatively, are expected to be above an average. In Virginia the wheat is "in excellent condition," in Georgia "very promising," and in North Carolina "better than for ten years past." From Kansas and Mississippi an average condition is reported.

As to spring wheat, which is an important item in the prospective aggregate, it is too early to make any decided prognostications. It cannot be denied, however, that the season is unusually backward. Although a season of this character is generally a promising one, many early risks being avoided, yet a crop is never safe until it is gathered and the fate of the Spring wheat is held by the future. The bulk of the reports, however, are hopeful. In California "the largest crop on record" is confidently looked for. There the seeding is the critical time; this having been done under favourable conditions, it is probable that the estimate of 40,000,000 bushels will be reached, which will place California as the banner wheat State of the Union. From Iowa the reports are least favourable, nevertheless with fair weather an average crop may yet be gathered. In some counties in Wis-

consin with frost in the ground on the 9th of May, and very dry weather in others the spring wheat seeding, as might be expected, is behind, and a less area than usual is sown. Among reports from 25 counties we find unfavourable statements in all but seven.

The corn crop is in even less condition to be estimated. A large portion, on account of the late season, is as yet unplanted, but generally that which has been planted is in good order. The cotton, sugar, and rice in the Southern States are backward, extensive floods and excessive rains having not only prevented planting, but seriously injured crops already started. An advance in the prices of these staples point unmistakably to an expected short supply. The grass is generally good throughout New England, and the recent rains and cool weather in that section, as well as in the Middle States, will go far towards making the hay crop safe and put the pastures in excellent order. The blue grass regions of Kentucky are said to be in fine condition, but in the North-Western States the variable winter and the unusually dry spring have greatly injured the meadows and pastures. As a consequence, coarse fodder in this region is now in request at such prices as greatly to interfere with the comfort of stock and the profits of their owners. As to fruit, the reports are in the main favourable. The backwardness of the season has restrained vegetation until danger from frosts has disappeared, and it is only from Southern Delaware and parts of Virginia that we hear of any material damage having been done.

From home fields we turn naturally to foreign ones, for it is greatly upon their yield that the value of our own products depend. From present appearances the crops generally in England promise well, a large area having been sown, and the winter having been mild. Throughout the continent of Europe the same hopeful condition is presented. But it is not so safe to calculate upon the results of a crop in the fickle climate of England as with us, and there are circumstances which may render it a matter of serious concern to Europeans that our crops be abundant. Besides the usual contingencies of the weather there are some serious possibilities that may affect both the harvest and the market values of grain. The "lock-out" of English labourers is still keeping many thousands from field work, and without hands there can be but little harvest. Again, the scarcity of last year still keeps the market bare of supplies, and the consumption of the population increases in greater ratio than the production. It is quite probable, therefore, that even with an excellent harvest in Europe there will be a demand for every bushel we may be able to spare, and if any disaster should be precipitated on either side of the ocean there may be a recurrence of the scarcity of last year. On the whole, then, the outlook for our farmers is one of promise, for if there should happily be a full average crop, there will be a fair market for all of it, and should there be a partial failure the value of the decreased harvest will doubtless be advanced in an equal ratio.—*New York Tribune*, May 20.

THE COMPOSITION OF GREEN CROPS AND THE UNDESIRABILITY OF GROWING VERY LARGE ROOTS.

At a meeting of the Royal Agricultural Society of Ireland, Professor C. A. CAMERON, M.D., Chemist to the Society, read the following paper :

Last winter I received from Mr. William Young, J.P., of Brockley Park, Queen's County, Member of the Council of the Royal Agricultural Society of Ireland, ten specimens of roots for the purpose of being analysed. They consisted of five specimens of mangels, two of turnips, and three of carrots. They were numbered one, two, three, &c., but were not otherwise described. These roots were carefully examined, and the result of my analysis was communicated to Mr. Young, from whom I subsequently obtained the following information with respect to their cultivation : Weights per Irish acre of mangels, turnips, and carrots sown in medium loam, resting on limestone. (The previous crops were oats, wheat after lea, followed by wheat, top-dressed with nitrate of soda and superphosphate—both heavy crops. The mangels were sown from 26th April till 1st May—raised early in November. They were manured with 35 tons of dung, 3 cwt. superphosphate of lime, 1 cwt. nitrate of soda, and ½ cwt. Peruvian guano per acre. The drills were 28 inches apart.)

MANGELS.

	Tons.	Cwts.	Average weight of each root.
1. Mammoth Long Red ...	46	15	} 6 to 7 lbs.
3. Ditto ...	46	6	
Sown in separate acres.			

1. Mammoth Long Red ...	39	11	} 6 to 7 lbs.
3. Ditto ...	42	8	
Sown in alternate drills.			

Sandringham Yellow Globe ...	35	15	} 6 lbs.
2. Yellow Intermediate ...	33	16	
4. Orange Globe ...	35	3	

10. Long Red, about ... 70 0 18 lbs.
Same as No. 1.—Grown on site of manure heap. Spaced irregularly, but very wide apart; in fact, show roots, averaging 18 to 20 lbs., but quite solid in the heart.

CARROTS.

7. White Belgian ...	33	11	2 to 2½ lbs.
Same land and same manure as for mangels. Drills 25 inches apart. Roots 4 inches apart. Many of them up to 3 lbs.			
8. Select Swede-turnip ...	40	0	7 lbs.
Same soil as mangels and same manure, less 5 tons of dung.			

TURNIPS.

9. Norfolk Red Globe ...	30	0	6 lbs.
Light sandy soil, 25 tons artificial manure; same artificial manure.			

The weights of the carrot crops, Nos. 5 and 6 were not ascertained. With respect to the areas of the experimental plots, I am glad to learn that they were sufficiently large. Nos. 1 and 3 were each grown on two acres. One half of each crop was grown by itself; the other moieties were sown in alternate drills. Nos. 2 and 4 were sown each on one acre; Nos. 5 and 6 upon ¼ acre; and Nos. 7 and 9 upon ½ acre each. Four acres were devoted to No. 8, and half a rood to No. 10.

The results of my analyses of the different roots are given in the following table :

NAME OF ROOT.	MANGELS.		CARROTS.			TURNIPS.		Weight of each root (average)		
	1	2	3	4	5	6	7		8	9
Mammoth Long Red Mangel.	6 to 7 lbs.				2 lbs.	2 lbs.	2 to 2½ lbs.	7 lbs.	6 lbs.	
Long Red Mangel.	6 to 7 lbs.				2 lbs.	2 lbs.	2 to 2½ lbs.	7 lbs.	6 lbs.	
Yellow Intermediate Mangel.	6 lbs.				2 lbs.	2 lbs.	2 to 2½ lbs.	7 lbs.	6 lbs.	
Orange Globe Mangel.	6 lbs.				2 lbs.	2 lbs.	2 to 2½ lbs.	7 lbs.	6 lbs.	
Mammoth, same as No. 1.	18 lbs.				2 lbs.	2 lbs.	2 to 2½ lbs.	7 lbs.	6 lbs.	
White Belgian Carrot.—Hogg and Robertson.					2 lbs.	2 lbs.	2 to 2½ lbs.	7 lbs.	6 lbs.	
Intermediate Red Carrot.—Carter.					2 lbs.	2 lbs.	2 to 2½ lbs.	7 lbs.	6 lbs.	
Red Altringham Carrot.					2 lbs.	2 lbs.	2 to 2½ lbs.	7 lbs.	6 lbs.	
Select Swede.					2 lbs.	2 lbs.	2 to 2½ lbs.	7 lbs.	6 lbs.	
Norfolk Red Globe Turnips.					2 lbs.	2 lbs.	2 to 2½ lbs.	7 lbs.	6 lbs.	
Water	84.30	82.85	84.69	92.55	88.72	87.50	88.90	89.06	90.06	100.00
Albumenoids	0.80	0.90	0.81	0.40	1.20	1.06	1.05	0.70	0.62	100.00
Sugar	4.36	7.40	5.60	1.50	9.30	10.70	9.15	9.74	8.77	100.00
Pectose, Fibre, &c.	9.68	8.25	7.74	4.34	0.68	1.04	0.90	0.59	0.50	100.00
Ash	0.86	0.60	1.16	1.21						100.00

It was not considered necessary to determine the sugar in all the roots; but as the mangel is essentially a saccharine plant, I considered it an interesting point to ascertain the proportions of sugar existing in these roots. In the case of No. 2, yellow intermediate mangel, the percentage of sugar was very high, nearly 7.4. I think that some conclusions which might be turned to useful practical account are deducible from some of the results in the field and the laboratory, stated in the foregoing tables. We learn from them, for instance, that no useful results, but rather the contrary, can be obtained by growing monster mangels or turnips. Since the introduction of green-crop husbandry into these countries, it appears to have ever been the farmer's ambition to exceed his neighbours in the production of gigantic mangels and swedes. It has always been the practice, too, of writers in agricultural journals to encourage the growth of roots of abnormal dimensions. I have not a shadow of a doubt upon my mind but that this practice has been carried out to an extreme and mischievous extent. Mr. Baldwin of Glasnevin, has forcibly pointed out the absurdity of awarding prizes to show roots merely because they are the largest. By "spoon-feeding" (as it has not inaptly been termed) a few roots it would be easy for a man with a few perches of a garden to produce more promising roots for show purposes than a farmer could who grew his 20 acres of roots in an ordinary, and I may add, a proper, manner. Let us see how far the results of Mr. Young's experiments and my own justify my statement that very large roots should not be grown. At Brockley Park Mr. Young sowed Mammoth long red mangel in two plots. The mangels sown in one plot were not thinned out widely, but were allowed to grow

rather closely together. In the other plot the mangels were supplied with a very large amount of manure, because the plot was the site of a former manure heap. The mangels here were thinned out widely, so as to allow room for the rapid and extensive development of the roots. The acreable yield of the mangels which had been moderately manured and kept close together amounted to 46 tons 15 cwt., whilst the mangels which had been abundantly manured and widely thinned out produced a crop of about 70 tons per acre. Now, if the large roots and the small ones were equally nutritious, it would, of course, be desirable to grow the former, but when we compare the composition of the mangels of plot 1 (thickly sown) with those of plot 10 (thinly sown), we find an absolute and important difference in favour of the former. The thickly-sown roots contain 15.7 per cent. of solid, or nutritive matter, which, the acreable yield of the crop being 46 tons 15 cwt., would amount to 19,782 pounds weight of dry food per acre. The thinly sown roots contained only 7.47 per cent. of solid or dry matter: and as the acreable return from these large roots was 70 tons, that would yield only 11,681.6 pounds weight of dry food per acre. In producing the large roots, the farmer would incur more expense than if he cultivated the small ones; for instance, he would have to apply more manure, and his cartage would be far greater. If Mr. Young grew ten acres of mangels like No. 10, he would have to cart 700 tons from the field to the stores, and yet he would have in this crop only as much solid food as would be contained in about 450 tons of the smaller mangels, No. 1. This year I hope to be able to make in conjunction with Mr. Young, some additional experiments in reference to the influence of cultivation on the composition of the mangel.

IXWORTH FARMERS' CLUB.

LABOUR-SAVING MACHINERY.

At the last meeting, to hear a paper by Mr. Castledine, agent for Messrs. Ransomes, Sims, and Head, on Labour-saving Machinery, Mr. P. Huddleston was in the chair.

Mr. CASTLEDINE read the following paper: The present agitation going on in the country has already resulted in such a vast amount of correspondence, on all sides, that it will be needless for me to dwell upon a subject, which at this period is occupying the attention of agriculturists throughout the country, as well as dignified heads from Manchester, and real home-grown Londoners, whose sole knowledge of agriculture consists in growing about two dozen scarlet runners round the back wall, two boxes of mignonette, three rusty looking geraniums, and occasionally supplemented with a window fernery. But we will leave the Londoners to enjoy their little bit of green, and strongly recommend the people from all large towns to come and get a peep at the country as often as possible. And in the meantime, we will try to do everything in our power to improve the appearance of the crops, and bring to bear as much as possible our knowledge for their benefit, as well as our own, by endeavouring with the help of an all wise Creator to improve the blessings bestowed upon us, so that good beef and mutton can be sent to their large towns; also good wheat for their bread, which will prove to them in the best manner that we are of some use to them. It is well known that to be behind with your work at the important time of harvest, is most disastrous to all, and in many instances would as much effect the consumer as the producer, and would also indirectly effect all kinds of trade. In years gone by, we frequently read of large crops of all kinds being completely spoiled by wet weather, and a variety of other causes. Now everyone can, by the uses of improved machinery and other appliances, which facilitate the ingathering of the crops, be to a great extent provided against either a wet season, or a very forward harvest. The ingathering of corn can now be effected in a way that our forefathers never dreamt of, and which, had they been told would one day be accomplished, would have made them think that all the rising generation, to use the present popular phrase, had really gone mad. Perhaps the best way to illustrate the present remarks would be to refer to a very wet season that was worked upon the old plan, before the harvester, or any other machines for that purpose had been introduced. I refer to the harvest of the

year 1801, which though an extreme case, was aggravated by the war then going on against the First Napoleon. That year was not only a late one, but owing to the continued wet, there not one field of wheat gathered in good condition, and the greater part was so much sprouted that it was impossible to get any sound flour from it. But few farmers are now living who went through that awful period, and fewer still of the labourers who suffered much in health through eating the unwholesome food, as well as nearly all being thrown on the parish for supplementary relief to support their families. The farmers were also very much reduced by a series of wet harvests, between 1795 and 1801, which was the climax, and were unable to pay the labourer enough to exist upon, so much so that an Act was passed that entitled the labourer to an allowance of 2s. 6d. per week for each child to aid him in supporting his family. Happily we are now in a position to be able to cope with most seasons, and instead of the harvests extending over such a lengthened period, in most cases it is got through in less than half the time formerly occupied. What with reapers and mowers for cutting corn, hay, and stover crops (which are all laid by them in light and convenient form both for drying and collecting), with haymakers for speedily drying the hay, and rakes for collecting and the elevators and stackers to do all the drudgery that was formerly done by the labourer, it makes the harvest time for him much easier, and places the farmer in a position to take every advantage of the season. I will now call your attention to a few of the special advantages and improvements in the various machines. Nothing, I think, is more conducive to preserving a good crop of hay than to cut it down quickly when ready, and to gather it in as speedily as possible, consistent with sufficient time for drying, so as to preserve as much as possible the green freshness and beautiful aroma that is retained if well gathered. The plan of mowing or cutting with a machine is infinitely superior to the old plan of cutting with a scythe, enabling you to cut down one acre per hour as against three-quarters-of-an acre in a day with a scythe, thus showing from ten to twelve times as much cut down; and not only does it cut more expeditiously, but you are also able to cut closer to the ground and get that portion wherein lays all the weight, and which very much increase the tonnage per acre. It also dries quicker when cut with a machine from being left more evenly distributed

over the ground than with the scythe, and left better for the haymaker. I will now notice the reaper. You will find it is not nearly so new an implement as a great many people imagine, as a machine was used in a very rough way for about 400 years, but after which was in a great measure lost sight of. After this we only find records of the sickle. I do not intend noticing the hundreds of patents that were taken out for reaper and mowers, but shall trace the principal ones, with the various improvements that were made from time to time. The first reaper we have notice of, a sketch of which is now before you, was made in the period of Roman greatness: they had a notion that grain should be cut down more expeditiously than with a sickle, but never assumed a very satisfactory form to induce the agriculturist to adopt them. Of the structure of such abortive attempts as a reaping machine, little has come down to us, and that little very vague and unsatisfactory. I find in looking over some old records, Pliny, an old Roman author, born A.D. 23, in his Natural History, writes as touching the matter of cutting down and reaping corn, there are divers and sundry devices. He goes on to say, "In France, where the fields are large, they use a jade into the tail of a mighty wheelbarrow or cart, made after the fashion of a van, and the same set with knives and trenchant teeth, sticking out on both sides—otherwise stakes or palisades, on wheels. Now the same is driven forward before two beasts, on two wheels, into the standing ripe corn, contrary to the manner of other carts that are drawn after them; the said teeth and sharp knives, fastened to the side of the wheelbarrow or cart, catch hold of the corn ears and cut them off yet so that they fall presently into the body of the wheelbarrow." It appears that the straw was then not much valued; it was cut afterwards if any was wanted. Palladius, an Eastern prelate, who was born A.D. 391, gives a very similar account of this machine, and says its use was probably continued for centuries. Reapers of the foregoing description appear to have been in use for about 400 years, after this the cutting was principally done by the labourers, with a sickle, a sketch of which is now before you. The earliest proposal for a mechanical reaping machine in Britain, appears to be that described by the Annals of Agriculture, collected by Arthur Young, and published in the year 1785. Capel Loft, Esq., Troston, on August 17th, 1785, called the attention of the Society of Arts to the machine described by Pliny and Palladius, and sent translations of both authors to the Society, at the same time asking them whether a machine made in this way would not be eligible for the prize of £30, which the Society of Arts then offered. When sending these translations to the Society, this gentleman also describes the locality in which he lived. He says: "Troston consists of 28 houses, but we have resident here neither butcher, baker, nor barber, divine, surgeon, or apothecary, nor till I imported that evil, a lawyer." On the 4th July, 1799, the first patent for a reaping machine was obtained by Joseph Boyce, of Pine Apple Cottage, Mary-le-Bone, and in the following year another patent was granted to Robert Mears, Frome. In 1814 there is a notice of a reaper invented by Mr. Dobbs, dramatist at the Birmingham Theatre: and having got through with it too late for the season, he introduces it to the public in a very peculiar manner. He advertises on his play-bills that part of the stage will be planted with wheat, &c., that the machine has cut and gathered where it grew, and that the machine will be worked exactly as in the field. He goes on to say that "On Friday next, October 14th, will be presented the celebrated comedy of 'A Bold Stroke for a Husband,' and at the end of the play Mr. Dobbs will exhibit two machines, of different powers and purposes, for cutting down corn, sugar cane, &c.; to conclude with the celebrated farce of 'Fortune's Frolic,' the part of Robin Roughhead by Mr. Dobbs, in which he will work the machine in character, in an artificial field of wheat, planted as near as possible to the manner in which it grew." In 1822 Mr. Henry Ogle, of Rennington, near Alnwick, invented a machine for reaping corn, to which, in the same year, an apparatus for collecting the corn into sheaves was added by Messrs. Thomas and Joseph Brown, of Alnwick. This appears to be the first reaper constructed to lay the corn in sheaves. Messrs. Brown then advertised they had machines ready for use for cutting and sheaving corn, but not one person could be found to purchase. After this some working people threatened to kill Mr. Brown if he persevered any further, so that he was obliged to give it up, although he proved to several of the farmers the machine would cut a large quantity in a day. The machine invented by the Rev. Patrick Bell was one that

made a great stir, and in 1828 this machine was publicly worked and was admired by all who saw it. After this there was not much improvement in the machines till the Exhibition of 1851 from whence sprung our present modern machines. I will now pass on to notice the benefits arising from the use of these modern machines. It is not generally known that the self-raker will cut the stover crops, but this they will do well, if properly set. The average cost of a reaper made by any of the large houses is from £30 to £35, and it may be estimated to last at least seven years, which makes the cost, say £5 per year. The cost of knives, wear and tear, and repairs, may also be estimated at from £3 to £5 per annum, making the annual cost of the reapers from £8 to £10. The ordinary two-horse machine will cut about an acre per hour, and in the long harvest days, from five in the morning till seven to eight in the evening, making 14 to 15 hours per day, working the whole time without stoppages, will cut down fifteen acres. I have taken the result as working without any stoppages, as it is customary to have a change of horses, each pair working for two or three hours at a time, and changing the men during the meal times. In a harvest lasting a month there would be 24 such days, making 360 acres as the work of a machine during one harvest. These 360 acres done at a cost for the machine of from £8 to £10, or from 160 to 200 shillings, if worked out will average from 5½d. to 6½d., or, say, all round sixpence per acre. The price of cutting by hand varies considerably, but I should think would average about 9s. or 10s. per acre. By the use of the machine many farmers are able to let out their harvest at a reduction of, say 2s. 6d. per acre, still leaving it possible for the men to earn, during the time they are at work, as much money or more than when doing the whole of it by hand. This, however, is not the greatest advantage, for farmers have been willing to give their men the use of the machine in order to facilitate the harvest work and enable them to take advantage of the fine weather or the early markets, which, on an average crop of eight coomb per acre, would only cost about ½d. to 1d. per coomb, which would be more than compensated for by getting the corn up in good condition, and being able to take advantage of the markets. It is also a further advantage to get the harvest over as speedily as possible, as the land can then be ploughed up during the fine dry weather, and exposed to the action of the sun, and the weeds thereby be more effectually killed. It may be said that I have not taken into account the cost of the horses, but at this time of the year, when there is not much other work, there is generally a good supply of horses on the farm which would otherwise be standing idle if not employed on the reaping machine. It should also be born in mind that the men who would otherwise be employed in cutting the corn, can, when the reaper is used be employed in collecting and carting, or it would enable the farmer with a scarcity of hands to get through his work in the same time as another farmer who had plenty of labour. I shall not pretend at this time to say anything as to the respective merits of the various descriptions of reapers made by the well-known makers in this country. There are two classes of machines, viz., those which simply cut the corn, and the self-rakers, which cut and deliver the corn. As I have shown the cost of a reaper, also the average cost for repairs, and the probable quantity that can be cut down per day, it will be for you, who are better acquainted with the paying part of a farm, to discuss the utility and general saving effected by the use of a reaper. The first introduction of the drag rake dates far back for a very long period, and was as near like the present swathe rake as possible. It was afterwards improved by making the drag rake much longer, and putting on a wheel at each end. It was very light and convenient to handle, so that girls of from 14 to 16 years of age could readily use it. The next improvement was made by Wedlake, who made the rake to balance by two heavy balls projecting in front of it. This rake was highly commended at Cambridge R.A.S.E. After this another great improvement was made in rakes by J. C. Grant, of Stamford, who took the prize at the R.A.S.E., Liverpool. This was the first rake made so that the whole row of teeth could be lifted at once, and just as quickly resume their proper position. Since this time there have been various improvements in the construction and detail of horse rakes, some of which are constructed for the man to walk behind, others for him to sit on the rake and deliver the load by a lever, and others which are, so to speak, self-acting. If no very large quantity has to be raked, delivery by hand is perhaps sufficient; but for going over a large quantity of

ground in a short time, it is important that the driver should ride, as he will then not hesitate to allow the horse to walk at its fair pace. If the leverage is sufficiently light, I prefer a rake of this description to the self-acting rakes, which must necessarily be more expensive and more liable to get out of order. A rake also should be so constructed that the teeth can be set just to skim the ground, so as not to gather any dirt with the load, and also that when required the teeth can be set hard on the ground, for the purposes of raking twich or rubbish, or for collecting hay on a hard bottom. Supposing you have three full sets of waggons or carts, it takes nine men to clear and rake after them; whereas one good horse rake does equally well, or it will even save twelve hands if a good quick-walking nag horse is used, and a seat for the driver is fixed on the rake. Haymakers are so well known, and their uses so well appreciated, that it is almost needless to say much about them. The main feature is to secure one that will not knock out the seed from the hay and stover crops, and to have one that will leave the crops light and in a convenient form, so that the weather may have full effect. Some persons prefer those haymakers which have a forward action, for scattering the hay, and they are especially needed when the grass is cut by hand; but when the haymaker is used in conjunction with a mowing machine, the backward action is generally sufficient; and as the hay is knocked about, the seeds and small particles are not so likely to be broken off and wasted. But, whether one kind of machine be used or the other, there can be no doubt that hay can be made in a very much shorter time with a haymaker than it can be by hand. It is much more regularly thrown about the field, and will consequently make in less time, and will therefore be of more uniform quality and of greater value. Also advantage can be taken of a few hours' sunshine, which in the old way of making hay by hand would be inevitably lost; and it can be quickly put into windrows by the American gatherer. A great point in the haymaker, as in all these season implements, is that it should be so constructed as not to be liable to break down in the middle of the haysell; and it would be the worst economy to buy a cheap machine of this character, when so much depends upon its thorough efficiency. Toppers, or American gatherers, are extremely good things where a quantity is wanted to be got in quickly; and too much cannot be said in their favour. As much as twenty acres can be got with them in a day. The old-pattern elevator, as used with the thrashing machine, is modernised and used in the harvest field for stacking hay, stover, corn, &c.; and it is only very recently that this machine has come into use; and at the Hull R.A.S.E. show, in 1873, the Judges report upon them, and say, "While speaking of the elevators, we should not omit to notice a very excellent one, brought out by Stephen Lewin, of Poole. This is a very simple implement, compact and light of draught, and works smoothly, closes up for travelling, and can be opened out and put to work by one man, in three or four minutes. It can be used for all kinds of crops, and can be worked by a pony, and deliver to a height of twenty-five feet or more." From my own experience, I have found that this machine does not swerve in the work like many others, and has also a very good arrangement for lengthening or shortening the chains. These same stackers or elevators are so arranged that they are as well adapted for the thrashing machine as far harvest work. I have made inquiries, and am told these elevators will take the corn away from the carts as fast as four men could pitch it on to the stack; and two men, who have understood the working of the machines, have tried to block it, and could not do so. The cost of a stacking machine or elevator is about £58, including the gear and all necessary fittings for working same, and the cost of repairs is comparatively trifling. The main thing would be to keep it well cleaned, well oiled in all parts, and from time to time a good coat of paint. In fact this applies to every machine, as well as elevators. How frequently you will find the machine standing for months, just on the same spot where it was used, without having been cleaned after use, or without any protection from the weather! It is also very essential that the best kind of oil should be used; a great mistake is made in buying cheap rubbish that is sold as machine oil—good oil with economic feeding cans is much cheaper to use than an unlimited supply of common oil. A little oil that in a machine kept clean can really get to the bearings, is much better than a deluge of oil poured on without reason on to a bearing covered

with dust and dirt. I mention this as upon the proper management of oiling and cleaning in a great measure regulates the length of time a machine will last. I have now spoken of the machines, &c., used generally through the hay and corn harvest, and must leave the matter in your hands for discussion. I think I have said enough to show that the introduction and use of good machinery is of advantage to the agriculturist, in enabling him to deal with his work and his crops expeditiously, economically, and effectually. That it is of advantage to the manufacturer you will all readily believe; but not only to these two classes is it of service, but also to the labourer himself, in relieving him of the heaviest and severest of the work on the farm. In fact, in the present day where should we all be without it. The work could not be got through, and there would necessarily follow a scarcity of provisions, which would be disastrous to all.

Mr. FISON thought Mr. Castledine had rather miscalculated the duration of the reaping machines. He had had his in use for six or seven years, and had it not been for his determination to have it overhauled, a year since, it would have been no expense whatever. He had gone to the expense of having the bolts and small castings in duplicate. With the exception of that expense, he did not think his reaper had cost £1 a year. As he had said, he had had his for seven years, and he believed that it would last another seven years, and at the end of that time it would be as good as ever. He had repeatedly cut eighteen acres a day with his. He did not, however, agree with Mr. Castledine about working the horses in harvest. If they had nothing to do then, that was the very time that they were best resting, ready for the hard work of the autumn tillage. He thought one great evil of the reaping machines was that they kept the horses too much at hard work in harvest, so that they were mauld out, by the fourteen hours a day that Mr. Castledine spoke of.

Mr. PETO remarked that there was a time when he thought farmers were a little too hasty about the introduction of machinery, but at that time labour was plentiful, and strong able-bodied men were willing to do justice to their employers. Unfortunately, however, within the last few years, there had been a sort of retrograde movement in the matter of labour, and consequently it behoved farmers to see how far the introduction of machinery would enable them to tide over the present difficulties. He spoke of having worked one of Wood's mowers with great success. With one of these machines he cut a whole field, and he did not have a man on the field until he carted the hay. He expressed his belief the haymaker really improved the hay, and said if there was not a very heavy crop that there was no necessity for shaking it out; if it was left in that state, and horse-raked the contrary way, that would be sufficient. He was quite of opinion that with the assistance of machinery it would not be necessary to have many men in the field, and he began to think the same with regard to the harvest field. He believed they would be able to get in their crops with much less trouble and expense than they did at the present time. He had not been so successful with reapers as some of his friends; he, however, had worked one of Hornsby's with success, and he did not doubt but that other machines were equally as good.

Mr. GAYFORD, jun., said he agreed with Mr. Fison as to wear entailed by the reaping machine. In harvest the wheat carting itself was enough for the horses when the farmer was fortunate enough to get a crop. The reapers were costly to the farmers at first, and very expensive to repair. He did not think that the reaper left the wheat or the barley so well for tying as the scythe did. The elevator which he found best was easiest to move and least trouble to fix. He did not see the necessity for its doubling up, as it might generally be placed in the barn when done with. As to the question of cost, he hoped Mr. Castledine was right in his calculations, but he could not agree with him as to not charging for horse power; it was really an objection to the use of machines. If he could make sure of labour he would rather have his corn cut by hand, but in order to meet a scarcity of labour he was glad, and they all were glad, of machines. He did not think they would have any difficulty, for at the prices now paid they would attract labour from the towns. He had heard of an elevator to take the corn quite from the swathe. He only wished they might invent a machine to elevate a little more money into the farmers' pockets.

Mr. MANFIELD would strongly urge upon all farmers to use

machines for cutting grass, but he thought the saving was not so great in cutting corn. He looked upon reaping machines as necessary evils, for he did not like them. Last year he went to the expense of putting two reaping machines into order, and then did not use them, but cut his corn by manual labour. There was no machine which took so much out of the horses as the reaping machine did; nor could he see the great saving of manual labour in cutting corn; but in cutting grass there was a great saving. In corn cutting he found that he wanted nearly as many men for tying as they did to cut the corn by hand. He did not anticipate a scarcity of labour. They never had more harvest men offered to them than last year, and he expected to see the same again this year. They would find people coming from Bury and Thetford offering their services. Mr. Castledine had spoken of hand-rakes being used by girls. Nothing must be said about that in the present day.

Mr. CASTLEDINE: That was in 1801.

Mr. MANFIELD said he did not see how reaping machines could be used so many days as Mr. Castledine spoke of, and he could not agree even with Mr. Peto as to the expense. As to the use of elevators, he could not see the saving as they delivered the corn at one side, and there must be men to remove the corn to any part of the stack they needed.

Mr. FISON said he found that there were less men employed. As to the use of the toppler for barley, he found that they toppled out too much corn. He thought the toppler a most dangerous machine. He had injured a valuable horse by one, and lost the use of it for six months. He thought the cost of reapers was much increased by neglect. He had his taken to pieces and cleaned every year as soon as the work was done. He usually cut 140 acres with his machine.

Mr. GAYFORD, in reference to the topplers, agreed with Mr. Fison, that he could not use them with such crops as his; there would be no where to topple it to. He believed the toppler had a very great advantage on their light lands. In some seasons, such as 1865 and 1870, he found it a great advantage in getting the barley together. He also thought he must defend the elevator against what Mr. Manfield had said.

Mr. FISON said that the great fault of the elevator was its unwieldy form. There was no building on a farm to receive it; it was like putting a six foot man into a four foot bed.

Mr. BOOTY said he had but little experience of the reaper, but he had found great benefit from it, especially in cutting his sanfoin and clover. He found great difficulty with his men, who put every obstacle in the way. If men could be found willing to work it, the reapers would be of the greatest advantage. He cut his wheat, 50 acres, and 30 acres of clover and sanfoin at an expense of 2s. 6d. an acre.

Mr. MALLOW'S spoke in favour of the elevators, and said he was sure that anyone who used them would not try to do without them. He also said he had used the reaper with great advantage, and he should be sorry to be without either a reaper or an elevator.

Mr. T. GOLDSMITH said he was in the habit of allowing his men the use of his reaping machine without charging them. Where the corn was laid his men preferred the scythe, but taken as a whole, for expedition and for other reason, he thought the reapers were advantageous to farmers. He was an advocate for the introduction of machinery, though he had no fear that there would be any scarcity of labour.

Mr. PETO said the introduction of reapers were very expensive, and where farmers did introduce them at all, he did not see why they should not make them pay for themselves. Hitherto they had been a little too lenient with their men. If machinery was introduced, some charge had to be made for it.

Mr. GARRARD was much pleased with the reaper. He charged his men 3s. per acre, and deducted it from their wages, and not only did he make 3s. per acre by his machine, but he cut some for his neighbours, for which he charged them, thus earning something with his reaper.

Mr. BURT said he had a combined machine for mowing and reaping, which did its work admirably; it would cut grasses beautifully, and was of extremely light draught. It was rather an expensive machine, but it did its work remarkably well.

Mr. F. GAYFORD did not like cutting barley with a reaper; but in cutting wheat and stover, and especially stover, it did its work remarkably well. In the present day farmers would not be able to do without machinery; but it was very expensive to the farmer, taking it altogether, because at present they did not pay their men less on account of the introduction of machinery. He pointed out that the horses deteriorated greatly during the harvest from the severe character of the work on small farms, though it lasted but a short time.

Mr. MANFIELD said he did not use the reaper because he found the other plan cheaper, but he was greatly in favour of the use of that machine for hay, stover, and beans.

The CHAIRMAN pointed out that the machinery which had been used up to the present was, unfortunately, like law books, there was always a new edition coming out. That was a very good thing for the machinist, but it was uncommonly bad for the farmer. He did not, however, wish to be misunderstood. He thought that all the improvements in agriculture of late years had come from the power which the machines had given to them. As to the labour question, he thought the farmers were wrong in the first instance. The farmers ought to have fought the question some little time ago. They fought the question in his parish (Norton) last year. The labourers there demanded a rise and the farmers would not give it. He for one had made up his mind for years that if a mau came to him and laid his case before him, as between man and man, he would listen to him, and he would do whatever was right; but if his men came to him and told him that they must have a certain sum, without any argument about it, then he for one would not submit to it. He would never be browbeaten by any set of men, and he did not care who they were. He respected the labourer as much as anybody, but he would not be set at defiance by any body of men. They had heard a great deal of Unions; they had been productive of much mischief, and he would urge upon all farmers to resist its introduction into their midst. He spoke of the object the Farmers' Defence Association had in view, and he urged farmers to join it and to stand shoulder to shoulder in their own defence. As to there being a deficiency of labour, he looked upon it as perfect nonsense. If farmers united, he believed they would be able to make the labourers disbelieve the nonsense which was written in certain papers; for instance, that the landlord and the farmer could be kicked over the hedge, and the labourer could have all the land.

Mr. CASTLEDINE: I saw it in the *Labourers' Union Chronicle*.

The CHAIRMAN urged that farmers should treat the labourer kindly in case he should return, for after all he was led away by other people.

Several other members warmly recommended a lock-out, and maintaining it amongst farmers.

Mr. CASTLEDINE, in reply, recommended the use of the reaper in the sale of which he was interested.

THE OUTBREAK OF FOOT-AND-MOUTH DISEASE

IN CHESHIRE.—At the monthly meeting of the North Cheshire Chamber of Agriculture, held at Macclesfield—Mr. Carswell (Adlington) in the chair, the recent outbreak and prevalence of foot and-mouth-disease in the county was discussed. The Chairman gave it as his opinion that Cheshire had suffered more from foot and mouth disease in the past than from any other disease, not even excepting the cattle plague. The stock deteriorated in value by the disease, and altogether the loss was incalculable. Mr. Whitley (Birtles) moved, and Mr. Cooke (Adlington) seconded a motion that the Chamber memorialise the Lords of the Privy Council, praying them to re-enforce the restrictions recently rescinded as to the movement of cattle affected with disease, in order that no cattle suffering from the disease may be brought to fairs or markets, or carted any distance after death. The Chamber also considered the Valuation of Property Bill, now before Parliament, and resolved "That this Chamber is of opinion that the 6th clause of the bill is unworkable, and recommends that the game on each estate should be valued and assessed in one sum."

LANCASHIRE FARMERS' CLUB.

At the annual meeting in Liverpool, Mr. G. C. Hale, Knowsley, in the chair,

Mr. H. NEILD, of Worsley, in moving the adoption of the report, and referring to the union question, said that he did not at all fear the spread of what was called trades' unionism amongst their labourers. The farm labourers of Lancashire, he believed, were superior to any, and he should like very much to see them represented in the council.

Mr. RIGBY, the Secretary, read a paper on "Lancashire Farming: Its Favourable and Adverse Aspects." He said: Allow me to premise that my own knowledge of Lancashire farming is almost wholly confined to the southern part of the county. Of that part of it which lies north of Preston I have only caught glimpses from the railway in travelling to Blackpool or towards Carlisle; but I had the advantage of being inspector of farms for the Manchester and Liverpool Agricultural Society for three years in conjunction with the late Mr. Rothwell, who was well known to most of us, and highly respected for his extensive agricultural knowledge and sound judgment; and from him and other gentlemen of repute and intelligence I have gathered such facts as would lead me to say that while there is a great diversity of soil and climate and cultivation in Lancashire, and while a large portion of the county is practically unsuitable for farming in its natural character, yet there will be found as good and successful management as in any other county, and a larger proportion to its area capable of arable cultivation than in most other counties in the kingdom. The Lancashire farmer, as a rule, is a hard-working and industrious man, often working himself and his children as hard as his own labourers, and cherishing great pride in his crops and in his cattle and horses. He avails himself largely now of the use of machinery in cultivation, with the best results, and a farmer is considered a sluggard and almost a disgrace to his class whose crops are overrun with weeds and who has recourse to a bare summer fallow to keep his land clean. The farms of Lancashire vary much in extent, but as a rule the holdings are small. The average size, as given in the agricultural returns collected last year, is 32 acres, which I notice, is less than that of any other county in England or Wales. Of the 712,000 acres in the county from which returns were received, 103,000 in round numbers were in corn crops, and 510,000 in green crop and grass for pasture and hay. The live stock returned was 32,000 horses, 238,000 cattle, 348,000 sheep, and 39,000 pigs; and the total number of garden allotments detached from cottages or other houses were 992, averaging a tenth part of an acre each. Having made these general statements, I proceed to speak more particularly of the advantages and disadvantages that affect the farming of the county. One principal advantage of a Lancashire farmer is that he is near to good markets for the sale of his produce. Another fact favourable to Lancashire farming is its easy access to town-made manure as a fertiliser. Large breadths of what is now very profitable land would be poor and unproductive if it were not for liberal and constant applications of manure from cowhouses and stables in town, used in conjunction with that made upon the farm, and for which no better or even equal substitute is found. I have a high opinion of the value of ground bones as a top-dressing to pasture land, and of guano and nitrate of soda as a stimulant, particularly to plants in the early stages of their growth; but for staying power, for feeding crops to their maturity, and for developing them in perfection, as well as improving the soil, there is nothing to be compared to the manure I have referred to. For getting good crops and keeping land in good heart, applied plentifully and judiciously, it will almost work miracles upon land; and it has the negative advantage that, however applied, it never does harm. I am almost afraid to state the value of the crops I have seen growing on farms within a few miles of Liverpool, on land naturally poor and of a hungry character, for fear of losing credit for veracity; and this is accomplished principally through liberal application of manure, aided, no doubt, by good cultivation, and to some extent also by a fine climate. But I do not hesitate to say that in the farming within three or four miles of the Mersey, from Halewood to Crossley, and in adjacent parts, there is as much valuable produce raised from the land annually as in any part of England, and that it would be impossible to do so well

if it were not for the manure made in Liverpool and carted out from that town, and the same advantage applies to the farming around all our large towns from the same conditions. Lancashire farming is also favoured, I think, by its proximity to the stimulative influences of extensive commercial pursuits. The life and growth of commerce is dependent upon enterprise, and it is always most successful where there is most competition, and when to the rules of prudence is added the push and energy of effort to excel, and to go further than has before been attained. And as example of this kind stimulates the same action in others similarly engaged, it may be fairly assumed that the Lancashire farmer comes within its influence when disposing of his produce to the merchant princes of Manchester and Liverpool and other large towns. But I shall be reminded that it is presuming too much upon the good nature of farmers to expect this general progress in farming under the present system of land tenure. To produce such results there must be a large antecedent outlay in very many cases, and always a liberal expenditure in manures and in deep cultivation, the profitable return of which cannot be realised annually; and I grant the propriety of the qualification. Taken as a whole, the occupation of land generally is in an unsatisfactory state, and requires revision. The conditions under which it is held are not so liberal even as in feudal times, when it was given to the baron's retainers as their wages for suit and service, and a portion of its produce as an acknowledgment in the shape of rent, for then it descended from father to son for generations, and such a thing as disturbance or notice to quit was unknown, except in cases of treachery to the baron, or of criminal delinquency to the law. There is much of the same kind of feeling still existent on some large estates. Our noble president has many families among his tenants who have succeeded deceased relatives, and who can trace back their ancestry for several generations as tenants of the same farm, and the same things exist on other estates in the county, to the credit of owner and occupier alike. On those estates there exists mutual confidence between landlord and tenant, and confidence which has been rarely abused by either party; but it is far from being the rule. The law in respect of tenancies is more favourable to the landlord than the tenant generally. Let any unprejudiced man read nearly any old farm agreement, and say if he does not think the tenant is treated either as an ignorant who does not know his business, or as a suspicious character who must be kept in honesty's path by rule and line. This state of things is, I think, adverse to farming generally and to Lancashire farming in particular. Another thing adverse to Lancashire farming is the heavy burden of taxation which the sanitary condition of adjacent towns renders necessary in order to make them healthy places of habitation. Where population clusters together there must be an adequate supply of water, an efficient system of sewerage, and certain other outlay to provide for the health and comfort of the inhabitants; and when to this is added the cost of highways, maintenance of poor, and all the other charges that are collected under the head of Poor-rate, the local taxation of large portions of Lancashire farming becomes a heavy burden. Almost every advantage in life has some drawback. Our population gives us a good and near market for our produce, but it also adds to our taxes. The most serious part of the case, however, is that we are assessed upon the annual value of our holdings, which is relatively much higher than any other kind of business premises in proportion to income made from them. The Income-tax Commissioners are contented to take our income at half our rentals, but the proportion of income to rental in most other occupations is double, treble, ten times, or even seventy times the amount of rental. What we complain of, therefore, is the unequal incidence of local taxation, and that we as farmers, confessedly least able, are made to contribute the greatest share; and we feel it the more deeply that the cost of these works is continually increasing, and because the means for carrying out other objects of national utility are being levied in the same way. The testimony of many farmers present will confirm me in the remark that rates have doubled and trebled during the last five years, and that they are now in many places a very serious addition to the rentals of farms. Labour is another serious item of increase to cost of raising

produce in Lancashire. Our proximity to large manufactories and to busy towns is a disadvantage to us again here. Being able to make greater profits, the manufacturers can give higher wages, moreover he must do so to draw men away from the fresh air and healthy residence of the country, and to retain them farmers are compelled to give nearly equal wages. We have no delicacy in speaking of this matter, as we have no difficulty in Lancashire, or in any adjoining county, like that existing in the southern and eastern counties. We honestly believe our men deserve all they get, and that they will always get as much as they deserve, without combining in union to enforce it, from the action of the inevitable law of supply and demand. Labour must always command high value in Lancashire, and we accept the fact without further comment, except this, that landlords could materially assist their tenants by providing cottages on their estates and letting them with their farms for the residence of labourers employed thereon. Much is done in this way, although some of the cottages are poor and inconvenient, but the worst of them I would just say in passing are better than the cellar residences and thickly peopled houses in courts and alleys in large towns—a fact which some well-intentioned people overlook when moralising upon our cottage accommodation to its disadvantage; but there is more wanted doing, and the building of more cottages would be an inducement to men to remain in the country and do farmwork, instead of migrating to the towns. The cretation and working of copper and alkali works, although confined to a part of the county, have become so injurious to vegetation around them as

to be a perceptible disadvantage to a large part of the farming of Lancashire. This subject has been so lately brought before the Chamber that I shall not require to do more than enumerate its existence as one of its adverse aspects. The last adverse aspect of Lancashire farming that I shall name is one whose correction lies largely in the hands of Lancashire farmers themselves. I know not if I shall have their sympathy, however, in naming it, but I beg them to believe my remarks are made in no captious or censorious spirit, but from an honest desire to point out and to correct what I think is a serious disadvantage. I allude to the imperfect or unsuitable education which, as a rule, they give to their sons. It may be thought a matter of necessity to draw a boy from school at 14 years of age, and place him from that time among the workmen of the farm in order to keep down expenses, but as largely done it cannot be the best way to make a farmer of him. A boy rarely begins to feel any interest in study until he is 14 years of age, and to take him away just as he is beginning to work, and shut him up to menial duties alone, is the surest way to blunt his faculties and demoralise his intellectual nature. The discipline and education of the school should be continued for two years longer at least. Farming has advanced, and must advance, in character as a pursuit or profession, requiring ability of mind as well as strength of body.

At the conclusion of Mr. Rigby's paper, a slight discussion ensued upon it, the members all cordially agreeing with his arguments. A vote of thanks was passed to him, and the paper was ordered to be printed and circulated.

BALLARAT FARMERS' CLUB.

At the usual monthly meeting at Craig's Hotel, the president, Mr. Bacchus, in the chair, the secretary read a letter received from Mr. C. T. Sutherland, of The Grange, Tatyoon, stating that he preferred the months of July and August for the sowing of kohl-rabi, although he had sown up to the end of November with success, but he had generally found that period too late to allow the plant to come to full growth before the land was wanted for another crop. He felt sure it would become a great favourite with farmers when better known. In connection with this letter the Secretary likewise read a lengthy statement in reference to the growth and mode of culture of the plant referred to, and which has appeared in a former issue. Mr. Sutherland, in his explanation of the plant, states that his horses will eat it in preference to oats and chaff, and milch cows were extremely fond of it; it likewise did not affect the taste of milk and butter as turnips did. Its keeping properties were first-class; in fact, he had some of it on hand from last year firm and sound. In its cultivation the ground should be well prepared in drills 32 inches apart, and then lightly rolled, after which planting could be commenced from the seed-beds. This work, it is stated, could be easily effected by a man and two boys, the man as he walked along making a cut with a spade on top of the drill, the first boy dropping in a handful of bone-dust, and the second putting in the plant, only taking care not to bring it in immediate contact with the bones. The seed is of very rapid growth, and should be sown about eight days before the plants were required, the size of the plants to be not larger than ordinary cabbage plants, and to be planted two feet six inches apart in the drills, and in extra rich land three feet would not be too much. Mr. Sutherland stated that he had grown bulbs as much as 20 lbs. in weight, and some even larger, but the average weight would be from 8 to 12 lbs. each. He intended having ten acres planted next season for his stock.

The secretary submitted a sample of anti-rust wheat sown by Messrs. R. U. Nicholls and Co., of Armstrong-street, in a deep chert late soil, in the parish of Bangaroo, on the 28th July, 1873. The sowing was an experimental one of 14 lbs., and the yield was 159 lbs. The wheat was cut on the 20th January, the straw being then five feet high; it was perfectly free from rust, but difficult to thrash. The sample was that of a splendid heavy wheat, not unlike in appearance purple or red straw, and seemed to be very favourably regarded.

Mr. MARTIN then read a paper on the subject of local rates, as follows:

In the absence of Mr. Read I have been pressed into the service, but it is not easy to say something on the spur of the

moment which would be useful, and likely to merit your attention. However, it has occurred to me that the English farmer presents to his club such matter as affects his interest. I shall therefore make no excuse for directing your attention to the subject of local rates. I do so with greater readiness as I know it very nearly affects every man in this room. The rates, as you are aware, are determined by the annual letting value of the property, or, in other words, in proportion to the amount of money invested therein. In reviewing the subject you will please to remember this is a new country, and it remains with us to make it prosperous and great, which can only be accomplished by the investment of capital and labour in the soil; by the cultivation of cattle and corn, orchards and vineyards; by the planting of timber; by the erection of houses; by the building of schools, workshops, and factories; and by the establishment of cities. Now, although every member of this community will acknowledge these improvements to be desirable, yet they suffer a system of taxation to exist which strikes at the very root of all improvement, and operates as the chief impediment to the profitable investment of capital in land. To illustrate this subject, I will present facts which are known to most of you. A gentleman, who has been frequently in this room, purchased, in the suburb of this city, about eighty acres of very poor land, so poor, indeed, that it would require several acres to feed one sheep. The rates demanded by the shire did not exceed one penny per acre per annum. The owner determined to improve this land by expending some hundreds of pounds in manure. He purchased the best implements, employed the best labour, and the result of these investments was a magnificent crop. However, before it was removed, the valuator came upon the scene again, and, with an exclamation of surprise, declared it to be the best farm in the district, as the crop was without an equal. The annual letting value made a bound of several hundred per cent., and the rates were increased from one penny to the sum of one shilling per acre. This imposition very speedily abated the enthusiasm of the investor, who discovered that the money he had expended upon the land was not only subject to the ordinary interest, but, in addition, it was subject to a very large percentage collected by the shire council under the name of rates. He, therefore, very wisely allowed his land to relapse into its original wild condition, and placed his capital into other investments. It would be impossible to imagine anything which could more effectually stop improvements, or which could be more injurious and unequal in its operation than the present system of taxation. The case I have mentioned is by no means a solitary one, as thousands of persons can testify.

The most speedy and certain method a man could devise to draw down upon his capital the swoop of the rate-collector is to invest his money in building houses or improving land. Every improvement is but the prelude to an additional burden of rates. If a man invests his money in planting an orchard, it is subject to be rated at three shillings per acre per annum; if a vineyard, it is subject to five shillings per acre per annum. If he should have the pretension to build something like a comfortable house, plant his ground with ornamental trees, which in time would change the bleak, dreary solitude into a place of beauty, he is at once subject to an additional imposition—in fact, a fine, collected under the name of local rates. The evil becomes intensified when the farmer who has spent years of toil in fencing and clearing his land is compelled by the requirements of his family to replace the hut with a more comfortable and convenient dwelling. His wife, poor soul, having done her best, is now subject to many infirmities, and he is conscious that his own health is not so vigorous as it was a dozen years ago. He has but £600, however, which is not sufficient to complete the improvements; it would require twelve hundred. He borrows six upon the security of his land at eight per cent. The improvements give grace and beauty to the country, making it not only habitable but beautiful to live in. These improvements entwine the affections of his children around the place of their birth, and give to their aspirations the ring of true nationality. We may ask why should these investments, which have accomplished so much good, and which are still subject to the mortgage, be liable to the burden of additional rates? The question seems to acquire greater emphasis when the land contiguous to these improvements is being held in its wild state for speculative purposes. No labour is employed upon this land, no improvements are made, but the local councils, as if in admiration of the do-nothing policy of its owner, charge the land with the lowest modicum of rates. By this system of rating, the speculator is encouraged, and permitted by law to trade upon the enterprise and energy of those who invest their capital in building homesteads and cities, as well as upon the enterprise of those who cultivate the land. The speculator's land acquires yearly an additional value by the facilities afforded by means of roads, bridges, and such other conveniences as may be constructed at the public cost. It is no fault of the local bodies that the land has a low-letting value; that is the fault of the owner, and should not be accepted as a reason why a low rate should be charged. From these statements it will be apparent that just in proportion as the land is reclaimed from its original wild condition and made habitable, as capital is invested in fencing, supplying water, building houses, planting trees, manuring and cultivating, so with each additional improvement the investor is subject to an additional tax, which operates in direct antagonism to the profitable investment of money in the improvement of the country. In other investments capital is not trammelled by impositions. It can be invested to immensely more advantage in trade, bank stock, mortgage, or in land held for speculative purposes. If these

statements are true, why should not country land be rated at per acre, irrespective of improvements? Why should not city land be rated at per foot frontage? Why should the Bank of Victoria and other buildings which ornament and beautify this city be encumbered with heavy rates, and shanties which offend the eye and taint the air allowed to go free? The present system operates alike in both town and country, but always as an impediment to progress. Every foot of city frontage should pay its share of rates irrespective of the improvements which may be upon it, and every acre of country land should pay its share of rates without taking into consideration the sum of money which has been invested in its improvement. Then some inducement would be offered to build and to cultivate, but none to hold land in its wild state for speculative purposes. Then the true workers would be unfettered, and free to raise the raw products of the soil in abundance, and the skill of the manufacturer would be free to expend its ingenuity in constructing machinery or in fabricating those delicate and durable articles of clothing which are in daily wear. If it is a self-evident truth that the source of all nations' wealth arises from the improvement of the land, then let each farmer and citizen endeavour to remove every impediment and clear away every obstacle which may act as a drag upon the enterprise and prosperity of the people. If the present system of valuation presses heavily upon the investment of capital in houses or land, or upon the industry of the people, let it by all means give place to a system more equitable and just. We may then hope to check the migration of men who have done so much to give permanent prosperity to this country, and who are our best and most useful colonists.

Mr. M'CLURE moved a vote of thanks to the lecturer.

Mr. LEWIS seconded the motion. The lecturer's views quite accorded with his own in everything he had stated, and more especially in regard to town property, with which he had had ample experience. He for one felt certain that the system of levying rates required re-modelling altogether, as at present it was most unfair to the industrious working-man, who was obliged to pay higher rates than his thriftless neighbour, who was either too lazy or too careless to improve his property.

The motion was carried unanimously.

Mr. M'DOWALL gave notice that he would at the meeting in a month hence move for the meetings of the club to be held at Learmouth. He stated that the efforts of the club at present were perhaps fully appreciated, but they were not, judging by the meagre attendance at all events, fully recognised. The club had done a great deal for the benefit of the farmers generally, and the press, he must state, had nobly stuck to it. In fact, but for the close and firm adherence which the press had accorded the club, it would have ceased to exist long ago, as it was merely a body in name and appearance, but not in reality, at least in the way of attendance, members generally preferring to read the newspaper reports to taking part in the discussion.

The secretary stated that the club's town and trade members numbered sixty, as against forty members in the country.

THE POWER OF THE FARMERS.

There can be very little doubt that whichever side ultimately gains the victory, the struggle between the farmer and the labourer will in many things result in evil. Without laying much stress on the oft-talked-of sympathy and good feeling between master and man, now broken up for ever, there still remained bonds which it is a mistake to have severed. The character of Englishmen is averse to much sympathy: it is a form of sentiment against which a straightforward and independent man revolts. The ideas and feelings which in the town are refined and softened, in the country come out in their blunt abruptness; and there is perhaps no section of the population which sets so low a value upon sympathy as the agricultural. The very rudeness of the life, the strife with the weather, the battle with the soil, tends to produce a sturdy and somewhat surly manliness which cannot understand the meanings conveyed under the fine phrases of mutual forbearance, and so on, which have been so largely used in this controversy. But there certainly was an appreciable amount of *esprit de corps*, extending through-

out the ranks of farmer and labourer up to a recent period. There was a common dislike of the town, its ways and men—a *growling* kind of pride in the country, and masters and men growled in concert. They found fault with the same things; they grumbled together; they could always agree in abusing the weather; they talked freely and without distrust; and there was not that sharpness of definition between the two classes that exists in manufacturing districts. The farmer did not set himself up as superior to the labourer in a coarse and insulting manner. He conversed familiarly with his men; walked with them a mile upon the road, without feeling in the least degree that he was lowering his dignity as an employer, or showing condescension to them; asked after their wives and families, and how the potato-patch or allotment was looking, and generally showed an interest in their concerns. After the agitation first commenced, this species of intercourse was a long time in dying out. The indignation of the farmers was poured entirely upon the agents who were spreading disaffection. No one found any fault with the labourers them-

selves. If they thought they were really worth more per week than they were receiving, they had a right to ask for an increase of pay; but when, after an increase of pay was granted, as the farmers maintain, to a reasonable amount, and the agitation still continued, there arose a gradual coolness, and the two classes slowly arrayed themselves into opposing forces. It was now that the employers began to blame the employed, and to set themselves firmly against any further movement.

The lock-out in Suffolk was only what every one had seen must in the end take place, if the aspect of affairs continued unchanged. Throughout the county the agriculturists had come to a distinct though unexpressed determination that the matter could not go on without a firm resistance being offered. In the markets, at the market ordinaries, wherever the agricultural world met, the tone that universally prevailed was that some decided step must be taken. When it was at last taken, and the news spread of the lock-out, the tone of conversation in these places of assembly grew at once firmer and more defiant. The agriculturists are slow to combine, slower still to give utterance and shape to their resolves; but they possess a depth of feeling and a strength which is hardly acknowledged. The latent energy of resistance which exists among the agriculturists of the whole country is incalculably great. The Suffolk movement will be endorsed, if not followed in kind, in almost every county. The suppressed bitterness of two or three years of what they, rightly or wrongly, consider unjust treatment, will bear fruit in harsh and rigid measures which it would have been to the interest of all to avoid. The farmers have an immense power in their hands—a power little understood and much underrated. It extends into the smallest affairs, especially, of course, in rural districts. Take the Boards of Guardians, for instance: they are almost exclusively formed of farmers and landed gentry. We may regret the fact, but there is no doubt about it, that many such guardians will carry, perhaps have already carried, their resentment into the board-room. In these days of open meetings and free newspapers, absolute tyranny is out of the question as much as absolute justice, but there is still sufficient liberty of action to enable a man, and more particularly a body of men, to make their ruling ideas felt by those under them. Hitherto the agricultural poor certainly cannot complain of their treatment at the hands of the unions. They have been far more liberally dealt with than the poor inhabitants of towns. They have received, too, an amount of humanity over and above the strict administration of the Poor-law. Allowance has been made, rather illegally, for circumstances. Now as the local rates come chiefly from the land, the guardians must be more than men if they did not feel, under provocation, a degree of inclination to administer strict law, and nothing more nor less, to the applicants. This same system of reprisal has already been carried into effect in districts hundreds of miles remote from the Suffolk lock-out. In most villages there are adherents of the Labourers' Union. Generally the first members are the disagreeable inhabitants—the two or three perpetual grumblers and ne'er-do-wells. They join the Union and become marked men. Perhaps they make themselves peculiarly obnoxious in parish matters, or did so at the late election. They very soon find that employment cannot be found in the parish; no one will give them a job; certain perquisites are cut off; harsh refusals to grant time-honoured privileges follow; finally they find it necessary to migrate, having first of all held themselves up as martyrs in a public cause. It may be said that all this is an argument in favour of agitation, but then it must be remembered that the farmers did not begin the conflict: they made no opposition till what they believed an unbearable pitch of overbearing insolence was reached.

So much for the power of the farmers in small things. The agitators argue that the farmers cannot possibly persist in the lock-out, because their work must be done or they will be ruined. Whether this particular lock-out continues or not, it is certain that this belief is a most mistaken one. The farmers are quite able to repeat or to continue the lock-out, as may suit them best. The reason is obvious: the landlords are at their back. If the tenant finds that he cannot cultivate his fields, and therefore cannot raise the money to pay his rent, the landlord seeing the condition of affairs, and feeling that his interest is identical, has only to remit the rent or part of it, and the struggle may go on indefinitely. The Union agitators are consequently quite in the wrong if they imagine they can

coerce the agriculturists, provided that the latter are determined to fight. The funds of the Union are as nothing to the wealth at the back of the farmers; and in these days the cause with the longest purse invariably wins. The two-pence per week of the Unionist is of very little account when placed in the balance with the thousands of pounds accessible to the other side. Every hundred men locked out or on strike, while they in some measure embarrass the farmers, at the same time weaken the Union funds, and just at the very moment when the Union appears strongest, and can show an immense number of men doing nothing, it is really worst off, because of the incessant drain of money. The labourers never for a moment dreamt that the farmers could do without them for so long as they have. They thought that a fortnight, or three weeks at least, would reduce their employers to their own terms. At the first glance there is indeed no trade or occupation in the country which seems to depend so much upon the labouring man as farming. The tenant of a large farm appears perfectly helpless without them. If the strikes or lock-outs had happened some years ago, the labourers would have doubtless been right in their calculations. But it is a notorious fact that while the art of agriculture has been carried to a length never imagined possible formerly, and while the produce has been doubled, the number of men employed has steadily decreased. Without going into statistics, though such aids to inquiry are forthcoming if necessary, it may be fairly reckoned that each farmer on an average employs less men by one-fifth, taking all the year round, than he did ten years since. If the harvest and busy season alone be considered, the decrease is far larger, and may amount to one-third. Machinery has of course a good deal to do with this. The hay is mown by machines, made by machines, elevated on ricks by machines, and the fields cleaned with rakes drawn by horses. The arable farmer ploughs by machinery, sows by machinery, reaps and thrashes by iron and steel instead of thews and sinews. In the aggregate the difference is something serious. The very price of labour has taught the tenant to do his utmost to reduce the expenditure in that direction. Farmers who used to employ six men to mow, now only put on a couple. There is less too of the system of keeping men all the year in order to secure their services at a busy season. Something must be put down to the growing scarcity of labourers themselves, which also tends to teach the tenants to get on with less help. Very few farmers now have sufficient labourers employed on their farms to get through the thrashing. They have to borrow men from their neighbours. The Labourers' Union, therefore, has not taken the farmers so much at a disadvantage as they at first supposed. There were a vast number of old men, past hard work but still capable of small services, who would have been glad of a job, but who found it impossible to get one. Now they come in and assist. Then there are the regular men—the herd-men, carters, shepherds, with cottages and gardens. Many of these are too well paid to risk the loss of their wages. In this way the farmers may manage to get over the harvest without much loss. Another feature of the agriculture of late years has been the number of men and women who come out from the towns to work in the fields, particularly at harvest. In the neighbourhood of large towns, and especially where there are factories, they come out by hundreds. Many of them like a spell of work in the open air, and the women are glad of a chance of adding to their slender incomes. The immense numbers of women and girls who have absolutely nothing to do in great towns, eagerly grasp at a few weeks' employment and fair pay in the harvest fields. In addition there are the loads upon loads of Irish whom the steamers bring over, with their brozue and their sickles, to reap the English corn. A stream of them pours into Bristol and other western ports about June. Harvesting, in fact, becomes every year more and more similar to the Kentish hop-picking season. Instead of being done by the regular residents on the spot, it is got through by what may be called casual labour. The farmers have a certain amount of resources in this floating population.

But then it may be said, with all these aids, still the produce cannot be so large as it would be if the labourers were at work, and there must be loss. For the first year it is doubtful if the loss would be appreciable; there would be some but not much—not enough to lower the receipts of an individual farmer by a serious figure. But next year, if the lock-out and strike and agitation should continue, would of course show some con-

siderable decrease. And upon whom would this fall chiefly? If the landlord and the tenant are agreed, and the former remits his rent, or subscribes heavily, it is clear that the farmer will not suffer. The first to sniffer will be the labourers. If the produce is smaller and prices rise, while wages, or rather Union pay, continues at the present 9s. per week, it is obvious that the labourer must partially starve. It matters very little whether the lock-out in Suffolk fails or succeeds. The same thing is nearly sure to occur again and again elsewhere, and each time over a wider area of country. Conceive for an instant what is not at all beyond the regions of probability, the lock-out and strike extended to the greater part of England. The farmers say, "We can wait; we are not dependent upon a certain weekly income of a few shillings!" What would be the consequence? The men must either starve or emigrate. That this is the fact is already practically acknowledged by the Union, which does all in its power to induce the labourers to go to America, or elsewhere abroad. It recognises its own incapacity to keep thousands of men in idleness for any length of time. Again, the pressure of the population, and the demand for food, prove that anything like a general lock-out or strike would be attended with serious consequences; and these consequences must principally fall upon the lower classes who have no resources, no bankers' balance to fall back upon. There is no trade or manufacture the proprietors of which can afford to wait so long as the agriculturist. Farming is naturally a waiting business. Its professors possess the greatest of all powers, the capability of patience. They have no need to hurry. The tone and feeling of the agricultural world at present is in such a condition that a few energetic men in a county could easily form an association for resisting the demands of the Union. The only organisation which now exists in agricultural districts is the very weak and feeble one of the farmers' clubs or chambers, from which politics are excluded, and discussion is confined to the narrow limits of cultivation and subjects associated with it. The very exclusion of politics acts as a sedative, and keeps these chambers in a lukewarm state. There is no enthusiasm, no life about them. But once let an organization be set on foot having for its object the suppression of Union agitation, and the farmers will throw themselves into it with energy and determination. They feel deeply on the matter. Rightly or wrongly, they believe that they have been insolently ill-treated, and held up as monsters of iniquity. This personal feeling would at once give such organizations a cohesive power never before experienced in a society of agriculturists. They will not spare either money, time, or exertion to render their efforts successful. The farming world was probably never so united and unanimous before. It is even possible that the agitation may result in permanent good to them, since it will teach them the strength that lies in unity. Already in parts very distant from that where the lock-out occurred, the idea of sending money in aid of the movement has been mooted and warmly supported. Some think that it would be better to forward men to a lock-out district, who would be willing to work on the terms offered by the employer. The only objection to this is that it might result in a collision between the Union men and the imported labourers. The Union men would certainly have no right to complain. It has long been the policy of the Union to denude a district of men as much as possible in order to force up the rate of wages there. If it is fair to take men away, it is equally fair to the other side to bring bodies of labourers from a distance. As to a collision the police must take charge of that; and it must be remembered that either party commencing a disturbance will at once place itself in the wrong in the eyes of the impartial observers. There can be very little doubt if the movement continues, and is extended to other counties, that the system of sending labourers from one part to another will be put into execution by the farmers. It will be far more efficacious than money. As to the possibility, that is beyond question. There are men enough to be found ready to work for reasonable wages in those districts to which the Union has not thoroughly extended itself, and such districts are well known. There is such a thing possible, too, as importing Irish labour. A well-organised gang of men thoroughly conversant with their work and under proper leaders, could be sent into a disaffected district, and pass on from farm to farm, doing the work as they go. This would answer better than sending a mob of men to spread themselves about and get work as they could. It would be preferable to forward them in companies, officered as it were, with a given

extent of country to work over. This concentration of labour would finish the operation in half the time, and would enable the imported men to present a bold front to the labourers on strike, who would scarcely care to attack a strong gang. But would such imported men work for less wages than the rest were out on strike for? The farmers would not stop at a few shillings a week extra to such men. They say that they do not object to the rise of wages; what they object to is the Union. Give up your Union card, and we will not refuse an extra shilling. It is, therefore, quite possible that a body of men from a distance may be found working in the midst of a strike or lock-out, for wages as high as those the locked-out men require, simply because they are non-Unionists. The Union tactics are very bad. They follow a course which must, if persevered in, ultimately bring them to ruin. They deport as many men as possible from a district in which the farmers are obdurate. They employ every agency to induce the men to emigrate. Nothing is left undone to thin the agricultural population. There are two pleas for this course. The first is, that the greater the scarcity of labour, the higher price it will command. The second is one of necessity. They cannot keep so numerous a body on the Union funds; but they should reflect that the larger the number of men who emigrate, by so much do the twopences a week diminish, and that force of any association consists in the numbers of its members. They should let the men on strike or locked-out go on the parish for relief. That would touch the farmers nearest. They all pay local rates, and many very heavily. A sudden increase of paupers would be a sore point indeed. It is true that the theory of the Poor-law is that relief cannot be given to an able-bodied man; but in practice, if an able-bodied man presents himself at the workhouse, and shows that he is utterly destitute and without a penny, the guardians must offer him the house. As a rule they will not relieve him in the house, and his wife and children out or *vice versa*. Imagine, then, the effect of some thousands of labourers, and their wives and families, applying at the workhouse for relief. The poor-rates must immediately rise to a heavy figure. The Union however, does all in its power to lighten the rates by deporting the men who served to swell them. The Union agitators actually boast in the papers, that since the formation of the Union and the rise in wages, and flow of emigration, the expenditure at the workhouses has decreased one-third, and the poor-rates in equal proportion. Of course they have. The Union has taken the cause of poor-rates—has deported it elsewhere; but this does not injure or embarrass the farmers—it actually relieves them. The tactics of the Union, therefore, are extremely ill-calculated, and their plans for coercing the agriculturist very badly laid. If the Union has succeeded in raising the wages of labourers, and in making England such a paradise for them, how is it that the men emigrate in shoals, and do not stay at home to enjoy the high wages and other advantages the Union has obtained for them? Anyone who will carefully consider the arguments adduced will at once see that the power of the farmers is no imaginary theory; it is a real hard fact which cannot be got over. Every one must deeply regret that the exercise of such a power should ever be necessary; but it must also be admitted that the farmers have been slow to avail themselves of it. Granted that it was quite fair, quite open to the labourers to form an organization for their benefit as a class, then it must also be conceded that the farmers have an equal right to associate together to defend their interest. It must never be forgotten that the farmers did not begin. They did not form their association first, and by injudicious treatment and insolent language force the labourers into a union in their own defence. The labourers commenced the agitation, and the farmers did not retaliate for a long period of time. It is at least two years since the Union made itself notorious; it is only after two years that the farmers show any signs of combination and resistance. They did not refuse an increase of wages. They did not give way to their tempers, however much they may have been provoked. They remained quiet, waiting for the agitation to subside. What substantial point is there that the most passionate unionist can say that farmers denied their men up to this spring? They have shown an amount of patience and forbearance which no other business men in the kingdom would have shown. Neither the colliery owners, nor the ironmasters, nor the cotton-mill men—none of the great trades would have waited so long. The extreme agitators are to blame for forcing matters to such a crisis. They would

be wise if they counselled moderation; but at what stage of the whole affair have they ever counselled that? Who began the affray? No one can say it was the farmers. The labourers at this period of the movement cannot complain if their own measures are returned upon them. The worst feature of the case is that the labourers seem completely in the hands of the agitators, to do as they are bid, and go as sheep to the slaughter. Ill-educated, ignorant, and prejudiced, they take every statement made to them by their so-called friends as literally true. They have no power of criticism—no penetration to distinguish the facts from the fictions. They take it all on trust; just as they start from Liverpool on the ocean-going steamers with the most dim and visionary ideas of the land they are about to visit. Whether it be honourable of educated and well-informed men such as certain leaders of the agitation are, to take advantage of their simplicity, the world can decide for itself. What may occur in time is, of course, not to be foreseen; but it must be admitted on all hands that hitherto the conduct of the labourers has been wonderfully good. Whether congregated in immense numbers, listening to the inflammatory harangues of the Union orators, or slowly spelling out in solitude the broad hints of the Union paper of rick burning and “beacon fires,” they have ever remained quiet, peaceable, and orderly. It is doubtful if any other section of the population under the same circumstances would so long have continued well behaved. They are a rude lot, primitive in their ideas, prejudiced in the extreme, blunt and coarse in their expressions; but they are not “roughs.” That expressive word must be confined to the produce of the back streets of great cities. The agricultural labourer, rude as he may be, is no “rough.” There is nothing of the rowdy about him. He has not been induced

to commit any excesses which present the faintest resemblance to a civil war. The question remains, Is there no hope of real good from arbitration? Arbitration certainly seems the natural outcome from such a state of things. The doubt is whether the Unionists, as represented by the agents, will ever cordially accept any decision which does not endorse all their demands. In that case, of course, the attempt must fail. Putting the agents aside, if that were possible, then without hesitation it may be affirmed that the labourers would soon come to terms of their own accord. If it were possible to get at the men apart from their organization, it may be asserted that arbitration would be successful. The farmers, as men of education, and many of them men of position, would not hold out in the face of public opinion, provided that no ultra demands were made upon them. But, on the whole, there is little reliance to be put on arbitration. It may decide a lock-out here and a strike there, but it does not, and cannot, settle the question. There will still remain a feeling on both sides ready to break out. It may even be asked whether or no the best way, after all, is to let the affair come to an issue and decide itself. With that, however, the subject of the present article has little to do. The aim of the moment was to show that the farmers are possessed of immense, if unrecognised, power. In the face of such facts, which on consideration no one can doubt, it may reasonably enough be questioned whether those are the true friends of the labourer who urge him to persist in courses which embitter the two classes more and more. At the same time, conscious of this power, the farmers need not continue their measures till they force a victory. They can afford to accept fair terms without loss of dignity or prestige.—MR. RICHARD JEFFERIES in *The Fortnightly Review*.

CLUBS FOR WORKING MEN.

At the last meeting of the Newbury Chamber of Agriculture, Mr. F. E. Frampton in the chair,

The Rev. JOHN ADAMS read the following paper: The subject which I have now the pleasure of introducing to your notice may, I fear, be thought somewhat inopportune, on the ground that current events do not encourage employers to discuss schemes for the promotion of working men's social welfare. But however strongly such a feeling might naturally prevail in many districts, it can have no force in this neighbourhood, for the old cordial relations between masters and men have been but little interrupted amongst us, and there is not, I am sure, a member of this Chamber who does not heartily wish to promote the happiness and prosperity of the farm labourer, in every way that he can reasonably be expected to do. I need hardly say to such an audience as I now address, that there is great room for improvement in the social condition of the working classes generally, and that low wages are not the only, and, in many cases not the chief hindrance to their happiness and prosperity. Anyone who has lived and laboured amongst the poor must have seen that their earnings however scanty they may be, are sometimes sadly wasted, and that frequently every farthing which is not imperatively demanded for the necessity of bare existence, finds its way to the nearest beershop. The causes of this improvidence are no doubt numerous and complicated; but amongst them one of the most prominent is, I believe, the scarcity of wholesome places of recreation for the working man. In many country villages the beershop is the only place of refuge open for him outside the walls of his own cottage. If he wants to make himself acquainted with the current news of the day, or to smoke his pipe with a friend, or to escape from the discomfort which must sometimes be inevitable in a small apartment scantily furnished, badly ventilated, and not unfrequently crowded with children, where is he to go but to the beershop? and once there he must drink as a matter of course. In no other way can he pay for the accommodation of the place. To provide that accommodation the landlord has to incur considerable expense. He is obliged to occupy a larger house than his family requires to pay a licence as well as rent, to keep up a cheerful fire all through the long winter evenings, to purchase furniture specially required for the business, and to get up a variety of amusements to suit the tastes of his customers. Every man therefore who crosses the threshold is clearly under an obligation

to contribute towards the support of the establishment. But the mischief is that instead of merely paying an equitable charge for the accommodation, custom requires him to swallow some stimulant, whether he needs it or not, at double the price for which it might be purchased elsewhere. Now, if this system could go on without injury to the condition of the working man, no one would have any right to interfere with it on his account. But it is notorious that such is not the case. The harmless attractions that lure him to the taproom pave the way to a vicious waste of money in drink, and many a man who at first innocently seeks them to escape from the misery of his own home, or because, like every other human being, he has at times a craving for social intercourse and amusement, gradually adopts the tone and custom of the place, and, almost before he is aware of it, acquires the habit of drinking, and becomes a confirmed tippler. Such, I am perfectly certain, is the process by which working men all over the country are brought under the bondage of the beershops, and dragged down to the lowest depths of poverty and degradation. Remedies in abundance have been tried to counteract this mischief, and they have all, no doubt, worked a certain amount of good; but still the drinking goes on, and in most of our villages where there is a keen struggle for custom between rival beershops of a low character, the agencies which are commonly employed to check intemperance, have but little influence, and seldom touch inveterate drunkards. A few of the most intelligent frequenters of the taproom may, for a time, be attracted, and kept in sobriety by night schools, penny readings, lectures, and such like institutions. A drunkard, too, may here and there be reclaimed by teetotal vows or Good Templar Clubs, but experience proves that none of these useful agencies can lay hold of the masses of the poor, and save them on any large scale, from the bane of the beer and liquor traffic. The reason of this comparative failure lies, I believe, in the fact that sellers of intoxicating drink have been allowed to monopolise two things which the working man thinks essential to his happiness, namely, rooms where he may meet his fellow men for talk and recreation, and the supply of beer by retail. No institution which philanthropists may set up for the improvement of the working classes is likely to take firm hold of them, and maintain its ground against the temptations of tippling shops, unless it offers those two advantages—beer and amusement. Whether they are intrinsically the greatest boons we can bestow or not, is a ques-

tion upon which there may be great divergence of opinion, but with regard to their universal attractiveness and popularity, there can be no doubt. Say what we will against drinking intoxicating beverages, the working man will not abandon his beer; and provide educational agencies for him ever so cheap and advantageous, he will still, generally speaking, prefer a game at bagatelle, or a gossip about the last sensational police news. After a long and monotonous day's work, it is not much to be wondered at that such should be the case. Perhaps some who lament his bad taste would have the same proclivities, if they were obliged to toil all day long in a field, oftentimes alone, and come home in the evening dull and jaded, to a scanty and somewhat uninvigorating supper. When a man seeks to hook a shy or sluggish fish, he takes care to offer him a tempting bait. On the same principle, in trying to elevate the poor, we must adapt our schemes—so far as we can do so honestly and safely—to their tastes and habits, otherwise our efforts, however zealous they may be, will be only like casting pearls before swine. What the labourers really want, especially in our villages, is a social club, possessing all the innocent charms of the beerhouse, apart from its contaminations. Such an institution would give them opportunities of spending their leisure hours together without being subject to the necessity of drinking, and of procuring wholesome beer at a cheap rate when they require it, under such restrictions as would prevent excess. Clubs of this character, although as yet but little known in this county, have been rapidly springing up in our large towns, and in some country districts for many years past. At the present time there are at least 700 in England, and the aggregate number of their members is not less than 100,000. The aim of all these institutions is to provide for the poor advantages similar to those which London West End Clubs provide for the wealthy. They have their reading rooms well supplied with newspapers, their rooms for conversation, games, and smoking; their refreshment bars, some under total abstinence restrictions, and others furnished with the ordinary excisable beverages sold in a public-house. In addition to those attractions, some of them have classes for teaching singing, drawing, and modern languages, whilst most of them comprise such institutions as coal clubs and penny banks. As no licence is required for retailing beer or any other articles to the members, and as everything is supplied at prime cost, the economical benefit of those clubs is considerable. On beer, *e.g.*, the saving is equal to the expenditure, a pint costing just half the price charged for it by the publican. To facilitate their formation and maintenance, a central institution has been established in London, called "The Workmen's Club and Institute Union," which forms a medium of communication between men of all ranks who are interested in the well-being of the lower classes, sends out lecturers, disseminates pamphlets, supplies information and rules, and makes loans of suitable books. Any Workman's Club may be affiliated to this Central Union on payment of 5s., and thereupon become entitled to the use of the Society's Circulating Library, and other advantages. To the value of this agency in the infancy of a Club, I can myself bear personal testimony. Its publications, and still more the counsel of its energetic vice-chairman (Mr. Hodgson Pratt) were of much help to me in starting a club at Stockcross, and I am sure that anyone who purposes setting up a similar institution will do well to have recourse at the outset to the guidance of the Central Union. Difficulties as a matter of course cannot fail to arise in attempting to establish such an agency; and as I have spoken of its benefits it is but fair that I should allude to the obstacles which it has to encounter. First and foremost is the apathy of the poor to all schemes for the improvement of their habits. Everyone who has laboured in their behalf must have often been discouraged by the indifference, and not infrequently by the distrust, with which they regard efforts made by others for enlightening and elevating their minds. Perhaps this disposition has in a great degree been engendered by ignorance, and sometimes by the degradation into which they have been suffered to live, and if so, it should rather be regarded as a misfortune than a fault. But worse than the apathy of the poor is the active opposition which those clubs at their commencement receive from beersellers. Every conceivable weapon that can be used to prevent their success is sure to be employed against them, by those whose prosperity depends upon the drinking habits of the people. Exceptions no doubt there are to such antagonism, and one or two have come under my own notice; but generally speaking, I regret to say, brewers and publicans too often meet our efforts to restrain the tipping

propensities of the poor in the spirit of Demetrius, the silversmith of Ephesus, who, seeing that his craft was in danger, maligned the Apostle, and stirred up the people to shout "Great is Diana of the Ephesians." The brewing interest, as it is called, is unquestionably a great power in the country, and it takes care from time to time to let us know that no individual can with impunity interfere with its traffic; but the time has come when every Christian man who cares for the well-being of his country should fearlessly lift up his voice against the demon of drink. Its ravages are literally appalling. Our gaols, workhouses, and asylums are filled with its victims. It counteracts all our efforts for the elevation and refinement of the masses. It weakens the moral and physical energies of the nation. It frustrates to a great extent the work of Christ's church. But, argues the beerseller, we have no wish that men should ruin themselves with drink; why should we be blamed? If they tittle too much the fault is their own, and not ours. Now admitting, for the sake of argument, that the fault is entirely in the customer, and not at all in the seller, we should still be warranted in restricting this traffic in a way that we restrict no other; for its abuses bring heavy burdens upon us. When illness befalls the poor man who wastes his evenings in drink, he throws himself upon the rates. When he commits some crime in a drunken brawl, he must be clothed and fed at our expense in prison, and when he dies we have to bury him, and to provide for his destitute family; so that as ratepayers and taxpayers, we may fairly insist upon the proper regulation of a business which brings such loss upon us, and endeavour to shut up every beershop that is not imperatively needed. In so doing, cases of hardship to individuals engaged in the trade, must, no doubt, sometimes occur; but their justification, if they need any, is that no private interests whatever can be allowed to override the welfare of the public. Where facilities for drinking have been forced upon the poor in excess of their requirements, as in the case in my own parish, which has nine beershops and licensed victuallers for a population of less than nine hundred inhabitants, the reduction of the number is the most efficient way to promote temperance; for it is notorious that drink-shops develop habits of drinking, just as gaming tables encourage gambling; and it is equally certain that the speediest method of drying up those sources of intemperance is to cut off their supplies, by drawing their customers into an association such as I have described. The attractions which a club of this character presents are so manifest that they outweigh any amount of opposition on the part of the publicans. As an illustration of this I may say, that in the teeth of the nine public-houses just mentioned, and with the disadvantage of a very inadequate room, a social club was started six months ago at Stockcross, which now comprises no less than 94 working men, and that the leisure hours of those men during the long winter evenings were spent in innocent recreation, in place of tipping at the beershops. Abstinence from beer has not, it is true, been required of them. On the contrary, they have been allowed to procure it direct from the brewer for their own consumption in the club-room, but it has been under such conditions as to render drunkenness and intemperance impossible; and to show how conducive to moderation such a society is, and how little the working man is disposed to waste his money in beer, if he can be kept from the beershop, I may state this striking fact, that although the quantity of beer allowed to be drunk by each member of the club has been two pints every evening, it is found that the quantity consumed has not averaged one pint, and that the expenditure has been less than five farthings a day for each customer. Let me add, also another fact not less noteworthy. Since the establishment of the club, the village policeman has not heard of a single row in the village, nor apprehended one drunken man, although hardly a week previously elapsed without cases of drunkenness and disorder coming under his notice. To use his own words, "The club seems to have taken away his occupation in the village." One difficulty more in establishing these clubs I will touch upon, if I may do so without occupying too much of your time. At the outset there must be a greater expenditure than working men can afford. Two rooms are required—one for smoking and amusement, and another for reading a bagatelle board, too, with plenty of other games, is essential. There should also be suitable furniture, and a small stock of books. With such apparatus, a club in almost any country village might be made wellnigh, if not altogether, self-supporting. But how are the preliminary expenses to be met? In my own case the resident squire, Sir R. Sutton, has, unsolicited, under-

taken to build, not merely a couple of rooms, but a clubhouse, comprising apartments for a superintendent and all requisite accommodation for the members. Is it too much to hope that wealthy landowners generally will exercise similar munificence, or, at all events, that they will take the lead in providing and furnishing club-rooms for their peasantry wherever they are needed? By so doing they would not only cheer and brighten the leisure moments of the labourer's life, but would save him from temptations, which now commonly lead him to ruin. And it is not the men alone that are benefited by these institutions. They are a blessing also to their wives and children. Many a poor woman in my own parish, who has been accustomed to see her husband come home drunk and penniless from the beer-shop—an object almost of dread and loathing to his family—can now welcome his returning footstep with joy, and speak of the blessed change that has come over him since he joined the club. Nothing that I have ever done for the poor has called forth warmer thanks than the labourers' wives have given me for setting up this institution. Many a time have they made this remark, "The club, sir, is the best thing that ever was done for Stockcross." In conclusion, allow me to say that the growing prosperity of the working classes does not in the least degree exonerate us from taking an active interest in their moral and social welfare; or the contrary, it should increase our anxiety and concern on their behalf, for the improvement which is going on in their wages will be a bane rather than a blessing to themselves, and to the country at large, unless it is accompanied by habits of providence and sobriety. The feature which is to my mind by far the most alarming in the Labourers' Union movement is not the strike nor the look-out, but the disruption of sympathy, and the class antagonism which are springing out of the agitation. Disputes about wages soon right themselves, and are often adjusted to the mutual benefit of both parties; but if a chasm is made in their old friendly

relations, it will not be so easily bridged over, and cannot fail to become a mutual calamity. Money is not the only element essential to the labourer's well being. He needs also our personal help and guidance, to raise him from the low habits and social degradation in which he too frequently lives. After long years of indifference the country is beginning to see the expediency, as well as the duty, of insisting that no child shall be allowed to grow up in ignorance; but experience proves that social and moral safeguards are required for men as well as for their children; and I know of none more likely to save the poor from the snares which encompass them, than such institutions as I have ventured to commend to your notice.

The Rev. GEO. R. PORTAL, in moving a vote of thanks to Mr. Adams, said that in starting clubs of this kind it was desirable that the men themselves should have the control and management of the institutions, believing that working people disliked being petted, and did not care to be patronised by other classes. He felt that there was no question as to the advantage of such clubs, and the only difficulty which appeared to present itself was as to the way in which they were to be started? The Church of England Temperance Society had considerable funds in hand, and if the committee could be induced to grant loans for a time, to enable clubs to be started where that could not be done entirely by local efforts, much good would no doubt result.

The vote of thanks was passed unanimously, and Mr. ADAMS, in replying, said he very much doubted whether the Church of England Temperance Society could be induced to grant loans as Mr. Portal has suggested, seeing that the consumption of beer was permitted at these clubs, but the Central Club in London might possibly afford pecuniary help for such a purpose.

ROYAL AGRICULTURAL BENEVOLENT INSTITUTION.

The annual dinner took place on Wednesday, June 10, at the London Tavern, when close upon 100 were present; Mr. C. S. Read, M.P., in the chair.

After the usual loyal toasts,

The CHAIRMAN: I have now the honour of proposing the toast of the evening, "Prosperity to the Royal Agricultural Benevolent Institution." Of all the agricultural societies and institutions in this great country I am confident that this Society, if it does not do the most good, certainly relieves the greatest amount of distress. It was always a matter of wonder to me in times gone by that, considering how precarious the occupation of the agriculturist is, how it depends on the fluctuations of the seasons, and how many accidents and misfortunes are almost sure to fall to the lot of those who cultivate the soil, there had not been some benevolent institution to provide for the wants of those who in old age or misfortune might stand in need of the help it could afford. It was only, I believe, fourteen years ago that this Society was started, and who could then have believed that in that brief interval it would have grown to the magnificent proportions it has now assumed? I do not mean to say that we have done all we might or should have done, but I do say, having regard to the statement put into my hands, that we ought to be thankful for the good we have accomplished, and that we must hope to do a great deal more. I find that we have upon the list of those who are recipients of the aid afforded by this Society at the present moment no fewer than 297 annuitants, who are in receipt of a total sum of £6,386 per annum. On the 24th of this month we shall proceed to the election of 66 more annuitants, who will receive annually a gross sum of £1,580, making a total of 363 annuitants receiving yearly £7,776. I say, therefore that we have reason to be proud of having accomplished this result in so short a space of time. But when I look down the list of counties from which we derive our subscriptions, I am surprised at the indifference—I might say the neglect—with which this Society is treated in some parts of the kingdom. I cannot believe that Cornwall is so far distant but that that great mining and agricultural county might, if it pleased, contribute something towards the funds of the society and receive something from its beneficence. I cannot believe,

also that, although agriculture is so advanced in the northern counties, and especially in Northumberland, there are no cases in that part of the country that require relief, and that there are no kind and honest hearts that would contribute to the funds of this institution if asked to do so. I see that in the home counties and in the eastern counties the society is, as a rule, well supported, and I know that the suggestion has been made that instead of our anniversary meeting being always held in London, it would be as well to try whether we could not do something more by going into remote districts and endeavouring to stir up the latent feelings of humanity and benevolence which have been so slow to develop themselves in those out-of-the-way parts of the country. I was, only a few minutes ago in the House of Commons, and an hon. member there said to me as I was about to leave—"I understand that you are going to preside at the Agricultural Benevolent Institution. I really cannot believe that there will be much call for the funds of that institution in future, in consequence of the very high rate of agricultural produce" (laughter). I may here say that a friend on my left has just told me an anecdote that is worth repeating. When he helped to rock the cradle of this institution a noble lord said to him, he did not think there was in this country such a thing as a farmer who would be glad to receive in his declining years a pension of £25 a-year; and, strange to say, the very first person who applied to him for his vote for one of our pensions, was the sister of that noble lord—not, of course, for herself, but for some unfortunate tenant in whom she was deeply interested. It seems to me that a great number of people who live outside the agricultural world as well as a great number of those who are supposed to belong to it really do not know the trials, vicissitudes, and misfortunes to which the farmers are subject. In the first place I would say that I think we, as agriculturists, must acknowledge that however great and paramount our interest was in times gone by in this country, it is certainly declining when you come to compare it with the prosperity and activity of other industries. Twenty-five or thirty years ago no interest was so successful, no interest so powerful, no interest so generally acknowledged as the leading interest of the country as was the agricultural interest; but if at the present moment you happen to cast your eyes over the country at large

you cannot fail to see—and you know that what I am stating is correct—that the manufacturing, the commercial, and trading communities of this great country have risen and progressed on a scale altogether superior to that which has characterised the agricultural interest. Although our prices may be high, our expenses have so increased that in the long run we find that our profits are much smaller than they were. I will say this—that during the last ten years we have passed through, notwithstanding the favourable balance-sheet from Tiptree, and the remarkable reports of great produce that have been written to the newspapers, and indicted from railway-carriages—(laughter)—notwithstanding all that has been said about the advancement of agriculture, we have not had throughout the United Kingdom an average crop of corn in any one of those years. You may take the years 1865 and 1870—and you know that in those years we grew great crops of wheat—but it is well known that in those years the spring corn was peculiarly deficient, and we had also during those years long and terrible droughts, such as have been the ruin of many of our farmers. It should also be remembered that in those ten years we have had the cattle plague, we have had all sorts of contagious and infectious diseases ravaging our flocks and herds, and, what is worse, we do not seem as if we were going to get rid of them. If I were to take a brief retrospect of the history of agriculture in Parliament during the same period, I do not think I should find very much that we need congratulate ourselves upon. When I first entered Parliament we were a certain privileged class, who were in the enjoyment of certain exemptions; but since then all those privileges have been abolished and all those exemptions from taxation have been done away with. If for one do not complain for a moment of this; the only thing I say is that I fancy the time has arrived when the British farmer ought to claim at the hands of the British Legislature something like fairness and justice. Some of our exemptions have been done away with by the duties from which we were exempt being abolished altogether. Take the two cases of horses and fire insurance—both of them admirable things. Those duties have been got rid of, and at the same time they were both taxes to which the farmer contributed next to nothing. Then we have had the small dog-tax, from which we were previously free, imposed upon us, and as if it was necessary to add something by which the farmer could be victimised for scaring away birds from his crops, we have all to pay the gun-tax. The one shilling duty on foreign corn has been repealed. Sir Robert Peel described it simply as a registration fee, but it had amounted to nearly a million of money before it was abolished, and I do not know who is the better for the abolition—certainly the farmers are not (I hear, hear). Again, if you take the way in which the farming interest has been dealt with in regard to free trade in corn, what were we promised when the Corn-laws were abolished? We were told that we should have less foreign trade, not only in wheat but also in barley, and that the Malt-tax should be abolished. But now we find that not only the Government, whichever party may be in power, not only the predominant party in Parliament, but the whole country, appears to be set against the farmer on this point, and that our chance of getting what we were promised in the shape of the abolition of the Malt Duty is more remote than ever. If there is one kind of grain we can produce better than another it is barley. We can compete with all the world in that, and yet we are told that the imposition of a tax of 50 or 60 per cent. on that commodity in the first stage of its manufacture is no great impediment to its growth and cultivation. I do not wish to dilate on this any further than to say that when people come and tell us that the abolition of the Horse-tax, which was something like 1 per cent. on the value of the horse, would stimulate the breed of horses, surely we may say on the other hand, that a reduction of the Malt-tax would be a sensible gratuity to the farmer. Now, when we come to free-trade in cattle, what do we find? One would have fancied that if we had free-trade in cattle we should at least be protected from foreign disease; but that is not the case, and whereas the high prices that have prevailed are doubtless due in a great degree to the increased consumption of meat, I contend that a very great portion of this is due in the first instance to the untoward seasons we have lately passed through, especially in the great droughts of 1865 and 1870, and in the next, and in a still larger degree, to the way in which our flocks and herds have been ravaged

by contagious and infectious diseases. With regard to prospective legislation, I want to know what help the tenant-farmer is likely to receive in his struggles? First of all we have the question of Tenant-Right, and when the tenant-farmers of England simply say that they desire to have their capital which they have embarked in the cultivation of the soil protected by law, we are asked this question, even in chambers of agriculture, "Are you, the independent and patriotic farmers of England, going to class yourselves with women and Irish cottagers and lunatics?" One would naturally suppose that it was the duty of the State to protect the capital of the tenant-farmer as well as the property of any other class of people, and here I would draw a comparison between the statement that was made some twelve months ago by a noble lord who occupied this chair, and who said that in his great agricultural county there are only two recipients of the benefits of this institution. I believe that Tenant-Right extensively prevails in Lincolnshire, and it seems to me that as far as decayed farmers are concerned, Tenant-Right does not manufacture them to any great extent, at least, there. But I turn to my own county, where, unfortunately, Tenant-Right does not exist, and there I find that we have no fewer than 70 recipients of the bounty of this institution, and I say that some of this is due to the insecurity of the tenant's capital. I will touch lightly on the question of game. It is a ticklish subject, and I do not wish to enter into it further than to say that it is the opinion of one of the highest judicial authorities in the land that it is so remarkable a thing for the landlords to give their tenants the right to kill rabbits, that when in one instance this right was given on the eve of a general election, the landlord who gave it had to suffer the loss of his seat. With regard to a question which agitates the mind of the Scottish farmers so much, and on which they appear to be so unanimous—I refer to the question of hypothec, or, as it is called in England, the law of distress—that seems to me to be a matter that is likely to be solved by Parliament sooner than the other questions to which I have referred. And here I would say that, however much the abolition of the Law of Hypothec may benefit the large farmers and the great capitalists, I fear it will not be very much in favour of those poor farmers, those small men who are on the verge of ruin, and that if we do repeal the law, whatever else may happen, I am quite sure of this—the funds of this institution will be called upon just as much as ever. I have put these things before you just to show those who happen to be outside the agricultural world, and who do not understand it, that there is not only great, but increasing need for institutions like this. It has been said over and over again of the farmers of England that although we live well we die poor, and in the future as well as in the past I believe we shall still prove the truth of this old agricultural maxim. I say that as far as regards the farming interest there is greater need than ever of the increased exertions of our Agricultural Benevolent Institution for the augmentation of its funds. I know of nothing more harassing than to read over the list of the unfortunate applicants for the annuities of this Society. It has been said, with great truth, that every farmer who at the close of the day cannot bring to his mind this fact that he has done something to make those about him happier and better than they were in the morning has not fulfilled his duty to his neighbour. I say that those who neglect to subscribe to the funds of this institution do not do their duty to their neighbour. It is some consolation to those who have supported this institution to feel that they have been a comfort and a solace to the declining years of many a deserving individual. I am sure that the founder of this institution must feel this comfort and solace in his declining years—although I am happy to say that he does not seem to be declining at present, as he is still in possession of that health and vigour we have all been accustomed to see him enjoy for so many years, and it will be a source of gratification to all the subscribers to know that they have been doing good to their unfortunate brethren while this Society has gone on increasing and relieving an amount of affliction which perhaps few similar societies have been enabled to alleviate (cheers).

A list of donations and subscriptions was here read. These included £25 (annual) from the Queen, 10 gs. (annual) from the Prince of Wales, 10 gs. from Mr. C. S. Read, M.P., 20 gs. from the Drapers' Company, 20 gs. from the Vintner's

Company, and 10 gs. from Mr. J. E. Curtis—the total amounting to £6,700.

Mr. C. WREN HOSKYNs, in proposing the Chairman said he felt great pleasure in having to speak of an old friend whose life had been closely connected with agriculture, and who had rendered great service to it. He first had the pleasure of seeing Mr. Read at a country meeting of the Royal Agricultural Society. He could not remember what show it was, but he recollected that Mr. Read was engaged in the implement department, and he might add that in consequence of that his own labours as a steward were very light. On the next occasion that he met him he was again in the implement department of the same society, and he could not help saying that they were deeply indebted to Mr. Read for the rapid progress of improvements in the implements used in agriculture in England. There was hardly any other department of English enterprise which had done so much to benefit not merely this country, but almost every country in Europe, or in which such large fortunes had been amassed—he would say deservedly amassed—in the wonderful development of skill in mechanism. He next came in contact with the Chairman while he (Mr. Wren Hoskyns) was acting as one of the editors of the *Journal of the Royal Agricultural Society*, in which capacity he found that while Mr. Read had done, and was doing, so much out of doors, he was also rendering great service to agriculture indoors with his pen (cheers). He then had the pleasure of reading in manuscript some of the most interesting articles from the pen of the Chairman ever written on agricultural subjects, and he might say of Mr. Read that he had shown that it was possible to be eloquent on such topics. He next had the pleasure of meeting him at a gathering of the civil engineers of the country, the deep interest which he had taken in agricultural engineering having led to his presence on that occasion. It was then that he first had the pleasure of seeing him with the addition of M.P. to his name, and he could truly say of him that no man ever bore honours which had come thick upon him in a more easy or modest manner (cheers). They had had the misfortune to sit on opposite sides in the House of Commons, but though their politics differed he had seldom heard Mr. Read say anything with regard to agriculture in which he did not concur. He next saw him as the President of the Chamber of Agriculture—an office which he showed thorough capacity to fill, and he believed the Chamber had never been more successful than it was during the year that he presided over it. Mr. Read had lately been entrusted with the highest point ever attained by a tenant-farmer in this country—an important office in the Government (cheers). That elevation seemed not to have changed his character in the least, or to have engendered anything like conceit; and it was pleasant to be able to say of him that never in his life had he been known to turn his back on a friend, whether he was an old or a new one. It was one of the misfortunes of those who rose to such positions as that now occupied by the Chairman, that they were liable to hear a great deal said about their merits by others, including old friends. That was the first time in his life that he had ever had the pleasure of proposing Mr. Read's health, and he could truly say that there was not one word of exaggeration in what he had uttered with regard to him (cheers). When a man had been raised in consequence of the abilities which he had displayed in a high official position, he must discharge his duties with the most absolute impartiality, every Englishman and every class of Englishmen being alike to him officially. That was a necessary condition of official life in connection with the Government. It had placed Mr. Read in a rather trying position, and he (Mr. Wren Hoskyns) would ask that gentlemen's old friends, his farming friends, his political friends, and particularly those who thought they had special claims upon him on account of the past, not to expect him to do more than he had a right to do in his capacity as a member of the Government, and to remember that special interests must be subordinated, as it were, to the general interests of the whole country. They ought not to feel surprised if he were not able to pay to as much attention as some had expected him to pay to the interests of agriculture, seeing that he was responsible for the proper discharge of the duties of his office in relation to the whole kingdom (cheers).

The toast having been drunk very cordially,

THE CHAIRMAN, in returning thanks, said he felt deeply indebted to all present for the kind manner in which the toast

had been received. His friend, Mr. Wren Hoskyns, had in proposing it revived pleasant memories, which were almost obliterated. It was most gratifying to him that that toast had been proposed by the author of *Trajan*, the most classical book on agriculture ever written, and one which had clothed even the dull life of the tenant-farmer with features of pleasurable excitement. He heartily thanked his friend for the closing words of his speech. Among the pleasant associations connected with the responsibilities of his new official position there was this drawback—that some of his friends, his agricultural friends particularly, fancied that he was slirking his duty, and neglecting their interests. He hoped that what had fallen from his friend Mr. Hoskyns would teach them to be a little charitable, and to make all due allowances for one who, having accepted a responsible post, was bound, as a good soldier, to know and carry out the requirements of discipline and duty. Certain duties which devolved upon him in his present position were extremely pleasant. He liked his work; he was well "contented with his wages" (laughter); he esteemed his colleagues; he found the officials of his office to be hardworking, zealous, and able public servants; but he must confess that when he went into the House of Commons a certain reticence that was imposed upon him was a serious drawback to his satisfaction. Let him inform his friends, however, and particularly his agricultural friends, that whatever he could do for the cause of the farmer he would do (cheers). Although he had the honour to hold a position which he believed no other tenant-farmer ever had held, though he held an important, if subordinate, office in the Government of the country, he could never forget the claims of those to whom he belonged, and to whom he owed indirectly his present position (cheers). In conclusion he must express his satisfaction at finding in the list of donations just read that a great many persons whom he termed "outsiders" were liberal contributors to an institution founded for the benefit of unfortunate persons connected with farming in England.

The Marquis of HUNTLEY, in proposing "The Agricultural Societies of England, Ireland, and Scotland," alluded to the great services which those institutions had rendered to agriculture. He did not agree with the Chairman that agriculture had decreased in importance relatively to manufactures; on the contrary, he felt certain it was as great and as powerful as ever. As regarded the Chairman's own career, he saw no reason why he should not yet be a member of Her Majesty's Privy Council, and he thought agriculturists had great reason to rejoice that they had such an able representative of their views in the Government (cheers). The noble Marquis concluded by associating with the toast the name of Mr. Mechi, whom he eulogised for his enterprise as an agriculturist and as the chief founder of that institution.

Mr. MECHI, in responding, said he felt very much gratified at the growth and success of the Royal Agricultural Benevolent Institution—an institution which had done much to mitigate the distress of a class who, generally speaking, could hardly be considered responsible for the position to which they were reduced. Manufacturers were not, like farmers, subject to the sad effects of blight and drought and the vicissitudes of seasons. In that respect agriculture was at a disadvantage as compared with the general industries of the country. In other respects, however, the position of agriculture was much better than it was a hundred years ago. Steam had changed everything, and if agriculturists availed themselves of it as much as manufacturers had done they would, he believed, be more prosperous and have more money for that institution (cheers). There was not less than 1,800 millions of capital represented in the land and agriculture of this country, and he believed agriculture might still be regarded as the most important interest in the country (cheers).

Sir JOHN MORRIS proposed "The Executive Council," coupling with the toast the name of Mr. Charles S. Cantrell.

Mr. CANTRELL said in that institution they knew nothing of politics. At one anniversary the chair was taken by Earl Spencer; at another the foremost man of the day, Mr. Disraeli, occupied that position (cheers). The Council resolved many years ago that they would not dabble in bricks and mortar, and to that principle they had firmly adhered. Three or four years ago Lord Sondes suggested that they should if possible increase the amount of the pensions; but the Council, after giving that suggestion the most careful consideration, thought it better to increase the number of

pensions. They had been told by the Chairman how many pensioners were on the funds of the benevolent institution, but he had not told them this further important fact—that during the last fourteen years they had given 400 pensions, and that there were now no less than 246 candidates for the 66 additional pensions that were shortly to be granted. They would never have been able to do what they had done had it not been for the valuable aid of the honorary local secretaries.

Mr. J. K. FOWLER suggested that with the view of increasing the income of the Society there should be a special appeal made at all the market tables in the country at the beginning of October in every year, and spoke of the great benefit derived from the Commercial Travellers' Schools through an annual appeal to travellers in all parts of the country.

The CHAIRMAN said he had in his previous remarks purposely avoided the labour question, but he could not help observing that in the county which he had the honour to represent—No-folk, since the formation of that Society the wages of the labourers had advanced fully 50 per cent., and that if that rate of increase were to continue the funds of the association would not suffice to meet the cases which would arise.

Mr. MECHI: You must use more steam.

The CHAIRMAN: Even the steam would not protect farmers against everything.

The remaining toasts included the Secretary and the Honorary Local Secretaries, for whom Mr. Frank Sherbon answered.

THE ULSTER TENANT-RIGHT BILL.

BY AN EAST ESSEX FARMER.

Of the four bills for the amendment and extension of the Irish Land Act that were on the list of orders of the day for second reading on Friday week, but none of which were discussed owing to the time taken up by the debate on the Intoxicating Liquor Bill, Mr. Butt's Ulster Tenant-Right Bill is by far the most comprehensive. Indeed the present title of the bill is too narrow to give an adequate idea of its contents; but in the first clause it is stated that if the bill passes it may be cited as the "Land Act (Ireland) 1874." It not only defines the principles of the Ulster Custom, which was only imperfectly legalized by the Act of 1870, and proposes to extend those principles to the rest of Ireland, but also in some important respects amends other portions of that Act. Although, as appears from discussions upon the bill that have recently taken place in Ireland, it fails to give complete satisfaction to the more advanced of the Irish tenants, it will probably be considered by our Conservative House of Commons as a somewhat "revolutionary" measure, and it is undoubtedly a bold and uncompromising attempt to deal with a difficult problem.

Mr. Butt has divided his bill into four parts, which we propose to describe in their order, without, however, entering into the particulars of every clause, but only giving the gist of the principal provisions.

Part I. is headed, "Provisions for better securing the Ulster Custom of Tenant-Right," and aims at legalizing and more strictly defining what Irish tenants term the Ulster Custom in its integrity. This part of the bill, then, proposes: 1. To extend the operation of the Ulster Custom to every holding proved to be subject to it, whether that holding be agricultural or not. 2. To declare illegal all newly made (less than 40 years old) estate rules in limitation of the tenant's power to dispose of the goodwill of his holding for the highest price which he can obtain for it either by private contract or in the open market. 3. To decide in the negative the disputed point whether leases can abrogate the custom. 4. To define the limits of the landlord's power of objecting to accept a purchaser of the Tenant-Right of a farm as his tenant. 5. To define the Ulster Custom to be the custom as it existed 40 years ago, except in cases in which it came into practice within that period. 6. To declare that in every district in which the custom is proved to prevail generally, the *presumption* shall be that every individual holding is subject to it.

Part II. is entitled, "Provisions for better securing the compensations provided by the Land Act," and proposes: 1. That a new lease or agreement, a change of tenancy, or an addition to or diminution of the area of the holding shall not be deemed an interruption of the continuity of the tenant's title to compensation under the Land Act.

2. That in any agreement for a shorter term than a lease of 31 years, consent on the part of the tenant to contract out of the Act shall not be valid, unless it can be shown to have been made for valuable considerations. 3. That the 12th section of the Land Act (1870), which sanctions any tenant of a holding valued at £50 and upwards in contracting out of the Act, be repealed. 4. That where an under-tenancy was created before the passing of the Act, the under-tenant shall be entitled to compensation under the 3rd section. 4. That in cases of eviction by title paramount, the tenants shall be entitled to compensation under the 4th section of the Land Act. 5. That a tenant's violation of an agreement with his landlord shall not debar him from compensation under the third section of the Land Act, though the chairman may take such violation into account in awarding compensation.

Part III. consists of "Provisions for extending the benefits of the Ulster Custom to other parts of Ireland." Of this part of the bill it is enough to say that if it passes in its present form it will place the tenant of every holding in Ireland in precisely the same position under the law as an Ulster tenant will occupy if the first part of the bill also passes without alteration, and that it also enters into particulars as to the method which a chairman shall adopt in settling the amount due to a tenant when the landlord is the purchaser of the Tenant-Right.

Part IV. consists of "General Amendments of the Land Act," and recommends: "1. That a chairman should be at liberty to call in two referees, one appointed by the landlord and the other by the tenant, to assist him in settling any disputed question. 2. That a chairman or judge should have power to empanel a jury. 3. That a landlord and tenant may agree for a fee-farm grant of a holding, and that such grant shall be equivalent to a sale as far as the provisions of the Land Act are concerned. 4. That yearly tenancies shall terminate on the last gale-day of the year. 5. That an assignee of the estate of a limited owner shall have the powers of a limited owner. 6. That schedules of improvements, instead of being filed in the Landed Estates Court, shall be filed in the office of the Clerk of the Peace for the county, and shall be entered in a book, to be called the Land Registry of such county.

Such are the outlines of Mr. Butt's bill, and they will be sufficient to enable our readers to form a fair estimate of its scope and intentions. There is no doubt that it will meet with very strong opposition, and we do not suppose there is any likelihood of its being passed in its present form by the existing House of Commons. The proposal to extend the principle of the Ulster Custom to the whole of Ireland will be especially objected to, and we can in imagination already hear the cry of confiscation raised in

opposition to it. But, after all, without pronouncing a decided opinion as to the expediency of the plan, it is not easy to see *what* it would confiscate, unless it be certain powers and privileges. That it would tend to the confiscation of any property is more than doubtful, since it is generally admitted that in Ulster land of a given quality is worth more rent than it would be worth in any other province of Ireland. That there are other and very strong objections to the Ulster Custom we are perfectly aware; but these chiefly concern tenants, who in Ireland are generally in favour of the custom, and who ought to know their own business better than an outsider. There is no doubt that the sale of Tenant-Right in the open market is the simplest way of settling compensation of unexhausted improvements: whether it is the best way is another question. Irish tenants say that it is the best way, and that it would benefit landlords, tenants, and consumers alike. To our English ideas it is certainly

less objectionable in principle than the allowance of compensation for "disturbance" which the Land Act provides for.

But apart from this debatable third part of Mr. Butt's bill, it contains some amendments of the Act of 1870 which would greatly simplify and improve its working. That the Act needs amendment no one who has watched its working will deny. It could scarcely be expected that so great a measure would not contain many defects, especially as there were so many adverse opinions amongst those who had a hand in framing and in altering it before it became law. It has long been obvious that it was drawn so defectively as to render it easy of anyone so disposed to evade the intention of its authors and to outrage the spirit of the Act. Mr. Butt has done his best from his point of view to remedy these defects, and his bill at any rate deserves the careful attention of Parliament.

THE BATH AND WEST OF ENGLAND SOCIETY, AND SOUTHERN COUNTIES ASSOCIATION. MEETING AT BRISTOL.

In point of fact, the show of the old West of England Society was *not* held this year at Bristol, but at Clifton—that is to say, from the nearest railway station to the ground there had to be encountered a three-miles ride or walk, all very much up-hill, over a bad dusty road, and under a hot blazing sun. Having all things in consideration, your Bristol fly-man or 'buss-man did not take that advantage of the occasion which might have been expected, although long before the shilling days conveyances ran short, and visitors waited and wandered about Bristol for hours together; as, had the rain only set in the result must have been a miserable failure, instead of an immense success. As it was, later on in the week the cruelty to animals, which must have been practised in whipping over-worked machiners up to the show, might have justified the interference of the Prevention Society, not so much against the mere drivers or proprietors, as the members of the Council in again selecting a site at so an unwarrantable distance from everywhere. Of course, it is all very well for these officials who took good care to secure to themselves the best accommodation in Clifton: but looking a little further into the interests of the general public, there can be no possible doubt but that in the absence of a junction line to the Downs the choice of such a meeting-place was an egregious mistake; as if Bristol had nothing better to offer closer home, the Society should have gone elsewhere. However, breasting the hill afforded a fine trial for condition in the stock, and Mr. Walter's Shorthorn cow died of the way up.

In the opening report, which we gave on the opening day, we were enabled thus early to sum-up the show as "only a fair average one" and nothing more. In truth, in some of the classes, like the old Shorthorn bulls and bull-calves, and a class or so of Shorthorn heifers, there is nothing which we can expect to see stand as well at Bedford as it did at Bristol. The marked moderation, indeed, of the Shorthorns was emphasized by the award of the champion prizes, both of which went to the Devons, with the Shorthorns showing nothing very formidable, for either the best bull or best cow. And yet we have seen stronger entries of Devons, although these are very sure to repeat themselves at the Royal meeting in the Midlands, there being so few of the sort now about, with the

prize stock mainly in the hands of three or four exhibitors. Again, there should be better Herefords, as at any rate some of the "plums" of last season were not to be found here; and the Sussex, if numerically great, are often common in character, the old story of stealing the Devon cross being not now so noticeable. The Channel Islands cattle, with another judge on, were put about a bit; but there was plenty of merit here, not that we think there will be any material revision of the list on a second reading at Bedford. As we said in our last number, "the show of horses of all sorts is one of the largest ever seen at these meetings;" but even thus early we questioned its quality, and the "nag" classes are pretty generally inferior to Plymouth; while the cart stallions and mares are better than those shown in the companion classes of riding stock. The sheep section, either in the way of general competition, or individual merit, is mostly but of second-rate order, and, with the exception of Mr. Treadwell's famous old Oxford, the winning Leicester rams and a Cotswold or two, there is scarcely a sheep amongst any of the leading breeds which threatens to make much mark hereafter. Of Southdowns, to quote ourselves again, "there is only a moderate display," and Lord Chesham's best Shropshires were clearly not at Bristol. It may be stated further in the way of proof, or want of proof, how there was a deal of discussion over the Shorthorn awards, with only really one recognised Shorthorn man on the bench; while the presence of two such energetic supporters of the red cattle as Mr. Edward Cane and Mr. Quartly must have had all its weight when it came to the deciding courses, backed as they would be by Mr. Pope. There is always a difficulty in comparing different breeds; but with no such difficulty before them, the riding-horse judges went as wrong as they well could go in their choice of the champion weight-carrier.

The Shorthorns, as the gentleman said of his wife's relations, were a "very miscellaneous lot," with some well-known animals amongst them, but with others never heard of before and not very likely to be heard of again; the Somerset and Dorset breeders, with the signal exception of Mr. Bruce Kennard, being quite overshadowed by entries from further a field. The business here opened indifferently enough with such a bull as Mr. Richard Stratton's Protector placed first, whereas in the two-year-

old class at Hull he was never noticed, nor has he ever made much mark, save at some merely local meetings. Either in or out, we seldom saw a bull show himself worse than Protector: he has a dreary hang-dog look when on parade, and stands as ungainly as can be in his stall. In fact, he lacks not only style but masculine bearing, and is just a good bit of beef with a broad back and fairish quarters, but mean and drooping forward. The second prize, Lecman, the best yearling in 1872 and the reserve number at Hull in the same class with Protector, is wearing well and shows a deal more fine bull character than the other, although his flashy red-and-white markings will always tell against him—not that we ever expect to see the Stratton's bull beat him again. The reserve number here was the Cornwall Duke of Oxford, second at Barnstaple and first at St. Austell, as our special reports have told; while he also beat Protector when they met at Plymouth in 1873. The best Royal yearling, Sir Arthur Ingram, is only now commended; but he has grown even plainer and meaner in the interim, having never been much of a show animal, and now with little beyond his touch in his favour. The remainder of the class was very miscellaneous, and the lump of flesh put first but a butcher's verdict.

Writing of Hull we said "Mr. Oathwaite's winning calf, a son of Royal Windsor, is straight and shallow with a plain head, but very showy out," and Lord Godolphin since then has gone on famously. He still stands rather high; but to see him move in the ring, what with his great liberty and grand carriage, was a pleasure indeed—the more especially after having been treated to a view of such a goer as the best old bull. Godolphin, still preserving his fine straight outline and growing kinder about his head and horn, fairly placed himself, as if he but furnishes and drops a little to his leg, he has all the makings of quite a first-class, full-grown bull—a very different thing from a first-prize calf. Rapid Rhone, on the contrary, has gone off, standing very badly on his hocks and running altogether wrong in his quarters; as it is a question whether at all points Colonel Loyd Lindsay's lengthy, useful bull should not have had the second place. And these three were all the judges had any call to dwell over, the contingent being still quite "miscellaneous."

So far the decisions had been tolerably well received for critics with so many different fancies as Shorthorn men indulge in; but over the cow class there was quite a sensation when the renowned Vivandiere, the best cow at Hull, Harrowgate, and Gainsborough in 1873, and a winner all over Yorkshire and Lancashire from her youth upwards, was now placed only second in her class. Of course upon precedent there were plenty of people ready to run down the award; but although at six years old Vivandiere is still wearing well, and showing the better for not being quite so full of flesh, we go altogether with the judges in their preference for Victoria Viatrix, a really sweet heifer, full of fine cow character, and at the same time broad enough and wealthy enough for any useful purpose; while she begins with a pretty, kindly head, and barring her quarters, which are growing gaudy, she is at most points a very handsome specimen of her kind—in fact more of a cow than the Yorkshire one, whose chief merit is mere beef. In the heifer class, on the other hand, Lady Pigot's red heifer, the famous Rose of Wytham, has been overdone, and, as she threatened last season, is now showing coarse, steery, and lumpy; so that she was well beaten by Messrs. Hosken's white, a straight symmetrical Oxford, showing rather light and lathy from having been a deal about of late, first at Barnstaple in one week, and not only first again but the champion cow or heifer at St. Austell in the week following, and that immediately preceding Bristol. At

Barnstaple our report, written by an accomplished Shorthorn breeder, declared that "in the heifers not exceeding three years old Messrs. Hosken exhibited a perfect gem—thick, mellow, tubular, and worthy of competition anywhere;" as a *raison*, our special correspondent at St. Austell, another Shorthorn breeder, said "Moss Rose takes the cup as the best female in any class of cattle, and a charming heifer she is." So that she goes on to Bedford with a character, not merely from about home, as she also beat here Baroness Conyers, the third prize to the Rose of Wytham at Hull, and now growing into quite a grand heifer, with a fine straight top, as considered by many the best of the class, which included two or three more smart things. Another Wytham of fine quality was beaten amongst the yearlings by that wonderfully good roan from Blandford; straight and square, with a beautiful coat and of good quality, Queen Mary is yet more promising than when she came out at Plymouth last summer, when we thus wrote of her: "Mr. Kennard's calf was quite in keeping for good points with the other winners amongst the Shorthorn females, having touch, hair, and style, but she was a long way in advance of the rest of the class." Here also there were a few more to look at; but the heifer-calf class now contained scarcely anything of much account. On the whole, beyond animals like Lord Godolphin, the Hoskens' heifer, and Mr. Kennard's yearling, who placed themselves, we cannot give much weight to the Shorthorn decisions at Bristol. Mr. Randell is more of an "all-round" judge than one with any especial Shorthorn proclivities, and Mr. Aylmer is chiefly known westward for the inconsequential impartiality with which he helped to upset awards at Cardiff, which he had helped to make at Dorchester.

There was said to have been a suspicion of foot-and-mouth disease hanging about the county shows just previously held further westward; as for this reason or some other a considerable number of the Devon entries were not sent on. In fact, numerically the Devon was the weakest breed on the ground, although the classes actually came to include the two champion animals—the best bull and the best cow. And with neither of these selections do we agree, as had the Herefords been anything like as strongly represented in the ring we really believe that they must have won both these extra premiums. As it was, two Devon judges and a third, who only loves the Devons less because he loves the Sussex more, looked to thoroughly talk down the one Hereford judge and the two Shorthorn men. In truth, the show of Devons was hardly anywhere a great one, as it is curious to see how the Flitton herd has fallen away since the death of Mr. Davey, and this has naturally let in the Somerset Devons. The champion here, Mr. Farthing's Master Robin, a winner of many first prizes, has improved considerably since last season, and is now a straight weighty useful animal, but he lacks much of the style and high-breeding of the North Devon, material points, for which the best bull-calf is far away his superior. Whereas the best bull-calf at Hull, the Flitton Duke of Plymouth, is getting mean and plain, although he now reversed positions with the yearling put before him at Barnstaple. Picture, again, is not so handsome a cow as she was a heifer, and when one compares so noble, massive, and thorough a specimen of his breed as Winter-de-Cote with Master Robin, or such a cow in such a class of cows as the great grand Sunflower, with Picture, one comes to see how these champion prizes must result in simply a majority of votes. The Hereford cows, as at Cardiff, ran up unmistakably to the best class of any kind of animal on the ground, with four high commendations and another commendation attached to the actual awards; and with all

these honestly earned, it is only charitable to conclude that the "other" judges knew nothing of "other" breeds when they gave way as they did. In the Devon heifers in-calf a *Tempress* was beaten again, as she was at Barnstaple, further evidence of a decline; and in the two younger classes Mr. Senior from Buckinghamshire won with a couple of smart *Moss Roses*, the calf being especially clever and promising. It would so seem from this that the Broughton herd has not yet been quite broken up.

As we said when we last saw him, Von Moltke has grown out of show form, or, as the return will tell, is no longer a prize Hereford; and *Winter-de-Cote* had a long lead, as we spoke to him both at Plymouth and Hull as the best bull of his breed out. Few of the younger animals here, however, threaten ever to compare with such a bull or the entry of cows, as one missed sadly from the class of heifers in-calf—running only to a couple of moderate things—the *Lea Beauties*, *Exquisite* and *Satellite*, as we hope in reserve for Bedford; while the yearling heifer class was far better filled: if few of the calves, male or female, looked to have much merit, the cow-calves being "a very miscellaneous lot."

The Sussex bulls seldom show to much advantage, as probably from the ready comparison with the Devon they look coarse and common, and handle harshly—some proof at any rate of their not being "contaminated." The best young bull at Plymouth, short in his coat and bad in his touch, now succeeded to the first place in the older class, with another first prize or two, like Mr. *Turrill's* and Messrs. *Stanford's* *Dorchester* calf in the entry. The younger bulls were generally plain, especially about their heads, and the judges took for their best cow an animal of size and weight, but of not the nice character of the second best from *Crawley*; as even the other cow from Mr. *Duke's* herd, the highly commended from *Slinfold* or the brothers *Stanford's* entry were more comely and suggestive of the milk-pail. A beef cow at a breeding show is, or should be an abomination. The champion, however, of the Sussex was Mr. *Agate's* level, bloodlike, and really handsome two-year-old, the first yearling at Plymouth, and surely something of a model to improve by. The three best yearlings were also good, it being a very near thing between the second and third, the displaced *Hartley Honey* showing more breeding, but with the worst of it in the way of age and size. Amongst the calves the *Stanfords* distinguished themselves with a good straight heifer of far better touch than many of the breed; as the merits of the Sussex centred over the heifer classes, the general strength of this sort certainly depending more on quantity than quality.

In good proof of how these agricultural meetings still continue to develop, and spread the best types of their breed, we may cite the show of Channel Islands cattle at Bristol—one of the largest and certainly one of the best exhibitions of Jerseys and Guernseys ever got together. The Jersey, no doubt, has long been in favour, it until lately people did not know much about its actual merits; whereas but a few seasons back it was a matter of some difficulty to find a sufficient number of creditable Guernseys over which to award the prizes of the several classes. But at Bristol the advance was really extraordinary, with eight cows and nineteen heifers, many of which were very superior animals, and, even further, most of the entries fairly good. In fact, the heifers, so much general merit was there, took a deal of judging, if the best cow, a magnificent and about perfect specimen of her breed, readily placed herself. This is Mr. *Rendle's* *Duchess*, who in or out of the Island has equally distinguished herself, having been first at *Truro*, Jersey, and Guernsey in 1871, first at *Cardif* Royal and Guernsey in 1872, first at Guernsey in 1873, and once more first at the Island show a few weeks back. The

best bull was also very good, as Mr. *Rundle* *Watson*, another home breeder, is carefully cultivating the native cattle, while Mr. *Compton* is establishing them in the *New Forest*; so that the Guernseys are in every way advancing, alike for looks, use, and money value.

There was only a short show of all-aged Jersey bulls, and only one good, the *Forest-bred Blue Bonnet*, as the *Surrey Crocus* is growing coarse and common; but both the prize yearlings were worthy of their places, and Mr. *Simpson* highly and honestly commended for one over which a big figure was refused last season from America. But the *Wray Park* herd was rather over-paced here, and in a wonderfully good class of cows, where almost everything was commended, it was something even to get as near as second. In another admirable class of heifers, another of Mr. *Simpson's* breed took the same place, although easily beaten for first by Mr. *Gilbey's* beautiful fawn, at all points perhaps the best Jersey now about. And yet, multiplying as these beauties are, it is noticeable how little some folks know of their points: here a Hereford man will take you up to one unnoticed, and will ask indignantly "if it ain't the best? Look how level and well covered she is!" Just as if he were appraising a Christmas steer. Others, again, will go all for the bag; but the "steeking" of milch cows' udders, that is the trick of not milking them for some time before they are led into the ring, will never deceive a judge who really knows his business. Many of the animals cannot retain their milk in such a case; and if a bag be the least misshapen, the faulty part becomes only the more conspicuous when over-loaded. One Guernsey exhibitor in his zeal even went a little further, and dyed his cow's bag and the inside of her ears with annatto! for which in due course he received a rebuke from the judges, stern but dignified, that would have done credit to the Lord Chief Justice or the Speaker of the House of Commons. Go, and observe the eleventh commandment, "Thou shalt not be found out."

There were, by way of a "spurt" three champion premiums offered this year—£30 for the best cow or heifer in milk or in calf; £40 for the best bull, and £50 for the best hunting horse; and not one of these, as we are inclined to think, was rightly awarded. The light horse show, though larger, was nothing like so good as that at Plymouth, as was pretty clearly demonstrated by the fact that an animal then merely commended was now pronounced to be the best of all. This was Mr. *Battams' Hector*, certainly the best of a very moderate lot of alleged hunters, Mr. *Battams* taking both first and second in the next class of four-year-olds, where the competition was yet more indifferent, so that so far it was pretty plain sailing for *Kilworthy*. The three-year-olds, however, included a brown or black by old *Hunting Horn*, called *Black Prince*, and a colt of great power, fine symmetry, and plenty of breeding, set off by a somewhat plain head. He thus proved well enough to stand alongside of, but when the winners came in together it was a horse to a hen on the young one. In fact the *Black Prince's* action at three-parts speed was everything which a man could wish for in a hunter—bending beautifully to his bridle, and going strong and oily, with his knee nicely bent, but not too round or high, it was all the over-weighted *Hector* could do by nicking and cutting off corners to keep within hail. And so the judges, utterly ignoring the far greater promise in every way of the three-year-old ripening into the better 1st. hunter, duly awarded the championship to *Hector*, as false a decision at the time and place as ever was recorded. Mr. *Legg* was out of luck again with his two-year-old, which we fancied a deal more than the chestnut put before him; while there was some hunting character about Mr.

Quartley's old grey mare, and something else was preferred to her. The hacks and ponies were mostly common in appearance and slovenly in action; though The Hart is a showy gentleman who takes a deal of riding, and Major Ballard handled him as gingerly as if he were taking his ship through the chops of a dangerous channel. But this was nothing to the "exhibition" kindly afforded by Mr. Bolton on a miserable grey, with which he presented in front of the stand, after the manner of Signor Smytho at a circus. As this riding performance proved to occupy some time—and the judging was as slow as a Bristol wagger—we wandered away elsewhere, only to find on our return that the grey had taken the second prize, as for looks or action she was one of the very worst in the class. It is really fortunate the Major was steering the Hart, or they might have put the "grey hack filly, aged 6 years"—so runs the description—first! The veteran Hunting Horn had little to beat in the special class, as Jacko looked to be the best stamp of horse for getting hunters in the class proper, but they put Reinfrid, a very bad third at Cading, first, and something else second. We are glad to admit that we never fancied the riding test less than at Bristol, although the other judge, Mr. Harvey Bayley looked to be putting his trust in it.

The best cat stallion is a very handsome, showy horse, who can move, but the judges would not have the Clydes or Suffolks, though there was not much merit in their second prize. The mares and foals ran up to a fairly good class, with the winner worthy of her name, and quite a *smart* mare, and there were some useful two-year-olds; but taken through, the show of draught horses was short and not very imposing, and we do not believe in mules, if some of those paraded at Bristol were big enough and ugly enough for anything.

The Leicester judge thought very highly of young Mr. George Turner's sheep, and not much of anything else, and so Mr. Turner's high-bred looking entries took everything they tried for, that is, all the prizes for rams, and the first with his one pen of ewes. The Cotswolds were better represented than for some time past, and here and there reminded one of the days when the Garnes and the Lanes and the Hewers would make so grand a display. The worst class was that of old rams, while the Messrs. Gillett's two prize pens of ewes were handsome, sorry, and altogether superior specimens of their breed—and a flock is thought to be highly tried with two "topping" lots of ewes. Amongst the Southdowns Mr. Rigden has so far had his hold on the place once occupied by Lord Walsingham; but we expect to see better sheep of the breed at Bedford, although the Hensmans, Sir William Throckmorton, Mr. Penfold, Lord Portsmouth, and Mr. Sydney Waller were in competition. Mr. Rigden's best old sheep, now four years old, was second at Dorchester, Cardiff, Plymouth, and Hull, as he always struck us as a particularly neat sheep, beginning with a very true type of head. Sir William Throckmorton's two pens of ewes are also of a very pretty stamp, but running it through the Southdown show was not of remarkable merit. According to the judges they gave the prizes in the Shropshire classes to the sheep which "looked most like Southdowns," and so Lord Chesham was first; and when Mr. Pulley was second it was with a ram bred straight from Latimer. The best old sheep was never previously exhibited, but served his time as a shearling in Ireland. As we intimated last week, Mr. Treadwell's old Oxford Down ram is here, and still about the best sheep on the ground; he has spread into great size and weight, but he did good service on Mr. Street's flock last season in Bedfordshire. The Duke of Marlborough, who made his first appearance here, was first in the companion class of rams, and Mr. Milton Druce, the only other exhibitor of Oxfordshire Downs, was second best throughout. The absence of Mr.

Rawlence, whose flock is about to be sold off, told sensibly on the quality of the Hampshire Down entry, although Mr. Morrison's two prize shearlans are bred entirely from Bulbridge sheep. The Prizes had also omitted to enter, and as they sent nothing from Donhill into the classes of rams or amongst the ewes, a new name or two will be found in the return; the Bulbridge breeders being terribly misused amongst the ladies. By the way, some "Lancashire Down" were exhibited in the special classes. How is this cross arrived at or the description maintained? Horns from Exmoor, Somerset, and Dorset, and Devon Long-wools completed the sheep show, with the prizes still mainly in the hands of the same exhibitors: Lord Poltimore for Exmoors, Mr. Herbert Farthing and Lord Bedford for Somersets, and Mr. Corner for Devons, although the supremacy of the Wilton sheep was occasionally disputed by Sir John Heathcoat-Amory, who won with ewes, and Mr. Radmore, who showed the best old sheep; Mr. Corner, however, contriving to keep some place in the prize-list in every class. But, no question, there is a deal of "practice with science" required in preparing a show-sheep, and we heard at Bristol how an intending exhibitor has sent out a couple of Shropshire rams to be trained by another flock-master for the Bedford meeting! And as the trainer has a number of winners amongst his own lot, the others will probably have the benefit of a very high trial.

The Berkshires are maintaining or rather extending their lead, and again the Berkshire sows made up the best class of pigs on the ground; while Mr. Hewer's best all-aged boar was probably, taken singly, the best of all the pigs; and the younger boars very generally an excellent class, with commendations scattered throughout. There has been a deal of dabbling between large and middle amongst the white pigs, and neither of the two classes of large boars contained anything more than moderate; but the sows were much better, both classes in fact being good, and Mr. Beswicke Royals winning in both with five capital pigs. The small blacks were nowhere so good, and the younger class of small white boars generally indifferent; nor were the single sows so much in fashion as they have been. Indeed, neither the small whites nor small blacks were quite up to the average, while the large whites were not liked, and the Berkshires unmistakably the favourites. But then they are quite "at home" in these parts.

PRIZE LIST.

JUDGES.—DEVONS AND SUSSEX: E. Cane, Berwick, Lewes; J. Pope, Hurningham, Warrimster; J. Quartly, Molland, South Molton. SHORTHORNS AND HERFORDS: H. Aylmer, West Dereham, Stone Ferry, Norfolk; C. N. Hussman, The Poles, Ludlow; C. Humell, Chadbury, Evesham. CHANNEL ISLAND: J. Diamond, Ditcheling, Sussex; H. Tait, Royal Shaw Farm, Windsor. SHEEP—LONG-WOOL: J. Painter, Belgrave House, Forest-road, Notts; G. Walmesley, Radnor, Bridlington. SHORT-WOOLS: J. Ford, Rushton, Blandford; T. Horley, The Fosse, Leamington; J. E. Rawlence, Ballbridge, Wilton. HORSES—AGRICULTURAL: J. H. Wood, Humberstone, Grimsby; A. Lovibond, Thorngrove Close, Bridgewater. HENTERS AND HACKS: T. H. D. Bayley, Edwinstowe, Olifton; H. D. Boulton, Putnoe, Bedford. PIGS: G. M. Sexton, Wherstead, Ipswich; M. Savidge, Sarsden, Chipping Norton. INSPECTOR OF SHEARING: E. Olding, Salisbury.

DEVONS.

Bull, two and not exceeding four years old.—First prize, and Champion Prize as best of all the bulls, W. Farthing, Stowey Court, Bridgewater (Master Rubin); second, Mrs. Langdon, Flitton-Barton, North Molton (Duke of Flitton St.). Highly commended: J. Jackman, Hexworthy, Launceston (Earl of Exeter). Commended: J. H. Buller, Downes, Crediton.

Bull, two years old.—First prize, Mrs. M. Langdon (Duke of Plymouth); second, J. Gould, Bampfylde Lodge, Poltimore (Bampfylde). Commended: J. H. Buller.

Bull-calf.—First prize, J. A. Smith, Bradford P verill, Dorchester (Albert Victor); second, W. Farthing (Master Willie). Highly commended: Mrs. M. Langdon (Duke of Bedford).

Cow in calf or in milk.—First prize and Champion Prize as best of all the cows and heifers, J. A. Smith (Picare); second, J. Bradbeer, Pyelud, Taunton, Somerset (Nane).

Heifer in calf or in milk, not exceeding three years old.—First prize, W. Farthing (Nellie); second, Mrs. M. Langdon (Tempress 3rd).

Heifer, not exceeding two years old.—First prize, T. L. Senior, Broughton, Aylesbury (Moss Rose the 1st); second, Viscount Falmouth, Tregothnan, Probus (Plymouth Queen).

Heifer calf.—First prize, T. L. Senior (Moss Rose the 2nd); second, J. A. Smith (Honest).

SHORTHORNS.

Bull, two and not exceeding four years old.—First prize, R. Stratton, The Duffryn, Newport, Monmouthshire (Protector); second, G. Fox, Herefield, Wilmslow, Cheshire (Leeman). Highly commended: W. Hosken and Son, Loggan's Mill, Hayle, Cornwall (Duke of Oxford). Commended: W. Linton, Sheriff Hutton, York (Sir Arthur Ingram).

Bull, not exceeding two years old.—First prize, J. Outhwaite, B. Iness, Catterick, Yorkshire (Lord Godolphin); second, Lady Emily Pigot, Branches Park, Newmarket, Suffolk (Rapid Rhone). Commended: Lieut.-Col. Loyd-Lindsay, V.C., M.P., Lockinge Park, Wantage, Berks (Prince Rupert).

Bull-calf, six and not exceeding twelve months old.—First prize, Lieut.-Col. Loyd-Lindsay, V.C., M.P. (Lord Rockville); second, Rev. R. B. Kennard, Marnhill Rectory, Blandford, Dorset (Marquis of Blandford).

Cow in calf or in milk.—First prize, Lady Emily Pigot (Victoria Victrix); second, J. Outhwaite (Vivandiere). Highly commended: J. Stratton, Alton Priors, Marlborough, Wilts (Euphemia); G. Garne, Churchhill Heath, Chipping Norton, Oxon (Butterfly's Duchess).

Heifer in calf or in milk, not exceeding three years old.—First prize, W. Hosken and Son (Moss Rose 2nd); second, Lady Emily Pigot (Rose of Wytham). Highly commended: R. Fookes, Milton Abbas, Blandford, Dorset (Lady Pearllyn). Highly commended: J. Outhwaite (Baroness Conyers). Commended: J. A. Mumford, Brill, Thame (Edith Emily).

Heifer, not exceeding two years old.—First prize, Rev. R. B. Kennard (Queen Mary); second, Lady Emily Pigot (Princess of Wytham). Highly commended: Lord Sudeley, Toddington House, Winchcombe, Gloucestershire (Seraphina Bella 2nd); J. S. Bull, Dodhill, Taunton, Somerset. Commended: R. Stratton (Brilliant Flower).

Heifer-calf, six and not exceeding twelve months old.—First prize, R. Stratton (Regalia); second, B. St. John Aekers, Prinknash Park, Painswick, Gloucestershire (Lady Carew). Commended: Lord Fitzhardinge, Berkeley Castle, Berkeley (Lady Wild Eyes 7th); Lieut.-Colonel Loyd-Lindsay, V.C., M.P. (Diana).

HEREFORDS.

Bull, two and not exceeding four years old.—First prize, Mrs. S. Edwards, Wintercote, Leominster (Winter-de-Cote); second, H. J. Bailey, Rosedale, Tenbury (King of the Dale). Highly commended: W. Evans, Llandowlas, Usk, Monmouthshire (Von Moltke 2nd). Commended: T. Thomas, St. Hilary, Cowbridge, Glamorganshire (Sir John 4th).

Bull, not exceeding two years old.—First prize, W. Taylor, Showle Court, Ledbury (Freedgar); second, H. N. Edwards, Broadward, Leominster (Alfred). Highly commended: J. Harding, The Greenhouse, Bridgnorth, Salop. Commended: T. Thomas (Symmetry), and Rev. A. Clive (Baron 3rd).

Bull-calf, six and not exceeding twelve months old.—First prize, W. Tudge, Adforton, Leintwardine (Regulator); second, Mrs. S. Edwards (Plato). Commended: W. B. Peren (Lord Compton).

Cow in calf or in milk.—First prize, T. Thomas (Sunflower); second, T. Thomas (Rosaline). Highly commended: E. Benjafield, Gammershay House, Stalbridge, Blandford (Matchless 2nd); Mrs. S. Edwards (Young Mermaid 2nd); T. Rogers, Coxhall, Bucknell, Salop. Commended: W. Taylor, Showle Court, Ledbury (Dainty); U. Bull (Countess).

Heifer, in calf or in milk, not exceeding three years old.—First prize, T. Fenn, Stonebrook House, Ludlow (Lady Stanton). Commended: W. B. Peren, Compton House, South Petherton, Ilminster (Rosalie).

Heifer, not exceeding two years old.—First prize, P. Turner Leen, Pembridge (Verbena); second, J. W. James, Mappowder Court, Dorset (Rosebud). Highly commended: P. Turner (Isabel). Commended: P. Turner (Snowdrop); H. N. Edwards, Broadward, Leominster (Dolly).

Heifer-calf, six and not exceeding twelve months old.—First prize, T. Fenn; second, H. N. Edwards (Cary). Highly commended: W. Taylor. Commended: T. J. Carwardine Stockton Bury, Leominster (Helena).

SUSSEX.

Bull, two and not exceeding four years old.—First prize, A. Agate, West-street, Horsham, Sussex (Alfred 2nd); second, J. Turvill, Hartley-park Farm, Alton, Hants (Hartley). Highly commended: P. H. Ellis, Clayton, Hurstpierpoint (Knight-Errant); E. and A. Stanford, Eton, Ashurst, Steyning (Dorchester).

Bull, not exceeding two years old.—First prize, G. C. Carew-Gibson, Sandgate, Pubro', Sussex (My Lord); second, J. Turvill (Tom). Highly commended: R. Mills (Young Bismarck).

Bull-calf, six and not exceeding twelve months old.—First prize, G. C. Carew-Gibson; second, J. and A. Heasman, Angmering, Arundel, Sussex. Highly commended: A. Agate (Grand Duke 3rd).

Cow in calf or in milk.—First prize, B. Duke, Lyminster, Arundel, Sussex (Primrose); second, G. Smith, Paddockhurst, Crawley. Highly commended: C. Child (Jewell). The Class commended.

Heifer in calf or in milk, not exceeding three years old.—First prize, A. Agate (Auburn); second, J. and A. Heasman, (Marj Stewart).

Heifer, not exceeding two years old.—First prize, J. and A. Heasman (Pride of Ham); second, G. Smith (Pride of the Family). Highly commended: J. Turville (Loney).

Heifer-calf, six and not exceeding twelve months old.—First prize, E. and A. Stanford; second, A. Agate (Honesty 1st). Highly commended: A. Agate (Adelaide 4th).

CHANNEL ISLANDS.

JERSEY.

Bull, two and not exceeding four years old, first prize, Mrs. Malcolm, Beechwood, Lyndhurst, Hants (Blue Bonnet); second, G. Simpson, Wray-park, Reigate, Surrey (Prince Crocus).

Bull, not exceeding two years old, first prize, J. C. F. Ramsden, Busbridge-hall, Goldaming, Surrey (Modoc); second, W. Gilbey, Hargrave-park, Stanstead, Essex (Ducal). Highly commended: G. Simpson (The Queen's Favourite).

Cow, exceeding three years old, in calf or in milk, first prize, G. D. Digby, Sherborne-castle, Dorset (Miss Edith); second, G. Simpson (Gentle). Highly commended: W. Gilbey (Tal). Commended: W. Gilbey (Medora), J. C. F. Ramsden (Grisette), G. D. W. Digby (Queen of the Vale), F. L. Pop ham (Flora), G. Simpson (Queenie and Florence), J. Buckman (Fancy).

Heifer, not exceeding three years old, first prize, W. Gilbey (Fau); second, G. Simpson (Pretty Lass). Highly commended: R. Rendle. Commended: R. Rendle and T. F. Horner.

GUERNSEY.

Bull, two and not exceeding four years old.—First prize, Rev. J. R. Watson, La Favorita, Guernsey (No. 1 Cloth of Gold); second, E. A. Sanders, Stoke-house, Exeter, Devon (Prince Humbert).

Bull, not exceeding two years old.—First prize, Rev. J. R. Watson (No. 3 Cloth of Gold); second, H. Compton, Manor-house, Minstead, Lyndhurst, Hants (The Duke). Commended: E. A. Sanders (Prince Amadeus).

Cow, exceeding three years old, in calf or in milk.—First prize, R. Rendle, Catel-farm, Guernsey (Duchess); second, Rev. J. R. Watson (Portia). Highly commended: H. Compton (Ada).

Heifer, not exceeding three years old.—First prize, Rev. J. R. Watson (Esmeralda); second, J. B. Carey, St. Helene, St. Andrew's, Guernsey (Nelly). Highly commended: Rev. J. R. Watson (Sylvia). Commended: H. Compton (Betty); J. James, Les Vauxbelets, Guernsey (Buttercup).

SHEEP.

LICESTERS.

Yearling ram.—First and second prizes, G. Turner, jun., Thorpeplands, Northampton.

Ram of any other age.—First and second prizes, G. Turner, jun.

Pen of five yearling ewes.—First prize, G. Turner, jun.; second, J. H. Buller, Downes, Crediton, Devon.

COTSWOLDS.

Yearling ram.—First prize, Royal Agricultural College Farm, Cirencester; second, J. Gillett, Tangley, Chipping Norton, Oxfordshire. Commended: J. Gillett.

Ram of any other age.—First prize, Cirencester College; second, J. Wheeler and Sons, Long Compton.

Pen of five yearling ewes.—First and second prizes, T. and S. G. Gillett, Kilkenny, Faringdon, Oxon. Commended: T. Thomas, St. Hilary, Cowbridge.

DEVON LONGWOOLS.

Yearling ram.—First prize, R. Corner, Torweston, Wilton, Somerset; second, Sir J. H. Heathcoat-Amory, Bart., M.P., Knightsaves-court, Tiverton, Devon.

Ram of any other age.—First prize, G. Radmore, Courtbarton, Thorverton, Cullompton; second, R. Corner.

Pen of five yearling ewes.—First prize, Sir J. H. Heathcoat-Amory, Bart., M.P.; second, R. Corner.

SOUTH-DOWNS.

Yearling ram.—First and second prizes, W. Rigden, Hove, Brighton.

Ram of any other age.—First prize, W. Rigden; second, Sir W. Throckmorton, Bart., Buckland, Faringdon, Berks.

Pen of five yearling ewes.—First prize, Sir W. Throckmorton; second, H. S. Waller, Farmington, Northleach, Gloucestershire. Highly commended: Sir W. Throckmorton.

HAMPSHIRE DOWNS.

Yearling ram.—First prize, A. Morrison, Fonthill-house, Tisbury, Wilts; second, A. Morrison.

Ram of any other age.—First prize, W. F. Bennett, Chilmark, Salisbury, Wilts; second, J. Barton, Harkwood Farm, Basingstoke, Hants.

Pen of five yearling ewes.—First prize, W. Parsons, Monk Sherborne, Basingstoke; second, T. Chapman Saunders, Watercombe, Dorchester.

SHROPSHIRE.

Yearling ram.—First prize, Lord Chesham, Latimer, Chesham, Bucks; second, J. Pulley, Lower Eaton, Hereford.

Ram of any other age.—First prize, Lord Chesham; second, W. Baker, Moor Barns, Atherstone, Warwickshire.

Pen of five yearling ewes.—First prize, Lord Chesham; second, W. Baker, Moor Barns, Atherstone, Warwickshire. Commended: J. Pulley, Lower Eaton, Hereford.

OXFORDSHIRE DOWNS.

Yearling ram.—First prize, Duke of Marlborough, K.G., Blenheim Palace, Woodstock; second, A. F. Milton Druce, Twelve Acre, Eynsham, Oxford.

Ram of any other age.—First prize, J. Treadwell, Upper Whitchendon, Aylesbury; second, A. F. Milton Druce. Highly commended: J. Treadwell.

Pen of five yearling ewes.—First prize, Duke of Marlborough; second, A. F. Milton Druce.

SOMERSET AND DORSET HORNS.

Yearling ram.—First prize, H. Farthing, Nether Stowey, Bridgwater, Somerset; second, H. Farthing.

Ram of any other age.—First prize, H. Farthing; second, H. Farthing.

Pen of five yearling ewes.—First prize, Viscount Bridport, Cricket St. Thomas, Chard, Somerset; second, Viscount Bridport.

EXMOOR AND OTHER MOUNTAIN.

Ram of any age.—First prize, Lord Poltimore, Poltimore-croft, Exeter.

Pen of five yearling ewes.—First prize, Lord Poltimore; second, Lord Poltimore.

HORSES.

FOR AGRICULTURAL PURPOSES.

Stallion foaled before 1872.—First prize, W. Wynn, Cranhill Leys, Grafton, Alcester, Warwickshire (Nonpareil); second, S. Davis, Woolashill, Pershore, Worcestershire.

Stallion foaled in 1872.—First prize, S. Butler, Stitchcombe, Marlborough (Young Lincoln); second, R. Canning, Ramsbury-park, Hungerford. Commended: W. Byford, the Court, Glemsford.

Mare and foal, or in foal.—First prize, E. Gibbs, Clitterne, Heytesbury (Smart); second, J. Hennessy, Conygre-house, Filton (Blossom). Highly commended: W. Stanford, Charl-

ton-court, Steyning (Brown). Commended: W. Friday, Poldsmead-house, Hempstead (Smiler).

Filly foaled in 1872.—First prize, W. Baker, Moor Barns; second, S. Davis, Woolashill, Pershore. Highly commended: Lieut.-Colonel Loyd-Lindsay (Patty). Commended: T. David, St. Athan, Cowbridge (Diamond).

HUNTERS.

Thoroughbred stallion for hunters.—First prize, Major J. Simpson Ballard, The Verlands, Cowbridge (Reinfrid); second, Lord Fitzhardinge, Berkeley Castle (Red Cloud).

Mare or gelding, foaled before the 1st January, 1870.—First prize, and Champion Prize as best weight-carrying hunter, G. Bland Battams, Kilworthy, Tavistock (Hector); second, J. W. Miles, Shirehampton. Highly commended: L. Cornock, Aldbury, Thornbury (Kington Lass).

Mare or gelding, foaled in 1870.—First prize, G. Battams, (Sea King); second, G. B. Battams (Penance). Highly commended: H. Cooper, Hazlewell House, Hmister (Crown Prince).

Filly or gelding, foaled in 1871.—First prize, E. G. Legg, Combe Down, Beaminster (Black Prince); second, W. Trist (Sydenham).

Colt, gelding, or filly, foaled in 1872.—First prize, H. Cooper (Royal Oak); second, E. G. Legg (Rainbow).

Colt or filly, foaled in 1873.—First prize, H. J. Bailey, Rosedale, Tenbury (Precosity); second, N. Cooke, Cheviethorne Barton (Second Flight).

Mare and foal, or in foal.—First prize, H. Carter, Cattybrook, Almondsbury (Brisk); second, F. Quartley, Brindley, South Molton (Moonbeam).

HACKS.

Mare or gelding, 14 hands and not exceeding 15 hands 1 inch, calculated to carry 14 stone.—First prize, W. Rookes, Baring House, Exeter (Prince); second, S. Butter, Hitchcombe.

Mare or gelding, 14 hands and not exceeding 15 hands 1 inch.—First prize, R. N. Hooper, Stanshares Court, Chipping Sodbury (The Hart); second, J. Gifford, North Cadbury, Castle Cary (Eliza).

PONIES.

Mare or gelding, not exceeding 14 hands.—First prize, T. L. Senior (Pride of the Vale); second, A. Stevens, Park Place, Cardiff (Cwmro).

Mare or gelding, not exceeding 13 hands.—First prize, C. A. Jacobs, Riding School, Clifton (The Gem); second, Rev. J. Coleman, Allerton Rectory, Weston-super-Mare (Jenny).

PIGS.

LARGE BREED.

Boar, one year and not exceeding two years old.—First prize, C. R. N. Beswicke-Royds, Pyk-House, Littleborough; second, J. Dove, Hambrook, Bristol. Highly commended: R. E. Duckering, Northrope, Kirton Lindsey.

Boar not exceeding one year old.—First prize, R. E. Duckering; second, J. Wheeler and Sons, Long Compton, Warwickshire. Commended: C. R. N. Beswicke-Royds.

Breeding sow in farrow, or exhibited with her litter.—First prize, C. R. N. Beswicke-Royds; second, J. Wheeler and Sons. Highly commended: M. Walker, Stockley Park, Anslow, Burton-on-Trent. Commended: J. Dove, R. E. Duckering.

Pen of two breeding sows, not exceeding nine months of age.—First and second prize, C. R. N. Beswicke-Royds. Highly commended: J. Dove. Commended: J. Dove.

SMALL BREED (BLACK).

Boar, one year and not exceeding two years old.—First prize, C. R. N. Beswicke-Royds; second, J. Wheeler and Sons.

Boar not exceeding one year old.—First prize, C. R. N. Beswicke-Royds; second, the Earl of Portsmouth, Eggesford. Commended: the Earl of Portsmouth.

Breeding sow in farrow, or exhibited with her litter.—First prize, J. Wheeler and Sons; second, the Earl of Portsmouth. Highly commended: the Earl of Portsmouth.

Pen of two breeding sows, not exceeding nine months of age.—First prize, C. R. N. Beswicke-Royds; second, the Earl of Portsmouth. Highly commended: T. Rose, Melton Magna, Wymondham.

SMALL BREED (WHITE).

Boar, one year and not exceeding two years old.—First prize, C. R. N. Beswicke-Boys; second, R. E. Duckering. Commended: M. Walker.

Boar, not exceeding one year old.—First prize, J. Dove ; second, M. Walker.

Breeding sow in farrow, or exhibited with her litter.—First prize, C. R. N. Beswicke-Royds ; second, R. E. Duckering.

Pen of two breeding sows, not exceeding nine months.—First and second prizes, C. R. N. Beswicke-Royds.

BERKSHIRE.

Boar, above one year and not exceeding two years old.—First and second prizes, W. Hlewer, Sevenhampton, Highworth. Highly commended: A. Stewart, Saint Bridge Farm, Gloucester. Commended: Cirencester College; H. Humfrey, Kingstone Farm, Shrivenhall, Berks.

Boar, not exceeding one year old.—First prize, Cirencester College; second, A. Stewart. Highly commended: W. Hlewer and H. Humfrey. Commended: J. Dove; B. St. John Aekers; A. C. Bailey, Swindon, Wilts; H. Humfrey.

Breeding sow in farrow, or exhibited with her litter.—First prize, Cirencester College; second, Marquis of Aylesbury. Highly commended: A. Stewart and H. Humfrey. Commended: N. Benjafield, Short's-green Farm, Motcombe, Shaftesbury; A. Stewart, Wheeler and Sons, and Sir W. Throckmorton, Bart.

Pen of two breeding sows, not exceeding nine months.—First prize, A. Stewart; second, Cirencester College. Highly commended: A. C. Baily, J. Dove.

SPECIAL PRIZES.

HORSES.

Cart stallions.—Prize, Sir J. H. Greville Smyth, Bart., Ashton Court, Bristol (Prince Imperial).

Thoroughbred stallions for hunters.—Prize, T. Kinsman Bickell, St. John's, Lamerton, Tavistock (Hunting Horn).

Pair of mares or geldings foaled before January 1st, 1860, best suited for town-work.—Prize, S. Butler, Stitcomb, Marlborough (Drummer and Captain).

Cart mare or gelding foaled in 1870.—First prize, J. W. Miles, Shirehampton; second, E. Phillimore (Prestbury).

Cart mare or gelding foaled in 1871.—First prize, C. L. Hunt, Court Farm, Over, Westbury-on-Trym (Diamond); second, E. Phillimore, Prestbury-park Farm, Cheltenham (Perfection).

Cart mare or gelding foaled in 1872.—Second prize, W. Stanford (Diamond).

MULES.

Mule, male or female, above 15 hands high.—First and second prizes, Flower and Sons, Stratford-on-Avon. Highly commended: Duke of Beaufort, Badminton.

CATTLE.

Pair of Shorthorn Heifers, calved in the year 1872.—Prize, Mr. R. Stratton. One entry.

Pair of Hereford Heifers, calved in the year 1872.—Prize, W. B. Peren. One entry.

Pair of Devon Heifers, calved in the year 1872.—First prize, W. Farthing; second, T. L. Senior. Two entries.

SHEEP—LONGWOOLS.

Pen of 10 4-tooth couples in the wool.—Prize, T. Allen, Thurmaston, Leicester (Leicesters). One entry.

Pen of 10 4-tooth couples in the wool.—Prize, G. W. Homer, Athelhampton, Dorchester. One entry.

CHEESE AND BUTTER.

Judges: R. H. Symes, R. Harding, J. Pearce.

Thick Cheese, 3 cwt. of 1873 and 3 cwt. of 1874, over 56lb. each.—First prize, G. Hoddinott, Manor Farm, Norton St. Phillip; second, G. Gibbons, Tunley, Camerton, Bath.

Thin Cheese, 3 cwt. of 1874 make only.—First prize, G. Harris, Court House, Lower Cam, Dursley; second, J. Smith, Nupdown Farm, Hill, Thornbury.

BUTTER.

One dozen pounds of fresh butter.—First prize, Mrs. J. Thatcher, Beechwood Farm, Portbury; second, W. H. Williams, Home Farm, Dodington, Chipping Sodbury.

HORSE-SHOEING.

First prize, J. White, Leighton Mendip (41 minutes); second, R. Holcombe, Bishop's Lydiard (26 minutes); third, C. Weaver, Wells (31 minutes). Highly commended: G. Eth

ridge, Bishop's Stoke (30 minutes). Commended: J. Hallet, Portbury, Bristol; and J. W. Batten, Wadeford, Chard.

THE ANNUAL MEETING

took place on Tuesday, Sir Massey Lopes, Bart., M.P., the president, in the chair. The Secretary read the annual report of the Council, from which it appeared that the funded capital, which at the close of 1863 was £2,608 15s. 9d., had by repeated investments been raised to £7,200 Consols, the amount at which it now stands, independently of a considerable balance in the hands of the Society's bankers. There were at present on the books: Life governors and life members, 89; governors, 117; annual members, 750; total, 956. The Council recommended that Mr. Richard Benyon, M.P., of Englesfield House, Reading, be elected president, that the Right Hon. the Earl Morley be elected vice-president, and that the following members of the society be appointed members of council, to supply vacancies occurring by retirement, by rotation, or other causes:

EASTERN DIVISION.—Clement Bush, Weston, Bath; Thomas Danger, Rowford, Taunton; James Hole, Knowle, Dunster; J. Webb King, West Everleigh, Marlborough; J. E. Knollys, Fitzhead, Taunton; R. Neville-Grenville, Butleigh, Glastonbury; Gabriel S. Poole, South Brent, Weston-super-Mare; E. W. Williams, Herringstone, Dorchester; Herbert Williams, Stinsford, Dorchester.

WESTERN DIVISION.—Hon. and Rev. J. T. Boscawen, Lamoran, Probus; John Tanner Davy, Rose Ash, Southmolton; John Daw, Exeter; R. R. M. Daw, Exeter; Charles Gordon, Wiscombe, Honiton; W. R. Gilbert, the Priory, Bodmin; James Quartly, Molland, North Devon; E. U. Vidal, Cornborough, Bideford; Richard Wippell, Rudway, Thorverton.

SOUTHERN DIVISION.—A. F. M. Druce, Twelve Acre-hill, Eynsham; Rev. John Goring, Weston Park, Steyning; Arthur Grenfell, Queen's Terrace, Windsor; Wyndham Portal, Malshanger, Basingstoke; W. Rigden, Hove Farm, Brighton; W. B. Simonds, M.P., Abbot's Barton, Winchester; G. Simpson, Wray, Reigate; J. R. Stebbing, St. Andrew, Southampton; J. S. Turner, Chyngton, Seaford.

ELECTED WITHOUT REFERENCE TO DISTRICTS.—James D. Allen, Pyt, Tisbury; Thomas Duckham, Baysham, Ross; H. M. Holdsworth, Wilton, Salisbury; S. P. Newbery, Plympton St. Mary, Devon; Henry Robertson, Overstowey, Bridgwater; H. D. Skrine, Warleigh, Bath.

The Earl of MOUNT-EDGUMBE moved the adoption of the report.

Mr. J. C. MOORE STEVENS, seconded the motion, which was carried unanimously.

Sir J. DUCKWORTH proposed Mr. Benyon as president for the ensuing year.

Mr. RAMSDEN seconded the motion, which was adopted.

Major PAGER, M.P., moved that the gentlemen recommended by the Council to be appointed vice-presidents, and the gentlemen recommended by the Council for election to supply the vacancies occasioned by members retiring by rotation or otherwise should be elected members of the Council for a term of two years ensuing.

Mr. ASHLEY seconded the motion and it was carried.

Thanks were then given to the Mayor of Bristol, the ex-Mayor, the Society of Merchant Venturers, the Chairman, Vice-Chairman, Hon. Secretary, and members of the Local Committee, and the inhabitants of Bristol and neighbourhood generally "for the liberality which they have received and entertained the Council, and for their untiring zeal in endeavouring to promote the success of the Bristol meeting;" and further votes of thanks to the judges and officers of the society.

THE TRIAL OF IMPLEMENTS

took place on Monday and Tuesday. The first tried were the mowers, and 14 machines were set to work in a field at Stoke, of more than a mile from the show-ground, where there were but few spectators. The field was divided into 14 parts of about three-quarters of an acre; and the firms represented were Samuelson and Co., Harvester, Pickley and Sims, Hornsby, Brigham, Johnston Breston Company, Burgess

and Key, Howard, Osborne and Co., Mattison, Baker, Harrison and McGregor, Wood and Williams. The reapers were set to work at Kingweston, on a field of rye, rather thin in parts. Amongst those represented were Picklesy and Sims, Brenton, Hornsby, Brigham and Co., Samnelson and Co., Johnston Harvester Company, Wood, Mattison, Williams, and Howard. The trial of steam ploughs and cultivators took place in a field adjoining the reaping, where Messrs. Howard, Fower, and Barford and Perkins, were the firms represented.

DEVON COUNTY AGRICULTURAL ASSOCIATION.

MEETING AT BARNSTAPLE.

The meeting of this Society has been an undoubted success. There can be no mistake or doubt about it: most things have been favourable—scenery, situation, stock, and weather—and all folks have worked with a will to ensure this result. The one presiding idea of the neighbourhood, whether of landlord, tenant, or labourer, is the chase of the grand red deer over Exmoor in autumn and sly Reynard in the wild-duck season; and a right good chain of mutually correcting sympathy is it too! There is not in Suffolk over their auburn teams and Diamond pigs of Socratic visage a more kindred current of uniting interest than the art and recollection of venery supplies here; and in a thorough *esprit de corps* the first elements of triumph are inherent, as the stamp of animal exhibited here to-day, and especially horse-flesh, sufficiently indicates. Embosomed in the hollow of a real Devonshire valley we see the gay flags, tents, and shedding of the exhibition beneath us as we descend the rich grassy slope, and where our business is, within that enclosure of tall boards, to which the path lies through a garden and beside the fresh rushing current of the reservoir which supplies the town of Barnstaple. Blue policemen abound, and the ticket offices are duly arranged, but the officials are raw, and it takes longer than it need to arrive within, and there we find an appearance and a set-out that reminds one rather of the Bath and West of England gathering than a mere county show. There are the world-celebrated names of Hornsby, Ransome, and suchlike, with tiny double ploughs adapted to the banks of the district. Here you are admonished by placard to “wash your linen,” and there you are instructed how at once to wash and wring it. On one side a firm takes a bright and promising position with the blue and yellow stores which are warranted to force the growth of any mortal thing, but especially the cash store of the manufacturer himself; whilst upon a rival stand one studies a grand collection of tall cereals, an actual sugar-cane, and a cotton plant all tufted with the snowy material which runs one’s thoughts back to the scenes of ‘Uncle Tom’s Cabin,’ together with gigantic mangold bulbs, and heaps else that indicate the excellence of the stimulant set forth. Then there are waggons and ploughs and mowing machines, notably Wood’s, who, false to his name, now makes the frame of his implement of iron; and whips and guns and harrows, and suchlike paraphernalia, until one gets finally pitchforked alongside the ring into which the animals are being led and where is the special sphere of our criticism.

First enter a lordly array of really grand animals, the North Devon old bulls, comparatively small in size, but generally round and smooth as moles, though a few certainly have wide ungainly horns, a rhinoceros rump, and a disfiguring accumulation of fat about the tail, but as a rule they were wonderfully good and level. Their great weight made most of them walk delicately, but they had a very winning appearance notwithstanding, and the deep

layer of juicy meat along the chine, loins, and quarter made one’s mouth fairly water. The “Bulls above two and not exceeding three years old,” were also very good. “Us didn’t see they afore, all prize bullocks bean’t they?” was a very fair criticism of the lot on the part of a lout who would keep enclosing one in a superfluous and odoriferous embrace against which, locked in as we were, it was useless to protest by any impatience of movement. How aggravating it was, too, to hear this fetid fellow take such trouble to invert the grammar of his cases! In the next class there were some thick and some narrow, and one very playful party. Amongst the ‘Bulls not less than six, nor exceeding twelve months,’ Mr. Walter Farthing’s representative was low and lengthy, and padded with mellow meat along his back, while the rest in this class showed a tendency to flatness of rib, which may disappear, however, with good keep and increasing age. One looked starved, and several were suffering from ringworm, which in a showyard should not be allowed. Amongst the aged cows there was a big one, with a taking head, a great promise of milk, and much style, but “she is cross-bred” the natives protest, which means that the expansive aptitude of the breed experienced the advantage of richer keep upon the meadows of Somersetshire than her sort taste usually amidst the heather of the hill-side. We are bound in fairness to remark, a great want of uniformity in the style of the heads of this class generally. Does this indicate tampering? With their long-inherited type this should not be. With the representative of a minority the judging of the Devons seemed to go much on “the odd man out,” and size certainly had all the best of it.

The South Devon kine, much bigger and more uneven as they are than the North Devon, had yet quite a family facial likeness throughout, whereby they contrasted favourably with their northern cousins. In the next class of North Devons there were some right good heifers again. It is, in fact, a breed rich in exquisite specimens such as must be a source at once of profit and delight to the breeder. It is assuredly to the other cattle of our English sorts what the Southdown is to other sheep. In the next class Promise is very stylish to look at in the distance, but does not admit of equal praise upon closer acquaintance. The fortunate winner is inferior to second prize in character of head, but deliciously mellow to the touch, and solidly invested with rare meat upon the choice joints. So weighted is she in that enviable respect that she has grown close and rather close and narrow behind, as though in self-defence she had packed her feet so as best to sustain the weight above. The heifers not less than six, nor exceeding twelve months, are comparatively inferior to their elder relatives. Some, moreover, already show signs of overtraining in their “poor feet,” and one was bellowing painfully as though suffering from incipient colic. The South Devon cattle are of a much larger stamp than the northern sorts, and consequently less taking to

the eye, but very useful evidently both for plough and butcher.

Next come the Shorthorns, and at their head Earl of Warwickshire III., a winner of last year at Plymouth and elsewhere. He is an upstanding bull, but wants squareness of dewlap, and he looks a trifle short in the quarter, as he is the least possible volcanic about the tail. How much better would he have looked, too, arrayed in rich roan! Messrs. Hoskens' second prize animal has a deal of Shorthorn style about him; with good crops, rib, and dewlap, but he is unevenly developed in places. With a few starved exceptions the Shorthorn bulls were fairly represented in the several sections, and several Devon tenant-farmers state that they are stealing a cross from the shorthorn in their native herds, much to their satisfaction, too, only, as one intelligent breeder knowingly observed, "We don't give money enough for the sort we use." For increased size, with elegant grace and aristocratic style, let them try a small red one of the best descended Bates or Knightley tribes. Their cattle have already enough of the Booth tubular shape. Of course if they go to the outside conglomerates of the Shorthorn, what is there for them to expect in the results but what they have found—that is, something of all sorts, and nothing worth keeping? The cider-soaking yokel was right in that remark. "Beautiful," admirably observed a merry-looking matron to her comfortable spouse as the cows were led in, "but we could'n't keep them on our land, though the Torquay people like their meat too! and how beautiful they're trained up, so docile, and they take the whip you see, dear things!" We charitably hope that Devon matons' dear things are not expected to take the whip, but this apple-cheeked lady's words and tone were suggestive. Messrs. Hoskens' first prize cow walks well, is long and elegant, and greatly indebted to the mill, but not quite the A 1 animal of the Royal. Mr. Pollard's cow had in a certain degree more of the Shorthorn look about her, but is fairly placed second. In the heifers not exceeding three years old class, Messrs. Hoskens exhibited a perfect gem—thick, mellow, tubular, and worthy of competition anywhere. It was a good class throughout. In class 23, Mr. Williams' long Lady Seymour had been allowed to lose her calf-flesh or she might have been a dangerous antagonist to the winners, which are both of compact if rather short figure, but remarkably well made up, especially the first prize. Mr. Digby's beautiful fawn-tinted Jersey cows appeared next, but for promise of milk we have seen these quite equalled amongst Bates and Knightley Shorthorns. Their excellence, however, lies in the butter produce. Some wretched Guernseys were shown, fresh imported too.

The sheep are reckoned a good lot. The winners are certainly broad-backed and symmetrical. What they term the South Devon, however, look diversely compounded of the Cotswold, Leicester, and Lincoln in various degree, built upon the indigenons animals (whatever that might be), but which is called the Barmpton breed, and comes from a small district near Exmoor. Some of this sort cut about 20 lb. of wool, but suffer proportionately in the quality of flesh. 14 to 16 lb. a good flock will average in the clip, we were informed by those who ought to know. The Dorset were well represented, as were the good-flavoured Exmoor, and the coarser Dartmoor, of flannel fame.

There is a smart show of pigs, including white and black Suffolks, Essex, Berkshire, Duckering's compounds, and the huge Salford masses of hog-flesh, which always make us wonder where they can be housed at home. There were besides a few native specimens which had gained the first dark dye of advancing civilization, but have yet inquiring snouts of an ex-

ceedingly aboriginal order, which we cannot compliment.

Amongst the cart-horses there is a fine upstanding grey horse of Mr. Statter's breeding, somewhat light in carcass, but with much else to recommend him; while there is an active, roundish, useful brown, and a white-maned animal called Suffolk, but which that county would not own. He is still of a useful sort to compound with the light mountain-side mares. The cart classes, upon the whole, are decidedly indifferent, especially the mares, which are most nondescript; the winner having a good deal of gig-fashion about her, and calculated to breed well by a thoroughbred sire. Amongst the thoroughbred stallions Mr. Froule Dillon wins with a good-backed brown horse of unmistakable Touchstone character, and well calculated to put the rather loosely made proportions of the pack-mare together in their produce. He wants rather liberty of action, but is very pleasing in appearance as he stands. There is a Stockwell colt of some style, but slack over the back, and inclined to be leggy; as amongst the roadster stallions the first prize horse, of substantial and rich colour, trots well, but he would not shine in Norfolk or Yorkshite, though he has great power and mettle. The general character of the horses in this district was well represented. They have capital legs, and biggish feet, of use upon the swampy surface of Exmoor, with lots of power, but are, as a rule, too steep in the shoulder, and want yet one more infusion of blood. They are still of an active and very useful character. Mr. Cooke's first prize brood mare has plenty of size, and is clever-looking, but has apparently a little too much cart in her, a defect which her produce shows. The second prize mare, not so true made as the first, looks a huntsman's treasure all over for creeping through covert, or timber. There was a nice but small chesnut Blair Athol thoroughbred in the lot, with an excellent foal at foot and plenty of action, as she is credited with several short races. The four-year-olds had a good corky mover at their head, which wanted something of their general substance, yet by his going indicated their common defect. One more removal from the pack-mare of local celebrity in the direction of racing is what the district horses want. Among the four-year-olds over 15 hands we preferred the second prize grey to the first prize chesnut, but the lot have a certain lack of quality and pace for the Shires, although doubtless clever enough for a bank country. Some of the yearlings showed an increase of quality, notably the second prize colt, a nice animal. The ponies were too mixed, consisting of all kinds, from the "sorny" Exmoor, so grand a foundation as it proves for the weight-carrier, as witness Major Barlow's Tregothuan, to the flashy Galloway weed. There were some good ponies included, of an intermediate cobby character, but the class should have been divided.

The following is a list of the exhibitors of implements taken by the numbers of the stands:

John Fowler and Co., Steam Plough Works, Leeds; Ransomes, Sims, and Head, the Orwell Works, Ipswich; Abbot, Bideford; Denning and Co., Chard; Osborne and Co., Liverpool; Isaac, Braunton; Samuel Barn, Milltown, Marwood; Lacey, Barnstable; Bell and Co., Oxford-street, London; Kerr, Dublin; Bradford and Co., London and Manchester; Davies, Regent-street, London; Beesley, Regent's-park, London; Wrenford, Newport, Barnstable; Brown and Co., London; Huxtable, Ottery St. Mary and Honiton; Vanstone, Buckland Filleigh; Milford and Son, Thorverton, Devon; Huxtable, Brayford, Devon; Crump, Tewkesbury; Hornsby and Son, Grantham; W. A. Wood, Worship-street, London; Samuelson and Co., Oxon; Wright, Sandford, near Crediton; Eddy, Kennford, Exeter; Luxton and Co., Hatherleigh; Forbes, Regent's-park, London; Silvester, Halton-road, London; Goss, Plymouth; Fison, Ipswich; Greening, Westminster; Day, Son, and Hewitt, London; Tucker Bros., Ashburton; Gray, Torquay; Pettle, Barnstable; Beare, Son, and Co., New-

ton Abbot; McDougall Bros., Mark-lane, London; Bailey Bros., Chancery-lane, London; Western Counties Manure Company, Devonport; Gale, Joy-street, Barnstaple; Tremer, Square, Barnstaple; Tipper, Birmingham; Goulding, Dublin and Cork; Parnell and Sons, Exeter and Bristol; Brenton, St. German's, Cornwall; Davey, St. German's; Garton and King, Exeter; Dicker, Chagford, Devon; Furze, Holdsworthly; Ackland, Exeter; Head, Wrixton, and Co., Stockton-on-Tees; McGregor and Co., Leigh, Lancashire; Moore, Filleigh, Southmolton; Lobbett and Son, Braunton; Webber, Chawleigh, Devon; Curson, South Zeal, Okehampton; Wallis and Stevens, Basingstoke; Marshall, Sons, and Co., Gainsborough; Fishley, Pottery, Fremington; Matthews, Royal Pottery, Weston-Super-Mare; Barford and Perkins, Peterborough.

There was a trial of steam-ploughs on the Wednesday, in an eighteen-acre field more than a mile from the show-yard. North Devon farmers, while they are ready to acknowledge all the high merits of the steam-plough, where there is a flat, unbroken soil, are unanimous and emphatic in the declaration that it is unsuitable for the farms of this locality. However, a good field had been secured for the trial, and in it Fowler, of Leeds, and Barford and Perkins, of Peterborough, showed the utility of their implements, with six acres devoted to each firm. The trials of mowers took place in a field near the show yard. The crop of grass was very light and the bottom tough, which well tested the capability of the implements. The exhibitors who engaged in the trial were Samuelson, Brenton, Wood and Co., Osborne and Co., Harrison, McGregor and Co. Several side self-delivery reaping machines were worked in a capital field of rye by the above-named exhibitors, and Dicker, of Chagford, worked a reaper with manual delivery. There were nine entries of ploughs, but only three came on the ground—Huxtable's single turn-wrest, Eddy's double-furrow, and Davey's Climax double-furrow. The ground to be dealt with was a very hard surfaced piece of hill-side, with a stiff clay bottom. Of the three implements that came into the field only Davey's got to work, from the difficulties of the ground. The others would have worked, but the stewards thought the ground too bad to afford any thing like a fair trial. There can be no doubt that, as usual, these so-called trials without results, otherwise prizes, were a complete failure.

P R I Z E L I S T.

JUDGES.—**CATTLE:** S. P. Newberry, Plympton; G. May, Modbury; M. Savage, Chipping Norton. **HORSES:** C. Gordon, Honiton; G. Tucker, St. Germans; Rev. J. Russell, Swynbridge. **SHEEP:** Leicester, Exmoor, Dorset Horn, and Somerret; J. Palmer, Crediton. **South Devons, Dartmoor, and other Long-wools:** T. Wills, Lustleigh; J. Palmer, Bridestowe; J. Cook, Tiverton.

CATTLE. DEVONS.

Bulls exceeding three years old.—First prize, W. Farthing, Stovey (Master Harry); second, J. Jackman, Hexworthy, Cornwall (Earl of Exeter); third, Mrs. M. Langdon, Plitton Barton, North Molton (Duke of Plitton VIII.). Highly commended: Viscount Falmouth, Tregothnan, Probas (King-craft).

Bulls above two and not exceeding three years old.—First prize, W. Farthing (Master Robin); second, Mrs. M. Langdon (Duke of Plitton X); third, J. Snow, Boode (The Czar).

Bulls above one and not exceeding two years old.—First prize, J. Gould, Bampfylde Lodge, Exeter (Bampfylde); second, Mrs. M. Langdon (Duke of Plympton); third, G. Turner, Bramford Speke (Duke of Edinburgh). Highly commended: W. Farthing (The Shah).

Bulls not less than six nor exceeding twelve months old.—First prize, W. Farthing (Master Willie); second, Mrs. M. Langdon (Duke of Bedford). Commended: J. Gould, Bampfylde Lodge (Tempter II.).

Cows exceeding three years old.—First prize, J. Bradbeer, Pyeland, Taunton (Beauty); second, W. Farthing (Milkmaid); third, J. Bradbeer (Nancy).

Heifers no exceeding three years old.—First prize, J. Harris, Bittadon House, Barnstaple (Curly); second, Mrs. M. Langdon (Temptress III.); third, J. Jackman, Hexworthy (Fancy). Highly commended: W. May, Popham (Countess).

Heifers not less than twelve months nor exceeding two years old.—First prize, W. Farthing (Duchess); second, W. May, Popham (Lady-bird); third, W. Perry, Alder (Camella). Highly commended: D. Ridd, Chelpham Barton (Jenny). The whole class commended.

Heifers not less than six nor exceeding twelve months old.—First prize, Mrs. M. Langdon (Actress VIII.); second, J. Jackman (Tulip); third, G. Shapland, jun., Broadmeadow Cottage, Newport (Countess of Devon). Highly commended: J. Gould, Bampfylde Lodge, Exeter (Rosedale).

SOUTH DEVONS.

Bulls exceeding three years old.—First prize, J. Wroth, Coombe, Bigbury (Baron); second, E. R. Cornish, Torr Farm, Mounts, Totnes (Sir Roger). Highly commended: J. and T. Irish, Poulston, Halwel, Totnes (Hercules).

Bulls above two and not exceeding three years old.—First prize, R. Trant, Elston, Churston (King Coffee); second, G. Coaker, Old Newnham, Plympton (Young Hero).

Bulls above one and not exceeding two years old.—First prize, J. Wroth, Coombe, Bigbury, Ivybridge (Forester); second, W. Coaker, Charleton Court, Kingsbridge (Viscount); third, G. S. Toms, Greenway, Brixham.

Bulls not less than six nor exceeding twelve months old.—First prize, W. Coaker, Charleton Court, Kingsbridge (Admiral III.); second, J. B. Oldreive, Little Dartmouth (The Czar). Highly commended: L. N. Oldreive, Landcombe, Dartmouth (May Duke).

Cows exceeding three years.—First prize, W. Coaker, Charleton Court, Kingsbridge (Beauty); second, W. Coaker (Duchess); third, G. Dewdney, Higher Chaddelwood, Plympton (Beauty). Highly commended: W. Coaker (Daisy). Class commended.

Heifers not exceeding three years old.—First prize, W. Coaker (Lily); second, L. N. Oldreive, Landcombe, Dartmouth (Minnelaha). Highly commended: W. Harvey, Frogmore Farm, Ashlprington (Cherry).

Heifers not less than twelve months nor exceeding two years old.—First prize, W. Coaker (Venus); second, W. Harvey (Nancy II.); third, G. Dewdney (Nelson). Highly commended: F. W. Coaker (Primrose). Class commended.

Heifers not less than six nor exceeding twelve months old.—First prize, W. Harvey (Rose); second, W. Coaker (Violet).

SHORTHORNS.

Bulls exceeding three years.—First prize, J. W. Wilson, Austin House, Broadway, Worcester (Earl of Warwickshire III.); second, W. Hosken and Son, Loggan's Mill, Hayle, Cornwall (Duke of Oxford); third, J. Horswell, jun., Burn's Hall, Lew Down (Oxford Duke I.). Highly commended: W. H. Hewett, Norton Court, Taunton (Crown Prince).

Bulls above two and not exceeding three years.—First prize, W. H. Hewett (The Claimant); second, J. Horswell, Exwick House, Exeter (Oxford Duke III.); third, R. W. Pollard, Blagdon, Paignton (Duke of Oxford).

Bulls above one and not exceeding two years.—First prize, W. H. Hewett (Saccharometer); second, J. Horswell, jun., Burn's Hall, Lew Down (Oxford Duke VIII.).

Bulls not less than six nor exceeding twelve months.—Prize, C. Williams, Piton House Barnstaple.

Cows exceeding three years.—First prize, W. Hosken and Son, Loggan's Mill, Hayle (Countess of Oxford II.); second, R. W. Pollard, Blagdon, Paignton (Rose).

Heifers not exceeding three years.—First prize, W. Hosken and Son (Moss Rose II.); second, W. H. Hewett, Norton Court, Taunton (Fanny). Highly commended: W. H. Hewett (Elsie).

Heifers not less than twelve months nor exceeding two years.—First prize, J. S. Bult, Dodhill, Taunton; second, W. Hosken and Son (Kentish Girl); third, W. Horwell, Week, Milton Abbot, Tavistock (Oxford Cometilla).

Heifers not less than six nor exceeding twelve months.—First prize, R. W. Pollard, Blagdon, Paignton (Princess Jessie); second, D. R. Scrutton, Ogwell, Newton Abbot (Artful).

CHANNEL ISLANDS (JERSEY).

Bulls exceeding one year old on the 1st June, 1874.—Prize, G. D. W. Digby, Sherborne Castle, Sherborne (Cow Boy).

Cows exceeding three years old.—First prize, G. D. W. Digby (Miss Edith); second, G. D. W. Digby (Queen of the Vale).

Heifers not exceeding three years old.—First prize, G. D. W. Digby (Miss Augusta); second, G. D. W. Digby (Bessie).
GUERNSEY.

Bulls exceeding one year.—First prize, E. A. Sanders, Stoke House, Exeter (Prince Humbert); second, E. A. Sanders (Prince Amadeus).

Cows exceeding three years old.—First prize, R. Rendle, Cotel, Guernsey (Lady Jane); second, R. Rendle (Buttercup).

Heifers not exceeding three years old.—First prize, E. Andrew Sanders (Young Elegance); second, W. H. Walrond, New Court, Topsham (Daisy).

SHEEP. LEICESTERS.

Yearling rams.—First and second prizes, J. Tremaine, Polsue, Grampond, Cornwall; third and highly commended, J. Gould, Bampfyld Lodge, Poltmore.

Rams of any other age.—First prize, J. Tremaine; second, T. Potter, Yellowford, Thorverton; third, G. Turner, Bramford Speke, Exeter.—The whole class commended.

Pens of five yearling ewes.—First prize, J. Gould; second, J. B. Torr, Westleigh House, near Bideford.

Pens of five ewes of two years old and upwards, with their lambs.—First prize, J. B. Torr; second, T. Potter. Highly commended: G. Copp, Hill Side, Tavistock.

SOUTH DEVONS.

Yearling rams.—First, second, and third prizes, J. Fairweather, Malston, Sherford, Kingsbridge. Highly commended: E. R. Cornish, Torr, Mounts, Totnes. Commended: J. Stooke, East Sherford, Plympton.

Rams of any other age.—First prize, J. S. Hallett, Sherford Barton, Plympton; second, J. Badcock, Bearscombe, Kingsbridge. Commended: C. G. Mason, Ashprington Court, Totnes.

Pens of five yearling ewes.—First prize, J. Stooke; second, J. S. Hallett. Commended: W. Harvey, Frogmore Farm, Ashprington.

Pens of five ewes of two years old and upwards.—First prize, J. S. Hallett; second, J. Stooke. Highly commended: W. C. Hodge, Pounds House, Weston Peverell.

OTHER LONG-WOOLS.

Yearling rams.—First prize, R. Corner, Torweston, Williton, Somerset; second, Sir J. Heathcoat-Amory, Bart., M.P., Knights Hayes Court, Tiverton; third, R. Corner. Highly commended: Sir J. Heathcoat-Amory, Bart., M.P. Commended: R. Corner; T. Radmore, Court Hayes, Thorverton.

Rams of any other age.—First, second, and third prizes, R. Corner. Highly commended: J. Wheeler and Sons, Long Compton, Shipston-on-Stour.

Pens of five shearing ewes.—First prize, R. Corner; second, Sir J. Heathcoat-Amory, Bt.; third, R. Corner. Highly commended: J. N. Franklin, Fluxham. Commended: W. Leverton, Woolleigh Barton, Beaford.

Pens of five ewes, of two years old and upwards, with their lambs.—First prize, Sir J. Heathcoat-Amory, Bt.; second, J. N. Franklin. Highly commended: J. Trott, South Hill Barton, Uffculme. Commended: T. Radmore.

DARTMOORS.

Yearling rams.—First prize, R. Palmer, Venn Barton, Ashbury, Northlew, second, third, and highly commended, J. Drew, Artiscombe, Tavistock.

Rams of any other age.—First prize, J. Drew; second, R. May, Grendon, Tavistock. Highly commended: T. Wiling, Wringworthy, Tavistock. Commended: J. Drew; R. May.

Pens of five yearling ewes.—First and second prizes, R. May. Commended: J. Drew.

Pens of five ewes, of two years old and upwards.—First and second prizes, R. May. Highly commended: J. Drew.

EXMOORS.

Yearling rams.—Second prize, P. Rock, Gratton Barton, Highbury.

Rams of any other age.—First prize, Lord Poltmore; second, C. Williams, Pilton House, Barnstaple; third, W. Burden, Kerscott, Swimbridge, Barnstaple. Commended: J. Smyth, Bentwischen Farm, Northmolton.

Pens of five yearling ewes.—First and second prizes.—First

and second prizes, Lord Poltmore; third, E. Passmore, Higher Fynton, Northmolton.—The whole class commended.

Pens of five ewes, of two years old and upwards.—First prize, E. Passmore; second, Lord Poltmore; third and commended, T. Yeo, Dennington Barton, Swimbridge. The whole class commended.

SOMERSET AND DORSET HORNS.

Yearling rams.—First and second prizes, H. Farthing, Nether Stowey, Bridgwater; third, Viscount Bridport, Home Farm, Cricket St. Thomas, Chard.

Rams of any other age.—Second prize, H. Farthing.

Pens of five yearling ewes.—First and second prizes, Viscount Bridport.

HORSES.

FOR AGRICULTURAL PURPOSES.

Stallions foaled before the 1st of January, 1871.—First prize, J. Joee, Newport, Barnstaple (John Bull); second, G. E. Elliott, Monkirton, Pinhoe (Model); third, C. Brown, Middlezey, Bridgwater (Protection).

Stallions foaled on or after the 1st of January, 1871.—First prize, F. Quartley, Brimley, Southmolton (Clayball); second, G. Elliott, Swilley Farm, Plymouth (Young Drayman); third, T. Buckingham, Landkey Town (Petro).

Mares in foal, or having a foal by her side.—First prize, R. Pethbridge, Ham, Barnstaple (Clydesdale mare and foal); second, N. Cook, Chevithorn Barton, Tiverton (Kealant); third, G. Lock, Instow Barton, Instow, Devon (Jessie).

Fillies foaled in 1872.—First prize, J. Hexter, Moor Farm, Crediton; second, W. B. Pearce, Court Gates, Stoddiscombe (Juno); third, W. T. Hynam, Abbott's Marsh, Barrington, Chulmleigh.

HACKS OR HUNTERS.

Thoroughbred stallions suitable for getting hacks or hunters.—Prize, J. F. Bellew, Stockleigh Court, Crediton (Hurstbourne).

Roadster stallions.—Prize, B. Giles, Penquit, Ivybridge (Cottager).

Mares in foal, or having foals by their side.—First prize, N. Cook, Chevithorne Barton, Tiverton (Marygold I.); second, T. Palmer and Sons, Borough, Kelly, Tavistock (Polly); third, Captain W. Arthur, R.N. (Mayday).

Geldings or fillies foaled in 1870.—First prize, W. Trist, Langford Barton, Ugborough (The Baron); second, H. Ellis, Morebath, Tiverton (Baronet); third, R. Pethbridge, Ham, Barnstaple (Intrepid).

Geldings or fillies, foaled in 1871.—First prize, E. G. Legg, Coombe Down, Beaminster, Dorset (Black Prince); second, W. Trist, Langford Barton, Ugborough (Sydenham); third, T. Palmer and Sons (Premier).

Geldings or fillies, foaled in 1872.—First prize, W. Trist (Edinburgh); second, E. G. Legg (Rainbow); third, J. Heal, Parkham, Bideford (Hart).

Colts, geldings, or fillies foaled in 1873.—First prize, N. Cook (Second Flight); second, F. Quartly, Brimley, Southmolton (Starlight); third, G. Davey and Son, Plaistow Mills, Barnstaple (Prince Georgie).

Mares or geldings, over four years old, exceeding 15 hands high.—First prize, W. A. Deane, Webbery, Bideford (Lorna); second, A. Gould, Blackheath, Exminster (Pattern Card); third, Rev. J. J. Chichester, Clovelly Rectory, Bideford (Brown Stout). Highly commended: W. Rookes, Baring House, Exeter (Prince).

Mares or geldings, over four years old, not exceeding 15 hands high.—First prize, Pedrick and Price, Paris-street and Heavitree-road, Exeter (Perfection); second, J. Harper, Bearstreet, Barnstaple (Bob); third, F. Quartly, Brimley, Southmolton (Vesper).

PONIES.

Ponies of any age or sex under 14 hands high.—First prize, T. Radden, Plymouth (black-brown mare); second, A. E. Gould (Dandy); third, W. Rookes (Beauty). Commended: J. Parminter, Fullsford, Highbury, Barnstaple (Bob).

PIGS.

LARGE BREED.

Boars not less than six months old.—First prize, J. Dove, Hambrook House, Hambrook, Bristol; second, R. E. Duckering, Northorpe, Kirton Lindsey, Lincolnshire; third, J. Wheeler and Sons, Long Compton, Shipston-on-Stour. Commended: R. N. G. Baker, Heavitree, Exeter.

Sows of any age in farrow, or with their litters.—First prize, L. E. Duckering; second, Wheeler and Sons; third, J. Dove.

SMALL BREED (BLACK).

Boars not less than six months.—First prize, Earl of Portsmouth; second, G. Turner, Bramford Speke, Exeter; third, Earl of Portsmouth. Highly commended: J. Partridge, Hillerton House, Bow.

Sows of any age, in farrow or with their litters.—First prize, J. Wheeler and Son; second and third, Earl of Portsmouth. Highly commended: Earl of Portsmouth. Commended: Lord Clinton; G. Copp, Hillside, Tawstock; T. Fisher, Upcott, Tawstock.

SMALL BREED (WHITE).

Boars not less than six months old.—First prize, J. Dove; Highly commended: R. E. Duckering.

Sows of any age, in farrow or with their litters.—First prize, R. E. Duckering; second, J. Dove, Hambrook House, Bristol. Highly commended: J. Dove. Commended: J. Wheeler and Sons.

ADDITIONAL PRIZES.

Pair of steers, of any breed, not exceeding three years old.—First prize, J. Horswell, jun., Barn's Hall, Lew Down (Shorthorn steers); second, J. M. Hartnoll, Lerwell, Chittlehampton, Southmolton (North Devon steers).

Pair of North Devon steers, not exceeding three years old.—First prize, W. Shaplaid, Fyldon Barton, Northmolton; second, T. K. Lock, Instow Barton, Instow, North Devon.

North Devon cows in milk or in calf, bred by the exhibitor.—Prize, T. D. Ridd, Chelpham, Barton, Bratton Fleming, Devon (Lady Elizabeth).

A special general meeting of the members of the Association was held in the Show-yard, Lord Poltimore presiding. The meeting was called for the purpose of considering the expediency of altering the second Rule of the Association, states that "No exhibition of the Association shall be held in any year in which either the Royal or Bath and West of England Society may hold its meeting in the county," and

Mr. DREW now proposed to add the following: "Unless the Council shall at the time see cause to determine otherwise, and any such meeting of the Royal or Bath and West of England Society so held in the county shall be considered as equivalent to the holding of a meeting of this Association in the particular division of the county in which it may have been held."

Mr. J. TAFT seconded the resolution.

Mr. POLLARD moved as an amendment that the part of Rule 2 which prohibited their holding an annual meeting of the Association in any year in which either the Royal or Bath and West of England Societies held a meeting in the county, be struck out.

Earl DEVON pointed out that the effect of the alteration proposed by the resolution would be to place a discretionary power in the hands of the Council.

Mr. DREW said the adoption of the amendment would be breaking faith with the other societies.

Mr. SCRATTON seconded the amendment, as he believed their meeting, which would be held in advance of the others, would not injure the latter, and, if necessary, they could put their meeting forward a fortnight.

Mr. ANSTAY said the amendment could not be put, as it affected the rules, and no notice had been given.

The noble CHAIRMAN said that nothing but a negative amendment could be put to the meeting.

The motion was then put to the meeting and carried by a large majority, two only voting against it.

At the luncheon, Mr. SCRATTON counselled the establishment of a South Ilams herd book.

THE DEVON COUNTY SHOW.

TO THE EDITOR OF THE MARK LANE EXPRESS.

SIR,—Let me say one word on the dissatisfaction expressed by the exhibitors of North Devon cattle at this show. The Council doubtless intended to please every one by appointing a judge for each class of animals—viz., Short-horns, South Ilams Devons, and North Devons; but, sir, when these three men of opposite views got to work, it was soon seen, especially in the North Devon classes, that the competition rested between "*quantity* and *quality*," and as the third voice came from the Shorthorn judge, *quantity* had it! However, as we breeders of North Devon are quality men, we shall happily meet the quantity men again next week at Bristol, and, thirdly, at the Royal, where quality with symmetrical proportions have proper respect paid them.

Yours faithfully,

... AN EXHIBITOR.

[We have received another letter conveying precisely the same protest, as it does seem curious that "the Flittons" should have been put out as they were at Barnstaple.—EDITOR M.L.E.]

THE ROYAL CORNWALL AGRICULTURAL SOCIETY.

MEETING AT ST. AUSTELL.

The show-ground, about a mile from the town, was delightfully situated in a valley, surrounded by fine trees, whose shade added greatly to the comfort of the visitors, of whom upwards of 6,000 attended on the first day—a number far exceeding that of any previous first day. The management was all that could be desired, and reflects much credit on the secretary, the director, and the other officials. Of the opening classes of Devons, if some of these were numerically short, the quality in nearly every case was good, Mr. John Jackman beating Lord Falmouth in the old bull class, and taking the Cup as well for the best bull of any breed in the yard. Again, amongst the Devon heifers, which are very superior, Mr. Jackman's two-year-old is especially excellent, as also is Mr. Perry's yearling and Mr. Jackman's calf. The Shorthorns were a good lot, and would, all classes considered, do credit to any county show in England; indeed we shall be much surprised if some of these do not take a good deal of beating at the Bedford Royal. When we hear that some thirty-odd years back there was scarcely a Shorthorn in Cornwall, it speaks much

for the energy of the farmers of the county that they are able to send such a lot of animals on to the show-ground. The first prize, however, goes to Mr. Wilson, of Worcestershire, for the well-known bull the Earl of Warwickshire; the second prize is taken by Mr. Whitford for Earl of Fawsley, a half-brother of the first prize bull; and Messrs. Hosken are third with Townley Oxford. For bulls above two and under three years old, Messrs. Hosken's Duke of Oxford and Mr. Horswell's bull met to fight their battles o'er again, with the same result as on former occasions, and very good bulls they both are. Mr. Tregaskis wins with a very good bull-calf in a strong class of 16. Messrs. Hosken are first and second with their cows Alexandria and Countess of Oxford 2nd—the first far away the best; as they also are first and second with their heifers Moss Rose 2nd and Lady Oxford; while Moss Rose also takes the Cup as the best female in any class of cattle, and a charming heifer she is. The Hoskens also take first prizes in the classes for heifers calved in 1872 and 1873.

The Hereford classes were fairly filled, and the

breed is said to be increasing in favour in the county; but that Shorthorns are the most esteemed is shown by there being 54 entries of Shorthorns, against 25 Herefords. The sheep are of more than average merit, but short in number. Mr. James Tremaine takes nearly all the prizes for Leicesters; but in the shearing class the Barnstaple decision was reversed: his three-year-old ram, which takes first prize in the old class, is really a wonderful sheep. Mr. Tremaine's sheep struck us as being so much superior in their legs of mutton to the general run of Leicesters. The South Hams are a useful sheep, and the Dartmoors looked to pine for their native ground, and to dislike the confinement they were subjected to. Lord Falmouth had some nice Shropshire Downs, with which he took all the prizes offered.

Taken as a whole the horses may be said to be a good lot, but it is not to be wondered at that among so many there should be some inferior. In the old class of agricultural stallions there were six competitors, and the first prize, Excelsior, is a very nice brown horse belonging to Mr. H. Laity, and bred in Monmouthshire, and he ought to do some good in the West, where, however, they do not like a heavy horse for agricultural work, and amongst the young stock evidence of a cross with thoroughbred ones was easily seen. Two Clydesdales have been introduced lately, but they appeared to have very light middles and not the best feet ever seen. Amongst agricultural stallions foaled after January 1st, 1871, Mr. Hawkey takes first prize with a clever blue roan, two years old, beating Mr. W. R. Tobey's Sir Garnet, a three-year-old, without much character. The agricultural mares and foals were a very mixed lot, and some of them looking quite out of place with foals at foot by thoroughbred horses; and the prizes went to the mares looking most calculated to breed horses for agricultural purposes. Mr. E. James showed a very clever three-year-old mare, that looked fit for almost anything, and Mr. W. Mugbur had a second to her with a good top but too high on the leg. In this class was exhibited a grey gelding with Grey Castle as his sire, and nearly as high as a church steeple, just the reverse of what a horse should be. Mr. W. Trethewy showed a smart chesnut yearling filly which deserved the prize awarded. She looked full of Suffolk blood and would hold her own, we fancy, even in the home of the chesnuts. Mr. E. Stroker takes second prize for a useful colt, and Mr. J. King Martyn is third with a smart black or grey filly, as much like light harness work; there were ten entries in this class, but scarcely two alike. Six thoroughbred stallions were entered and from the ring-side they looked a very good lot. Mr. H. Laity has a very handsome horse in Mouravieff, who in spite of his age wears very fresh and well, carries two good ends, has a deep middle, and goes remarkably well, with lots of freedom in his shoulders, while he can still use his hind legs. The second prize horse, Eastley, has a very handsome top, with good middle, but is rather high and short, and he is deficient in action. Poor old Motley looked pretty fresh, but he has lost his action, and his prize-taking days are over; and Garna, by King Tom, is but a flashy-looking one. The hunter mares and foals were a useful lot, Major Carlyon sending four out of the eight shown, and taking first and second prizes with two good mares, Mr. T. Hicks being third with a good sort of old grey mare. *The class of the show was undoubtedly the three-year-old geldings and mares for hunting purposes, of which there were twelve entries; while three prizes were given, two were highly commended, and the entire class commended. The first is a very strong bay mare that at first sight looked rather plain, but she is a fine mover, and improves on acquaintance. This mare belongs to Mr. J. Laity, and with luck looks like being a very valuable weight carrier;*

the second prize horse of Mr. Chegwyn looks now more like harness than cross-country work, and the third prize, Miss Floretta, is full of quality, but rather light. One very handsome horse lost the prize on account of his hocks not looking quite the thing. There are not many counties that can produce such a class. The two-year-olds were a smart lot again. We preferred the second prize to the first, whose shoulders are too short, but he is a very smart-looking nag, and he moves well. The second prize one is a stronger animal, and looks more like carrying 14 stone to hounds, whilst the third is more of a park hack than a hunter. A very good-looking son of Mouravieff gets the prize as the best yearling, and a thoroughbred one by Dundee is second, in whom Major Carlyon has a very promising horse; whilst his filly by Blair Athol does not look worth half her sire's fee.

There were twenty hunters not less than four years old, and here we cannot agree with the judges in their first prize horse; it is true he looks equal to any weight, and he improves when set going, but a plainer one we have seldom seen. A very different sort is Mr. Jackman's bay mare, an eight-year-old "Irish hunter," with lots of substance, good quality, and one that looks and goes like a hunter. Mr. Whitford's Jessie, a good-looking mare, is highly commended, as is also Mr. Grigg's Rallie by Rallywood. There are several animals shown in this class that were very useful ones, but not coming up to the required condition of being "weight-carriers." A Cup given for the hunter in this class to be tried over hurdles was well won by Mr. Jackman's bay mare already alluded to. There were some good performers; but the "Irish hunter" proved herself a good one in her work as well as to look at. There were fourteen cobs and hacks not exceeding fourteen hands three inches in the next class, the first prize, a chesnut three-year-old mare belonging to Mr. W. Grose, was good looking, with a nice top and shoulders, but when ridden she did not appear to have length enough before the saddle, and her hind legs were too far behind her. Mr. Silas Rickard took the second prize with a nice four-year-old, and Mr. Cardell was highly commended for a three-year-old, as Mr. H. W. Tremaine received the same compliment for an aged cob who has been a wonder in his day. There was a fair show of pigs, Mr. Jacob Dove, of Bristol, and Messrs. Wheeler and Duckering's taking most of the prizes.

There was a small show of implements, the exhibitors of which stood thus in the catalogue: Brenton, Polbathic, St. Germans; Davey, Crofthole, St. Germans; Blamey and Son, Truro and Liskeard; Clemow and Co., St. Merryn, Padstow; Prout, Kelley, Lewanick; Draydon, Helland Bridge; Wellington, Probus; Mitchell and Son, Lelant, Hayle; Hornsby and Son, Grantham; Plimsaul Brothers, Plymouth; Samuelson and Co., Banbury; Wood, London; Day, Son, and Hewitt, Dorset-street, London; Marsden, Leeds; Osborne and Co., St. Austell; Clark, St. Austell; Oatey and Martyn, Wadebridge; Marshall Sons and Co., Gainsborough; Hearle and Sons, Gwarder, Penryn; Bradford and Co., High Holborn, London; Crabb and Sons, Bodmin and Fal-mouth; Ackland, Exeter; Goss, Plymouth; Jones, Aberdare; Singer and Company, Plymouth; Murton, Plymouth; Bailey Brothers, Chaucery-lane, London; Myers, Navigation-road, York; Martyn, Wadebridge; Phillips and Co., Newton Abbot.

PRIZE LIST.

JUDGES.—DEVONS AND HEREFORDS: Mr. Powlesland, Stockley Pomeroy; J. W. P. James, Mappowder Court, Dorchester. SWORTHORNS: C. Howard, Biddenham, Bedfordshire; J. Wood, Harewood Hill, Darlington. JERSEYS: Mr. Lisbriel, St. Neot. SHEEP: W. Sundry, Radcliffe-on-Trent, Nottingham; E. Howard, Nocton Rise, Lincoln. HORSES: Hacks and Hunters—H. Biddell

Playford, Ipswich; T. Trist, Ugborough. Agricultural horses: N. G. Barthropp, Great Yarmouth; Mr. Sturdy, Swinfen, Lichfield. Pigs: W. F. Collier, Woodtown, Horrabridge.

DEVONS.

Bulls above three years old.—First prize, J. Jackman, Hexworthy (Perfection); second, Viscount Falmouth, Tregothuan (Kingcraft); third, R. Knight.

Bulls above two and not exceeding three years old.—Prize, Mr. Julian, Creed (Sweet William).

Bulls not exceeding two years old.—First prize, Mr. Julian (Baronet); second, R. Bickle, Lifton (Perfection); third, J. Smith, Kea (Earl Bothwell).

Trellis not exceeding twelve months old.—First prize, E. H. Somer, Advent, Camelford (Young Kerscott); second, R. Bickle (Prince 2nd); third, J. Menhenick, Wadebridge (Harold).

Cow in calf, or if in milk, having had a calf within six months.—First prize, Mr. Julian (Bloomer); second, Mr. Julian (Cherry); third, J. Tremaine, Polsue.

Heifer in calf, or in milk, calved in 1871.—First prize, J. Jackman, Hexworthy; second, Mr. Julian (Famous); third, J. Tremaine.

Heifer calved in 1872.—First prize, W. Perry, Lew Down, Devon (Champion); second, Mr. Julian (Flora); third, J. Menhenick, Wadebridge (Diana).

Heifer calved in 1873.—First prize, J. Jackman; second, J. Menhenick (Marie). Highly commended: W. Perry, Lew Down.

SHORTHORNS.

Bulls above three years old.—First prize, J. Wilson, Broadway, Worcestershire; second, W. Whitford, Trehane, St. Erme (Earl of Fawsley); third, Hosken and Son, Hayle (Townley Oxford).

Bulls above two and not exceeding three years old.—First prize, Hosken and Son (Duke of Oxford); second, J. Horswell, Burns Hall, Lew Down; third, J. Faul, Probus (Mercury).

Bulls not exceeding two years old.—First prize, J. Thomas, Gerrans (Knight of Oxford); second, W. Horswell, Weck Barton; third, R. W. Pollard, Blagdon, Paignton (Duke of Oxford). Commended: Mr. Croggan, Creed (Rufus).

Bulls not exceeding twelve months old.—First prize, Mr. Tregaskis, St. Issey; second, J. Horswell, Burns Hall; third, T. Blamey, Verman (Marquis of Oxford). Commended: E. Stocker, jun., St. Mewan (Burgulow); G. Williams, Ruanlanthorne (Kingscote).

Cows in calf, or if in milk having had a calf within six months.—First prize, Hosken and Son (Alexandria); second, Hosken and Son (Countess of Oxford 2nd); third, R. W. Pollard, Blagdon, Paignton (Rose). Commended: J. Gill, Probus.

Heifers in calf or in milk, calved in 1871.—First prize, Hosken and Son (Moss Rose 2nd); second, Hosken and Son (Lady Cædard); third, Major Carlyon, Tregrehan, Par Station (Sweetbrier).

Heifers calved in 1872.—First prize, Hosken and Son (Countess of Oxford 3rd); second, J. Horswell, Burns Hall, Lew Down.

Heifers calved in 1873.—First prize, Hosken and Son (Kentish Girl); second, R. W. Pollard (Princess Oxford). Commended: Hosken and Son (Countess of Cornwall); J. Gill, Probus.

HEREFORDS.

Bulls above two years old.—First prize, G. Lobb, Lawhitton (Ostorius); second, J. Baron, Lanivet; third, R. Tucker, Prideaux Farm (Admiral).

Bulls not exceeding two years old.—First prize, Mr. Hawken, St. Breward (King Koffee); second, J. Paull, Ruanlanthorne (Ganymede). Commended: G. Lobb, Lawhitton (Fatriarch).

Bulls not exceeding twelve months old.—First prize, R. Olver, Trescowe, Bodmin; second, R. Olver, Penhallow.

Cows in calf, or in milk, having had a calf within six months.—First prize, W. Grose, St. Kew; second, J. Paull (Daisy). Highly commended: R. Olver, Trescowe. Commended: R. Olver, Penhallow.

Heifers in calf, or in milk, calved in 1871.—First prize, W. Grose; second, W. Grose.

Heifers calved in 1872.—First prize, W. Grose; second, J. Paull. Commended: R. Olver.

Heifers calved in 1873.—First prize, J. Paull; second, W. Grose.

CHANNEL ISLAND BREED.

Bulls not exceeding four years old.—Prize, Mr. Rendle, Ca'el Farm, Guernsey.

Cows in calf, or if in milk, having had a calf within six months.—First prize, Mr. Rendle; second, J. Tremayne, M.P.; third, J. Tremayne, M.P.

Heifers in calf, or in milk, calved in 1871.—First prize, D. H. Shilson, Trewhiddle, St. Austell; second, J. Tremayne; third, T. Coode, Pond-dhu, St. Austell.

SHEEP.

Leicester yearling rams.—First, second, and third prizes, J. Tremain, Polsue.

Rams of any other age.—First prize, J. Tremain; second, Mr. Rosewarne, Nanpuska; third, J. Tremain.

Pen of five yearling ewes.—First and second prize, J. Tremain; third, Mr. Rosewarne.

South Ham yearling rams.—First and second prize, J. Stooke, East Sherbord, Plympton; third, R. Cornish, Mounts, Totnes.

South Ham rams, of any other age.—First prize, R. D. Clemens, St. Keyne; second, J. Moon, Penhale; third, J. Dyer, Dobwalls, Liskeard.

Pen of South Ham yearling ewes.—First prize, R. C. Clarke, St. Budeaux; second, J. Stooke; third, J. Moon, Penhale, Liskeard.

Dartmoor yearling rams, to be shown in their wool.—First prize, R. Palmer, Venn Barton, Exbourne; second, J. Drew, Artiscombe, Tavistock.

Dartmoor rams of any other age, to be shown in their wool. First prize, R. May, Grendon, Tavistock; second, J. Drew.

Pen of five Dartmoor yearling ewes, to be shown in their wool.—First and second prizes, R. May. Commended: J. Drew.

Long-wooled yearling rams, not qualified to compete in the foregoing classes.—First prize, R. Corner, Torweston, Somerset; second, R. H. Marshall, Trenoon, St. Mowgan; third, R. H. Marshall.

Long-wooled old rams.—First prize, Wheeler and Sons; second, R. Corner, Torweston, Somerset; third, R. Corner.

Pen of five long-wooled yearling ewes.—First and second prizes, R. Corner.

Shropshire Down yearling rams.—First and second prizes, Viscount Falmouth.

Shropshire Down old rams.—First and second prizes, Viscount Falmouth.

Pen of five Shropshire Down yearling ewes.—First and second prizes, Viscount Falmouth.

HORSES.

Agricultural stallions, foaled before 1st January, 1871.—First prize, H. Laity, Praze, Crown (Excelsior); second, North Cornwall Stud Company (Bobby Burns).

Agricultural stallions, foaled on or after 1st January, 1871.—First prize, Mr. Hawkey, St. Columb (Cornish Champion); second, W. R. Sobe, St. Veep (Sir Garnet).

Agricultural mares and foals, or mares in foal.—First prize, J. Eglos, Merther (Tulip); second, J. Tremain, Polsue; third, J. Robins, Withiel. Highly commended: C. R. Gatley, Truro.

Agricultural geldings or fillies, foaled in 1871.—First prize, E. J. Newlyn; second, W. Mugfur, St. Sampsons; third, W. H. Tremaine, Newlyn.

Agricultural geldings or fillies, foaled in 1872.—First prize, T. Blamey, Verman; second, Mr. Lark, Cornely.

Agricultural colts, geldings, or fillies, foaled in 1873.—First prize, W. Trethewey, Probus; second, E. Stocker, jun., St. Mewan; third, J. King Martyn, St. Enoder. Highly commended: D. Cock, Roche.

Thoroughbred stallions, foaled before 1st January, 1871.—First prize, H. Laity, Crown (Mouravieff); second, J. R. Bickle, Lamerton (Eastley).

Thoroughbred stallions, foaled on or after 1st January, 1871.—Prize, North Cornwall Stud Company (Pirate King).

Hacks or hunters, mares and foals, or in foal.—First prize, Major Carlyon (Princess); second, Major Carlyon (Sweet Oil); third, S. Hicks, Bodmin (Jessie). Highly commended: W. H. Preston, St. Mewan.

Geldings or fillies, foaled in 1871.—First prize, J. Laity, Goldsithney; second, Mr. Chogwyn, Pool; third, R. White, St. Just (Miss Floretta).

Geldings or fillies foaled in 1872.—First prize, J. H. Grigg, Creed (Laddie); second, N. H. Hocking, Nansloe, Wendron; third, W. Rowse, Bodmin.

Colts, geldings, or fillies foaled in 1873.—First prize, E. J. Newlyn; second, Major Carlyon; third, J. Tremain.

Weight-carrying hunters, not less than four years old.—First prize, A. Brewer, Probus; second, Mr. Jackman, Plymouth. Highly commended: R. H. Hocking; W. Whitford, Trellane, St. Erme (Jessie).

Weight-carrying hunter, mare or gelding, to be tested over hurdles in the show yard.—Special prize, Silver cup, Mr. Jackman.

Cobs, mares, or geldings, not exceeding 14 hands 3 inches high.—First prize, W. Grose, Lanivet; second, S. Rickard, Lower St. Columb.

Mare or gelding cob, not exceeding 14 hands 3 inches high, to be tested over hurdles in the showyard.—Special prize, Silver Cup, W. H. Tremaine.

Ponies, mares or geldings, not exceeding 13½ hands high.—First prize, Mr. Jackman; second, J. G. Hugo, Feock. Highly commended: Miss H. M. Tremaine, Heligan (Leotard); J. Lovering, St. Austell.

Mare or gelding pony, not exceeding 13½ hands high, to be tested over hurdles in the showyard.—Special prize, Silver Cup, R. Nicholls, Lostwithiel. Highly commended: J. Paul, Ruanlanihorne.

PIGS.

Boars, large breed.—First prize, J. Dove, Bristol; second,

Wheeler and Son, Long Compton. Commended: Mr. Duckering, Northorpe, Kirton Lindsay.

Breeding sows in farrows, or that have farrowed within six months of the meeting.—First prize, J. Dove; second, Wheeler and Sons. Highly commended: Mr. Duckering.

Pen of two breeding sows (of the same litter), not exceeding twelve months old.—(Prize, Mr. Duckering.)

Small breed, boars exceeding twelve months old.—First prize, Mr. Duckering; second, Wheeler and Sons; third, W. Fenton, St. Mewan.

Boars not exceeding twelve months old on the 1st June, 1874.—First prize, Mr. Duckering; second, J. Dove; third, J. Tremain. Highly commended: J. Tremain; N. Reynolds, Creed. Commended: R. Knight, Lanivet; J. Basset, Kenwyu; W. Trevenen, Crowan.

Breeding sows in farrows, or that have farrowed within six months of the meeting.—First prize, Mr. Duckering; second, J. Dove; third, Wheeler and Sons. Highly commended: J. Dove. Commended: J. Tremain.

Pen of two breeding sows (of the same litter), not exceeding twelve months old on the 1st June, 1874.—First prize, J. Dove; second, Wheeler and Sons; third, J. S. Guy, Endellion. Highly commended: R. Nicholls.

SPECIAL AWARDS.

The best cow in the yard.—Mr. Jackman (Devon).

Best bull.—Messrs. Hosken (Shorthorn).

Best ram.—Mr. Tremain.

Best pen of ewes.—Mr. Tremain.

Best pig.—Mr. Dove.

THE OXFORDSHIRE AGRICULTURAL SOCIETY.

MEETING AT WITNEY.

This show proved to be one of the most attractive meetings ever held by the County Society. It was a very generally good one, though the cattle were not the best section, but Mr. Peuson's bull in the first class, and Mr. G. Garne's cow, and Mr. Hewer's heifer, were as good as any in their respective classes as were ever shown at the Society's shows. The sheep were a large show, and the Duke of Marlborough's Oxfordshire Downs were quite a show of themselves; while Mr. Gillett's Cotswolds were also good. There was a good show of horses, much larger than ever exhibited in Oxfordshire; but the two prizes for hunters went out of the county.

JUDGES.—CATTLE: C. Howard, Biddenham, Bedford; E. Little, Lanhill, Chippenham. HORSES: T. Bullford, Hordley; T. M. K. Elliott, Heathercote. SHEEP AND PIGS: J. Bryan, Northleigh; R. J. Newton, Campsfield.

CATTLE.

The best horned animal in the yard, exhibited in either of the Classes 1 to 6.—A Silver Cup, of 5 gs., R. Peuson, Foxcote.

Bull of two years old and upwards.—First prize, £7, R. Peuson; second, £3, J. A. Mumford, Brill.

Bull of one year and under two years old.—First prize, £7, J. A. Mumford; second, £3, H. Betteridge, East Hanney. Commended: J. Dodwell, Long Crendon, and A. T. Matthews, Hanborough.

Bull-calf under one year old.—First prize, £7, G. Garne, Churchill Heath; second, £3, R. Peuson. Commended: T. Hewer, Inglesham, and J. A. Mumford.

Cow (having already produced one calf) in milk or in-calf, of three years old and upwards.—First prize, £7, G. Garne; second, £3, J. B. Jenkins, Kingston Bagpuze.

Heifer in milk or in-calf, under three years old.—First prize, £7, J. A. Mumford; second, £3, T. Hollis, Coggs.

Heifer for breeding purposes, under two years old.—First prize, £7, T. Hewer; second, £3, J. A. Mumford. Commended: G. Garne.

Pair of cows in milk, of five years old and upwards.—First prize, £7, S. Smith, Somerton; second, £3, G. Wallis, Old Shifford. Commended: J. Timms, Evenlode.

For the best entry in Classes 7 or 8.—A Silver Cup or Plate, value £10, S. Smith.

HORSES.

Mare for breeding hunters.—A silver Cup, of 5 gs., F. Dandridge, Northcourt.

Hunter, five years and upwards, being at least equal to 13 stone weight, exhibited by a tenant-farmer.—A Silver Cup, of 5 gs., G. A. Lepper, Aylesbury.

Hunter not over seven years.—A Silver Cup, of £10, G. A. Lepper. Highly commended: W. H. Fox, Bradwell Grove.

Nag horse for general purposes.—First prize, £7, A. R. Howland, Thame. Highly commended: T. Akers, Burton Abbots.

Cart mare, with colt or foal this season.—First prize, £7, T. Akers, Burton Abbots; second, £3, J. Huitt, Water Eaton. Highly commended: S. Davis, Woolashill.

Cart gelding or filly, above two and under four years.—First prize, £7, J. Hitchman, Little Milton; second, £3, to ditto. Highly commended: J. Huitt.

Cart colt or filly, under two years.—First prize, £7, S. Busby, Curbridge; second, £3, Mrs. Rowland, Shabbington. Highly commended: H. Barnett Glympton Park.

Entire cart horse travelling in Oxfordshire or within 2 miles of Witney for the season of 1874.—First prize, £7, W. Coles, Long Crendon; second, £3, H. Woodbridge, Chimney. Highly commended: J. Huitt.

SHEEP.

Oxfordshire Down shearing ram.—First prize £7, Duke of Marlborough; second, £3, A. F. M. Druce, Eynsham. Highly commended: G. Wallis; commended: Duke of Marlborough.

Oxfordshire Down ram, above two years old.—First prize, £7, J. Treadwell, Upper Winchendon; second, £3, A. F. M. Druce. Highly commended: G. Wallis.

Oxfordshire Down ram exhibited in classes 17 or 18—Plate, value 4gs., J. Treadwell.

Pen of five Oxfordshire shearing ewes.—First prize, £7, Duke of Marlborough; second, £3, G. Wallis. Highly commended: A. F. M. Druce. Commended: Z. W. Stilgoe, Adderbury.

Pen of five breeding Oxfordshire Down ewes, with their lambs.—First prize, £7, Duke of Marlborough; second, £3, J. Treadwell. Commended: H. Gale, Cuddesdon.

Pen of five Oxfordshire Down shearing wethers.—First prize, plate, value 5s., Sir H. Dashwood, Bart., Kirtlington Park; second, £3, Z. W. Stilgoe.

Long-wooled shearing ram.—First prize, £7, T. and S. G. Gillett, Kilkenny; second, £3, ditto. Highly commended: S. Smith.

Long-wooled ram, above two years old.—First prize, £7, S. Smith; second, £3, T. and S. G. Gillett.

Pen of five long-wooled shearing ewes, First prize, £7, T. and S. G. Gillett; second, £3, ditto.

Pen of five long-wooled breeding ewes, with their lambs.—First prize, £7, T. and S. G. Gillett; second, £3, ditto.

Pen of 40 stock ewes of any one breed, the *bona fide* property of the exhibitor, which shall have bred and brought up lambs on his farm. A Silver Cup, value £20, Duke of Marlborough. Commended: C. Gillett, Lower Haddon, and T. and S. G. Gillett.

Pen of ten Oxfordshire Down ram lambs. A Silver Cup, value £5, G. Adams, Faringdon. Highly commended: W. S. Hunt, Fawler.

Pen of ten Oxfordshire Down ewe lambs. A Silver Cup, value £5, W. S. Hunt. Highly commended: Mrs. Pratt, Little Haseley.

Pen of ten long-wooled ram lambs. A Silver Cup, value £5, E. Tombs, Shilton. Highly commended: C. Gillett.

Pen of ten long-wooled ewe lambs.—A Silver Cup, value £5, E. Tombs.

PIGS.

Boar not exceeding 16 months old.—First prize, £7, A. C. Baily, Swindon; second, £3, J. Dove, Bristol. Highly commended: H. Humphrey, Shrivenham. Commended: Ditto.

Boar exhibited in class 31.—Plate, value 3s., A. C. Baily.

Sow in farrow or with pigs.—First prize, £7, H. Humphrey; second, £3, ditto. Highly commended: J. Dove.

Pen of five breeding pigs of one litter, not exceeding six months.—First prize, £7, H. Humphrey; second, £3, J. Druce, Eynsham. Commended: J. Dove.

Beast, sheep, or pig, for consumption, brought to earliest maturity, symmetry and quality being considered.—A Silver Cup or Plate, value 5s., E. W. Harcourt, Nuneham Park.

Best jumper of a wall, water jump, timber fence, hedge and ditch.—A Cup, value £20, J. Hutt.

Shoeing a saddle horse.—First prize, £3, E. Glanville, Oxford; second, £2, A. Ballard, Longworth.

Shoeing of a cart horse.—First prize, £3, C. Wiggins, Witney; second, £2, W. Jackson, sen., Witney.

THE CAMBRIDGESHIRE AND ISLE OF ELY AGRICULTURAL SOCIETY.

MEETING AT NEWMARKET.

In the first instance it was resolved that, in consequence of the Royal Agricultural Society visiting Bedford this year, the county show should be abandoned; but it was subsequently determined that the meeting should be held as usual. Under the circumstances there was a great falling off, and the attendance was very limited. At the luncheon, Mr. C. W. Townley, the chairman, said there were not so many things exhibited as might have been expected, but the quality came up very well.

PRIZE LIST.

JUDGES.—CART HORSES: J. Manning, Orlingbury, Wellingborough; T. Plowright, jun., Finchbeck, Lincoln. NAG HORSES: J. E. Bennett, Husband's Bosworth, Rugby; T. M. K. Elliott, Heathcote, Towcester. CATTLE: C. Howard, Biddenham; J. Lynn, Stroxtan, Grantham. LONG-WOOLED SHEEP AND PIGS: J. H. Casswell, Laughton, Folkingham; H. Dudding, Wragby, Lincoln. SHORT-WOOLED AND CROSS-BRED SHEEP: T. Fulcher, Elmham, Dereham; J. Treadwell, Upper Winchendon, Aylesbury. IMPLEMENTS: M. Cooke, Ely; J. Martin, Littleport. BUTTER AND CHEESE: G. Deeks, Newmarket; M. Hilton, Newmarket.

HORSES.

AGRICULTURAL.

Stallion.—First prize, J. Martin, Littleport; second, H. Stanley, Bury St. Edmunds.

Entire three years old colt.—First prize, T. Briggs, Babraham; second, H. Cockle, Hilrow.

Entire two years old colt.—First prize, G. E. Daintree, Fenton; second, J. Martin.

Cart mare, not under four years old.—First prize, C. Ambrose, Stuntney; second, H. Lambert, Abington Park.

Mare and foal.—First prize, C. Ambrose; second, F. G. Robins, Isleham.

Two years old filly.—First prize, C. Ambrose; second, T. H. Vergette, Borough Fen, Peterborough.

Yearling colt or filly.—First prize, J. Coy, Decoy Farm, near Mildenhall; second, B. W. Grounds, jun., Whittlesey.

Plough team.—First prize, E. Staples, Exuing; second, J. Crisp, Stow-cum-Quy.

Dray horse.—First prize, T. Gardner; second, J. S. Nunn. Cart foal.—First prize, J. Martin; second, C. Ambrose.

Entire horse for agricultural purposes.—Prize, a cup, value £20, J. Martin.

RIDING AND COACHING.

Stallion calculated to get weight-carrying hunters.—Prize, T. Smith, Bansted Manor.

Hackney stallion.—First prize, W. Giddens, Walpole; second, C. Groucock, Newmarket.

Hackney mare or gelding.—First prize, W. Giddens; second, F. W. Lilley, Granchester.

Hunter of any age.—Prize, G. S. Hall, Ely.

Carriage horse, not entered for any other premium.—First prize, W. R. Cockle, Hilrow.

Hackney mare or gelding, not exceeding 15 hands high, not entered for any other premium.—Prize, T. Banyard, Horningsea.

Hackney mare or gelding, not exceeding 14 hands, not entered in premium 24.—A cup value £10, W. R. Cockle, Hilrow.

Riding cob, not exceeding 14 hands 2 inches, and not under 13 hands 2 inches.—Prize, F. W. Lilley, Granchester.

Pony under 13 hands 2 inches.—Prize, W. F. Saberton, Wilbulton.

Yearling colt or filly got by "Little Pippin."—Prize, H. Stanley, Bury St. Edmunds.

Thoroughbred mare and foal.—First prize, T. Jennings, Newmarket; second, S. Smith, Bansted Manor.

Thoroughbred stallion, calculated to get hunters, open to serve half-bred mares, within the limits of the Society.—Prize, Earl of Stamford and Warrington.

CATTLE.

Bull not exceeding two years.—First prize, Lord Braybrooke, Audley End; second, H. Porter, Haddenham.

Bull not exceeding one year.—First prize, Lady Pigot, Newmarket; second, T. Banyard, Horningsea.

Cow in calf or in milk.—First prize, T. Jennings, Newmarket; second, C. Ambrose, Stuntney.

Heifer not exceeding three years.—Prize, Lady Pigot.

Heifer not exceeding two years.—First prize, Lady Pigot; second, C. Ambrose.

Heifer not exceeding one year.—First prize, Lady Pigot; second, C. Daintree, Fenton.

Alderney and Guernsey cow in calf or in milk.—First prize, W. Gilbey, Hargrave Park; second, J. Dawson, Newmarket.

Shorthorn bull of any age.—Prize, C. Beart, Stow, Downham Market.

Best bull in the yard.—Prize, C. Beart.

Bull, cow, and offspring.—Prize, G. Jonas, Ickleton.

SHEEP.

Shearling Leicester or Lincoln ram.—First and second prizes, T. Gunnell, Milton.

Pen of five Leicester or Lincoln ram-lambs.—First prize, F. Allwood, Walsworth; second, F. Ellis, Chesterton.

Pen of five Leicester or Lincoln ewes, each certified to have brought up a lamb this year.—First prize, T. Gunnell; second, F. Allwood.

Pen of five shearling Leicester or Lincoln ewes.—First and second prizes, T. Gunnell.

Pen of five Leicester or Lincoln ewe-lambs.—First and second prizes, F. Ellis.

Shearling Southdown ram.—First and second prizes, Lord Braybrooke.

Pen of five Southdown ram-lambs.—Prize, F. M. Jonas, Chrishall Grange.

Pen of five Southdown ewes, each certified to have brought up a lamb this year.—First prize, F. M. Jonas; second, G. Jonas.

Pen of five shearling Southdown ewes.—First prize, G. Jonas; second, F. M. Jonas.

Pen of five Southdown ewe-lambs.—First prize, F. M. Jonas; second, G. Jonas.

Pen of five short-wooled fat shearling wethers.—Prize, G. Cooke, Horseheath Park.

Shearling short-wooled ram, not Southdown.—First prize, G. Cooke; second, F. Street, Bedford.

Pen of five short-wooled ram-lambs, not Southdowns.—First prize, G. Cooke; second, F. Street.

Pen of five short-wooled ewes, each certified to have brought up a lamb this year, not Southdown.—First prize, G. Cooke; second, F. Street.

Pen of five shearling short-wooled ewes, not Southdowns.—First prize, G. Cooke; second, F. Street.

Pen of five shortwooled ewe lambs, not Southdowns.—First prize, H. Lambert, Abington Park; second, G. Cooke.

Pen of five cross-bred lambs.—First prize, T. Rush, Babraham; second, W. Baker, Stapleford.

Pen of five half-bred fat shearling wethers.—First prize, W. J. Waters, Babraham.

Southdown ram.—First prize, Lord Braybrooke; second, G. Jonas, Ickleton.

Pen of five cross-bred or half-bred ewe lambs.—First prize, T. Rush, Babraham; second, R. Musk, Dullingham.

Pen of five cross-bred or half-bred ram lambs.—First prize, T. Rush, Babraham; second, W. Baker.

Blackfaced Suffolk ram.—First prize, J. M. Green, Stradishall Place.

Shearling blackfaced Suffolk ram.—First prize, J. M. Green; second, Lord G. Manners, M.P., Cheveley Park; third, W. S. Gardner, Moulton.

Pen of five shearling blackfaced Suffolk ewes.—First prize, Lord G. Manners, M.P.; second, W. S. Gardner; third, E. Staples, Exning.

Pen of five blackfaced Suffolk ewes, each certified to have brought up a lamb this year.—First prize, E. Staples; second, W. S. Gardner.

Pen of five blackfaced Suffolk ewe lambs.—First prize, H. Northern, Moulton; second, Lord G. Manners, M.P.

Pen of five blackfaced Suffolk ram lambs.—First prize, Lord G. Manners, M.P.; second, J. S. Green; third, H. Northern.

PIGS.

Boar, large breed.—First and second prizes, H. A. Kilham, Tydd St. Mary.

Boar, small breed.—First and second prizes, H. A. Kilham.

Sow, in pig or suckling, large breed.—First prize, H. A. Kilham.

Sow, in pig or suckling, small breed.—First prize, H. A. Kilham; second, J. P. Fison, Teversham.

Pen of three sow pigs, not six months old, large breed.—First prize, H. A. Kilham.

Pen of three sow pigs, not six months old, small breed.—First prize, H. A. Kilham.

IMPLEMENTS.

Collection of agricultural implements.—First prize, Ransomes, Sims, and Head, Orwell Works, Ipswich.

BUTTER.

Three pounds of butter, in single pounds, the exhibitor being an owner or occupier of land.—First prize, R. White, Soham; second, T. Jennings, Newmarket.

THE HORSE SHOW AT THE AGRICULTURAL HALL, ISLINGTON.

Those great judges of form, the tight-lacing young ladies who set about correcting nature's loveliest work, often find when they have nearly accomplished the feat, as Abernethy said, of getting the contents of a quart-pot into a pint, that Dame Nature starts for them a danger signal in the shape of a jolly red nose. Now we do not say the manager of the Agricultural Hall ever accomplished the quart-pot and pint feat, but he is evidently aware that nature must give way to art if too tightly pinched; and this year it was given out that he was going to start a danger signal—not a jolly nose, but a thermometer. This is a step in the right direction, as a thermometer is a correct reporter if not supplied with iced champagne, as then it might err, like some other reporters, who actually gave the credit of managing a horse show to one who acted the parts of bottle-holder, head-waiter, messenger, and cock chambermaid, and who knew as much about a horse show, and had as much to do with it, as Maria Martin or the Red Barn. But though we failed to find the thermometer, we found the hall as clean and as sweet as ever, and comparatively cool to the scorching heat in the paddock on Epsom Downs, and, to give the Secretary his due, everything was well done at "the greatest horse show in the world," which must be all the world to him, as we happen to have witnessed a few of the small ones, one where there were 450 stallions, including West Australian:

So have I heard on Africa's burning shore

Another lion give a grievous roar,

And the first lion thought the last a bore.

About ten o'clock we found Lord Waterford, Sir George Wombwell, and Colonel Luttrell, who acted for Mr. John Musters, who had met with an accident when trying a horse some days ago; while Mr. Phillips, of Knightsbridge, the well-known dealer, after being

an absentee for fifteen months through a broken leg from a kick, was to be seen supported by a couple of friends which he told us once did service for the Honourable Robert Grimston well-known in the Vale. Then Mr. A. H. Billington, who has three or four nice horses in the yard, has not quite recovered of an arm broken in two places and a severe kick on the ankle. With this we must conclude the chapter of accidents, although we nearly had another when Honeycomb, a well-known show nag, while cantering round the ring, stepped in a hole and came down plump on his rider's leg. "There's another fall in beef!" we ejaculated at the moment, which so startled an agricultural friend, deep in the morning paper, that with anxiety in his face, he cried "O drabbit it! You don't say so!" But we must return to the ring, where we find forms familiar to the eye, while some of the judges act so frequently that surely they give more than a fair share of these fanciful verdicts, which, after all, as Mr. Hawkius remarked of the evidence of the noble army of Carabineers when they had all been brought up and one after the other said on oath in confident tones, *That's him*, "My Lord, all this is but opinion after all," and with three or four facts the learned Q.C. routed the regiment." As one gallop across a fair hunting country for a cup or two at the end of the show season of each year would set at rest all differences of opinion as to which was the best of the show nags up to a certain weight, and keep an impostor fit for nothing but the ring out of it. Then there are bipeds who will enter where angels dare not tread, and who, when they see the orderly throng standing round, set the common decencies and rules of a horse show at defiance by trying to thrust themselves into the ring on the strength of knowing an official or a judge—as if they and only they knew an official or a judge. We put the great

men first for repulsing several and doing their duty. Barring numbers of nondescript animals, whose like we never wish to look upon again, the show of horses is good, for there are many deep-framed, good-ended, nice-limbed, free-stepping, hunting-like horses; a few for the ladies, and several for the youngsters, as well as a goodly lot of well made quick-stepping roadsters and fashionable grand-moving park hacks; while nearly all the prize horses of any note are among them, which go the round of the shows like a traveling circus, so that what you see at one place you meet with at another. Then there are roadster, but no thorough-bred stallions, harness horses in pairs and tandems, polo ponies, and people continually asking when the jumping will begin. Is it not lamentable that a few five-pound notes laid out to encourage owners of hacks to jump them, and a little water to make a splash, is a greater attraction to the cockney and paying multitude than the finest shaped horses that a thousand pounds in prizes will bring together? But how can we expect people to appreciate a hunter who never saw a hound?

It takes about three minutes to run the Derby course, and say at the outside a minute and a half to hoist the 1, 2, 3, while the six-and-twenty horses in the weight-carrying hunters up to not less than fifteen stone took the judges exactly two hours by the clock to place. The first is the compact, stout-built Palmerston, a great prize-taker last year, with limbs well placed, and a quick, sharp goer, but evidently not showing to his best in the Hall. The second, Iron King, is a rather soft-looking bay, but a useful horse with good action; while Chief Constable, a taker of several prizes as a four-year-old last year, was much fancied by many, and takes third honours. He has fixed a great deal, and now shows more of the blood of his sire, Theobald, a son of Stockwell, and makes good use of his iron-looking legs, bringing the hind ones well under him. Behind him is the lighter-made Grandmaster of Mr. Holmes; Lucifer, a fine powerful brown of Mr. Billington's; Waverley, a blood-like nag of Mr. Percival's; Earl Spencer's Emperor; Mr. Hayward's Sir Isaac Newton; Mr. Tattersall Musgrave's Honeycomb, often described in this paper; Mr. G. Bland's Conrad and Gem of the Peak. A half-bred stallion entered in the roadsters also figured in this class, and one year, at Birmingham, actually took a thorough-bred stallion prize, and again beat several more thorough-breds another year, but was disqualified as not to be found in the stud book. He never struck us as a thoroughbred, and is not the first half-bred that has carried off a thorough-bred stallion prize. The hunters without condition as to weight were a very good class, mustering over fifty, including the well-known Banker, who is now in his prime, and to whom we have always stuck to from a two-year-old. Then Iron King, a second prize in the weight carriers, takes the same honours here, but is disqualified because he has already taken a hunting prize, which let in Mr. Freeman Mill's well-known bloodlike chesnut Ruby, and a good goer; but as he does not give a satisfactory account of himself, Mr. Harvey Bayly's Newsmonger comes in for second honours, a horse which was second to Landmark at Malton one year, and now thickened into a compact clever-looking one, and as sound as the day he was foaled, and Digby Grand, a good moving, rather light-backed son of old Orpheus, for third honours, while Mr. Goodliffe's Marshal MacMahon, invincible as a two-year-old, takes the fourth place. Mr. Billington's Caradoc was much fancied by the judges. Mr. Jewison's Freddy was neat and could go, as could Major Chaplin's hog-maned Singalee, while Dolly Varden, of Wansford, looked like flying with a light weight; and Captain Heygate, a breeder of hunters, has in Sir Hercules a neat one that will bear

looking into, and will be sold at the Captain's fifth annual sale at Tattersall's on the 22nd June. Some of the others we noticed were the Earl of Rosebery's The Boy, Mr. Newcomen's Kismet, Mr. Battam's King of Trumps, Mr. Parry's Mrs. Borrodale, Mr. Sanday's Silvertail, Mr. Linnell's Czaravina, and Mr. Lepper's Calico. The four-year-old class was good, and mustered over thirty strong, headed by Cashier, a fine looking horse, and an oily goer of great character, who was afterwards awarded the Cup for the best hunter in all the classes; and darkness coming on, we had no time for a close inspection. Among the four-year-olds he beats was Prize-taker, a first prize three-year-old when he was nowhere; the Showman, a very good-looking one from Hull, not unknown in the ring, but which did not show so well in the saddle as when we have seen him lead at Driffild, Malton, Hull, &c. Nor had Lieut.-Colonel Barlow's Cornishman, a rather gentlemanly horse, got quite used to the saddle and the Hall, a horse we saw take prizes at Hull and Gainsborough last year. Mr. Mills' Reindeer and Captain Heygate's Constable were nice horses, and some more which we have not time to notice. The second four-year-old, Sedgwick, was light and shelly, and not much to look at. In the hunters under 15 hands 2in. out of the twenty-one or two there were a few nice ones, but the tug of war laid between Sir George Wombwell's Miss Sykes, a very bloodlike, handsome mare, and good goer, and Mr. Harvey Bayly's thick-set, nicely-built Enterprise, as strong as a tower, with grand action, and legs well under him, Sir George retired, and Lord Shannon took his place, the verdict being in favour of Enterprise, which was then not half shown in the covert hacks and roadsters not exceeding fifteen two, as he is a wonderfully fine trotter, and was beaten by Norma, a fast stepping cob, kept at her best pace the whole time. The third was Cori-ande, of good form and action; while Fibert, one of the neatest of cobs, with grand action, if not lasting, came in for a commendation. The tiding horses of any height, exceeding fifteen two, as a lot were poor. Iniskilliner could move well, and so could Brunette stylishly; while on Coomassie we should not like to risk a rather bald crown.

PRIZE LIST. JUDGES.

HUNTERS.

Lord Waterford.
Sir George Wombwell.
Colonel Luttrell.

RIDING HORSES.

The Marquis of Waterford.
The Earl of Shannon.
Sir George Wombwell.

COVER HACKS AND ROADSTERS.

Lord Shannon.
Colonel Kingscote.
Colonel Maude.

Weight carriers up to 15 stone.—First prize, £60, H. Jewison, Raisthorp, York (Palmerston); second, £30, R. Hutton, Gloucester-place (Iron King); third, £20, T. Harvey Bayly, Ollerton (Chief Constable).

Without condition as to weight.—First prize, £60, W. Armstrong, Kendal (The Banker); second, £25, T. Harvey D. Bayly (Newsmonger); third, £15, A. Kennard, May Fair (Digby Grand); fourth, £10, J. Goodliffe, Huntingdon (Marshal MacMahon).

Four years old.—First prize, £50, W. Armstrong (Cashier); second, £25, T. H. Ashton, Worcester (Sedgwick).

Not exceeding 15 hands 2 inches high.—First prize, £40, T. Harvey D. Bayly (Enterprise); second, £20,

Sir G. Wombwell (Miss Sykes). [Lord Shannon judged in this class.]

RIDING HORSES.

Exceeding 15 hands 2 inches high.—First prize, £20, G. Heavyside, Dublin Castle (Inniskillener); second, £10, Smith and Sanday, Nottingham (Brunette); third, £5, H.R.H. The Prince of Wales (Coomassie).

COVER HACKS AND ROADSTERS.

Not exceeding 15 hands 2 inches high.—First prize,

£20, R. E. D. Poucy, Kensington (Norma); second, £10, T. Harvey Bayly (Enterprise); third, £8, R. Nelson, Barton, York (Corisande). Commended: H. Frisby, Buckingham-gate, Filbert.

PARK HACKS AND LADIES HORSES.

Not exceeding 15 hands 2 inches high.—First prize, £20, Mrs. Frisby (Lady Adelaide); second, £10, Sir George Wombwell's (Miss Sykes); third, £5, A. C. Kennard, Eaton-place (Sunshine).

STOCK SALES.

SALE OF SHORTHORNS AT
BLISWORTH,

ON FRIDAY, MAY 22ND, 1874.

BY MR. THORNTON.

Blisworth is a convenient centre on the London and North Western Railway for the Northamptonshire and Warwickshire farmers; and as the Rev. John Storer's herd at Hellidon, near Daventry, some fourteen miles away, had outgrown the small farm, he sent forward three-and-twenty of his animals for sale at George Savage's farm, adjoining the canal, and scarcely five minutes' walk from the station. Mr. Waldo, whose herd in Kent is of somewhat similar blood, wishing to dispose of two or three tribes, contributed eleven head, and these, with three bulls from Mr. C. C. Dorner, and a few odd lots, mustered sufficient for a sale. The situation may have helped it; but doubtless the blood had more attraction, for we have not seen this year so large and influential a company as surrounded the ring at half-past one. Yorkshire was well represented by Mr. Booth, Mr. Pickersgill, and others; Lincoln, by Messrs. Dudding, Pears, Paddison, and Garlit; the Rev. Thomas Staniforth and Mr. Jacob Fair hailed with several others from Lancashire; while Cumberland and Northumberland had representatives; and Mr. Crosbie came from Ireland, and Mr. Deans and Mr. Easton from Scotland. Even distant Wales is now affording a home for the Shorthorn, and Mr. Pugh took one of the handsomest lots into Carmarthenshire.

The place is well adapted for a sale. There is a large, open straw-yard, surrounded with houses and loose-boxes, so that from fifty to sixty head could be well accommodated, and an adjoining field makes a good place for the ring, to say nothing of the easy delivery to the station, and absence of any town or crowded dwellings. The very thing, however, acts somewhat against the stock. The cattle we heard had been wisely put up there since Monday and Tuesday, but notwithstanding these things never will show in that bloom, or with that contented look, as in their own pastures and houses. The pedigrees read attractively; the catalogue opening with Anna 3rd (Rev. J. Storer), a large, good red and white cow, with a fine Shorthorn head and character. Although she had a very fair red yearling in the catalogue, lot 18, she laboured under the disadvantage of having calved at seven months, still looking fresh and healthy and unbullied; she went slowly along until Mr. Blackwell, of Nottinghamshire, secured her at 85 gs. Her heifer was the most attractive female, especially as her two sisters had made in 1872 respectively 105 and 190 gs. each. Moreover, she was unbullied, and, by the way, the unsatisfactory state of many of the lots had doubtless a damaging effect on the sale. After being put up at 100gs., Mr. Crosbie and Mr. Pickersgill finally opposed until the latter secured her at 170 gs. Lot 3, Coral, which also traced to a Warlabry tribe, had two or three objectionable crosses to

begin with; this, as well as her light-fleshed appearance, albeit she milked fairly too, and broken service prevented any strong bidding, and Mr. Edward Fawcett, who has a liking for the tribe, got her at 45 gs. He also bought her bull-calf by Knight of Knowlmere, a promising animal, at 36 gs.

The most numerous tribe was the Sockburn. This family having as ancient descent as any of the kingdom had passed through various hands before reaching Mr. Storer's. On Robert Colling's Lancaster (360) Mr. Bates implanted Belvedere (the "double blessing," as it is humorously termed), and Mr. Whitaker's Norfolk. The Rev. T. Cator added a little Tempest and Spencer blood, whilst Mr. Tounshend gave it a dose of Bates through Duke of Cambridge, and Mr. Storer is now applying the Booth portion. Fecundity must be naturally expected from such an admixture as well as diversity of character. Yet this was not apparent. March Duchess was a large massive square cow, somewhat palish in her red and white colour, but a fine animal nevertheless. Being recently bullied, and not having calved for two years previously, Mr. Wardle got her on the hazard at 45 gs. Rose Duchess was also good, although not of such scale as March Duchess. Neat as Earl of Rosedale may have been he is not the bull to impress size or grandeur. Even Rose Duchess had no live calf to show, and she sold very well at 72 gs. Queen Duchess 3rd has gone six months and came again, so that only 42 gs. could be got for her. The two next having calves by them were not in good order, and being young did not show well. They were the only two by Earl of Clare, and gave him little credit as a sire. They made 46gs. and 40gs. respectively. A nice heifer, Mileote Maid, of Mr. Adkin's old Diana tribe, sold slowly, but well, at 62 gs. (Mr. Gurney), and then probably came, next to Anna 7th, the pick of Mr. Storer's lot. This was Rennie Gwynne 2nd, a sweet nice roan heifer, bred by the late Mr. Caddy; after sharp 5 and 10 gs. bids she went at 130 gs. to Mr. Gibb, Canada, Mr. C. Williams being one of the last on. The yearling heifers sold well, and a little more spirit was thrown into the sale, Knowlmere Duchess, out of May Duchess, going at 65 gs. to Mr. Wardle; indeed he got the best of this Sockburn tribe.

Mr. Waldo's cattle were in better condition, having apparently been well done; the females were of two tribes. Lot 2 was bred by Messrs. Angus, a large massive cow, a little flat ribbed and plain in her quarters; not holding, she went very cheap at 39 gs. Her two heifers inherited their dam's defects, and coupled with it what the late Mr. Maynard described as a strong constitutioned nose; they accordingly made but low figures. The five Sweethearts were better; tracing from Mr. Tracy's branch of Sweetheart 3rd, they had the crosses of the Irish Baron, combining the Booth and Sylph blood of Baron of Rathcool, his son, and finally of Fitz-Hopewell, a capital sire, bred by Mr. Waldo from Fathom, of the Fame tribe, which was bought at Holmepierrepoint. Lot 9 was

an elegant good cow, but thin and fretted from her journey, and Mr. W. Garne got her a bargain at 60 gs. for the old Broadmoor pastures; while her heifer calf, certainly by Mr. Booth's King of Britain, ran up to within 4 gs. of her dam's price. Lot 14, Charming Bead, a very handsome heifer by Mr. Torr's Beadsmán, sold fairly well at 130 gs.; she was heavy in calf, and her more than half-sister, not so forward and perhaps a trifle plainer, was bought by Mr. Attenborough at 80 gs.

Of the bulls, Rosedale Favourite, out of the dam of the prize heifer Rosedale had been used at Hellidon; although neat, yet he lacked size, if he may be a good bull for a herd of large-framed pointy cows. Mr. Deans got him at a trifle over butchers' price (47gs.), whilst Rosedale Comet, a white, could only reach 40gs. Lot 27, Crown of the Realm, a very short-legged thick-fleshed bull, had some difficulty at times in breathing, and in consequence a reserve of 150gs. was put on him. This Mr. Pickersgill covered with 5, and the bull goes into Yorkshire at 155gs. Flower Duke caused some amusement by his ugly colour and big horns, although a useful, large, farmer's bull. Prince of the Roses, by Prince Christian from Warlaby, out of Rose of Eden, a 300gs. purchase at Beeston, did not show quite so well as he might have done, and was not so good in his fore-arm as we would expect from his blood. Messrs. Dudding and Pears joined on him, and he went reasonably at 110gs. The young bull-calves, although late in the season, sold fairly well, and brought the average to £46 14s. for the bulls. A few extra lots were sold afterwards. Raspberry, and her calf, of the Nonpareil tribe, went cheap enough at 76gs. the pair, and Mr. Fawcett re-purchased the Queen of Beauty at 53gs., which Mr. Longman bought at his sale last autumn for 50gs. Grand Patriot, a good roan bull of Mr. Oliver's breeding, goes into Wales at 71gs.

Taking the result of the sale, it appears that Mr. Storer's twenty-three head averaged within six shillings of 60 gs. each, and Mr. Waldo's eight shillings over £60. The five Sylphs, *alias* Sweethearts, made £78 6s. 7d. each, the eight Blanches £53 8s. 4d.; but taking into consideration their state and condition, this can hardly be looked upon as a just estimate. The sale all through was slow, and the biddings came forth reluctantly, although there was a company present sufficient to take three times the number at double the price. But this must always occur in a greater or less degree with draft sales away from home. Mr. Booth, of Warlaby, was in the chair at lunch.

SALE OF THE LATE MR. BLYTH'S SHORTHORN HERD,

AT WOOLHAMPTON, ON FRIDAY, JUNE 12TH, 1874.

BY MR. THORNTON.

It has been often said that a good bull leads to a pure herd, and it may justly apply to the Woolhampton herd. Ten years ago Tam o' Shanter (20930), own brother to Saraphina 13th and 15th, was bought at Mr. Lawford's sale at Southcott. He did good service among the dairy cows kept on the home farm, and was very useful to the tenants hard by. Some pure bred cows were soon afterwards bought, and gradually replaced the half-breeds and Alderneys, though one or two Guernseys were to be seen on the sale day. The establishment requiring good butter and cream for town was put in by way of apology for their appearance; but of this there was little need, for though the cows showed good udders, yet the calves running by their sides managed to empty them. Mr. Charles Barnett's herd supplied Old Water Wave 6th, Lot 3, a fine, deep old cow, very much of the old Yorkshire type, especially about the head and horns. She had bred a large family, and done good service

in the ten years she had been on the farm. The dispersion of Mr. Champion's herd at Calcot in the neighbourhood, one of the first herds, by-the-by, in the district, was the means of bringing a few more to Woolhampton. In 1865, however, several purchases were made at Mr. Fawcett's, of Childwick; Mr. Wells, of Redleaf (whence Lot 1 came, one of the finest cows in the sale); and from Mr. Bowly. Fair Lady, a 60 gs. purchase at the Siddington sale, gave so much satisfaction, that several others were bought privately from Mr. Bowly, and the catalogue of seventy-five head, contained no less than twenty-four lots descended from his herd. Three lots were also bought at Her Majesty's sale at Windsor, in 1867; among these were Lot 9, Ringlet, which Mr. W. Garne took at 35 gs., as well as most of her heifers, which were called Frogmores. One of them, however, Lot 19, a handsome red, Mr. Cope took into Ireland, at 50 gs., as well as the following lot, Melody 2nd, one of the best in the sale, at 65 gs. She was a large, massive, red, round-ribbed cow, down calving. Lot 6, Queen of the South, of Lord Ducie's Chaff tribe, was a calf purchase at Mr. Fawcett's; a useful cow herself, she had been a true and regular breeder, producing seven calves, four of which were in the catalogue. Three of them were purchased by Mr. King for Mr. Beuyon, M.P., at 50 gs., 40 gs., and 52 gs. respectively; but the last calf, a nice hairy roan, but thin, went to Mr. C. Stubbs, at 21 gs. Four years later, Fra Diavolo was selected at the Royal at Leicester, where he stood fourth as a yearling. Some good heifers were by him, whilst some of the younger ones had Snowball as sire. This bull was by Seventh Duke of York from British Lass, a cow of the Gazelle tribe. Lots 41 and 42, two capital yearlings, were fine samples of his get, and about the two best yearlings; the better bred (42) made a guinea less (56 gs.) than the better looking (41) lot, which went to Norwich. Last year it was intended to have a few more fashionably-bred animals. Duke of Kennet, bred by Mr. Sheldon, combining the Bates and Knightley blood, was the sire of the calves, and Knight of Geneva, of the Duchess and Blanche strains, had both been bought previously; but when Col. Towneley's sale took place two heifers were bought, Oxford's Duty, a red, and Grand Duke's Butterfly, of the Blanche tribe. Bull-calves had been dropped from each, but neither of the calves made great prices, not being in high condition. Oxford's Duty, with the bull Knight of Geneva, was reserved, with about eight or nine others, to keep up a herd at Woolhampton, but Grand Duke's Butterfly was sold. The blooming condition that the "Talleyrand of trainers" can put on had departed, consequently she dropped something over 50 gs. on her cost price. M. De Vitre bought her at 185 gs. Red Butterfly, bred by Mr. Attenboro, and bought at Whitley last year, returns to her old quarters at 100 gs. Many of the lots go into Somersetshire, Gloucestershire, Kent, and Sussex, two or three into Hampshire, Essex, and Oxfordshire, while several remain in the county, and it was singular that though many North Country breeders were present, none of the lots go due north. Looking at the cows, heifers, and calves in the park, there was nothing very striking in the herd. Even and uniform they were naturally enough, being by the same sires; but no lot was so very excellent as to specially attract notice. Two good red cows were noticeable, and Mr. Gorringe bought them both to go into Sussex. The fashionable lots were not cracks, though very good. Neither were they fat good, healthy condition was the rule; and the appearance of the heifers indicated that the calf flesh might have been better kept on. As to the arrangements they were excellent, and the field in which the luncheon tent and sale-ring were erected afforded one of those charming little bits of beautifully-wooded landscape scenery,

bounded by Kinglere in the distance, that only the South of England can show. Here and there in the park the coloury cattle, the bright red-bricked mansion, and noble trees formed a picture that if transferred to canvas might gain the eye-line in the Academy.

ANOTHER GREAT SALE OF AMERICAN SHORTHORNS.

TO THE EDITOR OF THE MARK LANE EXPRESS.

SIR,—What can possess breeders to become so anxious for that *peculiar* breed of the Duchesses, is to me strange and unaccountable, and I cannot help saying that it is of an idiotic character. This bad example was set in England by earls, nobility, and gentry, who were born with "*silver spoons in their mouths*," and who never knew the industry, perseverance, and sterling stability required to obtain wealth by the sweat of their brow, and hence became ignorant of the *true value* of money. With men placed in such a critical situation, their minds become stagnant without some hobby to ride, and when once adopted they are reckless in its support. If *pedigree* is a protection, then let the man sustain it. Pedigree in a nobleman is good, when nobly sustained; but when he becomes reckless with his purse to support fashion, where is his usefulness? Poverty and *high pedigree*, however fashionable, cannot go well together. So it is with the pedigree of Duchesses: view them in their pampered state of to-day, loaded with flesh to attract the novice; then look at them hence in their natural state, and what are they? Mark their pedigree, and what does it amount to? It will not sustain their constitution, for die they will. This pernicious example has been studied in this country. A nobleman's pedigree is ignored, title is squeezed at in the human race, and for this reason is transferred to cattle; they are honoured with Dukes and Duchesses; thus become fashionable, regardless of value or true merits. Such a position has rendered them a fictitious name and false fame, and when brought to the hammer, no matter whether the auctioneer is a swaggering prodigal, a chattering magpie, or a sound man of few words, the bidders are there with the money in their pockets, or an established credit, and they will have them at fabulous prices even if *they know they will die before they get them home*, and are aware that this family or tribe are constitutionally failing by pampering to hide their faults. With this erroneous system of speculation, these enticing titles will become extinct. I will not say much now on the cattle or sale, but send you the particulars from the *Chicago Times*; but I will say, the highest prices sold, and called "*Bates Duchesses*," showed plainly, in their heads, and black-tipped horns, the West Highland cross; while the slender waist, so general in all the Duchesses that were sold, was inherited from Duke bulls called *pure*. The general impression of the crowd was, that America needed the money much more than they did the 2d Duke of Hillhurst, and those who have suffered from the weak constitutions of the Duchesses were glad those animals were returning home, like the prodigal son, to die where their ancestors originated.

The Professor was there to represent the Agricultural College of Michigan. He is still of the opinion that he can drain swamps to the centre and ignore the outlets; and he still thinks that the Bates young bull he purchased at the New York Mills sale, with a light waist, large paunch, flat sides, long legs, and narrow brisket, is going to improve the College stock wonderfully, because he is fashionable, hence the improvement. Mr. Page was so much exhausted, that he was com-

elled to call Colonel Kid to his assistance in the midst of the sale. The Colonel is a favourite auctioneer in Kentucky, and has sold many of the best there. You will hear further from me on the Dukes and Duchesses.

W. H. SOTHAM.

Transit House, Stock Yards, Chicago, Ill.

Since writing you from Chicago there is some doubt whether the bull sold for fourteen thousand dollars will go to England. From the appearance and conduct of the purchaser, Mr. Geo. Robbins, the matter looks mysterious. This gentleman, the day previous, at Mr. C. C. Park's sale, made it known to many that he was commissioned to give twenty thousand dollars for the bull, therefore other breeders of the same tribe ran him up.

Detroit, Mich., May 25th.

The stock farm of Colonel William S. King, of Minneapolis Minn., has long been regarded as a model of its kind by the Shorthorn cattle-dealers of this country. Its owner has paid great attention to the breeding of blooded stock, and had acquired a herd second to none in America. It has been found, of late, necessary to abandon the principal portion of the pasture and meadow land for city purposes, and in consequence thereof Colonel King was compelled to dispose of his Lyndale herd, comprising 80 head of the choicest Shorthorn cows and bulls to be found in the market. This sale too, place at Dexter Park, beginning at 11 o'clock. It was the means of drawing together nearly 400 of the stock-fanciers of this country, and also was successful in attracting the attention of Shorthorn dealers in England and Canada, where the merits of the herd were perhaps more fully appreciated than here at home. The grand stand of the Dexter Park course was jammed with spectators and parties intent on purchasing the stock; and the quarter-stretch, which was partially reserved for the display of the animals, was crowded with stock men and others. The sale was beyond doubt one of the most noteworthy of the day. The sale began with the exhibition of the noted bull, Second Duke of Hillhurst, a Duchess animal, by the Sixth Duke of Geneva. He is less than three years old, is red and white, and a perfect model in build. The moment the auctioneer, Mr. John R. Page, of New York State, asked for an offer for the Duke, a gentleman in the crowd made the response, "Ten thousand dollars!" A buzz of excitement went about the grand stand, and amongst the bidders on the quarter-stretch, all of whom craned their necks to get a glimpse at the gentleman who had made so large an offer. He was a quiet-looking Englishman, with nothing in particular to individualise him above the hundreds of other stock men. The bid was then jumped to 12,000 dols., when a season of sparring in bids then occurred between the Englishman and Long John Wentworth, the latter fancy stock man desiring to possess himself of this bull. The bids went up gradually, 100 dols. at a time, until finally Long John found his limit reached at 13,900, and the little Englishman was awarded the sale at 14,000 dols. The purchaser is George R. Robbins, of London, England, who will take the bull to his country at an early day. It is the desire of the English Shorthorn fanciers and breeders to gather together all the Bates stock animals there are in America and get them back to England again, where they may hold the monopoly of this strain. Two or three calves by this famous bull, were also on the ground and disposed of during the day. The price at which the Duke was sold is the largest ever realised in America for a bull. The highest figure reached for bulls at the famous New York Mills sale was only 12,000 dols. A short time after the Duke of Hillhurst was knocked down to Mr. Robbins, his agent was offered 16,000 dols. for his bargain, but he would not accept the proffer, as he stated to parties, privately, that his principal was so anxious to secure the bull that he had instructed him to pay 20,000 dols. for him if he could not be obtained for less.

After disposition had been made of this bull the sale of the cows was begun and continued until the list was exhausted, after which the remainder of the bulls were taken up and disposed of. Bidding on the cows was quite spirited many of the animals bringing high and first-class prices. There was not a cow or heifer in the catalogue that sold for less than 200 dols., while several of them ran as high as 5,500 dols. A trio of Duchess heifers ranged from 2,100 dols. to

4,400 dols., while two heifers, less than two years old, and twins, realised 11,000 dols. from one gentleman afterwards, and while the sale was in progress a telegram was received, from a party in another state, offering 15,000 dols. for the same animals. Very spirited bidding was shown on a seven-months bull-calf, True Blue, by the Second Duke of Oneida, one of the most noted bulls of the country. Started at 1,000 dols., the bids ran up finally to 2,240 dols., and at that figure the little fellow was transferred to a new owner. Only four of the cows were withdrawn from the stand, Col. King asking permission to retire them on account of their being in an unfit condition for sale, and he not being willing to guarantee their breeding qualities.

COWS AND HEIFERS.

Garland, red and white, four years, bred by Lord Penrhyn, England.—T. J. McGibbon, Cynthiana, Ky., 2,100 dols.
 Hubbaks Garland, red and white, one and a half years, by Baron Hubback Second.—William Sandusky, Indianola, Ill., 2,100 dols.
 Grace, red and white, nine months, by Second Duke of Hillhurst.—S. W. Jacobs, West Liberty, Iowa, 1,115 dols.
 Gem of Lyndale, red and white, two years.—S. E. Ward, Kansas City, 1,850 dols.
 Peri Third, roan, five years.—A. W. Griswold, Morrisonville, Vt., 2,100 dols.
 Peri Second, of Lyndals, red, six months.—Avery and Murphy, Detroit, 2,500 dols.
 Peri Fourth, red and white, four and a half years.—T. J. McGibbon, 3,000 dols.
 Peri Fifth, red and white, one and a half years.—James Wadsworth, Genesee, N. Y., 4,000 dols.
 Bell Duchess, red, three and a half years, by Sixth Duke of Geneva.—James Wadsworth, 4,400 dols.
 Bell Duchess Second, red and white, two years, by Baron Hubback Second.—Ben. B. Groome, Winchester, Ky., 2,100 dols.
 Bell Duchess Third, red, two years, by Second Duke of Oneida.—T. J. McGibbon, 3,300 dols.
 Lyndale Wild Eyes, roan, bred in England, three years.—T. J. McGibbon, 5,000 dols.
 Star of Lyndale and calf, red and white, three years.—S. E. Ward, 1,850 dols.
 Scottish Lady, red, two and a half years.—S. W. Jacobs, 1,275 dols.
 Florence, roan, one and a half years.—D. M. Flynn, Booneville, Iowa, 1,700 dols.
 Sunshine, roan, five and a half years.—D. W. Wendell, Lincoln, Ill., 650 dols.
 Sunrise, roan, one and a half years.—A. W. Griswold, Morrisville, Vt., 1,025 dols.
 Sunflower, roan, four months.—Chas. Wadsworth, Genesee, N. Y., 800 dols.
 Second Lady Gwynne, red and white, five and a half years.—T. J. McGibbon, 1,500 dols.
 Medora Fourteenth, red roan, four years.—J. R. Craig, Edmundton, Canada, 1,300 dols.
 Oakwood Gwynne Second, roan, one year.—N. M. Curtis, Ogdensburgh, N. Y., 1,500 dols.
 Third Malvern Gwynne, roan.—T. J. McGibbon, Cynthiana, Ky., 3,000 dols.
 Miss Gwynne, roan, one year.—A. W. Griswold, Morrisville, Vt., 3,000 dols.
 Butterfly's Rose, roan, five years.—S. E. Ward, Kansas City, 1,025 dols.
 Butterfly's Gift, red, one and a half years.—S. E. Ward, Kansas City, 1,900 dols.
 Lucy Ann Twelfth, red and white.—John Nichols, Bloomington, Ill., 750 dols.
 Rosebud, red roan, two years.—S. W. Jacobs, West Liberty, Iowa, 500 dols.
 Lady Newham Third, and bull calf, red, six years.—S. E. Ward, Kansas City, 325 dols.
 Agnes, red and white, two and a half years.—S. E. Ward, 1,025 dols.
 Moselle Sixth, red, two years.—A. W. Griswold, Morrisville, Vt., 1,600 dols.
 Mazurka of Lyndale, red roan, five years.—S. Meredith and Son, Cambridge City, Ind., 1,525.
 Mazurka and Lyndale Third, red roan, one and three-fourths years.—J. H. Kissenger, Clarksville, Mo., 1,475 dols.

Mazurka of Lyndale Fourth, red, eight months.—John Nichols, Bloomington, Ill., 1,100 dols.
 Empress, roan, three and a-half years.—S. E. Ward, Kansas City, 800 dols.
 Lady Mary Fifth, red, two and three-fourths years.—General N. M. Curtis, Ogdensburgh, N. Y., 3,000 dols.
 Lady Clyde, roan, one and a-half years.—J. C. Jenkius, Petersburg, Ky., 900 dols.
 Lady Mary Seventh, roan; twin with Lady Mary Eighth, roan, 5,500 dols each.—Charles Wadsworth, Genesee, N. Y.
 Second Tube Rose of Brattleboro, red and white, seven years.—T. J. McGibbon, Cynthiana, Ky., 1,805 dols.
 Fifth Lady Sale of Brattleboro, roan, four and three-fourth years.—Charles Wadsworth, Genesee, N. Y., 2,000 dols.
 Sixth Lady Sale of Brattleboro, red and white, three years.—J. R. Craig, Edmundton, Canada, 900 dols.
 Eighth Lady Sale of Brattleboro, roan, two years, bred in England.—Charles Wadsworth, Genesee, N. Y., 1,600 dols.
 Roan Princess, roan, one and a half years.—D. M. Flynn, Booneville, Iowa, 1,600 dols.
 Rosa Bonheur Fifth, red and white, one and three-fourth years.—Gen. N. M. Curtis, Ogdensburgh, N. Y., 900 dols.
 Lilac, roan, eight years.—John Nichols, Bloomington, Ill., 330 dols.
 Prune, red, ten years.—J. Weaver, Oleana, Henderson County, Ill., 375 dols.
 Royal Oakland Beauty, red, four years.—Benjamin Sumner, Woodstock, Conn., 525 dols.
 British Maid, roan, two years, bred in England.—J. Weaver, Oleana, Ill., 200 dols.
 Mayflower, roan, bred in Ireland, five years.—E. L. Davidson, Springfield, Ky., 1,424 dols.
 June Flower, roan, two years.—J. G. Colter, Reesville, O., 1,225 dols.
 Pink Thorn Leaf, with bull calf, roan, nine years, bred in England.—E. L. Davidson, Springfield, Ky., 900 dols.
 Rose of Lyndale, red, two years.—J. G. Colter, Reesville, O., 650 dols.
 Mazurka Ninth, red roan, four years.—S. E. Ward, Kansas City, 700 dols.
 Miss Leslie, roan, six years.—Josiah Chorn, Towanda, Ill., 2,005 dols.
 Miss Leslie Napier, red, three years.—J. Chorn, Towanda, 2,015 dols.
 Constance of Lyndale Second, red, two and a-half years.—A. W. Griswold, Morrisville, Vt., 1,675 dols.
 Constance of Lyndale 3rd, roan, one and a-half years.—John R. Craig, Edmundton, Canada, 1,600 dols.
 Oakwood Gwynne, roan, two and a half years, was withdrawn, but afterwards sold at private sale.—C. C. Parks, Waukegan, 750 dols.
 Hope of Oakwood, red roan, two years.—D. M. Flynn, Booneville, Iowa, 600 dols.
 This last concluded the sale of cows and heifers, when the following bulls were brought into the arena and disposed of. The first-mentioned animal was the first one disposed of at the auction, before the cows were put up, but is placed here for classification:
 Second Duke of Hillhurst (12893), red and white, by Sixth Duke of Geneva, Duchess.—G. R. Robbins, Loudon, England, 14,000 dols.
 Lord of the Lake, roan, two and a half years.—C. A. Degraff, St. Paul, Minn., 500 dols.
 Emperor Booth (11915), red, three and a half years.—J. M. Colter, Reesville, O., 425 dols.
 Baron Hubback Second, red, bred in England, four years.—C. A. Degraff, St. Paul, 2,600 dols.
 Marquis of Oakwood, red roan, two years.—J. M. Kenyon, Fillmore, Mo., 560 dols.
 Sam, roan, one and a half years.—John Wentworth, Chicago, 500 dols.
 Second Baron of Oakwood, roan, one and a half years.—D. M. Flynn, Booneville, Iowa, 410 dols.
 Lord Bright Eyes, red, one year.—Charles Whittaker, Chelsea, Mich., 360 dols.
 Panic, white, one year.—D. M. Flynn, Booneville, Iowa, 300 dols.
 Peabody, roan, one year.—J. D. Downer, Marshalltown, Iowa, 190 dols.

Third Baron of Oakwood, roan, one year.—D. M. Flynn, Boonville, Iowa, 280 dols.
 Fourth Baron of Oakwood, white, one year.—H. Sherwood, Breedsville, Mich., 200 dols.
 Star, red and white, one year.—P. Stuart, for J. Wentworth, Chicago, 745 dols.
 Forrester, roan, one year.—Peter Stuart, Gibson City, Ill., 210 dols.
 Earl Gwynne, red and white, one year.—S. W. Jacobs, West Liberty, Iowa, 190 dols.
 Lord Carlisle, roan, nine months.—F. H. Mathews, Chicago, 210 dols.
 Patron, red and white, eight months.—P. Stuart, for John Wentworth, Chicago, 440 dols.

True Blue, red and white, seven months.—P. A. Cocc, Washburne, Ill., 2,340 dols.
 Patriot, red and white, six months.—R. C. Kelly, Peru, Ill., 200 dols.
 Prince Gwynne, roan, three months.—S. M. Thompson, Canton, Ill., 360 dols.

Cherry Prince, roan, by Second Duke of Oneida, one year, was not in the catalogue.—Emery Cobb, Kankakee, Ill., 505 dols.

There were, in all, 59 cows sold, aggregating 102,370 dols., making an average of about 1,735 dols. each. Twenty-one bulls were sold for 25,425 dols., averaging nearly 1,217 dols. each. The sum total of this sale was 127,795 dols.

THE ADULTERATION OF FOOD.

MILK, BUTTER, AND BREAD.

At the sitting of the Committee of the House of Commons appointed to inquire into the operation of the Adulteration Act, Dr. Voelcker, the analyst of the Royal Agricultural Society of England, was examined by Mr. C. S. Read, the chairman; when Dr. Voelcker said he was astonished to hear that anyone professing to be an analyst could have said, as Dr. Tidy was reported to have declared, that 33 per cent. of water could be added to milk without detection. There were variations in the qualities of milk certainly, but these were not great. The greatest variation in milk solids was from 10 to 14, but the usual variations—the natural ones—were from 10 to 12. But he would make no "standards," such as had been suggested by Dr. Tidy, below which he should decide milk to be adulterated. No such standard should be fixed in an analyst's mind, let alone in an Act of Parliament. To fix such a standard even at 10 per cent. would permit a dishonest tradesman to adulterate, while it would lead an honest tradesman to be fined for selling poor milk as pure; and milk would be poor in some seasons. Asked as to the difference between town and country milk, he said town milk was, as a rule, better than country milk, for the reason that some of the owners of town dairies knew how to keep up their cows better than some of the country owners. With regard to the operation of the Act on the milk supply, he considered that much good had been done by legislation, for better milk was to be obtained now than before. Milk was sometimes a little artificially coloured, but it was chiefly adulterated with water and by the abstraction of the cream. What was called "Australian" and "Dutch" butter was manufactured to a large extent. He had examined a sample of stuff sold as "Australian butter" at 7½d. a pound, and on inquiry he found it to consist largely of bone fat, this grease being extracted by the steaming of bones of animals. This was manufactured in England, and was most disagreeable to the taste and smell. The real Australian butter was good. The Dutch butter was better to the taste than English, but it was manufactured from American lard and some real butter. The American lard, a merchant had complained to him, was sent over from here to Dunkirk and came back as Dutch butter. Asked if genuine butter naturally varied, he said it varied less in composition than in quality, for the quality varied with the food of the cow. He was astonished at seeing that analysts had given decided statements as to the fats found in butter, as there were no decided tests. As to bread, before the Act the bakers used a "whitening powder," which contained alum, and this was followed by the sale of American flour, which was of the same character as the whitening powder. This practice was largely stopped by the Act. Rice used to be mixed with bread too. Potatoes were also used, but he should hardly call the use of potatoes an adulteration. He did not think sugar was adulterated, and as to the sugar "mites," there was no more to cause alarm in these than in the mites in cheese. He had seen many samples of mustard, but most were "mixed." As to cocoa, he could say the "prepared cocoa" was a mixture of starchy matter with the fat of the cocoa, but he thought this was done to make the cocoa more digestible. As to "pure cocoa," as the oil was to some extent extracted in this, it would come under the proposed extraction clauses. As to "prepared" corn flours, he could say they were chiefly of starch, but he considered starch an element of nutrition and

as food. With regard to the absence of gluten in these flours, he did not consider this as establishing anything against them, for wheat meal, which contained 12 per cent. of gluten, cost a great deal more than bean flour, which contained twice the quantity of gluten. The bran taken from wheat flour, containing a large quantity of gluten, might be looked upon, according to some views, as an adulteration; but as things were, the finer the flour the less gluten there was in it. If a man had to live exclusively on bread it would be better for him to eat brown bread, as containing more gluten, than upon white. Then, as to arrowroot, the starch contained in the corn flours was quite as nutritious as arrowroot, which was costlier. As to beer, he did not know of any decided adulteration of beer now. All wines were mixed, and one might look in vain for a pure vintage of foreign wines. Some wines were more fortified than others, especially port and sheries; but as to claret, the cheaper this was the more likelihood there was of getting it less mixed. The higher classes of clarets were largely mixed. As to "British wines," they were mixed; but he had not found anything injurious in them, except when they were young, when they would cause headache. As to French brandy, much of this as imported from France was nothing but beetroot spirit, and so coloured and flavoured that it would puzzle a chemist to discover the cheat. Some spirits were adulterated with "fusil oil" (potato spirit), which was extremely injurious. He was astonished to hear that Dr. Tidy said most vinegar was adulterated wholly. The large quantity of vinegar sold from malt; but some pickling vinegars were in many cases adulterated with acetic acid. Summarising his views on adulteration, he said that cattle foods and articles used by the agriculturists were far more adulterated than human food. He thought, too, that much wrong had been done by the so-called food analysts, and he supported the idea that there should be a court of appeal against the statements of analysts. He thought it could not be allowed that "colouring" or "facing" of tea should be recognised as lawful, as this would be opening the door to every adulteration. He would not, however, have considered 1½ per cent. of facing an adulteration. Asked who would be the best judge of tea, a dealer of experience or an "average analytical chemist," he held that an analyst could do very little in regard to tea, as it was a matter more of quality than anything else. As to the judgment of the "average analysts," he thought this should be open to question; many of them, who were hastily appointed after the passing of the Act, had had to learn their business, and many of them had not even now had a sufficient training to enable them to be judges of fact in food analyses. Some of their statements in evidence had been very flippant and unwarrentable, and they had done harm by rendering the Act obnoxious to honest men, who had been wronged by analysts' statements founded on a want of knowledge. The witness referred to the statement of the "wholesale examinations" (many thousands in a brief period) described by Dr. Tidy as having been made by him, and said that this was not the way that analyses should be made, for it was impossible from the number made, to take every case carefully and thoroughly examine every sample with all the *minutiae* necessary to arrive at the truth. This could not be done in a wholesale or hasty way. He did not think that tea was adulterated in this country, and he thought the sale of

adulterated tea would come to an end here if all such teas were stopped at the Customs. He had not found any decidedly adulterated tea.

Examined by Mr. WELBY, the witness objected to seeing certificates, especially his own, on tradesmen's goods; for, he said, he had known a certificate given on a good sample to be attached to an adulterated article. In reply to Mr. HEYGATE, he said that much of the champagne was made from something else than grape, and though he could not say that what it was made of was positively injurious, yet it had disagreeable effects. As to "improvers" going about the country offering to "doctor" or improve articles, as deposed by Mr. W. Jackson, the witness thought this was possible, but not probable, and that such persons had very little practice. The witness thought that many of the local analysts were incompetent, and that it would be far better to have fewer analysts, more highly paid, by salaries, and that the appointments should be taken out of the hands of local authorities. In reply to Sir HENRY PEEK, he said he thought there should be a laboratory at Somerset-house to give the means of judging the analysts' analyses. He looked upon damaged tea when used to mix with other tea and sold as pure as an adulteration. He did not know that it was necessary to "face" tea to make it bear the voyage. He could not say—either in agreement or disagreement with Dr. Allen of Sheffield—whether when there was 69 per cent. of insoluble matter found in tea the tea contained exhausted leaves. In reply to Mr. SANDFORD, the witness said that his meaning of not having any standard was that he would have every case decided on its merits. Though he knew that the facing of the tea was practised to make the tea appear better, yet he did not think it was morally an adulteration, because it was generally understood that tea was faced, just as it was known there was colour in butter and cheese; but in these cases the working man ate his butter and cheese and did not think about it. As to the facing of green tea being required to enable it to bear the voyage, black tea bore the voyage and was not faced. The examination of the witness by Mr. CARPENTER GARNIER turned upon "condensed milk," and this, he said, was mixed with sugar; and the butter was taken from it, as the preparation would not otherwise keep. He did not consider this an adulteration. In reply to Dr. BRADY, he said he thought the facing of tea was not a necessary process. In reply to Viscount BARRINGTON, the witness said that butter being an animal fat it was hard to distinguish it from other animal fats. Asked as to the composition known in London under the name of "Normandy butter," he said he did not know the particular composition under this name, but there was a French "butter" which was altogether an artificial composition, in which there was no butter whatever. One of these butters he had seen, which was fair tasting, but it was only composed of lard, dripping, and "kitchen stuff," coloured with annatto. In reply to Mr. MUNTZ, the witness said that he had found that if cows were fed on too much sewage grass it would prove injurious to the cow and affect the milk to some extent, but this would only be from the cow having too much watery food, and there was nothing in sewage grass in itself injurious, but the milk of such a cow would be injurious to a child.

ADULTERATED BUTTER.—When butter is mixed with tallow, it may be usually detected by melting a little of the butter in a spoon, and smelling it, when the smell of the tallow may be at once perceived. Another way to learn whether the substance has been added is to melt a small piece of butter at a heat not exceeding that of boiling water, and pour it into a wine-glass. Then immediately pour over it two fluid drachms of commercial nitric acid (aqua fortis), and shake them slightly. If the butter employed was pure, it will rise to the surface, and not become opaque for some minutes; but if it contains much tallow, it will quickly become a more or less opaque white mass, the nature of the change, and the time required, depending on the amount of fat present in the adulterated article. Sometimes butter is adulterated with horse-bone oil. In this case, the butter is to be shaken up with hot water, until melted, and allowed to collect upon the surface. Remove five drops of this, and place them on a watch-glass, and immediately add ten drops of strong sulphuric acid. If the butter has been adulterated with horse-bone oil, a deeper colour will be produced than if the butter did not contain that substance.—*Cassell*.

AGRICULTURAL LAW CASE.

THE MANURE TRADE IN THE WEST.

In the full Court of Exchequer, their lordships gave judgment in the case of the Western Counties and General Manure Company (Limited) v. Lawes' Chemical Manure Company, which had been argued before them a few days previously. The action came on in the nature of a special case, the plaintiffs being a firm of manufacturers of artificial manure at Plymouth, where they carry on an extensive business, and also amongst the farmers of Devonshire and Cornwall; and their allegation is that the defendants, who are in the same line, printed and circulated a trade circular which was tantamount to a false and malicious libel concerning the plaintiffs in the way of their trade and business as artificial manure manufacturers. It was in the form of a letter dated January 27th, 1873, written by Professor Anderson, of the Chemical Department of Glasgow University, to Mr. Moon, then secretary of the Devon and Cornwall Chamber of Agriculture at Plymouth, and contained this passage:

"I inclose herewith your four samples of artificial manure, which I must say differ very much in quality. They are all mixtures, and do not consist of bones and acid alone. . . . No 2" (meaning the defendants' artificial manure) "is much the best, and seems to contain some kind of phosphate. . . . No. 4" (meaning the plaintiffs' artificial manure) "appears to contain a considerable quantity of coprolites, and is altogether an article of low quality, and ought to be the cheapest of the four samples. . . . I know places where No. 2" (meaning the defendants' manure) "would be sold at about £8 per ton, and No. 4" (the plaintiffs') "at £5 and not more."

The plaintiffs alleged that in consequence of this libel, as they termed it, several influential farmers in Devonshire and Cornwall, who formerly purchased large quantities of their manure, ceased dealing with them. The damages were laid at £2,000. The defendants denied the allegation in plaintiffs' declaration, and the plaintiffs entered a demurrer to that plea; and that the latter was no answer to the action.

Mr. Charles Bowen, the counsel for the defendants, contended at some length that the statements contained in the circular were not tantamount in law to a libel; but Mr. Arthur Charles, for the other side, argued in support of the demurrer.

On the suggestion of Baron Bramwell, who was one of the judges before whom the arguments were heard, the case was adjourned to give the plaintiffs an opportunity of modifying their declaration; but as the recommendation of his lordship had not been acted upon,

The Court now gave its decision, which was that the words complained of were calculated to injure the plaintiffs in their trade and business as manufacturers of artificial manure, and consequently that they were libellous. Judgment would therefore be entered for the plaintiffs.

SALE OF MR. MILWARD'S PONIES AT TATTERSALL'S, ON MONDAY, JUNE 1.—Renira, 14.2½, Mr. Ridler, 155 gs.; Creswell, 14.1½, Mr. Padwick, 120 gs.; Isabay, 14.2, Mr. Dalgetty, 90 gs.; Lady Constance, 14.1½, Mr. Padwick, 95 gs.; Miss Chatty, 14.1½, Mr. Ridler, 250 gs.; Lady Nora, 14.2, Mr. Irving, 130 gs.; The Black Swan, 14.2, Mr. Machell, 125 gs.; The Maid of Sker, 14.1½, Mr. Padwick, 80 gs.; Truda, bay, 14.1½, Mr. Padwick, 50 gs.; Selina, bay, 14.2, Mr. Ridler, 50 gs.; Thorgou, 14.0½, Mr. Padwick, 85 gs.; Seeta, brown, 13.3, Mr. Machell, 200 gs.; Tardiff, 14.1½, Mr. Atkins, 71 gs.; Ombrá, 13.3, Mr. Padwick, 51 gs.; Penderell, 13.3, Mr. Lloyd, 55 gs.; Queen May, 13.3, Mr. MacKinlay, 65 gs.; Clodia, 14, Mr. Taylor, 55 gs.; Lonsdale, 14.1½, Mr. Miles, 56 gs. Also four hacks: Nella, 15.1½, Mr. Candy, 97 gs.; Armyuel, 15, Mr. Hutton, 40 gs.; Princess Thyra, 14.3, Mr. Rice, 58 gs.; Home Rule, 14.3, Marquis of Headfort, 120 gs. This at 95½ gs. is the highest average the Thurgarton ponies have ever made, as Miss Chatty, at the extraordinary price of 250 gs. is, of course, the top figure ever realised. Mr. Milward is riding this mare at Hull during the Royal Show.

EAST LOTHIAN AGRICULTURAL CLUB.

LOCAL TAXATION.

At the monthly meeting held in the hall at Haddington, Mr. Charles Smith, factor, Whittingham, presiding, Mr. Gaukroger, Southfield, being vice-chairman, Mr. Robertson, New Mains, opened the debate on The Effect of Local Taxation on Agricultural Tenants.

Mr. ROBERTSON said: The subject before us is local taxation, its effects upon the agricultural tenant. The different local Acts which most directly bear upon tenants of land are the Poor-law Act which was passed in 1815, with its after-progeny, if I might be so allowed to term them, that is, the Registration Act, Lunacy Act, and Burial Grounds Act. All these are generally wrought by one hoard, although under separate heads. The Poor-law has lately got a grandchild in the Education (Scotland) Act of 1872, which is as yet but a mere child, not almost in any case having arrived at maturity. The modes of raising of money for the different purposes of these are based upon one and the same principle, namely, one half being from proprietors, the other half from tenants and occupiers. Agricultural leases in Scotland are generally for a tenure of nineteen years. Many leases consequently at the passing, or when these Acts became law, had a considerable period still to run. Consequently the agricultural tenant is particularly interested under an existing contract that he pays no more than his proportion of these different assessments along with others. It must, however, appear evident that the agricultural tenant pays in all cases more than a fair proportion. This arises to a certain extent from a want of fair representation at the Poor-law Board, from which emanates the mode of assessment under which all monies are levied under the different Acts formerly stated. The Act provides that the proprietors of lands and heritages of the annual value of £20 and upwards are entitled to sit and act at the board meetings, while the tenant farmers are only represented through a very limited number of elected members, which prevents any motion being carried as to classification for which the Act provides, any concessions in that way being opposed to the interests of small heritages, who are in general so numerously represented at board meetings in the event of any question being raised to affect their interests. Let us look at the case of an agricultural tenant paying on a thousand a year 6d. a pound, which will give the sum of £25 a year. Then the case of a mercantile man renting premises at a hundred a year pays £2 10s., who, in the majority of cases, has as great an interest, and is in as lucrative a position, and in nine cases out of ten earning a larger income than the tenant-farmer. Also, look at the proprietor paying upon his twenty pounds rent his 10s. a year, who is entitled to sit and act as a member of that board, while the tenant-farmer, paying his £25 a year, is only represented through a very limited number of elected members; and, if a classification is got it is only to the extent of one-half, or one-third at the very most, where I hold in justice one-tenth would be nearer the mark. What I consider should be the mode from which to draw assessments for the purposes of these different Acts is, that proprietors of lands and heritages and occupiers of heritages, should be charged upon their gross rental, while tenants and occupiers of land should be charged upon one-fifth of their gross rental, and that tenants and occupiers of land and heritages, paying rates upon £50 a year and upwards, should have a right to sit and act as members of that board, in the same manner as proprietors of lands and heritages of £20 a year and upwards have at present, and that there be no division as at present, but the rates be collected *in cumulo*. Land under lease I hold to be only the raw material from which we manufacture our goods, consequently, we are no more entitled to be assessed upon it in the gross than is the manufacturer of woollen cloth to be assessed upon his wool, or the merchant upon his goods—these being the raw material from which they derive their profit, in like manner as the tenant derives his profit from the land. The recent Education Act bears very heavily upon the tenant farmer in so far as when they are united to a burgh, the landward part of the parish paying, in many cases, two-thirds of the assessment, while the benefits or number of pupils

attending schools will not be more than a fifth of the proportion from burghs, and the landward part of the parish is powerless, from the limited number of parties to vote or represent their interests when brought in contract with burghs; also I hold under this Act, proprietors of land or heritages were unjustly relieved, from erecting the buildings for the purposes of education, and have been allowed to pocket what was public property. The Haddingtonshire Road Act of 1863 is the only other local Act of 1873 is the only other local Act which affects the agricultural tenant in this county. This Act I hold to be a step in the right direction, and consider it an advantage in its present state even to the old system of tolls. Only it appears to me something was neglected in the present state of the county. This county being surrounded by toll bars in other counties, I hold that we ought to have a cordon of toll bars around the county, to prevent other counties using our roads without paying for them, and that check-books could be furnished to all parties paying road rates within this county to allow such to pass toll-free, and that landlords should pay one-third more of assessment than they at present do, to pay equal with the tenant; as the present rates are quite inadequate to keep the roads in proper repair from the great rise in the labour market, and upon all material used for the purpose of repairing the roads. I observe that a bill for the abolition of tolls in Mid-Lothian was brought into Parliament, and among other provisions which I quite approve of the proprietors purpose paying the whole assessments for the maintenance of the roads. They are, however, cute enough not to overlook the tenant-farmers under existing leases. This I hold to be quite just, but you will find in all late enactments by Parliament no such provision is ever made in levying any new assessment for local purposes as to exempt tenant-farmers under existing leases. Take the Poor-law Act, the Registration Act, the Lunacy Act, and last, though not least objectionable, the Education (Scotland) Act. These statements will, I have no doubt, not meet the views of many I see around this table, but may be the means of drawing the attention of others to the subject who are better qualified than I am to deal with the different points. In conclusion, before I sit down, I beg to put a motion—"That a committee of five members be appointed to endeavour to remedy any of these excess charges, and to watch over the interests of the tenant-farmers should any legislative enactment be brought before Parliament affecting their interest, with power to add to their number."

Mr. HARVEY (Whittingham Mains) said Mr. Robertson made no reference to the gum tax and the dog tax—two abominable imposts.

The CHAIRMAN: These are scarcely local taxes.

Mr. HARVEY: They have a local bearing certainly.

Mr. DURIE (Barney Mains) said several of the taxes referred to were more national than local taxes, therefore it was doubtful if they came within the scope of the subject for discussion. He quite agreed with Mr. Robertson about the roads, excepting the border tolls: he did not approve of them. Every other county that passed a road bill, got the landlords to pay half the maintenance of the roads, but in East Lothian the proprietors only paid a third, while the tenants paid two-thirds. One scandalous tax, and it was strictly a local tax, was the Haddington Customs. It was surely absurd of any town council or town's authorities charging the public for coming in from the country to keep the town alive. If they got the town custom abolished, and got the landlords to pay one-half the cost of maintaining the roads, he thought they would have little cause of complaint on the score of local taxation.

Mr. PATON (Standingstones) thought of all the taxes they had in that locality the Haddington Customs were the most absurd. In imposing such taxes he thought the townspeople stood in their own light. Only the other day he sent a straw-cutter in a cart to Haddington in the morning to get repaired. He was then charged 4d. for the cart. Being pressed for it at home he sent for it the same afternoon; he had again to pay 4d. That certainly was far from encouraging

trade, for he would rather send anything else of the kind anywhere than to Haddington, just on account of those petty, irritating charges. Street manure, or any manure manufactured in the town, is charged at the rate of a halfpenny per cartload passing along the street, and guano, or any pure article of manure, is charged the same, but dissolved bones and other manufactured artificial manures are charged at the rate of fourpence per load. One day lately he sent down two carts for nitrate of soda—a pure manure—and fourpence per cart was charged. He maintained, however, that nitrate of soda, being a pure manure, came under the same category as guano, and only paid a halfpenny per cart, adding that he would at once pay more, if his liability could be established. Those were one or two of the examples of the irritating nature of the customs, and of the darkness, so to speak, which still overhung the town of Haddington.

Mr. SMITH (Stevenson Mains) said the farmers had paid too much all along under the Poor-law Act, the assessments in connection with which were no doubt meant to be a tax on the means and substance of the people. Many thought the laud ought to bear the burden of the poor. Be that as it may, there was no question the farmers had not been properly represented at those local boards—and certainly they never had been represented in Parliament as they ought to have been long ago. If the landlords had looked better after their own interests by looking more to the tenant's, they would have had more power in the House of Commons at the present time. But the commercial interest, the railway interest, and other interests had assumed greater power in the House of Commons than they would have done had the landlords at the outset taken on themselves the legitimate burdens on the land, thus carrying the tenant along with them, and making a more powerful agricultural representation than they had just now. A great deal of the taxation of the country came out of the tenants' pockets. They were taxed on an uncertain income. Many thousands of pounds were put into the soil, and in a measure lost by the tenantry of Scotland; yet under the Poor-law Act they paid 6d. about with the landlord. The income-tax was a very hard one on the farmer. The farmers were taxed on their rentals whether it was income or not. Of course they could get certain deductions by keeping very correct books and record of all their transactions, and showing these. The road tax in that county was certainly unfairly divided as between landlord and tenant. If the tenantry were better represented in the House of Commons, which they would be soon, such questions would be better adjusted and attended to in the future. As regards the Education Act, the farmer was nominally much the same after as before its passing, though actually he will have more to pay. Though many of the landlords did not exact it, the proprietors had the power before of making the tenants pay half the cost of education, and that was all they had still to do. Only under the new Act the landlord, he supposed, could compel the tenant to pay half the cost of schools building, which could not have been done before.

Mr. SHIRREFF (Saltcoats) endorsed generally what Mr. Smith had said. The education rates and suchlike he thought were more imperial than local rates. One purely local rate, however, had not yet been touched on—viz., the addition of 2½ per cent. to the fairs in East Lothian. They lived now in the days of free trade, and the augmentation to the fairs in question was a very old impost. In his part of the county they had little to complain of in the form of local taxation. Their poor rates were only 3½d. per £. Their road rate was similar, and their school rate was 3d. per £. A readjustment of some of these taxes was worthy of the consideration of Parliament. For instance, many labouring people, who worked perhaps in his parish, had their houses or settlement in the parish of Haddington, and when they required alms they became chargeable on that parish, in which perhaps they had worked very little.

The CHAIRMAN said Mr. Robertson opened the discussion creditably, though he seemed to be under a misapprehension as to the effect of different representation in the parochial boards on the arrangement of the assessment as between landlord and tenant. The proportion of the Poor-law assessment, as payable between landlords and tenants, was fixed by Act of Parliament. More tenant-farmers, therefore, in the administration of affairs would only affect the classification of the assessments between tenant and tenant, so to speak, as between tenants of lands and those of houses. A majority of the Board

either way cannot affect the proportion payable as between landlord and tenant. Tenants paid nothing under the Lunacy Act. [A Voice: "They do."] The Chairman: They pay under the Poor-law Act and Administration for Pauper Lunatics, but he had yet to learn that they paid under the Lunacy Act. As regards the question of what was local taxation and what was not, there seemed to be some diversity of opinion. He thought all taxation which was under local administration might be called local. The tenants had nothing to complain of in the recent change made by the Education Act, for previously they were liable—and some had to pay it—for one-half the expense of education, and in reference to representation the greatest reformer could surely desire no more sweeping change than the new Act had produced. The landlords paid the half of the assessment, and had no prior claim to be put on the administrative boards. The landlords might be elected or not, as the farmers and other electors chose. If there was anything which formed reasonable cause of complaint, it might be regarded as the road rate. It was explainable, however. Formerly the farmers paid all the statute labour rates, and the landlords had only the toll charges to pay on the turnpikes, like the other members of the public. The arrangement, therefore, that the tenants pay two-thirds and the landlords only one third of the maintenance of the roads, was not so unreasonable in the circumstances of the county, though times may have changed sufficiently now to induce matters to be looked at from a different point of view. The time may have arrived for a readjustment of the existing arrangement, and in order to put the roads in a good state of repair, it might be well to consider whether the landlord's payment should not be equalled to the tenant's present contribution. (Hear, hear.)

Mr. ROBERTSON said that most of the hits at his views had in his opinion been unsuccessful. The landlords, with the parish minister, had raised the parish schoolmaster's salary from £35 to £70 without the tenant having a single voice in the matter. Though formerly the education rate was not generally exacted from the tenants, those farmers who had to pay it had not a single representative at the Board, and the landlords doubled the salary of the teachers, many of whom were old men and were now, when the burden came on the tenantry, retiring on handsome allowances, the ratepayers having to provide proper teaching machinery over and above. (Hear, hear.) No man could gainsay his argument that hitherto the tenantry of Scotland had been unfairly dealt with under several of the Acts referred to. Why, in the Poor-law administration they were completely swamped by the owners of small properties.

Mr. SHIRREFF wished to know if Mr. Robertson was aware of the position of the farmer in all those matters when he took his farm?

Mr. ROBERTSON: I was not aware of the Education Act.

The CHAIRMAN remarked that if the different representation in the management of schools occasioned by the new act had increased the burdens so much, it certainly was not an argument in favour of popular management or representation.

Mr. HARVEY considered pauper lunatics a great burden on the parish and the farmer. In the parish of Whittingham they had four pauper lunatics, who cost £150 a year.

Mr. ELDER, to show the state in which the present school boards got some parishes, adduced the case of the parish of Morham. There, the landlord left matters in a very awkward position. The school-room was scarcely fit to keep a pig in for the last twenty years, and the school-house would not be considered good enough for a pauper. The landlord had at length resolved to go on with new buildings. Accordingly, plans had been prepared, and estimates for the erection of new buildings accepted, when, after all, the proprietor backed out as the Education Act made its appearance, and left the parish to provide a school and buildings for itself. The tenantry and the parish had now to do what should have been accomplished twenty years ago.

Mr. DOUGLAS (Athelstaneford) had no intention of speaking on the subject under discussion; but he was so much pleased with the discussion that he would offer a few remarks. The discussion had taken quite as much of a legislative turn as a local, but he thought the Club might benefit very much by remarks on such general subjects as it would on what might, strictly speaking, be termed local taxation. He thought the town of Haddington erred very much in exacting the charges it did from the farmers. The town depended much

more on the country than the country did on the town. The farmers, it should be remembered, had other means of disposing of their produce. They had the metropolitan market in Edinburgh within easy access by rail. There was no doubt the Poor-law bore heavily on the tenantry of Scotland, and the lunatics were a very heavy charge on the tenantry. As long as the world lasted there would always be poor upon the land, and he thought the land should support the poor. The tenantry should have nothing to do with maintaining the poor, because they paid full market value for the land, so that those rates that were enacted in addition were exigencies over and above the market or commercial value of the land. Then the Education Act compelled tenant farmers to pay for the education of other people's children. Well, the farmers did very well if they educated their own children, but they were taxed to pay for the education it might be of the children of labourers, the full marketable value of whose services they had previously paid. He thought that was an unreasonable thing. The farmers were pinched to pay labourers the high marketable value of their services, and yet after all were liable to be taxed for the education of those very men's families. He did not think the gun-tax was

such an obnoxious thing as Mr. Harvey would have them believe. It had done good in preventing the carrying of guns and fire-arms by idle people, and altogether he thought it was not a bad tax. The agricultural or farming interest had never been properly represented in the House of Commons. That was the cause of the legislation being, as many of them complained it was, unfair to the farmer. There were only some three or four actual representatives of the tenant-farmers in the House. They must have a great many more. It had been said suitable representatives could not spare the time or bear the expense. He did not think there would be much difficulty in getting men to represent the agricultural interest properly if the counties only set about it; but though a little contribution was necessary, he was sure there would be many of the farmers ready to subscribe. There was no radicalism about such a proposal. The farmers were entitled to be fairly and fully represented. If they were things would be better balanced.

After some further discussion, Mr. ROBERTSON withdrew his motion for the appointment of a committee until any bill affecting their interests was before Parliament.

THE MIDLAND FARMERS' CLUB.

THIN SEEDING.

At the last meeting at the Great Western Hotel, in Birmingham, the Earl of Yarmouth, M.P., the President, in the chair,

Major HALLETT read a paper on Thin Seeding and the Selection of Seeds, in which wheat was first spoken of, and the process of tillering—the great characteristic of all the cereals, described. At the Exeter meeting of the British Association, he exhibited three plants of wheat, barley, and oats, each from a single grain, with the following: wheat, 94 stems; barley, 110 stems; oats, 87 stems. A plant of wheat required space for full development, and, therefore, time to fill that space. It was evident that the proper space and time to allow to each grain were those which, while sufficient for full development, left no ground unoccupied at harvest. Such proper time must, it was plain, be much earlier than when wheat was planted so thickly that tillering could not take place. In reference to the time of sowing, the rate of wheat growth during the different months must be considered, and the best measure of this was the time it takes to come up. Wheat sown on 1st of September comes up in seven days. In a mild autumn wheat sown on the 1st of October comes up in fourteen days; on the 1st of November in twenty-one days; and on the 1st of December in twenty-eight days. Assuming this to be the rate of wheat growth when it is up, then that which was up on the 1st of September made in the first fifteen days of that month a growth equal to that of the whole month of October; in the next ten days a growth equal to that of whole of November; and in the last five days of September a growth equal to that of the first twenty days of December; or, in other words, wheat up on the 1st of September, compared with that up on the 1st of October, had exactly a double autumn for growth before the winter set in. In determining the space to be assigned to each grain, they must deal with seed the result of continuous selection, for the vital powers of the different grains of ordinary wheat are so very unequal that it would be impossible to fix upon any uniform distance. In planting grains of wheat in August, singly, and 12in. apart each way, all the requisite conditions of time and space seemed to be best fulfilled. He had known wheat planted on September the 9th, 9in. by 9in., to produce at the rate of 108 bushels per acre. It was a matter for the maturest study and judgment to correctly apportion the quantity of seed to the time of sowing and to all the existing surrounding circumstances. As a general basis he would suggest on a large scale the drilling of wheat as follows: End of August to 10th September, two or three gallons per acre; for each week later, to the end of September, an additional gallon per acre. With regard to the selection of seed, Major Hallett said the importance of a good pedigree for animals, as also for some agricultural plants, was fully recognised; but the moment the farmer dealt with cereals he altogether ignored the great principle of like producing like. Upon

that great principle running through all nature he based his system of selection. After alluding to the benefits which had resulted from the principle of selection in many agricultural plants, such as parsnips, cabbages, turnips, potatoes, hops, &c., he said that close observation showed that in the cereals, as throughout nature, no two plants or grains are precisely alike in productive power, and hence that of any two or greater number of grains or plants one is always superior to all the others, although that superiority can be discovered only by actual trial. This superiority may consist in various particular characteristics. The following were the chief points of his standard in order of their importance, but all have to be duly considered: 1, hardihood of constitution; 2, trueness of type; 3, quality of sample; 4, productiveness; 5, power of tillering; 6, stiffness and toughness of straw; 7, earliness of ripening. The plan of selection which he pursued was as follows: A grain produced a plant, consisting of many ears. He planted the grains from these ears in such a manner that each ear occupied a row by itself, each of its grains occupying a hole in this row; and the holes being twelve inches apart every way. At harvest, after the most careful study and comparison of the plants from all these grains, he selected the finest one, which he accepted as a proof that its parent grain was the best of all, under the peculiar circumstances of that season. This process was repeated annually, starting every year with the proved best grain, although the verification of this superiority was not obtained until the following harvest. After giving instances of the results due to the influence of selection alone, by which the length of the ears had been doubled, their contents nearly trebled, and the tillering power of the seed increased five-fold, Major Hallett next proceeded to consider what might be effected by the combination of thin seeding with selection. Taking the seed wheat sown by a usual mode at two bushels per acre, $1\frac{1}{2}$ millions of grains per acre (speaking roughly) were put into the ground. In ordinary crops the number of ears produced per acre being taken as about one million and the crop as 34 bushels, they had at 700,000 grains to the bushel, 23,800,000 grains per acre, or an average per ear of only 23 to 24 grains; and if more than one million ears per acre were claimed it must be at the expense of their contents. Five pints of wheat per acre planted in September 12in. by 12in. gave 1,001,880 ears per acre, or 67,760 ears in excess of those produced on the other side of the hedge from 6 pecks, or more than twenty-one times the seed. Again, 5 pints planted 12in. by 12in. October 17th, gave 958,320 ears per acre; and planted similarly October 14th, 966,792 per acre; while one bushel planted October 15 gave only 812,160. Two plants of twenty-four ears each gave 1,911 and 1,878 grains, or seventy-nine per ear. Twenty ears per foot, at forty-eight grains only ear, would produce eleven quarters per acre. In reference to effects of his system, Major Hallett directed attention to the

effect upon the crop of the more increased size of the grain produced. A bushel of pedigree wheat produced from single grains, planted 12in. by 12in., contained about 460,000 grains, while a bushel of ordinary wheat contained 700,000 grains and upwards. Therefore, in two crops, consisting of precisely the same number of grains, the crop from the thin seedling would be upwards of seventy bushels against forty-six bushels, or nine quarters against six quarters per acre. Again, a bushel of pedigree barley, produced from grains planted singly 12in. by 12in., contained 390,400 grains, while a bushel of ordinary barley contained upwards of 550,000, or in two crops of equal numbers of grains, the one would be 55 bushels, the other 39, or 7 quarters against 5 quarters per acre. Thus in the increased size alone of the grains produced, they obtained an increase of crop of from 40 to 50 per cent. The present average contents of ears of wheat must be from 20 to 30. Were it grown as he proposed, the average contents of the ears would be, at the very least, from 40 to 60—far more probable from 60 to 90; for under such a system, so small an ear as one of 40 grains was quite the exception. And this increase of the contents of the ears would be obtained without any diminution of their number. In other words, the crop would thus at least be doubled. The saving of nearly one million quarters of wheat used for seed was likewise, in itself, a matter of national importance. In conclusion, Major Hallett said, by the adoption of his system

the land of England might be made to double its present produce of corn, and that the whole of the breadstuffs which we purchase each year at the enormous sum of £40,000,000 sterling might be produced upon our own land at home, enriching the proprietors and cultivators of England, and annually adding those forty millions to the wealth of the entire nation.

A discussion ensued, in which objections were raised to the adoption of Major Hallett's system by several speakers, who confessed that they did not speak from practical experience of it or his seed, while Mr. Hawthorn and Mr. Bomford, after long experience of both, spoke highly in its favour, the former complaining that there was a lack of men present who had used Major Hallett's seed, or followed up his instructions, and under those circumstances they were not in a position to dispute what Major Hallett had said. He had planted Major Hallett's wheat for the last twelve years, and he never planted it without a good crop. One year, when he planted on the 7th September, he grew more than sixty bushels per acre. The great difficulty in carrying out thin seedling was planting it at a proper time.—Major HALLETT replied, and on the motion of Mr. BOWEN JONES, seconded by Mr. BARTLETT, a vote of thanks was passed to Major Hallett for his paper, who, in replying, invited the members of the Club to visit and inspect his farm.

THE INTRODUCTION OF SUPERPHOSPHATE. OR DISSOLVED BONES.

TO THE EDITOR OF THE MARK LANE EXPRESS.

SIR,—The following paper was written for, and appeared in a local newspaper, *The Aberdeen Journal*, some two or three weeks since. It has been suggested by some who take an interest in the application of chemical science to agriculture, that, on account of the facts stated—not, it seems, generally known, and now becoming of an historical character—it deserves the wider circulation which your columns afford. As a reader and occasional correspondent of, and I may add, a pretty constant agricultural reporter to *The Mark Lane Express* for a period of forty years, I may say that it appears to me that the subject would not be without interest to a large proportion of your readers. In point of fact, the first paper on the subject of superphosphate was written for *The Mark Lane Express*; but the then editor, deeming the paper to be of some permanent importance, transferred it in the first instance to the pages of *The Farmers' Magazine*, also under his charge, in which it appeared in the beginning of the year 1842. It was stated lately in a periodical publication that the process for the preparation of superphosphate was at one time the subject of a patent. That is not the case. A person who subsequently became an extensive manufacturer of superphosphate applied for a patent; but the paper in *The Farmers' Magazine*, above referred to, as well as other evidence, was brought forward to show that the process was known and had been already practised, and the application was refused.

I have the honour to be, sir,
Your obedient servant,
W. HAY.

Tillydyesk, Aberdeenshire, June 13th, 1874.

In Liebig's first work on the Chemistry of Agriculture, a suggestion was thrown out to the effect that bones might be more advantageously applied as manure if the phosphate of lime, of which they mainly consist, were brought into a state of complete solution before depositing it in the soil. Immediately after the publication of that work, viz., in 1841, the water of this, impressed with a sense of the importance of the suggestion, put it to the test of experiment by dissolving a few bushels of ordinary crushed bones in sulphuric acid, and applying the product, diluted with several hundred parts of water, as a manure for the production of turnips. The solution

was, in the first instance, applied to the drills by means of a common watering pan; and the quantity of phosphate of lime so applied was, by calculation, made equal, or little more than equal, to the whole amount of that substance (or rather of phosphoric acid), which a crop of turnips would take up from the soil. Such was the first attempt, so far as is known, to apply phosphate of lime in a soluble condition, or rather in a state of actual solution, as manure. It is needless now to state in detail the result of our first experiment, or to describe the various appliances (a water cart, &c.), which were subsequently used for distributing the solution. It is only necessary to add, that the application of so large a quantity of liquid over a field of any considerable extent was found to be a very laborious business; and the practical difficulties thence arising led to the consideration whether the "dissolved bones" (for at that period bones were the only source of phosphate of lime available) might not be applied in a dry or powdered state. It was speedily found that the preparation might be so applied if used in larger quantity—not, indeed, with equal success, but still with such a measure of success as to justify us in dispensing with the more cumbersome and laborious mode of application. In giving some account of our first year's experiments in the local newspapers, and more especially in *The Farmers' Magazine* of that day, we endeavoured to state the considerations which led us to see the importance of Liebig's suggestion, and to explain the rationale of the practice (which we of course recommended for adoption), both with respect to the preparation of the manure and to the superior advantages which we held it must needs possess when applied for the immediate production of a crop of turnips. In doing this, we explained the nature of the chemical action which takes place when dilute sulphuric acid is added to reduced or crushed bones, and stated that the important product thence resulting was "what chemists called a *Superphosphate of Lime*," putting the word "Superphosphate" in italics as a sort of apology, so to speak, for using a purely technical term; for such the word then was, although it has since come to be familiar in the mouths of all parties connected with agriculture, not only in this country, but throughout Europe and America. In the chemical language of that day a *super-salt* was a combination of an acid with a base in which the former was supposed to exist in its *highest* proportion relatively to the base; and such, in point of fact, the peculiar phosphate of lime referred to really is, being what chemists would now call a *mono-calcic phosphate*; that is, phosphoric acid in combination with one equivalent of calcium (the metallic base of lime). It was to this soluble phosphate of lime, then, that the term *superphosphate* was

originally applied by us. Like many other words in common use, it has gradually, with a change of circumstances, been made to bear a different meaning from that originally attached to it; and it would now be impossible, even if it were desirable, to recal it to its original and specific signification. In the commercial and agricultural world it is now commonly used, in a general way, to signify a manure prepared by the action of sulphuric acid on ground coprolites, apatite, or other mineral or semi-mineral phosphates of lime, while it has ceased to be applied to "dissolved bones." A curious evidence was afforded some years ago of the misconception and of the popular ignorance which prevailed on this subject by a discussion, which was carried on in some of the agricultural journals, as to whether "superphosphate" made from bones was not different in its nature and qualities from superphosphate manufactured coprolites, &c. The soluble phosphate of lime produced by the action of sulphuric acid upon "bone-earth" and other natural tri-basic phosphates, has, for some years past, been generally—both by chemists and others—called "Bi-phosphate;" and, in want of a better term (the use of the word *superphosphate*, in its original sense, being precluded), the writer of this must plead guilty to the use of the word bi-phosphate in these columns and elsewhere. But, though following others in using the term *biphosphate* for the soluble phosphate of lime, we took occasion to point out some eight or ten years ago that it is really a misnomer, besides being otherwise objectionable, and ventured to advise analytical chemists, in noting the results of their analyses of "superphosphates" &c., to state the precise amount of phosphoric acid existing in a soluble condition in the manure—whether in combination with lime, or other alkalis—instead of the usual details about "biphosphate" and its equality to so much "bone phosphate rendered soluble." But to this point we shall have occasion to recur, for the important work which we are about to notice affords evidence of the propriety of our suggestion. In first using the term "superphosphate" in the manner above indicated, we had little idea that the word would come to be generally adopted throughout the world as the name of a substance familiarly known to everyone connected with the science or practice of agriculture. Still less did we expect to see the day when some two or three millions of pounds would be invested in its manufacture in Great Britain alone, not to speak of the extent to which the same manufacture is carried on in America and on the Continent of Europe, or to witness the amount of shipping, of general trade, and of labour (in mining, collecting coprolites, &c.), to which the demand for "superphosphate" has given rise. For many years we gave, from time to time, instructions to farmers for the preparation of their own superphosphate, and in this part of the country, in the Lothians, and in some parts of England, the purchasing of a number of "carboys" of sulphuric acid, and its application to the "dissolving of bones" in large wooden troughs, or in tanks, or in some other rule way, formed, for a considerable period, a regular portion of the "annual toil" of the farm on the part of many of the more intelligent and enterprising agriculturists. But, *nous avons changé tout cela*: the manufacture of superphosphate, not only from bones, but from coprolites, fossilised guano, &c., came to be taken up as a special business by individuals or by commercial firms; and had these parties in all cases, or even generally, conducted the business with anything like a proper knowledge of scientific principles, or been content with moderate profits, nothing but good would have resulted to all concerned. Much trouble would have been saved to the farmer, while the commodity which he required might have been produced of better quality, if not at a cheaper rate, on account of the facilities which its manufacture on a large scale necessarily affords. Unluckily, the very nature of the manufacture not only afforded the utmost facilities for adulteration, but actually made such adulteration a sort of necessity, resulting from ignorance on the part of some, while in not a few cases, (too many, the amount of worthless stuff in the market seemed to indicate) the rate of profit which might be realised at the expense of the farmer was matter of discretion—we do not say of conscience—on the part of the vendors of what was called "superphosphate." In fact, the farmers for a time accepted anything under that name; and the word, like "charity," was made to cover a multitude of sins. During the last twelve or fifteen years, we have again and again insisted on the duty obviously laid upon the farmers of taking some means to ascertain that the materials which they bought as manure were really something like what they were sold for by the vendors; and in doing so, we have

repeatedly stated what ought to be the composition of honestly-prepared superphosphate, at the same time earnestly advising all parties to have nothing to do with mixtures of indefinite composition, sold under the names of "corn-manure," "turnip-manure," "grass-manure," and so forth. We have never ceased to remind farmers that the two substances of which they are mainly in want are phosphoric acid (in a soluble condition) and nitrogen—the latter in the form of ammonia, or of a nitric acid salt. Our warnings seemed, for a time, to fall in a great measure unheeded. The manure trade flourished. Some of those engaged in it realised fortunes by a very simple process. Gradually, however, in this case—as we have had occasion to observe in other cases—the seed sown has, after a time, been productive of fruit. Increased intelligence and knowledge of the subject among agriculturists have led them to look more closely after their own interests. Nor has the sharp teaching of experience been wanting. The result has been that what are called Analytical Associations—that is, associations of farmers for the purpose of obtaining analyses of the manures and feeding stuffs which they purchase—have been instituted in various parts of the country. These associations have already done an incalculable amount of good, not only to their own members, but to the agricultural community generally. We observe that Dr. Voelcker has very lately discarded the term biphosphate, and substituted "mono-phosphate," by which, doubtless, he means to indicate the anhydrous salt, or what we have above designated as "mono-calcic phosphate," the chemical formula for which is, $\text{CaO P}_2\text{O}_5$, or, which is the same thing, $\text{Ca P}_2\text{O}_5$. Biphosphate of lime, according to Morfit (who uses the old chemical notation), is CaO, 2HO, PO_5 . It is exceedingly desirable that some uniform system should be adopted with reference to this matter. The phosphoric acid, we repeat, is the valuable constituent to the farmer; and what he desires to know from the chemical analyst is how much—what per-centage—of that substance a given manure contains.

[Mr. Hay in this article makes some reference to a work which we have not seen, and so prefer to let him speak on his own authority.—EDITOR *M. L. E.*]

THE DORSETSHIRE DOWN.

TO THE EDITOR OF THE MARK LANE EXPRESS.

SIR,—In reference to your remarks on the Dorsetshire Down couples with which I took the prize at the Bath and West of England Show at Bristol, I beg to say—1st. That the term "longwool" is an error in the catalogue's description, the prize having been offered for the best short-wool couples, and my sheep were entered as such. 2nd. The Dorsetshire Down sheep originated in a cross between the Hampshire and Southdown. It is the breed of sheep usually kept in this county, and is believed to be the best tenant-farmers' sheep, or in other words the most profitable, combining as it does the size of the Hampshire with the quality of the Southdown. 3rd. In answer to your question how is this breed to be maintained? I can only say that I annually let and sell upwards of one hundred Dorsetshire Down tups.—I remain, yours obediently,

GEORGE W. HOMER.

Athelhampton Hall, Dorsetshire, June 20, 1874.

THE HERD BOOK.—The following circular has been issued: 34, Charles Street, Berkeley Square, London, W., June 15, 1874.—Sir,—A numerous and influential body of Shorthorn breeders having expressed a wish that some steps should be taken as to the future management of Coates' *Herd Book* whenever Mr. Strafford should determine to resign the editorship, and as he has now signified to us his desire to do so, we earnestly invite you to attend a meeting of subscribers, to be held at Willis Rooms, King-street, St. James's, at 2 p.m., on Wednesday, July 1, to consider with him the mode for the continuation of that work.—We remain, yours faithfully, Dunmore, Skelmersdale, Penrhyn, R. Nigel, F. Kingscote, John Storer, Thos. C. Booth.

REVIEW OF THE CORN TRADE DURING THE PAST MONTH.

Up to the 12th of June the weather was forcing and the heat almost tropical, with, however, so scanty an allowance of rain, that a general conviction prevailed the crop of hay must be short, as well as that of spring corn, though the prospects for wheat were unusually good. But before half the month was reached came a week of very cold weather, with frosts so frequent and so sharp that much of the potato crop suffered, the whole harvest became deferred, and some apprehension has been entertained for the earlier pieces of wheat, which had pushed rapidly into bloom during the heat. The prospect, therefore, for the main crop has become less favourable, while there seems little chance for spring corn, especially beans and peas, from the long persistence of dry weather. The fall of rain having varied materially in different places, we may have chequered crops, though all seem likely to be short, excepting wheat, and that is yet doubtful; the same sort of weather having ruled in France, at a period when stocks were so low, that values have been greatly enhanced, much wheat going from our coast, with flour and oats, and thus at a time when we have little to spare, and have only been hoping to reach the end of our term, without the public having to pay extravagant rates. That the stocks of wheat here must be at a low ebb is seen from the little now held in granary, and the small returns constantly made in the weekly sales, the last four weeks showing less by 39,000 qrs. than the small returns of 1873, which is about 25 per cent. below the rate then noted, and our foreign receipts weekly continue below our estimated necessities. It is true that consumption always falls off in summer, and we are beginning to get the help of new potatoes from abroad and our own early districts; but there is no provision against any possible calamity that may yet take place at the blooming time or gatherings, and the position is somewhat critical; yet, as we live upon the bounty of Providence, let us hopefully depend upon it, especially as more rain has since fallen. They have already had so great a pressure from prices in the South of France, that 78s. to 80s. has been paid for wheat, but foreign arrivals are reaching Bordeaux and its neighbourhood, now moderating values, and throughout the provinces there has been lately a partial decline. Still Marseilles, with all its receipts, keeps dear, having to contribute to the necessities of Switzerland as well as France. America has continued the cheapest place, and still sends the most liberal supplies, and to that country we shall still have to look till our own sheaves begin to be gathered, and the nation's anxiety shall cease. The following were the most recent prices at the several places named: Best white native wheat at Paris 73s., red 71s.; Spanish white and Oregon at Rouen 70s., spring American 62s. 6d., Polish 61s. 6d.; Ghirka at Marseilles 67s., Polish 66s. 8d.; Californian white at Antwerp 66s., spring American 60s. 6d.; best native wheat at Liege 69s.; at Louvain 68s.; wheat at Maestricht 65s.; red wheat at Berlin 55s. 6d., at Cologne 63s., at Mayenne for August 58s.; high-mixed at Danzig 60s.; wheat at Pesth 56s. to 66s.; Mecklenburgh at Hambro' 63s. 6d., Ghirka off the coast Oregon 64s., Canadian 62s.; red spring at New York, per 480lbs. free on board, 44s. 6d.

The first Monday in Mark-lane opened on a small supply of English wheat, the foreign arrivals being moderate, about two-thirds from New York and India, and a

good portion from Adelaide. The show of fresh samples from Essex was very limited; but with fine weather the demand was equally so, and prices were only maintained by a Continental inquiry. Orders from France raised the price of white foreign 1s. per qr., but red sorts being left to English millers were 1s. per qr. lower, with only little doing. Floating cargoes went off at full rates for the Continent, France being the principal buyer. Though short deliveries in the country this week kept some places from a decline, others noted a fall of 1s. as Gainsboro', Market Rasen, Melton Mowbray, Newcastle, Sheffield, &c.; but Liverpool on Tuesday was 6d. per cental down for red, and 1d. more on Friday. No change was noted at Leith; Edinburgh was quiet for fine qualities, and 1s. lower for inferior wheat; and Aberdeen quoted a similar decline. The scarcity of native samples at Dublin kept them at the former range; but foreign was dull, and in favour of buyers.

On the second Monday the English supplies were small, and exceeded by the exports; but the foreign arrivals were doubled, half being from America, and a fair quantity from Australia. The show of fresh samples this morning was very scanty; but it mattered not, the weather having increased in fineness, insomuch that factors were willing to take 1s. less, and even then found it difficult to sell. In foreign, generally, little was done, and less money was taken—say 1s. on white qualities, and 1s. to 2s. on red American spring. In floating cargoes white sorts obtained the prices of the previous week, but red declined 1s. per qr. The mid-summer weather which had been then prevailing, together with lower advices from London, had its usual influence in the country, making poorly-supplied places dull, and generally reducing rates 1s. per qr.; while some places noted a larger reduction, as Lynn, Melton Mowbray, Newcastle, St. Ives, &c., and Liverpool was down 2d. to 4d. per cental for the week. Edinburgh, Leith, and Glasgow were all cheaper 1s. qr. Dublin was dull for Irish sorts notwithstanding their scarcity, and foreign was 6d. per barrel lower.

On the third Monday there was another small supply of home growth, and the foreign arrivals fell off to less than one half of the previous week, two-thirds being American, with a moderate quantity from the Baltic. On the Essex stands a very small quantity of fresh samples was exhibited; but though some frosty nights had been experienced, there was no disposition to pay more money, and the previous rates were but slowly given. The sudden change of weather, however, checked the downward disposition of prices, and at Friday's decline of 1s. some little business was done. In floating cargoes the previous rates were paid for the Continent. The country markets this week mostly resisted any further reduction, though some still remained dull; but on Saturday there was a recovery of 1s. at several places. Liverpool was quiet on Tuesday, and improved 1d. to 2d. per cental on Friday. At Aberdeen, with severe drought, there was no change; but Leith and Edinburgh were 1s. to 2s. lower for wheat. Dublin, commencing the week dull, with some decline, afterwards rallied, and noted an improvement of 3d. per barrel on foreign.

On the fourth Monday the smallest supplies were received both English and foreign, the latter only exceeding the exports by about 3,000 qrs. The exhibition of fresh English samples was also extremely scanty, and

factors commenced by asking 1s. advance, but the weather indicating a return to warmth they did not succeed, business remaining very slow. In foreign white there was no change, but the improvement in red spring noted on Friday was confirmed, with, however, but little business passing. The demand for floating cargoes was steady, and rather more money was paid for red American. There has been, therefore, a decline for the month of about 1s. to 2s. per qr. Since the last London market prices have hardened in the country.

The imports into London for four weeks were in English qualities 13,963 qrs., foreign 88,883 qrs., against 17,339 qrs. English, 135,712 qrs. foreign for the same period in 1873. The exports were 18,450 qrs. wheat, 20,415 cwt. flour. The imports into the kingdom for the four weeks ending the 13th of June were 2,727,010 cwt. wheat, 457,306 cwt. flour, against 2,906,638 cwt. wheat, 437,488 cwt. flour in 1873. The London averages commenced at 63s. 6d. and closed at 63s. 2d. per qr. The general averages opened at 62s. 2d. and ended at 61s. 4d. The weekly sales noted for four weeks were 160,881 qrs., against 199,847 qrs. for four weeks in the same time last year.

The flour trade has been pretty steady as to prices during the month, but varying in activity with the demand for wheat. For the most part business has been dull, country sorts giving way on the second Monday 1s. per sack, leaving Norfolks at 43s. Foreign, also, in sacks and barrels, have yielded to the same extent, but were kept from further decline by the demand from France; and it was this that brought our exports to 20,415 cwt., the trade being mostly in medium quality barrels, at about 28s.; and fine kiln-dried qualities for consumption still bring 32s. to 33s. The most recent quotation at New York for extra State was 6 d. 35c. (23s. 7d. per brl.) free on board. The top price of town-made has stood at 54s., and it has stood at about the same at Paris. The arrivals into London for the four weeks were in country sacks 48,347, in foreign 16,950 sacks 40,211 brls., against 74,425 sacks country, 15,147 sacks 62,215 brls. foreign for the same period in 1873.

Maize, after declining about 2s. in the first two markets, recovered 1s. to 1s. 6d. on the third, and has since remained firm, American landed being worth about 39s., white 42s. to 43s. The price at New York for mixed was 25s. 9d. free on board; at Pesth, in Hungary, it was quoted 37s. The imports into London for four weeks were 36,884 qrs., against 49,243 qrs. in 1873.

The malting season being over it has mattered little that the crop of English barley has been nearly exhausted and brought supplies to their lowest. Foreign arrivals also have been very moderate, and so prices have kept at a high range for grinding and distillation, the lowest price for the former being about 33s., while prime stout French and Danish have been worth 40s. to 44s. It is thought we cannot have a good crop this year and that prices for malting will again rule high. The imports for four weeks into London in British were only 406 qrs., in foreign 30,110 qrs., against 1,314 qrs. British, 25,553 qrs. foreign in 1873.

Malt during the month has been but a slow sale, and with more anxiety to clear stocks, at the close there was a decline of 1s. per qr.

The oat trade, with continuously good arrivals from abroad, has been almost constantly rising. Stocks here, in Scotland and Ireland being reduced very low, and placing the whole country in a state of dependence on our receipts from the Baltic and elsewhere, Parliament being in town, has kept up a large consumption, and values have improved fully 1s., notwithstanding slight fluctuations in the lower qualities. 40 lbs. Russian have become

worth 29s. 6d. to 30s., and prime sweet Sweden 30s. to 31s., with the lighter and inferior qualities relatively quite as dear. The long drought here and in France give both countries but poor prospects. Indeed we have lately had a French demand, and though some rain has recently fallen in France, as well as here, prices in Paris have risen, prime qualities being fully worth 31s. In Belgium, Holland, and Germany, as well as Hungary, it has been much the same, and as there are yet fully two months to harvest, people begin to doubt the power of Russia and Sweden to supply all the world, and fear extravagant rates, unless rain falls in abundance and changes the prospect generally. Our receipts in London for four weeks were 618 qrs. English, 64 Scotch, 237,849 qrs. foreign, against 1,422 qrs. English, 157,327 qrs. foreign in 1873.

The bean supplies, both English and foreign, have been moderate, and the first Monday opened with a rise of 1s. to 2s. per qr., which has since been maintained but nothing beyond it, the late advance making them very dear and lessening the demand. Ticks are worth 42s., Harrows 48s., and small 52s., large French 46s., Egyptian 44s. The imports for four weeks into London were 1,233 qrs. English, 3,872 qrs. foreign, against 1,977 qrs. English, 1,300 qrs. foreign in 1873.

Hog peas have been forced up by scarcity, still maples are worth 47s., and duns 44s. to 45s., while white foreign have risen from their comparative cheapness about 2s., being now worth 45s. The total imports in four weeks were 312 qrs. English, 8,735 qrs. foreign, against 149 English, 3,525 qrs. foreign in 1873.

Linseed has been quiet but maintained its price. Arrivals 43,644 qrs. against 14,630 qrs. in 1873.

The poor prospects for the crop of cloverseed and other seeds have kept the values up, but there are very small stocks on hand.

MUIR OF ORD SHEEP MARKET.—INVERNESS, (Wednesday).—A stiffer market than that which was held to-day has not taken place on the same stages for several years. The numbers on the ground were also below that of the corresponding market of last year. Blackfaced predominated, and several lots of Cheviots were also on the ground, but half-breds were conspicuous by their absence. The prevailing drought has caused pastures to decline, and hill farmers having sent their stock to their summer quarters were loth to bring them to market, expecting that sales could not be effected to their advantage. The fact is that there is at present a sort of panic in the sheep trade. Wool is also disposed of at reduced figures; and these things combined caused, as we have said, transactions to be effected with difficulty; and at the conclusion a great proportion of stock remained unsold. Few dealers put in an appearance. Cheviot hogs sold from 16s. to 22s., blackfaced hogs from 18s. to 20s.; blackfaced ewes and lambs sold from 25s., blackfaced ewe hogs from 18s. to 22s., and three-year-old widders at 25s. The number of animals exposed for sale was 1,303.

TAUNTON FAIR, (Wednesday).—This annual fair attracted a large number of farmers and dealer. The supply of sheep and lambs was abundant, and horses and cattle about the average. Mr. Robert Farthing, of Farrington, North Petherton, sent 20 longwooled rams for disposal at Mr. Maynard's auction stand, and they ran up to 6½ guineas. Prices showed a marked decline. Sheep averaged 6d. to 7½d. per lb., and lambs a halfpenny higher, about 26s. each. Cross-bred ewes realised 41s. 6d. Beasts sold from 70s. to 80s. per cwt Trade was active. The Devon longwool ram (the property of Mr. Richard Corner, Torweston), which obtained the first prize at the Bath and West of England Agricultural Show at Bristol, was let for the season, from September, to Mr. Blake, of Trull, for the sum of 85 guineas. The competition among bidders for the other rams at the auction mart did not come up to the anticipation of the breeder, nearly the whole of them being unsold. Great interest was taken in the wool trade, and prices ranged from 1s. 2d. to 1s. 3½d. for some lots.

LONDON AND COUNTY BANKING COMPANY.

ESTABLISHED 1836.

SUBSCRIBED CAPITAL...£3,000,000, in 60,000 SHARES of £50 EACH.

THE LONDON AND COUNTY BANK opens—
 DRAWING ACCOUNTS with Commercial Houses and Private Individuals, either upon the plan usually adopted by other Bankers, or by charging a small Commission to those persons to whom it may not be convenient to sustain an agreed Permanent Balance.

DEPOSIT ACCOUNTS.—Deposit Receipts are issued for sums of Money placed upon these Accounts, and Interest is allowed for such periods and at such rates as may be agreed upon, reference being had to the state of the Money Market.

CIRCULAR NOTES AND LETTERS OF CREDIT are issued, payable in the principal Cities and Towns of the Continent, in Australia, Canada, India, and China, the United States, and elsewhere.

The Agency of Foreign and Country Banks is undertaken.
 The Purchase and Sale of Government and other Stocks, of English or Foreign Shares effected, and DIVIDENDS, ANNUITIES, &c., received for Customers of the Bank.

Great facilities are also afforded to the Customers of the Bank for the receipt of Money from the Towns where the Company has Branches.

The Officers of the Bank are bound not to disclose the transactions of any of its Customers.
 By Order of the Directors, WM. MCKEWAN, } Joint General
 WHITBREAD TOMSON, } Managers.

IMPORTANT TO FLOCKMASTERS.

THOMAS BIGG, Agricultural and Veterinary Chemist, by Appointment to his late Royal Highness The Prince Consort, K.G., Leicester House, Great Dover Street, Borough, London, begs to call the attention of Farmers and Graziers to his valuable SHEEP and LAMB DIPPING COMPOSITION, which requires no Boiling, and may be used with Warm or Cold Water, for effectually destroying the Tick, Lice, and all other insects injurious to the Flock, preventing the alarming attacks of Fly and Shab, and cleansing and purifying the Skin, thereby greatly improving the Wool, both in quantity and quality, and highly contributing to the general health of the animal.

Prepared only by Thomas Bigg, Chemist, &c., at his Manufactory as above, and sold as follows, although any other quantity may be had, if required:—

4 lb. for 20 sheep, price, jar included.....	£0	2	0
6 lb. 30 " " " " " " " " " " " "	0	3	0
8 lb. 40 " " " " " " " " " " " "	0	4	0
10 lb. 50 " " " " " " " " " " " "	0	5	0
20 lb. 100 " " " " " " " " " " " "	0	10	0
30 lb. 150 " " " " " " " " " " " "	0	15	0
40 lb. 200 " " " " " " " " " " " "	1	0	0
50 lb. 250 " " " " " " " " " " " "	1	3	6
60 lb. 300 " " " " " " " " " " " "	1	7	6
80 lb. 400 " " " " " " " " " " " "	1	17	6
100 lb. 500 " " " " " " " " " " " "	2	5	0

Should any Flockmaster prefer boiling the Composition, it will be equally effective.

MOST IMPORTANT CERTIFICATE.

From Mr. HERBPATH, the celebrated Analytical Chemist:—Bristol Laboratory, Old Park, January 18th, 1861.

Sir,—I have submitted your Sheep Dipping Composition to analysis, and find that the ingredients are well blended, and the mixture neutral. If it is used according to the directions given, I feel satisfied, that while it effectually destroys vermin, it will not injure the hair roots (or "yolk") in the skin, the fleece, or the carcase. I think it deserves the numerous testimonials published. I am, Sir, yours respectfully,

WILLIAM HERBPATH, Senr., F.C.S., &c., &c.,
 To Mr. Thomas Bigg Professor of Chemistry.
 Leicester House, Great Dover-street, Borough, London.

He would also especially call attention to his SPECIFIC, or LOTION, for the SCAB or SHAB, which will be found a certain remedy for eradicating that loathsome and ruinous disorder in Sheep, and which may be safely used in all climates, and at all seasons of the year, and to all descriptions of sheep, even ewes in lamb. Price FIVE SHILLINGS per gallon—sufficient on an average for thirty Sheep (according to the virulence of the disease); also in wine quart bottles, 1s. 3d. each.

IMPORTANT TESTIMONIAL.

"Scoulton, near Hingham, Norfolk, April 16th, 1855.
 "Dear Sir,—In answer to yours of the 4th inst., which would have been replied to before this had I been at home, I have much pleasure in bearing testimony to the efficacy of your invaluable 'Specific for the cure of Scab in Sheep.' The 600 sheep were all dressed in August last with 81 gallons of the 'Non-poisonous Specific,' that was so highly recommended at the Lincoln Show, and by their own dresser, the best attention being paid to the flock by my shepherd after dressing according to instructions left; but notwithstanding the Scab continued getting worse. Being determined to have the Scab cured if possible, I wrote to you for a supply of your Specific, which I received the following day; and although the weather was most severe in February during the dressing, your SPECIFIC proved itself an invaluable remedy, for in three weeks the Sheep were quite cured; and I am happy to say the young lambs are doing remarkably well at present. In conclusion, I believe it to be the safest and best remedy now in use.
 "I remain, dear Sir,
 "For JOHN TINGEY, Esq.,
 "R. RENNEY.

"To Mr. Thomas Bigg."
 "Flockmasters would be well to beware of such preparations as "Non-poisonous Compositions;" it is only necessary to appeal to their good common sense and judgment to be thoroughly convinced that no "Non-poisonous" article can poison or destroy insect vermin, particularly such as the Tick, Lice, and Scab Parasites—creatures so tenacious of life. Such advertised preparations must be wholly useless, or they are not what they are represented to be.

DIPPING APPARATUS.....£14, £5, £4, & £3.

A NEW AND REVISED EDITION.

THE BOOK OF THE FARM,

BY HENRY STEPHENS, F.R.S.E.

ILLUSTRATED ENGRAVINGS, representing the principal Field Operations, Implements, and Animals treated of in the Work.

Third Edition in great part Re-written, and brought up to the Present time.

Two Volumes, Royal Octavo, Half-bound, £2 10s.

"From its first appearance a quarter of a century ago until now, 'The Book of the Farm' has held the very highest rank as a book of reference on matters connected with the theory and practice of agriculture. . . . We can unreservedly commend this new edition, and we should augur well for the agricultural future of this country if it could find a place on every farmer's book-shelf. It is in its favour that it contains within four covers all the book-learning a farmer need know."—*Saturday Review*.

"This clear directory to rural labour. . . . We commend it to the careful study of every young man who wishes to become a good practical farmer."—*Times*.

PLATE.

THE COLLEY.

The colley is a true Scot, about twenty-one inches in height, and in colour black and tan, or a sandy yellow, now and then enlivened by a bit of white. He takes to sheep as naturally as a duck does to water. He is very intelligent, and a faithful friend, and has been immortalized by the Ettrick Shepherd, and by Sir Edwin Landseer, as the shepherd's chief mourner. With the march of the iron-way his services are mostly confined to Scotland; through taking up with an eccentric swell or two some years back, and leading a town life, Sandy has become quite the rage, as he may be now seen, combed and brushed, caressed by beauteous females, or lounging along at the heels of west-end or city shepherds, who know not a Cotswold from a Cheviot. He attends his Club, and in coffee-rooms is looked up to as a connoisseur of highly-flavoured dishes, at which he smacks his chops or shakes his head. One or two we have seen brought up in the

Catholic faith, which would not on any account touch meat when told it was Friday. As Sandy and his swell are inseparables, he may occasionally be seen in a private box looking grave over a tragedy, admiring the legs of the ladies of the ballet, or condescending to smile at a screaming farce; and as it is to be hoped his friend attends a place of worship, no doubt Sandy joins heartily in a psalm, as it is notorious that sacred music has the effect of making all dogs dismally jolly. But we have left our colley in the pure air of the Highlands, where she needs not raiment, and can rest on a bed of ever verdant turf, curtained by the blooming heather; where everything is wild, beautiful, and harmonious, and where the gentle shepherd can sit in the lap of content, and dance and sing, and say his prayers, and dream of bliss, his lithesome lass and faithful colley.

THE RESULTS AT BEDFORD.

Not so very long since there was some "talk" as to the necessity for, or the good policy of holding the great July meeting of the Royal Agricultural Society in the neighbourhood of London—say at least in every alternate year. Experience, however, does not go to support such a proposal. The Exhibition-year meeting in Battersea Park, notwithstanding the variety of attractions and the immediate vicinity of the show-ground, was financially a failure; the receipts at Stratford-le-Bow the other day fell woefully below the expectations of the Essex Committee, and London never rose to the shilling days at Bedford. In fact, encouraging as were the receipts on Monday and Tuesday, the absence of the town element was still very marked, as one missed the people which are met about everywhere—at the Derby, the Handel Festival, or the flower-shows. In a word, an essentially rural society will still have to depend much on a rural or quasi-rural class of visitors, as from one side it gathers

but little the nearer the meeting approaches to London. The attendances, as tried by the receipts, were some thirty or forty thousand less than at Hull, but on the earlier days more money was taken than in 1873.

We are not inclined, however, to test the actual success of such a gathering by the mere money taken at the doors, as for years the Society has never had a more thorough or generally good show than that just held at Bedford. Our own very full reports will tell out the story of how this went, while in another page we call attention to the suggestions offered or more direct reforms proposed in the direction of a Society, which the very reformers themselves admitted in the outset to be one of the best-managed associations in the Kingdom. In a word, though there may be occasionally a weak place, there is no other body of a similar aim and character which does so much or does this so well as the Royal Agricultural Society of England.

THE "ROYAL" JUDGES.

There can be no question but that Mr. Fawcett, in his speech at the general meeting at Bedford, touched upon a weak place in the arrangements of the Royal Agricultural Society of England. Immediately, indeed, after the Hull show of last year we spoke through these columns to "the continual complaints of the Shropshire breeders as to a Shropshire man being never now put on to judge Shropshire sheep; for at Bury St. Edmund's, Leicester, Manchester, Oxford, Wolverhampton, Cardiff, and Hull these appointments were all made from other counties." And this remonstrance was not without its effect; for, as we intimated last week, at Bedford two judges were taken from the home district, being the first time in eight years that a Salopian has been appointed. Mr. Fawcett follows in the same direction when he suggests "that the judges ought to be changed every year; that no one should be allowed to act a second time, or oftener than once in six or ten years, under any pretence whatever; and that new blood should be continually brought forward." It may be well, however, to go a little closer into this, when we shall find that other breeders have quite as much cause to protest as the Shropshire men against the selection of judges resting with small parties or being monopolised by particular persons. Going back for five years, and taking a breed of sheep which vies in popularity with the Shropshire, we note that the judges of Southdowns have been carefully confined to one certain set. Thus, Mr. Henry Fookes, a very good man no doubt, acted as a judge in 1870, 1871, 1872, 1873, and 1874; as how much further back without a break we really do not know, for we have not taken the trouble to look. Again, Mr. J. S. Turner, of Chyngton, by Brighton, acted as a judge of Southdowns at the Royal meetings in 1871, 1872, and 1874, and of pigs in 1870 and 1873. In fact, in consideration of past services, it would seem that, like Von Joel at Evans', Messrs. Fookes and Turner "will always be retained on this establishment." Again, Mr. Hugh Aylmer has actually been three times appointed a judge of Shorthorns in five years, in 1870, in 1872, and in 1874; relieving the monotony by taking the pigs in 1871 and the Cotswolds in 1873; while Mr. R. J. Newton has also enjoyed, at least a five years' lease over Cotswolds, Oxford, Hampshires, and other sorts of sheep, so that here we have two more deserving men "retained on the establishment." There are other cases almost as strong, if the series be interrupted by an occasional break or so; as over the implements we have in unvarying chorus for the last five years, or nobody knows how much longer, Kimber, Hicken, and Hemsley—Hemsley, Kimber, and Hicken—or Hicken, Kimber, and Hemsley—until the competing firms must know to a man who is coming and prepare accordingly. In truth, any one on receiving a copy of that complimentary invitation to act would be justified by asking in answer whether the office was to be looked upon as for life or only for a term of years?

On the face of it all this is very curious, as it requires no argument to demonstrate how unwholesome such a system must become. Are there really no judges of such famous breeds as Shorthorns or Southdowns to be found in this kingdom beyond Messrs. Aylmer, Fookes, and Turner? The thing is absurd, or as Mr. Fawcett puts it, "highly unsatisfactory to the great bulk of exhibitors;" as he says further, "these appointments are made in the most objectionable manner, through the influence of breeders and exhibitors who are members of the Council." Somebody said *No! no!* here, but surely it is an indisputable fact that the judges are

appointed by a Committee selected from the Council; as we shall go on to say that no man who is an exhibitor, and that no man who is in the habit of acting as a judge, should sit on this Committee. Few people may have the nerve to object to the nomination of a man sitting side by side with them, although they might still see the impropriety of a member of Council so continually taking office; as the least sense of delicacy should prevent the presence of an exhibitor, who might thus abuse his power by nominating or voting for his own judges. As somebody said *No! No!* may we inquire if this business rests respectively with the Stock-Prizes and Implement Committees, and if not, to whom is it deputed?

Mr. Fawcett in the very outset recommends that the judges at the Royal Show ought not to have acted in a similar capacity at any previous meeting in the same year; as, of course, they should not. No Royal judge is eligible for Yorkshire, and latterly the same judge could not go on from Birmingham to Islington. With the same judges the thing gets into one groove; if in justice to Mr. Aylmer, we must say that at Cardiff and Bedford he helped to put the first last and the last first of Dorchester and Bristol with unintelligible impartiality. For a thrice Whittington in five years, such a line does not carry much weight.

So far reform is not only practicable, but for the good name of the Society must be speedily set about; though we question whether any rules for showing stock in breeding condition at a breeding show can be really enforced. Of course all thinking men have advocated the observance of such an enactment, but when the attempt was made more than twenty years since to uphold the rule the entry suffered so much that the good intention was of a necessity abandoned. Exhibitors will feed for show, and judges will follow the fashion; or as one of the draught-horse bench admitted the other day, "I think we did pretty well with the mules, and all right with the carriage horses, for there was only one shown, but we gave all the prizes for cart-horses to the fattest brutes we could find." The proposal that the animals should not be led into the ring by their herdsmen is supported with much point by Mr. Barnes in a letter which appears in another part of our paper, where he says "Mr. Fawcett would have the cattle led into the ring by proper men appointed by the Society, *that the judges should not know whose they were*; and the Council will not put catalogues into their hands *for the same reason*. The Royal Agricultural Society of England and Mr. Fawcett therefore agree that the judges ought not to know what or whose animals they are judging; and I am quite sure the public outside will say *Amen* to this." This outside public says a deal more than we have done here, although enough has been said to show that this business of judging has been suffered to drift away anywhere, and the Council and the Stewards must do their duty and bring it back quickly into the proper course. In fact, the eye of a Steward should be as keen as that of a detective in looking up abuse; and instead of periodically penning sugar-and-water reports full of mutual congratulation and great gratitude for favours received, the Stewards might dwell more advantageously on the duties associated with the offices which they undertake. Will the Stock Stewards as members of the Selection Committee ensure us any fresh blood at Taunton? and will the Stewards of pigs tell us of anything which happened at Bedford?

TO THE EDITOR OF THE MARK LANE EXPRESS.

SIR,—At the annual meeting of members of the Royal Agricultural Society of England, Mr. Fawcett, as reported by *The Agricultural Gazette*, suggested, firstly, the judges who acted at the Royal show should not officiate in the same capacity at any other show in the same year. I think this goes too far, and I doubt its expressing what Mr. Fawcett meant. What difference can it make to the Royal whether they act or not? The animals exhibited there are, with very few exceptions, not likely to compete again in the same classes; and it is, of course, open to other large societies to inhibit Royal judges from acting at their shows. I would therefore suggest, "That any one having acted as a judge at any *previous* show should not judge at the Royal."

"At present the majority of the prizes were won by fat animals," &c. This every one will acknowledge; but why animals are shown in such a state is impossible to say, unless fat is like charity, and conceals a multitude of sins. Certain it is, however good an animal may be, if it is not fit for the Hall, it stands no chance at the Royal.

The third resolution refers to animals being led into the ring by men who are as well known to the judges as the animals themselves, and would seem to infer that the judges are not always to be trusted—that if they knew an animal of *their sort* by the man who led it in, they would give it a prize, or *vice versa*. Speaking plainly, this is saying that the judges are not honest—not a pleasant thing to tell a man. But the Council do not allow them a catalogue during their sojourn in the ring; and what should they infer from that? If they know indirectly to whom the animals belong why keep the catalogues from them? Mr. Fawcett would have the cattle led into the ring by proper men appointed by the Society, *that the judges should not know whose they were*; and the Council will not put catalogues into their hands *for the same reason*. The Royal Agricultural Society of England and Mr. Fawcett therefore agree that the judges ought not to know what or whose animals they are judging; and I am quite sure the public outside will say "Amen" to this.

The Journal already referred to says: "Indeed, he would be a bold critic who should assume to himself the right to teach Shorthorn breeders of twenty years' standing how to judge Shorthorns." And a little further on it also states: "The reporter to an influential daily paper questions one of these honourable mentions, &c." Well, here's a plucky man! The reporter of a newspaper setting up his opinion against the Royal judges! But let me ask, Did he differ from *all* the judges? Were their decisions unanimous? Did they all agree in putting Lord Irwin before Telemachus, Rapid Rhone before Aachen and Charon, Rose of Wytham before Nectarine Bud, Robin's Rose before Seraphina Bella 2nd? and though last, not least, were they unanimous in giving Moorish Captive a prize at all? To us outsiders it seemed as if there were two against one all through; and when we see the summary of prizes won by Booth cattle at Bedford (which no doubt we shall very shortly) let it also be recorded that there were two Booth judges on the bench.

I quite agree with Mr. Fawcett that judges who are to act at the Royal should not officiate in that capacity at any previous show, because, if they have already decided in favour of a particular animal they are not likely to acknowledge that their decision was wrong. I think also that animals showing their faults in a natural breeding state at a breeding stock show should be preferred to Smithfield cattle.

Let men be appointed to lead the cattle into the ring for reasons already given, and have practical men appointed as judges—men who know nothing of Booth or

Bates, but who do know what a good animal is without its being loaded with fat.

Lastly, let the animal's ages be dated from the 1st of January instead of the 1st of July, the hottest month in the year, and the most dangerous for calving. Let all these things be looked to, and I feel sure there will be quite as good stock shown at any future Royal as there has been, and not half the cavilling at the appointment and decisions of the judges.

Yours truly,

CHARLES A. BARNES.

Charleywood, July, 20th, 1874.

[A part of this letter is written under a misconception. If Mr. Barnes will turn to the report in *The Mark Lane Express* of last Monday, he will find that Mr. Fawcett's first recommendation runs thus: "The judges at the Royal Show ought not to act at any *previous* show in the same year."—EDITOR *M.L.E.*]

THE CIRENCESTER COLLEGE CLUB.

The Midsummer meeting was held at Bedford; but the rapid growth of the Club has made it a matter of increasing difficulty to obtain dining accommodation in county towns which are overwhelmed with visitors during the show week. The difficulty was this year overcome through the courtesy of the Council of the Royal Agricultural Society, who gave up their own room in the show-yard to the Club for the occasion. The attendance of old students and of visitors was somewhat smaller than it would have been if a larger room could have been obtained; but in spite of this, the list of toasts drew out so many brief speeches upon agricultural matters connected with the Royal Agricultural Society, the College and the Club, that the chairman found it necessary to defer till the next winter meeting the subject proposed upon the cards of invitation, viz., "The best Means of Reducing the Cost of Labour on Farms." Professor Wrighton, the president of the year, occupied the chair, with Mr. C. G. Roberts, the honorary secretary, in the vice-chair. The President and several members of the Council of the Royal Agricultural Society with some of its chief officers were among the guests. After the usual loyal toasts had been duly honoured, Dr. Voelcker proposed "Prosperity to the Royal Agricultural College," and coupled with it the name of Mr. E. Holland—its earliest and staunchest supporter—to whom he owed his own connexion with the Cirencester College. Mr. Holland, in reply, spoke of the great pleasure he derived from the steady progress of the institution, and the success achieved by those who left its walls—some for foreign and others for home appointments. "English and French Agriculture" was next received with acclamations, being proposed by Mous. Dutche, Director of the French Agricultural College at Grignon. Mr. E. P. Smith, an old student, and the official reporter for this year of the trial of implements, proposed "The Royal Agricultural Society of England." Mr. C. Randell responded. Mr. H. M. Jenkins gave "The Royal Agricultural College Club," and spoke of the valuable services rendered by many of its members as contributors to the Society's *Journal*, and as stewards, judges, and reporters in the show-yard. Professor Wrighton replied, remarking upon the pleasure it afforded him to see representatives present from every department of agricultural science and progress. The health of the visitors was proposed by Mr. Coleman, formerly Professor at Cirencester, and the first secretary to the Club. Dr. Gilbert replied on behalf of himself, Dr. Dcherain, and Messrs. Bowley, Prout, Pratt, E. Rich, and others. A special train from the showyard siding conveyed the party back to Bedford.

THE JUMPING BUSINESS AT HORSE-SHOWS.

"The ring was then given up for a miscellaneous performance, in which all the horses entered for leaping prizes were permitted to take part and to do pretty much as they pleased." This notion of Pandemonium, of screws and roughriders let loose to follow their own wild fancies, is given by a writer for one of the daily papers in his report of the second Alexandra Park horse show; while he thus goes on to tell of the very natural consequences: "Some of the riders sent their horses out at speed, and positively raced over the hurdles. Between two of these the rivalry became so keen that the boy jockey of one, in attempting to cut down his opponent and taking more heed of the other horse than his own, failed to head him for the fence in time, and, to the horror of every onlooker the horse was seen to make straight for the white rails and the some deep bank of heads behind it. There was no time to get out of the way, only a sharp, half-stifled cry of terror, and with a terrific bound the horse was over the rail and cleaving the mass of people with a heavy *thud* that could be heard to the further end of the enclosure. Horse and rider went down among the struggling and mangled men and women, and before they could be got out the groans and shrieks told of the severe injuries that had been sustained. One man was taken up in appearance lifeless, with his face mangled and limbs apparently fractured, and it is feared he is even more seriously hurt internally. Four or five women and another man were also injured more or less severely;" and so on. This happened on the second day, or rather on the first day of the regular jumping business; while we learn from another morning journal that on the day following "a lady had done very well, though her horse, ridden on a snaffle, could not always be persuaded to go straight. Being forced by her at the water-jump, he came short, and, falling, hurled the lady to the ground. Bruised as she was, she actually ran after, caught, and remounted the animal, amid a tempest of cheers! Another courageous and practised horse-woman had a rather worse fall, and was for some time afterwards in serious pain. A boy, well known as a winner of prizes at the Agricultural Hall, got one of the worst falls of the day. The rider of *Minstrel Boy* also came to trouble." Precisely so: on one day the racing roughriders main the visitors by dozens, and on the next gallantly essay to kill themselves or each other. Noticeably enough on the first occasion of this show being held, a horse, late in the week, being driven mad at the water jump by the shouts of the people, charged the rails and fortunately got clear of the two or three persons on the other side; and yet, strange to say, no attempt whatever was made this year to ensure more safety until "mangled men and women had been got out with groans and shrieks." The general "authorities of the Alexandra Park" probably know as much of a horse-show as they do of a grand concert, which they prudently hand over to the direction of Sir Michael Costa; as we are compelled to look a little further for any one in any way responsible for the riders racing at the hurdles or charging the people. The committee was, we believe, this season, raised to the Peerage, but according to *The Daily Telegraph*, "Colonel Luttrell is the acting steward in the ring, having never for ten minutes at a time been absent during any of the important trials." If, as it would so seem, the main responsibility rests on the shoulders of one sportsman, "the acting steward" has had a narrow escape of being tried for manslaughter.

That to this it will come sooner or later we have not the slightest possible doubt. The jumping for prizes under a fierce blazing sun and over hard jarring ground is a fool-hardy unsportsmanlike business, without a word to be said in its favour but that which has been said already by the manager of the Islington show—viz., that it "draws" the shillings and helps to pay his shareholders a dividend. On the other hand, the practice is as dangerous as it is cruel, and our only wonder is that the Prevention Society has not already interfered. Let the secretary only make it his duty to witness the terrible "bucketings" which the horses get in being ridden round and round in that close, stifling Islington Hall atmosphere, or the more direct punishment they receive from hand and heel at the Alexandra Park. The more cruelty, however, and the more danger proportionately the more shillings; as no doubt the graphic account of the racing horses and the groans and shrieks acted as a capital advertisement for the next day's "performances." But such successes are not legitimate; and the legislature, so soon as somebody is killed outright, or some horse ridden to death, will have to interfere and put down jumping prizes just as it must such fool-hardy displays as flying men or the greater abominations of man and dog-fights amongst the pitmen.

Our main regret is that these jumping prizes are coming to be so much identified with our agricultural meetings; and yet the finest shows in the kingdom, where there are by far the best entries of horses, are still free from such absurdities. At the great gathering during this week at Bedford there will be no jumping classes; at the great show of the All-Yorkshire Society at Sheffield in August there will be no jumping prizes; and at the meetings of the oldest agricultural society in the kingdom, as only second in importance to the Royal itself, and where Colonel Luttrell served his apprenticeship as an "acting steward," there are no jumping classes; and yet at no show has more money been taken. Still, at minor meetings, with a view to the shillings, jumping premiums prevail; as at Bishop's Stortford, a nobleman, who resides in the county and exhibited at the meeting, expressed his disgust at the jumping business; while one of the judges left the ring so soon as the jumping trials commenced. The thing is, in fact, growing into a serious nuisance, as the main objects of such exhibitions come to be neglected; but if this business must be continued, let it be put off to the shilling or second day, by when the really good horses, who of course never take any part in these proceedings, may be suffered to leave, and the mob be "amused" by the baiting of screws, while the stewards act as judges, and very properly become liable for the consequences.

THE BENGAL FAMINE.—The work undertaken by the Government has been done, and all the famine districts are "saved." The starving population will be better fed, probably, than they have ever been in their lives before; and Lord Salisbury and the English public will have nothing left to cavil at. Lord Northbrook has, in short, given full satisfaction to every one except the taxpayers of India, whose interests have, by some unaccountable oversight, never been taken into consideration by either the Secretary of State or the English press.—*The Bombay Gazette*. [We were enabled to announce some months since, on the authority of a private correspondent that the Bengal famine had been much exaggerated, as it would appear to suit certain purposes. Editor *M.L.E.*]

LINCOLNSHIRE AGRICULTURAL SOCIETY.

MEETING AT GRANTHAM.

With a nicely laid out show ground, capital sheddings for the horses and cattle, good rings for judging, and a nice stand, with prize cards, instead of ribbons as of old, posted over the winners after each verdict with commendable alacrity, the meeting still with all its improvements was not without its drawbacks. For instance, the grand stand instead of being open from end to end at a fee for the day like the Royal at Bedford, had the centre partitioned off and covered with red cloth for "other breeds," which was a nuisance, as it separated friends, as well as having the further effect of keeping the stand tolerably empty; while the catalogue was as tormenting a reiteration as ever, and always will be so long as owners are allowed the absurd privilege of entering their horses for one and the same fee in as many classes as they like. Then the stallions were under lock and key most part of the day, while those whose duty it was to have taken care that they could be seen by the public had the good taste to remain in the ring as faithful attendants on the judges, while their own horses were competing for prizes. The Ancient Briton girded his loins with the skin of a wild beast, but the improved man of the day not only clothes his hide in purple and fine linen, but that of his horse and his dog also, his bull and his cow, and verily sometimes his pig. In a word it is more difficult in these refined days to get a glimpse of a beast in his stall at an agricultural show unadorned than in days of yore it was a sight of the fair proportions of Queen Boadicea herself; while many of the improved breeds have been so crossed and recrossed that for distinctive character and genealogy they rival De Foe's "true born Englishman." Although there were very few first Royal winners in the catalogue, and the names of Linton, Outhwaite, Garne, Stratton, and many others were not to be found; still there was a very fair show of Shorthorns: Telemachus looking as fresh and "beautiful for ever" as the champion had neither Lord Irwin, Duke Aosta, Protector, Knight Templar, or Earl Warwickshire, the pick at the Royal, to oppose him in the seventeen entries, one of which, Earl Derwent, a bull of fair proportions, was afterwards declared the best of a small class of three-year-olds. In a nice class of two-year-old bulls, General Wharfedale, a useful animal, but only commended at the Royal beat those very taking-looking youngsters, Robert Stephenson, Prince of Cashmere, and Cymbeline, the second, fourth, and highly commended Royalists. Rapid Rhone, anything but a level beast, but a third Royal, beat a smaller and a much better-looking bull in Telemachus the 6th; while Cambridge Duke 6th took more after the cow in the head and neck. In the absence of Royal winners May King, a neat nice-backed youngster, and commended at Bedford, beat the lengthy even-made Cambridge Duke the 7th and the small, but very neat Bright Knight, while Messrs. Dudding and Bradburn each sent a couple. Victoria Victrix, one of the Princesses of fancy beef, was here made Queen of her class of cows; but in all her greatness, as she came waddling along, her eye told plainly enough that prize cattle as well as man are born to misery, as she was very near calving. Blooming Bride, alongside of the "Queen," looked a great-grown heifer; and though only the reserve number at Bedford, in the two-year-olds, beat Rose of Wytham placed before her there, and Mr. Hutchinson's nice-built kind-headed Lady Playful, who, with his good-looking ones, Dairy Girl and Lady Louisa, beat with the first two very nice ones in a small gathering, and with the latter five more, including Moll Gwynne and Rosebud

4th, a lengthy but not level heifer, which headed a fair but small class. There were four yearling heifers, some nice she calves under one year old, some capital pairs of bullocks, and good oxen and heifers for butchering purposes.

The show of Lincoln was great and good, with awards somewhat put about, but the Leicesters were not strong in numbers, although of first quality; Mr. Turner having it all his own way in the shearing rams, and again with his two-shear, beating Messrs. Marris, Borton, and Hutchinson's; while in ewes Messrs. Marris and Allen were the only entries, and Messrs. Turner and Borton the only competitors in gimmers. For the best shearing ram of the Lincoln breed there were forty-two competitors, and some very good sheep, with representatives from the flocks of Messrs. Hack, Sardeson, Garner, Wright, Clark, Garfit, Cartwright, Howard, Dudding, Morley, Pears, Close, Marshall, Dean, Lister, and Byron. Seventeen two-shear rams entered the lists, and made a very good class; while the three-shear rams were represented by nine, all told, from the flocks of Messrs. Johnson, Wright, Morley, Pears, and Swinger. A nice pen of five ewes from Kirby Green were unopposed, and Mr. Clarke with twenty-five very nice sorty good-backed ewes beat some very neat, but more delicate-looking entries from Colonel Grantham's flock. There were ten entries of shearling gimmers, one pen of ten lambs, and four of shearling wethers—all looking remarkably well, considering some of the grass we saw between Grantham and Peterborough looked about the colour and with as much bite on it as a pair of kersymerre breeches. The prospects of the farmer in that district, where the soil is on the rock, we are sorry to say look anything but golden. There was a good show of pigs, although many pens were empty.

Taking the situation of Grantham into consideration, we must say we were disappointed with the display of riding horses. Mr. Chaplin deserves the thanks of the county for the thoroughbred stallions he introduces into Lincolnshire; and Knowsley by Stockwell is really a grand looking horse, as none the worse for a heap of flesh taken off since we saw him at Oxford. The Dart by Lord Falconberg, his only rival, has neither substance nor character. Lady Decanter, a fresh-looking mare for twelve-year-old, and one that we have seen before, is very well built, with good limbs, and moves well. Not that we care so much about the moving in brood mares, but would rather go for points, as many a good one is not put to the stud until stumped up. In fact, the father of one of the finest fellows that ever stepped was put to bed with a wooden leg long before the son was thought of. There were several grand old mares in the class full of hunting form, and we think better than the second, or even the third, though she was very hunting like. The Baronet, a grey of Mr. Howard's, of Temple Bruer, was not the best in the five year olds to our mind, although a stiff-built, well-made horse, with the exception of his shoulders and not being a great mover. Shakespeare, though not perfect in his shoulders, was more to our mind as he could go, but not so well as Peacock, a compact, well-built horse, with good limbs; while another very nice one was Sea Breeze, a chestnut, with form, action, and quality. Rifleman, from Melton, was well-made, with good action; and Grenadier, a bay gelding, showed quality, and a little too much flourish with his feet, but this he may grow out of. Mr. Philip Hornsby had two or three nice

horses—Moody Sam, a compact, powerful brown, showing breed, backed by White Stockings and Kingfisher, and Mr. Brady Nicholson brought a varmint-looking bay that could use his legs. For the next class the whole seventeen had been in the former one, with many of them in one or two more classes, so that we do not attempt to take them class by class, but make a puzzling jumble, like the managers do of the show year after year, instead of taking the Royal as a pattern, and one which they cannot beat. In the four-year-olds King of Diamonds, a horse which we were not desperately in love with when we described him at Bedford, was here, and can move; as can a black gelding of Mr. Lett's, and Mr. Spafford's Ashfield, a nicely bred well-made horse, with the exception of a flick neck, into which his head was stuck in anything but a pleasing way when he was set going. Mr. Paddison had a bay by Peon, of fair form, and Mr. Miller sent Singleton, by Carbine, which showed blood, and could move. Then Mr. Conpland's Spoilt Child, by Canute, is a very nicely formed light hunter, and a capital goer, making use of his hind legs in style. The best three-year-old was a very compact built, powerful, good limbed bay, that could make use of his legs, and by a Harkaway, but not the great horse that we remember well as one of the quietest stallions ever at the stud. In fact, you might crawl under him and through his hind legs, and those who knew him would have insured your life for £1,000 for sixpence. He was a grand deep topped horse, with capital ends, but rather small arms. But why are we describing the sire of King Tom? Merely to say that grand horse as he was he would not have stood a chance in the show-ring alongside of some wretch with coaching action, and for his sake and the breed of horses we wish all such judges at the Cape, and so on to Calcutta, or some place warmer. Mr. Harvey Bayley bought the bay, while Newsmonger, which was in one of the classes, leaves the land of his birth for the King of the Belgians. The Banker, Jester, and Marshal MacMahon were entered, but not present. Mr. Miller's Victor is compact with breed, and Mr. Wood's Pottinger was also well put together, and could gallop, as could The Gem, a very neat chestnut filly, shown by Mr. Letts. Wellington wants time, or screwing up together a bit. The two-year-old hunting colt of Mr. Jackson Everett is of good form, and could move, but has not wearing-looking legs. The second to him, a roan, from Castle Bruer, is a nice gelding of very good form; and a brown, from the same stable, by Brother to Bird on the Wing, when he drops to his leg, will take the shine out of some across country. With a little more depth in the girth, and a trifle more goosey on the rump, he might grow into a likeness of old Lokery, famed for deeds with that really fine horseman, Jem Mason. And this by the bye reminds us of another fine horseman who was tittuping about the ring all the day, doing it so prettily.

The yearling hunting colts were a middling lot bar one or two, and the two-year-old hunting filly of Mr. Middleton's, a big lathy one, while the second had form but his joints wanted oiling. Then Mr. Goodliffe had a good looking one by Tom Tit. Mabel Grey is a pretty hackney brood mare, of which there were several in the lot, when she was put at the head. Mr. Hornsby's grand going old coaching mare came in for first honors, as she was third at Bedford, and the Hackney mares included Stella, Gipsy Queen, and Ballet Girl, which took our eye, together with Mr. Staples' Skylark, Colonel Reeves' brown gelding, Mr. Benson's Sancy Girl, and Mr. Stephenson's well-known chestnut Princess.

The agricultural horses made a fair show, but anything of great note was wanting, Le Bon being in the catalogue, but not in the flesh, although a namesake of his

belonging to Mr. Bromby was, as was Honest Tom the 2nd and Mr. Cotton's grand three-year-old Boxer, a deep-bodied short-legged horse, which we fancied was a little light in his forelegs, and that he flourished them a bit too much in his walk. There were some fairly made two-year-old entire colts out of eight, and among a very good gathering of cart mares was Royal Duchess, but we did not see them out, as the judging did not take place till the morrow. This we think a mistake, as few people can spare the time to spend two days at a show like the Lincolnshire. We speak of business men, and not those out pleasuring, and who can face a pork pie in July and August. Ten or eleven two-year-olds stood in their stalls, and looked very promising. Mr. Vergette's Violet was among a few two-year-old cart fillies, and there were some excellent pairs of agricultural horses.

The show being this year held in their own town, Messrs. R. Hornsby and Sons made a great display. In the machinery in motion department they had four of their patent portable steam-engines of different powers, three of them being matched with steam thrashing machines. In reapers and mowers, a newer, but no less important branch, Messrs. Hornsby showed a large assortment, consisting of examples of their Governor, Progress, and spring-balance self-rakers; one and two-horse back-delivery reapers and mowers; and combined mowers and reapers. Six drills of various sizes and kinds were shown, backed by turnip-cutters, root pulpers, single and double furrow ploughs, dressing machines, blowers, and washing machinery. Carter and Co., of High Holborn, in some return for not showing at Bedford, had a capital as well as very extensive "museum" of seeds, roots, grasses, and Italian rye-grass, with which they took the first prize; while Sharpe and Co., of Sleaford, with another nice collection, were second.

Amongst the other exhibitors of implements were Tuxford and Sons, of Boston; Fowler and Co., of Leeds; Marshall and Sons, of Gainsborough; Robey and Co., Lincoln; Nicholson & Son, Newark; Foster & Co., Lincoln; Coultas, of Grantham; Coulson and Wear, of Stamford; Wright, of Shuce Ironworks, Boston; Hempstead and Co., Grantham; Ashby, Jeffery, and Luke, Stamford; Heft, Brigg; Felton, Grantham; Barford and Perkins, Peterborough; Jekyll and Co., Lincoln; Doughty and Son, Grantham; Penny and Co., Lincoln; Martin, Grantham; White, Spalding; Parkinson, Lincoln; Topham, Colsterworth, Grantham; Cooke, Lincoln; Perkins, Boston; Boyers, Grantham; Wiseman, Spalding; Anderson, Grantham; Simonds and Sons, Boston; Whitworth, Wyberton, Boston; Wholey, Alford; Slater and Padgett, Grantham; Hayes and Son, Stamford and Peterborough; Lewin, Ropsley, Grantham; Pearson Brothers, Gainsborough; T. Harrison, Lincoln; Rainforth and Son, Lincoln; Tong, Lincoln; Cheavin, Boston; Boyall, Grantham; Caborn, Grantham; Ashton, Horncastle; and Hughes, Market Harborough.

PRIZE LIST.

JUDGES.—SHORTHORNS: G. Drewry, Holker, Carke-in-Cartmel; G. Mann, Scawsby, Doncaster; Rev. L. C. Wood Singleton, Poulton-le-Fylde. LICESTER SHEEP AND PIGS: W. Sanday, Ratcliffe-on-Trent, Nottingham; G. Walsley, Rudston House, Bridlington; L. Borman, Barnoldby-le-Beck, Grimsby. LONG-WOOL SHEEP: E. Davy, Worlaby House, Brigg; H. Mackinder, Langton Grange, Spilsby; T. Casswell, Pointon, Folkingham. HORSES—Hunters and Roadsters: H. D. Boulton, Putnoe, Bedford; J. Martin, Wainfleet, Boston; Colonel Luttrell, Badgworth Court, Axbridge. Agricultural Horses: W. Wood, Haborough, Uleby; V. B. Watts, Melcombe Horsey, Dorchester; J. W. Rowland, Valle, Boston.

SHORTHORNS.

Bull.—Champion prize, £30, and challenge cup, value 20 gs., Marquis of Exeter, Burghley Park, Stamford (Tele-machus).

Bulls three years old or upwards.—First prize, £20, W. Handley, Greenhead, Milnthorpe; second, £7, C. Beart, Stow, Downham Market; third, £3, T. Pears, Hackthorn, Lincoln.

Two-year-old bulls.—First prize, £20, R. Moss, Whisby, Lincoln; second, £7, Messrs. Dudding, Panton, Wragby; third, £3, T. Willis, Carperby, Bedale.

Yearling bulls.—First prize, £20, Lady Pigot, Branches Park, Newmarket; second, £7, Marquis of Exeter; third, £3, J. J. Sharp, Broughton, Kettering.

Bull calves.—First prize, £15, Lady Pigot; second, £7, J. Lynn, Stroxton, Grantham; third, £3, T. Rose, Melton Magna, Wymondham.

Cows or heifers, in milk or in calf.—Champion prize, £25, Lady Pigot.

Cows above four years old, having had a calf at natural time within nine months of the time of showing.—First prize, £20, T. H. Hutchinson, Manor House, Catterick; second, £7, J. J. Sharp; third, £3, O. Bennion, Cresswell, Stafford.

Cows not exceeding four years old, entered in Coate's Herd Book, for dairy properties combined with aptitude to fatten.—Silver Cup, £10, T. H. Hutchinson.

Heifers three years old, having had a calf.—First prize, £15, Messrs. Dudding; second, £7, F. Cartwright, Drakelow, Burton-on-Trent; third, £3, J. J. Sharp.

Two-year-old heifers.—First prize, £15, Messrs. Dudding; second, £7, Lady Pigot; third, £3, T. H. Hutchinson.

One-year-old heifers.—First prize, £15, Lady Pigot; second, £7, Lady Pigot; third, £3, T. H. Miller, Singleton Park, Poulton-le-Fylde.

She calves under one-year-old.—First prize, £10, C. R. Fieldsend, Kirmond, Market Rasen; second, £5, B. J. Ackers, Frinknash Park, Painswick; third, £2, Lady Pigot.

Pair of bullocks.—First prize, piece of plate or £10, T. and J. B. Freshney, Louth; second, £5, Earl of Zetland, Aske Hall, Richmond.

Oxen or heifers which from early maturity, quality, &c., appear to have brought the greatest profit to the exhibitor.—First prize, £10, R. Wright, Nocton Heath, Lincoln; third, £3, T. and J. B. Freshney.

EXTRA STOCK.—First prize, £3, J. Codling, Whaplode, Spalding, for heifer; second, £1, J. E. Sanders, Gainsborough, for an Alderney bull.

SHEEP.

LEICESTERS.

Shearling rams.—First prize, £15, G. Turner, jun., Thorpe-lands, Northampton; second, £5, G. Turner, jun.

Two-shear or older rams.—First prize, £10, G. Turner, jun.; second, £5, T. Marris, Ulechy.

For the best ram in classes 16 or 17.—Additional prize, £10, G. Turner, jun.

Pen of five ewes.—First prize, £3, T. Morris, Ulechy; second, £4, T. Allen, Thurmaston, Leicester.

Pen of five shearing gimmers.—First prize, £3, G. Turner, jun.; second, £4, J. Borton.

LINCOLNSHIRE LONG-WOOLS.

Shearling rams.—First prize, £15, T. Cartwright, Dunston Pillar, Lincoln; second, £10, Messrs. Dudding; third, £5, J. Pears, Mere, Lincoln.

Two-shear rams.—First prize, £10, W. F. Marshall, Branston; second, £5, Messrs. Dudding.

Three-shear or older ram.—First prize, £10, J. Pears; second, £5, R. Wright

For the best long-wool ram (not a Leicester).—Challenge Cup, value 15 gs., J. Pears.

Pen of five ewes.—Prize, £10, J. Byron, Kikby Green, Sleaford.

Pen of twenty-five ewes of any age.—First prize, £15, C. Clarke, Ashby-de-la-Launde, Sleaford; second, £5, Lieutenant-Col. Grantham, West Keal Hall, Spilsby.

Pen of five shearing gimmers.—First prize, £10, J. Byron; second, £5, J. Pears.

Pen of ten she lambs.—First prize, £5, J. Byron.

Pen of five shearing wethers.—First prize, £10, C. Lister, Coleby Lodge, Lincoln; second, £5, T. Close, Barnack, Stamford.

EXTRA STOCK.—Pen of five ewes of various ages: Prize, £3, J. H. Cuswell, Loughton, Falkingham. Pen of six ewes of various ages: Prize, £2, S. E. Dean, Dowsby Hall, Falk-

ingham. Long-wool ram: Prize, £1, J. Wheeler, Long Compton, Shipston-on-Stour.

HORSES.

Thoroughbred stallions for hunters.—First prize, £25, H. Chaplin, M.P., Blankney Hall, Lincoln (Knowsley); second, £10, J. B. and S. Slater, North Carlton, Lincoln (Dart).

Mares for breeding hunters.—First prize, £15, H. Watson, Newbegin, Filey; second, £7, J. Tomlinson, Lutton Marsh, Long Sutton; third, £3, R. G. F. Howard, Temple Bruer.

Hunting geldings or mares, five, six, or seven years old.—First prize, £30, R. G. F. Howard; second, £15, W. Staple, Oxney, Peterborough; third, £5, T. L. Skipworth, Owmby House, Brigg.

Hunting geldings or mares, five years old, up to not less than 13 stone.—Prize, £10, J. Elson, Goadby, Marwood, Melton Mowbray.

Geldings or mares, four years old, calculated to make a hunter.—First prize, £50, C. C. Hayward, Southill, Biggleswade; second, £15, T. Darrell, West Ayton, York; third, £5, J. Lett, Scampston, York.

Hunters, four years old or upwards, up to not less than 13 stone.—First prize, £15, J. P. Oliver, Walcot, Falkingham; second, £5, P. Hornsby, Grantham.

Hunting geldings or fillies, three years old, by a thoroughbred horse.—First prize, £20, and a whip value £5, G. Hardy, Syston, Grantham; second, £10, C. C. Hayward.

Hunting colts, two years old.—First prize, £10, J. Everatt, Loughton, Gainsborough; second, £5, R. G. F. Howard.

Hunting colts, one-year-old.—First prize, £10, J. Potter, Wadworth, Doncaster; second, £5, T. H. Miller.

Hunting fillies, two years old.—First prize, £10, S. Middleton, Water Newton, Wansford; second, £5, R. G. F. Howard.

Hunting fillies, one-year-old.—First prize, £7, W. Hickson, Bettesford; second, £3, J. Goodhiff, Huntingdon.

Hunting foals.—First prize, £12, H. Watson; second, £7, J. Tomlinson; second, £4, R. G. F. Howard; third, £2, R. G. F. Howard.

Stallions for roadsters.—First prize, £10, T. Upton, Gosberton, Spalding; second, £5, S. Alford, Friskney, Boston.

Mares for breeding roadsters.—First prize, £7, T. H. Miller, Singleton Park, Poulton-le-Fylde; second, £3, R. G. F. Howard.

Mares for breeding carriage horses.—First prize, £10, J. Hornsby; second, £5, J. Wood, jun., Selby.

Horses whose action in harness is best.—First prize, £10, J. Baker, Wisbech; second, £5, P. Hornsby.

Horses in harness with best park action.—First prize, £10, J. Baker; second, £5, J. Hornsby.

Weight-carrying cobs, mare, or geldings, not exceeding eight years old, and not being under 14 hands nor above 15 hands.—First prize, £10, W. Sadler, Vicar-lane, Leeds; second, £5, P. Hornsby.

Hackney mares or geldings, exceeding 14 hands and not exceeding 15 hands 1 inch.—First prize, £10, J. Benson, Sandtoft, Thorne; second, £5, W. Sadler.

Ponies not exceeding 14 hands.—First prize, £7, J. Eaton, Grantham; second, £5, R. Brackenbury, Londonthorpe, Grantham; second, £3, W. Pinder, Ropsley, Grantham.

Mares for breeding draught horses.—First prizes, £15, C. Lister; second, £7, J. Tomlinson; third, £3, J. Tomlinson.

Cart-geldings, two years old.—First prize, £10, H. Smith, Cropwell Butler, Bingham; second, £4, R. Graves, Ashby-de-la-Launde, Sleaford.

Cart fillies, two years old.—First prize, £10, T. H. Vergette, Boro' Fen, Peterborough; second, £4, T. Morris, Welton.

Cart fillies, one-year-old.—Prize, £10, W. Chatterton, Belchford, Horncastle.

Cart foals.—First prize, £3, J. Tomlinson; second, £4, J. Tomlinson; third, £2, T. Sills, Honington.

Cart foals bred by and the property of occupiers of not more than 50 acres of land.—First prize, £7, Mr. Farmer, Marston, Grantham; second, £3, Mr. Goodacre, Barkston, Grantham.

Pair of draught horses under eight years old.—First prize, £10, W. Cafferata, Newark; second, £5, Mr. Woodhouse, Wellingore.

Stallions for draught horses, two years old.—First prize, £10, Mr. Greetham, Blankney Fen; second, £5, Mr. Colton, Newark.

FIGS.

Boars, large breed, not less than twelve months old.—First prize, £10, J. Dove, Bristol; second, £5, R. E. Duckering, Northorpe, Kirton Lindsey.

Boars not exceeding twelve months old.—First prize, £5, R. E. Duckering; second, £2, J. Dove.

Boars, small breed, not less than twelve months old.—First prize, £10, R. E. Duckering; second, £5, C. R. N. Beswicke-Royds, Littleborough, Manchester.

Boars not exceeding twelve months old.—First prize, £5, T. Rose, Melton Magna, Wymondham; second, £2, M. Walker, Stockley Park, Burton-on-Trent.

Berkshire boars.—First prize, £5, B. St. John Ackers, Frinknash Park, Painswick; second, £2, J. Wheeler.

Sows, large breed.—First prize, £5, R. E. Duckering; second, £3, R. E. Duckering.

Sows, small breed.—First prize, £5, R. E. Duckering; second, £3, G. P. Watson, Loudonhorpe, Grantham.

Berkshire sows.—First prize, £5, M. Walker; second, £2, J. Wheeler.

Three breeding pigs of the same litter, not exceeding six months old, large breed.—Prize, £5, M. Walker.

Three breeding pigs of the same litter, not exceeding six months old, small breed.—Prize, £5, C. R. N. Beswicke-Royds.

Three breeding pigs of the same litter, not exceeding six

months old, Berkshire breed.—Prize, £5, Rev. G. F. Deedes, Heydour, Vicarage, Grantham.

EXTRA STOCK.—Prize, £2, M. Walker, for two gilts, small breed.

AGRICULTURAL IMPLEMENTS.

Stand of agricultural implements exhibited by a maker.—First prize, £20, Hornsby and Son, Grantham; second, £10, Barford and Perkins, Peterborough.

Stand exhibited by an agent.—First prize, £20, Barford and Perkins; second, £10, J. Coultas, Grantham.

SEEDS AND ROOTS.

Collection of seeds and roots.—First prize, piece of plate or £10, Carter and Co., High Holborn, London; second, £5, C. Sharpe, Sleaford.

The President's Medal for the following articles: R. Hornsby and Sons' patent spring balance self-raker reaping machine; W. N. Nicholson and Sons, Trent Ironworks, Newark, new patent combined self-acting and manual delivery horseshake; Ashby, Jeffery, and Luke, Stamford, chaff cutter; Barford and Perkins, Peterborough, elevator and stacking machine—also to their improved finishing thrashing machine; W. Walker and Son, Tithby, Bingham, Notts, 14-row corn and seed drill, with cogging gear, waterproof seed box, and seed conductors; J. Cooke, Lincoln, patent turnwrest or one-way plough, "The Climax"—also to his patent light one or two-horse plough; Head, Wrightson, and Co., Teesdale Ironworks, Stockton-on-Tees, patent pulley block, to lift three tons eight feet high; Hayes and Son, Stamford and Peterborough, Royal Society's first prize agricultural wagon.

NORTHUMBERLAND AGRICULTURAL SOCIETY.

MEETING AT NEWCASTLE-UPON-TYNE.

Beyond a few good Galloways there was nothing in the cattle classes of any note except the Shorthorns. There were seven Shorthorn winners from the late Bedford meeting, including four firsts. In the best class of bulls over two years old the three, the best known were Mr. Bruce's Lord Irwin, Duke of Aosta, and Sir Arthur Ingram. The three go all on to Inverness. Among the other bulls in the class were Mr. Fox's Leeman, Sir Baron Lawrie, 3rd, and Mr. Meadow's Ben Bracc. Mr. Outhwaite's Lord Godolphin was easily in the front of the yearling class, and some fair bull calves competed. Mr. Outhwaite's Vivandière was first in the cow class and also gained the fifty-guinea cup given by the Corporation of Newcastle to the best cow or heifer; whilst the Queen's red five year-old cow, which was highly commended at Bedford, goes on from here to Inverness. The heifer classes were only fairly represented. There were 22 entries of Galloway cattle, including some specimens from the well-known herds of the Duke of Buccleuch, Mr. Graham, Parcelstown, and Mr. Cunningham, Tarbreoch. Several good Channel Islands and Ayrshire cows were exhibited. The collection of Border Leicester sheep is large and fine, including Mr. Forster's, Mr. Purves', and Mr. Tweedie's successful entries at the recent Royal show, and several others not much less meritorious. Shearing tups were a very good exhibition. In a pretty good turn out of Cheviots, Mr. Elliot, Hindhope, obtained the lion share of the honours. Black-faced sheep were not very numerous, but several of the lots possessed merit. There was a good display of agricultural horses, including some well-known animals in the showyard. Of hunters, ponies, and hacks there was also a creditable show, and the best prizes are mainly from far-famed exhibitors.

SHORTHORNS.

JUDGES.—G. Bland, Coleby, Lincoln.

W. Bowstead, Haackthorpe House, Penrith.

Mr. R. Smith, Storrs Farm, Windermere.

Bulls, above two and under seven years, £20 and a silver cup, value £50, for the best bull of all classes, first prize,

R. Bruce, Newton, of Struthers, N.B. (Lord Irwin); second, £10, W. Linton, Sheriff Hutton (Sir Arthur Ingram); third, £5, G. Fox, Harefield, Winslow (Leeman). Highly commended: J. Meadows, Thornville, Wexford, Ireland (Ben Bracc).

Bulls, above one and under two years, first prize, £15, J. Outhwaite, Bainesse, Catterick (Lord Godolphin); second, £6, The Duke of Northumberland, Alnwick Castle (Duke of Tyne); third, £3, A. H. Browne, Doxford Hall, Chathill (Rossario). Highly recommended: W. Linton, Sheriff Hutton, York (Sergeant Irwin). Commended: The Executors of the late W. Morley, Sweetwells, Stanhope (British Baron).

Bull calves, under twelve months old, first prize, £3, A. H. Browne (Marquis of Granby); second, £2, J. and G. Atkinson, Bywell Hall Farm, Stocksfield (Gay Duke).

Cows, first prize, £15, and silver cup, value £50, for the best heifer or cow competing in classes 4, 5, 6, 7, J. Outhwaite, (Vivandière); second, £6, Sir W. C. Trevelyan, Bart., Wallington, Newcastle (Lady-le-Moor); third, £3, J. and G. Atkinson, Bywell Hall Farm, Stocksfield (Bracelet). Highly commended: Her Majesty the Queen, Windsor Castle (Coldcream 4th); J. and G. Atkinson, (St. Crispin 2nd); J. Richardson, Lowther-street, Penrith (Rosebud). The class commended.

Heifers, above two and under three years old, first prize, £10, Sir W. C. Trevelyan, Bart. (Waterloo); second, £5, The Executors of the late G. Angus, Broomley, Stocksfield (Daisy Third). Highly commended: Sir M. W. Ridley, Bart., Blagdon, Cranlington (Lady Flora).

Heifers, above one and under two years old, first prize, £7, J. and G. Atkinson (O. B. Justicia); second, £3, Her Majesty the Queen (Carolina Fourth). Highly commended: The Duke of Northumberland, Alnwick Castle (Modesty); R. Harrett, Kirkwhelpington, Newcastle (Lady Fussbox). The class commended.

Heifer calves, under twelve months old, first prize, £3, Sir W. G. Armstrong, C.B., Craigs, Rothbury (Fifth Princess of Oxford); second, £2, J. Wilson, Woodhorn Manor, Morpeth (Mountain Beauty). Highly commended: R. Harrett.

GALLOWAYS.

JUDGES.—T. Gibbons, Barafoot, Esk, Longtown.

H. McLaren, Olferton Hall, Sunderland.

J. McCracken, Blackhall, Kirkwellington.

Bulls, above two years old.—First prize, £10, and silver cup, value £25, M. and F. Teasdale, Boggy, Knavesdale, Alston

(Gallant Graham); second, £5, G. Graham, Oakbank, Longtown (Forest King). Highly commended: W. Heslop, Denton Hall, Brampton (Bob); J. Cunningham, Tarbreoch, Dalbeattie (The Pretender).

Bulls, under two years old.—First prize, £10, J. Graham, Parcelstown, Longtown (Sim of Whitrain); second, £5, R. Beattie, Howend, Longtown (Brewer).

Cows or heifers.—First prize, £8, J. Graham (Dame Margaret Douglas); second, £4, J. Cunningham (Maid Marion 4th). Highly commended: J. Graham (Hermione 5th).

Cows or heifers, three years old.—First prize, £8, and a silver cup, value £10, J. Cunningham (Mary 2nd of Tarbreoch); second, £4, J. Graham. Highly commended: J. Cunningham (Bridesmaid).

CHANNEL ISLANDS.

JUDGES.—(As for Galloways.)

Cows or heifers of any age.—First prize, £6, Sir M. W. Ridley, Bart., Plagdon, Crumlington; second, £3, Sir J. D. Marjoribanks, Bart., Lees, Coldstream (Josephine); third, Sir J. D. Marjoribanks (Blossom).

AYRSHIRES.

JUDGES.—(As for Channel Islands.)

Cows or heifers of any age.—First prize, £6, Sir M. W. Ridley, Bart.; second, £3, C. T. Reed, Newbiggin House, Newcastle; third, £1, O. Richardson, Newbiggin-by-the-Sea.

SHEEP.

BORDER LEICESTERS.

JUDGES.—J. C. Bolam, Stamford, Alnwick.

J. Clay, Kirchester, Kelso.

Brood mares with foal at foot or in foal at time of show, a silver cup value £25, and £10 in money.—L. C. Chrisp, Hawkhill, Alnwick (The Favourite); second, £5, J. Moffat, Kirklington Park, Carlisle (Lady Line); third, £2, E. Hornby, Flotmanby, Ganton (Lady Derwent). Highly commended: T. Bell, Whorlton, Newcastle.

Three-year-old geldings for the field.—First prize, £5 and a silver cup, value £10, for the best gelding or filly competing in classes 37 and 38, R. Dand, jun., Hauxley Hall, Acklington (Daybreak); second, £3, J. Brown, Wigzonby, Wigton. Highly commended: T. Graham, Branlands Park, Irthington (Derby). Commended: G. A. Potter, Heaton Hall, Newcastle (Derby).

Three-year-old fillies for the field.—First prize, £5, H. Elliot, Akeld, Wooler; second, £3, the Duke of Northumberland, Alnwick Castle. Highly commended: T. Bell (Lady Sarah).

Two-year-old geldings for the field.—First prize, £5, Mrs. Cadogan, Brinkburn Priory, Morpeth; second, £3, B. Spraggon, Nufferton, Stocksfield (Duke of Tyne). Highly commended: T. Graham, Brandland's Park, Irthington (Disraeli).

Two-year-old fillies for the field.—First prize, £5, J. D. Ogilvie, Mardon, Cornhill (Firely); second, £3, J. G. Simpson, Mouldron, Richmond (May Queen). Highly commended: A. H. Browne, Doxford Hall, Chathill (Young Maid).

Yearling colts or geldings for the field.—First prize, £5, and a silver cup, value £10, Earl Percy, M.P., Alnwick Castle; second, £3, J. Rickerby, Wallhead, Crosby-on-Eden (Captain). Highly commended: J. Davison, jun., Trillington Hall, Morpeth.

Yearling fillies for the field.—First prize, £5, J. Moffat, Kirklington Park, Carlisle; second, £3, J. Paterson, Terrona, Langholm, N. B. (Oatcake).

Hunters of any age, confined to the district comprising the county of Northumberland and Durham, and regularly hunted

therein during the last season by the present owner.—First prize, a silver cup, value 25 guineas, and one-half of a sweepstakes of 10s. each, T. C. Coxon, Newcastle (The Cannibal); second, £5, and one-half of the sweepstakes, J. W. Annett, Ugham, Morpeth (Magician). Highly commended: R. Dand, jun., Hauxley Hall, Aeklington (Daylight).

Hunters, five years old and under ten, qualified to carry not less than 15 stones with hounds.—First prize, a silver cup, value £25, and one-half of a sweepstakes of 10s. each, J. Fearon, Corkickle, Whitehaven (Erl King); second, £5, and one-half of the sweepstakes, H. Jewison, Raisthorpe, York (Palmerston). Highly commended: J. W. Annett (Clayton).

Hunters, five years old and under ten, qualified to carry not less than 12 stones with hounds.—First prize, a silver cup, value £25, and one-half of a sweepstakes of 10s. each, and champion cup, value £40, for the best hunter competing in classes 43, 44, 45, and 46, T. H. Hutclinson, Manor House, Catterick (Jester); second, £5, and one-half of the sweepstakes, J. W. Annett (Nunykirk). Highly commended: J. Tate, Barnhill, Aeklington (Markah).

Horses or mares, four years old.—First prize, a silver cup, value £25, and one-half of a sweepstakes of 10s. each, Sir G. Wombwell, Bart., Newburgh, York (Cawton); second, £5, and half the sweepstakes, Mrs. A. H. Browne, Doxford Hall, Chathill (Seabreeze). Highly commended, E. Liddell, Morris Hall, Norham (Maydew).

HACKNEYS.

JUDGES.—W. S. Atkinson, Barrowby Hall, Woodlesford, Leeds. A. Calder, Yetholm Mains, Kelso.

J. Farrington, Brancepeth, Durham.

Horses or mares of any age, not exceeding 15·2 hands high, and equal to carry 14 stones.—First prize, a silver cup, value £25, C. G. Grey, Dilston, Corbridge (Jenny); second, £5, and a sweepstakes of 5s. each, C. J. Cunningham, Tofts Morebattle, Kelso (Zampa). Highly commended: T. Pattison, Norwood, Gateshead (Duchess); B. Spraggon, Nafferton, Stocksfield-on-Tyne (Duchess of Tyne). Commended: A. Hornsey, Stitttenham, Sheriff Hutton (Young Agnes).

Horses or mares of any age, not exceeding 14·2 hands high.—First prize, a silver cup, value £25, W. H. Blackman, Wressle, Howdon, York (Fairy); second, £5, and a sweepstakes of 10s. each, C. Stephenson, V.S., Newcastle (Gipsy). Highly commended: C. Stephenson (Lady Florence). Commended: The Duke of Northumberland; R. Jefferson, Todd's Nook, Newcastle (Sam).

PONIES.

JUDGES.—(As for Hackneys).

Horses or mares of any age, not exceeding 13 hands 2 inches high.—First prize, a silver cup, value £15, and a sweepstakes of 5s. each, C. W. Wilson, High Park, Kenda (Bobby); second, £4, J. C. Straker, Willington House Durham (Sprite); third, £2, E. Bell, Westgate-road, Newcastle (Jessy). Highly commended: C. W. C. Henderson Leazes House, Durham.

Horses or mares of any age, not exceeding 12 hands high.—First prize, a silver cup, value £10, R. Deuchar, Newcastle; second, £4, M. Nixon, Earsdon Moor, Morpeth; third, £2, H. F. Swan, North Jesmond, Newcastle (Kittie). Highly commended, Sir W. G. Armstrong, C.B., Cragside, Rothbury.

CARRIAGE HORSES.

JUDGES.—(As for Hackney Ponies).

Horses or mares, three or four years old.—First prize, £10, J. Johnson, Brigham, Driffield (Rob Roy); second, £5, H. A. Clarke, Prospect House, Aspatria (Emma). Highly commended, J. Wilson, Woodhorn Manor, Morpeth.

PIGS.

JUDGES.—J. B. Booth, Killyerby Hall, Catterick.

J. Fisher, Carhead, Cross Hills, Leeds.

W. Goodrich, Dilston, Corbridge-on-Tyne.

Boars of the large white breed of any age.—First prize, £5, C. R. N. Beswicke-Royds, Littleborough, Manchester; second, £7, J. Dove, Hambrook House, Bristol (Lord Hambrook).

Boars of the small white breed of any age.—First prize, £5, and a silver cup value £10, for the best pig competing in classes 52, 53, 54, 55, 56, 57, 58, 59, and 60, C. R. N. Beswicke-Royds; second, £2, J. Dove (King Thistle).

Boars of the Berkshire breed of any age.—First prize, £5, and highly commended, J. Wheeler, Long Compton, Shipston-

on-Stour; second, £4, T. Wilson, Shotley Hall, Shotley-bridge.

Sows of the large white breed of any age.—First prize, £5, R. E. Duckering, Northorpe, Kirtton Linlsey; second, £2, T. Hodgson, Newton Arlosh, Wigton. Highly commended, J. Bulman, Carleton Hill, Carlisle (Chicken-Eater).

Sows of the small white breed of any age.—First prize, £5, R. E. Duckering; second, £2, C. R. N. Beswicke-Royds. Highly commended, J. Dove.

Sows of the Berkshire breed of any age.—First prize, £5, T. Wilson, Shotley Hall, Shotley-bridge; second, £2, J. Wheeler, Long Compton, Shipston-on-Stour. Highly commended, J. Ismay, Whiekham, Gateshead.

Sows of a breed not eligible for the preceding classes, of any age.—First prize, £5, C. R. N. Beswicke-Royds; second, £2, R. E. Duckering. Highly commended, J. J. Wheeler (Jenny). Highly commended and commended, J. Dove (Queen's Little Beauty) and (Shamrock).

Three Sow pigs of the large breed, of any colour, under 16 weeks old.—First prize, £2, J. Taylor, Ireby Mills, Wigton. Highly commended, C. R. N. Beswicke-Royds.

Three Sow pigs of the small breed, of any colour, under 16 weeks old.—First prize, £2, T. Wilson, Shotley Hall.

SHEPHERD'S DOGS.

JUDGES.—(As for Cheviots, black-faced mountain sheep, and sheep of any breed).

Rough-haired dogs of any age.—First prize, £3, and a silver cup, value £5 for the best dog or bitch competing in Classes 61, 62, and 63, T. R. Stephenson, West Keilder (Mos); second, £2, J. J. Turnbull, Hindhope, Jedburgh (Hemp); third, £1, A. Robson, Emmethaugh (Tom).

Rough-haired bitches of any age.—First prize, £3, A. Scott Byrnes, Rochester; second, £2, F. Burn, Hardacres, Coldstream (Maria); third, £1, T. Brown, Alnham, Alnwick (Gip). Highly commended, T. Purvis, Woodhorn, Morpeth (Moss).

Smooth-haired dogs or bitches of any age.—First prize, £3, A. Wilson, Clock Mill, Caphacton (Meg); second, £2, R. S. Lamb, Acorn Bank, Bedlington (Fan); third, £1, R. Foggan, Bedlington, Morpeth (Lead); highly commended, J. Ryder, 9, Providence-place, Newcastle (Moss); T. Pringle, High Bakeson (Beauty); R. Smith, Preston, Chathill (Sweep); commended, R. Harrett, Kirkwhelpington, Newcastle (Keeper).

WOOL.

JUDGE.—Mr. Joseph Humble, Newcastle-on-Tyne.

Five fleeces of Border Leicester Wool.—First prize, £2, and second, £1, G. Lang, Wark, Coldstream

Five fleeces of half-bred Wool.—First prize, £2, second £1, R. Donkin, Ingrams, Alnwick.

Five fleeces of Cheviot Wool.—First prize, £2, T. Elliot, Hindhope, Jedburgh; second, £1, R. Donkin.

Five fleeces of Black-faced Wool.—First prize, £2, and second, £1, the Earl of Tankerville, Chillingham Castle.

SALE OF SHOW STOCK AT BEDFORD.—Mr. Fowler's yearling Shorthorn bull, by Prince Regent, to Mr. Marcus Pool, for France; Mr. W. G. Garne's yearling Shorthorn, Aachen, to Mr. Herman Stedman, for Germany; Mr. C. J. Webb's Shorthorn bull-calf, Royal Oxford Gwynne, to Mr. Simon Beattie, for Canada, who also takes out Mr. G. Garne's Shorthorn cow, Butterfly's Duchess, and Mr. Outhwaite's two-year-old Shorthorn heifer, Baroness Conyers. Further, Mr. Downing's yearling Shorthorn heifer, and Mr. Mumford's two-year-old Shorthorn heifer, Edith Emily, go to Canada in charge of Mr. Craig; and Messrs. Dudding's Shorthorn calf, Pride of Beauty, to Chili. In consequence of the laws with regard to cattle disease, there can be no exportation of stock to Australia until 1875, but several offers were made for animals to be kept over until next summer. A bid of a thousand guineas for Mr. Bruce Kennard's famous Shorthorn heifer, Queen Mary, was quickly refused; while just previous to the show Colonel Loyd Lindsay sold Rob Roy to Mr. Richard Stratton. From amongst the Jerseys Mr. Simpson's famous Pretty Lass goes from Wray Park to Woburn Abbey, having been purchased for the Duke of Bedford. Two of Lord Walsingham's shearing Southdown rams go to Chili at high prices, and good offers were refused for other entries for the same flock; whilst there was also some trade for abroad amongst the Cotswolds.

EAST OF ENGLAND HORSE SHOW.

MEETING AT SUDBURY.

PRIZE LIST.

JUDGES.—RIDING HORSES, HUNTERS, AND PONIES: W. Lort, The Cotteridge, King's Norton; W. Cropper, Horn-castle. AGRICULTURAL HORSES: W. Baker, Atherstone; C. Hellaby, Bramcote Hall, Atherstone.

Weight-carrying hunters.—First prize, cup value £20 and £10 in money, J. Goodliff (Marshal McMahon); second, £10, T. Harper, Beverley. Commended: P. Foncneau (Lucifer).

Light weight hunters.—First prize, cup value £10 and £10 in money, J. Grout (Bonner); second, £5, F. Lambard (The Count). Highly commended: J. Goodliff (Lady Mary); F. Low (Theodore); A. Ballard (King of Trumps). Commended: J. T. Blott (Lothian Queen); F. Low (Quick Step).

Hunters not exceeding four years.—Prize, cup value 15 gs., J. Goodliff (Lady Mary). Highly commended: A. S. Andrews, Walthamstow (Romco). Commended: J. W. Wakelin, Brantree (Challenger).

Thoroughbred stallion.—First prize, cup value 15 gs., W. Wilson (Hotshot); second, £5, the Duke of Hamilton (The Beadel). Commended: J. Grout (Ashantee).

Hackney or roadster stallion.—First prize, cup value 12 gs., W. Giddens (Great Gun); second, £5, J. Grout (Quicksilver). Highly commended: F. Branwhite (Defiance). Commended: Phillips, Smith, and Co., and Special Prize (Condiment).

Hackney or roadster mare or gelding.—First prize, cup value £10 and £5 in money, T. Banyard (Princess); second, £5, T. Hudson (Peter). Highly commended: W. Giddens (Giddy Girl). Commended: Rev. J. Foster, Foxearth (Madge).

Park hacks or ladies' horses.—First prize, cup value £10 and £5 in money (if won by a lady a riding whip will be presented), R. Cooke; second, £5, T. D. Taylor, The Grange, Bury St. Edmund's (Perfection). Highly commended: P. Foncneau (Eagle Eye); W. S. Postle (Lady Jane Grey); C. R. Harvey (Alice).

Cobs not exceeding 14 hands 3 in.—First prize, cup value £10 and £5 in money, T. Mitchell (Bosco); second, J. R. Vaizey, Attwoods, Hilsted (Marquis). Highly commended: T. D. Taylor (Perfection). Commended: H. Skingsley, Wakes Hall (Tommy).

Saddle or harness filly or colt, under four years.—Prize, £6, Rev. J. Foster (Tommy). Commended: C. Scott (Pretty Girl).

Ponies not exceeding 13 hands 3 in.—First prize, cup value £5 and £3 in money, T. Mitchell, Bradford (Bosco); second, £4, C. Gates, Hepworth, Soles (Lord Tom Noddy). Highly commended: C. H. Daking, Bower House, Boxford (Sweep); S. C. Roper (Rocket); the Duchess of Hamilton (Ambitious); T. D. Taylor (Black Bess).

Agricultural or cart stallion, any age.—First prize, cup value 12 gs., T. Briggs (Heart of Oak); second, £5, J. Ketley (Talbot). Highly commended: W. Byford (The Statesman).

Agricultural or cart colt, under four years.—First prize, £6, T. Briggs (Heart of Oak); second, £3, W. Byford (The Statesman). Highly commended: W. G. Walford.

Agricultural or cart mare, over four years.—Prize, £6, R. Makins, Barking (Moggy). Highly commended: W. Byford (Bragg). Commended: W. Byford (Pride).

Agricultural or cart filly, under four years.—Prize, cup value 5 gs., W. Cross (Kathleen). Highly commended: W. Byford.

Special prize of £5 for the best foal by The Beadle.—F. J. Rackham.

Special prize of £5 for the best foal by Chaucer.—J. Humphreys. Commended: A. Smith.

Special prize of 3 gs. for the best yearling colt or filly by Little Pippin.—T. Kilburn. Commended: Rev. R. H. Longden (Pippin).

Special prize of 3 gs. for the best foal by Little Pippin.—W. Oakley.

Special prize of 5 gs. for the best foal by Defiance.—F. Branwhite.

Special prize of £3 for the best foal by Volunteer.—First prize, £3, W. Byford; second, £2, W. Byford.

Jumping over single and double hurdles.—First prize, cup value 6 gs., C. H. Daking (Sweep); second, £3, E. Payne, Brockley (Peter). Commended: W. Cross, Toy Lodge, Frating.

Jumping over fence and water.—First prize, cup value 5 gs., T. Alton, jun., Staunsted Hall, Sudbury (Telegraph); second, £1, E. Faus, Heybridge Hall. Highly commended: Mrs. Kate Radcliff (Kwei). Commended: G. A. Coulson, Fingriuhoe (Peggy); E. Payne (Peter); F. C. Payne (Sailor).

JUDGING BY "POINTS."

At the show of the Scotch Midland Agricultural Society at Kinross, a feature which had been looked forward to with some degree of interest was the competition for Lord Kinnaid's prize of £10 for Shorthorns, cows or heifers, judged by points. His Lordship solicited the services of three well-known judges of stock, who, believing themselves in the system, agreed to act. These were Mr. James Whyte, Clintarty, Aberdeenshire; Mr. Robert Bruce, Newton of Struthers, Forres; and Mr. George Hedley, Newcastle-on-Tyne. They met Lord Kinnaid at Rossie Priory on Wednesday, the day before the show, and, after a full discussion, agreed upon a code and scale of 26 points, with an aggregate of numbers amounting to 200. The difficulty in fixing the scale arose from the fact of Mr. Hedley, who had written at some length on the subject, having given a scale at 85. The Scotch gentlemen desired a greater extension of numbers, but, ultimately coming to a mutual understanding, they fixed as mentioned. With a view to arrive at a clear operative conception of the plan laid out in their award paper they adjourned to Castlehill, the Home Farm, and there each independently and separately, took to judging three of Lord Kinnaid's cows on the principle agreed on. They differed a very little on one cow, but as a whole they arrived at a pretty

close approximation to each other, being within four numbers. Although Mr. Hedley was not confident as to the scale adopted, they were firmly decided on the justice of judging by points. In this spirit they went to the showyard, and entered on their duties without hesitation. An award paper was printed with the points and scale; and fifteen or sixteen animals were entered. Four of these were entered direct for the special competition, while the others were entered from other classes. Whatever was the reason, only eight of the number were brought before the judges, and of these one was disqualified at the outset, as its age was not given. After the seven had been carefully examined the prize was awarded to *Bonny Belle*, aged four years and a month, bred by the exhibitor, Mr. Thomas M. Tod, West Brackly, Kinross, which had also won in the off-hand judging the second prize. The second in order was a heifer, aged three years and twenty-five days, bred by Mr. Copland, and owned by Mr. Alexander Reid, Cruvie; and the third was a cow, aged 3 years, bred by exhibitor, Mr. Robert Husband, Giltot, Dufferrline. The cow belonging to Mr. A. Bethune, Blebo, which was selected for first honours by the previous judges, was rejected on account of her very uneven form and patchy hindquarters.

THE POWER OF THE LABOURERS.

BY AN EAST ESSEX FARMER.

Under the above heading an article from the pen of one of the strongest, though it may be added one of the fairest of the partizans of the Labourers' Union is published in the current number of the *Fortnightly Review*. We entirely agree with the writer in his remarks upon the impolicy of the lock-out, which from the first we have unequivocally condemned. The lock-out is a movement against the very life of unionism, and not, as its advocates plead, simply an opposition to the abuses of the existing Unions. The obstinate refusal of the Farmers' Association to sanction a conference which would have taken into consideration not only the disputed question of wages, but the rules and tactics of the Unions also is, sufficient evidence in proof of this statement. Piece-meal strikes, strikes without notice, and abrupt and uncourteous ultimata sent in by Union delegates might have been opposed without resorting to an onslaught upon the Union as an organization. By resorting to such an attempt to force the men out of an association which is perfectly legitimate, and which might be conducted in a spirit of fairness and courtesy, we have repeatedly urged that the farmers have been fighting against their own interests. One inevitable result has been, as we from the first declared that it would be, to diminish the number of men in the lock-out districts, and thus to give them an advantage in accordance with the principle of supply and demand that they had not previously enjoyed. Even if the masters should succeed in driving the men temporarily out of the Union, the "armed peace" which would ensue would be nothing better than "veiled rebellion," and there would be nothing to prevent a recurrence to the real or supposed advantages of unionism, with an accession of energy and bitterness as soon as a favourable opportunity offered. The men might be temporarily discouraged by defeat, but they would soon see that the result of the contest had really been a gain to them by the removal of many competitors from the labour market. As this must inevitably be the result of every lock-out, it requires no extraordinary discrimination to enable anyone who thinks at all to see that such an apparent victory as has been supposed would in reality be a defeat, or a preparation for it. Like the hero who, often stricken to the earth, acquired increased vigour at each contact, the labourers will emerge from every lock-out with an increased power in the wage market, and, consequently, in the ability to contribute to the funds of their unions.

But whilst we go so far with Mr. Cox, we cannot agree with him in his exoneration of the leaders of the Unions from all blame on account of the language and tactics which they at first chose to adopt, but which have been considerably moderated, with some exceptions, under the pressure of the strong power of opposition manifested by the farmers. Especially we part company with him in his attempt to whitewash *The Labourers' Union Chronicle*, which most unprejudiced people regard as the *bête noir* of the labourers' movement. Nothing has done so much to inflame the passions of the two parties to the contest that has been so long going on as the immoderate abuse, gross misrepresentation, and the slightly veiled threats of violent resolution that have appeared almost every week in the journal of the National Agricultural Labourers' Association. From the first publication of the paper—long previous to the appearance of the famous

"beacon fires" and "midnight surprises" article, which even the staunchest adherents of the Union protested against, down to the implied threat of a possible massacre à la Nero of monopolist landowners in *The Chronicle* of July 4th—the leading columns of that paper have been filled with the most gross vituperation of "brutal" and "bloody" farmers, lying editors, fibbing ladies (or rather a fibbing lady), and laudlord robbers. Editors of papers friendly to the movement, or impartial and amicable, have been abused by name, and in one case at least have been accused of the "lie direct," simply because they could not go all fours with the wild schemer who in most eccentric English rages weekly in the first page of *The Chronicle*. The smallest spark is sufficient to ignite his excessively inflammable tinder, and we can only imagine that he is one of those unfortunately constituted persons who can only write when their pens are dipped in fire and brimstone. We could give extracts enough to fill two or three numbers of this Journal in justification of the conclusion, arrived at from no preconceived prejudice, that *The Labourers' Union Chronicle* is a discredit to the Labourers' Union and to the modern Press. To plead its independence of the Union is idle as long as it is not disowned as the special journal of the association, which it claims to be, and as long as its editor is a treasurer of the Union. It is better to be one of those whom Mr. Cox condemns as "lukewarm friends of the Union," than to be such a red-hot partizan as to condone vulgar abuse, gross exaggeration, and suggestions of agrarian outrage on the "don't put him in the horse-pod" principle.

As to the Union delegates, they have no doubt had a great deal to irritate them. From the first they have been assailed with abuse, and, in some instances, with calumny. But we cannot agree with Mr. Cox in thinking that they have generally shown a "marvellous self-restraint," or that their demands and their conduct have been characterized by a "general tone of fairness and moderation." With the object of exciting the feelings of the men and obtaining fresh members, they have often given way to culpable exaggeration and misrepresentation. They have systematically underrated the earnings of the labourers, most unfairly refusing to take into account any extras beyond the ordinary weekly wages, whether in the form of money payment or perquisites and exemptions. This has been done with the object of enlisting the sympathy of the public; but now that the world has been informed that the labourers in the Newmarket and Bury districts (probably a fair average as to wages of the whole of England) earn 17s. per week more or less throughout the year, with cottages and gardens at low rents and other advantages, they can no longer remain under the false impression that the county labourer is worse off than the unskilled workman of our provincial towns and many of our chief cities. A rural labourer, paid so much as stated, is better off than a town workman who gets a guinea a week, and there are thousands of town workmen who get considerably less than that amount. In making these remarks it is not our object to urge that the farm labourers should not try to improve their position, but only to show that much public sympathy has been obtained for the men by the leaders and officials of the Unions by means of a systematic misrepresentation and suppression of the truth.

One demand made by the leaders of the Union, accompanied by the threat that, if it were not acceded to, England should be drained of her agricultural labourers, has done not a little to strengthen the resistance of the farmers to the Unions. We refer to the demand for three or four acres of land for every farm labourer. Probably Mr. Cox, and many other Union partizans who know little or nothing of the exigencies of practical agriculture, consider this to be a perfectly reasonable demand, and one that should be acceded to by landowners and farmers. But every farmer knows that a labourer with so much land to cultivate on his own account would be almost useless as a hired workman. His services would, to a very small extent, if at all, be available to the farmer in the busy agricultural seasons; and it would only be in slack times, when his labour was but little needed, that he would be willing to engage in regular work for hire. If the Unions and their friends had turned their attention to the develop-

ment of agricultural co-operation, instead of to this impracticable scheme, some good might have resulted. As Mr. Brassey, in a thoughtful and suggestive article on "Co-operative Production," in the current number of the *Contemporary Review*, has observed, co-operation, if successful, would not only benefit directly those concerned in it, but would also afford to other labourers a correct idea as to a fair division of profits between capitalists and labourers, and would thus stimulate just, and discourage extravagant demands.

In deprecating the expatriation of our farm labourers, Mr. Cox insists that they are by no means too numerous to cultivate the land of this country as it should be cultivated. Here he is probably correct; but before it will be safe for the tenant-farmer to increase his investments by adopting a more liberal system of tillage, including an increased expenditure for labour, he must have that legal security for his capital which is at present so unjustly and mischievously denied to him.

THE FARMERS' FRIENDS IN ENGLAND AND IRELAND.

TO THE EDITOR OF THE MARK LANE EXPRESS.

SIR,—It may be said to have been a settled arrangement with the English farmers previous to the late general election that when the time came they would endeavour to turn out the Gladstone Ministry, and permit of a Conservative Ministry coming in. The election arrived, and the thing was done. Everywhere over England the counties returned Conservative representatives, and, generally speaking, they were either returned unpledged, or only pledged to attend to farmers' interests in the most slipshod manner. There were general rejoicings among farmers at the Conservative success. The Conservatives in Opposition had been urgent for Malt-Tax repeal, for Local-Taxation reform, and their leader, Mr. Disraeli, at the last moment almost, had stated that the priceless boon of a two-years' notice to quit ought, in all fairness and justice to tenants, to be conceded. On the other hand, Mr. Clare Sewell Read, the all-England tenant-farmers' representative, had pronounced in favour of protection to his class in contracting with their landlords.

This was the situation when the Conservative Budget was introduced. On the Local Taxation difficulty it offered a composition of almost eleven-pence three-farthings in the pound, and in the matter of Malt-Tax repeal, it—but let a veil be now drawn over this part of the subject.

Then there intervened Mr. Ward Hunt's big speech about rotten ships, and what he was resolved to do for the honour and the glory of the navy of England, followed by the speech of the Chancellor of the Exchequer, in which he quietly snuffed out Mr. Ward Hunt, rotten ships, and all the rest of it. By this the farmers were given time to recover their equanimity, and they did recover it somewhat. Mr. Clare Sewell Read, too, had become connected with the Ministry, and every Conservative tenant in England believed in Mr. Read. The hope now lay in Mr. Seely's motion, "That outgoing tenants should be compensated for unexhausted improvements." The proposition appeared so just, and moreover, so entirely in consonance with Conservative landlord professions, that no opposition, far less any *dodge* against the proposal on the part of the "farmers' friends," was anticipated. In the best informed circles, therefore, it was believed there would be an overwhelming majority in its favour; and oh! how every farmer congratulated his neighbour on the intelligence and the foresight which had put Messrs. Disraeli and Co. into power.

Amid these jubilatons, Mr. Seely's motion was intro-

duced, and, *O tempora! O mores!* what then happened? First, there was all but a general *stampede* among the farmers' representatives, and the narrowest possible escape made from a Parliamentary "count out!" And—tell it not in Gath, whisper it not in the streets of Askalon—in the second place, Mr. Disraeli, while conceding to outgoing tenants the right to compensation, declared in favour of "free contracts," as a necessary accompaniment of the concession. What, he exclaimed, "force men into contracts from which human nature recoils!" And so Mr. Clare Sewell Read was snuffed out, as Mr. Ward Hunt was snuffed out—the only consolation left to Mr. Read being, that it had taken a greater personage to snuff him out than it had taken to snuff Mr. Ward Hunt out!

Seriously, what does this enunciation of Mr. Disraeli in regard to "contracts from which human nature recoils," mean? Evidently this—that landlords are to be allowed to remain virtually in the position in which they are in at present—free to preserve game upon their tenants' crops; free to exercise the law of distress upon their tenants' goods; free to evict their tenants and to seize upon and confiscate their property in their improvements on their farm; and free, under the pressure of the notice to quit, to enforce penal and feudal and arbitrary contracts upon the farmers upon their estates. There will, in every probability, be legislation upon the subject of Mr. Seely's motion. The "mountain will go into labour and bring forth a mouse"—a *permission* Act. The Irish tenants got their *permission* Land Act four years ago, and the Duke of Leinster and others have been enforcing arbitrary, penal, and confiscatory contracts upon their tenants, under its provisions, ever since. The English tenants will be given a similar bauble. There will be a great blowing of Conservative and landlord trumpets, a session of Parliament in great part wasted, as in the Irish case, and the upshot of all will be that the English farmers will be presented by the aristocratic representatives whom they had the unaccountable folly to elect—with the shadow for the substance!

But all this criticism comes from an Irish tenant, you or your readers might object. And why not from an Irish tenant? For nigh thirty years, to my knowledge, Irish tenants, and more particularly those of the Irish provinces of Leinster, Munster, and Connaught, have been sending representatives to Parliament who, in

almost every instance in which an opportunity was afforded them, voted to emancipate the English tenants and the English people from the bane of landlord power and feudal oppression. And what has been the return? The election, year after year, by English tenants, during that long period, of Conservatives and landlords as their representatives—of men who never yet willingly yielded a single concession to tenants, whether English or Irish—of men who have so governed as to have all but ruined Ireland—of men who have sat still and seen the Irish population reduced by nigh three millions—of men who have never proposed a thorough remedial measure with the view of arresting the depopulation process, and of men who, when a Land Act (1870) was introduced into Parliament, with the intention of doing at least something in the way of giving security to the Irish tenant, and thereby inducing him to improve in the cultivation of the soil, did everything which men could do to emasculate that Act and make it what it now is, and what the promised English Land Act will be when it is passed,

a sham, a delusion, and a snare! And hence, therefore, why I, an Irish tenant, dare to criticise as above and to point out to English tenants that they, by the representatives which they elect, are not only acting to their own detriment and in the way of obstruction to their own interests, but by the number of Conservative members which they return—of men trained in arbitrary principles and accustomed to high-handed conduct, are swamping the Irish popular representation, and thus rendering futile all the efforts of the Irish tenants to obtain laws which would tend to their emancipation from feudal oppression and confiscation—which would give them security in their homes and in the possession there of any property created by them in the improvement of their farms, and which would stimulate them to double the annual produce from the soil, and so annually double the present income of the country.

Your obedient servant,

THOMAS ROBERTSON.

Narraghmore, Athy, 8th July.

THE IMPLEMENTS IN THE WEST.

At a meeting of the council of the Royal Cornwall Agricultural Association, at Truro, the following report on the implements and machines in motion at the Royal Cornwall Agricultural Exhibition held at St. Austell, in June last, was presented:

1st. The exhibition of implements and machines was larger than on any former occasion, and our attention was called by exhibitors to sundry improvements, particularly in reaping and mowing machines, too numerous to mention in this brief report. 2nd. Seven mowers were tried—viz., Wood's, Samuelson's, Hornsby's, Picksley and Sims', Kirby's, Brenton's, and Oatey's. All worked well considering the rough surface of the land and the nature of the grass. 3rd. The stewards do not feel justified in giving anything more than a general report of such limited trials, which are simply calculated to give the public an opportunity of seeing such machines at work, and judging for themselves; but both the exhibitors and the public were much disappointed in not finding means either in rye, winter oats, and some such crops for testing the reapers, and more especially the self-delivery, which they are of opinion only requires to be seen at work to be appreciated, and will eventually become the machine of the day, and strongly recommend that some such crop as named be provided at the time of the exhibition, and likewise grass forced by artificial manure or other means, to make the test more effectual, it being generally known that all machines will cut ordinary crops; or, otherwise, that an extensive periodical trial of mowing and reaping machines, with liberal prizes, be held in the early part of the harvest, as it would stimulate improvements in this important class of machinery, and also give inexperienced persons oppor-

tuunities of learning how to work them properly, a matter of very great importance. 4th. Mr. Davey's patent climax double-furrow, turn-wrest plough did its work admirably, and it surprised most people to see two small horses pulling it through a dry, stiff piece of land overgrown with couch grass, rest harrow, and other kinds of weeds. The easy manner in which it is made to plough two furrows down the hill and one up, cannot fail to recommend itself to any practical agriculturist, as being superior to other implements of the class. 5th. Recent improvements in Marsden's stone-breaking machine, which was at work in the show-yard, appeared to have rendered it almost perfect, by reducing the material to a uniform size and reducing waste to a minimum, and in consequence of the excited state of the labour market, we think its introduction would be a very important auxiliary for all highway districts. 6th. We particularly noticed two sets of six-horse power steam thrashing-machines in motion on the ground by Marshall, Sons, and Co., of Gainsborough, which appeared to possess almost all recent improvements, while any part getting out of order can easily be repaired. And we are of opinion that they are taking a fair and good stand in the county of Cornwall, which, from the many recent improvements adapted to this county, they are justly entitled to. 7th. There was likewise the washing, wringing, and mangling machine combined, from Messrs. Thos. Bradford and Co., of High Holborn, London, and also from the Domestic Washing Machine Co., Aekrington, in full work, and appeared to give general satisfaction to the domestic part of the visitors.—THOMAS OLVER, T. BARON, Stewards.

The meeting of the Association for 1875, when the Prince of Wales is President, will be held at Truro.

THE STOCK YARDS AND TRANSIT HOUSE OF CHICAGO, ILLINOIS.

TO THE EDITOR OF THE MARK LANE EXPRESS.

SIR,—Some three or four years ago I gave you a description of these extensive yards, and the amount of stock they contained. Since then they have very much increased, and there are now upwards of 160 acres under plank and in sheds, while the new building now called the Exchange is one of magnificence, and the green lawn, with its shady trees fenced round with substantial iron railing, in the centre of the yard, has a picturesque appearance. The bank occupies a portion of this building, offices for the company, and separate offices for individual stockmen and packers. I think I can say that there is not such another institution as this in the world. When I wrote you previously, the best cattle were more of the "native,"

character than now; great improvement has been made during that time, many of the pens of to-day and yesterday are half-breeds and higher grades of the improved breeds, the greater majority being Shorthorns, but few of them of Duke or Duchess descent, as they are too expensive for beef and too scarce to be profitable. The Texas cattle are very much improved since I wrote you, although most of them are *still pure* in their native state; their feeders have learnt to put much more beef upon them. They are now sent into Colorado, Kansas, Iowa, and Illinois, to be made up for market, by which they are wonderfully improved in character, and if *feed* should still add more to their bloom in the future, there may

yet be a sale of such thoroughbreds. The following is a table of the weekly record:

Soams, buys upwards of five thousand hogs per week during the year for the firm of John P. Squires and Co., East Cambridge, Mass. These are principally shipped to the English market in the shape of bacon, hams, and lard. This is one of the best business men in the country; his judgment is excellent, not only in stock, but in the spot selected for his house, which he has built in the most substantial manner; it is a mansion fit for a prince. The material in wood is of black walnut, and the interior corresponds with the exterior. I have been through many of the first-class houses in Chicago, but none that has pleased me more. It is ample to receive his many friends, and it is their own fault if they do not feel at home, for his desire is to make them so, supported by his better half. I spent the past two evenings there, and never met a more happy family, for the wholehouse is kept in order. Not only this, his eldest daughter, Mrs. G. W. Dean, came from New York to spend part of the summer with her parents, and I was delighted to hear her play and sing. This was cheering to me in my seventy-first year, and I shall embrace the kind invitation of another visit.

The whole establishment is under the superintendence of Mr. John B. Sherman, and, though so extensive, everything is done with the regularity of clockwork. The Transit House is kept by Messrs. Tucker and Sherman, and it corresponds with the whole—viands substantial and good, waiters attentive and good, and charges very moderate.

In connection with this establishment is the race-course, called Dexter Park, where are two tracks for running and trotting equal to any in this country. The running races have been held here this week, affording much sport; the trotting to be held on the 21st inst., and three following days, when some of the fastest horses in the country are expected.

I am, dear sir, yours, &c.,
 Transit House Stock Yards, Wm. H. SOTHAM,
 Chicago, July 4th, 1874.

THE SHORTHORN HERD BOOK.

At a meeting of the Committee at the house of Lord Penrhyn, on July 23rd, there were present: The Earl of Dummore, Lord Penrhyn, Col. Kingscote, the Rev. J. Storer, Mr. Chandos Pole Gell, Mr. Hugh Aylmer, and Mr. T. C. Booth.

The formation and constitution of the Society was fully discussed, and it was decided to enlarge the number of the Committee to thirty; Mr. Harward, as Honorary Secretary, being directed to communicate with the gentlemen proposed to be added to the Committee. It was decided to form the Society (under the provisions of the Act) on the basis of a company formed for the purpose of carrying out a specific object without profit, and not as an ordinary trading Company. The articles of association were fully discussed, and the leading principles adopted.

A draft of the proposed agreement with Mr. Strafford was also fully discussed and adopted, and this has since been sent to Mr. Strafford for his approval.

Circulars are to be sent to all Shorthorn breeders, briefly detailing the purposes of the Society, and inviting them to become members.

The Committee decided not to entertain any question as to the appointment of editor or other officers for the present.

In nominating these new members, the Committee were desirous of having the various districts in which Shorthorns are bred, and the breeders of different families adequately represented.

Some of the stock in the yards to-day are first-class beef; thick in flesh. The sheep market is not so extensive as cattle and hogs, of which the following will give you some idea as to the extent: A friend of mine, Mr. John

THE OUTGOING TENANT.

NISI PRIUS COURT, TUESDAY.—Before Lord Chief Justice COLERIDGE and a Special Jury.

Atkinson v. Minet.

Mr. Cole and Mr. Collins were counsel for the plaintiff, and Mr. Lopes and Mr. Murch for the defendant.

Mr. Collins opened the pleadings, the action being to recover the value of an outgoing crop of wheat of ten acres.—Mr. Cole said the plaintiff in this case, Mr. Atkinson, was a farmer, and he had brought an action against his landlord, Mr. Minet, who had since died, so that the action was now brought against his eldest daughter as executrix. The facts of the case were very simple. In 1842 the plaintiff entered into an agreement with Mr. Minet to grant him the lease of Revel's Farm, the tenant at that time being Mrs. Kinsman. The tenancy was to commence on Lady-day, and it was arranged that the plaintiff should pay the outgoing tenant for the crop of wheat which had been sown—about £130—and it was stated in the agreement that when the plaintiff went out of possession he was to be entitled to take off a crop of wheat not exceeding ten acres. The parties acted upon this agreement for seven years, but at the end of that time no fresh agreement was made, and the tenancy was afterwards yearly until 1855, when a fresh lease was drawn up for another term. This expired in 1869, and from that time until 1872 the plaintiff went on a yearly tenancy, paying his rent from year to year. The tenancy expired at Lady-day, 1872, and then, of course, when the plaintiff was about to leave he looked to be paid for his outgoing crop of wheat in the same manner as he had paid when he entered on the farm. It appeared the landlord, Mr. Minet, had the notion that because there had been no intermediate lease granted, and nothing had been said about his being entitled to take off the outgoing crop, that plaintiff was not entitled to anything when he went out. The law, however, provided that where the custom of a county was that a person going out of a farm was to be entitled to the same terms as he came in, although there might be a lease, he was entitled to claim the custom in respect to his outgoing crop.—Mr. Lopes contended it was not the custom of the county for tenants to take away outgoing crops.—Mr. Cole stated that the defendant had paid into court £26 for the value of the wheat crop of 10 acres, which he considered was sufficient to pay for the labour and tillage. In that respect he was wrong, as the cost of tillage and 36 bushels of seed-wheat cost £29 6s. 6d. If the law was against his client, he (Mr. Cole) must say it was a very hard law, as the plaintiff had paid for the wheat crop when he went on the farm, and he expected of course to be treated on the same terms when he went out.—His lordship remarked he could not see the law was very hard, as an agreement might easily have been made.—Mr. Cole then read some correspondence which had passed between the plaintiff and the defendant, in which the latter addressed the former as plain "Atkinson," and in his first letter said "that the lease must be our guide." Unless he gave up his "hollow claim" he (the defendant) should proceed against him, and his opposition would only lead him to expense. The defendant further stated that this was the last letter and the last "piece of advice plaintiff would receive from his landlord and well-wisher." Owing to Mr. Atkinson being ill, Mr. Symonds replied to this letter, stating that plaintiff would quit on the same terms as he entered. To this the defendant wrote another letter, saying for the last time he cautioned Atkinson that there was a lease, which he should act upon, and if he did not give up possession of the farm he should eject him. In another letter defendant warned him "for the last time," stating that he wanted his rent paid and his farm given up. To this Mr. Giles Symonds replied that Mr. Atkinson would not be prepared to pay any rent whilst defendant disputed as to the outgoing crop of wheat. If defendant wanted possession of the farm plaintiff was willing to leave the matter to a valuer.—The plaintiff, in the course of his evidence, said the custom with respect to a Lady-day tenancy was for the incoming tenant to take off the outgoing wheat crop. In cross-examination he said he knew such was the custom in Warwickshire and Surrey, and he knew how tenants came out in his own neighbourhood, although they held in various ways. He filled ten acres of wheat and sowed seed for it.—Mr. Giles Symonds, auctioneer and valuer, said in most cases in this neighbourhood a tenant having a Lady-day tenancy was entitled to take off the outgoing crop of wheat.—His lordship said before a person could swear as to custom he must know in what respect a farm was held. There were many difficulties in proving custom. He did not see there was any

hardship in this case; it was simply a question of law on both sides. The plaintiff in this case bought, when he went into the farm, the outgoing crop. He took the land on lease, in which it was provided that he should be paid for his outgoing crop. Another lease was then granted him containing no such provisions, yet in the face of this the plaintiff sowed his land when he had no outgoing crop, and the defendant in order to settle matters said he was willing to pay a certain sum, when in point of law he was not bound to do so.—On the recommendation of the learned judge, as the parties concerned could not come to terms, the plaintiff's counsel agreed to a nonsuit, which was accordingly entered.

EAST ANGLIAN FARMERS' CENTRAL BOARD OF CONSULTATION.

The members of the several Farmers' Defence Associations in the Eastern District met the Consultation Committee of the West Suffolk Association, by invitation, at the residence of its Vice-Chairman, Mr. H. Stanley, of Bury St. Edmund's, to consider the constitution of a Central Board of Consultation for the discussion of questions of policy affecting such associations, without prejudice to the independent action of each. The proposal for the formation of a Board of this kind had emanated from the Committee sitting at Bury St. Edmund's and had already gained the approval of all the associations consulted. The chair was taken by Mr. B. B. Hunter Rodwell, Q.C., Chairman of the West Suffolk Farmers' Defence Association, which was also represented by the Marquis of Bristol, P. Huddleston, Esq., Mr. Henry Stanley, Mr. Walton Burrell (Fornham St. Martin), Mr. G. Gayford (Barrow), Mr. W. Harvey (Timworth), Mr. W. Harvey (Wattisham), Mr. W. N. King (Great Barton), Mr. J. H. Turner (Horinger), and Mr. Salmon (Solicitor to the Association). The following were also present as representatives of other Defence Associations: Mr. Martin Slater, of Cheveley, and Mr. George Robins, of Isleham, for the Newmarket Association; Mr. T. J. Gayford, of Hargham, for the Norfolk Association; Mr. Chas. Mainprice and Mr. Wm. Mainprice, of Ely, for the Isle of Ely Association; Mr. R. Attenborough, of Sawtry, and Mr. C. P. Tebbutt, of Huntingdon, for the Huntingdon Association; Mr. J. S. Gardiner, of Borley Lodge, Sudbury, for the Essex and Suffolk Association; Mr. Richardson, for the Colchester and East Essex Association; Mr. John Burrell, of Littlebury, for the Saffron Walden Association; Mr. W. Johnson, of Hancheston, for the Wilford Hundred Association; and Mr. J. Sherwood of Leiston, for the Saxmundham District. The aggregate assessment of the members of these Associations may be taken at an average of at least £50,000 each association. The Chairman having opened the proceedings, the meeting proceeded to discuss the rules, which were unanimously agreed to in the following form:

1. That this Board be called "The East Anglian Farmers' Central Board of Consultation," and be composed of representatives of the several Farmers' Defence Associations in Suffolk, Norfolk, Essex, Cambridgeshire, the Isle of Ely, and Huntingdonshire.

2. That the Board shall have power to admit representatives from other similar associations.

3. That the object of the Board shall be to discuss and advise on all questions affecting the interests of such associations without prejudice to the independent action of each, but with a view to secure one uniform course of policy as far as practicable.

4. That each association shall in the first instance be entitled to send not more than two representatives to the Board, but that the Board shall have power to give additional representatives to each district association if it shall be deemed expedient.

5. That in cases of emergency, or upon the requisition of any association, the chairman of the Board may call a special meeting of the Board at such time and place as he may appoint.

6. That the first general meeting of the Board should be held in the month of September next, at Bury St. Edmund's, the day to be fixed by the Chairman, and that the subsequent annual meetings shall be held in the month of June, the day and place to be fixed by the Board at its previous meetings.

7. That the expenses of the Board shall be borne in equal proportions by its members.

Mr. W. N. KING proposed the appointment of Mr. Hunter Rodwell as Chairman of the Board, and as the motion met with unanimous concurrence, Mr. Rodwell consented to take the office. Mr. Francis Ford was appointed secretary.

THE EDUCATION OF THE FARMER.

At the half-yearly general meeting of the members of the Cheshire Chamber of Agriculture at Knutsford, the Hon. Wilbraham Egerton, M.P., presided over a very meagre attendance.

The CHAIRMAN said he wished particularly to call attention to the outbreak again of foot-and-mouth disease in the county. It was with great regret he did so, because he had hoped when that disease disappeared last autumn the county would have been clear of it for some years to come. They now found, however, that the disease was spreading throughout the county, and that the local authority, who previously had some power to encounter the disease by the inspection of farms, were at present unable to do so, as the power was withdrawn by the Privy Council. In reference to this matter it was felt that Cheshire was exceptionally situated. It was close to one or two of the large seaports at which Irish cattle were constantly landed, and therefore such animals were exposed in the fairs of this county; and the fact of the cattle having undergone a sea passage predisposed them to affection by foot-and-mouth disease after reaching land. It might be said it was impossible to stamp out the disease except by slaughtering, which would not be tolerated by agriculturists generally and the evidence before the Committee of the House of Commons confirmed that. But he must observe that there was a great difference between stamping it out and limiting the centres of disease. The former probably the local authority could not do. He thought, however, it was quite possible if some power were conferred upon the local authority they could prevent the centres of disease being increased, inasmuch as they might prohibit the exposure of animals which had been recently in contact with the disease, or the removal of such cattle from one part of the country to another. The Orders in Council were repealed last year on account of the report of the committee which sat upon the subject of contagious diseases, and the Privy Council were not likely to renew those orders unless there were some expression of opinion by agriculturists, now that the disease had broken out afresh. The committee who sat upon the question only contained 6 English county members—representing Huntingdon, Norfolk, Leicester, Essex, Sussex, and Northumberland—and in considering the evidence given by that committee it should be remembered that the two great dairy counties, Cheshire and Somersetshire, were not represented on the committee. Besides, out of 47 witnesses examined there were only eight or nine who were English farmers, while the rest consisted of veterinary surgeons, scientific gentlemen connected with different counties or with the Privy Council, and a good number of those interested in the Irish cattle trade; consequently, he thought it could hardly be said that the agricultural witnesses were so numerous as to influence the decision of the committee. There was not a single agricultural witness in favour of the repeal of the Orders in Council, and the only witness who spoke in favour of the removal of the restrictions was Mr. Verdon, a cattle salesman, of Liverpool. Under these circumstances, he thought it was desirable that the chamber should memorialise the Privy Council to give the local authority some power, and if that power were given it would be for the local authority to decide how it should be used. He did not wish other counties to be forced to carry out these regulations against their will. Therefore the orders should be permissive.

Mr. CARTER—Would it include this county only?

The CHAIRMAN said the regulations might be adopted in any county, but other counties should not be forced to adopt them against their will.

Mr. CARTER thought it would be useless unless the regulations were observed in Lancashire.

Mr. G. SLATER moved that a memorial be sent to the Privy Council according to the suggestion in the report.

Mr. FAIR having seconded the motion,

Mr. DUTTON said that he did not rise to oppose it, but he thought that more depended upon the care exercised by farmers in the purchase of stock than upon any enactments of the law. Foot-and-mouth was very different from pleuro-pneumonia, and he thought it was very desirable to check it, and strongly objected to anything like the system in operation last year. It was utterly impossible to prevent the movement of cattle unless

they could in some way control the importation of cattle from Ireland. When a lot of Irish stock was brought into the market there was a strong temptation to purchase for a pound or thirty shillings a head less if it could be done instead of paying a proper price and getting cattle free from disease. They purchased at a low price, and that was the foundation of a large portion of the disease.

Mr. G. SLATER; I suppose that if the disease broke out in Mr. Dutton's stock he would wish to have the liberty to sell those which he considered healthy, say 49 out of 50 to different customers.

Mr. DUTTON: I said nothing of the kind. I deny it. What I said was this, that the Legislature had no right to prohibit me from selling a portion of my stock.

Mr. G. SLATER: Exactly; that is what I mean.

Mr. DUTTON: Why didn't you say it.

Mr. SLATER: I hope I shall not misrepresent you. I was trying to give the logical result of your argument. If a man is left at liberty to sell his stock, there is many a scoundrel who would do it, and Mr. Dutton thinks because you cannot carry out the law in all its details that you should do nothing.

Mr. DUTTON: Not at all.

Mr. SLATER: Well, I understand you to say you would let things remain as they are.

Mr. G. W. LATHAM read a paper on "The Education of the Agriculturists." In commencing he said: "The education of a large part of the people of England, and that a scattered population, distributed up and down the country, and seldom collected in one town. It means the education of those who, from weather, distance, and the necessities of the seasons, are least able to attend school regularly. It means the education of those who, from their parentage and their associations, have less perhaps than any other class, any influences to awaken their imagination, and rouse their intellect. It means the education of a class who have few opportunities when the age is come at which they cease to go to school, to keep up their learning or go on with their knowledge. In many cases, alas, it means a struggle against indecency and immorality found in wretched homes; against corrupt and evil communications of companions; against bad influences and cold indifference of all who ought to warn or encourage. But more than this. The education of the agriculturist implies the early teaching of another class—of the future employer as well as the future employed. It implies the education of the landlord as well as the farmer, of the farmer as well as the labourer, and of these three classes I believe, at present, the education is imperfect. Can we doubt that if these classes had known more, had been trained better, had learnt some of the doctrines, if not of political economy, at all events of Christian charity, that wretched struggle we have seen lately in the East of England would have been more easily re-adjusted? Can we doubt that if there was a more general education those twin curses of English life, pauperism and crime, would sensibly diminish? After giving some statistics to show that ignorance was the fruitful source of crime and pauperism, he proceeded to argue that it was the duty of Government to protect society against these evils, and to do so by enforcing education. He went on to say that this obligation the Legislature had at all events partially acknowledged, and speaking of the Education Act, he expressed his regret that the present authorities of the Council of Education should have thought it necessary or expedient to alter the standard of education which the children of pauper parents were obliged to reach before they could be exempted from attendance at school. But by a farther Act of last session a more general measure for indirect compulsion in the case of children employed in agriculture became law. No child between eight and twelve can be employed in any agricultural labour—exception being made for hay harvest, corn harvest, and hop picking, or in cases where the justices of the division may for a period of not more than eight weeks suspend the Act—unless, being under ten, he has made 250 school attendances, or being above ten he has made 150 school attendances, during the preceding year, or can produce a certificate showing that he has passed a certain standard of education; and the employer is liable to a penalty

of £5 if he wilfully employs a child without such a certificate either of attendance or of proficiency. The standard is miserably low, and indeed the Committee of Council have been obliged to lower it, from the discovery that it was impossible to expect more. But, at all events, it is obligatory that every child employed in agricultural labour should have had an opportunity of learning something. Take our own class, take a child reared up in an intelligent home, sent early to school, kept there from 12 to 18, spending its holidays among educated people; and how often does that education turn out to be a sham and a delusion? I remember a young squire in Cheshire, owner of a good many thousands a-year, being reproached with some mistakes in spelling after he had been at Eton for a term, turning round and saying, "Well, at all events I am better than my uncles, for they can neither read nor write;" and if with all advantages this is sometimes the case, what must be the case when education at school ends probably at 12 and certainly at 14? Is there no way in which we can contrive to enable that education to be continued? It is a question rather for the practical agriculturist than for myself to consider; but I cannot but believe that there are times and seasons when a boy might be spared from farm work, and as a condition of his engagement be sent to school during some part of the day. I believe, too, that a system which our late President, the Lord Lieutenant of the County, tried at Tatton, of having one set of boys one week and another for another, might, with certain modifications to suit the tenant-farmers, work successfully. I confess that I do not see how in purely agricultural and scattered populations the night-school can work, when the pupil tired with labour, and by an extra walk to the school, can hardly be expected to have his mind very fresh or his faculties very clear. He advocated lending libraries, because, he said, agricultural labourers as a class seem not to know what to do with their spare time in the winter evenings, and it is fortunate if the hero-worship of some older farm-servant, the desire to be thought bold men before they have ceased to be weak children, and the love of adventure, do not lead them into the public-house and even into crime. On this point, then, I will sum up my opinions by saying that the Legislature has done something—not, perhaps, all it should, but all it dares. The gap it has left is for you, as employer, to fill up. By your example and by your advice try to persuade the agricultural labourer to carry on the education he has begun at school. One of our present statesmen told us, "We must educate our masters." I tell you that by educating our servants alone can we hope to remain masters, for else the world, the flesh, and the devil will be masters, and the labourer will serve them and neglect us. After drawing a very flattering picture of the state of education in Scotland, where the shepherd on the hillside is to be found reading his Greek Testament, Mr. Latham continued: But if I am sometimes inclined to despair of any great advance in the education of the agricultural labourer, until, as in Scotland, the nation is as a rule educated, and parents have begun to recognise the necessity of making sacrifices of present comfort and additional wages earned by their children, in order to secure to them the advantages of education, the case is far different when I come to the second branch of my subject—the education of agricultural employers. I believe that in this case we have first the desire for education, and secondly the means of supplying it, and all that is wanted is organisation, and the application of means to an end. No one who knows the tenant-farmer of Cheshire can doubt that of late years he has improved in many ways. I do not speak of my present hearers. They are, doubtless, the aristocracy of intellect among their brotherhood, they desire to learn, and are in most cases capable of teaching, or else they would not be members of this Chamber; but I speak of the general class of farmers, large and small, scattered up and down the several divisions of this county. Perhaps, in many cases, they are both timid and obstinate. Afraid of introducing new-fangled improvements, wedded to a fault to their old-fashioned ways, disposed somewhat to hesitation in an expenditure of capital, too much in awe of the landlord or the agents, and sometimes, spite of all their caution and cunning, apt to be taken in by the humbug of a clever rascal. In some classes, doubtless, they are far from intellectual or refined; the temptations of a rent-day or a market-day are too much for their sobriety. But, on the whole, I believe that as a class they are sensibly improved and improving. Yet who can doubt that if they had the opportunities of a thorough education, the ben-

efits they would receive thereby must lift them up even more rapidly. And if the employe is to be educated, in the same proportion at least so should be the employer. Now, up to this time what has been the usual education of the future employer of labour? He has been sent to the national school, and stayed there probably a year or two years longer than the sons of his father's labourers. If he has lived near a town, he has been sent to some private or old-fashioned grammar-school. In the holidays he has done some work on the farm, and frequently if there was a horse to drive or an odd job to do he has been kept at home, sometimes even, in a busy time of the year, saving the quarter's fees and the employment of an extra hand, by staying away from school altogether. His education has as a rule been desultory, superficial, and unsystematic. He has been taught no one thing specially useful to him as a farmer, and been so imperfectly grounded as to have small power of acquiring future knowledge. He has picked up some reading, some power of writing, some arithmetic, but has had little encouragement at home to advance his studies, and every temptation that a boy can have to be idle and amuse himself when the few hours of school are over. He is regarded as a hero by the labourers, flattered into self-conceit by his father's workmen, has no accurate knowledge of any one subject, no intellectual training by which he can pursue any definite study. Is not the wonder greater that so many turn out well, spite of all these disadvantages, than that a proportion goes to the bad under the system? Of course a boy educated in this way gets a sort of technical training. He knows by observation what is a fair day's work, what a pig or a calf ought to weigh. He can learn by experience the results of feeding and cropping, and may fight his way up to being a good and money-making farmer. But is this all we want of our great rural middle class? Is this enough—I was going to say for the safety of society, but I will put it even lower—for man's great happiness? Some knowledge of chemistry, of botany, of geology, would be useful to him in his profession, as well as increase his every-day's pleasures, whilst power to read, to appreciate the history of the past, to compare it with the possibilities of the future, would make him a better citizen, more fit to exercise influence himself, less subject to the undue influence of passion, prejudice, or fear, that are occasionally exercised upon him. How, without casting a burden upon the parents greater than can be borne, are we to conceive that the opportunities of a thoroughly good education can be offered to every farmer's son? Doubtless there will be cases where such opportunities will not be accepted, or, if accepted, appreciated, but the first thing is to find how they can be offered. Now, in the first place, I say that I distrust all education when it is carried on at home, and that home an average farm-house. I believe that a boy requires far more than the few hours' intellectual teaching that he gets by going to school, when he is resident at home, and that home is not one where, by the tuition of parents or relatives, his training can be carried on so as to supplement the school teaching. A boy wants the constant training of the playground as well as of the school. He wants to be taught temper and forbearance. He wants to find his level among his fellow-boys, who some day will be his fellow-men. He ought to be rid of the temptation to put by his book from school-time to school-time, to be rid of the flattery and subservience of his father's servants. His intellect will be freer in an atmosphere which all day is full of learning, and when he finds these associated with him at school are also his companions in play. I say therefore that the education to be preferred for a farmer's son is one which is carried on away from home with the usual interval of rest for master and pupil. I say, too, that to obtain this it is worth any father's while to make sacrifices greater than any which I believe to be necessary for this object. I do not ask for the sacrifices that a Scotch crofter or a small Welsh farmer will make to give his sons a college education—an education which from age answers somewhat to that of our grammar schools. I ask only that from the age of 13 to 16 the mothers should be contented to see their sons at rare intervals, and that a sum something beyond the cost of the boy's maintenance at home shall be bestowed on his better education at a middle-class school. Mr. Latham then went on to say that, as a starting-point for our middle-class school, he could not help looking at the old foundations of grammar-schools which existed in Cheshire. Primary education was cared for out of the public purse. They had therefore the whole amount of these old endowments available

either for middle-class education directly or indirectly by a system of exhibitions from our national schools to the middle-class schools for boys who had shown talent and power of rising. If they could avail themselves in some measure of these old foundations, if they could utilise the buildings and masters, a payment of £33 or £35 per annum per head would provide food and teaching for schools of 100 boys each. If they could not do this, then as in Suffolk, in Surrey, and Devonshire, they might make an effort—build plain and simple buildings for their own use, raise the money by shares taken either by landlords or by the larger tenant-farmers, manage the establishment by a council of the wisest and most discreet among them, sure that the improvement of the rising generation would recompense them a hundredfold for the outlay. He gave an illustration of a school in the county which had aimed too high, and to show that what the sons of Cheshire farmers and Cheshire tradesmen wanted was an education to suit them for the now more difficult battle of life, he quoted a passage from the report of Mr. Wright on the Endowed Grammar Schools of Cheshire, which, he said, proves two things—first, that there are middle-class schools in this county, but not enough for the population if they are to be used simply as day-schools; secondly, that though these schools exist, they are not used to their full extent. I would propose to do away with the first evil by making one, two, three, or four of them into boarding-schools, as we might find the numbers required; and the second evil by shaping the instruction to the wants of the pupils, and thereby making the schools useful and popular. As far as I can see, there are endowments for schools in agricultural districts, excluding Macclesfield and Stockport, of some £1,500 per annum. In some places, as I have told you, there is accommodation ready, and I believe it would be well worth the effort before we embarked on any scheme of building a central school to see it, with the help of the Endowed Schools Commissioners, and with the goodwill of the trustees of these schools, we could not shape out some satisfactory plan. I can conceive no object more worthy of the attention of a Chamber of Agriculture than to promote the education of agriculturists; and I trust that before we part this day the Chamber will appoint a committee, or request its council to consider the whole subject, with powers to consult the Endowed School Commissioners if they think it desirable. I have hitherto said nothing about technical education; not that I undervalue it, as any who know me can testify, but because I think that in the education of our labourers employers the first step is to get a good general education, and to leave the technical education to follow in cases where it is necessary. Doubtless the best technical education for the farm labourer is to be found in work on the farm, and the discipline of hand and eye that follows practice in agricultural work. Doubtless, too, for their future employers a year or two at Cirencester College, or on some farm other than his father's, is a great advantage; and the early teaching of botany and the rudiments of chemistry may be given at our proposed middle-class school. But in the third branch of the subject—the education of the landowner—I shall speak only of technical education. The education of the sons of our large landowners is to be found in half-a-dozen famous schools—Oxford, Cambridge, the army and navy, and certain posts in the public service—supposed to be fit for gentlemen. These are the schools, all or any of which give a training, a stamp, a cast of ideas, which make a sort of association of those who share them, and the association is the upper class. This cast of ideas has both its good and its bad side; but I think that one may say, as a result of the teaching as a whole, that the class is characterised by a high spirit, by dignity, and by governing qualities. On the other hand it is wanting in an indispotion and incapacity for systematic knowledge and scientific learning. But be the education what it may, I believe that much technical and special learning is necessary before a man can become a good landlord. He may be a good-natured landlord; he may be an improving landlord, but unless he understands something of the science of agriculture—what land should do and what a tenant ought to do—he can never be a good landlord. He may, at considerable expense to himself, learn, by the experience of a home-farm, something of the difficulties of agriculture; or he may by study at Cirencester or elsewhere, arrive at some idea of practice and science; or, as our great landowners wisely do, he may abdicate his functions and entrust his duties to a part-professional adviser, called an agent. Speaking merely

of the education of a landowner in his relation to his tenants and to the land he holds, I believe that he is the wisest man who has the least confidence in himself, who trusts mainly to professional advice, and who joins a knowledge of human nature and a power of finding out a man whom he can trust, with a thorough disbelief in his own power—unless he has received a professional training for the purpose—to manage his own estates. But a landowner has, to my mind, another training which is requisite to enable him to perform the ordinary duties of his calling, to go through. A landlord, be he large or be he small, is likely to have more time to spare than an occupier of land; and from that circumstance, as well as from his social position, will frequently be called upon to fill a position to which his neighbours have elected him, and to take part in the local government of the country. Is it possible that he can do this without some knowledge of the truths of political economy, without some acquaintance with social science, without some ideas of natural science, and without in many cases, some training to interpret an Act of Parliament? Now, great and good as I consider the training of our schools and colleges to be, much as I value the army and navy as schools for practical knowledge of men and manners—and in this county we ought never to forget that to the training of the army we owe the many reforms which, aided by his strong practical common sense and active mind, our late chairman of quarter sessions was able to carry out—I think that just in these points does their teaching fail utterly. I confess that week after week, meeting after meeting, am I shocked to find that educated men, for whose opinion on many things I have the highest respect, can ignore the first principle of political economy, can ruthlessly ride over the easiest teaching of social science. They are led away by their compassion, by some idea of economy, some fear of infringing the liberty of the subject, and in consequence what they intend by compassion is really cruelty, their professed economy ultimate extravagance, their so-called liberty of the subject slavery to the worst prejudices and habits of mankind. The blind lead the blind, and those who should be in advance of others, able to combat with the prejudices of those less educated than themselves, are really on these topics as little educated as those who follow and look up to them. But how can we hope to remedy this, to me, the greatest evil of our faults is education? It is not so much a want of education as of special training in certain matters. Much may, and I trust will be done by the future responsibilities which enlarged local government will throw on individuals. Men will educate themselves for the occasion. Much could be done if our universities would make such subjects a special object in their training. But I feel that, after all, as long as property alone gives position and influence, as long as riches are able to overpower all other aristocracy, we must be at the mercy of those who can educate themselves, or not, as they choose, and must trust to the good sense of our rulers and to the influence of public opinion to prevent their meddling in matters of which they are positively ignorant. In this case, alas! where it is most needed we can have no compulsory education. I have spoken so far, of what can be done for the education of the agriculturist—to the employed, employer, or landowner, by voluntary effort. But before I conclude I should be cowardly to conceal from you my opinion that such efforts, unsystematic and ill-regulated as they must necessarily be, can never cover the whole ground of secondary education. Of primary education I need no longer speak, for I think that the ground will be and by, when the country is better prepared for it, be fairly covered by a national system. It strikes me that in our middle-class and upper class education, we have an easy-going absence of system, a powerlessness and indifference of the state, a fatal independence in single institutions, a free course for abuse, a waste of power, and a poverty of result, which is mainly owing to our disregarding the laws which rule modern society. In France, Germany, Italy, and Switzerland, education exists by having the commune and the municipal government as its foundation, and could not exist without them. Here in our country districts we have at present only the ecclesiastical organisation of the middle ages. The real preliminary to an effective system of education is to provide the counties with effective local government, to allow the means of education therein, to be utilized for a common object, to do away with all parochialism, and to throw revenues together under a system which will at once both benefit individual parishes and promote the good of the

county. If we could in each county provide a local organization, trusted as it would be with the home rule of that county, would among its other duties direct the education; if those chosen to rule the country were, as I take it they would be, those who possessed the confidence of their constituents, we should see the endowments, at present hardly utilised, if not, indeed, wasted, turned to some good purpose. We should have a system by which the boy might rise from the National school to the County-school, from the County school to a Central school, from the Central school to the University. We should have an assurance that talent and industry would meet with their rewards. Our education would cease to be a quackery, but become real and efficient, and the education of the agriculturist would be assured, as the best that could be given to him under the ever-varying circumstances—as must happen in each county—of the position he is to occupy in his after life.

The CHAIRMAN said he was sure he was only giving expression to the feeling of the Chamber when he said that their thanks were due to Mr. George Latham for his very able paper. The paper was really more comprehensive than the heading of it—The Education of Agriculturists—would have led them to expect. It was really an essay on the present state of education in this country as it affected all classes, and there were few classes which were not in some way or other connected with land interests. The paper touched upon the education of the labourer, the farmer and the landowner, and many of the suggestions which had been made were well worthy of their consideration; but still, what they had more especially to look to in that Chamber, was the education of the middle classes, and that was the point to which Mr. Latham attached the most importance. He had justly said that the education of the labourer was to a certain extent provided for by the Elementary Education Act, nor did he expect that the Chamber would attempt to interfere with the education of those in our great public schools, who would compose the land-holding class. Public opinion had already done much to improve the education of the higher classes of this country, and no doubt would do more, and he (the chairman) did not think that any recommendation which they might make would be likely to have any effect in inducing people to qualify themselves in a better manner than they did at present for the position of the landowner; but he agreed with Mr. Latham that the Chamber might do something to further the education of the middle class or farming class of this county. It seemed to him (the chairman) that this county stood in a position different from that of other counties, for many of the farmers were very little above the agricultural labourers. Many of them went to school until they reached the age of thirteen or fourteen and obtained some education, but went to work on the farm, and so long as that was the case—as it not be expected that they could would spend three or four more years at school in order to get a technical or scientific knowledge of agriculture—so long there would be no amendment in their education. Much might be done, however, by having agricultural schools, at which some special training could be given to the sons of farmers up to the ages of thirteen or fourteen. To show them that agriculturists were not altogether unmindful of the question of technical education in regard to agriculture, he stated what had been done by the Royal Agricultural Society as shown in their report. This was the framing of a scheme by the head masters of certain schools for the systematic study of agricultural chemistry, applied mechanics, &c., and competitive examinations in the same, the most successful students being rewarded by scholarships. He was sorry to find that there was no school in this county at which the scholars could study and compete with those of other schools, and he hoped before long there would be such.

Sir HARRY MAINWARING did not quite agree with Mr. Latham. He (Sir Harry) thought the education of the eyes was worth a great deal more than the education of the head. Therefore he would suggest now what he suggested thirty years ago, that every farmer should send his son into another county at the age of thirteen, and when he came back in two years' time he would turn out better than if he had been to a school where they taught German, geology, the pianoforte, and all the rest of the accomplishments. He did not like that, and he hoped there would never be such schools for farmers' sons. Send a boy into Sussex, where he would see very different things to what he saw here.

Mr. CARTER endorsed what Mr. Latham had said, and it was then decided to adjourn the discussion till the next general meeting.

THE RABBIT AS AN ELECTIONEERING AGENT.

—Mr. Justice Mellor reports that it was proved that at Launceston Colonel James Heury Deakin was guilty of a corrupt practice within the true intent and meaning of the Corrupt Practices Prevention Act, 1854: "I was perfectly satisfied by the evidence that Mr. Deakin had endeavoured to remove all serious cause of complaint on the part of his tenants, in respect to damages by rabbits by employing trappers, and by urging upon his bailiff and gamekeeper his great desire that the rabbits should be kept down; and it appeared from a correspondence between Mr. Cowlard, his solicitor and agent, and himself, that in the month of December previous to the election he was informed that the rent audit was just over, and that the only discordant element was 'the rabbit damage,' and Mr. Cowlard proposed to Mr. Deakin that, with reference to certain of the tenants who had strongly urged their complaints, for the future the money arising from the sale of the rabbits should be divided into three parts, and, assuming the price of a rabbit to be 9d., that one-third should be assigned to the trapper, another third to the keepers, and the remaining third divided between the tenants who might have sustained damage. Mr. Deakin at once agreed to the suggestion, and I am satisfied that he did not desire or intend to keep any part of the proceeds of the sale of the rabbits for his own use, although he did intend to keep the control of the fund in his own power. I think that he was not aware of the extent of the excitement from the rabbit question until his arrival on the 28th of January, and that his resolution to make the promise which he did make on the 29th with regard to the killing and appropriation of the rabbits by the tenants was made on the spur of the moment without reflection, and without considering that what might have been a very reasonable and even laudable proceeding on his part at another time, when disconnected with the election, was an illegal proceeding during a contest for the representation of the borough, at which he was a candidate. Unfortunately, the report of his speech on the 29th of January was printed and circulated the next day by his agents, and his proposal and promise was commented on and approved by his solicitor and agent at the meeting held on the 30th of January, after the nomination and before the poll. Still, I think that neither he nor his agents were at all aware of the extent and effect of the provisions of the Corrupt Practices Prevention Act. This may be accounted for by the fact, stated to me at the hearing, that only one contest has taken place for the borough of Launceston during the last two hundred years, and that such contest occurred at the time of the passing of the first Reform Act, and I think that, inasmuch as the representation of Launceston had always followed the ownership of the estate which Mr. Deakin had purchased in the year 1872, he and his agents were entirely taken by surprise at there being a serious contest at the last election. In the result, although I am quite satisfied that the facts of the case properly avoided the election, I regret the serious disqualifications which flow personally to Mr. Deakin from my decision, and which, as I think, should be reserved for the baser forms of bribery."—[Of course the question which at once arises here is why should the trapper or keeper claim any share in the money for which the rabbits are sold? They might almost as reasonably claim a share in the sheep or any other stock kept on the farm.—EDITOR.]

THE ROYAL AGRICULTURAL COLLEGE, CIRENCESTER.—Diploma awarded to (full marks 1,800) Monckton, John Henry, Brewood, Staffordshire—1,418. Brewitt, George William, Old Gaudaloupe, Melton Mowbray, Leicestershire—1,415. Way, Henry, Dodpitts, Yarmouth, Isle of Wight—1,375. Drewry, Frank Holker, Cark-in-Carkmel, Lancashire—1,341. Rouse, Martin Luther, Balham House, Balham, London, S.W.—1,200. Holland Medal.—John Henry Monckton. Scholarships.—First scholarship to Brewitt, Wilson, Moconchy. Second scholarship to Burn Murdoch, Ward, Mahony.

THE SOIL—ITS ORIGIN AND GEOLOGICAL RELATIONS.

A LECTURE BY MR. JAMIESON, THE FORDYCE LECTURER ON AGRICULTURE AT MARISCHAL COLLEGE, ABERDEEN.

Seeing that the mineral matter of the soil has been derived from the rocks and strata of which the crust of the earth is composed, we may expect to find that the character of the soil will vary with the geological nature of the rock on which it rests, and will depend a good deal upon it, and that if we had a geological map before us we could trace out the boundaries of different classes of soil by the colours which indicate the distribution of the various kinds of rock. In this expectation, however, we should find ourselves often much deceived. It would doubtless be the case that a close connection would be observed between the nature of the soil and the strata beneath it if the soil had resulted from direct decomposition of the subjacent rock. But this is seldom the case, for it is not often that we find the substance of the rock to have gradually mouldered down into a soil, and to have remained undisturbed in the same spot. The wasted matter is generally carried off to some distance—often to a very great distance—from the locality that furnished it. The various agencies I have already alluded to—the rivers, and glaciers, and ocean currents—bear off the material and carry it far away, so that we frequently find the mineral matter of the soil bears no relation whatever to the actual rock on which it reposes. Take, for example, the soil of Egypt. The fine alluvial loam of that country has been brought down hundreds of miles from the far interior of Africa by the river Nile, and has nothing to do with the rock which immediately underlies it. Its source is far away among the mountains, beside the great lakes at the head of the river. And in our own country we find that the boulders and pebbles of the soil of any particular field have often come from remote localities, and that even the mass of earthy matter in which they are embedded may also have been transported from a distance. The glaciers in this instance have probably been the means of transport, or floating ice, when the country was under water. The geological map, therefore, requires to be used with discrimination, and it becomes necessary to bear in mind the way in which Nature goes to work on these matters. The maps show the distribution of the various classes of rock, but we have none as yet that show the distribution of different soils; and the barren or fertile nature of a farm cannot often be inferred from the nature of the rock that lies below it. The character of the soil depends more upon the loose, superficial, earthy matter that covers the rock than upon the solid strata themselves, and these superficial deposits have not been sufficiently studied as yet to enable us to map them with any degree of accuracy. It is true they have been derived originally from the rocks, but they have been carried in various directions, and drifted hither and thither, so that in many cases they do not lie upon the rocks from which they have proceeded. This is one reason why we cannot get the information from a geological map in regard to the soils of a country that we might have at first expected. Although, therefore, we cannot draw any nice distinctions, nor tell whether a farm will be a good one or not, merely because it lies on this or that kind of rock, yet taking a broader view of the matter, we can perceive some connection between the two sets of facts, and, without asking you to follow me into a long disquisition on the various geological formations (which I think would be out of place here), I shall touch briefly on a few points that seem to me to be worthy of notice, and, in doing so, I shall confine myself to the rocks and soils of our own country. The greater part of the North of Scotland, what we are accustomed to term the Highlands, consists of the older crystalline rocks, the gneiss, mica-slate, quartz-rock, clay slate, and granite. These rocks are generally of a hard solid nature, and do not yield readily to the weather, and when they do moulder down, they give rise to soils which are commonly not very difficult to work, and are well adapted for the cultivation of oats and turnips, being of a light, free, or friable texture, unlike the heavy clays of England, some of which can scarcely be ploughed by a pair of horses. These rocks of our Scottish Highlands have been the source from whence a great part of the superficial deposits have been derived that overspread the lower grounds of the surrounding districts, the glaciers and

rivers having both flowed downwards from the mountain chains and great watersheds of the Highlands. Now, the mineral nature of these rocks explains some of the peculiarities of our Scottish soils, especially in the northern counties. There is a great deficiency of phosphates and of lime in all these rocks, and consequently we find that our Scottish soils, as a rule, are very much wanting in these ingredients. No doubt there are some beds of limestone here and there among our Highland mountains, but they are too local and of too limited extent to affect the general character of the district; and consequently we find our Scottish rivers contain far less lime than those of England. This gives the water a softer character, and makes it more suitable for washing with. The analyses of our Scottish soils, also, as a rule, exhibit a much smaller per-centage of lime than those of England, and those of the North of Scotland are poorer in this ingredient than even the soils of the Midland and Southern Counties. The same remark applies to the phosphoric acid. In all the soils derived from these old rocks, the gneiss, granite, &c., there is a marked deficiency of phosphoric acid, and hence the great demand for bone-dust, superphosphate, and all those manures which contain this ingredient. It is this poverty in lime and phosphates that constitutes the weak point in the soils of the North of Scotland, and has helped to stamp them with that aspect of barrenness which only the industry of the inhabitants has been able to efface. It is this which makes Scotland so much a land of heather. Wherever you find a hill of limestone, there you have grass and verdure, and, in order to banish the heather effectually from a newly reclaimed soil, there is nothing better than a good dose of lime. Lime discourages the growth of heaths in general, and also fir-trees (Lindley). We see, therefore, that the heather-clad surface of our Scottish hills—this land of brown heath and shaggy wood—arises in some measure from the want of lime in the rocks. The poverty of lime in our Northern hills and soils is also a reason why Scotland is so much a land of oats. Of all our grain crops, the oat is the one that does with the least lime. Barley loves a calcareous soil, and so does wheat, but an extra dose of lime will in many cases spoil a field of growing oats if it be of a thin, light texture, and good crops may be grown on land in which there is very little of this element. Although the rocks of our Scottish Highlands are weak in lime and phosphoric acid, there is generally no lack of potash and magnesia, and this is so far favourable for the growth of the turnip crop, which draws largely upon the potash of the soil, as also does the potato and the straw of the grain crops in general. Accordingly, it is found that potash manures have seldom much influence on the crops with us. Iron also is generally present, and often in so large quantities as to be injurious, forming a pan or hard stratum between the soil and subsoil. The heather is a plant that takes in a good deal of iron, and this is another reason why the hills of Scotland are so favourable for its growth. We see then that the granite and gneiss rocks of Scotland give rise to soils which are characterised by a deficiency of lime and phosphoric acid, and by a richness in potash and iron, and I should also add of the element called silica, which, however, is one that few soils want. Owing to the great poverty in lime and phosphoric acid, turnips can seldom be grown on such soils to advantage until these two substances be added, and indeed in the case of newly-reclaimed ground, a dose of lime is almost always required before crops of any kind will thrive well. Another serious disadvantage in regard to the soils of the Highlands and northern regions of Scotland, which I must not omit to notice, is the rugged, stony nature of the ground, more especially in its natural unimproved state. Large boulders and great blocks of stone abound in most districts, and form troublesome impediments to the plough and to some of the improved class of implements. They will also be found an obstacle to the introduction of steam cultivation in many localities which are otherwise well adapted for it. This rugged and rocky aspect of the soil is a characteristic feature of the older crystalline and granitic rocks, not only in Scotland, but in other countries where they occur, and is due in a

great measure to their hard, indestructible nature, which yields slowly to the weather.

THE OLD RED SANDSTONE.—A considerable part of Scotland is occupied by the old red sandstone formation, which we find stretching across the country from Stonehaven to the Firth of Clyde, in a broad belt along the south-eastern border of the Highlands. It also forms a large tract around the Moray Firth, extending from the mouth of the River Spey along by Elgin, Nairn, Inverness, and Easter-Ross, and likewise spreads over much of Caithness and the Orkney Islands. This geological formation comprises an extensive series of beds. Part of it is composed of conglomerate or pudding-stone, which is a mass of coarse gravel and pebbles, cemented together and consolidated into a hard, stony condition. Part of it is a sandstone more or less fine-grained, and often intermixed with beds of conglomerate. Other beds consist of flags and shales, such as are split up for paving floors of kitchens and cellars. These are very much developed in Caithness, and are well known in commerce as Caithness pavement. There are also some beds of limestone, but generally of no great extent. Owing to this diversity of character, the old red formation gives rise to variety of soils, but generally speaking, it forms a much better agricultural subject than the gneiss and granite, and some of the most fertile districts of Scotland are situated upon it. For example, the fine farms of Easter-Ross and of the Morayshire district, the How of the Mearns, and the best parts of Forfar and Perth, all lie on the old red sandstone. When the rough conglomerate comes to the surface, we have some barren tracts, and the flaggy beds of Caithness also form an inferior subject; but with these exceptions the character of the formation is decidedly good. The sandstone beds moulder down into a free, loamy soil, which is easily cultivated, and well adapted for most kinds of crops. The porous nature of the rock is favourable for drainage, and generally forms a dry, warm bottom. The outlines of the country are softer and less rugged than in the tracts of gneiss and mica-slate; and unless where the boulders from the Highlands have been drifted over it, the surface is not much encumbered with heavy stones. Owing, however, to its proximity to these mountainous regions, the old red sandstone has in many cases been deeply covered with drifted matter full of large blocks of granite and other crystalline rocks. In the midland counties, the old red sandstone is much penetrated by veins and masses of volcanic rocks. Sometimes these assume the form of narrow dykes, cutting through it, but at other times they occupy large areas, and form considerable hills, as in the Ochils and Sidlaw ranges. Geologists seem inclined to think that these intrusive masses have been due to old volcanic action, contemporaneous in some cases with the formation of the sandstone beds, and that they represent the lava, ashes, and other igneous products of the eruptions. However that may be, there is no doubt that they contribute in some degree to the fertility of the soils that have been derived from the rocks in which they occur, for they impart a greater richness of mineral elements, and afford not only a considerable amount of lime, but also traces of phosphoric acid.

THE VOLCANIC AND IGNEOUS ROCKS.—These volcanic and igneous rocks, I ought to mention, are not peculiar to one set of geological strata, but are met with more or less in all the formations, from the oldest to the most recent; for, although we have nothing of the kind in our country in recent times, yet in many other regions rocks of this nature are still in course of production. In Scotland, as I have already mentioned, they occur very plentifully in the red sandstone district of the midland and southern counties. Almost a continuous chain of hills, composed in a great measure of these igneous beds, stretches from the neighbourhood of Glasgow in a north-eastern direction across Scotland to near Montrose, forming the Campsie Hills, the Ochils, and the Sidlaw range. They are also largely developed in the county of Fife and the Lothians, and throughout the Scottish coal field generally. Another district where they occur in large quantity is in the West Coast of Scotland. A large part of the Isle of Skye, the Isle of Mull, Staffa, and many of the other islets of the Hebrides consist of volcanic rocks. This western group is of later date than those I have mentioned as occurring in the old red sandstone, and belongs to the same period as the basaltic beds of the Giant's Causeway, or in the North of Ireland. However, I shall here class them altogether, as we have only to contemplate them from an agricul-

tural point of view. In this aspect, they deserve attention, from the fertility of the soils to which they give rise. This fertility seems owing to the richness in mineral elements which characterises them. This is a feature that may be remarked in many of the products of modern volcanoes. For example, the sheets of volcanic ashes that clothe the flanks of Vesuvius form a soil of extraordinary fertility in many places, affording some of the finest vineyards in the world, and supporting good crops of wheat also. But the mineral character of the eruptions varies a great deal, and some are much less favourable to vegetation than others. One lava stream may continue barren and destitute of plants for centuries, while another will soon clothe itself with luxuriant vegetation. And so it, no doubt, is with the lavas and igneous products of former ages; some of them will give rise to more fertile soils than others. But looking at these rocks generally, we must pronounce them as a whole favourable to vegetation. In the Isle of Skye, the hills of volcanic rock are in many cases covered with a beautiful sweet grass, forming excellent sheep pasture; although the ground is so rugged and rocky that little of it can be brought under the plough. The fertile character of the Lothians and much of Fife also appears to be due in no small degree to the numerous beds of volcanic rock which occur among the strata of that quarter. The hill called Arthur's Seat, beside Edinburgh, is thought to have been the site of an old volcano in the times of the old red sandstone and coal beds. This theory was first promulgated by the late Mr. McLaren, formerly editor of the *Scotsman*, and an accomplished geologist, and it is now the one adopted by the Geological Survey. But it is in the islands along the West Coast of Scotland that the grandest display of volcanic rocks is to be found. Many of the hills and elevated plains of the Hebrides, which form the picturesque scenery of that region, are, in fact, nothing else than the remains of old lava streams poured out from the volcanoes that raged furiously there during the tertiary period. Mr. Judd, who has been recently exploring the geology of that quarter, tells us there were no less than five notable vents in the West Highlands from which the fiery matter issued, viz.: Mull, Skye, Rum, St. Kilda, and Arduamurchan. Mr. Judd says that Skye and Mull were the sites of volcanoes of far greater magnitude than Etna, and the others were of dimensions not much inferior. These fiery mountains poured out their lavas at intervals during a vast length of time, and patches of old soils, trees, river gravels, and lake beds are entangled among the products of the eruptions, showing that terrestrial conditions prevailed. Two kinds of lava are observable in these regions, distinguished by their ultimate chemical composition. One the acid, the other the basic series. The acid series is of a felspathic, the basic of a basaltic nature. The felspathic lavas were erupted first, Judd thinks, probably during Eocene times, and the basaltic at a later date, during the Miocene period.

THE COAL MEASURES.—The next great geological formation which occupies an important area of our country is that which is generally known as the coal measures. These comprise an extensive and highly diversified series of beds, composed of shales, sandstone, limestone, and seams of coal. Shale is a geological term applied to beds composed of indurated clay. Clay itself consists of mineral matter which has been reduced to a very fine powder, and has been accumulated at the bottom of still quiet water. In its original condition, it was just a fine soft mud or ooze, such as we often see at the bottom of a sheltered harbour. When this mud is laid dry, it forms clay, more or less tenacious, according to the fineness and purity of the sediment which subsided. When this clay has been subjected to great pressure and consolidation, and also to a certain amount of chemical change, as has happened in the course of ages to all the older beds of this nature, in consequence of the great weight of the strata lying above them and other causes, it assumes the character of shale; and when shale is still more altered by similar agencies on a greater scale, it becomes still harder and of a more crystalline and rocky nature, and assumes the character of slate or flagstone, as we see in the more ancient series of rocks. All these varieties of strata—viz., clay, shale, and slate or flagstone—are merely different phases of the same material assuming a different complexion and appearance, according to the degree of consolidation in which it is met with. In the same way beds of sand and silty matter vary in character owing to the same causes, and may present themselves as loose sand—sandstone or grit—or as hard quartz rock and gneiss, and in general the more ancient the strata are, the harder and more consoli-

dated is the state in which we find them. The coal measures, then, consist of a great series of beds, composed of shale or fire-clay—grit or sandstone—with much limestone and coal, often rich in iron ore. In Scotland and Britain generally the limestone beds lie beneath the coal, and are often associated and interstratified with sandstone and grit, the useful coal seams lying at the top of the series. In Scotland, these coal measures stretch across the narrowest part of the country from the shores of the Firth of Forth on the east coast to the Firth of Clyde on the west, occupying the greater part of Fife, the three Lothians, Lanark, Ayr, and Renfrew. In England, they commence at the northern extremity, and stretch through Northumberland, Durham, Lancashire, and York, into the very centre of the Kingdom as far as Derby and Stafford, and also occupy a considerable tract in the South of Wales. In Ireland they extend over by much the larger part of the country, the great central area of that island being formed of the lower beds of the formations, the upper or true coal strata being chiefly developed in the south-western district, near the mouth of the Shannon and in the neighbourhood of Kilkenny. In these coal measures the great limestone beds lie beneath the coal. This limestone, together with the associated beds of sandstone, is a marine deposit, and has been formed chiefly by the growth of great beds of stone lilies, together with masses of coral and sea shells. Just a sort of great coral reef. All these grew and flourished at the bottom of the sea, absorbing lime from the water in which it had previously been dissolved, and by their decay formed extensive reefs of calcareous matter, which now present themselves as beds of limestone. The coal, on the other hand, was formed at a later period, and has arisen from the decay of beds of vegetable matter, which grew in vast swamps and marshes, somewhat like our peat mosses, but on a far more extensive scale. The vegetation of that period consisted of plants allied to our ferns and mosses, but instead of being small and diminutive like them, they grew to the dimensions of trees, and must have formed thick forests which, owing to a peculiar climate and state of the atmosphere, sprang up with marvellous rapidity and luxuriance. These wide-spreading jungles grew and fell, and were covered up by sheets of mud and sand thrown down by the river floods of that period. On these a second forest sprang up, decayed, and was buried in a similar manner, and so the process went on. And it is evident that the conditions of the earth at that period were specially adapted for the purpose of making and preserving fuel for future ages, and thus we have it laid past for us in pits and cellars waiting the age of steam, which has now arrived, and threatens to consume these coal-beds far faster than they were originally made. Owing to the variety of character which the different members of the coal measures present, they give rise to soils which are equally diversified in their nature. The limestone forms the best soil, and the regions where it comes to the surface are often of a very fertile character. The great limestone plain of Ireland abounds in beautiful pastures, and, favoured as it is by a mild and moist climate, its grass and herbage are ever green, and therefore Erin has been called the Emerald Isle from the constant verdure of its vegetation. Again, some of our best land in Scotland is situated upon the limestone beds of the coal measures. I have only to mention Fife and the Lothians as evidence of this. In Scotland, however, the limestone and coal-beds generally are much invaded by masses of trap or volcanic rocks, and these, in many cases, no doubt help to give a character to the soils around them. This is very much the case in Fife, and also in East Lothian. In England the volcanic rocks do not occur so often, and a great part of the carboniferous limestone and millstone grit forms elevated hilly ground at too great an altitude for wheat. Where it descends to lower levels, it of course proves a more favourable subject. It was a favourite saying of Thomas Bates that there was no place for rearing *Shorthorn* equal to the valley of the Wharfe. Now, the Wharfe takes its rise in the carboniferous limestone, and flows the greater part of its course through it and the millstone grit of the coal measures. Perhaps this may have something to do with the character that Bates has given this valley, for this limestone forms some of the best pastures in England. In the North Riding of Yorkshire (according to Mr. Milburn, of Thirsk, *Roy. Ag. Soc. Journ.* ix., 496) the grass land in the valleys and hill-sides of the carboniferous limestone lets for as much as £4 an acre. The millstone grit and shale, lying to the eastward of the limestone, form a more ungenial belt of land. And taking the whole of North Riding, he tells us that

the character of the soil and the style of farming are very much regulated by the geological nature of the strata on which the soil reposes. Although the limestone, then, forms a good agricultural subject, we cannot speak so favourably of the other members of the coal measures. The shales, fire-clays, ironstone beds, &c., have all an inferior character, and form soils which are often low in the scale of fertility. This arises partly from their frequent tenacity and wetness, and, probably, also in part from their impregnation with sulphur and metallic substances.

THE GLACIAL BEDS.—In the northern parts of both Europe and America, and indeed over a large part of the polar and temperate regions of the globe, there is a very widely-spread mass of coarse earth or clay mixed with stones, which generally lies as a covering upon the more solid strata, and which, geologists are now of opinion, has been formed by the action of ice, at a time when a colder climate prevailed over most of the globe. This phase of the earth's history is generally known as the glacial period, and immediately preceded the occupation of the earth by the human race. During this glacial period an arctic climate reigned over the north of Europe, and a great part of the surface of our present continent was covered by snow and ice, much like what Greenland is at the present day, and it was owing to the action of the ice upon the rocky framework of the country that this mass of coarse earthy matter was produced, and spread over the surface of the rocks. It has been derived from the waste of the rocks by the ice, which, moving over them with great friction, ground them down to a state like mud, this earthy mud being at the same time mixed with stones and boulders carried along by the ice. In many parts of Scotland these boulders are thickly scattered over the surface, and form a great impediment to the improvement and proper cultivation of the soil, being frequently of great size, and requiring to be blown to pieces by gunpowder before they can be got rid of. Such is the case also in many parts of the North of Europe and in Canada and the U.S. of America. These large boulders are generally met with in great numbers along the sides of the Highland valleys, and over the low ground adjoining the hills and mountain ranges, and have frequently been transported to immense distances from the rocks from which they were derived. In many parts of Scotland they have proved a source of much expense in the reclamation of the soil. The boulder clay, or coarse earth in which they are imbedded, varies a good deal in its character, according to the nature of the rocky strata from which it has been derived. It generally consists of a mixture of fine impalpable mud, mixed with coarse sand, pebbles, and stones of many kinds and sizes, forming a stiff, tenacious paste. In Aberdeenshire and most of the North of Scotland it has been derived from the waste of the Grampian hills, and its materials consist of the granite, gneiss, and other crystalline rocks of the Highlands and hilly grounds reduced to powder. When it rests upon a dry bottom, and is not much infested with large boulders, it often forms a tolerably good subsoil; but, owing to its tenacity, it is frequently of a retentive nature, and requires drainage. It also abounds frequently in springs of water, and its agricultural value with us depends chiefly upon its dryness and freedom from large boulders, and also upon the circumstance of its being not too much impregnated with oxide of iron. In those districts, when the rock on which it reposes is of an open, porous nature, it forms a good warm subsoil; but, when the rock supporting it is of a close texture or full of springs, then the water, diffusing itself through the overlying mass of earth, renders it cold and wet. In Scotland this boulder clay is generally deficient in lime, and is often too much impregnated with oxide of iron, which occasionally forms a hard stratum or pan, very unfavourable to vegetation. In the districts of the old red sandstone the glacial beds partake of the character of that formation, and are of a redder, sandier, and more porous nature—are generally less infested with heavy boulders, except in the neighbourhood of the Grampians, when the drift from the gneiss mountains has partially overspread the sandstone strata.

THE GLACIAL MARINE CLAYS.—Along the low grounds adjoining the coast, we find in many places beds of a very pure retentive clay, which consists of the fine muddy sediment deposited at the bottom of the sea during part of the glacial period when much of the country was under water. These clays occur along the eastern parishes of Aberdeenshire, and here and there along all the low coast districts of Scotland, and over part of England and Ireland. They vary in colour

according to the hue of the rocks from which the sediment has been derived. Along the Banffshire coast, and round by Fraserburgh to the neighbourhood of Peterhead, the clay is generally of an indigo or dark leaden blue colour. From Peterhead along the east coast to Fife it is mostly red. These clays are used for making bricks and tiles. They form a very heavy and difficult soil to work. Turnips don't thrive upon them, except in unusually favourable seasons, and they are difficult to drain. Clover and vetches, beans and wheat, are the crops for which they are naturally adapted. In some quarters there are beds and seams of fine sand interstratified with the clay, and these form a better subject for the agriculturist, but the tracts of pure clay form some of the worst soils we have, and are more adapted for steam cultivation than horse labour. The large boulders that occasionally occur in them are supposed to have been drifted by the agency of floating ice. There is a good deal of this clay in the parishes of St. Fergus, Peterhead, Cruden, Slains, Logie-Buchan, and some parts of Ellon, Foveran, and Belhelvie. We do not meet with it in the interior of the county, and there is none of it in Deeside, Donside, and very little along the valley of the Ythan.

VALLEY GRAVEL AND MORAINES.—Along the banks of all the rivers we find a good deal of gravelly ground, the extent of which is generally in proportion to the size of the valleys. These beds of gravel have been formed at the close of the glacial period, when the snow and ice gradually melted, and their origin is to be sought in the heavy floods which took place every season when great thaws occurred, and gave rise to volumes of water flowing down the valleys much greater than anything we now see even in the rainiest seasons. They mark the time when the ice was disappearing gradually by reason of the return of a more genial climate. We find a great deal of this gravel along the side of the Dee, the Don, the Spey, the Findhorn, the Tay, and all our larger rivers; and a proportionally less amount of it on the banks of the smaller streams. It forms a dry, warm subsoil, on which we have light porous soils that grow good crops in moist seasons, well adapted for here and barley, turnips and potatoes. In the Highlands valley we often find large mounds of coarse gravel and stoney rubbish, which are old moraines formed along the margin of the beds of ice that filled the valleys in the latter part of the glacial period, similar to what are to be seen among the Alps of Switzerland at the present day. The greater number of our towns and villages are built on this valley gravel. Aberdeen, Banochory, Aboynie, Ballater, and Braemar, Kintore, Inverurie, Huntly, Ellon, &c. It forms a favourable site for mansions and country seats by reason of its dry healthy character; Balmoral, Taymouth Castle, and most of the houses of the nobility are upon it. When the gravel is coarse and pebbly, it forms a poor, hungry soil, which in a dry summer grows almost nothing, but when the sand is finer, and covered by a good depth of loam, it forms one of the most valuable soils we have, easy to work, and adapted for almost every kind of crop.

THE CARSE LANDS.—Another geological deposit different in character from any of those I have been describing is the carse ground. The Carse of Gowrie and the Carse of Falkirk are two well known tracts of very level land, which have been formed after the glacial period had passed away, and are composed of masses of old estuary mud formed along the Firths of Tay and Forth at a time when the coast was depressed about 25 feet beneath its present level, so that the tides reached higher up the river valleys than they do now. The soil of the carse consists of a fine muddy sediment, quite free from stones, and very similar to the ooze which we find at the bottom of any of our sheltered harbours. Several skeletons of large whales have been got imbedded in the soil of the carse, and beds of cockles and oysters also attest the nature of the conditions under which it was accumulated. Although the Carse of Falkirk and Gowrie are the most extensive and well known of these deposits, yet ground of the same kind, although of less extent, occurs round the Montrose basin, at the mouth of the Clyde, at Beaully, Spynie, Tain, and other similarly situated places. There are also large tracts of the same nature in England, in the Fen districts, and along the mouths of most large rivers. These carse lands are often extremely fertile, and form some of the most valuable wheat-soil we have, but although this is often so, it is not always the case. Some of it is a poor tenacious clay, difficult to work, and from its flat nature not

easily drained. It is remarkably well adapted for steam cultivation, owing to its uniform character and entire freedom from stones. It generally forms level plains of rich bluish mud, rising in a sort of low platform along the sides of the present estuaries.

ALLUVIAL SOILS.—Along the banks of every large river we find some extent of alluvial soil, consisting of the fine sediment thrown down from the water in time of floods, and which forms meadows and flats along the sides of the stream; in Scotland they are generally called *haughs*. The extent of these alluvial soils depends of course upon the size and nature of the river. In Britain, where the rivers are small, they are of comparatively little extent, but in other countries they are of immense area. The fertile land of Egypt is nothing else than the meadow of the River Nile, and in the valleys of the Mississippi, the Amazon, and other large Continental streams this fluviate sediment forms some of the most important and fertile tracts in the world. A large part of China consists of the alluvium of its great rivers. Although this class of soil is generally of a very fertile character, yet its value is often impaired by the difficulty that occurs in keeping the water off. It is often subject to be flooded, and lying generally little above the level of the rivers, a proper outfall cannot be got for drains. These meadows form excellent grass land, from the great depth and richness of the soil, which permits the roots of the plants to go deep down, so that they do not suffer in dry weather. The finest pastures in England are in some of these alluvial grounds, as, for example, in Somersetshire, where there is a flat of about 1,000 acres which lets annually for grazing at about £6 an acre all over.

PEAT SOILS.—Another kind of soil or superficial covering which is still in course of formation is peat, which in some places occupies a large extent of surface, and furnishes fuel to much of our rural population. These beds of peat are of very variable depth, and occur not only in low swampy hollows where the drainage is obstructed, but also cover with a less degree of thickness the surface of many of our hills, even the very tops of some of them, up to heights exceeding 2,000 feet above the level of the sea. In the Highland districts peaty turf forms a very large proportion of the surface; while in Ireland, so great is the area it occupies, that the Commissioners appointed by Parliament to inquire into the subject, reported that the extent of peat soil in that county amounts to nearly three million acres, of which rather more than half consists of flat red bog, and the remainder forms the covering of mountains. These Irish bogs are often of immense depth, 30 to 40 feet being not uncommon in some of them; and, in one instance, 47 feet was reached. In Scotland, their depth and dimensions are much less. One of the largest peat mosses is the Flanders Moss, in the district of the Forth, which covers about 10,000 acres. We have a good deal of it in Aberdeenshire, and in the Buchan district there are extensive peat mosses to the E. and W. of the Hill of Mormond, occupying much of the parishes of Crimond, Lonmay, St Fergus, Strichen, and New Deer. In St Fergus some of the peat is said to exceed 20 feet in depth, but it is not often that it reaches ten feet with us, so far as my observation goes. Peat is a substance formed in cold and humid climates by the gradual decay of those plants which flourish in moist and swampy places. In warm and tropical countries the decomposition of the dead plants goes on too rapidly and completely, so that peat is not formed. A moist, temperate, or coldish climate, and a wet soil, seem to be the conditions most favourable for its accumulation. In many peat mosses we find remains of trees, such as hazel, birch, oak, alder, and fir, but in others we find none, and many of the most extensive bogs in Ireland contain no trees, the whole mass of peat from top to bottom being formed of mosses, sedge, and other aquatic plants, which have flourished and decayed season after season, each year's crop forming by its decomposition a film of vegetable matter. Towards the bottom of these deep Irish bogs, the fibres of the dead plants cease to be visible, the colour of the stuff, becomes blacker, and its texture more compact, forming a very valuable fuel, and having, when dry, some resemblance to pitch or bituminous coal. Peat itself forms a very poor soil, but when it is well drained, and mixed with a proportion of earthy matter, it is greatly improved, and will grow good crops of oats, turnips, and potatoes.

A NORTH COUNTRY VILLAGE.

[Report by H. Franklyn Parsons, M.D., Medical Officer of Health, for the Goole and Selby Rural Sanitary Districts.]

As the first instalment of my sanitary work, I beg to present the following report on the sanitary condition of Luddington, based upon personal observations made there in company with Mr. Tudor, on January 10th and 23rd. My reason for beginning with Luddington was that I was informed that it was in the worst sanitary condition of any township in the union, and indeed for the credit of the union I hope this is the case; for in spite of what has been already done for its amelioration the state of Luddington is still filthy and unhealthy in the extreme. The village of Luddington consists almost entirely of a single long serpentine street, which formerly skirted the right or Lincolnshire bank of the river Don. When, however, the "Dutch river" was cut, about 250 years ago, the waters of the Don forsook their old course, which in consequence became silted up. At present the course of the old Don is for the most part marked only by a scarcely perceptible depression, but in some portions a ditch still remains, into which water finds its way, but can escape only by evaporation or soaking into the soil, and these portions form convenient receptacles for refuse of various kinds. Owing to the unevenness of the ground, the walls of several houses built on the margin of the old river bed have sunk and cracked to a greater or less extent. The country around Luddington is treeless, and very flat, there being only a very slight fall to the east, where a watercourse, called the Mere Dyke, pursues its sluggish way towards the Trent. The geological formation is alluvial, and consists of a sandy loam or "warp" with beds of sand or clay in places; and at a depth of about thirty feet a hard bed of sandstone known as "pan-sand" is met with. The population of Luddington according to the last census was 775. In 1873 thirteen deaths occurred there, including one each from typhoid and scarlet fevers. The population is entirely an agricultural one, and consists to a considerable extent of Irish; wages appear to be low for this part of England; and the scanty furniture, and ragged children in many houses bore witness to the poverty of the inmates. Overcrowding is said to prevail among the Irish in summer and harvest to a dangerous degree, and some instances came under our notice, although owing to the free ventilation afforded by the dilapidated houses, its evil effects were not always so obvious to the senses as might have been expected. In one case we found a man with his wife and nine children sleeping in a room only five feet three inches in height, and of only 955 cubic feet capacity; each person would, therefore, have on an average less than eighty-seven cubic feet of space—240 cubic feet being the minimum allowance fixed for each person in the regulations for metropolitan lodging-houses, while authors on hygiene insist on a much larger amount. The room had no ceiling, but only a sloping tiled roof, partly concealed by a few mats of flax-waste; there was a large gaping crack in the wall at the end, and the floor was of "grouting," upon which the whole family slept without a bedstead. In several other houses we found no ceiling, the only covering being the tiles. Such houses are hot in summer and bitterly cold in winter. Many of the cottages are in a very ruinous state; of one a large portion of the roof had been blown off: it was, nevertheless, occupied by a family. The walls and floors are generally constructed of an inferior kind of brick, which decays in the course of time; from this cause, combined with the absence of drainage and neglect of necessary repairs, many of the cottages are very damp—a condition most injurious to health. There is no main drainage in Luddington. The houses on the west side of the road are mostly furnished with drains of common porous pipes, which run across the old Don into the adjoining field and terminate in blind extremities, their contents soaking into the soil. Some of the houses on the opposite side of the street have drains which lead into stagnant foul ditches, a short distance from the houses, and the remainder have no drainage at all; the liquid refuse from the houses being thrown into the ashpits, or anywhere handy. The evils resulting from this state of things are—1, Dampness of the houses from the ground around being sodden with slops; 2, Nuisances arising from the stagnation near the houses of runnings from pigstyes, and other foul liquids; and 3, Pollution of the wells by these liquids percolating through the soil. To remedy these evils a proper system of sewerage is

urgently called for. The principal street would require to be sewered in two portions, one of them discharging into a sewer leading down Mere Dyke-lane, the other into one down Church-lane; both should be covered for some distance beyond the last houses. For the details, however, I will refer you to your able surveyor, Mr. Tudor. As it is important for the prevention of phthisis, rheumatism, and other diseases, that the subsoil on which dwellings are built should be dry, and as this drying cannot be effected by the impervious pipes which it is necessary to use when sewage has to be conveyed, I would recommend that a row of ordinary agricultural drain-pipes be laid alongside of or underneath the sewer-pipes; the extra cost of this if done at the same time would be small, as no additional excavations would need to be made. A cheaper expedient would be to use unglazed socket-pipes, the lower half embedded in clay, so as to retain the sewage, and the upper part surrounded by porous materials to allow the passage of the subsoil water into the sewer. The farmyards should be drained into water-tight covered cesspools, with pumps for the liquid manure, for owing to the oft repeated removal of soil with manure from their surface, their level is too low for any other outfall to be obtained. Another great defect in many of the poorer houses is the absence of a staircase, access being gained to the bed-rooms up a ladder in the corner of the room, and through a hole in the floor above. In one case, where the height that had to be ascended in this way was as much as 10 feet, the tenant told me that she and her children had frequently met with accidents from falls. Other houses are without adequate means of ventilation. On the whole, the state of the cottage property in Luddington is disgraceful, and there are about eight houses which, in my opinion, ought to be closed as soon as practicable, unless the necessary alterations are made, which would probably cost nearly as much as rebuilding. The water of Luddington is one of the most unsatisfactory features of the place; the quantity being deficient, and the wells almost invariably polluted. Indeed the inhabitants seem to have got to consider that the water of a well was never meant, and can never be fit, to be drunk by human beings, and that as it is therefore useless to protect the water from contamination, the most convenient place for the pump is in the fold-yard. For drinking and culinary purposes they always use rain-water, which those who have no facilities for catching it, are compelled to purchase at from 0½d. to 1½d., or even 2d. a bucketful. In dry seasons the supply of rain-water is very inadequate for the wants of the people, and the wells often run dry; and when to this it is added that some of the people have to fetch water a quarter of a mile or more, it will be readily imagined that cleanliness must be a rare virtue among the poorer classes. As a proof of the scarcity of water I may mention that the rain-water butts were kept locked, and that the hard water pumps were almost always out of order, the buckets being leaky so that the pump ran dry, and had to be primed by pouring water down the top, it being preferred to let the pump remain in this condition, to prevent the neighbours taking the water. The rainwater is collected either in barrels or cylindrical zinc cisterns, and in the better class of houses in underground tanks of masonry, or in cisterns of stone or lead. I consider stone or slate the best material for the purpose; the use of leaden cisterns to hold rainwater used for drinking is fraught with much danger. I was informed of some cases of lead poisoning from this cause that occurred in Luddington some years ago. The rainwater is generally drunk unfiltered, yet no care seems to be taken to ensure its purity; before entering the butt it usually has to wash the lid, which in some instances I noticed to be covered with excrement of birds and animals. Still, I should prefer drinking even this, to the water of most of the wells, which in colour, smell, and taste resembles—as in fact it is—a somewhat dilute infusion of farm and other manure. Chemical tests show it to be loaded with organic impurities, and a foul scum rises to the surface on boiling. Nevertheless, there does not appear to be any absolute necessity for this disgusting state of affairs. No doubt there is but little water, and that of a poor quality, to be obtained from wells that do not penetrate below the "warp," but I am informed that on boring through the

stratum known as "pan saud," to which I have before alluded, an abundant supply of good water may be obtained at a depth of some 30 feet. In order to preserve this from pollution, the upper part of the well must be made water-tight, which may be done by clay puddle outside the brickwork, or better still by substituting for the latter large-sized glazed stoneware pipes. It is usual in this neighbourhood, instead of sinking a well until a sufficient supply of water is reached, to stop when a depth has been attained somewhat below the level to which it is thought that the water will rise, and to bore the remaining distance. If this be done, a flag-stone should be placed at the bottom of the well for the brickwork or casing to rest on. This flag should have a hole in the centre through which an iron pipe should pass down the bore-hole as far as the nature of the ground may render it necessary, the upper end of the iron pipe being left projecting a foot or more above the stone bottom of the well. If this be done there will be no fear of the bore-hole getting closed up, and the well thus ceasing to yield. One or two good public wells in convenient situations and furnished with pumps, would be an immense boon to the people of Luddington. I may mention that there is a well close to the Primitive Methodist Chapel, the water of which appears good, no source of pollution being present within some distance. Where rain-water is used for drinking it should always be filtered, the roofs and pipes by which it is collected should be kept clean, the tank or butt covered, but ventilated, and in a cool shady place. The privies and pig-styes are often placed too near the houses: this is especially the case with those on the side of the street towards the old Don, the back premises to which are inconveniently

small and cramped; those on the other side have generally gardens. The privy arrangements are almost universally on the faulty plan. The excrement is allowed to accumulate until the privy is full, by which time it has become an offensive nuisance; it is then raked out and mixed up with ashes. Instead of this it would be far better to cover the excrement with ashes day by day. The deodorizing power of dry ashes is so great that nearly all smell would thus be prevented; and for the greater convenience of emptying (which of course under these circumstances would require to be more frequently done), I recommend the adoption of box closets. These are in use to some extent in the town of Goole, and have been found to answer well. They are, no doubt, familiar to you, so that I need not stop to describe them, but I may remark that the box should be made watertight with pitch, and carried well under the front of the seat. One modification I would suggest in order to facilitate the removal of the box when full, viz., a pair of small wheels at the end of the box farthest from the door by which it is drawn, and sockets on either side at the nearer end, into which wooden handles might be thrust. The whole box might then be wheeled, wheel-barrow fashion, to any required place, and its contents applied at once to the soil. It is in vain to expect any plan to succeed among the poor, however great its sanitary advantages, if it entail more labour than that to which they have been accustomed. I do not propose that the adoption of this plan should be at once enforced in every case, but that when nuisances arise, as under the old arrangement they are nearly certain to do, and a notice for their abatement is necessary, the inspector be instructed to require the adaptation of the privy to the box form.

THE HIGHLAND AND AGRICULTURAL SOCIETY OF SCOTLAND.

The general meeting was held in the Society's Hall, Captain Tod, of Howden, senior director, in the absence of the president or any of the vice-presidents, in the chair.

Christian Holst, Chamberlain to his Majesty King Oscar II., and Norwegian Court Paymaster, and Ferdinand August Dahl, Director of the Royal Higher Agricultural School at Aas, Christiania, were elected honorary associates; and 135 gentlemen were balloted for and admitted as ordinary members.

Mr. G. AULDJO JAMIESON, C.A., on behalf of Mr. Irvine, of Drum, read the following addition proposed to be made to the bye-laws: "The Secretary shall, 30 days before the meeting of directors at which the list of ordinary and extraordinary directors for the ensuing year is to be made up, intimate by advertisement in any two or more of the Edinburgh newspapers that the directors are prepared to receive from members of the Society, within eight days from the date of such intimation, the names of such members as they may desire to suggest for the consideration of the directors in making up the list to be recommended for the adoption of the Society at the general meeting in January."

The CHAIRMAN said it must be borne in mind that this proposed alteration would not come into operation till next general meeting, as all alterations must be approved by two general meetings.

Mr. WALKER (Bowland), read the reply from her Majesty's Office of Works to the memorial adopted at the general meeting of the Society on the 21st January upon an Ordnance Survey of Scotland. The memorial has already been published. It may be remembered that the First Commissioner stated that it seemed to him that the only mode of expediting the survey of Scotland was by increasing the annual Parliamentary grant for the service. Mr. Walker went on to say that he believed that a deputation which had been appointed for the purpose had not yet had a conference with the Government, but he hoped it would soon take place. He trusted they would impress on the Government the necessity of a larger outlay on this great work. It was clear that the obstacle in the way was financial; and it was also clear to him that if they did not proceed more rapidly than hitherto, none of the present members of the Society would live to see it completed, and when it would be completed the earlier portions of it would be found to be out of date. He thought it was a disgrace that the Government of the country had not provided funds to complete this great national work within a reasonable time,

The directors' proceedings in these matters were approved of.

Mr. CAMPBELL SWINTON (Kimmerghame) stated that in February last the Baroness Burdett Coutts made some suggestions to the directors as to the Society exerting its influence for the promotion of the humane treatment of animals. Her ladyship's letter was referred to special committees, and these committees afterwards reported, when the directors agreed that to the medals in aid of premiums given by local societies there should, as already reported, be added a class for men in charge of stock, and one for women having charge of dairies and poultry. The directors had also under consideration the subject of aiding the cause of humane education, and circulars were sent out on the 31st March to above 970 school boards in Scotland. It was gratifying to know that all the answers received stated that the subject had been favourably entertained by the school boards; and he could personally state that that was the case in several school boards to which the circulars had been addressed. These boards looked upon this as a matter of great interest and importance.

Mr. MURRAY (Dollerie) stated that he could say the same thing. The circular had been very favourably considered by the school boards with which he was connected.

The report was approved of.

Mr. GILLON (Wallhouse) reported that the entries for the show to be held at Inverness were: Cattle 380, horses 150, sheep 500, swine 55, poultry 500, collie dogs 12, implements 1,000.

The following gentlemen, holders of the Society's diploma, Forbes Burn, Hardacres, Goldstream; Henry Erskine, Dal-ladies, Brechin; Richard Henderson, Goldstream, were also elected.

Mr. MURRAY (Dollerie) moved the proposed alteration of the bye-laws, to enable the members to recommend gentlemen as directors, and providing that the four vice-presidents and ten extraordinary directors shall retire annually, instead of one-half the number each of two successive years, and this was approved of.

Previous to the reports on agricultural education being given in,

The CHAIRMAN said that he wished to make a few remarks. It was always best to tell the truth, and he confessed he was a little sorry to have to say that the directors could not come to one mind regarding agricultural education and the chemical department. He therefore hoped that they would not be too

hurried in coming to any decision on the matter. The fact was that the public generally thought that the Highland Society was rolling in wealth; and the true state of the case was that they had very little wealth. From a statement which they might hear by-and-by from the chairman of the Finance Committee, they had only £550 at their disposal as a surplus to spend in any way. That was all that there was to spend in promoting either agricultural education or in paying the expenses of the chemist. Now, agricultural education was so very much mixed up with the chemical department, that he wished to state these things before they entered upon the discussion of the subjects connected with the educational department, and to show that they must not be too hurried in coming to any decision regarding even what they as directors had proposed. The meeting would hear in a short time that it was proposed to give bursaries to encourage agricultural education, but that was agreed to at a time before the directors had a clear understanding about their finances. They decided to give as much as £300 a year in bursaries, and it was very doubtful now whether that could be carried out. He wished to make these remarks, so that in the discussion which would subsequently take place nothing, as he had said, should be hurriedly done. It was quite a mistake for the public to think that the Highland Society was so wealthy. Their expenses had enormously increased within the last few years. A great deal was said about the small premiums and patry medals which they provided. These were all now largely increased, and instead of having money at their disposal, they would have hard work to make ends meet at the end of this year. With these remarks, he called upon Professor Balfour for his report on agricultural education.

Professor BALFOUR reported that the annual examination of candidates for the diploma and certificate in agriculture granted by the Society took place on the 24th and 25th of March, when the following gentlemen passed: For diploma—Forbes Burn, Hardacres, Berwickshire, who obtained the certificate in 1872; for certificate and diploma—Henry Erskine, Dalladies, Brechin, and Richard Henderson, Coldstream; for certificate—William Kennedy, 89, Marine Parade, Brighton, who is, in terms of the bye-laws, entitled to present himself next year for the diploma. It was stated that the prizes given by the Society to the class of agriculture of the Edinburgh University had this year been awarded by Professor Wilson to John Bramwell, Blackadish, Sanquhar, and Robert W. E. Murray, Housebyres, Galashiels. The papers of these two gentlemen being of equal merit, the amount, £10, was divided equally.

Mr. MENZIES then read the following report by the Council: The Council on Education having received the report of their sub-committee, adopted it as follows: 1. That the Society should establish ten bursaries of £20 each, and ten of £10 each—at schools, to be approved of by the directors, which include or are willing to introduce the teaching of chemistry, and the following branches of natural science—physical geography, botany, and geology—into their curriculum. 2. That the bursaries should be determined by examination in the usual manner by the Society's examiners. 3. That the £20 bursaries should be tenable for one year at the Universities, for the purpose of enabling the holders to take the classes necessary to qualify for the Society's certificate or diploma; and the £10 bursaries to be tenable for the same period, to enable the holders to receive another year's preparation at school. 4. That the age of candidates for the bursaries at the Universities should not be less than 17, and at schools not less than 16 years. 5. That the present scheme of the Society's examinations should be modified so as to admit of a lower award, or second-class certificate. 6. That the awards in future should consist of a diploma, first-class certificate, and second-class certificate. 7. That the examination for the second-class certificate should comprise the principle and practice of agriculture, agricultural chemistry, surveying and farm engineering, and farm accounts. The examination for the first-class certificate should include the compulsory subjects of the second-class certificate, and any three of the following optional subjects—botany, geology, physics or mechanics, meteorology or climate, natural history, and veterinary practice; and that the examination for the diploma should remain as at present. 8. That a standing acting committee of the Council on Agricultural Education should be appointed by the directors.

The CHAIRMAN said he hoped the meeting quite clearly understood that the £300 which the Council of Education proposed to give annually must be paid out of the sum of £550 which he had said was available. It was mentioned on page 11 of the premium list, clause viii.—“That a sum not exceeding £100 per annum shall be placed at the disposal of the examiners, to be applied in prizes to candidates who pass with distinguished merit, and on a standard exceeding that required for the diploma.” He might explain that that sum had also to be taken out of the £550.

Mr. WALKER (Bowland) suggested that it might be convenient to the members of the Society who were not generally conversant with the subject that this report should be passed from, and that the discussion should take place after they had heard the reports on both subjects.

This was approved of.

Sir THOMAS HEBURN read the following resolution: “That the Highland and Agricultural Society accepts with regret Professor Anderson's resignation of the appointment of chemist to the Society which he has held since 1849. That the Society convey to Dr. Anderson its expression of deep regret that the state of his health has compelled him to abandon his important duties both in the Society and in the University of Glasgow. That the Society in the fullest manner recognises the importance of the services which Dr. Anderson has rendered to the science of chemistry by his original researches, and to the Highland Society's chemical department by the fidelity and accuracy of the work executed on its behalf by him. That the Society convey to Dr. Anderson its cordial wishes for the enjoyment of ease and comfort in the retirement which the state of his health has compelled him to seek. That the above resolutions be recorded in the minutes of the Society, and that an extract thereof be communicated to Dr. Anderson by the secretary.” The resolution was unanimously adopted.

Professor DEWAR read the following report:

“Chemical Laboratory, Clyde Street Hall,
June 16, 1874.

“During the past six months, the work of the Chemical Department has been greatly increased. The substances analysed have included simple and compound manures, guanos, volatile waters, refuse substances, and stomachs of animals suspected to have died from the action of poisons. No grave cases of adulteration have come under my observation, and I believe the plan now adopted by many agriculturists of buying the essential ingredients of plant food, and mixing them according to the requirements of the soil and the crop, is tending greatly to diminish the system of vending defective manures. At the same time that this plan of applying manures is most advantageous to the farmer, it is more satisfactory to the Society's chemist, as he can recommend the mixture that ought (as far as experiments have been made) to be most likely to yield good results. Further, the adoption of this course by the farmers generally would greatly diminish the difficulties that are apt to arise in the estimation of the values of complex manures, and also to shorten the time and labour of the analytical processes. I have learned from various agriculturists that a feeling exists that the fees for analyses are in some cases too high, and that something ought to be done to lower them. This, I believe, may be effected through the Society favouring the prosecution of original investigations in the laboratory; so that well-educated young men might be induced, from the quality of the scientific instruction they would receive, to become, after some time, useful assistants in the discharge of the Society's work.”

The CHAIRMAN then stated that, from what he had already said, he dared say that the meeting did not expect that any report should now be brought forward. They had had a great many proposals before them, which were all on the table; but if it was thought necessary, they could all be read. To do so would occupy a great deal of time; and perhaps the best plan would be to read the last proposal, which had been drawn up by a small committee.

Mr. MENZIES read the report of the sub-committee on the chemical department, which was in the following terms: “The secretary read a memorandum detailing the various schemes suggested for the re-adjustment of the chemical department, and the chairman submitted a view of the income and expenditure of the Society. Your committee have considered the various proposals for the appointment of a chemist, and find

the amounts proposed to be more than the Society can afford. From the financial statement your committee find that no greater sum than £550 is available for the schemes suggested, both chemical and educational. This sum is made up as follows: (1) Professor Anderson's salary, £300; (2) Professor Dewar's salary, £150; (3) Vote to chair of cattle pathology which has expired, £100—total, £550. Your committee therefore recommend the appointment of a chemist at a salary of—say £500 a year, who shall be restricted from making analyses for manufacturers of manures, feeding stuffs, and other substances, for the purpose of trade advertisements. With reference to his general duties in carrying on field experiments, analyses, original investigations in agricultural chemistry, &c., it should be referred to the chemical committee to draw up regulations, stating what assistance he should be provided with. The chemist to be entitled to the fees for analyses, and to be at the entire expense of keeping up a laboratory."

Mr. MURRAY GRAHAM (Murrayhall) stated that before the more important discussion commenced on the reports they had just heard, he might perhaps be permitted to say a word with reference to a request made to him by several agriculturists in the neighbourhood of Perth as regarded the inspection of their purchases of artificial manures. The use of these had increased very much of late, and the agriculturists to whom he had referred found that the chemist in Edinburgh was hardly enough, so far as their convenience went, for the whole work. They would much desire to have trustworthy men appointed in the central towns in which the various shows of the Society were held, to whom they could have recourse. They might appoint a chemist of their own by subscription, but from various circumstances which had occurred recently, they were much more desirous that the matter should be left in the hands of the Society. The long purses and fees given by agricultural companies had rather an injurious effect as compared with the smaller resources of the farmers.

Mr. MURRAY stated that several years ago they were able to fund some money, but in consequence of the expressed desire of the members to enlarge their expenses, they for the last two or three years had funded nothing. It was perfectly true that they had, by desire of the society, invested £1,500 for what was called the building fund, it being the desire of many to remove from their present building to another. Nothing, however, had been added to it since last year.

Mr. HUNTER (Blackness) stated that in one of the last reports he found that the funds of the Society were something like £36,000. He thought the Society was too rich already, because it was getting quite independent of public opinion. Lord Kinnaird lately wrote a letter in which he stated that the expenses were something like £1,500, and that statement was never corrected. He thought that a statement of the accounts should be presented to every member of the Society twice in the year.

Mr. HARVEY (Whittingham Maine) thought they must get on to business. They had been a long time at this chemical department. They had already the services of Mr. Dewar, who had read a very able paper, and, in the meantime, he thought the best course for them to adopt was to instruct the Secretary to advertise for a first-class chemist at a salary of not less than £500 a-year. He remarked that it was very heartless to see so few farmers present. He thought, from what he heard out of doors, that greater interest would have been taken in this appointment. The chemist they appointed might analyse what the members sent to him, and keep a register; and, if necessary, an increase might be given to the £500. Who was the great ornament of the English Society but Dr. Voelcker? He thought that if the Scotch Society were to get such a man it would resuscitate its energies, and add to its popularity. Out of doors they heard nothing but despondency, and that they were going on like a lot of old wives. He had been told that a hundred times. They ought to have the best chemist for agricultural purposes in Europe if possible, and they could get that if they took the proper means of doing so.

Mr. D. MILNE HOME (Wedderburn) said that they had before the meeting two documents, one of which recommended certain bursaries to be approved of by the society. The other document was not a report from the directors at all. It was a report from a sub-committee with regard to the chemical department; and it appeared from the statement that there were only two gentlemen who attended on that occasion, and drew out this report.

The SECRETARY: They were all present.

Mr. MILNE HOME: There were three—Mr. Murray, Sir Thomas Hepburn, and Mr. Walker.

Mr. WALKER (Bowland): Allow me to correct a misapprehension. The sub-committee were present at a meeting at which the whole subject was fully discussed. They were appointed to draw up a report for the information of this meeting on the resolution which the chemical committee, or rather the directors, after hearing the report of the chemical committee, had come to. Therefore, the conclusions in that report are not the conclusions of the sub-committee, but an embodiment of the conclusions of a larger meeting.

Mr. MILNE HOME said he was still right that the directors had not approved of the report of the sub-committee, and they had only that report as to the appointment of a chemist. It also appeared that £550 was all that was available both for the chemical and educational departments. They had a report from the Council, at which the Lord Justice-General, Chancellor of the University of Edinburgh, presided, and approved of by the directors, submitted to this meeting, and therefore they had a distinct and definite plan with reference to the educational question, while they had only that short report in regard to the chemical one. They had now considered the suggestion of Mr. Walker, of Bowland, that it was desirable that the meeting should go into the educational question and the chemical question together, or whether the whole of these questions were to be shelved and delayed for consideration. It would be an unfortunate thing if they were not to come to some resolution on these questions at this meeting. They had spent six months in considering them, and both of them had undergone great consideration by the directors, who had, especially on the educational one, the benefit of the assistance of the Council on Education. He begged leave to say that twenty-five years ago the Society considered the matter of such importance that they were at the expense of going to the Crown and getting a charter to enable them to commence the work of agricultural education. They felt that it was of great importance that the farmers who raised stock and used implements should have the knowledge to enable them to use these implements and raise that stock; and they understood that a knowledge of science, mechanics, chemistry, and so forth, was necessary to carry on agriculture on a proper footing. He did not approve of the method which the Society at that time adopted for communicating agricultural science. What they said was this—"We will grant a diploma and also a certificate to any who will stand a difficult examination in chemistry and other branches." What had been the result during the last twenty-five years? How many gentlemen did they think had gained the diploma of those who had been induced to go on with the subject of agricultural instruction? According to a blue-book published the other day, the whole number was just twenty-six, or about one individual for each year during the time that this society had its charter. That of itself would show how insufficient the means were which the directors had adopted for agricultural instruction. Then, if they looked at the names of these twenty-six persons, they found that twenty-three of them obtained their education in England. They got it at the College of Cirencester, and other places where such instruction was given. Only three Scotchmen had the instruction necessary for the diploma, and perhaps these gentlemen got their instruction in England also. If they asked the Professor of Agriculture whether he was satisfied or not with the means existing in this country for enabling young men to come to his classes, he stated that a large number of these young men were unable to understand his lectures, because they had not received the necessary instruction in chemistry and other branches. Therefore it was that this proposal had been brought forward to encourage agricultural education more in schools. This committee, with the Lord Justice-General at its head, recommended them to give bursaries to encourage young men to come to the agricultural classes in the Universities, and to encourage middle-class schools to teach those branches necessary prepare young farmers to come to the university for further instruction. They had ascertained that most of the schoolmasters throughout the country, not merely in the middle-class schools, but likewise in the primary schools, were quite ready to begin this if they were only encouraged to do so by resolutions passed by the Highland Society inviting and encouraging them to give that instruction. Colonel Innes, of Learney, who was present, would tell them that in Aberdeen.

shire there was a large number of schools where chemistry was being taught; and he (Mr. Milne Home) had personal knowledge that there were seven or eight middle-class schools, such as Dollar Institution, prepared to give such instruction if the scheme of the directors was adopted. The bursaries were of two classes—£20 and £10. The former were for those able to attend the university classes—those who showed such knowledge and proficiency in the middle-class schools as to be able to understand Professor Wilson's lectures; and the £10 bursaries were for those not quite up to the mark, but sufficiently up in it as to show that they were making fair progress. They were to receive these to enable them to continue their education in these middle-class schools. Here, therefore, was a distinct and intelligible plan—the plan adopted by the Royal English Agricultural Society, who had set aside £500 a year for bursaries in order to encourage young men to attend the middle-class schools or the colleges in England, Scotland, or Ireland. The people of England saw and acknowledged the necessity of encouraging agricultural instruction, and now, when circumstances required more scientific education than thirty or forty years ago—education implying a knowledge of chemistry, mechanics, and things of that kind—would it be said that the Highland Society felt so little interest in encouraging this as to let it go to the ground, and, that having a charter, it was not to do anything to put itself on a right footing? Their past efforts had been an entire failure, and had not encouraged that education in Scotland that it was desirable to encourage. When they had this definite place and this £550 of surplus, they had the means of encouraging that most important object, and they should approve of what was laid on the table by the directors. In concluding, Mr. Milne Home said it was ridiculous to suppose that a chemist could be obtained and his laboratory kept up for £550 a year. The Finance Committee made a very important suggestion to the directors. At present they spent £440 a year in giving gratuitous copies of the Transactions to all the members of the Society. He thought that that was unnecessary. Let those who wished to read the Transactions pay their 4s. or 5s. for the Transactions, and then the Society would be in funds. He moved that the Education Council's report be adopted, and the chemical matter remitted back again to the directors for further consideration.

Mr. HANDYSIDE (Edinburgh) said he thought that the meeting might have received from the directors a little more than a bundle of reports, and that it would have been far better if matters had been brought before them in a more adjusted manner. In regard to the two proposals he thought they were bound to do something for those who had borne the brunt of the matter, and that perhaps the best thing, in the first place, was to look after the chemical department. He did not think that the farmers reposed that confidence in the chemical department which they ought to do, but the directors should see that it was made of real advantage to the members.

The CHAIRMAN said that the directors were divided in opinion in regard to the chemical department, and that was where the difficulty lay. If they could have come to a decision as to what was best for the members, no doubt there would have been a report.

Mr. HOPE said he agreed with almost all that Mr. Milne Home had said. He was most anxious for the education of the young, but the benefit of the farmers was also most important. He would second the motion that it be remitted to the directors to appoint a chemist at as high a salary as possible. They could not get a first-rate chemist for the money; but if they went to Germany, from which Voelcker came, he had no doubt they would get a very good man.

Mr. GOODLET (Bolshan) seconded Mr. Milne Home's motion. It was stated that there was a sum of only £550 at disposal. Now he thought that, in order to make a thorough inquiry into the state of the funds, they would require to go deeper into it than the length they seemed to have gone. There were many outlays on the part of the Society which might be turned to proper account; and he believed if a committee were to go over the expenditure of the Society, instead of £550 they would get a couple of thousands of pounds. If they got that sum, then they would be enabled to adopt Mr. Harvey's proposal as to the appointment of a chemist, and also Mr. Milne Home's as to education. Both things were necessary. It was necessary that they should have a chemist employed solely by the farmers, so that there would be no

suspicion in regard to him as there might be regarding one employed by those who sold manures. It surprised him to hear that the Society was poverty-struck, whose funds amounted to £56,000. If the Society had such a large sum of money, surely it would be possible to give a thousand or two to carry out the two proposals. He thought it would be well that there should be an examination of the books to see what really could be saved out of the present expense. Mr. Milne Home had spoken about the expense of supplying the Transactions to the members. He himself had read them, and he thought there was an immense mass of rubbish published. Then he thought they might save a good deal of money that was now given towards local societies, as he thought that these local societies should raise sufficient money for their own purposes. Then there was money that might be saved from premiums given for essays that were not worth it. They gave out subjects which, if properly written about, would require a high education. They had really no results from these essays, or if there were any results they were not worth having. He hoped that an inquiry would be made, so as to let them see whether they could not save more money than the paltry £550.

Mr. MELVIN said that if Mr. Goodlet would propose a resolution to investigate the expenditure of the Society, he would second the motion. He would like neither to oppose Mr. Milne Home's motion nor to curtail and weaken the proposal to appoint a chemist. If they voted in favour of Mr. Milne Home's motion without knowing what funds there were they might not be able to appoint a chemist, which would be a pity. The question of education was the thing that many years ago broke up the chemical association. He thought it would be extremely desirable that a motion such as that proposed by Mr. Goodlet should be made, and that both questions should be postponed till there was a report from the committee, which should consist of several influential persons, of whom some should be farmers.

Mr. WALKER (Bowland) said he entirely agreed with what Mr. Melvin had said, and the light in which the matter had occurred to that gentleman showed the reason why the directors did not come forward with a more distinct statement. The difficulties he felt were those which the directors had to encounter, and could not overcome. They had received from the convener of the Finance Committee a statement of their income and expenditure. They found that the present expenditure of the Society, including the £550, amounted to £1,022, while the average income of the Society, on an average of five years, amounted to £1,081. Now, it was out of the power of the directors to increase the expenditure for education or the chemistry department. Various suggestions had been made. The directors had no power to alter the destination of the funded money. It must be done under the rules of the charter, which required due notice and the sanction of certain meetings. Another proposition was made with regard to the publication of the Transactions, which cost £445. It was thought that that expense might be diminished, or altogether abandoned. Now, the arrangement as to the Transactions was agreed to by a distinct expression at a meeting that the system of selling the reports should be given up, and so it was not in the power of the directors to alter it. It was under these circumstances that it was proposed that a chemist should be appointed, who should devote his whole time to the Society, and keep up a laboratory—the estimated expense of which would be about £1,200, while the Committee on Education recommended a grant of £300. The directors could not recommend any one of these schemes.

A MEMBER: They did.

Mr. WALKER: They proposed one involving a cost of £550. These were organic changes, and he thought they should be carefully considered, and not entered into rashly. If they involved themselves either in pecuniary difficulties or in a system that was not thoroughly satisfactory, they would have very great difficulty in afterwards getting out of it. The moment they diminished their capital sum, the more their annual income would be diminished; and he thought if they retained the other objects of the Society, they should be very careful not to reduce the capital sum. It had arisen to a large extent from life subscriptions, and that ought to be divided over a number of years.

Mr. HOPE: But if you have got a capital of £56,000?

Mr. WALKER: We are not accumulating now.

Mr. SCOT SKIRVING said he thought it would clear the way so far if they were to come to a conclusion whether they

would have one first-rate chemist or a number of young men. There was a gentleman present from Perthshire who said they did not want one man in Edinburgh or Glasgow, but half-a-dozen men.

Sir THOMAS HEPBURN said he thought that a special meeting should be called for the purpose of considering the various proposals, as a number of the members were not aware of the nature of them.

Mr. GEORGE HARVEY said they could not do otherwise than appoint a first-class chemist. He was equally anxious to see the young instructed. He never opposed that; but they must commence with the appointment of a chemist. After the chemist was appointed, he thought it would be advisable then to see what he (the chemist) would recommend to be done with the money at the command of the Society. He proposed that they should advertise for a chemist; but he wished it to be understood that he was not opposed to the education of the young. It was most important to instruct the young; but a number of those present, who were old fogies, wished to have some instruction also, to know what they were about, to know whether they were paying £10 for what might be really worth only £5. They must have a first-class chemist—a man of undoubted fame—a man who would consult with the farmers, and let them know what, in his opinion, was the most suitable mode of experimenting.

Mr. ROUGHHEAD (Haddington) said he considered it of the utmost importance to the Society to have a chemist. The whole thing was in a nutshell. They spent at present upwards of £400. In Germany there were the first-class chemists of the day; and he believed if they were to advertise for a German chemist, they would get a young man for £600 or £700 a-year. He had no doubt that a young energetic chemist coming here would get pupils, and instruct the young farmers and the general public. He thought it was of importance that they should have a young man devoted to the purposes of the Society—to see that the farmer got the manures genuine; and not only that, but to explain what were the best manures to apply to the soil. It would have the effect of allowing the tenantry to come in contact with the chemist, and have conversations with him, which would be of great advantage, both to the farmers as well as the proprietors of the soil. Farmers had done much in regard to the rearing of stock, but they ought not only to pay attention to that department but also to the cereals of the country, and to get chemistry applied to make them more productive. He thought that that was more important than the education of the young. The young ought to be taught in the schools; and to have a good chemist was of the greatest importance. It would make the Society more popular, and if not done the Society would lag behind as compared with the other societies in England and Ireland.

Mr. SMITH (Whittingham Mains) said, that while they were all agreed that both departments were important, it must be noticed that if the motion for the appointment of a chemist was carried, the other matter in regard to education would be shelved. Both subjects were so intimately connected, that he thought it was much better for the Society and for all parties that the one should not be lost sight of for the other.

Mr. MILNE HOME said he had no objection to allow the educational question to lie over along with the other. The Society could suffer no prejudice, because they had heard a very able report from Mr. Dewar, who was Dr. Anderson's assistant. He did not know a more able chemist than Mr. Dewar in the country, and he thought they could well allow that gentleman another six months.

Mr. ROUGHHEAD said he had no doubt of Mr. Dewar's abilities, but probably they would get a young man to act at a much lower rate than that for which they could expect Mr. Dewar to perform the duties ("ries of "No, no").

Mr. FINDLAY ANDERSON said he thought there was a very strong desire that both questions should be disposed of in a satisfactory manner. The difficulty had been a difficulty in regard to funds. Mr. Walker said that the directors had no right to change the destination of the funds. But he thought that, after the strong expression of the opinions of parties, either as regarded the chemistry or the education question, it would have the effect on the directors of leading them to consider the question whether they could not devise the expenditure of the Society so as to allow a sum for both these things. Let them revise the whole of the accounts, and see whether

they could not, at another meeting, arrange by which both these objects might be carried on.

Professor BALFOUR said he did not see why they should go to Germany for a cheap chemist. It was ridiculous to suppose that they would get a chemist and a laboratory kept up for £550. He agreed with the proposal that the matter ought to be delayed.

Mr. MELVIN moved, "That the meeting ask the directors to appoint a committee of their own number and others to investigate the income and outlay of the Society, and to endeavour to provide sufficient funds for the purposes of the chemistry department and education. Delay consideration of these subjects in the meantime."

Mr. WALKER (Bowland) seconded the motion.

The CHAIRMAN: Perhaps Mr. Harvey and Mr. Milne Home withdraw their motions.

Mr. MILNE HOME said he would withdraw his motion in favour of that which was now proposed.

Mr. GEORGE HARVEY said he would withdraw his motion at once. He thought the Chairman should dismiss them, as they could not agree to anything. When he was a director they generally agreed about everything. There was no pleasure in doing anything connected with the directory. In Mr. Hall Maxwell's time there was no jarring except on some special occasions.

Mr. MELVIN said there was one remark he would like to make, and that was, that he hoped the directors would early consider the matter, so that they would be prepared to report to the first general meeting of the Society, so that the matter could be decided at once.

The CHAIRMAN said he was sure that the directors would take up the matter at once.

Mr. GEORGE HARVEY said he had great respect for Mr. Dewar, whose report was admirable, so far as he had been engaged. He would not say anything against Mr. Dewar. Perhaps he might be the chosen man after advertising, and in that case they would have no cheap Germans, as Professor Balfour said. There were many cantankerous men among the directors, and this meeting seemed not less so.

The CHAIRMAN said it was quite understood that everything connected with the educational and chemistry departments was deferred for the present.

The Hon. GEORGE WALDEGRAVE LESLIE: Except that Mr. Dewar is retained.

The CHAIRMAN: Yes, he has got an appointment.

Mr. Melvin's motion was then agreed to.

Colonel INNES (Learney) said he had made a proposal that the Privy Council, as representing the Department of Science and Art, should take up the subject of agriculture as well as other subjects that were to be taught in the primary schools. The directors unanimously came to a resolution approving of his proposal, and as it involved no difficulty as to expense, he trusted it would now be submitted for the approval of the meeting, and that the memorial be forwarded to Government. Mr. Milne Home's proposal was to obtain bursaries for students in primary and secondary schools, to enable them to pursue a higher education in agriculture in the Universities. His (Colonel Innes') proposal was a very modest one. It was to the effect that whereas the practice of agriculture now involved the application of science, it was necessary that instruction in the application of science to agriculture should be diffused generally among all classes of agriculturists, and that that could be done by that education beginning in the primary schools. It would be out of the question for the Society to operate on the primary schools; but in the Science and Art Department there was the whole organisation; and if they got the consent of the Privy Council to take up agriculture as one of their branches, it would open to the humblest agriculturist the means of getting information as to the application of science to agriculture. The following was the resolution adopted by the directors: "(1). That the Society memorialise the committee of the Privy Council on Education on the propriety of establishing agriculture as a branch of the system of physical science taught under the superintendence of the Department of Science and Art in the schools and classes. (2). That the Society offer a premium for the best text book for such a course, including the application of botany, geology, chemistry, and animal physiology to the art of agriculture and the management of farm stock." He held in his hand, when he made the proposal, a letter from a schoolmaster in the county of

Aberdeen, who occupied the position of chairman of the Association of Schoolmasters in three of the northern districts. It stated that 150 schoolmasters were ready to undertake that branch of education. Therefore, when they had such a complete organisation ready to enable the people to acquire a knowledge of the application of science to agriculture, it seemed to him that there could be no hesitation whatever as to the adoption of the proposal. Although there might be doubts as to the application of thousands a year, there could be no doubt as to the small expense necessary to carry out such a scheme as he proposed. He moved that the resolution adopted by the board of directors be carried.

Mr. MILNE HOME seconded the motion. He said there was no discrepancy between Colonel Innes and himself in regard to the matter. This proposal was with the view of securing not merely to primary schools, but to other schools, those liberal grants given in cases in which certain sciences were taught. There were at present 119 schools which were drawing grants from the Kensington Department for chemistry, botany, and other branches; but it appeared that the chemistry that was taught was not in relation to agriculture, but manufactures, and what the teachers wished was to have it extended to agriculture. They were prepared to give it their hearty support provided that agricultural chemistry be adopted by the Science and Art Departments. He wrote last week making inquiry into the subject, and the reply was that the grants were limited to other subjects than agriculture; but he had no doubt that as the object of that department was to educate the working classes of the country, they would be able to extend the grants to agriculture as well as to other subjects. At the same time, he did not confine his desire to the extension of grants to the primary schools. He had no reliance on the middle schools; and he believed that if the grants from Kensington were, extended they would apply to all schools.

Professor BALFOUR said he thought that in regard to the

elementary schools they did not want the practical application of science to agriculture. What they wanted in the elementary schools was to teach the elements of the sciences. There were no means of thoroughly testing the knowledge of the pupils in the elementary schools. In regard to the Kensington department, the answers were sent to London, and the matter was decided there. But surely we in Scotland were able to carry on the work ourselves. Let them give a good practical education in the middle schools, and they might depend on it that the elementary education would follow in the primary schools. He was sure that as the higher education was being carried on well, the other departments would be well attended to without the Science and Art Department requiring to come in.

Mr. MILNE HOME said he had no doubt that the examination could be carried on as well here as in London—perhaps better—but it was a fact that ought to be kept in view that 42 schools last year received £1,700.

The motion was then agreed to.

The SECRETARY reported that an exhibition of steam cultivators was to be held under the auspices of the Society, in the vicinity of Edinburgh, early in the autumn of 1874. The exhibition would not be competitive, but each exhibitor would have the opportunity of showing the full working power of his apparatus.

The Hon. WALDEGRAVE-LESLIE then moved: "That this meeting is of opinion that, considering the scarcity of labour, the uncertain state of the labour market, the high price of horses and of horse fodder, the Highland and Agricultural Society should in every way encourage all attempts to introduce an improved system of steam cultivation at remunerative prices, and that the directors be requested to assist the cause of steam cultivation by every means in their power."

Professor WILSON seconded the motion, which was adopted, and the proceedings then terminated.

THE ROYAL COUNTIES (HANTS AND BERKS) AGRICULTURAL SOCIETY.

MEETING AT READING.

The management of this Society still continues to be of a curiously primitive character, as one comes to question whether the stewards and other officers can ever have seen any show but their own. For some hours the two sets of cattle judges were working away, so far as the public was concerned, utterly in the dark. Class after class came in and went out again with nothing more known than that the judges had entered some mysterious marks in their note-books. No colours were given out, no winning numbers were announced, and thus the whole effect of the thing was destroyed. Through the courtesy of a judge we could occasionally get a glimpse of what was going on, but more commonly one had to wait about the stalls until in due course the prize placards were put up. Anything so crude or so thoroughly unsatisfactory we have not witnessed for many a long day; and unless the committee can arrange for public judging on a better system, it might perhaps be as well to get through this work with closed doors, as under the circumstances the admission charge of half-a-crown is taken under something very like false pretences, the visitor getting more for his money on the shilling days.

Remarkably enough, moreover, in the horse-ring the colours were handed to the winners as the awards were arrived at; and here of course the very pertinent question arises as to why the stewards of stock did not act in concert with the stewards of horses? It is very possible that some people took quite as much interest in the Jersey cows as others did in the cart-mares, although here unquestionably was the strongest feature of the show. The class ran up to between twenty and thirty, and with very little exception the class might have been generally commended. The majority of the mares, backed often

enough by some capital foals, were really adapted for agricultural purposes, and not over-weighted animals from the drays or the Shires. Smart, active, and comely, they looked like doing the work of the farm, and as they spread over the roomy ring, it was evident the judges had something to do. They, however, settled down to a well-grown handsome grey, who showed better out than in, and came from close by at Whitley Grove. In fact, like Mr. Hutchison's second and third prizes again, many of the best mares were handy home, as from the sample they must have a good sort hereabouts, the class being one, alike for numbers and merits, which would have done credit to any society. Amongst the cart stallions Messrs. Stanford's Duke now beat the second-prize horse put above him at Bristol, as he should then have done, but, as we wrote of it, "the judges would not have the Clydes or Suffolks," notwithstanding that the Duke has now furnished into a very taking horse. He was further "proved" here by two or three of his stock also placed on the prize-list, and the show of cart horses pretty generally was good enough at Reading to make a prize worth having; a particularly clever chesnut from Twyford winning in the two-year-old stallion class, where the entries occasionally expanded into voluminous histories. The "nags" were about as bad as the draught horses were good; though Mr. Pain won in the hunter class with a powerful grey, who only wanted a horseman on his back to do better; whilst the best hack, smart enough to stand alongside of, could not walk, trot, nor canter, but went shuffling about with his head up in a manner or with "manners" quite at variance with all notions of a good hack; and no question but, at all points as a really nice riding horse, Mr. Alfred Howland's better bred black should have been put first.

It is seldom that so many plain common-looking beasts have been got together under the denomination of highly-bred Shorthorns as were exhibited at Reading. A majority, indeed, of the prize takers were the mere culls from Bristol, with Lady Pigot, the Yorkshire and the Cornish enemies of the West now well out of the way. Protector, however, was again the best bull, though with absolutely nothing to beat; and the useful Prince Rupert won in another class of no consequence, the second best, with only half a pedigree attached to his nomination, having fairly broken down behind. In the cow class the highly commended of Clifton, Euphemia, was first, and another useful heifer from one of the brothers Stratton also won in the next class; but amongst the yearlings, Brilliant Flower was put out by a gandy-coloured, drooping animal never noticed at Bristol; and far away the most promising heifer of the lot, straight and stylish, was Her Majesty's Cawlina, which got no nearer than third. The best heifer-calf was the best at Bristol, where as we said there was scarcely anything of "much account;" and Shorthorn winners outright from the Western meeting which won again at Reading did so under very similar circumstances, that is, in bad company.

Her Majesty supplied the Hereford show in three entries which took three prizes; and the Royal farms were first and second for Devon bulls, and Mr. Senior first for cows and first for heifers, with a pair, however good, still so terribly overfed that the judges might have exercised their discretionary power as to such beasts being in place at a breeding show. "The judges took for their best cow an animal of size and weight, but not of the nice character of the second best from Crawley; as even the other cow from Mr. Duke's herd, the highly commended from Slinfold, or the brothers Stanford's entry were more comely and suggestive of the milk-pail." It was thus that we ventured to speak of the well-filled Sussex cow class at Bristol; and in the Sussex cow class at Reading Messrs. Stanford's cow was placed first, and Mr. Duke's first at Bristol *nowhere* in a class of four! as it did not require a Sussex judge to pronounce against her steery head and general coarseness, the one now preferred being a far sweeter *cow*.

But for cows, as cows, that is as producers of milk and butter, the public now turn to "the Alderneys," as they were once called, or "the Channel Islanders," as they are now written, of which, so far as the Jerseys went, there was a capital entry at Reading, set off by scarcely a Guernsey. And here Mr. Tait must either pride himself on his inconsequential impartiality, or plead his minority; for amongst the cows Mr. Digby's Miss Edith, the best of all at Bristol, was now never noticed! the highly commended. Tal of the other day being now placed above her, and Mr. Gilby winning outright with his famous old Milkmaid—such a cow still at over seven years old! despite her broken horn. But this class of Jersey cows would rank well with the cart mares, there being a deal of good about, beyond the mere winners, from Mr. Simpson at Wray, Mr. Fuller of Dorking, Mr. Bonham Carter, Mr. Drewitt, and Mr. Wingfield Digby. There was another almost equally excellent entry of heifers, wherein the Hargrave Fan was not to be found, though Mr. Simpson was again second, while the winner turned up in Adburst Flower, a neat, pretty heifer, although the decision in her favour was not altogether fancied by "the fancy." Mr. Drewitt's best old bull is very handsome, as he has taken the attention of the judges before now; while a nice two-year-old from the same herd was well beaten for first by Queen's Favourite, rather a favourite of ours, as a handsome, lengthy, high-bred bull, only lacking a little more "devil" in his expression. Your Jersey

bull should let you know by his very look that he is a very resolute gentleman.

There was naturally a great show of Hampshire Downs, the judges speaking to the more general classes of ewes and of lambs in lots as particularly useful; while the Cotswold entry also ran up to some length of fairly good sheep from most of the prize flocks now about; but Lord Chesham had the Shropshires all to himself, as had Messrs. Wallis and Druce the Oxfords, where the Witney awards were "revised;" as was the old class of Southdown rams; Mr. Gorringe now beating the Prince's sheep, which was pronounced to be the better of the two last season. His Royal Highness, however, was first for shearlings with a ram commendable for size, but showing little Southdown character, being bad about his head, wrong in his shoulders, and wrong in his wool, and either of the Heasman's sheep should have been preferred. The one put second was commended at Bristol; but as true a type of a Southdown as anything in the show was another smaller and unnoticed shearer from Angmering, for size does not or *should* not make a Southdown. Still Mr. Gorringe's pretty bloodlike pen of ewes did win, although the other judges seemed to be going for something bigger, until, no doubt, discomfited by Mr. Rigden's eloquent ratiocination.

Berkshire pigs were, as of course they should be, quite in the ascendant in Berkshire, with the Duckerings doing by far the best amongst the other breeds, where the small blacks and small whites joined direct issue after a somewhat perplexing fashion, white having rather the call over Lord Portsmouth's pretty pigs, the decision against his lordship's young boar being not so self-evident to any beyond those in authority.

The "palatial" stand of the Messrs. Sutton was faced by the "palatial" stand of the Messrs. Carter—very emporiums of seeds and roots, set off and framed and baized like choice picture or cabinet curiosities; while the exhibitors of machinery in motion included Wallis and Stevens, Basingstoke; Humphries, Pershore; The Reading Iron Works Co.; Vosper and Clark, Portsmouth; Wilder, Reading; Nalder and Nalder, Wantage; Marshall, Sons, and Co., Gainsborough; Gibbons, Wantage; Tasker and Sons, Andover; and Cottrell and Co., Hungerford. The other exhibitors of implements and machinery were Bradford and Co., High Holborn, London; Heelas, Sons, and Co., Reading; Busse and Co., 8, South-street, Finsbury, London; Belcher, Gee, and Co., Gloucester; Wood, Worship-street, London; Smith, Basingstoke; Stacey and Lace, Newbury; Smith, Kettering; Benjamin and Gold, New Windsor; Gower and Son, Winchfield; Thomas and Taylor, Stockport and Salford; Apted, Guildford; Ashby, Jeffery, and Luke, Stamford; Spong and Co., Charing Cross, London; Parker, Woodstock; Milford, Cullompton; Sears and Co., Fenchurch-street, London; Maurice de Leon and Co., Oxford-street, London; King, Reading; Brown and Co., Charlotte-street, Blackfriars, Fox, Reading; Baker, Newbury; Samuelson and Co., Banbury; The Farmers' Supply Association; The Johnston Harvester Co., New York; H. Duffield, Regent's Park, London; Picksley, Sims, and Co., Leigh; Waide, Leeds; Hetherington and Parker, Alton; Vincent, Arborfield, Reading; Crump, Tewkesbury; Down and Co., Woburn; Ohlendorff and Co., Fenchurch-street, London; Osmond, Hungerford; Forbes, Albany-street, Regent's Park; Nicholson and Son; Northampton; Hancock, Dudley; Hollings Brothers, Swindon; Heard, Euston-road, London; Burney and Co., Millwall Docks, London; Kiddle, Donhead St. Mary; Jones, Gloucester; Martin, Reading; Bailey Brothers, Cursitor-street, Lon-

don; The Thorough Washing Machine Company, Burnley; Williams and Sons, Reading; Beaumont and Co., Reading; Davis and Co., Newington Butts, London; Jacques, Dublin and London; Player, Reading; Cook, Reading; Wheeler and Wilson, Regent-street, London; Muggleton, Croydon, Surrey; Ball, Henley-on-Thames; Ford and Co., Bristol-road, Gloucester; Reynolds and Co., Southwark-street, London; Saunders, Streatham, Reading; Lee, Gloucester; Williams and Co., Bermondsey, London; Iles, Regent's Park, London; Mrs. S. Ackerman, King's-road, Reading; Goss, Plymouth; Beach and Co., Dudley; Howard, Chesham, Bucks; Lyon, Finsbury-square, London; Margrett, Reading; Davies, Regent-street, London; Moore and Co., Upper Marylebone-street, London; Unite, Paddington; McDougall Brothers, Mark-lane, London; Day and Sons, Crewe, Cheshire; Chambers, Piclico; Wilson, Reading; Stiles, Peckham, London; Markall, Whitechapel-road, London; Hollis and Son, Witney; Elliman, Sons, and Co., Slough; Wright, Portsmouth; Swain, jun., Reading; Lawrence and Co., Notting Hill, London; Davis, Kingsland, London; Edwards and Suter, Swindon; Van Praag and Co., Soho, London; Soper, Reading; Day, Son, and Hewitt, Baker-street, London; Kerr, Dublin; Tipper, Birmingham; Sellar, Reading; Van Stan, St. Martin's-lane, W.C.; Hilton, Altrincham; Bell and Co., Oxford-street; Carter and Co., High Holborn, London; Sutton and Sons, Reading; Lewis and Co., Shrewsbury; Salmon, jun., Reading; Nike, Plymouth; Kearsley, Ripon; Voice, Horley, Surrey; Isabel C. Bates, Stoke Newington, London; Simpson and Co., Chiswell-street, London; Phillips, Smith, and Co., Wandsworth-road, London; Edgington, London Bridge, Southwark; Sadler, Sonning, Reading; Cranston and Luck, Birmingham; Brigham and Co., Berwick-on-Tweed; Talbot, Reading; Messer, Reading; Baker, Compton, Newbury; Watson, Audover; Bertlett, Wimborne; Head-Wrightson, and Co., Stockton-on-Tees; Pearce, Reading; Dennis and Co., Chelmsford; Bonilton and Co., Norwich; Rendle, Victoria-street, London; Tuck, Bath; Milford, Kenn, Exeter.

PRIZE LIST. SHEEP.

JUDGES.—H. Bone, Bisterne, Ringwood; R. J. Newton, Campsfield Farm, Woodstock; J. Rigden, Hove, Brighton.

HAMPSHIRE OR WEST COUNTRY DOWNS.

Shearling ram.—First prize, A. Morrison, Fonthill, Tisbury; second, R. Coles, Middleton, Warminster; third, J. Rigg, Wrotham Hill Park, Sevenoaks.

Ram of any age.—W. King, New Hayward, Hungerford; second, W. F. Bennett, Chilmark, near Salisbury, Wilts; third, A. Chapman Saunders, Watercombe, Dorchester. Commended: W. Lunn, Woodling Farm, Whitechurch, Hants.

Five shearling rams.—First prize, W. Parsons, Monk Sherborne, Basingstoke; second, T. C. Saunders; third, J. Walter, M.P., Bearwood, Wokingham.

Five shearling ewes, which have never been separated from the flock till one month before the day of exhibition, the ewes to be clean shorn.—First and second prize, W. Newton, Crommarsh, Battle, Wallingford; third, J. Barton, Hackwood Farm, Basingstoke. Highly commended: T. Moore, Viable's Farm, Basingstoke.

Ram lamb, bred by the exhibitor.—First prize, J. Rigg; second, A. Morrison. Highly commended: A. Twitchin, New Barn Farm, Whitechurch, and W. Parsons. Commended: W. F. Bennett.

Five ram lambs, bred by exhibitor.—First prize, J. Rigg; second, A. Morrison; third, W. Newton. Commended: W. F. Bennett and G. Edney, The Manor, Whitechurch, Hants.

Five ewe lambs, bred by the exhibitor.—First prize, W. Newton; second, H. Clift, Swallick Farm, Basingstoke; third, G. Edney. Highly commended: J. A. and T. Palmer, Clid-desden, Basingstoke. Commended: A. Twitchin.

Five ewes of any age, having bred a lamb this season.—J. A. and T. Palm; second, G. W. Homer, Athelhampton Hall, Dorchester.

SOUTH DOWNS.

Shearling ram.—First prize, the Prince of Wales, K.G., Sandringham, King's Lynn; second, J. E. and A. Heasman, Angmering, Arundel; third, H. Penfold, Selsey, Chichester.

Ram of any age.—First prize, H. Gorringe, Kingston-by-Sea, Shoreham; second, the Prince of Wales; third, H. H. Penfold.

Five shearling ewes.—First prize, H. Gorringe; second, G. Smith, Paddockhurst, Crawley, Sussex. Highly commended: The Prince of Wales.

OXFORDSHIRE DOWNS.

Shearling ram.—First prize, G. Wallis, Old Shiford, Bampton, Farringdon; second, A. F. M. Druce, Twelve Acre, Eynsham, Oxon.

Ram of any age.—First prize, A. F. M. Druce; second, G. Wallis.

Five shearling ewes.—First prize, A. F. M. Druce. Highly commended: Lieut.-Col. Lindsay, V.C., M.P., Lockinge Park, Wantage. Commended: G. Wallis.

SHROPSHIRE DOWNS.

Shearling ram.—First and second prize, Lord Chesham, Latimer, Bucks.

Five shearling ewes.—Prize, Lord Chesham.

LONG WOOLLED SHEEP.

Shearling ram.—First and third prize, Cirencester College; second, J. Gillett, Tangley, Chipping Norton.

Ram of any age.—First prize, J. Wheeler and Sons, Long Compton, Shipston-on-Stour; second, H. E. Raynbird, Old Basing, Hants; third, Cirencester College.

Five shearling ewes.—First and second prize, T. and S. G. Gillett.

Five ewes having bred a lamb this season.—First and second prizes, T. and S. G. Gillett; third, H. E. Raynbird.

CROSS-BRED SHEEP.

Five ram lambs, bred by the exhibitor.—First prize, Mrs. Clift, Sherborne, St. John, Basingstoke; second, R. Deacon, Bury Farm, Basingstoke. Reserved: W. Turvill, West Worldham, Alton.

Five ewe lambs.—First prize, Mrs. Clift; second, H. E. Raynbird.

HORSES.

FOR AGRICULTURAL PURPOSES.

JUDGES.—W. C. Spooner, Eling House, Southampton; W. Sharp, Shottesbrook, Maidehead; T. Rush, Chalk Farm, Babraham, Cambridge.

Cart stallion foaled before the year 1872.—First prize, E. and A. Stanford, Eatons, Steyning, Sussex; second, S. Davis, Woolashill, Pershore; third, W. Stanford, Fasilton Park, Reading.

Cart stallion foaled in 1872.—First prize, E. Headington, Scarlett's Farm, Twyford, Berks; second, J. Butler, Sherfield Court, Basingstoke; third, G. Twitchin, Worting Wood Farm, Basingstoke. Highly commended: J. Walter, M.P., Bearwood, Wokingham; J. Lawes, Sindlesham Mills, Wokingham; and E. and A. Stanford, Eatons, Steyning, Sussex.

Mare and foal.—First prize, R. Attenborough, Whitley Grove, Reading; second and third, N. G. Hutchinson, Crookham Manor Farm, Newbury. Highly commended: Lieut.-Col. Loyd Lindsay, V.C., M.P.

Gelding foaled in 1871.—First prize, T. Simonds, Carter's Hill, Boorfield, Reading; second, T. Thorn, 39, Victoria-street, Reading; third, G. Barton, Easing Mill, Old Basing, Hants.

Gelding or filly foaled in 1872.—First prize, W. Fisher, Chieveley, Newbury; second, W. Stanford, Steyning, Sussex; third, E. and A. Stanford. Highly commended: Lieut.-Col. Loyd Lindsay, V.C., M.P.

Cart colt foaled in 1873.—First prize, W. Stanford; second, S. Davis, Woolashill, Pershore.

Mare for breeding purposes.—First prize, C. J. Broadway, Pangbourne, Reading; second, W. L. W. Chute, the Vyne, Basingstoke. Highly commended: Sir P. Hunter, Bart., Mortimer Hill, Reading.

Cart gelding.—First prize, W. L. W. Chute; second, R. Attenborough. Commended: H. Hall, Alton, Hants.

HUNTERS, HACKS, AND PONIES.

JUDGES.—The Earl of Portsmouth, Hurstbourne-priors, Whit-Church, Hants; Sir P. Hunter, Bart., Mortimer-hill, Reading, Berks; W. W. B. Beach, M.P., Oakley-hall, Basingstoke, Hants.

HUNTERS.

Mare or gelding of any age, jumping to be a point of merit.—First prize, T. Pain, Lower Pertwood, Hindon, Wilts; second, Capt. J. May, Basingstoke.

HACKS.

Mare or gelding, not exceeding 15 hands high, and calculated to carry 12 stone.—First prize, T. Simonds; second, A. R. Howland, Ludesdon, Thame, Oxon.

PONIES.

Mare or gelding not exceeding 14 hands high.—First prize, C. Y. Brown, Mildenhall, Marlborough; second, the Rev. A. G. Barker, Sherfield Rectory, Basingstoke.

Mare or gelding not exceeding 13 hands.—First prize, F. P. Bailey, Brown Candover, Alresford; second, J. R. Bridle, 62, Charlotte-street, Landport.

CATTLE.

JUDGES.—SHORTHORNS, HEREFORDS, DEVONS, and SUSSEX: J. Thompson, Badminon, Chippenham; E. Bowley, Siddington House, Cirencester; G. Garne, Churchill Heath, Chipping Norton.

SHORTHORNS.

Bull.—First prize, R. Stratton, The Duffryn, Newport, Monmouth; second, Lieut.-Col. Loyd Lindsay, V.C., M.P.; 3rd, J. A. Mumford, Brill House, Thame, Oxon.

Bull above two and under three years of age on the 22nd of June.—First prize, J. Walter, M.P.; second, R. Penson, Foxcote, Chipping Norton Junction; 3rd, R. B. Blyth, Woolhampton, Reading.

Bull above one year and not exceeding two years of age on the 22nd of June.—First prize, Lieut.-Col. Loyd Lindsay, V.C., M.P.; second, W. Nicholson, Basing Park, Alton; third, R. Penson.

Bull-calf above six and not exceeding twelve months of age on the 22nd of June.—First prize, Lieut.-Col. Loyd Lindsay, V.C., M.P.; second, T. Simonds; third, G. Young, Ashley Farm, Brading, Isle of Wight.

Cow in calf, or, if in milk, having had a calf within six months next preceding the 22nd of June, 1874.—First prize and highly commended, J. Stratton, Alton Priors, Marlborough; second, R. Stratton; third, R. B. Blyth. Commended: Her Majesty the Queen.

Heifer in milk or in calf under three years old on the 22nd of June, 1874.—First prize, R. Stratton; second, J. A. Mumford; third, T. B. St. John Ackers, Prinknash Park, Painswick, Stroud.

Heifer above one year and not exceeding two years of age on the 22nd of June, 1874.—First prize, W. Nicholson; second, R. Stratton; third, Her Majesty the Queen.

Cow-calf above six months and not exceeding twelve months of age on the 22nd of June, 1874.—First prize, R. Stratton; second, Lieut.-Col. Loyd Lindsay, V.C., M.P.; third, T. Kingsley, Boars' Croft, Tring, Herts.

HEREFORDS.

Bull of any age.—First and second prize, her Majesty the Queen.

Hereford Cow in calf, or if in milk, having had a calf within six months next preceding the 22nd of June, 1874.—First prize, her Majesty the Queen.

DEVONS.

Bull of any age.—First and second prize, her Majesty the Queen.

Cow in calf, or if in milk, having had a calf within six months next preceding the 22nd of June, 1874.—First prize, T. Lee, senior, Broughton House, Aylesbury; second, J. Turvil, Hartley Park Farm, Alton.

Heifer under three years of age on the 22nd of June, 1874.—First prize, her Majesty the Queen; second, T. Lee, senior.

SUSSEX.

Bull of any age.—First prize, J. Turvil, Hartley Park Farm, Alton.

Cow in calf, or if in milk, having had a calf within six months of the 22nd of June.—First prize, E. and A. Stanford, Eatons, Steyning, Sussex. Highly commended: J. Turvil.

CHANNEL ISLANDS AND AYRSHIRE.

JUDGES.—H. Tait, the Prince Consort's Shaw Farm, Windsor; Mr. Middleton, Cuttleslow, Oxford; and E. Curtis, Dummer Basingstoke.

CHANNEL ISLANDS.

Jersey or Alderney bull of any age.—First prize, H. Drewitt, Milvill, Titchfield, Hants; second, T. B. Carter. Highly commended: J. Bonham-Carter, Lower Adhurst, Petersfield.

Jersey and Alderney bull, under two years of age on the 22nd of June, 1874.—First prize, G. Simpson, Wray Park, Reigate; second, H. Drewett, Titchfield. Commended and highly commended, C. B. Dixon, the Vinery, Shirley Warren, Southampton.

Jersey or Alderney cow in calf, or if in milk, having had a calf within six months of the 22nd of June, 1874.—First and second prize, W. Gilbey, Hargrave Park, Stanstead. Highly commended: J. Bonham-Carter.

Guernsey cow in calf, or if in milk, having had a calf within six months of the 22nd of June, 1874.—C. B. Dixon, the Vinery, Shirley Warren, Southampton.

Jersey or Alderney heifer, not exceeding two-and-half years old on the 22nd of June, 1874.—First prize, J. Bonham-Carter; second, G. Simpson, Wray Park, Reigate. Highly commended: Rev. A. G. Barker, Sherfield Rectory, Basingstoke.

Guernsey heifer, not exceeding two-and-a-half years old on the 22nd of June, 1874.—Prize, W. E. Fitt, Kerrfield House, Winchester.

AYRSHIRE.

Bull of any age.—Prize, A. J. Scott, Rotherfield Park, Alton.

Ayrshire cow in calf, or if in milk having had a calf within six months of the 22nd of June, 1874.—Prize, A. J. Scott, Rotherfield Park, Alton.

PIGS.

JUDGES.—A. F. M. Druce, Twelveacre, Eynsham; J. White, Broadaak, Winchfield; J. Smith, Henley-in-Arden.

BERKSHIRE.

Boar over twelve months of age on the 22nd of June, 1874.—First prize, R. Swannick, Cirencester College; second, H. Humphrey, Kingstone Farm, Strivenham.

Boar under twelve months of age on the 22nd of June, 1874.—First prize, A. C. Baily, Swindon; second, A. Stewart, Saint Bridge Farm, Gloucester.

Breeding sow of any age.—First prize, R. Swannick; second, H. Humphrey.

Pair of sows under nine months old on the 22nd of June, 1874.—First prize, A. Stewart; second, R. Swannick.

LARGE BREED, NOT BEING BERKSHIRE.

Boar of any age.—Prize, R. E. Duckering, Northorpe, Kirton Lindsay.

Breeding sow of any age.—Prize, J. Wheeler and Sons, Long Compton, Shipston-on-Stour.

SMALL BREED, NOT BEING BERKSHIRE.

Boar under twelve months of age on the 22nd of June 1874.—First prize, R. E. Duckering and Sons; second, W. Dunn, Elcot, Hungerford.

Boar under twelve months of age on the 22nd of June, 1874.—First prize, J. Dove, Hambrook-house, Hambrook, Bristol; second, Earl of Portsmouth. Highly commended: Earl of Portsmouth.

Breeding sow of any age.—First prize, R. E. Duckering and Sons; second, Earl of Portsmouth.

Pair of sows under nine months old on the 22nd of June, 1874.—First prize, Earl of Portsmouth; second, J. Wheeler and Sons.

MOWING MACHINES.

Manufacturer's class.—First prize, W. A. Wood, Worship-street, London; second, Samnelson and Co., Banbury.

Farmer's class.—First prize, R. Attenborough, Whitley Grove, Reading; second, J. Fall, Home Farm, Savernake.

At the dinner the chairman, Colonel LOYD LINDSAY, M.P., said it was a matter of congratulation when those in high position had the wisdom and the good feeling to direct the fashion in such a manner as to prove advantageous to the community among whom they lived. Some of the boldest and most liberal buyers of improved breeds of cattle were to be found among men whose chief time and attention were devoted to commercial affairs, and some of them who most liberally maintained the name of England at the great sale in America were men who were neither great owners nor occupiers of land. These men had doubtless had their attention turned to the pleasures and benefits to be derived from farming by the example which had been set them in the highest circles. In maintaining and sustaining the interest which was taken in high farming and in improving the condition as well as the breed of animals, they are also much indebted to such shows as that in which they had been taking part that day, and that

held a fortnight since at Bristol, and which was eminently successful. On these occasions men who had been spending hundreds of pounds on their stock deemed themselves well rewarded by receiving a small prize or even by being honourably mentioned or commended by the judges of the show. It had been frequently asserted by high authority inside the House of Commons, and by the highest authority outside the House of Commons, and never gainsaid that he was aware of, that England produced more corn and more meat, acre for acre, than any other country in the world; that she had in her fields more cattle and more sheep, and that those cattle and those sheep were bigger and heavier, and that they reached that size much more quickly than they did elsewhere. All this had been effected by the energy and industry of the farmers, and by the judicious admixture of economy and liberality in the conduct of their business, aided, also, by the free expenditure of money by the more wealthy classes in preserving a pure-bred of cattle and by replenishing it at almost any price from the best and purest strains of blood to be found in the world. It was perfectly true that farmers' profits were made by close and watchful economy, and without it there could be no good farming, and it might seem difficult to establish at first sight, that giving £1,000 for a cow or a bull was consistent with economy. In that respect English farmers were enormously liberal in their expenditure when compared with farmers on the Continent, and they had their reward by having in their fields cattle and sheep with such an aptitude to get flesh on their bones that six months' grass would do more to bring them into a condition for the butcher than twice or three times that amount of food would do when bestowed on a more skinny and bony style of animal. Such had been the effect of economy combined with liberality in the management of their farms; but if they were economical in their fields, they altogether failed to carry economy into their kitchens. They placed the finest joints before their cooks, and the result was not so good as was produced in France with a few odds and ends which many in their country would reject altogether. Take the evidence of their family butcher and they would find him state that his losses often arose from not being able to dispose of those odds and ends and scraps which not only poor people but the rich made such good

out of in France. This uneconomical cookery was not confined to the houses of the rich. It was much worse in the cottages of the poor. As a rule, where the means were, smallest the waste was greatest. This amounted to a national calamity, which once recognized ought, in these practical days, to be taken in hand and, if possible, diminished or cured.

Mr. R. BENYON, M.P., said he could not but think it was to be regretted that there had not been more frequent intercourse between employer and employed, and that the farmers had not availed themselves of the opportunity of the pay-night to calmly and quietly talk over matters with those who worked under them, and endeavour to explain to them things in their proper light. If this had been the rule, the labourers would never have listened to the gross fallacies and the impudent assertions which had been made throughout the land by babbling demagogues whose interests were not the interests of either the agricultural labourers or the farmers, but whose sole aim was to gain money as if by a trade. He would venture to refer to one matter, which was that it would be very desirable for them to encourage and support benefit societies among the labourers. He meant societies certified to be based on safe tables; not societies the legality of whose rules was certified by the Registrar of Friendly Societies, but societies based on the best statistics relating to human life that could be obtained and approved by the best actuaries in the land. These societies would give the labourers an independence of character and a self-reliance, and cause them to feel independent in the time of sickness and in old age, and at the point of death to be undisturbed by any thought of the horrors of the workhouse. He would have branches of the society all over the country, so that the labourers would be enabled to transfer their contributions from one branch to another, and so go on as before; and he would have one grand national society composed of a conglomeration of local branches. If labourers were to join these clubs it would remove them from the "wet" clubs, which were far from being to their advantage. If such a society as he had hinted at were established, he believed it would be greatly to the benefit of the labourers everywhere and to the welfare of the country.

THE ESSEX AGRICULTURAL SOCIETY.

MEETING AT STRATFORD.

It is recorded how when some second-class dandy wished to give a dinner-party he requested Brummell to name and invite the guests; but on going over these they could not agree as to the exact number, the Beau counting up to nine only, while the other reached to ten. At length, however, the host solved the difficulty by pointing out that Brummell had omitted to include in the company the giver of the feast. "My good fellow," was the Beau's answer, "you don't mean to say that *you* are going to dine with us!"

Now it seems to us that the almost hopeless muddle—for muddle it still is—into which the Essex Society has drifted might be amended in something the same way. Let them by throwing open the whole show, and so getting quit of that terrible Book of Numbers, provide the material for an entertainment in which they will not presume to take much share themselves. And in point of fact it has already nearly come to this. There are now but few show Shorthorn herds in the county, for Mr. Pigott has given over and Mr. Christie has been selling out; all the best premiums for horses went out of the county, as they mostly did also for sheep and pigs; the competition for the more local breeds or from the more local breeders, being pretty generally on the plan of a very limited company. In truth, with just an exception or so, the exhibition of the most famous breed of stock was supplied from without; Oxford Prize, paraded as a blind-fold savage, now receiving no notice whatever in the champion class, where one of the judges held to Dony-

land Duke, a yearling of good quality, but with little more in his favour. However, the Duke was eventually placed third or highly commended in the class, about the best performance the Essex stock did during the day; the winner turning up once more in Telemachus, who is wearing well and promising well again for the Royal meeting. Lord Exeter's bull must, indeed, be one of rare constitution, as he suffered terribly from foot-and-mouth disease in the summer of 1872, when he was on his side for some weeks, and shed all his hoofs. He won, of course, easily enough in the bull class, the judges dwelling for some time over the Essex yearling and The Earl of Warwickshire in their choice for second, as the Earl has lost his coat, and in other respects is a less "likely" animal than ever. Telemachus, nevertheless, was beaten for the challenge cup by Mr. Kennard's yearling heifer, to which we have previously spoken as almost perfect; singularly straight and true in her frame, with a good honest touch and plenty of breeding about her, Queen Mary rather lacks elegance in the "turn" of her neck, which threatens to grow too coarse for fine cow character. Still she beat not merely the champion bull Telemachus, but the rival beauties Vivandiere and Victoria Victrix, who here ran out their tie so far, and the crack yearling Lord Godolphin, showing very light and none the better for his recent travels about the country. As we intimated at Bristol, Lady Pigot's younger animals have not gone on well since last season, and Rapid Rhone and the Wythams made no great mark at Stratford; the

more slightly heifer Baroness Couyens now beating Rose of Wytham, as she should have done at Bristol, and also Blooming Bride. Amongst the family parties Telemachus and Sea Gull had nothing to beat but the blindfold Oxford Prize and Acacia, without it were Mr. Hope's Cherries; but then Mr. Hope will not feed up his milking cows for show, and thus, of course, his entries scarcely attracted a glance from such a judge of beef as Mr. Clifton Robinson.

There was a very short show of "Essex Shorthorns without pedigrees"—thorough Essex this—and in the general class of dairy cows old Milkmaid was the best of all, beating red Polls from Norfolk and Shorthorns from Essex, and a lot of quite beautiful little Brittanias. Milkmaid was, of course, first again in the Jersey cow class, with a very nice cow shown by Mr. Tower, beating the Wray Queens and Beauties for second; while Fan first, and Pretty Lass second, was again the return over the heifers, amongst which Lord Braybrooke showed a very clever one not in price. It was altogether a very good entry of Jerseys, with Essex doing better here, even beyond Mr. Gilby; and Mr. Simpson in defiance of some previous readings taking first and second with Crocus and Favourite in a large and good class of bulls of all ages, the entry running up to close upon twenty.

"A good show of riding horses for Essex" is simply tantamount to a very bad one. If the show of nags was bad the management was worse, or rather there was no management at all; but this is easily accounted for, as what is everybody's business is nobody's, and there was a very regiment of mounted officials continually getting in each other's and everybody's way. Then the "ring" was too circular, and surrounded by a chain, of all the dangerous things in the world; there was no telegraph board, while the prize cards were not nailed up for hours after the verdicts were given. The poor show of nags we think is in a measure due to the folly of only giving one prize in many of the classes, and the still greater folly of allowing the same horse to be entered in several other classes. For instance, there was nothing to prevent Masinissa, the Numidian Conqueror, from carrying off three prizes out of four had the judges believed in the old saying of "an ounce of blood is worth a pound of bone." As it was he was sent back to Hasketon loaded with spoil, as Mars, the God of War, was more vulnerable than Achilles, and though as handsome as paint, and by Marsyas, out of Necklace, the golden bay stood no more chance with the brown in the ring than the poor crippled Knight Templar, by Knight of Kars, half-brother to Stockwell, King Tom, and Rataplan! But such is the lottery of breeding, that while the vital spark lingers in the poor cripple it is possible, though not probable, that it may fall in fruitful soil, and bring forth a fiery steed who may cause a consternation. Such was the case with Marsyas, the sire of Mars, who, shrunken with age and gone in the back, was all but put out of sight when we were last at Cobham; but still to him it was decreed to get George Frederick, and not his grand companions, two as handsome looking horses as eyes ever gazed on—the all but faultless Macaroni and the twelve thousand five hundred guinea Blair Athol. Masinissa has thickened, and as he is liked by the Essexites we look forward to seeing some Sophonisbas and Jemmy Thomsons in the ring, as he always reminds us of the poet's line in his tragedy on the loves of Masinissa and Sophonisba.

O, Sophonisba! Sophonisba, O!
and the wag in the gallery who sung out

O, Jemmy Thomson! Jemmy Thomson, O!
The well-known Fireaway the 2nd was considered the best of a few useful roadsters, including Mr. Branwhite's

Defiance, which beat him last year, Mr. J. Grout's The Squire, and Mr. Gedden's Great Gun. For the weight-carrying hunters it was any odds on the Banker, as Mr. Hayward's Paramour, a winner of several prizes, and one other were his only opponents. For hunting mares or geldings five years old, peculiar to Essex, there were only two entries for the £10 and £5, and the prizes withheld for want of merit. This is what the management might have expected, as five-year-old hunters represent so much money now, and it is not likely that owners will risk their horses catching cold, and go to the expense of sending them away from home with servants for half a week or more on the chance of winning such prizes. In a very poor class of light-weight hunting mares and geldings Gentility, of fair hunting form and action, beat King John, not much to look at, and not at all like his sire King John, a horse from whom the late Mr. Blenkinsop expected great things. Such is breeding. The four-year-old hunting mare Duchess is a brown of good form, which, after being ridden by Mr. Booth, appeared in the ring with foal at foot as the best hunting brood mare. Ladylike, a clever hack, with rather tutored action, in a class of fifteen beat five or six worthy of notice—viz., Mr. Frisby's Fibert, Mr. Smith's chesnut mare by Knight Templar, Mr. Grout's Kitty, and Mr. Gray's brown gelding. The natty little harness horse Eclipse, from Buckingham-gate, noted in the ring for his very elegant moving only played second to Sensation, a short-legged capital-going zig mare; and again a fine showy and useful pair of browns from Mr. Gilbey beat him, as Eclipse's companion in harness was not considered his match, but an odd one. Then, with Princess Polo, a nice goer, Mr. Frisby was again out of luck, being put behind Sir Thomas White's nicely-made cob. Among the ponies was a very little dun, a perfect blood-horse in miniature and an extraordinary goer, as we think, called Sir Tommy, but we could not catch his number.

The agricultural horses made a better display, as the Suffolks mustered in strong numbers; but they were out of luck, and in many instances were beaten by anything but imposing animals, with the main exception of Mr. Purser's grand mare Honest Lass and Mr. Statter's Champion, many round the ring saying they never saw Champion show better; but we fear they did not take into consideration that he was not in tip-top society, and that his always superiors Honest Tom and Le Bou were well out of the way. With reminiscences of Sir Walter Scott and Young Lofty, we look for something grand, with power, a cheerful countenance, and an elastic step in a Clydesdale, which Mr. Sturgeon's horse has not, as he is but a sour-headed plain animal, with "plenty of hair" on his legs. Ashantee, again, is a good-limbed, useful horse; but we could find in our own neighbourhood many a gelding of much grander proportions in contractors' carts. Mr. C. Frost's four-year-old by Cupbearer, and the Ipswich Cup winner, is a well-made Suffolk, barring being tied in at the knees; while Major Garrett's old horse had left several very promising ones on the ground, but a two-year-old with bone and action, out of a mare by Barthropp's Hero, will do more for the fame of Cupbearer than the Claimant.

There were some nice two-year-olds, but the chesnuts had to succumb to a Grand Prince, not of their breed. In a good class of cart mares, four years old and upwards, the chesnuts were again routed by the Bedford Honest Lass, the first two-year-old at Cardiff, the class including Mr. Lester's Royal Duchess, Mr. Bott's old mare, and Mr. Brierly's famous grey Sensation, which has much fallen off in form and action, but still a grand mare, as she always will be, for even her skeleton would be a prize to any lover of the horse. Then there were Mr. Wolton's Diamond and Princess, Mr. Green's Smart, Mr.

Lambert's bay by Honest Tom, and Mr. Tomlinson's Smiler from Derby. There were a couple of good two-year-old fillies, the winner being by Cupbearer. A handsome mare headed the class under four years old, and a good-looking Clydesdale the mares with foals, backed by Mr. Coulson's upstanding Violet and Mr. Green's Blossom; while a neat active little cart-mare of Mr. Courage's—a breed getting scarcer every day—had a foal by the thoroughbred Knight Templar. There were a couple of good geldings, several capital pairs, and one very showy team of four.

It will be thus seen that the four-year-old filly Honest Lass, by Honest Tom, was without the slightest question—for everybody had so settled it before Mr. Purser's filly entered the ring—declared to be the best of all; as she also eventually was at Ipswich the other day, although two Suffolk fanciers had just previously contrived to put her out of her class, as not being the sort of animal fit for Suffolk. It is, however, going a long way to assume that had Honest Lass been a chesnut instead of a bay she would not have been considered just the sort for Suffolk. An old saying declares that a good horse cannot be of a bad colour, but this would the rather now appear to run, at least down Eastwards, that a good horse can only be of one colour. And what is this colour test worth even in a Suffolk? Next to nothing. There was a grey exhibited at Stratford, out of a grey mare, which when put to a chesnut stallion will or has thrown chesnut stock which have been duly exhibited as pure Suffolks? Of course Honest Lass now beat the smart filly put above her at Ipswich, and the joke of the day was Messrs. Barthropp's and Badham's award, to be known hereafter as "the Judgment of Solomons." But this is not the first time that Honest Lass has had to encounter such Solomons, as after winning at a Royal meeting, she was bodily turned out of the ring at Leicester, in company with a class duly recorded as possessing *no merit!*

Mr. Colman's Southdowns to our thinking never showed so well; there was more breed and style about them, and apparently less desire to manufacture a Southdown by feeding and crossing for size. The winning shearling was a smart neat sheep, and two or three really pretty ewes might have been picked out of the prize pen. With His Royal Highness the Prince of Wales, Mr. Goringe, and others here in competition, we may look to something like a battle Royal amongst the Norfolk flocks at Bedford. There were one or two exhibitors of Suffolk blackfaces, and one exhibitor of Oxfords or Shropshires, but in a better entry of longwools, Leicesters, Lincolns, or Cots wolds, the county had little or no concern.

Mr. Griggs in the county has still some capital hardy Berkshires. Yet the chief winner of pig premiums was from without, Mr. Roys being everywhere prominent, as in one class he substituted a small black sow bred by Lord Portsmouth for one entered as bred by Mr. Sexton, although some of the other firsts were direct from Wherstead. The Wheelers and Duckerings were also occasionally successful, but with one premium only in a class they had more commonly to be content with commendations.

If the Committee had intended the luncheon to be a failure they could not have contrived this more effectually than by putting the price of "the cold colation" at five shillings a head; the more especially as some of us who had rashly paid so much found subsequently to our sorrow that a slice of beef or the wing of a chicken might have been had in another place at just half the money. As it was the public would not give the fee even to look at a live Lord Mayor, and the large tent was very sparsely furnished with guests. However, those who did take tickets had plenty of elbow room and came and went just

when they pleased, paying the least possible heed to a gentleman who appeared to be proposing toasts and making speeches. It will, indeed, be noticed, that we have had still to dwell on the mismanagement of this Society, as some of our contemporaries are at length getting weary of the difficulties which they have to encounter in undertaking such an affair. *The Agricultural Gazette* becomes thus confounded: "In spite of unnecessary perplexities, caused by having county classes and classes open to the whole kingdom, and allowing the Essex cattle to compete in both, so that one animal might be (and sometimes was), if not 'like Cerberus, three gentlemen at once,' certainly representing three entries at once—*i.e.*, one in the county class, one in the general class, and one in the class for a group of animals (bull, cow, and offspring, or best three yearlings)—in spite of this bewilderment, and that caused by putting all the classes in line, putting an open class, for example, like the meat in a sandwich, between two home-bred ones, still the exhibition was very interesting—*i.e.*, when one had got over the puzzle of finding prize-cards more freely distributed among the more ordinary looking than among the choicer specimens." Again, even such an optimist as the agricultural authority of *The Field* declares how "the first thing which struck a visitor to the Shorthorn classes at Stratford was the extraordinary character of the awards. One passed animal after animal of the highest character, and hardly a riband among them. Then, in the same line, in the same sheds, were to be seen blue and red rosettes affixed to bulls and heifers; pretty cattle enough, but of far lower pretensions than the unnoticed ones. No explanatory notices on the numbers cleared up the difficulty; and the catalogue when referred to, was as hard to understand as a chess problem." Further, the county papers show that the entries in the chief classes are falling off, and protest against the system occasionally adopted of offering only one prize in a class. In truth, unless some very radical reform be effected in the constitution of the Society and the committee, it would be idle to expect that the Essex show can recover from the "muddle" into which it has sunk.

Amongst the exhibitors of implements were—Arthur Carey, of Rochford, with steam tackle and traction waggons; Ransomes, Sims, & Head, Orwell Works, Ipswich; Wedlake, of Horchurch, Romford; Davey, Paxman, and Davey, Colchester; Edmington and Co., Chelmsford; Woods, Cocksedge, and Co., Stowmarket; Catchpool, Stannard, and Stanford, Colchester; Pertwee, Old Hall, Boreham, Chelmsford; Barnard and Lake, Rayne, Braintree; Pash, Chelmsford; The Maldon Iron Works Company; Coleman and Morton, Chelmsford; Hunt and Tawell, Earls Colne; Dennis and Co., Mansion House-buildings and Chelmsford; King, seedsman, Coggeshall; Edgington, London Bridge; Day, Son, and Hewitt, London; Christy, Chelmsford; Willsher and Co., Braintree and London; Meesou, Rettendon-place, Chelmsford; Cottis and Sons, Epping; Cullingford, Stratford; Thurgood, Harlow; Emerson, Billericay; Gilders, Colchester; Wilson and Whitworth, Stratford; Mabbett and Piuik, Romford and Barking; Mein, Stratford.

PRIZE LIST.

JUDGES.—CART HORSES: J. Wady, Barton Hall, Darlington; J. H. Plowright, Manea, Isle of Ely; J. K. Cooper, Barron, Bury St. Edmund's. RIDING HORSES: Lord Combermere; Y. K. Graham, Edgbaston, Birmingham; J. B. Booth, Killyerby, Catterick; H. Thruvall, Royston. SHORTHORNS: The Rev. Canon Beever, Pencerig, Ross; J. Robinson, Clifton, Olney, Bucks; F. Talfant, Easebourne, Midhurst. CHANNEL ISLANDS CATTLE: Col. Wilson, Stowlaughtoft Hall, Bury St. Edmund's; H. Middleton, Cuttslow, Oxford. SHEEP AND PIGS: T. Horley, The Fosse, Leamington; J. Hempson, Erwarton Hall, Ipswich.

HORSES

FOR AGRICULTURAL PURPOSES.

Stallions.—First prize, C. Sturgeon, South Ockendon Hall, (Clydesdale); second, W. Thompson, jun., Rose Cottage, Thorpe, Colchester (Ashantee). Reserved: R. Cross, St. Oyth (Young Emperor).

Stallions, three years old and upwards (open to the United Kingdom).—First, C. Frost, Werstead (Cupbearer 2nd); second, W. Thompson, jun., Rose Cottage, Thorpe (Ashantee). Reserved and highly commended: W. Byford, The Court, Glemsford, Suffolk (The Statesman).

Stallion (open to the United Kingdom).—Prize, T. Statter, Stand Hall, Whitefield, Manchester (Champion). Highly commended and reserved: H. D. Dove (Matchless).

Entire two-year-old colt.—First prize, F. Mead, Barking, E. (Royal Oak); second, H. D. Dove, Langham Hall (Young Major). Highly commended and reserved: W. G. Walford, Walton-on-the-Naze.

Entire two-year-old colt (open to the United Kingdom).—First prize, G. E. Daintree, Fenton, Huntingdon (Grand Prince); second, F. Mead, Barking, E. (Royal Oak). Highly commended and reserved: Major R. Garrett, Carlton Hall, Saxmundham.

Cart mare, four years old and upwards.—First prize, D. A. Green, Donyland-place (Smart); second, D. A. Green (Brisk). Reserved: N. Allen, Great Horkesley (Smart).

Cart mare, four years old and upwards (open to the United Kingdom).—Prize, and Special Prize, H. Purser, Willington Manor, Beds (Honest Lass). Highly commended: C. Lister, Coleby Lodge, Lincoln (Royal Duchess). Commended: D. A. Green, Donyland-place (Smart); H. Lambert, Abington Park, Cambridge; A. Tomlinson, Stenson House, Derby (Smiler).

Two-year-old filly.—First prize, D. A. Green, Donyland-place, Suffolk; second, T. Wagstaff, Stifford Clays, Romford (Violet).

Yearling filly.—Prize, J. Ward, East Mersea, Suffolk.

Cart mare, under four years old (open to the United Kingdom).—Prize, W. Cross, Frating (Kathleen).

Mare and foal.—First prize, D. Robertson, Avey Hall (Jess); second, A. Coulson, Fingringhoe (Violet). Reserved: D. A. Green, Donyland-place (Blossom).

Mare and foal (open to the United Kingdom).—Prize, H. Wolton, Newbourn Hall (Pride). Reserved: D. Robertson, Avey Hall (Jess).

Foal.—First prize, D. Robertson, Avey Hall; second, D. A. Green, Donyland-place. Reserved: T. Docwra, Foxburrows, Colchester.

Gelding.—Prize, H. Trigg, Bury Lodge, Stansted.

Gelding (open to the United Kingdom).—Prize, H. Trigg, Bury Lodge.

Pair of plough horses, either sex (open to the United Kingdom).—First prize, H. Wolton, Newbourn Hall (Pride); second, D. A. Green, Donyland-place (Brisk). Reserved: D. Robertson, Avey Hall (Darling).

Pair of van horses, either sex, to be shown in harness in van with pole (open to the United Kingdom).—First prize, D. A. Green, Donyland-place (Smart); second, Savill Brothers, Stratford Brewery. Reserved: D. A. Green (Brisk).

Best cart mare or filly in any of the classes.—Prize, H. Purser, Willington Manor, Beds (Honest Lass). Highly commended: C. Lister, Coleby Lodge, Lincoln (Royal Duchess).

Team of four horses (open to the United Kingdom).—Prize, D. A. Green (Smart).

RIDING HORSES.

Thoroughbred stallion (open to the United Kingdom).—First prize, and Challenge Cup, Colonel Barlow, Hasketon (Masanissa); second, H. I. A. King, Great Bardfield (Knight Templar).

Hack stallion not thoroughbred, calculated to get roadsters and hackneys (open to the United Kingdom).—Prize, B. Mitchell, Crowe Hall, Denver (Fire Away the 2nd). Reserved and highly commended: W. Giddens, Walpole St. Peter's, Wisbech (Great Gun). Highly commended: F. Branwhite, Long Melford (Defiance).

Hack stallion, thoroughbred or otherwise, calculated to get roadsters or hackneys (open to the United Kingdom).—Prize W. Giddens (Great Gun). Reserved and highly commended: F. Branwhite (Defiance).

Weight-carrying hunter—Stratford Town Prize—Open.—£25, Wm. Armstrong, Fairfield, Kendal (Banker).

Hunting mare or gelding.—Prizes withheld

Light-weight mare or gelding, five years old and upwards, that has been regularly hunted during the past season in Essex.—First prize, W. Gilbey, Hargrave Park (Gentility); second, C. Page Wood, Scrips, Kelvedon (King John). Reserved: C. Page Wood (Ruby).

Light-weight hunter, which has been regularly hunted with any pack of hounds during the past season (open to the United Kingdom).—Prize, W. Gilbey, Hargrave Park (Maud). Reserved: C. Page Wood (King John).

Four-year-old hunter (open to the United Kingdom).—Prize, R. Emson, Great Warley (Duchess). Reserved: C. C. Hayward, Southill, Beds.

Hackney mare or gelding, not to exceed 15 hands 2 inches (open to the United Kingdom).—Prize, W. Gilbey, Hargrave Park (Ladylike). Reserved: T. Banyard, Poplar Hall, Horningsea (Pruces).

Hackney mare or gelding, five years old and upwards, not to exceed 15 hands 1 inch.—First prize, W. Gilbey, Hargrave Park (Ladylike); second, J. Smith, Pattiswick Hall.

Four-year-old hackney (open to the United Kingdom).—Prize, R. Emson, Halsted.

Three-year-old hackney.—Prize, W. G. Small, Bradwell-on-Sea (Stella). Reserved: R. W. Rayner, Galleywood, Chelmsford (Sunflower).

Two-year-old colt or filly.—W. Laws, Great Clacton Lodge (Young Defender). Reserved: W. and E. Heavers, Ingatstone.

Hackney mare or gelding, not under 14 hands 2 inches, to be shown in single harness (open to the United Kingdom).—First prize, T. Statter, Stand Hall, Whitefield; second, H. Frisby, James-street, Buckingham-gate (Eclipse). Reserved: Miss Scratton, Gosfield (Templar).

Cob, over 13 and not exceeding 14 hands (open to the United Kingdom).—Prize, Sir T. White, Great West Hatch, Chigwell.

Pony, under 13 hands, (open to the United Kingdom).—First prize, E. Faux, Heybridge Hall; second, W. N. Saberton, Ely (The Shah). Reserved: J. F. Hutley, Braxted Hall.

Pony (open to the United Kingdom).—First prize, W. D. Collins, Chesnut-tree House (Sir Tommy); second, E. Faux, Heybridge Hall. Reserved: W. N. Saberton, Wilburton, Ely (Cardinal).

CATTLE.

SHORTHORNS.

Bull.—First prize, J. Hutley, Porter's Hall, Stebbing (King Lear 2nd); second, D. A. Green, Donyland-place (Heydon Duke 2nd). Reserved: C. Sturgeon, South Ockendon Hall (Duke of Berkeley).

Two years old bull.—First prize, R. H. Crabb, Baddow-place, Baddow (Duke of Geneva); second, C. Hall, Tolleshunt Knights.

Yearling bull.—First prize, D. A. Green (Donyland Duke) second, Lord Braybrooke, Audley End (Christmas Duke 2nd). Reserved: R. H. Crabb (Claro's Rose 2nd).

Yearling bull, bred by exhibitor (open to the United Kingdom).—Prize, J. Outhwaite, Bainesse, Catterick (Lord Godolphin). Highly commended: D. A. Green (Donyland Duke). The class commended.

Bull, not exceeding twelve months.—Prize, A. T. Puckridge, Grange Hill, Chigwell (Blair Athol).

Bull of any age (open to the United Kingdom).—First prize, Marquis of Exeter, Burghley Park (Telemachus); second, W. Wilson, Broadway, Worcestershire (Earl of Warwickshire 3rd). Highly commended: D. A. Green (Donyland Duke).

Cow.—First prize, R. H. Crabb (Surprise); second, J. R. Chaplin, Ridgewell (Vernalia).

Cow or heifer, not under three years old (open to the United Kingdom).—Prize, J. Outhwaite (Vivandière). Highly commended and reserved: Lady Pigot, Branches Park, Newmarket (Victoria Victrix). Highly commended: J. Stratton, Alton Priors, Marlborough (Euphemia). The class commended.

Two years old heifer.—First and second prizes, J. Christy, Boynton Hall (Geneva Rose and Lady Liverpool).

Two years old heifer (open to the United Kingdom).—Prize, J. Outhwaite (Baroness Conyers). Highly commended: R. Dudding, Pantton-house, Wragby (Blooming Bride). Highly commended and reserved: Lady Pigot (Rose of Wytham).

Yearling heifer.—First prize, R. H. Crabb (Memento 2nd); second, A. P. Clear, Maldon (Geneva). Commended and reserved: D. A. Green (White Peach Blossom 2nd).

Yearling heifer (open to the United Kingdom).—Prize, Rev. R. B. Kennard, Marulhull, Blandford (Queen Mary). Highly commended: J. How, Broughton, Huntingdon (Lady Butterfly); Lady Pigot (Princess of Wytham); A. P. Clear (Geneva).

Heifer, not exceeding twelve months.—First prize, J. R. Chaplin, Ridgewell (Ridgewell Rose); second, A. F. Luckridge (Lady Chigwell).

Bull and cow, with calf their offspring (open to the United Kingdom).—Prize, Marquis of Exeter (Telemachus, &c.) Reserved: N. Catchpole, Bramford (Oxford Prize, &c.)

Yearling bull and pair of yearling heifers (open to the United Kingdom).—Prize, Lady Pigot (Rapid Rhone, Princess of Wytham, and Rose Lincoln). Reserved: J. Outhwaite (Lord Godolphin, Lady Lawson, and Matchless).

Best pure-bred Shorthorn in any of the classes.—Champion cup, Rev. R. B. Kennard (Queen Mary).

SHORTHORNS WITHOUT PEDIGREES.

Cow, three years old and upwards.—First prize, T. Mashiter, Romford (Landlady); second, D. Christy Patching Hall. Reserved: T. Mashiter (Ladybird).

Heifer, under three years old.—First and second prizes, J. O. Parker, Woodham Mortimer Place. Reserved: D. Christy.

Cow or heifer (open to the United Kingdom).—First prize, D. Dainty, Belmistorpe, Stamford (Economy); second, J. O. Parker. Reserved: J. J. Colman, M.P., Norwich (Lady Marton).

DAIRY CATTLE.

Cow or heifer.—First prize, T. Mashiter (Duchess); second, R. Laxton, Epping (Brittany cow); third, Sir T. F. Buxton, Warlies, Waltham Abbey (Brittany cow).

Cow or heifer (open to the United Kingdom).—First prize, W. Gilbey, Hargrave Park (Milkmaid); second, J. B. Burt, Kettering (Hilzhland Princess). Reserved and highly commended: W. Gilbey (Medora).

CHANNEL ISLANDS BREEDS.

(Open to the United Kingdom.)

Bull, exceeding one year old.—First prize, G. Simpson, Wray Park, Reigate (Prince Crocus); second, G. Simpson, (Queen's Favourite). Reserved and commended: S. Hanbury, Wickham-place, Wickham (Sir William). Highly commended: W. Gilbey, Hargrave Park (Ducal). The class highly commended.

Cow, exceeding three years old.—First prize, W. Gilbey (Milkmaid); second, C. J. H. Tower, Weald Hall (Victoria). Reserved and highly commended: W. Gilbey (Medora). Highly commended: W. Gilbey (Tal). Commended: G. D. Digby, Wingfield, Sherborne Castle, Dorset (Miss Edith). Commended: W. J. Beadel, Springfield Lyons (Bloom); G. Simpson (Beauty). The class commended.

Heifer, not exceeding three years old.—First prize, W. Gilbey (Fan); second, G. Simpson (Pretty Lass). Reserved and highly commended: Lord Braybrooke, Audley End (Flame). Commended: W. Gilbey (Daystar).

Best animal in the Channel Island classes.—W. Gilbey, (Milkmaid); S. Hanbury (Sir William), recommended to be divided, if not the former.

SHEEP.

(Open to the United Kingdom). Southdown ram, of any age.—First prize, H. Gorringe, Kingston-by-Sea; second, J. J. Colman, M.P., Norwich. Highly commended and reserved: Prince of Wales, K.G., Sandringham. Highly commended: H. Gorringe. Commended: Prince of Wales.

Shearling Southdown ram.—First prize, J. J. Colman; second, Prince of Wales. Commended and reserved: Lord Braybrooke.

Shearling short-wool ram.—G. Cooke, Horseheath Park, Shropshire.

Five shearling Southdown ewes.—First prize, J. J. Colman; second, H. Gorringe.

Five shearling short-wool ewes.—First prize, H. Trigg, Bury Lodge, Stansted; second, J. Smith, Thorpe Hall, Hasketon, Suffolk.

Shearling Cotswold ram.—First prize, Wheeler and Sons, Loug Compton; second, H. E. Rainbird, Basingstoke.

Shearling Lincoln or Leicester ram.—First prize, T. Gunnell, Milton, Lincoln; second, C. Hales, Manor House

Bissugbourne, Lincoln. Commended and reserved: T. Banyard, Poplar Hall, Horningsea, Lincoln.

Shearling Oxfordshire or Shropshire ram.—First and second prizes, G. Cook.

Shearling long-wool ram.—Prize, C. Hales.

Five shearling Oxford or Shropshire ewes.—Prize, G. Cooke.

Five shearling long-wool ewes.—Prize, T. Gunnell. Commended: F. Ellis, Chesterton.

Five shearling Kent ewes.—Prize, J. S. S. Godwin, West Peckham.

Five ewes with their lambs.—First prize, G. Jonas, Icleton; second, F. M. Jonas, Chrishall Grange.

Three fat shearling Southdown wethers.—First prize, F. M. Jonas; second, G. Jonas.

Three fat shearling short-wool wethers.—G. Cooke and H. Trigg, prize to be equally divided.

Three fat shearling cross-bred or long-wool wethers: First prize, T. F. Buxton, Easneye, Ware; second, H. Lambert, Abingdon Park, Cambridge. Commended: T. F. Buxton.

PIGS.

Boar, large breed (open to the United Kingdom). Prize C. R. N. Beswicke-Royds. Commended: J. Dove.

Sow in pig, large breed.—Prize, C. R. N. Beswicke-Royds. Highly commended: Wheeler and Sons. Commended: J. Dove.

Three sow pigs, large breed.—Prize, C. R. N. Beswicke-Royds. Commended: J. Dove.

Boar (Berkshire).—Prize, A. C. Baily. Commended: Wheeler and Sons.

Sow in pig (Berkshire).—Prize, G. Griggs. Reserved: Wheeler and Sons.

Three sow pigs (Berkshire).—Prize, A. C. Bailey.

Boar, small black.—Prize, C. R. N. Beswicke-Royds. Commended: A. Harvey.

Sow in pig, small black.—Prize, Wheeler and Sons. Highly commended and reserved: C. R. N. Beswicke-Royds.

Three sow pigs, small black.—Prize, C. R. N. Beswicke-Royds.

Boar, small white.—Prize, C. R. N. Beswicke-Royds. Commended: Lord Rendlesham, M.P., and R. E. Duckering. Reserved: J. Dove.

Sow in pig, small white.—Prize, R. E. Duckering. Highly commended and reserved: J. Dove. Commended: Lord Rendlesham.

Three sow pigs, small white.—Prize, Lord Rendlesham. Commended and reserved: C. R. N. Beswicke-Royds.

Sows and pigs, large breed: Prize, C. R. N. Beswicke-Royds.

Sows and pigs, small breed.—Prize, C. R. N. Beswicke-Royds. Reserved and commended: Wheeler and Sons.

THE GUERNSEYS AT BRISTOL.—Mr. Rendle writes in justice to himself and other breeders from Guernsey who exhibited at Bristol, giving the name of the man who coloured his cow's udder and ears, as stated in our report; but as the culprit was severely reprimanded by "the sharp-sighted and clever judges," as Mr. Rendle terms them, we in mercy withhold his name until he has been found to offend again.

THE AGRICULTURAL EXHIBITION AT BREMEN.—The *Irish Farmers' Gazette* avails itself of our report without one word of acknowledgment. This omission is the more noticeable, as we believe that *The Mark Lane Express* was the only agricultural journal which gave a special report. We are quite willing to admit that a very able article has been terribly mangled by our contemporary.

DIED — MR. JOHN BEASLEY.—On Saturday, July 4, at Brampton in his 73rd year. For many years past Mr. Beasley has been the agent to the late and present Earl Spencer and Lord Overstone, and during his residence in this country he has won the esteem of all who knew him. He took an active part in everything pertaining agricultural matters.

DONCASTER AGRICULTURAL SOCIETY.

MEETING AT DONCASTER.

At this, the third show, the entries of horses and Short-horns were found to be especially good, while of sheep and pigs there was also a very creditable display. The Shorthorns included many famous animals already seen out this summer at Bristol and elsewhere, including as these did Leeman, now first beating Duke of Aosta; Sir Arthur Ingram, Lord Godolphin, who of course "placed himself;" Rapid Rhone, and the rival beauties, Vivandiere and Victoria Victrix, who may now run out the tye at Bedford. Lady Pigot's younger heifers were, however, quite put out, and Mr. Dudding, Mr. Foljambe, Mr. Sharp, Mr. A. H. Browne, Mr. Statter, and Mr. Mann materially strengthened the entry, as the prize-list will tell, this being so far, no doubt, the strongest Shorthorn show of the season. The entries in the classes for Alderneys were chiefly by local exhibitors. Of sheep there was not a large entry; the Leicesters numbered twenty-three, the Lincolns twenty-seven, and the Shortwools eleven; the awards over the Leicesters furnishing a good advertisement for Mr. Borton's coming sale. In the class of gimmers were a smart pen from Mr. Turner, of Armthorpe, but they properly belonged to the Lincolns. Among the exhibitors in the Lincoln classes appeared the well-known names of Wright, Dudding, Pears, and Byron; and there were also some gimmers and ewes from Mr. Roe's, of North Scarle. In the Shortwool classes the only two exhibitors were Mr. Baker, of Atherstone, and Mr. Marris, of Uceby. Two or three entries in the class for Longwool shearing widders were from local breeders, Mr. Alcock, of Wadworth Grange, and Mr. Barker, of Marr, the other competitor being Mr. Byron, of Sleaford. The pigs were divided into large and small breeds, and the cottagers' class. Of the large seventeen were shown, and of the small breed nineteen. The principal exhibitors were the Earl of Ellesmere, Mr. Beswick-Royds and Mr. Kilham, of Wisbeach. Horses were the most numerous of the live stock on the ground. Of agricultural and draught horses there were 32 entries, in the class for roadsters and ponies 131, of hunters there were 79, and in the jumping class 23. Among the brood mares, some of which were of much merit, Mr. Turner, of Armthorpe, and Mr. Fawcett, of Barmbrough, contended against Messrs. Statter, of Manchester, and Mr. Hutchinson, of Catterick. In the three-year-olds Mr. Bramley, of Auncotts, Mr. Ingham, and Mr. Barker, of Marr, and Mr. Wood, of Hayfields, were each represented; while among the two-year-olds Mr. Oliver, of Barmby Dun, Mr. Vickers, of Brodsworth, and Mr. F. B. Frank, of Campsall Hall, had some good entries. The chief exhibitor among the draught horses was Mr. Brierley, of Middleton, the only local representative being Mr. Barker, of Marr. In the class for pairs of agricultural horses the whole of the entries were by residents in the vicinity, excepting Mr. Tenant, of Selby. The roadsters included a larger class which had come from a distance, and the competition was more keen than in the agricultural section. The three-year-olds were fair, but they were far eclipsed by the classes for any age, consisting of horses fifteen hands two inches and of fifteen hands high respectively. In the former of these classes was Mr. Harvey Bayly's famous hack and hunter, the best horse of his time for the two purposes. The three-year-old coaching geldings were also a superior class; and amongst the exhibitors were Mr. Winder, of Newton, and Mr. Law, of Stancil. There was a good display of ponies, the larger being the more excellent.

Of the hunters, those comprised in Classes 47 and 48—the five-year-old geldings or mares, and the four-year-old geldings or fillies, must be awarded the palm. Scheduled amongst the entries were Mr. T. H. D. Bayly, of Edwinstowe; Mr. Jewison, of Raisthorpe, Malton; Mr. Munday, of Wrawby, Brigg; Mr. Hutchinson, of Catterick; Mr. Horsby, of Grantham, and Mr. A. J. Brown, of North Elmsall, with well-known prize entries attached to their names. Next in merit might be named the four-year-old geldings or fillies equal to carry 13 stones. The brood mares and foals were also a good class; as also the two and three-year-old geldings and fillies, more particularly the latter.

PRIZE LIST.

JUDGES.—CATTLE: J. Knowles, Wetherby; J. Lynn, Stroton, Grantham; R. Kirk, Waltham, Grimsby. SHEEP, PIGS, AND WOOL: T. Cartwright, Dunston Pillar, Lincoln; R. Baker, Gamston, Retford; T. Dodds, Wakefield. HORSES: Hunters—Capt. P. Williams, Baraby Moor, Retford; F. Gordon, Thorne Haugh, Wansford; J. H. Barton, Staypton Park, Pontefract. Hackneys and Ponies—H. Beevors, Blyth, Workop; W. H. Gaunt, Thornville. Agricultural horses—E. Godfrey, Thealby, Brigg; G. Robson, Shires House, Easingwold; T. Plowright, jun., Pinchbeck, Spalding.

Boar, large breed, not exceeding twelve months old.—First prize, £2, Earl of Ellesmere; second, £1, C. R. N. Beswick-Royds. Highly commended: J. Garbutt, jun., South Cave, Brough.

Sow, large breed, not exceeding twelve months old.—First prize, £2, C. R. N. Beswick-Royds; 2nd, £1, J. Garbutt, jun.

THE NATIONAL FARMERS' UNION AT LEAMINGTON.—The paragraph which has been put into circulation as to the establishment of this "Union" has since been contradicted on some of the more material points.

THE SUFFOLK AGRICULTURAL ASSOCIATION.

MEETING AT IPSWICH.

The entries did not come up to the strength of the two previous years; and the younger classes of Suffolks stallions are numerically weak. Cupbearer 2nd, the champion, won also at Woodbridge; then, as now, the best Suffolk. Mr. R. Garrett's *The Claimant*, second last week in Norfolk, was now again placed first, as at Woodbridge. The judges had no little difficulty occasionally in coming to a decision, having, as it will be seen, to "refer" a case or two. The mares are, as a whole, not so good a lot as are the fillies and the foals. One deemed worthy of an extra prize for superior merit as an animal for general purposes—a shire hay—won Lord Henniker's special prize as the best cart mare. This is Mr. Purser's famous *Honest Lass*, first at Norwich. The riding and coaching horse classes are not so well filled as they have been of late at the Suffolk shows. Colonel Barlow's *Massanissa* and *Citadel* were first and second; while Mr. Grout shows the only coach and roadster stallions, and wins with *Vanguard*, *Quicksilver*, and *Harkaway*. The hunters are but a small show. A Bedfordshire mare stands first in the five-year-old class; Colonel Barlow's *Cornishman*, first at Norwich, first in the four-year-olds, and winning the special prize as best hunter. The hackneys and riding horses are only a moderate show. Of cattle, the Suffolk and Norfolk Red Polled are a much smaller show than that at Norwich. The Norfolk award in the cow class was sustained, the judges thinking Mr. B. Brown's *Countess* too heavily fattened to be a sure breeding animal, and giving first place to Mr. Loft's *Minnie 3rd*. The Shorthorn entries were very short in the younger classes; but beyond Mr. Catchpole's bull there are among the cows and heifers some animals which have previously held good places. The Channel Islands cattle are few, and by no means a first-class show, Mr. Gilby not exhibiting. The Suffolk sheep are fairly good, the prizes going to well-known breeders of the sort; while the Marquis of Bristol, Mr. Colman, M.P., and Mr. G. Cooke divide the honours for Southdowns and other shortwools, the Marquis also taking the prize for the best ram in the yard, and Mr. Colman for the best pen of five ewes. The show of pigs is as good, with prizes to Lord Rendlesham, Mr. G. M. Sexton, and Mr. T. Rose, among the local men; and to Messrs. Duckering, Wheeler, and Dove, residing out of the district.

PRIZE LIST.

JUDGES.—HORSES FOR AGRICULTURAL PURPOSES: N. G. Barthropp, Hacheston; W. Thompson, Thorpe, Colchester. RIDING AND COACHING HORSES: G. D. Badham, Bulmer, Sudbury; B. Sparrow, Halsted, Essex. CATTLE: W. Simpson, Attleborough; J. Seago, Stoke Holy Cross, Norwich. SHEEP: W. Harvey, Timworth; M. Biddell, Playford. PIGS: C. Sturgeon, South Ockendon, Essex; E. C. Clayden, Ellough, Beccles.

HORSES

FOR AGRICULTURAL PURPOSES.

Stallion.—First prize, C. Frost, Whersted, Ipswich (Cupbearer 2nd); second, Colonel F. M. Wilson, Stowlangtoft (Heir Apparent). Highly commended: S. Wolton, Butley Abbey Royal Duke 2nd).

Three-year-old entire colt.—First prize, R. Garrett, Carlton Hall, Saxmundham (Claimant); second, W. Byford, The Court, Glemsford (Statesman).

Two-year-old entire colt.—First prize, M. Biddell, Playford (The Templar); second, R. Garrett. Highly commended: Executors of the late S. C. Goodwyn, Covehithe, Wangford (Hero). Commended: R. Capon, Dennington; J. Toller, Blaxall; R. Garrett.

Best Suffolk stallion in classes 1, 2, and 3.—Special prize, C. Frost (Cupbearer).

One year-old entire colt, foaled in 1873.—First prize, Lieut. Colonel F. M. Wilson, Stowlangtoft Hall (Mouarch); second, S. Robinson, Bramford Tye (Stearn's Boxer). Highly commended: C. Frost (Cupbearer 2nd); W. Turner, Waldringfield (Grou's Emperor). Reserve and highly commended: A. Cracknell, Thornham, Eye (Cupbearer); E. Hodgson, Charsfield (Bismarck).

MARES AND FOALS.

Mare with foal at foot.—First prize, H. Wolton, Newbourne Hall (Pride); second, G. A. Goulson, The Hay, Fingringhoe (Violet). Reserve and highly commended: R. Makens, Ringshall.

Foal, foaled in 1874.—First prize, A. Cracknell (Spelman's Ploughboy); second, S. Wolton (Chillesford Duke). Reserve and highly commended: C. Frost (Cupbearer 2nd).

Gast mare.—First prize, D. A. Green, East Donyland, Colchester (Smart); second, H. Wolton (Diamond): Reserve: Lieut.-Colonel F. M. Wilson.

Bay cart mare, special cup awarded by the Judges on the ground that the animal was of superior merit for general purposes, but was not purely an agricultural mare.—Extra prize, H. Purser, Willington Maour, Bedford (Honest Lass).

FILLIES.

Three-year-old filly, foaled in 1871.—First prize, W. Cross, Ivy Cottage, Frating, Colchester (Kathleen); second, I. Rist, Brantham (Blossom). Reserve and highly commended: J. Toller.

Two-year-old filly, foaled in 1872.—First prize, M. Biddell (Jewel); second, C. Frost. Highly commended: D. A. Green. Commended: I. Rist. Reserve: W. Wilson, Baylham.

Year-old cart filly, foaled in 1873.—First prize, J. Skeet, Rushmere, Ipswich (Wilson's Bismarck); second, H. Purser (Grand Duchess, the Czar).

For the best filly in the above three classes.—Special prize, W. Cross.

For the best team of four cart horses, either mares or geldings, or mixed, of any breed, to be exhibited in harness or not, at the option of the exhibitor.—Special prize, H. Wolton.

Pair of plough horses, mares, or geldings, or mixed.—Special prize, H. Wolton (Captain and Brag).

RIDING AND COACHING HORSES.

Thoroughbred stallion for hunting purposes, having served not less than ten mares in the county.—First prize, Colonel F. Barlow, Hasketon (Massanissa); second, Col. F. Barlow (Citadel).

Stallion for coaching purposes, having served not less than ten mares in the county.—First prize, J. Grout, Woodbridge (Vanguard).

Roadster stallion, having served not less than ten mares in the county.—First prize, J. Grout (Quicksilver); 2nd J. Grout (Young Harkaway).

For best stallion in the above three classes.—Special prize, Lieut.-Col. F. Barlow's (Massanissa).

For best match pair of geldings or mares, for carriage purposes, not less than 14.2 hands.—Special prize, J. Grout, bay mares.

Hunting mare, with foal at foot.—First prize, J. Grout. (Myrtle); second, Rev. A. Bond, Freston Rectory, Ipswich Reserve: H. Wolton, Newbourne Hall.

Hackney mare, with foal at foot.—First prize, H. Wolton (Wood Nymph); second, E. Prior, Bury St. Edmund's. Reserve: J. C. C. Cok, Ashfield-cum-Thorpe.

Hunting foal, bred in the county, or by exhibitor.—Prize, J. R. Wood, Melton Hall, Woodbridge. Reserve: J. Grout.

Roadster foal, bred in the county, or by the exhibitor.—Prize, E. Prior, Bury St. Edmund's. Reserve: H. Wolton.

For the best foal, by either of his riding stallions.—Special prize, H. Wolton.

For the best foal by either of the Hasketon stallions.—Special prize, J. Humphreys, Ipswich.

Weight-carrying hunting mare or gelding, not less than five years old, equal to carry not less than 14 stone.—First prize, C. C. Hayward, Southill, Biggleswade, Bedfordshire (Paramour); second, S. A. Goodwyn, Leiston Hall (The Lancer). Reserve: F. G. Freeman, Henham, Wangford (Perfection).

Four-year-old weight-carrying hunting mare or gelding, equal to carrying not less than 14 stone.—First prize, Lieut.-Col. F. Barlow (Cornishman), also special prize as the best hunter in the yard; second, C. C. Hayward (Richelieu). Reserve: G. M. Sexton, Wherstead Hall, Ipswich (The Baron).

Weight-carrying hunting mare or gelding, three years old, having been bred in the county or by the exhibitor, and equal to carrying not less than 14 stone.—First prize, R. Garrett (mare); second, G. M. Sexton (gelding). Reserve: Lieut.-Col. Barlow (gelding).

Weight-carrying hunting mare or gelding, two years old, having been bred in the county or by the exhibitor, and equal to carrying not less than 14 stone.—First prize, W. P. T. Phillips, The Grange, Melton (Fencing Lass); second, Lieut. Col. F. Barlow (Courage). Commended: R. Garret (gelding).

Light-weight hunting mare or gelding.—Special prize, Lieut.-Col. F. Barlow, Hasketon. Reserve and commended: W. Harvey, Timworth.

RIDERS AND HACKNEYS.

Riding mare or gelding, not under 15 hands high.—First prize, R. Garrett (roan riding mare). Reserve: J. Grout (Gay Lad).

Hackney mare or gelding, not under 14 hands high and not exceeding 15 hands.—First prize, J. Grout, (Kitty).

Three-year-old hackney mare or gelding, bred in the county or by the exhibitor.—Prize, J. Toller, Blaxhall. Reserve: Rev. A. Bond, Preston Rectory, Ipswich.

Two-year-old hackney mare or gelding, bred in the county or by the exhibitor.—First prize, G. Bond, The Rookery, Cretingham. Reserve and commended: J. Smith, Hasketon.

The best hackney mare or gelding, of not less than 14 hands high, nor more than 15.2 hands high, to be exhibited in single harness.—Special prize, J. Grout, Woodbridge (Alice). Reserve: J. A. Ransome, Ipswich.

For the best weight-carrying cob, mare, or gelding, carrying (while being judged) at least 15 stones, saddle and bridle included, and not less than 13.3 hands nor more than 14.3 hands high.—Special Prize, R. C. Cooke, Livermore. Reserve and commended: M. Page, Hollisley. Commended: J. Grout, Woodbridge (Alice).

PONIES.

Pony, not under 13 hands high, and not exceeding 14 hands. Prize, R. C. Cooke.

For the pony showing the finest action in single or double harness.—Special prize, J. A. Ransome (Rory O'More). Highly commended: R. Capon, Dennington (Bess).

For the best match pair of ponies under 14 hands high.—Special prize, J. A. Ransome (Rory O'More) and (Kate Kearney).

For the best match pair of ponies under 12 hands high.—Special prize, Mrs. Ogilvie, Sizewell House, Leiston (Harlequin) and (Columbine).

For the hunter jumping the best the first day of the show.—Special prize, J. Grout, Woodbridge (Irish Lassie).

For the hunter jumping best: tried over hurdles, a bank and water jump, on the second day of show.—Special prize, cup, Duke of Hamilton, Easton Park.

CATTLE.

Suffolk or Norfolk red polled bull, not under two years old.—First prize, J. J. Colman, M.P., Norwich (Powell); second, H. Birbeck, Stoke Holy Cross, Norwich (Young Duke). Commended: M. Biddell, Playford (Big Playford).

Suffolk or Norfolk red polled bull, under two years old.—First prize, J. J. Colman, M.P., Norwich (Royal Duke); second, R. E. Loft, Troston, Bury St. Edmund's (Honest Tom). Commended: H. Birbeck, Stoke Holy Cross, Norwich (Suffolk).

Suffolk or Norfolk red polled bull calf, not exceeding one year old.—First prize, J. J. Colman (Baron Easton).

Suffolk or Norfolk red polled cow in milk or in calf.—First prize, R. E. Loft, Troston, Bury St. Edmund's (Minne); second, B. Brown, Thursford (Countess).

Under three-years-old Suffolk or Norfolk red polled heifer in milk or in calf.—First prize, B. Brown, Thursford (Nonpareil); second, H. Birbeck, Stoke Holy Cross, Norwich

(Wave). Commended: J. J. Coleman, M.P., Norwich (Rosabelle).

Under two-year-old Suffolk or Norfolk red polled heifer.—First prize, G. Gooderham, Monewden (Coral).

Shorthorn bull, not under two years old.—First prize, N. Catchpole, Bramford (Oxford Prize); second, J. Wortley, Swafeld, Walsingham (Captain Hopeful). Commended: R. H. Crabb, Baddow Place, Chelmsford (Baddow Duke of Geneva).

Shorthorn bull, under two years old.—First prize, D. A. Green, East Donyland, Colechester (Donyland Duke); second, R. H. Crabb (Claro's Rose 2nd). Commended: N. Catchpole (Thiers).

Shorthorn bull-calf, not exceeding one-year-old.—Prize, T. Rose, Melton Magna (Bright Knight). Highly commended: N. Catchpole (The Shah).

Shorthorn cow, in milk or in calf.—First prize, N. Catchpole (Accacia); second, T. Jennings, Phantom House, Newmarket (Bracelet). Commended: N. Catchpole (Queen Anne).

Shorthorn heifer, under three years old, in milk or in calf.—First prize, J. R. Chaplin, Ridgewell, Halstead (Cinnamon); second, N. Catchpole (Romford Rose). Highly commended: N. Catchpole.

Shorthorn heifer, under two years old.—First prize, D. A. Green; second, R. H. Crabb. Highly commended: N. Catchpole; R. H. Crabb; J. R. Chaplin (Lady Pigot).

Bull of any pure breed, not being red polled, Suffolk, or Norfolk, or Shorthorn.—Prize, R. M. Jary, Underwood Hall, Westley (The Shah).

Cow or heifer of the Channel Islands breed, if over two years old, in milk or in calf.—First prize, Lieut.-Colonel F. M. Wilson; second, Marquis of Bristol. Commended: I. Rist.

Best cow or heifer in the yard, bred by a tenant-farmer in the county of Suffolk.—Special prize, N. Catchpole (Romford Rose).

SHEEP.

Suffolk tup, of any age.—Prize, J. M. Green, Stradishall, Newmarket. Highly commended: R. Woodgate, Great Waldingfield, Sudbury.

Shearling Suffolk tup.—First prize, J. M. Green; second, W. S. Garner, Moulton, Newmarket.

Suffolk lamb tup.—Prize, R. Woodgate.

Pen of five Suffolk shearling ewes.—First prize, R. Woodgate; second, W. S. Gardner. Highly commended: R. Garrett.

Short-wooled tup, of any pure breed (not being Suffolk), of any age.—Prize, Marquis of Bristol (Southdown). Highly commended: G. Cooke, Horseheath Park Linton. Commended: J. J. Colman, M.P., Norwich (Southdown); J. Giblin, Bardfield, Braintree.

Shearling short-wooled tup of any pure breed, not being Suffolk, of any age.—First prize, Mr. Cooke; second, J. J. Colman, M.P. (Southdown). Commended: Mr. Cooke; J. Giblin.

Pen of five short-wooled shearling ewes, of any pure breed, not being Suffolk.—First prize, J. J. Colman, M.P. (Southdown); second, Mr. Cooke.

Long-wooled tup of any pure breed, of any age.—Prize, J. Giblin (Cotswold three-shear tup).

Shearling long-wooled tup, of any pure breed.—First prize, J. Wheeler and Sons (Shearling Cotswold ram); second, J. Giblin (shearling Cotswold tup).

Best ram in the yard.—Special prize, the Marquis of Bristol.

Pen of ten ewes of any age or breed, which have had lambs this year.—Prize, A. F. Nicholson, Ipswich (Hampshire Down).

Ten shearling ewes of any breed.—Prize, J. A. Hempson, Erwarton Hall (Southdown).

Ten ewe lambs of any breed.—Prize, J. J. Colman, M.P. (Southdown). Highly commended: A. Ogilvie, Sizewell House, Leiston. Reserve: R. Woodgate.

Best pen of ewes in the yard.—Special prize, J. J. Colman, M.P.

PIGS.

Boar of the black breed, not under one-year-old.—First prize, R. E. Duckering, Northorpe, Kirton Lindsey; second, J. Wheeler and Sons.

Boar of the black breed, under one-year-old.—First prize, G. M. Sexton, Wherstead Hall, Ipswich; second, Lord Rendlesham, M.P.

Sow and pigs of the black breed (the pigs not to exceed ten weeks old).—Prize, G. M. Sexton.

Breeding sow of the black breed.—First prize, J. Wheeler and Sons; second, G. M. Sexton. Reserve: R. E. Duckering.

Pen of three young sows, of the black breed, pigged since November 1st.—First prize, G. M. Sexton; second, T. Rose, Melton Magna, Wymondham.

Boar of the white breed, not under one-year-old.—First prize and special prize, for the best boar in the yard, G. M. Sexton; second, Lord Rendlesham.

Boar of white breed, under one-year-old.—First prize, J. Dove, Hambrook House, near Bristol; second, Lord Rendlesham.

Special prize, G. M. Sexton.

Sow and pigs of the white breed (the pigs not to exceed ten weeks old).—Prize, G. M. Sexton.

Breeding sow of the white breed.—First prize, R. E. Duckering; second, J. Dove.

Pen of three young sows of the white breed, pigged since November 1st.—First prize, Lord Rendlesham, M.P.; second, R. E. Duckering.

The following implement makers had stands on the ground: Ransomes, Sims, and Head, Orwell Works, Ipswich; E. R. and F. Turner, St. Peter's Iron Works, Ipswich; H. Garrett and Sons, Leiston Works, Suffolk; Woods, Cockledge, and Co., Stowmarket; Packard and Co., Ipswich; James, Sons, and Smyth, Peasenhall; J. K. King, Coggeshall, Essex; Rands and Jeckell, Ipswich; F. Beaumont, Ipswich; Bennett and Botwood, Ipswich; Whight and Mann, Gipping Works, Ipswich; C. Taylor, Ipswich; J. T. Scrivener, Ipswich; Scrivener, Gill, and Co., Ipswich and London; G. Busse and Co.; Ohlendorff and Co.; Bell and Co.; G. Gilders; Burgess and Key; R. Boby; Catchpool and Stannard; W. Bear; W. Tinsley; C. Burrell; J. T. Markall; Murton and Turner; Whitmore and Binyon; Page and Gilling.

At the President's dinner Lord WAVENEY returned thanks for the Vice-Presidents, and congratulated the Society on the remarkable success of the show of that day, and expressed his gratification to find that there was an improvement in the manner in which the horses were brought to the ring. He had previously expressed a hope that the horses might be shown so that they could see a little more of the skeleton, and a little less of the skill of the horse keeper. He thought the young animals exhibited that day had shown that there was now a tendency to work out the faults of the horses. He had never seen horses that more inspired him with hopes than the two-year-old class that day.

Mr. BASIL SPARROW, in returning thanks for the judges, said he considered the show of hunters had been very good. One of the horses he had got upon was such a one as he should have liked to put into his own stables, for he was one of the few big horses that could gallop. There were, he could say from his own experience, very few weight-carriers that were worth anything, and he could prove that in the mud of the Essex brooks. He thought there was a prospect of the British farmer being better horsed than he had been, that in future a good horse would not be beyond the means of the Suffolk farmer, and if he did not want them that the landlord would be willing to give a good price for them.

Capt. BARTHOLOPP also responded for the judges, and alluded to a difficulty which had arisen in judging class 7 that day. A bay mare, a very good animal, was exhibited in that class. His friend, Mr. Thompson, and himself did not quite agree as to the merits of this mare and a chestnut mare which received the prize. He (Capt. Barthropp) felt that the other was not the animal to encourage in this county, and a referee was called in. Mr. Badham was called in, and he coincided in his (Capt. Barthropp's) opinion, and the prize went to the chestnut, and the bay mare was considered not the sort of animal for Suffolk. Then the question arose whether this mare was eligible for the special prize for the best cart mare in classes 5 and 7? As he (Capt. Barthropp) understood it the prize was given for the best animal for agricultural purposes, and he certainly thought she ought not to go into the

ring; but it was decided by the stewards by a majority of one, that the bay mare was eligible to compete, she went into the ring, and his friend Thompson and himself were again at issue. They both retired from the contest, and left the matter to two other gentlemen—one of whom had been a judge of cattle, and the other of sheep—who decided that the bay mare should have the prize. The decision might be right, or it might be wrong, only he wished the explanation to be known, because it seemed curious that the mare should have been decided not to have been eligible to compete, and that they should turn about in half-an-hour and give her the best prize in the yard. He would fully admit the merits of the mare for dray purposes, but he did not consider that she was the best for agricultural purposes in Suffolk. The show of agricultural horses had been most successful. There were 12 or 13 animals in the two-year old class, and the fact that the Veterinary Inspector had said that he did not see a single side bone, spoke volumes in favour of the improvement of the Suffolk horses, who were said, by some enemies of the breed, to have had bad feet. He could only say with respect to other breeds that about three weeks ago he was acting as judge at the Royal Cornwall Show, and in the first class of horses there was not a single sound horse; and they all had side bone or very bad sand cracks.

Mr. THOMPSON also responded, and carried the bay mare story a little further. She was a Bedfordshire mare exhibited among the Suffolks. In looking over his judges' book he found that the prize was to be awarded to the best cart mare. As to being fitted for agricultural purposes, he would like to know what agricultural work that mare could not do? He wanted to know why that animal, which could do its work in Lincolnshire or Cambridgeshire, could not do it in Suffolk? He held strongly for that mare for the simple reason that he thought she was one of the best four-year-old mares he ever saw. He would ask Mr. Badham a simple question, whether that mare ought to be disqualified merely for colour or for the hair on her legs? She was said to be a mare for dray purposes, and as he found by the judges' book that the prizes were for cart horses, why should she not have the prize?

Mr. H. BIDDELL said a matter which had been talked of very much was the union of the three counties for the formation of one Society, so as to make one great East of England Show. They would get a very great show perhaps, but he should like to ask what they would get there that they had not had at Ipswich that day? If they wanted a bigger show, they had quite enough for anyone to look at in the two days. If they wanted more money, he would say that they had offered enough money to collect some of the best classes of animals he had ever seen. The Bath and West of England Society having recently enlarged the area of its operations, the County Associations within that area had started up into activity, and had never been more prosperous than now.

THE SHORTHORN HERD BOOK. — Messrs. Lythall and Clarke, the auctioneers of Birmingham, were ready to give Mr. Trafford his price, £5,000, for this work, which, however, as will be seen, has now been taken up by a Company.

THE WATERCOMBE RAMS.—Mr. J. T. Ensor, of Dorchester, brought to the hammer for sale and letting 135 rams, belonging to the flock of Mr. T. Chapman Saunders. The two-tooth rams were first submitted, there being 70 lots of these. They realised in all 312½ gs. and 392 gs. Lot 35, a superior animal, made 36 gs., while lot 46 brought 30 gs., lot 60 33 gs., and lot 64 23 gs. Fifty-two rams (four-tooth) were let at prices varying from 5 gs. to 31 gs., the whole of the lots bringing 187½ gs. and 171½ gs. Of the 6, lot 99, a very superior animal, was let at 27 gs., 22 gs. being given for the letting of lot 80, 31 gs. lot 95, and 21 gs. lot 105. Sixteen six-tooth (mostly) were sold at from 5 gs. to 13½ gs., the whole bringing 47½ gs. and 63½ gs. Twenty others were let at from 5 gs. to 9 gs., the whole making 124 gs. The grand total of the sale and letting was 1,298½ gs., or an average of £10 1s. 11d.

THIRSK AGRICULTURAL SOCIETY.

At this show the entries were 50 in excess of last year, the increase being in the sheep and pig classes, while the horses were up to about the usual standard of this meeting.

PRIZE-LIST.

CATTLE.

SHORTHORNS.

Bull two years old and upwards.—First prize, G. Yates, Studley, Ripon; second, I. Garbutt, Bragg House, Farnedale, Kirbymoorside.

Bull above one year and under two years old.—First prize, Rev. W. Prest, Ampleforth College; second, C. Mc C. Swarbeck, Sowerby.

Bull calf under twelve months old.—First prize, H. Clay, Northallerton; second, J. Coates, Hartshead Moor.

Cow or heifer in-calf or milk, three years old and upwards.—First and second prizes, and cup.—T. H. Hutchinson, Manor House, Catterick.

Cow or heifer under three years old.—First prize, T. H. Hutchinson; second, T. Strickland.

Heifer one year old and under two.—First prize, T. H. Hutchinson; second, T. Strickland.

Heifer calf under twelve months old.—First prize, Major Stapylton, Myton-hall; second, J. T. Robinson, Topcliffe.

CATTLE OF ANY BREED OR CROSS.

Cow for dairy purposes.—First prize, G. K. Harland, Northallerton; second, T. Strickland.

Cow, the property of a cottager.—First prize, T. Barnett, Thormanby; second, G. Yates, Thirsk.

Three dairy cows in calf or milk, the property of a tenant-farmer.—First prize, T. H. Hutchinson, Catterick; second, C. Mc C. Swarbeck, Sowerby; third, H. Pickersgill, Topcliffe.

SHEEP.

LEICESTER OR LONGWOOL.

Ram, one shear.—First prize, T. H. Hutchinson, Catterick; second, W. Coverdale, Helmsley.

Ram, aged.—First prize, W. Coverdale; second, T. H. Hutchinson. Highly commended: C. and W. Dovener, Bedale, and T. H. Hutchinson.

Three gimmer shearlings.—First and second prizes, T. H. Hutchinson. Commended: R. Tarbotton, Cawton, Gilling, and W. K. Pickering, Gilling.

Pen of three ewes having suckled lambs in 1874.—First prize, T. H. Hutchinson; second, W. Coverdale.

(Limited to the District).

Ram, one shear.—First prize, C. and W. Dovener; second, F. Heugh, Northallerton.

Ram, aged.—First prize, R. Tarbotton; second, F. Heugh. Commended: C. and W. Dovener.

Three gimmer shearlings.—First prize, W. K. Pickering, Gilling; second, R. Tarbotton, Cawton.

Three ewes having suckled lambs in 1874.—First prize, W. Hall, Thirsk; second, C. and W. Dovener, Bedale.

Half-bred sheep, limited to the district.—First prize, W. Dale, Topcliffe Park; second, C. Watson, Sowerby.

Three ewes having suckled lambs in 1874.—Prize, J. Greaves, Clothelholme, Ripon.

PIGS.

Boar, large breed.—Prize, W. Lister, Armley.

Boar, small breed.—First prize, G. Sedgwick, York; second, D. Sanderson, Richmond.

Boar of the black or Berkshire breed.—Prize, W. Holmes, York.

Boar of any other breed.—First prize, G. Sedgwick; second, —Graham, Leeds.

Sow of the large breed, in pig or milk.—First prize, —Graham; second, W. Lister.

Sow of the small breed, in pig or milk.—First prize, D. Sanderson, Moulton-hall; second, G. Sedgwick, York.

Sow of the black or Berkshire breed.—Prize, W. Holmes, York.

Sow of any other breed, not qualified to compete in classes 25, 26, and 27.—First prize, W. Lister, Armley, Leeds; second, F. Waller, High Consiliff, Darlington.

(Limited to the District).

Pig, the property of a cottager whose annual rental does not exceed £8.—First prize, J. Eden, Thirsk; second, G. Horner, Thirsk. Commended: J. Appleton, Thirsk. Highly commended: W. Jackson, Bedale. G. Horner being disqualified, prize given to W. Jackson.

HORSES.

Thoroughbred stallion for getting hunters.—First prize, B. Fishburn, Ainderby Steeple; second, W. Feaster, Cock Moor-hall, York. Commended: J. Gowland, Ripon.

Stallion for getting agricultural horses, to travel in the district the following year.—First prize, W. Robson, Old Malton; second, Jas. F. Crowther, Mirtfield.

Brood mare for breeding coach horses with foal at foot.—First prize, W. L. Robinson, Thormanby-hall; second, R. Mothersill, Northallerton.

Mare for breeding weight-carrying hunters, with foal at foot.—First prize, J. T. Robinson, Topcliffe; second, M. Wilkinson, North Kilvington.

Brood mare for breeding roadsters, with foal at foot.—First prize, Wm. F. Piter, South Preston; second, C. Lancaster, Northallerton.

Mare for breeding agricultural horses, with foal at foot.—First prize, T. H. Hutchinson, Catterick; second, J. Morton, Skipton-on-Swale.

HUNTERS.

Yearling gelding for the field.—Prize, H. Crossley, Masham.

Yearling filly for the field.—First prize, L. Manfield, Barugh; second, R. Kirby, Northallerton.

Two-year-old gelding for the field.—First prize, G. M. Lomas, Dishforth; second, J. Leng, Houghton-le-side.

Two-year-old filly for the field.—First prize, R. Garbutt, Ampleforth; second, J. T. Robinson, Topcliffe.

Three-year-old gelding for the field.—First prize, J. B. Booth, Catterick; second, G. Lancaster, Northallerton.

Three-year-old filly for the field.—First prize, G. K. Harland, Northallerton; second, C. Lancaster, Northallerton.

Hunting gelding or mare, four years old.—First prize, T. H. Hutchinson, Catterick; second, C. Rose, Malton.

Hunting gelding or mare, five years old and upwards, to be ridden in the ring.—First prize, T. H. Hutchinson, Catterick; second, J. C. Bilton, Hutton's Ambo.

Hunting gelding or mare, seven years old or upwards, to be ridden in the ring.—Prize, B. Nicholson, Garforth.

COACHING.

Yearling gelding.—Prize, H. Pettinger, Easingwold.

Two-year-old gelding.—First prize, G. Meynell, Bedale; second, R. D. Batty, Easingwold.

Two-year-old filly.—First prize, J. Goodrick, Skipton Bridge; second, W. Hardwick, Northallerton.

Three-year-old gelding for coaching.—First prize, T. Plummer, Easingwold; second, H. Pettinger, Easingwold.

Three-year-old filly for coaching.—Prize, J. Burton, Thirsk.

ROADSTERS.

Two-year-old gelding for the road.—First prize, J. Rountree, Leyburn; second, T. Heugh, Northallerton.

Two-year-old filly for the road.—First prize, Hon. G. E. Laecelles, Sion Hill; second, T. Carter, Thirsk.

Three-year-old gelding for the road.—First prize, R. Kirby, Northallerton; second, W. Wray, York.

Three-year-old filly for the road.—First prize, Jas. Cook, York; second, G. Wetherill, Thirsk. Highly commended: Robt. Farnhill, Batley.

HACKNEYS.

Gentleman's hackney, of any sex, not exceeding five years old, and not exceeding 15h. 2in. in height, to be ridden in the ring.—First prize, T. Dales, Kearby, near Wetherby; second, T. G. Mallory, Great Habton, Pickering. Highly commended: Earl Cathcart, Thornton-le-Street.

AGRICULTURAL HORSES.

Yearling gelding or filly.—First prize, Mrs. Kitching and Sons, Whorlton; second, W. Thrackrey, Burrowby.

Two-year-old gelding.—First prize, J. Morton, Thirsk; second, R. Bosonworth, Easingwold.

Two-year-old filly.—First prize, W. Wilkinson, South Kilvington; second, W. Appleton, Thirsk.

Three-year-old gelding.—First prize, J. Smith, Humburton, Boroughbridge; second, J. Prinson, Aireyholme, Northalton. Three-year-old filly.—First prize, J. Chapman, Thorp Hill, York; second, T. F. Imeson, Eldmire-hill, Thirsk.

Gelding or mare four years old and upwards.—First and second prizes, R. Saunders, Westbrook, Darlington. Commended: J. F. Crowther, Knowl Grove, Mirfield.

Juniper.—First prize, L. Peacock, Hill-house, Bedale; second, J. Welburn, Scackleton Grange, Hovingham.

Pony not exceeding 14 hands in height, any age or sex.—First prize, T. Mitchell, Bowling-park, Bradford; second,

Mc C. Swarbrick, Sowerby. Highly commended: W. Howe, Bondgate, Darlington; and W. Johnson, Mile-house, Thirsk.

EXTRA STOCK.

Horses.—Prize £1 each, Tom Strickland (Thirsk Junction), three gilt pigs; C. Nicholson (Melmerby, Thirsk), ewe and four lambs; and W. Hall (Thirsk), Alderney cow.

BUTTER.

Four rolls of butter.—First prize, J. Arrowsmith, South Kilvington; second, Mr. Abbey, Crimble; third, Miss Elsworth, Plompton. Commended: J. Stevenson, Crosby.

THORNE AGRICULTURAL SOCIETY.

The entries were 1,264, or an increase over those of the previous show of 150. The agricultural and draught horses were superior to those previously exhibited, but the hunters were not very good. There was a fair show of cattle, a better class of animals being displayed than at last meeting. The sheep penned were principally Lincolns, and on the whole a moderate lot.

PRIZE LIST.

JUDGES.—DRAUGHT HORSES: T. Reed, Upton, Hull; J. Wressell, Crow Grange, Beaford; J. Smith, Brayton, Selby. **HUNTERS AND NAGS:** E. Godfrey, Thealby Hall, Brigg; T. Smith, Gringley-on-the-Hill; W. H. Clark, Hook House, Howden. **CATTLE, SHEEP, AND PIGS:** T. Dodds, Mount Pleasant, Wakefield; J. Rowley, Norton Priory, Askern; E. Abraham, Barnethy-le-Wold, Uceby. **BUTTER AND EGGS:** T. Tasker, Moorgate-grove, Rotherham.

HORSES.

Agricultural mare and foal.—First prize, E. Coulman, Levels; second, F. T. Turner, Armthorpe.

Hunter mare and foal.—First prize, H. W. Godfrey, Levels, Thorne; E. Fearnside, Wakefield.

Carriage mare and foal.—First prize, J. Reader, Holme; second, M. Askren, Levels.

Roadster mare and foal.—First prize, T. E. Morrell, Rotherham; second, E. Belton, Tadworth.

Agricultural or draught, yearling colt or filly.—First prize, F. T. Turner, Armthorpe; second, J. F. Crowther, Mirfield.

Two-year-old gelding or filly.—First prize, J. T. Purvis, Gainsbro'; second, N. England, Fishlake.

Three-year-old gelding or filly.—First and second prizes, W. Bramley, Amcotts.

Pair of draught horses, within twenty miles of Thorne.—First prize, G. Wood, Doncaster; second, T. J. Brown.

Pair of draught horses.—First prize, G. Bletcher, Levels; second, J. F. Crowther.

Gelding or mare, any age.—First prize, M. Askren, Levels; second, W. Brockton, Tadworth.

Hunters, yearling colt or filly.—First prize, J. Furnis, Crowle Wharf; second, R. J. Winder, jun., Newton.

Two-year-old gelding or filly.—First prize, M. Askren, Levels; second, T. Everett, Laughton.

Three-year-old gelding or filly.—First prize, A. J. Brown, North Elmsall Hall; second, M. Askren, Levels.

Gelding or mare, any age.—Prize, A. J. Brown.

Carriage yearling colt or filly.—First prize, J. Waite, Fishlake; second, W. Gray, Thorne.

Two-year-old gelding or filly.—First prize, T. E. Morrell; second, C. W. Darley, Thorne.

Gelding or mare, any age.—First prize, G. Goody, Thorne; second, J. Benson, Sandtoft.

Roadsters, yearling colt or filly.—H. W. Godfrey, Bank House; second, M. Askren.

Two-year-old gelding or filly.—First prize, R. Chapman, Campsall; second, W. H. Brown, Beltoft.

Three-year-old gelding or filly.—First prize, W. Stephenson, Cottingham; second, R. Farnhill, Batley.

Gelding or mare, any age.—First prize, J. Robinson; second, W. Sadler, Leeds.

Weight-carrying cob.—First prize, J. Benson; second, W. Sadler.

Lady's hackney.—First prize, F. C. Matthews, Driffild; second, J. Reader.

Pony, not exceeding 14 hands.—First prize, W. H. Blackman; second, T. Mitchell, Bradford.

Pony, not exceeding 12 hands.—First prize, Miss A. M. Godfrey, Levels; second, R. Widdop, Snaith.

Yearling foal by "Blazeaway."—Special prize, H. W. Godfrey.

CATTLE.

Bull, any age.—First prize, J. H. Rockett, Goole; second, S. Barker.

Bull, not exceeding two years old.—First prize, J. Stainforth, Sheffield Park; second, J. F. Watson, Crowle Wharf.

Bull-calf.—First prize, W. Burton; second, T. J. Eland, Hatfield, Woodhouse.

Cow, in calf or milk.—First prize, J. H. Rockett; second, Messrs. Dudding, Wragby.

Heifer, in-calf or milk.—First and second prizes, F. Strickland, Carlton, Thirsk.

Heifer, two years old.—First prize, F. Strickland; second, J. H. Rockett.

SHEEP.

One-shear improved Lincoln ram.—First and second prizes, Messrs. Dudding.

Improved Lincoln ram, any age.—First prize, Messrs. Dudding; second, W. Roe, North Searle Field, Newark.

Five improved Lincoln ewes.—First prize, W. Roe; second, T. Askren, Levels.

Five improved Lincoln ewimmers.—First prize, F. T. Turner, Armthorpe; second, W. Roe.

Five improved Lincoln rams.—First prize, E. Belton; second, W. Roe.

PIGS.

Boar, any breed.—C. F. Hallas, Huddersfield; second, J. Garbutt, South Cave, Hull.

Sow, any breed.—First prize, C. F. Hallas; second, J. C. Conps, Barmby Don.

Open gilt, any age.—First prize, E. Ellis, Doncaster; second, J. Garbutt.

Two store pigs.—First prize, Parkinsson Brothers, Doncaster; second, H. C. Littlewood, Wicker, Sheffield.

BUTTER AND EGGS.

Pound of butter, flavour, colour, and make.—First prize, Mrs. J. Purdy, Thorne; second, Mrs. Moore, Thorne; third, Mrs. G. Watson, Fishlake; fourth, Mrs. Rawson, Woodhouse, fifth, M. Askren.

Twelve eggs.—R. C. Empson, Goole; second, Miss Gravid, Thorne.

THE THOROUGH-BRED STOCK SALE AT THE ALEXANDRA PARK.—This, the second experiment of the sort, was held under the auspices of Messrs. Tattersall, with a very indifferent result. The attendance was thin, and not half the yearlings offered were sold, those which did find purchasers going mostly at very poor prices.

THE LABOURERS' STRIKE IN SUFFOLK.—This seems hastening to an end; the march to the North country being, perhaps, for the present, the last act of the drama. In Norfolk labourers are well paid, well employed, and to all appear nice happy and contented. There is a plentiful supply of hands everywhere, so there is no prospect of a scarcity of labour for turnip hoeing or harvest.—*The Norfolk Chronicle.*

ROYAL AGRICULTURAL SOCIETY OF ENGLAND.

MONTHLY COUNCIL: *Wednesday, July 1.*—Present: Earl Cathcart, Vice-President, in the chair; the Duke of Bedford; the Duke of Devonshire, K.G.; the Earl of Leicester; Viscount Bridport; Lord Chesham; Lord Eslington, M.P.; Mr. Barnett, Mr. Bowly; Mr. Cantrell, Mr. Dent; Mr. Druce; Mr. Evans; Mr. Brandreth Gibbs; Mr. Horley, Jun.; Mr. Horsby; Mr. Hoskyns; Colonel Kingscote, M.P.; Mr. Leeds; Sir A. K. Macdonald, Bart.; Mr. Pain; Mr. Rigden; Mr. Statter; Mr. Wakefield; Mr. W. Wells; Colonel Wilson; and Dr. Voelcker.

Colonel Kingscote, M.P., was elected a Governor of the Society.

The following new members were elected:

Allen, George, Unicarville, Comber, Co. Down.
 Ambrose, Cole, Stuntney Hall, Ely.
 Armstrong, George, Grafham, St. Neots.
 Ashby, Captain G. Ashby, Naseby Woolleys, Rugby.
 Bidwell, Charles, New Barnes, Ely.
 Breeze, Edward, Old Marton Hall, Whittington, Oswestry.
 Broughall, Edward, Wikey House, Ruyton, 11 Towns.
 Burton, Oliver, Gwaynynog, Denbigh.
 Burt, Walter, Wellingore, Grantham.
 Calver, Thomas, Burnham Thorpe, Lynn.
 Clay, Edward, Ellesmere, Salop.
 Cooper, James, Barton Mere Farm, Bury St. Edmunds.
 Church, George, Bedford.
 Culverwell, William Thomas, Durleigh Farm, Bridgwater.
 Fryer, William Rolles, Lytchet Minster, Poole.
 Green, Edward, The Moors, Welshpool.
 Higgins, George, Castle Close, Bedford.
 Horrell, Robert, Oakley, Bedford.
 Hunt, E. Bradley, Hayes, Uxbridge.
 Inman, Henry, Rose Bank, Stretford, Manchester.
 Kynaston, Rev. Walter C. E., Hardwick, Ellesmere.
 Lester, James, Kempston, Bedford.
 Lester, Thomas, High-street, Dudley.
 Lovell, John M., Harpole, Weedon.
 Magniac, Charles, Colworth, Bedford.
 Meredith, Richard, Rednal, Shrewsbury.
 Noden, Joseph, Bridgemere Hall, Nantwich.
 Prior, Benjamin, Leighton, Kimbolton.
 Ransom, Edwin, Kempston, Bedford.
 Rigden, Henry, Saltwood Castle, Hythe, Kent.
 Sainsbury, Edward, 16, Mark-lane, E.C.
 Sartoris, Alfred, Abbotswood, Stow-in-the-Wold.
 Shaker, John, Knightley Hall, Chirbury, Salop.
 Simons, Thomas, Markgate Cell Park Farm, Dunstable.
 Smith, Henry Herbert, West Lodge, West End, Hampstead.
 Smith, Thomas, Tillbrook, Kimbolton.
 Vaughan, Lewis Edward, Trederwen Hall, Arlein, Oswestry.

FINANCES.—Viscount Bridport presented the report, from which it appeared that the Secretary's receipts during the past month had been duly examined by the Committee, and by Messrs. Quilter, Ball, & Co., the Society's accountants, and found correct. The balance in the hands of the bankers on June 30, was £2,582 7s. 9d., and £2,000 remains on deposit. The quarterly statements of subscriptions and arrears to June 30, and the quarterly cash account, were laid on the table. This report was adopted, with the addition of the following resolution:

That the candidates for election as members of the Society, whose names have just been read, shall be entitled to the privileges of membership at the Bedford meeting on paying their subscription for 1874, and signing the usual conditions.

JOURNAL.—Mr. J. Dent Dent, chairman, presented the plan of prizes for Somersetshire farms proposed by the committee as follows:

Class 1.—For the best-managed hill-farm, including not less than fifty acres of arable land, and not less than one hundred acres of hill pasture, whether convertible

or otherwise, and whether adjacent to the arable land or not, £50; for the second best, £25.

Class 2.—For the best-managed dairy-farm of not less than one hundred acres in extent, £50; for the second best, £25.

Class 3.—For the best-managed farm not qualified to compete in either of the foregoing classes, and of not less than two hundred acres in extent, £50; for the second best, £25. The entries to be made on or before October 31, 1874. This report was adopted.

Mr. Dent Dent then moved, pursuant to notice, on behalf of the *Journal* Committee, for a grant of £150 to enable the Secretary to inquire into the stock-farming of Sweden, Norway, and Denmark, with reference to the probable supplies of cattle from those countries to the United Kingdom. This motion was seconded by Lord Eslington, and carried unanimously.

GENERAL BEDFORD.—Lieut. Gen. Viscount Bridport reported the recommendations of the committee with reference to the tenders for showyard maure, and for printing the lists of awards; also with regard to the receipt and delivery of parcels to the showyard, and the engagement of a sufficient number of the A division of Metropolitan Police. The Committee also recommended that no animals should be received in the showyard previous to the date fixed in the Prize-sheet. This report was adopted.

IMPLEMENTS.—Mr. B. T. Brandreth Gibbs reported that the Committee recommended the following classification and prizes for implements to be tried at the Taunton meeting next year—subject to future amendment after consideration during the Bedford meeting:

Class 1. For the best one-horse mowing machine (the power required for one-horse machines not to exceed 33,000 foot-lbs. per minute), £20; for the 2nd best, £10; for the 3rd best, £5.

Class 2. For the best two-horse mowing machine, £30; for the 2nd best, £20; for the 3rd best, £10.

Class 3. For the best haymaking machine, £20; for the 2nd best, £10; for the 3rd best, £5.

Class 4. For the best horse-rake, £15; for the 2nd best, £10.

Class 5. For the best hay collector, £15; for the 2nd best, £10.

Class 6. For the best system of drying hay in wet weather, sufficiently economical for practical purposes, large Gold Medal; for the 2nd best, large Silver Medal.

Miscellaneous awards to agricultural articles and essential improvements therein, 10 Silver Medals. This report was adopted.

CHEMICAL.—Mr. W. Wells (chairman) presented the following quarterly report of the Chemical Committee:

The committee have to report that Dr. Voelcker has submitted to them the following cases of inferior manures which have been sent to him for analysis during the past quarter:

The first three cases reported again show the advantage of testing manures by independent analysis, in order to ascertain whether they are of equal quality with the analysis furnished by the vendors—more especially in cases where the mixture is sold as special manure prepared for some particular purpose.

1. A sample of barley manure was sent by Mr. W. G. Duncan, of Bradwell, Stony Stratford, who had bought it of an agent at £8 10s. per ton. Dr. Voelcker reported as follows:

Analytical Laboratory, 11, Salisbury Square, Fleet Street, E.C., London, March 9, 1874.

Sir,—I beg to enclose a copy of an analysis of the sample of barley manure which you sent me a short time ago. The manure is too wet to be readily applied to the land. I do not put a precise money value upon manures which are sent me for analysis, but may observe, in a general way, that a manure containing the constituents mentioned in the inclosed copy of analysis, and in the same proportions, can be bought in most places at about £6 10s. per ton.

Believe me,
Yours faithfully,
AUGUSTUS VOELCKER.

W. G. Duncan, Esq.

Composition of a sample of barley manure sent by Mr. W. G. Duncan.

Moisture	19.66
Water of combination and *organic matter	15.30
Bi-phosphate of lime (mono-basic phosphate of lime)	11.14
Equal to bone phosphate (tri-basic phosphate of lime) rendered soluble by acid	(17.45)
Insoluble phosphates	4.75
Sulphate of lime	} 42.05
Alkaline salts and magnesia	
Insoluble siliceous matter	7.40
*Containing nitrogen	1.71
Equal to ammonia	2.07

Mr. Duncan communicated this analysis and report to the agent from whom he had bought the manure, and received the following reply, which the makers addressed to the agent, after having had a sample of the manure for analysis by their own chemist:

April 2, 1874.

Dear Sirs,—I got the sample, and last night got our chemist's report, which I regret extremely to say quite confirms Dr. Voelcker's. Nothing but carelessness on the part of the men at factory could have made it possible for such manure to be sent out, as it is evident they have not used the ingredients in their proper proportions. We have severely reprimanded our foreman, and told him that if anything of the kind occurs again, he will be instantly dismissed. To yourselves and customer we must express our sincere regret, and can only add that we shall be most happy to take back the manure, pay all expenses he may have incurred, and supply him with other manures in its place.—We are, dear sirs, yours truly,
* * * * * (Manager).

2. Another sample of manure, invoiced as "Phosphatic Cereal Manure," at £7 per ton, also sent by Mr. W. G. Duncan, of Bradwell, Stony Stratford, who had bought it of an agent.

With regard to this manure, which was guaranteed to contain 25 per cent. of phosphates in soluble form, and about 2 per cent. of ammonia, Dr. Voelcker reported as follows:

Analytical Laboratory, 11, Salisbury-square, Fleet Street, E.C., London, April 13, 1874.

Dear Sir,—I beg to enclose a copy of an analysis of the sample of manure which you call a "cereal manure." This is a misnomer, for you will notice that the manure contains but little ammonia—an essential constituent of every good cereal manure—ammonia, or at all events nitrogen in some form or other. The sample of manure which you sent me for analysis is also poor in soluble phosphate, and in point of fact is essentially a badly-dissolved superphosphate, containing but little nitrogen. A manure of the composition of the sample analysed by me, in my opinion, is not worth more than about £4 15s. to £5 per ton. I should feel obliged to you to inform me at what price this manure is actually sold, and by whom it is manufactured and sold.—Believe me, yours faithfully,
AUGUSTUS VOELCKER.

W. G. Duncan, Esq.

Composition of a sample of cereal manure, sent by Mr. W. G. Duncan:

Moisture	17.16
Water of combination and *organic matter	18.09
Bi-phosphate of lime (mono-basic phosphate of lime)	8.32
Equal to bone phosphate (tri-basic phosphate of lime) rendered soluble by acid	(13.03)
Insoluble phosphates	15.78
Sulphate of lime	} 32.87
Alkaline salts and magnesia	
Insoluble siliceous matter	7.78
	100.00

* Containing nitrogen..... .73
Equal to ammonia59

On receipt of this letter, communications took place between the several parties, with the result that the following letter, dated April 16, from the makers, was handed to Mr. Duncan:

London, April 16, 1874.

Dear Sirs,—We regret much to learn the result of Mr. Duncan's sending to Dr. Voelcker, and at first were much surprised. On inquiries, however, the matter was cleared up, as we are able to connect the complaint with one particular parcel, which was sent out under the following circumstances: On going to dig out of bulk the phosphatic cereal for this order, our foreman discovered that, through our acid tank having sprung a leak, a large quantity of acid had run down into the bin in which the manure was, and had made it very wet; so he set to mix, with the shovel, enough ground coprolite with the manure, as he thought, to dry up the excess of acid. Of course the mixing was most imperfectly done, and was in random proportions. This will fully account for the deficiency in ammonia, the excess of insoluble phosphate, and the general bad character given by Dr. Voelcker to the manure. Fortunately it was the only parcel sent out; for, on discovering the matter, we immediately stopped any more going out, and made a fresh bulk, from which we are now delivering. We had no idea, however, that the value of the manure had been so much reduced, or would have taken steps to prevent its being used. As it is, we can only say how much we regret the circumstance, especially happening as it does with a customer of yours who had complained of another make. We shall leave it entirely in your hands to settle with him as you think right, and beg that you will express our unfeigned regret for the annoyance and trouble it has given to him, as well as make a fair and liberal allowance in money. Should he, fortunately, have not used all, will you please have what remains returned to us, and we will replace it with what we are now sending out, and of the quality of which we are perfectly satisfied. Meanwhile, we remain, yours truly,
* * *

3. Soon afterwards, on April 22, Dr. Voelcker sent the following report on a manure, invoiced as "Best Superphosphate of Lime," to Mr. Duncan, at £5 10s. per ton, and guaranteed by the makers (the same firm as in the "Phosphatic Cereal Manure case") to contain 28 per cent. of phosphates, in soluble form, and a small percentage of ammonia:

Analytical Laboratory, Salisbury Square, Fleet-street, E.C., London, April 22, 1874.

Dear Sir,—I have the pleasure of enclosing a copy of an analysis of the sample of superphosphate which you sent me a short time ago. I notice in the circular of Messrs. * * * their best superphosphate is stated to contain 28 per cent. of phosphates in a soluble form, and a small percentage of ammonia. I find, however, only 19½ per cent. of soluble phosphate, and the small percentage of ammonia really amounts to merely a trace. This superphosphate would be worth £5 10s., if it contained 28 per cent. of soluble phosphate; but as the insoluble phosphates in it occur as mineral, they are not worth much for the farmer, and in my judgment the sample of manure which you sent me is worth about 25s. less per ton than Messrs. * * * best superphosphate guaranteed to contain 28 per cent. of soluble phosphate.

Yours faithfully,
W. G. Duncan, Esq. AUGUSTUS VOELCKER.

Composition of a sample of superphosphate sent by Mr. W. G. Duncan, Bradwell, Stony Stratford :

Moisture	18.60
Water of combination, and *organic matter	9.32
Bi-phosphate of lime (mono-basic phosphate of lime)	12.29
Equal to home phosphate (tri-basic phosphate of lime) rendered soluble by acid	(19.25)
Insoluble phosphates	10.50
Sulphate of lime	} 43.49
Alcaline salts and magnesia	
Insoluble siliceous matter	5.40
	100.00

Mr. Duncan having thereupon communicated again with the makers, received from them a reply, dated April 29, and containing the following statement :

Our firm has been too long established, and has for too many years held an honourable reputation, for us to condescend to any action which was not perfectly straight forward, and if through any misfortune we get into a difficulty, we are always ready and anxious to do what is right to get out of it. We will not again refer to the matter of the "Cereal" Manure, as Mr. * * * told you just the simple truth about the way in which the mischief occurred, and we have nothing to add to what he stated, except to express our unfeigned regret that ever that parcel left our establishment.

And now as regards the superphosphate. This was made as we represent, from the very best materials, and as we believe in the best manner. The difference, however, between the statement of its composition in our circular and in Dr. Voelcker's analysis, arises mainly from two circumstances—(1). That rightly or wrongly we include as "soluble phosphate" the "precipitated phosphate," of which there are always from 2 to 3 per cent. present; these we find Dr. Voelcker classes with the "insoluble." (2). The superphosphate has evidently "gone back" since it was made, as it will do sometimes when certain substances, such as iron, are present in the original coprolite. Putting these two points together will fully account for the difference. The analysis shows that the phosphoric acid is present, although not in the form represented by us, which will relieve us from any imputation of having "adulterated" the manure, which is the point about which we are anxious; as we have honestly gone into the business with a determination to sell only good articles, and have resolutely abstained from anything in the shape of adulteration.

You are probably aware that this is a new trade with us, and we must learn wisdom by experience. We see in Luwe's circular that superphosphate is stated to contain from 23 to 27 per cent. of "soluble phosphate," and that the minimum only is guaranteed. We, unfortunately, in getting out a circular, from want of experience overlooked the fact that manures are liable to "go back," and did not leave any margin for any such accident happening.

As regards what you have left, Messrs. * * * will arrange with you about sending it back. With respect to what you have used we have no fear of the result, for although the analysis shows only 19.25 per cent. of really "soluble" phosphate, we are certain that the 10.50 of "insoluble" (according to Dr. V.), contains a large proportion of "precipitated," which, practically, is just as useful to the plant as the "soluble," and in a very wet season more so, as it is not so liable to be washed down into the subsoil, and is, nevertheless, as good "food" for the roots as the fully "soluble" phosphate. We do not in the least fear the loss of the turnips, and venture to hope, on the contrary, that in spite of the unsatisfactory "analysis," you will find the manure produce really satisfactory results.

Under any circumstances you shall not have cause to complain of our treatment, and we indulge the hope that though our first transactions have been so very unfortunate, we may have the pleasure of doing business with you in a perfectly pleasant and satisfactory manner for many years to come.—We are, sir, yours faithfully, * * *

Mr. Duncan, in sending these documents, stated, "I think it only fair to both Messrs. — and Messrs. — to say that the first-named firm supplied me, gratis, with 3 cwt. of nitrate of soda, and that the barley where their

manure was sown looks as well, if not better, than any other barley within miles of my farm—that when I sowed the nitrate of soda I left out a strip of barley *unsown*, and that I can at present see no difference in that portion of the crop. As regards the second firm, they make no charge whatever for the 'cereal manure,' which was sown on 4 acres of oats, and have given me 6 cwt. of nitrate of soda gratis. The superphosphate, or turnip manure, is not charged for either. I used half of it with some early turnips, and the other half Messrs. — fetched away. The oats where the 'cereal manure' was sown look well, but they have been helped by the 6 cwt. of nitrate. I cannot speak fully on this crop yet, because, being later sown than the barley, there is not yet much show, neither can I say anything of the effects of the manure on the turnips, as they are not yet hoed out. No doubt I was very unfortunate with both these firms, but I hope there was nothing but neglect in their dealing, and not cheating." Under these circumstances the committee withhold the names of the firms in question.

4. A sample of "English nitrate of soda" was sent by Mr. Charles Cock, of Hamstead, near Birmingham, who had bought it of Messrs. Padley and Co., of 40, Toll End, Tipton, Staffordshire, at £12 per ton.

This so-called "nitrate" yielded on analysis the following results :

Moisture and water of combination	32.55
*Sulphate of iron	40.98
Sulphate of lime32
Sulphate of soda and a little chloride of sodium (common salt)	22.47
Insoluble siliceous matter	3.73
	100.05
* Equal to crystallised sulphate of iron (green vitrol) 74.95.	

Mr. Cock states "this order was given because a gentleman (who stated himself to be a partner with Padley and Co., and was accompanying their agent soliciting orders) informed me it was better manure, and would produce better results than the imported nitrate under 5 per cent. refraction" [impurity]. The preceding analytical results, however, show that this so-called nitrate is merely salt-cake and green vitriol, and that it possesses no manurial properties whatever.

5. A sample of oilcake was sent by Mr. George Liddell, jun., of Chilton, Ferry Hill, Durham, who obtained it from Messrs. T. and G. Marley, of Bishop Auckland, to whom it had been invoiced by Messrs. Pearson and Bailey, of Hull, as pure linseed cakes at £12 15s. per ton, each cake being also branded with a triangle and the initials P. B.

This cake yielded the following result on analysis :

Moisture	14.07
Oil	13.50
*Albuminous compounds	26.31
Mucilage, &c.	27.32
Woody fibre	9.89
†Mineral matters	9.01
	100.00
*Containing nitrogen	4.21
†Sand	4.97

Dr. Voelcker reported that this oilcake was not a pure linseedcake, but was made from dirty linseed, containing many small weed-seeds, and 5 per cent. of sand.

6. Another sample of oilcake, which had been sold at £13 10s. per ton, was sent for analysis by Mr. T. T. Porter, of Baunton, Cirencester, and proved to be not a pure linseedcake, but made from dirty linseed, full of small weed-seeds and starchy matter, which does not occur in pure linseedcake.

The following results were obtained on analysis :

Moisture	14.06
Oil.....	10.41
*Albuminous compounds	25.94
Mucilage, starch, &c.	29.07
Woody fibre	13.49
†Mineral matter.....	7.03
	100.00

*Containing nitrogen 4.15
 †Containing sand 3.11

This cake, although sold at so high a price, was not invoiced as pure liuseed-cake. The committee therefore withhold the name of the vendor.

7.—A sample of soot, which was sent by a member who had bought about 10,000 bushels of it, of a common sweep, at 6d. per bushel, yielded on analysis the following results :

Moisture	2.11
*Organic matter.....	24.62
Mineral matter.....	73.27
	100.00

*Containing nitrogen42
 Equal to ammonia..... .51

Dr. Voelcker reported as follows: "This sample contains but little soot, and consists principally of ground coal-dust, ashes, and rubbish, and is barely worth 10s. per ton. Good soot yields from 3 to 4 per cent. of ammonia, and is worth about £2 2s. per ton."

On the motion of Mr. Wells, seconded by Mr. J. Dent Dent, this report was adopted, and ordered to be printed in the usual agricultural newspapers.

REPORT ON THE COMPOSITION OF 13 SAMPLES OF PERUVIAN GUANO, SENT BY THE SECRETARY OF THE ADMIRALTY TO THE ROYAL AGRICULTURAL SOCIETY OF ENGLAND.

These samples were sent to England in sealed bottles, by Her Majesty's ship Peterel, from Callao. The bottles were opened by me on the 9th of June, 1874, and submitted to careful analyses.

Five of the samples were taken from the guano deposits of Pabillon de Pica, three from the guano deposits of Punta de Lobas, and five from the deposits of Huanillos.

The samples were labelled as follows :

PABILLON DE PICA.—GUANOS.

1. Guano deposit of Pabillon de Pica at La Cueva, taken at 25 feet below the surface.
2. Guano deposit of Pabillon de Pica at Sau Lorenzo, taken at 15 feet below the surface.
3. Guano deposit at Pabillon de Pica at La Barloventa (white guano), taken at the surface of a large deposit not yet marked.
4. Guano deposit of Pabillon de Pica, Cueva del Rinconada, taken on the surface over deposit of probably more than 100 feet.
5. Guano deposit of Pabillon de Pica, Cueva del Rinconada, taken from about 50 feet lower than No. 4.

PUNTA DE LOBAS GUANO.

1. Guano deposit of Punta de Lobas, taken at 5 feet below the surface, above boring of 20 feet.
2. Guano deposit of Punta de Lobas, taken at 40 feet below the surface.
3. Guano deposit of Punta de Lobas, taken at 8 feet below the surface.

HUANILLOS.—GUANO DEPOSITS.

1. Guano deposits of Huanillos, taken at 5 feet below the surface.
2. Guano deposit of Huanillos, taken at 10 feet below the surface.
3. Guano deposit of Huanillos, taken at 19 feet below the surface.
4. Guano deposit of Huanillos, taken at 13 feet below the surface.
5. Guano deposit of Huanillos, taken at 40 feet below the surface.

According to a report given by Mr. Thierry, C.E., the estimated quantity of these deposits, which lie to the south of Iquique, are :

	Tons.
Huanillos	700,000
Punta de Lobas.....	1,601,000
Pabillon de Pica	5,000,000
	7,301,000

These are the chief deposits recently surveyed; for, according to Mr. Thierry, the additional minor guano deposits bring up the estimated total amount to 7,680,500 tons, or are only 379,500 tons more than the estimated quantity in the three large deposits from which I received samples for analysis.

PABILLON DE PICA GUM.

The following is the Composition of the five samples labelled as above :

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.
Moisture	3.20	5.45	4.13	9.23	6.70
*Organic matter and salts of ammonia	46.17	49.40	59.01	41.32	55.10
Phosphates of lime	25.51	27.01	21.82	23.80	24.55
**Alkaline salts... ..	15.49	15.99	9.00	23.30	12.10
Insoluble siliceous matter (sand) ...	9.63	2.15	6.04	2.35	1.55
	100.00	100.00	100.00	100.00	100.00
*Containing nitrogen	9.81	9.15	15.08	11.02	6.55
Equal to ammonia...	11.91	11.11	18.31	13.38	7.95
**Containing phosphoric acid	1.81	1.70	1.68	3.48	3.20
Equal to trisilic phosphate of lime	3.95	3.71	3.66	7.59	6.98
Total phosphoric acid	13.49	14.06	11.67	14.72	15.34

All these guanos, it will be seen, contain very little moisture. They are of a light brown colour, and in a fine powdery condition. No. 3 has a lighter colour than the rest, and is remarkably rich in ammonia. It is evidently a comparatively-speaking recent guano deposit, and compares favourably with the best old Chinchu Island guano.

The amount of ammonia in the four other samples varies from 8 to 13 per cent. in round numbers, and that of sand from 1½ to 9½ per cent.

Excepting No. 4, the samples from Pabillon de Pica do not contain so much ammonia as Chinchu guano, and although dry and powdery, without hard lumps, are inferior to the latter, whilst as regards composition three of the samples nearly come up to the standard of Guanope guano, and are greatly preferable to the latter as regards condition.

PUNTA DE LOBAS GUANO.

The following is the Composition of the Three Samples from these Deposits :

	No. 1.	No. 2.	No. 3.
Moisture	14.53	14.06	4.79
*Organic matter and ammonia-salts	35.77	49.74	17.14
Phosphate of lime	20.50	21.40	23.00
**Alkaline salts	20.35	13.45	27.04
Insoluble siliceous matter...	2.85	1.35	27.94
	100.00	100.00	100.00
*Containing nitrogen	6.55	9.99	2.64
Equal to ammonia	7.95	12.13	3.21
*Containing phosphoric acid	3.20	1.21	0.38
Equal to trisilic phosphate of lime	6.98	2.64	0.84
Total phosphoric acid ...	15.34	11.01	10.95

The deposit taken at 8 feet from the surface (No. 3), it appears, is used with a good deal of sand; it contains also a large proportion of alkaline salts, and in consequence is poor in ammonia. At 20 feet the Punta de Lobos sample yielded 8 per cent. of ammonia, and at 40 feet below the surface, 12 per cent.

The 40 feet deposit is a dry and fine guano. It is much drier than Guanacompe guano, and contains as little sand and as much ammonia as good Guanacompe guano on an average.

HUANILLOS GUANO.

The five samples, labelled as above, on analysis were found to contain in 100 parts:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.
Moisture	8.23	5.25	12.67	15.39	8.66
*Organic matter and salts of ammonia	46.46	41.90	34.83	34.21	47.09
Phosphate of lime...	22.45	30.21	33.20	24.71	24.20
**Alkaline salts...	19.22	16.73	15.69	23.09	16.65
Insoluble siliceous matter (sand) ...	3.64	5.91	3.61	2.60	3.10
	100.00	100.00	100.00	100.00	100.00
	10.40	7.45	6.72	6.65	8.81
*Containing nitrogeu Equal to ammonia	12.57	9.05	8.16	8.07	10.69
**Containing phosphoric acid	5.33	1.47	1.44	1.62	3.26
Equal to phosphate of lime	11.63	3.21	3.14	3.53	7.11
Total phosphoric acid	15.62	15.30	16.65	12.93	14.35

The Huanillos guano samples were all dry and powdery, and of a light brown colour.

The amount of ammonia in the several samples varies from 8 to 12½ per cent., and that of sand from 2½ to 6 per cent. in round numbers.

The proportion of phosphoric acid, in combination with alkalies, and present in a state soluble in water, in sample No. 1, it will be seen, is considerable, as it corresponds to about 11½ per cent. of soluble phosphate of lime. The samples No. 2 and No. 3 are also richer in phosphate of lime, but poorer in ammonia, than Chincha Island guano.

It will be noticed that several of the samples analysed by me contain a large proportion of alkaline salts. These salts I find consist principally of chloride of sodium, sulphate and phosphate of potash and soda, with more or less nitrates.

As the agricultural and commercial value of manures is much affected by the proportion of nitric acid which they contain, I have carefully determined the per-centage of nitric acid which occurs in these recently surveyed guano deposits, and have discovered that whilst some of the samples contain mere traces of nitric acid and others quantities varying from ¼ per cent. to 1 per cent., a few contain as much as 2½ to 3½ per cent. of anhydrous nitric acid.

The following are the results which I obtained in determining the nitric acid in the 13 samples:

Guano deposit from	Per-centage of Nitric Acid in
Pabillon de Pica, No. 101
" " No. 261
" " No. 304
" " No. 490
" " No. 5	1.20
Punta de Lobos, No. 1	3.40
" " No. 2	3.50
" " No. 329
Huanillos guano, No. 1	2.87
" " No. 2	2.46
" " No. 335
" " No. 425
" " No. 5	1.10

The occurrence of nitric acid in these deposits is no less interesting in a practical than in a theoretical point of view, for it throws some light on the formation of the large nitrate of soda deposits in the province of Parapasan and other localities in South Peru.

Nitrate of soda probably owes its origin to the nitrogenous organic matter of guano deposits, which in the course of time have been subjected to the action of seawater and the oxydizing influence of the atmosphere.

The search for guano deposits may probably lead to the discovery of extensive nitre beds in the southern parts of Peru.

All the samples with the exception of one, which is evidently a surface deposit, mixed with much sand, are unquestionable valuable guanos which will command a ready sale in England, especially as they are dry and in a fine powdery condition; but, as they vary in composition, it will, in my opinion, be found necessary to have each cargo carefully sampled, and to fix the price of the cargo according to the intrinsic value of the guano as ascertained by analysis.

AUGUSTUS VOELCKER.

Saturday, 11, Salisbury-square, Fleet-street, E.C.,
June, 1874.

Dr. Voelcker's report was adopted, and ordered to be forwarded to the Secretary of State for Foreign Affairs, together with a recommendation of the Council, which is embodied in the following communication from the Earl Cathcart (acting for the President of the Society in his absence) to the Earl of Derby, Secretary of State for Foreign Affairs:

My Lord,—The Council of the Royal Agricultural Society have the honour to submit to Her Majesty's Secretary of State for Foreign Affairs the enclosed report from their consulting chemist, Dr. Voelcker, on the samples of guano sent to the Council by the Secretary of State. The Council desire to call the attention of the Secretary of State to the great difference of the samples submitted, and the varying proportion of ammonia and phosphates contained in them. British agriculturists have for some years had to complain that all the guano delivered by the Peruvian Government has been sold by their agents at an uniform price, irrespective of its value as determined by analysis, and the Council take this opportunity of respectfully urging upon the Secretary of State the desirability of impressing upon the Peruvian Government the necessity of adopting a standard analysis for Peruvian guano, and regulating the price of the guano delivered in proportion to this standard analysis. The Council beg to tender their cordial thanks to the Secretary of State for his courtesy in sending to the Council a communication of so much interest at the present moment to the agricultural community.

I have the honour to be, my lord,

Your most obedient servant,

(Signed) CATHCART.

EDUCATION.—The Duke of Bedford (Chairman) reported that the committee proposed that the examination for scholarships be held on Tuesday and Wednesday, November 17 and 18; and that the entry of boys for these examinations must be made to the Secretary of the Royal Agricultural Society not later than September 30, 1874.

The following letter was read from Mr. Baldwin on behalf of the Commissioners of National Education in Ireland, requesting that the agricultural and training college at Glasnevin be admitted on the list of schools eligible to send candidates for scholarships, and the committee recommend that the application be acceded to. The report was adopted.

Albert Farm, Glasnevin, Dublin, June 26, 1874.

Dear Sir,—The Commissioners of National Education are anxious that the students of the Albert Agricultural Training Institution, Glasnevin, would be permitted to compete for the scholarships recently established by the Royal Agricultural Society of England.—Yours faithfully,

H. M. Jenkins, Esq.

THOS. BALDWIN.

HOUSE. — Lieutenant-General Viscount Bridport (Chairman) reported that the committee had instructed the Secretary to obtain estimates for painting the inside of the house during the ensuing recess, and to report to the committee in August. This report was adopted.

SHOWYARD CONTRACTS.—Mr. B. T. Brandreth Gibbs presented the report of the Surveyor, from which it appeared that the showyard works would be entirely completed and the yard ready for use by the end of this week. The local authorities had done everything that was required of them, with the exception of the rolling, which the state of the weather had necessarily delayed. The committee recommended the strengthening of the structure of the horse-boxes, and regulations for the admittance of the public to the top of the race-stand. This report was adopted.

SELECTION.—Lieutenant-General Viscount Bridport reported the recommendation of the committee that

Colonel Nigel Kingscote, C.B., M.P., be elected a trustee of the Society, in the place of Sir Harry Stephen Meysey-Thompson, deceased. This report having been received, Colonel Kingscote was unanimously elected a trustee, on the motion of Lord Bridport, seconded by Mr. Barnett.

In the absence of the President, Earl Cathcart (as chairman of the meeting) reported the death of Mr. J. Wells, of Booth Ferry, Howden, a member of Council of the Society.

A letter was read from the Lord President of the Privy Council, announcing the issue of orders in Council, having special reference to foot-and-mouth disease.

A programme of trials of reaping machines, to be held at Soissons this month, was laid before the Council, and ordered to be communicated to the agricultural newspapers.

THE ALEXANDRA PARK HORSE SHOW.

As at Islington, so at Alexandra Park, in a fair show of horses, with some first-class ones, there were many, very many, ordinary animals, evidently not exhibited by their owners with the hope of getting a prize, but a purchaser. The thorough-bred stallions, numbering fourteen, with half-a-dozen or so decent horses amongst them, would not bear a comparison, or the thought of one, with the grand gathering which Citadel, when a four-year-old, headed at Islington; nor would the muster of roadster stallions stand a chance in the scale with the collections we have seen in Yorkshire, while, as to the hunters, we only ask those who some years back attended the purely open-air meetings even at the little town of Great Driffield, where horses stood as they would at a fair, if the gathering at Muswell Hill looked as much like crossing a country as those they have seen there, when country gentlemen and masters of hounds vied with each other for almost the mere honour of the thing? Then, in the opinion of the judges at Islington, a beautiful little hack from Driffield was not worthy of notice, although a well-known prize-taker throughout the country, and here placed at the head of the light-weights; while in heavy division Mr. Harvey Bayly's very clever Enterprise, though only a second at Islington, easily disposed of his opponents here. But what is the good of quoting these differences of opinion when we know that bench after bench have been unanimous in awarding brutes more adapted for the German sausage trade than hunting, with hundreds of pounds of prize money, and that Muggins who has show interest in his district, appoints Buggins as Judge, and Buggins, who with the like interests in his quarter confers the same honor on Muggins, and so Buggins and Muggins keep turning up again and again, till people who form opinions without looking under the bark set them down as very knowing gentlemen, with whom it would be the greatest arrogance to differ. Yet what is Laughing Stock but a barrel on stilts; and why is he placed before Hot Shot, Christmas Carol, or Masinissa? Because he has that flash show-yard trot that no thorough-bred, worth a bunch of catsmeat ever has had. King John is really a very good looking horse, and if he had been lucky enough to hit upon the cross to get a Derby winner like his old companion, Marsyas, thousands would have thronged round him and thought as the late Mr. Blenkiron did, that he was one of the handsomest horses in England. For we have seen in our time a hack not worth seven pounds ten, wrapped up in hood and body clothes, with knee caps and bandages as a blind, followed and admired by a whole town, while the

real Simon Pure with a rug thrown over him and first favorite for the cup, walked quietly away to his quarters, showing that public performance and public opinion are very different things. Citadel is big enough for anything, and as he has beaten better horses in the showyard than he did on the turf, anything we could say in his favour would be preposterous. There were some tidy three-year-olds. Cawton, a niceish four-year-old has not quite the character of Sir George's nags, and we were never in love with his sire, Volturino, with his weak hocks and straggling hind leg action. Cornishman galloped well. Cashier, this year's Islington hero was one of the *non est*. In the five years old up to not less than fourteen stone many thought The Banker should have beaten Marmalade, as the latter has gone off since we saw him in Lincolnshire, while Mr. Harvey Bayly's Chief Constable was much fancied. Sir George, the pony stallion, is almost as well known as St. George and the Dragon, and was seconded by Cock-o'-the-Walk, a deep, lengthy, short-legged one of Major Barlow's. The coach-horses only numbered nine, including absentees. The agricultural horses made a very good, but not a large show, there being seventeen stallions and a dozen four-year-old and upwards mares or geldings. Young Champion, the winner well known about the country is certainly more of a dray-horse than adapted for agriculture; in fact, he is a tremendous brute, most unwieldy to meet, and as to stepping in the farrow, as some of our friends talk about, he would require one at least as wide as the ironway. We always thought Mr. Statters' two ended horse Young Champion a dray horse; but, in comparison to his monstrous namesake, he is a neat, light stepping nag. The well-known Le Bon is more of a cart horse than either; while Young Lofty, once the pride of a show-yard, and the Clydesdales, with Duke of the same breed second at two Royals, were among the unnoticed. In the four-year-old and upwards the winners and highly commended are better known in the show-yards all over the country than their judges.

With everything cut and dried, as it was last year, we thought anyone might have taken the reins and steered clear of accidents; but such was not the case, and it was an unpardonable neglect on the part of those who saw the lady riders clear the rails out of the ring last season not to have them raised higher this, and so prevented a lamentable accident. But accidents seemed rather to be courted than prevented, as the side rails or balks to each set of hurdles were not put up this year, and the gorse hurdles being the higher, it is only due to

a miracle and the crowd that some horse, tautalised by taking the same fences so often, did not jump the side rail to get out of the ring. Then again, horses and carriages were allowed to come in the same yard where the show nags were, and horses shown there, although there were trial rings for that purpose last year. More attention should be paid to the parade of classes than was done on Thursday, as this should not be hurried over, with a third of the horses only shown. Why during the best part of the time the horses are out the prize animals and the commended should be standing like recruits at the end of the ring is beyond our comprehension.

PRIZE LIST.

JUDGES.—Lord Shannon; R. G. O. Howard; and C. Ellerby.

STALLIONS.

Thoroughbred.—First prize, £70, Major Barlow, Haskelon, Woodbridge (Citadel); second, £30, W. Blenkiron, Middle Park, Eltham (King John); third, £20, R. Hutton, Gloucester-place, Portman-square (Lughing Stock). Reserve: W. Wilson, Worcester, Hertford (Hot Shot).

Roadster.—First prize, £30, W. Vary, Bigthorpe, Stamford Bridge (Young Fireaway); second, £20, B. Mitchell, Crowe Hall, Denver, Downham Market (Fireaway the Second); third, £10, W. Geddens, Walpole, Wisbeach (Great Gun). Reserve: F. Braithwaite, Long Melford, Suffolk (Defiance).

Pony.—First prize, £15, G. W. Wilson, Kendal (Sir George); second, £10, Major Barlow (Cock o' the Walk); third, £5, Fergus Ferguson, Beverley (The Arab).

HUNTERS.

Three years old.—First prize, £30, E. G. Legg, Beaminster, Dorset (Black Prince); second, £15, T. Jackson, Tattenhall, Chester; third, £10, T. Darrell, West Ayton, York (Ebor Witch). Reserve: J. L. Scampton, York (The Autocrat). Highly commended: J. B. Booth, Killyerby, Catterick (Baldersby). Commended: J. Goodlife, George Hotel, Huntingdon (Lady Mary).

Four years old.—First prize, £50, Sir G. Wombwell, Newburgh Park, Yorkshire (Cawton); second, £25, T.

Darrell, Speckers Hill, York (King of Diamonds); third, £15, F. Barlow (Cornishman).

Five years old and upwards.—First prize, £60, H. H. Teesdale, Catterick, Yorkshire (Jester); second, £30, R. Branton, Middlesboro, York (Joe Bennett); third, £20, Sir G. Wombwell (Amos Clark). Commended: J. R. Welch, Evererech, Somerset (Brunette).

Five years old and upwards, up to not less than 14 stone.—First prize, £75, H. Jewison, Raithorpe, Yorkshire (Palmerston); second, £30, J. T. Musgrave, Beverley, Yorkshire (Marmalade); third, £20, W. Armstrong, Kendal (The Banker).

Hacks and roadsters, up to not less than 12 stone.—First prize, £30, F. C. Matthews, Driffeld (Ozone); second, £20, Sir G. Wombwell (Miss Sykes); third, £10, W. Stephenson, Cottingham, Hull (Princess). Reserve: J. Christy, Chelmsford (Firefly).

Up to not less than 14 stone.—First prize, £30, T. H. D. Bayley, Etwinstowe House, Ollerton (Enterprise); second, £20, H. Frisby, Buckingham-gate (Filbert); third, £10, J. Groat, Woodbridge, Suffolk.

PONIES.

Not under 12 nor over 14 hands.—First prize, £15, H. Fri-by (Princess Polo); second, £10, R. Wright, Salford (Young Apricot); third, £5, M. R. Syers, Upper Norwood (Rattler). Reserve: J. Wilson, Enfield (Prince).

Under 12 hands.—First prize, £10, C. Godfrey Tull, Moreton-street, Pullico (Princess); second, £7, W. McDonald, Winchmore Hill (Donald); third, £3, Edith Field, Weybridge (Daisy).

JUDGES.—H. Biddell, J. Manning and B. Spraggon.

Agricultural stallions.—First prize, £40, T. Stokes, Caddicott, Rutland (Young Champion); second, £20, T. Scatter, Whitefield, Manchester (Young Champion); third, £10, C. Sharpley, Louth, Lincoln (Le Bon). Reserve: Messrs. Yeomans, Pennymore Hall, Wolverhampton (Pride of England).

Carriage horses, four years old.—First prize, £30, G. Holmes, Beverley (bay gelding); second, £15, H. A. Clark, Aspatria, Carlisle (Emma); third, £5, P. Watson, Talaght, Dublin (Dodder).

Mules.—First prize, £10, C. L. Sutherland Coombe, Croydon (Rosseau); second, £5 (Blossom). Reserve: S. Lang, Clifton (Lass of Poiton).

THE HERTS AGRICULTURAL SOCIETY.

MEETING AT BISHOP'S STORTFORD.

This, mainly through the spirit displayed by the town and neighbourhood of Stortford, was no doubt the most successful meeting which the Herts Society, a body of not much calibre, has ever held. The weather and the site were alike favourable, and the attendance very large. The show itself, however, was not one of much more than local interest; the Shorthorns, useful animals enough, being mostly from the home herds, but with Mr. Tom Jennings, the trainer, winning in a very good class of cows; while Mr. Chaplin, from Halstead, had the best bull as well as heifer, and Lord Braybrooke the first yearling bull in Christmas Duke. Mr. Gilby did not enter his "crack" Jerseys, and Mr. Tower's pretty Victoria, the second at Stratford, succeeded to first, with Ducal, beaten by Lord Rosslyn in the class of young bulls, and Lord Braybrooke's good-looking Flame taking the first prize for yearling heifers. Lord Braybrooke had also the best Southdowns, as Lord Chesham the best of the other short-wools with his Shropshires; while Messrs. Hales and Gunnell were his for long-wools. There were very few pigs, but with Mr. Griggs' good Berkshires amongst them. There was a very creditable display of farm-horses, Mr. Briggs showing the best stallion and Mr. Street of Malden being first for mare and foal with

Cardiff Lass. The "nags," however, were regarded as the chief attraction, and the usual Grand Stand was erected; but this section proved in many ways a failure. The three thorough-bred stallions were, in the outset, discarded as having "no merit," while it threatened at one time that almost every good-looking animal would be put out as unsound. Moreover, with two "riding" judges in the ring, the proceedings in the after part of the day became insufferably tedious, as there were continual remonstrances sent from the Committee that they would "be a little quicker." However, first one had a ride and then the other, like boys up in Blackheath-common, until the thing looked like an absurdity and ended in one. Mr. Gilby's Gentility, who took the first prize in his class in the previous week at Stratford, was eventually pronounced to be unsound, although quite as sound as any hunter need be; while another horse, disqualified as unsound at Stratford, here succeeded to a prize! of course by a majority of votes. Mr. Gilby, however, was more "in-ky" with Maud, Ladylike, and Wallflower; while Mr. Hayward, of South Hill, won with his big chesnut Paramour, as well as with Rielien, and a clever three-year-old bred by Mr. Purser at Willington. Most of these horses were at the Essex meeting, but about the best nag in the show for his purpose as "a weight-carrying hackney" was Mr. Odams' cob, who had a long lead of his class and plenty of

admirers outside. The judges were: Agricultural Horses, J. Manning; J. H. Plowright; H. Tait. Shorthorns: G. W. Baker; F. Leney; G. Garne. Alderneys: Col.

F. M. Wilson; H. Middleton. Sheep and pigs: J. Newman; Wm. Rigden; R. Webster. Hunters and hacks: F. Oldaker; H. Corbet; J. E. Bennett.

THE SHORTHORN CLUB.

There can be no question but that the Turf owes its respectability as a national pastime to the Jockey Club. Without the influence or countenance of that body so precarious a pursuit, as one, moreover, so open to contamination, must have long since sunk in public opinion. And the Jockey Club, which watches so jealously over the interests of the Turf, is perhaps the most exclusive society in existence. It is essentially an association of gentlemen of high position, who may affect the sport; as amongst the present members are the Prince of Wales, the Duke of Edinburgh, the Duke of Connaught, the Duke of Cambridge, Prince Christian, the Prince of Orange, and the King of Holland. Two of our past premiers, the late Lord Derby and the late Lord Palmerston, were long on its list, and the Duke of Richmond, amongst others of living statesmen, occasionally takes a part in the proceedings of the Club.

At a meeting at Willis' Rooms on Wednesday it was proposed "to form a Club on the model of the Jockey Club to promote the interests of Shorthorn breeders." The reverend gentleman, however, who seconded the resolution somewhat protested against such "model," and another holy man, out of orders, suggested that the offensive words should be struck out; while a nobleman, who had moved the resolution in its original shape, subsequently came to see that it would be better to do without the Club, as "the Managing Committee of the Herd Book Company would be the Committee of Appeal." It is only fair to say that these protests and emendations were very well received, a kind of shudder running through the company at the very mention of the Jockey Club, of whose actual constitution or use the meeting, with an occasional exception, knew probably nothing whatever. Like Mr. Stanforth, they did not know what they were talking about.

For our own part we altogether disagree with the Duke of Manchester, who was so easily brought over, as we believe it would be far better that the character and integrity of the Shorthorn should be in the possession of a club and not of a company. The principle of these two bodies must manifestly be essentially different: the object of a company is on the face of it to make money; the aim of any society of gentlemen "formed on the model of the Jockey Club" is to discharge a duty entrusted to its keeping free from profit or any prospective reward. The Shorthorn *Herd Book* is now in the market at the price of five thousand pounds; as it is quite possible that five persons might have taken first run at this in the way of a very limited company, and thus have constituted themselves the Herd Book Committee. There was nothing whatever to have prevented Lords Dunmore, Skelmersdale, and Penrhyn, with one or two more, doing this; but they took a broader view of the subject, which resulted in the meeting on Wednesday, when the co-operation of all Shorthorn breeders was invited.

By all means let the Shorthorn *Herd Book* develop into a company in accordance with the spirit of the age; and on every good showing let the members of this company be eligible to sit at the Council table of the Shorthorn Club. But, we repeat, the operation and constitution of the company and the club must be kept separate. Let us turn, again, for a moment to the model of the Jockey Club, whose secretary or secretaries are the proprietors and editors of *The Stud Book*. It will thus be seen that the Club through its officers is in close relation

with the conduct of *The Stud Book*, as no question this connection must be mutually advantageous. But this is a very different thing from making the proprietary of *The Stud Book* the chief authority or court of appeal for the Turf. And this demarcation line must be maintained in the interests of the Shorthorn. Messrs. Weatherby make a very good income by their book, as Mr. Strafford has done by his, and as the company may continue to do. But the club of a necessity must take higher ground.

If we made any exception to the Jockey Club as a model it would be as against its noticeable exclusiveness. A man may hold the rank of a gentleman, be true and just in all his dealings, and have bred a Derby winner or two, but unless he can trace himself for many generations back in Debrett as he can his horse in Weatherby he will stand but little chance of election. We are already glad to see that this principle is not to be so religiously observed in the Shorthorn Club. It is true that the names of the Earl of Dunmore, the Earl of Skelmersdale, Lord Penrhyn, and Colonel Kingscote sound rather formidable at first; but Mr. Thomas Booth creeps in at the end, while we hear of Mr. Charles Howard and one or two other experienced men as about to be taken from the rank and file. The Club, no question, will work far stronger in this way; but, at the same time, that which should be particularly guarded against is too hastily accepting a nomination made at a general meeting, and nothing could be better than the resolution with which Lord Dunmore discountenanced such an attempt on Wednesday. It is often enough but sheer toadyism, and should be resisted accordingly.

The definition of a thorough-bred horse has long since come to be recognised; but we question whether still the pedigrees of Shorthorns lying about are not occasionally of the loosest; and the influence of the Club must be felt not merely in the home-herd or by the sale ring, but on the show ground. In fact, the prize list goes with the *Racing Calendar* just as the *Herd Book* and the *Stud Book* rank together; and we really cannot see but that, with a little more liberty of selection, or election, the Jockey Club may be accepted as a model even by the *marinè pui*, who "rely almost as much on the *Herd Book* as they do on the Bible."

A numerous meeting of Shorthorn breeders and others was held on Wednesday, July 1st, in Willis' Rooms, St. James'; the circular calling the meeting running in the following terms:

34, Charles-street, Berkeley-square, W., June 15, 1874.

SIR,—A numerous and influential body of Shorthorn breeders having expressed a wish that some steps should be taken as to the future management of *Coates' Herd Book* whenever Mr. Strafford should determine on resigning the editorship; and as he has now signified to us his desire to do so, we earnestly invite you to attend a meeting of subscribers to be held at Willis' Rooms, King-street, St. James', at 2 p.m., on Wednesday, July 1st, to consider with him the best mode for the continuation of that work.

We remain, yours faithfully,
DUNMORE,
SKELMERSDALE,
PENRHYN,
B. NIGL,
F. KINGSCOTE,
JOHN STORER,
THOMAS C. BOOTH.

The Duke of DEVONSHIRE was called to the chair, and in opening the proceedings, remarked that in the few words he had to say he desired not to set a bad example by introducing any irrelevant matter whatever. He should, therefore, simply remind them that about two years ago, at a meeting of the Shorthorn Breeders' Committee, certain matters were discussed to which he need not more particularly allude; and besides the special object they were called upon to consider, they were authorised to deal with any matter which they might deem of importance as affecting the interests of Shorthorn breeders. Mr. Strafford having lately announced his intention of giving up the management of the *Herd Book*, which he had conducted with so much ability, it appeared to the committee that this was evidently an occasion on which they were called upon to take action, inasmuch as the future management of the *Herd Book* was a matter in which the interests of Shorthorn breeders were in every respect greatly concerned. They accordingly took up the subject and had given it a great deal of attention, and they were now prepared to lay the result of their deliberations before the meeting. The

Colonel then called upon

Colonel KINGSCOTE, who read the following statement: It will probably be in the remembrance of many gentlemen now present that a meeting of Shorthorn breeders was held at the residence of the Earl of Dunmore, 86, Brook-street, Grosvenor-square, London, on the 23rd day of July, 1872, to consider certain questions then pending. At that meeting a committee was appointed to examine and report upon those questions, and that committee was also authorised to deal with any other questions which might be submitted to them in which the breeders of Shorthorns might be interested, and it had power to add to its numbers. That committee having heard from Mr. Strafford that he was desirous of resigning the editorship and future management of *Cotes's Herd Book*, and having taken counsel with two other Shorthorn breeders, thought it was a suitable moment to invite the subscribers to the book to meet and consider with Mr. Strafford the best mode for the continuation of that work, and thereupon issued the circular convening this meeting, the circular being signed by the committee appointed at the first-mentioned meeting, and by two other gentlemen whom the committee have added to their number. The committee present to this meeting the following observations in the nature of a report, and by way of introducing the subject for discussion. The committee think that having regard to the public importance now attached to the breeding of Shorthorn cattle, and to the consequent obligation upon all Shorthorn breeders to secure accuracy in all matters affecting Shorthorn pedigrees, the time has now arrived when Shorthorn breeders should unite themselves into an association to ensure for themselves and the public generally the best information on these points that can be obtained. With this view they recommend Shorthorn breeders, first, to form a company, on the model of a limited liability company, for the purchase of Mr. Strafford's *Herd Book*, and the future preparation and publication of a Shorthorn book; and next, to form a Club, on the model of the Jockey Club, to consist of Shorthorn breeders as members, and a limited Managing Committee, for the purpose of collecting and transmitting to the Club, year by year, with the view to publication, accurate information as to past and current pedigrees and sales, and of promoting the general interest of Shorthorn breeders. It is anticipated that the Company and the Club will work in harmony; and if the result should answer the expectations now formed, it may be desirable to apply for a Charter for the incorporation of a Shorthorn Association, on the model of the Royal Agricultural Society of England, in which the Club might be merged, and by which the *Herd Book* might be published as part of the proceedings.

The Earl of FEVERSHAM proposed the first resolution as follows: "That this meeting resolves to form a company for the purchase from Mr. Strafford of the Shorthorn *Herd Book*, and for its future preparation and publication." He wished to express the feelings and acknowledgment which were due to Mr. Strafford for the admirable manner in which he had conducted the editing of the *Herd Book* up to this time. That gentleman had carried on that work in a most impartial and wise spirit. He had not conducted it on any exclusive principles, but had made it as comprehensive as circumstances would permit. He believed that was the best way

of conducting the work, and he trusted that in any arrangements which might be made for carrying it on in future the same principles would be adopted, and that it would be characterised by liberality and comprehensiveness. The transfer of this property would require a considerable sum of money, and it would, therefore, appear that a company would be a very proper mode of effecting the object in view. There would be, of course, a proper direction formed, and one which would not fail to inspire confidence among Shorthorn breeders. They would, in the first instance, be entrusted with the negotiations with Mr. Strafford, and the subsequent carrying on of the publication would probably be entrusted to a board of directors or committee. He had no doubt such a body could be formed which would merit and command confidence.

Mr. POLE GELL, in seconding the resolution, trusted the meeting would acknowledge its importance, and would consider it proper that some such steps as those suggested should be taken to maintain such a very valuable publication as the *Herd Book*.

Lord PENRYN thought it desirable that some intimation should be given to the meeting of the mode in which it was proposed to carry on the work. He did not want details gone into, but some sort of outline might be given or the way in which the company was to be formed.

Mr. JONATHAN RAGG said whatever plan was adopted, it was essential that perfect reliance should be placed in the integrity of the book. If a committee were formed out of the present meeting, with the noble Duke as chairman, breeders might rely upon the book almost as completely as they did upon their Bible.

Mr. HARWARD stated that the mode of carrying out the arrangement would be very plain and simple. As regards the company, the committee would have to consider the mode of its formation, the number and value of the shares, the capital required, and the sum to be paid to Mr. Strafford. Having drawn up that scheme, they would look to the subscribers to the *Herd Book* for suggestions, and shape their course accordingly. The object of the present meeting was to get the principle established, and collect the opinions of the breeders, with the view of considering them afterwards. The broad principle had been laid down that every branch of Shorthorn cattle should be represented, and that no preponderance of interest should be given to one class over another. He thought the noblemen and gentlemen who had convened the meeting constituted a sufficient guarantee on that head, and that the future management of the *Herd Book* would be conducted on the same judicial and impartial manner as heretofore.

Mr. LODER, speaking for the class who might be termed the greenhorns of Shorthorns, would like to say a few words. The resolution stated that it was desirable to form a company. It had always been his opinion that it was not only desirable to form a company, but to go a little further, and he had no doubt the committee who had called the meeting, and who were so much interested in this matter, would be able to give some data which would enable breeders to calculate what were the prospects of such a company. For instance, he supposed the committee knew what sum was to be paid to Mr. Strafford, and upon what basis and to what amount the shares of the company were to be issued. These were matters which might just as well be mentioned now, because it was unlikely that the information would be afterwards given at so large a meeting as they had at present. On a future occasion, he might make remarks on other subjects, and in the meantime he might state that he held in his hand a catalogue of a sale of Shorthorns to take place next day. Mention was made in the catalogue of a cow which belonged to him, and there was another about bearing of the same name and number. Now, he thought in the preparation of the *Herd Book* attention should be directed to the subject of two or more animals bearing the same name with the view of getting a distinction made.

Mr. HARWARD said, in answer to the first question put by Mr. Loder, he might state that Mr. Strafford had seen the Committee, and had named the sum of £5,000 as the purchase price of the plant, goodwill, and copyright of the *Herd Book*, and the Committee had been given to understand that other parties were prepared to give him about that amount. No agreement, however, had been made, and no estimate had been formed as to the sum which should be paid. That

amongst other things would require and would receive careful consideration, and whatever resolution was come to by the Committee would necessarily be submitted to the subscribers before the sum was finally fixed. He thought that matter might safely be left in the hands of the Committee at present. With regard to the amount at which the shares should be fixed, the Committee had received various suggestions, and they were day by day receiving others, and doubtless the shares would be fixed at such a sum as would meet the wishes of the whole body of the subscribers. The Committee had formed no definite idea as yet, and would be ready to receive suggestions from any Shorthorn breeders. It was thought that the sum should not be so large as to make the company exclusive, or so low as to make it insignificant.

Mr. STONE asked if the Committee could give any idea what the publication of the book would yield to the company. If the meeting knew what it had realised in the past, there would be some substantial basis to work upon in the future.

Mr. HARWARD said each volume produced £1,500.

Mr. STONE: Do you mean profit?

Mr. HARWARD: No; that is the gross yield. Part of that sum was derived from the entries, and the other part from the sale of the book. Mr. Strafford estimated the expense at £780.

Mr. STRAFFORD said he had made a calculation that if the price were the same the return would be not less than £1,500. The printing cost £500, but a sufficient balance would be left, after deducting all expenses, to pay a dividend of 10 per cent.

Mr. STONE said whether the Company paid a large or small dividend, his feeling would be decidedly in the direction of making the book as cheap and as comprehensive as possible, so that the smallest breeder might experience no difficulty in acquiring the knowledge which the *Herd Book* would furnish. If the book were to get into the hands of every breeder, it would tend more than anything else to encourage the breeding of Shorthorns.

Mr. HARWARD observed that, so far as he could ascertain the views of the Committee at present, their great object would be to maintain the integrity of the *Herd Book*, both as a safeguard to themselves and other breeders, and as a guarantee to the purchaser that what appeared in the volume was "the truth, the whole truth, and nothing but the truth." At the same time it was desirable to make it as reasonably profitable as possible. There was one drawback which the Company would feel, namely, the reprinting of the back volumes, which were out of print, and the work had to be done in such a way that it left no great margin for profit.

A GENTLEMAN, whose name did not transpire, said the whole matter appeared pretty well cut and dry without asking all the Shorthorn breeders to meet together ("No, no"). He hoped, on behalf of breeders who were not present that the price of entries would not be increased, but that it would be continued at the same rate as at present. The price was quite enough now, as all, like himself, who had been subscribers for twenty years could testify.

Lord DUNMORE appealed to the meeting whether the remarks just heard were fair to those who had taken so much trouble with this matter (cheers). They had not come there with anything whatever cut and dry. If the speaker thought there were good reasons for attacking the Committee for having everything cut and dry, why did he not come with something cut and dry himself? He thought the previous speakers had wandered away from the subject. The resolution simply asked the meeting whether they thought it desirable to form a company for the purchase of the *Herd Book*. Nothing else could be settled that day. All details must be arranged at a future meeting.

The resolution was then put and agreed to, with only the one dissentient.

The Duke of MANCHESTER said, as he was one of the green horns alluded to by a former speaker, it might appear presumptuous in him to propose the second resolution in a meeting of gentlemen of so much more experience and fame in this matter than himself. He should not have appeared so prominently had he not been requested by those who had called the meeting to undertake this duty. He had great pleasure in acceding to the request, for, inexperienced as he was in Shorthorn breeding, he was very glad to have this opportunity of meeting so many gentlemen who were famous for breeding cattle well-known in all Her Majesty's dominions and many

other parts of the world. He took great interest in the colonies, and from his connection and friendship with many colonists, he was aware in what high estimation Shorthorn breeding was held by them. The Shorthorn breeders in this country were, as a matter of fact, stocking the existing unpopulated wilds and unoccupied lands with the best race of animals in the world. Little as he knew of Shorthorn breeding, he believed it had become of fully equal importance with the breeding of race horses, whilst it was quite as interesting and very much less baneful to those engaged in it. He, therefore, thought it of great importance that Shorthorn breeders should have a Parliament or Council of their own to manage their affairs, to regulate, control, and keep a check upon the pedigrees of animals, and to certify that what was said about them was true. He begged to move "That it is desirable to form a club on the model of the Jockey Club, to consist of Shorthorn breeders and managers, with a limited managing committee, for the purpose of collecting and publishing accurate information as to past and current pedigrees and sales, and promoting the general interest of Shorthorn breeders." As to the fees to be charged for the book it would obviously be the interest of the company to keep them down as low as they could. The object of the company would not be to make a profit. If they charged too high for entries, they would cut their own throats.

The Rev. T. STANFORTH seconded the resolution, with one little proviso, that he did not understand the model of the Jockey Club. He thought it quite right that the preparation and future issue of the *Herd Book* should be entrusted not simply to a committee, but to some person who understood pedigrees. They had all confidence in the impartiality and honesty of Mr. Strafford. Had it not been for his clear eye, sound judgment, and intimate knowledge of pedigrees, many animals would have crept into the breed unworthily. That showed the necessity of looking sharply after the matter. As to animals having the same names, he thought that could not be prevented, and those interested would have to decide the relative merits of such cattle from their numbers, and by studying their pedigree. No doubt there was a difficulty in finding new names, but he himself was lucky in having a great many lady friends, who assisted him with names.

Mr. JOHN BOOTH suggested that the words "model of the Jockey Club" should be struck out of the resolution, and that all details should be left to the committee who would be nominated.

The Duke of MANCHESTER approved of the suggestion.

Colonel GUNTER thought if the Club were to point out the inconvenience of having cattle of the same name, breeders would find new names, and thus prevent the pirating of herds. In the colonies, animals often got a fictitious value from the circumstance that the names were the same as those of some well-known cattle in this country.

Lord PENRYN acknowledged the difficulty alluded to, but thought there was no more chance of remedying the matter than there was of numbering and re-naming all the Smiths in the world.

Mr. DENT asked whether the Club was to be entirely independent of the Company, and how the Club was to be formed?

The Duke of MANCHESTER thought that it would be better to strike out the word Club altogether, as the managing committee of the "Herd Book Company" would be the committee of appeal in all cases of disputed pedigree.

Colonel LOYD-LINDSAY was of opinion that the word "Club" conveyed to one's mind a certain amount of exclusiveness which was not desirable. If the company were started, a committee could be appointed who would constitute a court of appeal. He proposed to insert "society" instead of "club."

Mr. STORER said this meeting was only a preliminary one. The matter should be left as it stood, and a committee instructed to bring up a general report on a future occasion. Such matters as those discussed could not be settled in that room. It had been suggested that the Royal Agricultural Society's show at Bedford would be a good opportunity for holding the second meeting.

The Duke of MANCHESTER thought it would cause confusion if too many alterations were made. As had been said, a committee would draw up a scheme to be submitted to the Shorthorn breeders.

Mr. DENT asked if it was necessary to have both a society and a company to conduct the *Herd Book*. Would it not be possible for the subscribers to the company to form a committee to look after pedigrees?

Lord LUNMORE replied that that was always understood by those who drew up the resolutions. This meeting was simply called to take the sense of the breeders, whether it would be desirable to form a company.

The resolution was then adopted unanimously, the word "society" being substituted for "club," and the words "model of the Jockey Club" omitted.

Lord CHESHAM moved that the following noblemen and gentlemen should form a committee to consider the suggestions made, and bring up a report hereafter: Earl of Dunmore, Earl

of Skelmersdale, Lord Penrhyn, Mr. Nigel, F. Kingseote, Rev. J. Storer, Mr. Pole Gell, and Mr. T. C. Booth. He remarked that everyone he had named was earnest in the work, and it was fortunate that the matter should be undertaken by them.

Mr. BOWLEY seconded the resolution, and expressed regret at the reflections which had been cast upon those who had convened the meeting. He was glad they had got such high-minded men amongst them to take the lead in this important matter. They were men without bias or prejudice, and the breeders could repose the greatest confidence in them.

The resolution was at once agreed to.

On the motion of Lord Bridport, seconded by Col. Loyd-Lindsay, a vote of thanks was passed to the Duke of Devonshire for presiding, and the proceedings terminated.

THE IRISH CATTLE TRADE.

Considering how thoroughly the sympathies of the Conservatives are assumed to be with Agriculture, it is remarkable how much in a very short time the present Government has effected to correct such an impression. It has turned tail on the Malt-tax; it has shirked and trimmed over Tenant-Right, and it is now intent on undoing anything done to prevent the spread of the more serious diseases amongst cattle. As everybody knows who has given any attention to the subject, one of the most fertile sources of contagion for some time past has been Ireland; or, as the Committee of last session put it, "many complaints have been made by English and Scotch farmers with regard to the Irish imports, alleging that these have caused an increase both of pleuro-pneumonia and foot-and-mouth disease." Countered as the other members of the Committee continually were by the Irish contingent, they were not enabled to speak out so strongly as they otherwise would have done, but still they went so far as to advise, "that the regulations in Great Britain and Ireland with regard to contagious diseases be similar—that such regulations be carefully enforced at the landing-places both in Great Britain and Ireland—and that the Irish Government take steps by inspection at Irish ports to prevent the shipment to Great Britain of any diseased or infected animals." And upon this suggestion, coming under the immediate authority of the Vice-President of the Council, Mr. Forster, his colleagues decided to act. The importation of Irish stock was to be watched with all that care and suspicion which its condition but too well warranted.

It is noticeable, however, how there has long been a kind of Conservative feeling manifested in dealing with the cattle trade of the sister Kingdom. No language could be too strong, no regulations could be too severe when touching on the case of the foreigner. He was always bringing in pleuro and foot-and-mouth, as over and over again some still more terrible disorder was reported to be coming up the Thames. Meetings were held, and resolutions were passed, declaring it to be simply ruin to land anything alive from the Continent; while at the same time it was regarded as something very like bad taste to say a word about Ireland, although far more disease was known to be drifting in from that quarter. Graziers, it was said, could not get on without their customary supplies of Irish steers, as occasionally they came to admit that they would prefer risking an attack of foot-and-mouth disease to being cut off from such importations. So far the Commons Committee may be regarded as going with these views, for, as the Report runs, "the consumer and the producer would consider the remedy—that of stamping out—to be worse than disease." And again, "such an interference with the home trade in animals would much affect prices." In fact, much of the agitation over foot-and-mouth is little better than a sham; but pleuro-

pneumonia is a far more serious matter, and so the Committee recommended that "the slaughter of all cattle affected with this disease should be compulsory"—that "the regulations in Great Britain and Ireland should be similar"—and that "the Irish Government should take steps by inspection at Irish ports to prevent the shipment of any diseased or infected animals." And these resolutions or recommendations were, in Parliamentary phrase, approved.

Just now, however, we are threatened, according to common report, with another extensive outbreak of pleuro-pneumonia, and so, of course, there could be no more fitting time to relax any very stringent conditions. As Sir Michael Beach put it on the part of the present Government, "honourable gentlemen would fully appreciate the difficulties which stood in the way of the compulsory slaughter of cattle shipped from Ireland." But why so especially from Ireland more than from any other country? Surely the slaughter of a diseased Irish beast is as justifiable and imperative as that of a Frenchman or a Dutchman! Again, "there came the question whether the system of slaughter had been successful in those countries to which it had been applied. He believed it had been tried in several countries in Europe, and had been abandoned because of its enormous expense." But assuming this statement to be true, why should we make so curious an exception with regard to Ireland? as if the system of slaughter is not successful, why should we incur any further enormous expense in continuing it elsewhere? Sir Michael Hicks Beach would seem to possess a remarkably illogical turn of mind, or perhaps he has only caught the tone of his adopted country, "By Jabers! it is no use whatever to try to cure the noble bastes of Green Erin by killing them, but you ought to kill everybody else's." Further, Sir Michael says, "if disease from Ireland was imported so largely as was alleged, it was strange that there had been no complaints." No complaints! Why we have been complaining, and not merely complaining, but proving our case for years; or if Sir Michael Hicks desires any more official evidence as to the cattle disease imported from Ireland, we would refer him to Professor Browne, a gentleman at the head of the veterinary department of the Privy Council office. No complaints! Why the House of Commons Committee formed its strongest recommendations upon the weight of these complaints. No complaints! Why just previously on Friday night Mr. Stewart had stated how "he lived in a part of Scotland to which there was a large trade from Ireland, and they were very much afraid of the introduction of disease." Mr. Evans said "Derbyshire would be seriously inconvenienced if the importation of cattle from Ireland were stopped; but the regulations as to compulsory slaughter if inconvenient had on the whole been beneficial." In the Upper House Lord Kimberley said "So long as animals suffering from pleuro-pneumonia and

foot-and-mouth disease were allowed to be imported into England from Ireland it was utterly futile to expect that those diseases could be stamped out in England, however stringent might be the rules in this country. For instance, it was the practice for large numbers of diseased animals to be lauded in Norfolk from Ireland, and the consequence was the disease could not be stamped out." Mr. Barelay asks for a more vigilant and effective

inspection on embarkation, and we hear officially in reply that the Irish Government will do the best it can. This does not amount to much, nor does Sir Michael Hicks appear very desirous to do much. If, however, there is to be any exceptional legislation over this business, people will only waste their time in talking about the danger of foreign stock, while we can continue to count upon the existence of this so haudy home.

STOCK SALE.

SALE OF MESSRS. LENEY'S SHORTHORNS

AT ORPINES, WATERINGBURY, ON THURSDAY, JULY 2, 1874.

BY MR. STRAFFORD.

A happy combination of events all tended to render this one of the most successful of sales of this season, and an average of £221 16s. for 41 head—the majority of which were young animals—is a great encouragement to Messrs. Lenev to continue those lavish outlays for good animals that have recently distinguished their line of breeding. A few years ago their bulls were not looked upon as fitting sires for some very capital cows and heifers of the Charmer and Knightley blood in which their herd was so strong. In 1872, at Winterfold, Eighth Duke of Geneva, a pure Duke bull, as closely bred to Mr. Bates' herd as anything in this country (notwithstanding Mr. George Bedford's assertion of his great Duke bull in Kentucky, U. S. A.), was purchased for 1,650 gs.; and for the heifers Sixth Duke of Oneida was imported from the New York Mills at 1,200 gs. These two bulls gave an immense lift to the herd; and with two such cows as Seventh Duchess of Geneva and Grand Duchess of Geneva, for bull breeding, they may hold a high position in the Bates market for some years. Both bulls were paraded before the sale, and again in the ring immediately preceding it. That the younger one, Sixth Duke of Oneida, was the favourite there can be no two opinions; perhaps a little small for his age, three years in October, he is nevertheless a remarkably good bull, of great substance, capital form, and fine masculine character; indeed he is unlike what has been for years looked upon as Duke character. His dam, Lord Bective's seven-thousand-guinea cow, is one of the grandest cows in the country, and she has the Romeo cross running in her veins on her sire's side. Like his sire (Fourth Duke of Geneva, now Mr. Renick's property in Kentucky, where he is mated with the Red Roses), his hair is a trifle harsh, but this slight blemish is overcome in the blaze of his general excellence. Eighth Duke of Geneva looks thin, being kept so for use and lightness; he is of large size, and with that high mettle and nervous disposition for which the strain is so well known. His head and neck are very grand, and he is of great length; but he wants more middle, his length giving a sinking in the back that is not admirable. As a stock getter he will certainly rank high; five large calves rising a year old by him were shown in pens under the cherry-trees that were a nice lot, mostly of a colour, and good size and quality. It was remarkable that the best two of these five made the lowest prices: some thought lot 16, others lot 14, a gayer roan, but with not so good a back as on lot 16, though more even. The Rev. R. B. Kennard purchased this one at 130 gs., her dam being of John Wood's old Garland blood; and lot 16 went to Mr. Henry Brassey at 250 gs., her dam being of Lord Ducie's Louisa or Lizzy tribe, of Charge's blood. Mr. George Fox gave 300 gs.

for lot 15, of the Knightley Walnut family. Mr. Stavely Hill and Mr. Jon. Rigg took the other two at 290 gs. each. But the pick of the sale was another and younger calf by Eighth Duke of Geneva; this was lot 19, Fourth Grand Duchess of Geneva, a granddaughter of Seventh Duchess of Geneva, bred by Mr. Sheldon, U. S. A., imported in 1867, and bought by Mr. Lenev, at the Windsor sale, for 700 gs.; she is a very grand white cow, better than her daughter by Fifteenth Grand Duke. The calf was thin, but well grown; Mr. Lenev, not intending to sell it, had given it ordinary keep until the last six weeks, when it had been running with a nurse, and will probably grow into a large fine heifer. A thousand guineas was talked of as the opening bid, but Mr. Loder's fifteen hundred seemed to stop all opposition for a time. Mr. Holford added fifty-guineas bids three times, but Mr. Loder's two thousand took the calf to his estate at Whittebury (late Lord Southampton's), adjoining Mr. Oliver's farm; so that Northamptonshire, as of old, will still be the home of some of our finest Shorthorns.

The calves by Sixth Duke of Oneida were darker in colour and not being in such bloom as the older ones appeared to less advantage, still they sold remarkably well, Mr. Loder again taking quite the pick of them in Oxford Fausley 6th, a broad thick roan calf, slightly scouring, at 225 gs. There were five useful cows in nice condition and mostly in-calf. Mr. Blundell bought Lot 1, Lactea Oxoniensis, out of Sir Chas. Knightley's old Lactea, at 240 gs. Mr. Drewry, for the Duke of Devonshire, bought Lily, one of the Bell-Bates line, a fine large broad-backed cow, at 170 gs., and her calf by Sixth Duke of Oneida at 120 gs. Lot 3, Knightley Grand Duchess, another Bates on Knightley, went rather dear, at 350 gs., to Mr. Larking, who got several other lots. Thorudale Duchess, recently calved, looked plain and thin, still she ran up to 100 gs. (Mr. Jon. Riggs, Kent), and the Queen, bred from the herd at Windsor, was bought by Lord Chesham for 160 gs. Lot 6, Primrose, a thin fleshed cow, of nearly pure Knightley blood, excited keen competition, and Mr. A. Brøgden finally took her into Lancashire at 335 gs. Two whites followed; one of the Charmer line, being recently calved, made only 225 gs.; but Oxford Fausley 4th, full of hair and heavy in-calf, was one of the handsomest lots. Sir Curtis Lampson's 400 gs. finally secured her for Sussex against strong opposition from Lancashire. Columbia Duchess, by Fifteenth Grand Duke, was also greatly run upon, but she is also retained in the south by Mr. Larking. Mr. Sheldon, who had bid strongly for her and several preceding lots, purchased Lot 10 of the Charmer tribe, a strong good heifer, at 320 gs.

The bulls were a fair good number, and their sale was greatly assisted by Mr. Larkworthy taking three of the best at 210 gs. (lot 8, brother to lot 16), 140 gs. (lot 11, of the Furbelow line), and 81 gs. (lot 2, brother to lot 7) for New Zealand. Mr. Collard bought lot 9, a pure Bates bull of the Wild Eyes tribe, at 145 gs. He is a thick good white, and likely to do excellent service near Canterbury. Lot 1, Young Knightley (own brother to

lot 6 cows, sold for 335 gs.), was bought by the Rev. J. Storer at 60 gs.; and The Friar, a promising red calf of the Charmer line, goes to the Rev. Chas. Marshall, Surrey, at 58 gs.

Lord Penrhyn, chairman of the Shorthorn Committee, presided at the lunch, and it may be justly said that the same assembly of noblemen and breeders that thronged Willis' Rooms the day previously had a "country meeting" the following day in the pleasant vales of Wateringbury. Moreover, the Stratford meeting of the Essex Society brought many up from the Eastern Counties, and two days' showing was happily relieved by a pleasant day's selling in Kent. The heavy corn crops, the healthy hop-bines, and the rich pastoral look of the surrounding country, all indicated the high farming that Messrs. Lency's Shorthorns necessarily caused; and this their third public appearance, with average of 211 gs. on the 60 gs. and 70 gs. averages of 1869 and 1871, is the best indication of the high and fashionable character of the herd.

COWS AND HEIFERS.

Lactea Oxonensis, roan (1867), by Imperial Oxford (18084), dam Lactea by Sarawak (15238).—Mr. J. H. Blundell, 240 gs.

"CHOICE" TABLE BUTTER.

A PAPER, BY THE HON. CLARK KING,

Read before the Agricultural Society at Waitsfield, U.S.

In order to make a choice tub of butter, at all times see that your cows are provided with the best kind of food for that purpose. In summer, when your cows are at the pasture, let them have the best pasture you can provide. As a rule, a dry pasture which lies high and rolling produces the best grasses for butter-making: it makes a yellow, fine-grained, sweet tub of butter; while a low, swampy pasture, full of foul grass and bushes, makes a much poorer grade. Such pastures are not fit for the dairy. A moist pasture, if not too wet, may produce a good quality of grass, and in such pastures good butter can be made; but my experience, after dealing in butter some ten years, and manufacturing butter during this time, has taught me that a dry pasture, producing sweet qualities of grass, is the kind for dairying. At this season of the year, when the cows are stabled, and during the spring, when the cows are giving milk, give them the very best quality of early-cut hay, and a fair amount of meal each day. Corn-meal is the best, and any green fodder or roots which are of good flavour will also be good to feed them when giving milk. Give your cows warm stables; milk as regularly as possible; and milk clean. After the milk is drawn, set it away, after it is thoroughly strained, in a good milk-room, which must be kept sweet and clean. All odours, from whatever source, must be avoided, as cream on the milk is tainted very easily by smoke, cooking of various foods, odours from the sink and other places. The milk-room should be kept at a high temperature, for the cream to rise well, in cold weather, and in warm weather kept as cool as possible. Many times the cream will not half rise on account of the extreme heat, and a good share of it is thrown to the pigs. There is no doubt but that the large patent pans now coming into use, with pipes carrying cold water around them, so as to cool the milk and take out the animal heat as soon as set for the cream to rise, will prove to be a great improvement. Those who have used them consider them an improvement, and say that they paid for first cost in one season. They made good butter during the hottest weather last summer, and a good cream rose all through the extremely hot, damp weather. I had several dairies of butter made from those pans and the cooling apparatus the past season, which proved to be excellent. Doubtless these pans for setting milk will soon come into general use by good dairymen, as thereby a great amount of labour is saved, as well as good butter made. Always skim your milk before the cream is thinned. As a rule, skim it just before it sours, or as soon as it begins to sour on the bottom of the pan. No time can be given to skim milk after it is set which will always be reliable, as milk-rooms vary somewhat in temperature; but never fail to skim it while it is sweet and before it becomes tainted in the least. Here is where dairymen must not neglect the care necessary for producing choice butter. Here is where many dairymen make a mistake, in letting the cream stand on the milk too long; and the result is a common tub of butter, or even worse—*i. e.*, a poor tub of butter, which nobody wants. After your cream is taken from the milk, churn it in good season, taking care always not to let it stand too long before churning. Use a churn with as little machinery as possible. The plain churn, with the least number of floats, is the best for manufacturing solid butter. Never salt your butter too much. An ounce of salt to one pound of butter is enough for butter made to keep through the season, while from one-half and three-quarters to one ounce is enough for the market, when the butter is soon to be used. In fact, light-salted butter commands the highest price, where it is sweet and new; and this is a fact for good dairymen to be sure to remember. The working is another very important part to be performed in the manufacture of butter. Great care must be used to work it enough and then stop; and to do this requires close attention. Before working the butter, it should be thoroughly washed in good, pure water, until you can see that you cannot do much more to cleanse the buttermilk from the butter.

As a rule, I find the finest butter where the maker works the butter twice before putting the same into the tub for market. The butter is taken from the churning and salted, and worked enough to thoroughly work-in the salt, then set away overnight, the next morning taken up and worked until it is clear from buttermilk. Then it is ready for use—either to send to market or to keep through the season. I consider the use of a butter-worker the best mode of extracting the buttermilk, although fine butter can be made by working with the hands, if they are not so warm as to injure the grain of the butter. A sponge can be used with good success in connection with the butter-worker, to soak up the moisture in the process of working. After your butter is ready to pack, get a nice clean tub or box to pack it in, as a clean package is always desired by the purchaser. Never put good butter into an old, dirty tub; but give your butter the best tubs the market affords. It will pay well in the end, and will be money well expended. After you have succeeded in making a choice tub of butter, it is always wanted at good prices in the market, and you can readily find a purchaser for all you can manufacture, from the fact that so little excellent butter is made at present. A choice tub of butter at this time is sold for 40 cents in the market, while a good fair tub brings 35 cents per pound, and a common one 30, a poor one 25, and so on, down to grease prices. A difference of 5 cents per pound is well worth a good amount of time spent to make a choice article. As there are over 100,000 cows kept in the State of Vermont, and the annual product of the same will average 150lbs. from a cow, or more, let us calculate the difference of 5 cents a pound on the whole amount made in the state. Reckoning 150lbs. to the cow, 15,000,000lbs. would be manufactured annually; and a difference in price of 5 cents per pound would make an addition of 750,000 dollars to the annual wealth of our state—a fine increase to record in the manufacture of butter. If we only take as much pains in this branch of farming as we have done to improve our breeds of sheep and cattle, the thing will be done; and when once done, it will pay so well, there will be no danger of a reaction, as in the sheep business, from the fact that every tub of choice butter is at all times in demand at good prices, there not being enough of such butter made at the present time for the consumer. And, to review what I have said in detail, allow me to say, keep no poor cows, and only those that make good firm yellow butter. Keep them well both summer and winter. Use great care in cleanliness in every stage of the manufacture of this product. Have a good milk-room, keep it perfectly sweet and clean, and follow the best modes of making good butter; and if you do not succeed, then go to those who do succeed and find out their method, and in the end you will certainly come off victorious. And now, brother-farmers and dairymen, let us all resolve to accomplish the art of making choice butter.

PETERBOROUGH AGRICULTURAL SOCIETY.—The following are the chief awards: Hackney mares or geldings, not exceeding 15½ hands: £7 to Mr. A. Goodman, Thorney. Weight-carrying cobs, above 13 hands 2 inches and not exceeding 15 hands: £5 to S. Middleton, Waternewton. Ponies not exceeding 13½ hands: £5 to A. Leeds, Eye-bury, North. Ponies not exceeding 13½ hands, to be driven: £5 to G. Gee, Jun., Deeping Fen. Fat oxen: £7 to the Earl of Lonsdale, Barleythorpe. Bulls, under 2 years old: £7 to the Marquis of Exeter, Burghley Park. Cows, having had a calf: £7 to the Marquis of Exeter; and £3 to J. J. Sharp, Broughton, Kettering. Heifers, in-calf, under 3 years old: £5 to D. Dainty, Belmishope, Stamford. Heifers under 2 years old: £5 to J. J. Sharp. Special prize of £5 for pair of heifers under 1 year nine months, shown in classes 40 and 41, to J. J. Sharp. Long-wooled rams: £7 to R. Wright, Nocton Heath. Boars of the large breed: £3 to H. A. Kilham, Tydd St. Mary. Boars of the small breed: £3 to H. A. Kilham.

A M I S C R O P P I N G C A S E .

In the Court of Session, Edinburgh, an action was raised by Mr. Baird, of Ury and Easter Drumkilbo, against Mr. Wm. B. Mount, for damages for alleged miscropping of the farm of Castleton of Eassie, of which the defendant was tenant. The defendant was bound by the lease to have two-fifths of the arable area of the farm in grass during the last three of the nineteen years over which the lease extended. It was complained that there was not enough in second year's grass. In 1872 there were 187 acres in grass, but the greater proportion was in new grass. In other words, less than one-fifth was in second year's grass, though more than two-fifths were in grass. It was contended by the defender that the size of the parks did not admit of any other arrangement, and it was proved that no scouring or hanging policy towards the land had been adopted. Lord Gifford has issued the full interlocutor and note in the tenant's favour.

The Lord Ordinary, having heard parties' procurators, and having considered the closed record, proof adduced, and whole process, absolves the defender from the conclusions of the action, and decerns: Finds defender entitled to expenses, and remits the account thereof, when lodged to the auditor of Court to tax the same and to report.

(Signed) AD. GIFFORD.

NOTE.—The question in this case is whether the pursuer is entitled to exact and the defender bound to pay penal, but fractional, extra rent in respect the defender has "deviated from the mode of cropping described and agreed upon" in the lease between the parties. The case involves several points of some difficulty and nicety.

The Lord Ordinary was favoured with an able and instructive argument as to how far fractional rent of a penal nature, such as that stipulated for in the present lease, was subject to equitable modification by the Court, and how far there was reason for the equitable interposition of the Court to restrict the pursuer's claim. The Lord Ordinary is of opinion that if the pursuer can clearly establish the contravention or mis-cropping, the Court has no power to restrict the liquidated or fractional damages which the parties themselves have fixed and ascertained under the name of additional rent. This doctrine seems to be quite established by a long series of decisions both in this country and in England. See the cases collected in *Hunter on Landlord and Tenant*, I. 265 (3rd Ed.). One of the leading cases is *Miller v. Lord Ewyder*, 26th May, 1824, affd. H. L. 3rd March, 1826, 2 W. & S. 52; but there are many other cases to the same effect. The principle is that where the parties themselves have agreed upon and liquidated the damages the Court cannot interfere to modify, for this would be setting aside the delicate bargain of the parties themselves. The terms of the lease in the present case are exceedingly explicit that the penal rent shall not be subject to modification; and although, notwithstanding such a clause, the inherent equitable power of the Court may not be excluded, and exceptional cases for interference may arise, the present does not seem one which can be made an exception from the general rule. See *Forrest and Barr v. Henderson*, 26th Nov., 1869, 8 Macph. 187. But while the Lord Ordinary is of opinion that the fractional rent is not subject to modification by the Court, if it can be shown that it has been really incurred, he feels that it is a demand of a highly penal nature, and great strictness must be applied in considering whether it has been really incurred or not. The whole proper rent stipulated in the lease has been paid; it was hardly pretended on the part of the pursuer that the defect in the amount of grass of a particular age, of which alone he complains, had led to injury anything like the penal rent claimed, and no attempt was made to prove actual damage from deficiency of grass. In short, it was conceded, at least in argument, that if the tenant was found liable it would be an exceedingly hard case, and no attempt was made to show that the pursuer's demand was to any extent founded in equity. In such circumstances, and where the landlord's severe demand is founded on the precise words of the lease, he cannot complain of a strict interpretation as applied to that lease in ascertaining whether it supports his plea. In short, while the Court will not modify the penal rent, they will equitably consider whether penal rent at all

has been incurred. Certainly, on this last point, equity is not excluded, but imperatively called for. Now, on considering the whole structure and terms of the lease, and applying them to the facts established in evidence, the Lord Ordinary has come to be of opinion, though not without difficulty, that the pursuer has failed in sufficiently establishing "miscopping" in the fair sense of the lease, or that the defender has deviated "from the mode of cropping above described and agreed on." The lease is a long and complicated document, and it is a little difficult to read from it what in many respects were the precise duties of the tenant. The clause stipulating for penal rent is not confined, as the pursuer suggested, to the last three years of the lease. On the contrary, it is quite general, and applies to the whole currency of the lease, so that, if incurred, it might have been enforced the very first year; and it is expressly stipulated that the penal rent shall be exigible at the same terms of payment as "the ordinary rent." The clause for penal or fractional rent is in these terms: "And the said Patrick Birrell (the defender's author) binds and obliges himself and his fore-saids to labour, manure, and crop each division successively during the currency of the lease, without any departure from the rules above written; and in case the said Patrick Birrell and his fore-saids shall deviate from the mode of cropping above prescribed and agreed upon, either in opposition to his landlord or by his tacit consent, he shall be bound, as he hereby binds and obliges himself and his fore-saids, not only immediately to restore such part of the lands as may be so miscropped to the notation and course of cropping applicable thereto under this lease, but likewise to pay the proprietor an additional rent of £5 for every imperial acre which shall be cropped differently from the rotation above laid down," and so on. The first observation which occurs is that, although this penal clause speaks of "rotation" and "notation above laid down," the lease does not provide any particular rotation or shift of cropping. It does not require a four-year shift, a five, six, or eight-year shift, or any other shift. The lease confines itself to specifying certain restrictions, and under these restrictions the tenant may follow any shift he pleases. Now, it is at least an awkward thing for the landlord to rely upon a penal clause providing penalty for deviation from a rotation of cropping when no particular rotation is described. The next point is that the tenant is taken bound to crop each "division during the currency of the lease without any departure from the rules above written." What is meant by "division?" The landlord says it is the set or series of fields which constitute a break, being a fifth, a sixth, or other aliquot part of the farm. The tenant says "division" simply means field, the farm being completely divided into separate fields by permanent fences. The Lord Ordinary inclines to the tenant's view as most consistent with the restrictive structure of the lease. It is difficult to suppose that "division" means a new laying out of the farm into exact fifths or sixths, which would necessarily imply new permanent fences. The skilled evidence, so far as competent, confirms the Lord Ordinary in the view that "division" simply means "field." But the main point relied upon by the tenant is that the farm—being a completely enclosed farm, consisting of a definite number of fields separated from each other by permanent fences—it is not possible to lay it out into exact fourths, fifths, or sixths under any of the known shifts or rotations. This really happens in every arable farm; and when, for example, a five-shift is stipulated, this merely means that each field must follow the shift, and that the farm shall be approximately divided into fifths as nearly as the fences will allow. This is universal practice and quite equitable; for although the tenant under a five-shift may have rather more than two-fifths in white crop one year, he will have so much less the next, and so on. The present lease stipulates that there shall never be more than one-half of the farm in crops of corn during the first sixteen years. This seems to point to a four drift rotation; and it is thought in equity that it would be implemented if the farm were divided into four equal breaks, as nearly the size of the fields would permit; so that, though there might be a few acres too many for one year, there would just be so many

less the next. Now, apply this to the last three years of the lease—the only years complained of by the landlord. The landlord's complaint is that the tenant has not enough of grass. Two-fifths of the arable part of the farm are, as nearly as possible, 160 acres, and two-fifths are required to be in two years' and one year's old grass the three last years of the lease. The complaint is that the tenant in 1871 was nine acres short; and in 1872, 36 acres short; and in 1873, 12 acres short of two-year-old grass, although he had in all 187 acres, being an excess of 21 acres of one-year-old grass. It seems proved in evidence that this was as near as the divisions of the fields would admit, unless, indeed, the tenant had gone back a good many years, and cultivated his farm under greater restrictions than the lease imposes. It is proved also that there was no miscropping and no scouring of any one field on the farm; and it further appears from the evidence that, whereas the tenant was not bound to have grass more than two years old, he had, during the last three years considerable quantities of grass three and four years' old. Now, in these circumstances, the Lord Ordinary has come to be of opinion, though he cannot say without difficulty, that there has been substantial implement of the lease. He cannot modify the penalty, but he can equitably consider whether any penalty has been incurred or not, according to the fair reading of the instrument. The skilled evidence is all one way. For example, Mr. Goodlet says that he thinks there has been no substantial deviation from the terms of the lease, and speaking of the last three years he says: "If you take an average of the three years, the tenant had 166 acres in such crop. He did not have it every year, but what he wanted in one year he made up for in another. If you go to the green crop, again, he ought to have had 83 acres each year in green crop, but on an average of the three years he had 97 acres in green crop, so that there was an excess of 14 acres in green crop on the whole. That is not considered bad management. It would have been worse if it had been 14 acres of oats or grain crop. Again, he had in grass in three years altogether 160 acres each year on an average. He was bound to have had 166 acres, so that he had a deficiency during the three years of about 18 acres. The deficiency was in grass, and the excess was in green crop; and, according to the way in which he was bound to farm, the one would about make up for the other, so that practically there was no substantial injury." The other skilled witnesses speak to the same effect; and it would be the hardest possible construction against the tenant to hold that, while, for example, in 1871 he had 192 acres in old grass, three and four years' old, whereas he was only bound to have 83, he is to be subjected in a penal fine because he was nine acres short upon the one year's grass to make up the full quantity of 166 acres. The year 1872 is a more difficult year, for here there was a deficiency of thirty-six acres in all, although there were 93 acres of old grass instead of 83; but then in 1873 there was a surplus of 20 acres, so that on the whole there is only a deficiency of 6 acres per annum, and much of the grass was three and four years old, whereas the tenant was only bound to have it two. The Lord Ordinary thinks that on this point of the question he is entitled to look to substantial compliance, and if so the tenant's defence is complete. It is really vain to say that the tenant was bound to run up temporary fences and have the fields cultivated in patches. It is proved that this would have led to great embarrassment and disconcerted the fair cultivation of the farm. It would have done more injury than 6 acres per annum shortcoming in grass. The total arable acreage is 415 acres. There is some force in the defender's plea founded on the discharge for rent. No doubt the landlord's mere silence or not stating objection would not be enough. But seeing that the penal rent is due year by year, and was not reserved when the ordinary rent was received and discharged, each discharge may fairly imply a passing from the penal claim. This defence was expressly sustained in *Hunter v. Blackwood*, 2nd Feb., 1854, 16 D., 441; but perhaps there were specialities which may found a distinction. On the whole, the Lord Ordinary thinks that the landlord has failed to make good his claim.

A. G.

THE DUKE OF MARLBOROUGH'S BUCKINGHAMSHIRE PROPERTY.—This estate, including the Winchendon farms, was offered at the hammer in London, when it was bought in for £174,000. The chief bidder was Mr. Lambert, one of the members for the county.

THE LONDON CATTLE MARKETS AND SLAUGHTER HOUSES.—At a meeting of the Common Council the Lord Mayor presiding, the town clerk, Mr. Monckton, read a communication, addressed by the Lord Mayor on the 27th of June to Lady Burdett-Coutts, stating that at a recent meeting of the Common Council considerable discussion arose with reference to the position and prospects of Columbia Market; and after various motions had been submitted to the Court, an amendment was agreed to, in effect that, although the Corporation has an unexpired term of two years within which to test the possibility of making Columbia Market successful, yet the Court was of opinion that it would be unfair to every interest concerned, and, therefore, undesirable, for the Corporation to continue the present experiment without first consulting Lady Burdett-Coutts as to her wishes with reference to a transfer of the market to her ladyship. That being the amendment carried, the Lord Mayor in his letter went on to state that, with the knowledge of her ladyship's many efforts to promote the well-being of the inhabitants of the East of London by means of the market, he had thought it only courteous to herself to personally be the medium of communicating that resolution to her, and to ask to be favoured with her ladyship's views and wishes upon the matter, rather than that it should be forwarded through the ordinary official channel. In reply to that communication, the Baroness, after acknowledging the Lord Mayor's politeness and courtesy on the occasion, said the resolution of the Common Council was conceived in the generous spirit with which the Corporation, in the first instance, accepted the market. She understood from the resolution that the Corporation, prior to any further dealing with the market, offered to restore it to her, if she desired to resume the possession of it, in the hope that she might be able to carry out her original plans. Her best thanks, she said, were due both to the Lord Mayor and the Corporation for the frankness and courtesy with which they had treated her in making this offer. Inasmuch, she added, as she still had a great hope that she might be able to effect her object, she would follow the example set her by the Corporation, and frankly at once accept the offer of the Corporation to re-transfer the market to her, in order that she might make another attempt to carry out successfully her original intentions. On the motion of Mr. Rudkin, chairman of the Markets' Committee, it was referred to that committee to make the necessary arrangements for the re-transfer of the market to Lady Burdett-Coutts. In relation to Farringdon Market, Mr. Rudkin asked to have the intended site of the new Farringdon Market more clearly defined than it was at present, in order to obtain the necessary plans. He added he had made the suggestion without any intention to raise a difficulty as to the reconstruction of the market. Mr. Horace Jones, the City architect, undertook to give the necessary information. Mr. Lawley gave notice of his intention to move that the resolution as to the change of site adopted at the last Court be rescinded. On the motion of Mr. Rudkin, it was resolved that it be an instruction to the Cattle Markets' Committee to take prompt and immediate steps to obtain from Her Majesty's Government some concession as to the power to utilise surplus space, or a rectification of charges, with a view to diminish the present heavy loss on the cattle markets. Mr. McGeorge said he entirely demurred to the policy as stated in the report of the Committee of letting £17,000 go to the capital accounts in relation to Deptford Market. The Markets' Improvement Committee submitted the fifth annual statement of the clerk and superintendent of the Metropolitan Meat and Poultry Market. The total revenue of the market last year amounted to £51,165, being an increase on that of 1873 of £76. The amount received in 1870 was £49,850; in 1871, £50,554; and in 1872, £51,089. While the revenue showed a slight increase, arising from rental, the total amount of toll (£16,818) had been slightly less than that in the previous year (£17,116), but that was probably owing to exceptional circumstances affecting the supply of meat sent to the market during the year. A sum of £8,082 had been paid during the year by the railway companies in respect of the rent of the substructure of the market. The total weight of meat upon which tolls were paid last year was 151,366 tons. The country meat sent to the market amounted to 83,980 tons, and the town and foreign meat to 67,965 tons. The number of loads weighed was 91,561; the average quantity of meat brought into the market weekly was 2,911 tons, and daily 490 tons;

the *minimum* delivery in any one day was 190 tons, and the *maximum*, being the highest since the opening of the market, 1,095 tons. There was a balance to the good of £6,136, but that result was for the most part due to the payment of rent after seven years' delay by the railway companies. Mr. Fricker, chairman of the Cattle Markets' Committee, brought up a report from them, recommending that they should be authorised to construct from time to time, as might be required, 20 additional slaughter-houses upon ground on the east side of the market, in Copenhagen-fields, contiguous to the Great Northern Railway, at an expense not exceeding £20,000, and to let the same upon lease for 7, 11, or 21 years, at rents varying with the size. In moving its adoption, he said the Court would remember that by the Act of 1844 all private slaughter-houses would become illegal after the end of this year. There might be some attempt to extend the

time of the operation of the Act, and also to continue, with some restrictions, private slaughter-houses in the suburban districts; but, however that might be, there could be no doubt that the authorities would insist on their being closed in the crowded streets of the metropolis. There were upwards of 1,500 slaughter-houses in London, but only 28 in the City, most of which were in High-street, Aldgate. He contended that private slaughter-houses were a nuisance, and detrimental to the public health, and he thought, therefore, that it behoved the Corporation to take some steps in the matter, and to provide suitable accommodation for slaughtering in the vicinity of their cattle market. He then explained the plans for the construction of the slaughter-houses, and estimated the annual income from them at nearly £2,000. Upon the motion of Mr. Bone the debate was adjourned.

THE MISAPPLICATION OF POOR-LAW RELIEF.

Just forty years ago there was a great reform in the administration of the English poor-law. It had been shown by a most careful investigation that the former system of administration was pernicious, that it lessened wages, that it demoralised the recipient, and that it pauperised the poor ratepayers. The time was one of suffering and anxiety; a great alarm was felt, and a vigorous struggle was made to resist the evil. And for a time the amendment was remarkable. All the worst evils were lessened and a corresponding good produced. The authors of the reform hoped that it would be permanent. But, unhappily, since then our prosperity has been great and our fears have been lulled, and in consequence the worst practices of the old law have revived upon us with a rapidity and in an intensity which few are aware of. An elaborate report on the system of poor-law relief in the southern counties (by Mr. Woodhouse, a poor-law inspector) has just been published by the Local Government Board, and its contents will dishearten our older readers, who remember former efforts, and who have little idea how far their beneficial results have passed away. The habit of very general, if not of indiscriminate, outdoor relief—the practice formerly most condemned, and that which was thought to have least to say for itself—has again fixed itself over a wide area and in great magnitude. The poor-law inspector tells us “that the workhouse,” the legal alternative to illegal outdoor relief, “is no longer offered.” “That the workhouse, however, is not offered so frequently as it ought to be, I am convinced not only by the statistics relating to the number of indoor and outdoor paupers, but from my own personal observation of the proceedings of the guardians in this respect, and from the inquiries which I have made upon the subject. It has been stated that the outdoor paupers throughout England are to the indoor in the proportion of eight to one. In many of the unions, however, which I visited the preponderance of persons in receipt of out-relief over those maintained in the workhouse is far greater. Thus, to take the three unions, which in the first week of February, 1871, exhibited the highest rate of pauperism in the county of Devonshire—viz., Tiverton, Axminster, and Honiton: In the Tiverton Union at that date the percentage of pauperism upon the population according to the census of 1861, was 8·5 per cent., in Axminster 8·4 per cent., and in Honiton 8·2 per cent. In the Tiverton Union there were on the last day of that week 111 paupers in the workhouse and 2,544 in receipt of out-relief; in the Axminster Union there were 145 in the house and 1,518 receiving out-relief; and in the Honiton Union the numbers were 90 indoor, against 1,780 outdoor paupers. In the Axminster Union, therefore, less than 8 per cent. of the pauperism was at that date relieved in the workhouse, and in the Tiverton and Honiton Unions less than 5 per cent. Again, taking the expenditure in these unions for the year ended at Lady-day, 1869, I find that out of every £100 expended upon the relief of the poor during that year, £85 in the Axminster Union, £92 in the Tiverton Union, and £93 in the Honiton Union were spent upon out-relief. The presumption raised by these statistics, that the workhouse test is not used so frequently as it ought to be, was further confirmed by my own observation and the information I received on the subject, not only in the unions which I have mentioned, but in a very large number of those which I visited. In some unions the guardians acknowledged that although relief in the work-

house only was offered to persons of known bad character, yet the house was not often made use of as a test of destitution, and in many others in which the guardians professed to apply the workhouse test for this purpose it appeared to me from my own observation of the cases disposed of on the day of my visit that out-relief was granted in many cases in which the workhouse might properly have been offered. At Yeovil the chairman, who had been a guardian for thirty-four years, informed me that in the union the workhouse test was not applied nearly so frequently as was formerly the case. At Plymouth I ascertained that during the six months preceding my visit out of about 600 cases disposed of by the guardians in one relief district, orders for admission into the workhouse were given in fifteen cases upon the application of the paupers, while the guardians offered the workhouse as a test in eleven other cases, in not one of which was it accepted.” Yet the bad consequences of this system are just now what they were formerly. First, it enables the worst class of employers to obtain labour at a much less price than they otherwise would. Mr. Longley, a local Government inspector, who has reported very ably on Poor-law administration in London, tells us of a case “which occurred in his presence.” “A widow, who applied for a renewal of out-relief, stated that her occupation was to clean an office in which she lived rent free, though she received no wages for her work. The relieving officer told the guardians, as indeed was evident, that ‘her relief paid her wages;’ and that ‘if it were discontinued her employer must pay her.’ The relief, however, was renewed.” Secondly, it reduces most the wages of the poorest and those who can least bear reduction. The same authority tells us of a case where “a chairman of a board of guardians, addressing a widow with two children applying for renewal of relief, said, ‘If you can’t earn enough to keep you with what we give you, you must come into the workhouse, we don’t profess to give enough to keep you out of the workhouse.’ In another case the view of the guardians was thus frankly explained to me by one of their number: ‘Relief in aid is our principle for out-relief, we can only give adequate relief in the workhouse.’” Naturally it is female labour, and the less efficient kinds of male labour, which are exposed to this system. Strong artisans do not ask for it or think of it; and the consequence on the class affected, we are told, may be judged of by the following typical case: “A woman states that she earns from 3s. to 4s. per week, and that she pays 2s. 6d. a week in rent; the weekly relief awarded her, by way compromise, will be 1s. 6d. or 2s., and a loaf of bread, upon which together with the balance of her earnings, it is all but impossible that she can exist.” The system fastens on the kind of labour now worst paid, and prevents it from receiving more than the minimum which will support life. Thirdly, we thus encourage thriftlessness and improvidence in ways too obvious to point out at length. Fourthly, it pauperises the poorer ratepayer, for in the end it leads to an expense which he cannot defray. There is indeed an idea that outdoor relief saves money, and there would be an augmented cost if the law were strictly enforced, and if the able-bodied poor were required to go into the workhouse. But Mr. Woodhouse tells us from his experience: “As regards the argument which proceeds upon the ground of economy, I believe that its fallacy may be very readily shown by a simple arithmetical process. This argument

stated in its simplest form, is as follows: A family applies for relief; if they are given out-relief to the amount of four shillings a week, they will be satisfied; if they come into the workhouse, their maintenance will cost ten shillings a week. The economists therefore argue, that by giving out-relief they will save six shillings a week. Now the very same guardians, who have used this argument, have frequently acknowledged to me, that when the workhouse test is offered, it is not accepted in more than one case out of ten. By offering the workhouse then in ten such cases the guardians would indeed lose six shillings a week in the one case in which it was accepted, but in each of the remaining nine cases they would save four shillings, so that their total gain upon the ten cases would amount to thirty shillings a week. I believe, however, that transparent as the fallacy is, this mistaken notion of economy lies at the root of a large proportion of the out-relief at present given throughout the country, and that if the guardians were generally convinced of the fallacy of the argument employed, they would be more willing than they are at present to make a proper application of the workhouse test." In fact, there is a possibility that the due administration of the law may produce a large augmentation of cost, and therefore the guardians will not risk it, though they know that this large augmentation is most improbable, and that general out-door relief is sure to cause much outlay. They fear the possibility of the larger expenditure, but they do not fear to incur the lesser, though its effect is certain, and in the long run it becomes far more. A commercial firm thus managed would very soon have to be wound up. We fear that in rural districts the Union Chargeability Bill is not working well. Mr. Woodhouse reports on this as follows: "There cannot in the first place fail to be instances in which a guardian, well acquainted with the circumstances of some case from his own parish, is tempted to divest himself of his judicial character as a member of the board, and assuming that of an advocate of the applicant, to urge some relaxation of the mode in which the guardians would, under ordinary circumstances, deal with the case. His brother guardians are, in the absence of the pauper, unable to support their own views by questioning him, and ascertaining his condition for themselves, and being compelled to rely solely upon the report of the relieving officer, and the opinion which has been expressed by the guardian of the parish, give way against their better judgment, and assent to the relief which he has proposed. The guardian, whose views have thus been adopted, is naturally willing to assent to the wishes of each of his brother guardians in turn under similar circumstances, and thus, without being consciously actuated by any improper motives, Boards of Guardians are constantly led to depart in practice from what they would in theory acknowledge to be sound principles of poor-law administration. At a meeting of a Board of Guardians, which I attended in an agricultural union in the West of England, I took occasion to call their attention to the exceptionally high rate of pauperism which prevailed in their union, and to several points which appeared to me objectionable in their mode of administering relief. A large number of guardians were present, and in the course of the discussion which ensued, one member of the board stated it as his belief that the large majority of the guardians agreed individually with what I had said, and were prepared to assent to the principles which I had endeavoured to enforce, 'but somehow,' he added, 'when we come to act as a board, we don't carry them out.' None of the other guardians expressed any dissent from this statement, and I have no reason to doubt that it was correct." In former times the paupers of each parish were chargeable on that parish only, and then the guardian for that parish who knew them applied all his mind and all his knowledge to prove that they ought not to come upon the rates; but now the charge of the paupers is distributed over the whole union, so that each guardian only thinks of getting the people of his own parish helped in the way they most wish to be helped, and in so burdening the funds of the whole union, the representative of each parish aids all the others. The only comfort which these reports give us is that the magnitude of the evil seems in some places to be working its own cure. People are beginning to be alarmed at it, and to take steps to lessen if not remove it. In some parts of London a considerable reform has already been effected. By taking advantage of a fairly, though not extraordinarily favourable movement, the guardians of a single union at the East End have reduced the number of paupers receiving out-of-door relief in the following extraordinary manner:

NUMBERS IN RECEIPT OF OUT RELIEF.	
1st week August, 1872	2,584
— 1873	1,366
Decrease	1,218
or 47 per cent. And in spite of this great reduction in the number receiving out-door relief, the addition to the number receiving indoor relief was very trifling.	
NUMBERS IN THE WORKHOUSE.	
1st week August, 1872	720
— 1873	803
Increase	88
which is not to be considered in comparison.	
And the effect on the cost of relief has been equally satisfactory:	
	£ s. d.
In 1st week of August, 1872, the cost of outdoor relief was	164 13 10
— 1873	90 16 10
Reduction	73 17 0
And in the same period the 88 additional inmates of the workhouse only cost..	18 6 8
Leaving a net gain on the week of.....	55 11 2
or 33½ per cent.	

If so much can be done by care and watchfulness at the East End of London, where there are many poor and few resident rich to attend to them, surely more might be done in such districts as the West End, where the rich are comparatively many, or in the rural districts, where the poor are comparatively few.—*The Economist*.

RIPON AND CLARO AGRICULTURAL SOCIETY.—At the show held at Ripon, the only class in which there is a falling off is Shorthorns, several of the most noted exhibitors being absent. A special prize of £10 for the best bull of two years and upwards was gained by Mr. William Linton, Sheriff Hutton, York, with Sir Arthur Ingram; and the second by Bismare, another animal of Booth blood, the property of Mr. George Yeats, Studley. In Shorthorn cows and heifers a special prize of £5, given by Mrs. Staively, was gained by Lady Louisa, a white animal, of three years and six months, the property of Mr. T. H. Hutchinson, Manor House, Catterick; and in the same class, Dairy Gid, a roan the property of Mr. Hutchinson, was second. For the best heifer, in-calf or milk, under three years, and for the best heifer above one and under two years, Mr. Hutchinson also stood first with two roans, Lady Playful and Wild Cherry. In the classes for cattle of any breed, or a cross, dairy cows were a fine class, so much so, indeed, that the judges commended the whole lot. Among the horses animals for agricultural purposes showed a great improvement on former years. Much greater attention appears to have been given to the breeding of these horses, and one of the judges considered those exhibited as one hundred per cent. better than those shown on previous occasions. The two and three-year-olds formed the most noted classes. A prize of £10, for the best hunting gelding or mare of any age, was gained by Jester, the property of Mr. T. H. Hutchinson; and a special prize of £10, for the best four-year-old gelding or filly for hunting, by Anontillado, the property of Mr. T. H. Foden, Givendale Grange. The judges were—For horses: T. B. Colton, Newark. E. Hall, Burton, Darlington; J. Johnson, Brigham, Hull; and G. Cooper, Woolley, Wakefield. Cattle: R. Botterill, Waulaby, Brough; and T. Wetherill, Claypath, Durham. Sheep and pigs: T. Stamper, Highfield, Oswaldkirk; and C. Wright, Oglethorpe Hall, Tadcaster.

IRISH CATTLE IN SCOTLAND.—So long as the surplus store cattle of Ireland come so unrestrictedly over to England and Scotland, the endeavours of local authorities to extinguish the disease are not likely to be crowned with success. Unless uniform and stringent measures are adopted on both sides of the Irish Channel, a clean bill of health will be difficult, if not impossible, to obtain. It is within the mark to say that about 90 per cent. of the Scotch outbreaks are more or less directly traceable to the importation of Irish cattle.—*The North British Agriculturist*.

THE ROYAL AGRICULTURAL SOCIETY OF ENGLAND.

MEETING AT BEDFORD.

Bedford is a circular course; a dead flat and good turf, about two miles from the town—So runs the official description as taken from the pages of WEATHERBY. But Bedford race-course has now been turned to other uses: it is just eighty years since a Duke of Bedford gave a fifty-pound plate for three-year-olds, which has been continued up to the present time by his successors at Woburn Abbey. The new Duke, however, has determined to withhold this annual grant, and the Autumn meeting as something of a consequence has fallen through. The very stand has been converted into a show manufactory, and the local sportsmen who were wont to do battle here for hunters' staks and farmers' cups have turned their thoughts, like the course itself, into another channel. A Magniac shows a Shorthorn heifer, a Purser a Shire filly, and the Queen's Plate, for which there can be now no call over the allotted three miles, should be transferred to the horse-ring.

As we were enabled to intimate from the ground in our last paper, the number of entries is in some marked excess of the head of stock actually sent on to the show. Indeed, in some of the sections, or more especially amongst the pigs, a large proportion of the pens were vacant; as, if we are to believe all we hear, the Royal pig competition is for a variety of reasons a feature which is fast growing into a disgrace to the meeting. No needy "leg" ever played such tricks on Bedford race-course as were played during the past week, and if the Council will hold its own it must not be content with periodical disqualifications, but at once institute an inquiry with a view to the more thorough reform of an abuse of which everybody but the direction would appear to be cognisant.

Still, in other places the front offered from the first was not a very bold one; and, as we stated last week, the Herefords and Devons are a short show, as also are the Sussex; while the Eastern Counties' red polls, despite the spurt of the new Herd Book, do not mark much advance in the show-ring. Considering the recognised worth for "general purposes" of the Hereford, the demonstration was at most but moderate, the competition, on an average, not exceeding six or seven in a class, with much of "the quality" but a twice-told tale after Bristol. Thus, Winter-de-Cote, Von Moltke 2nd, King of the Dale, Tredegar, Sunflower, Rosaline, Lady Stanton, and Verbena stood prominently on the prize-list as they previously had done, although occasionally with some little revision. The most noticeable and, to our thinking, the least justifiable of these changes was now placing the low, lengthy, and charming Sunflower below her companion Rosaline; while the well-known Lady Milton separates the Glamorganshire pair. This may be perhaps best explained by the fact that Sunflower has calved since Bristol, and so, what with her travels and travail, has naturally lost some of her bloom; but for fine, true cow character Sunflower is still the best of her class. The tendency is to go too much for mere flesh in a show Hereford, as this was very marked amongst the bulls, some of whom, with the winner Winter-de-Cote amongst them, looked to have fed and thrived beyond any very active service. Old Bachelor, short of coat but otherwise wearing well, again, got into position amongst the all-aged bulls; but the class only ran to four all told, as the other prize was but a foil in such company. The second Moltke has already quite gone behind, and King of the Dale is growing into a plain but useful bull; while

the third from Usk way is of nice quality, and Mr. Taylor's best yearling, with a deal of liberty, out promises to make more mark in the ring, if in the interim they do not kill him with kindness. Saving these two, the class was not very strong, but there were two or three smart things amongst the bull-calves beginning again with the stylish "breezy" Regulator. There was only one two-year-old heifer sent, and she won as previously, mainly from want of competition; as with Mr. James not in the entry, Mr. Philip Turner's brace of yearlings followed each other as in the West; but we again sought in vain the Leen beauties, Exquisite and Satellite, and anywhere the show of Herefords in the Midlands was not so good as it should have been when we remember how the steers thrive in the Shires.

The Devons furnished a decidedly more insipid exhibition, as they have lost the master mind at Flitton Barton, and the repute of the once famous North Devon has clearly fled from the home county, by which in eight classes only one first prize was retained. Mr. Parthing, in fact, occasionally against the scantiest opposition, did very much as he pleased, as he was first in the four bull classes, and first and second for two-year-old heifers. Master Harry and Robin and Kingcraft, and the Davy Dukes are household words over whose merits or doings we do not care to tell thrice-told tales; nor are the Dorsetshire Pictures nor the Buckinghamshire Roses hardly less known about; but any such repetition was relieved in the commended class of yearling heifers, where Mr. Perry from Lewdown won with a particularly neat one of his own breeding, Her Majesty, Lord Falmouth, and a Moss Rose giving emphasis to such a victory. The heifer calves were also generally commended, with the Bristol first still first, but with Mr. Smith exhibiting another Picture as the second prize. In the companion class the Stowey Disraeli, very promising and blood-like, was the youngest calf in the class, beating the best of Bristol; and no question amongst the younger animals there was a much-needed infusion of new blood, which did something to relieve the Bedford show of Devons of a certain tameness and sameness consequent on encountering a few animals over and over again:

Now Munster beat Worcester—
Now Worcester got first, sir.

The Sussex entry was not so strong as it should have been, an occasional miss or jump in the catalogue showing that some exhibitors were already satisfied: the best cow at Bristol was not shown, and the Stanford's cow which beat her at Reading, was here only highly commended, the winner cropping up in old Colley. Then, the best bull at Bristol was now merely the reserve, without even a commendation, and the then second was here first, and so forth; the two "odd" judges only holding to the previous line over the heifers, where they again placed Auburn first and the Heasman's Marie Stuart second; as of Bristol we thus wrote: "the champion of the Sussex was Mr. Agate's level, blood-like, and really handsome two-year-old, the first yearling at Plymouth, and surely something of a model to improve by"; as since then Auburn has been the only Sussex which has kept her lead on the showground, so that the title of Champion was not much out of place. If Mr. Pitcher represented the red horns Mr. Overman took his nomination for the red polls, of which in all there were about twenty exhibited, with the competition mainly coming

from Norfolk and all the prizes confined to that county. Drawn from their standings to a hole-and-corner ring, which few people ever found, or tried to find, the public appraisal of this breed of stock created little or no interest, if we except only amongst the exhibitors themselves or their stewards. In truth, with a keen instinct as to popular tastes, the directors so mapped out the ground that the Herefords, the Devons, the Sussex, and the red polls were all put into the shade, while the Shorthorns and the Jerseys took up their positions on the very highway which stretched across the course from the entrance to the horse-ring.

Still fashionable as is the Shorthorn, it is certainly remarkable how carefully the more fashionable herds keep clear of the showground. Mr. Booth has retired, and Colonel Gunter has retired; how long is it since that Grand Duchess was exhibited? and, although Lord Dunmore did once show a heifer or two, his lordship's experience in this way seems to have agreed pretty much with that of the man who was married, who thereon declared that he would never do so any more. There are highly-bred animals led into the ring no question, but the stranger who expected to find here anything of the two or three-thousand-guineas sample would have looked in vain alike through the prize list or the catalogue. Mr. Booth was about the last of the great herd-owners to withdraw, and since then it is only fair to say that we have never seen a Lady Fragrant. Nevertheless, or rather as the very legitimate consequence of great sales and great shows, the improvement, as tested by pedigree, has gradually become very manifest at these annual expositions, for blood is now as essential in a Shorthorn as in a race-horse; and, moreover, he must show much of this in his frame, air, and character. So well, then, did the show of this famous breed open at Bedford that the judges were enabled to generally commend the class of old bulls, which included such well-known animals as Telemachus, Lord Irwin, the Earl of Warwickshire, Duke of Aosta, Duke of Wetherby 7th, Leeman and Protector. It took a deal of time to get through the fourteen or fifteen bulls thus paraded, although from the first the race seemed to be between three or four. Of these, the young bull Aosta was much liked, as he has gone on famously, and if not perfect over his quarters, has a good, high-bred bull's look about him, backed by a capital touch. The Knight Templar also showed well, and Leeman, despite the way in which he is occasionally put aside, is an animal of some "presence," with really useful quality. The judges, however, went for their first prize to another of Mr. Linton's breeding—the white Lord Irwin, a wreck of what he was; all odds-and-ends, short in his coat, and sadly lacking style and nobility in his appearance. At five years old he never looked worse; whereas at six years old Telemachus has seldom looked better, having now quite recovered from his illness, and showing to far more advantage than he did at Hull. In fact, as a true-framed, really handsome bull, not over-marked, Telemachus is just now something of a model Shorthorn, and the judges accordingly put Lord Irwin before him! The white may overshadow the roan in mere size—but that is not much of "a point," in a bull—or ragged, rusty, and lathy he thought more fit for use; but by any proper comparison between two animals it was as unseemly and as unpopular a decision as ever was announced. Telemachus first and the Duke of Aosta second would have been a deal better received. Of the fourth-prize Protector we said when he won so unexpectedly at Bristol that "in or out we seldom saw a bull show himself worse: he has a dreary, hang-dog look on parade, and stands as ungainly as can be in his stall. Indeed, he lacks not only style but masculine bearing, and is just a good bit of beef with a broad back and finish quarters, but mean and drooping

forward." It is doubtful whether Protector had really any claim to stand as high as he did at Bedford; but then one of the Bristol judges came on with him.

The two-year-old Shorthorn bulls were a moderate lot, with a number of plain animals in the class, and nothing very extraordinary in the way of contrast. As showy a bull bull as any out was the third prize, Oxford Cheer-boy, of good length, and with a certain smartness of carriage nicely set-off by great liberty of action, which every animal ought to have. The winner, Sir Arthur Ingram, has improved since we first saw him this season, and has a more comely look, but he will never be a very taking bull, and his quality is still his chief merit. The third, housed at Panton, but bred at Aylesby threatens to grow coarse, especially about his head and horn; but there was not much more to pick and choose from. The yearlings, running up in the entry to close upon thirty, were far better, headed as they were by the bull of his year, Lord Godolphin, who had profited much by his few days' rest at Biddenham, and came out again quite fresh, so that his place was a foregone conclusion. He is a very charming, if rather airy bull, but all over a gentleman, to whom the useful Prince Rupert finished but a moderate second, although he fairly beat Rapid Rhone, put above him at Bristol, when we questioned the soundness of the decision. In truth Lady Pigot's young bull is already growing so faulty that his right even to third-best was disputed by one of Mr. George Garne's breed which was making its mark here and there at Bedford. This class was remarkable in one way for the number of yearling bulls bred in or on the borders of the county: by Mr. Fowler at Ilenlow, Mr. Barnett at Stratton, Mr. Wythes at Ravensden, and Mr. Sartoris at Rushden; but the Bedfordshire Shorthorns could do nothing at Bedford. A large class of bull-calves will probably do a deal more harm than good, as showing calves ranks very much with running two-year-olds; for though a few may wear through the process far more are ruined in the preparation. Colonel Lindsay's Lord Ruckville, as at Bristol, was still the prize baby, against stronger competition.

In consequence of Victoria Victrix not having had a calf within the twelve months, she was disqualified, although due to calve in a few weeks; and thus any further contest between her and Vivandiere stands adjourned to the All-Yorkshire show at Sheffield. A deal of the interest in the cow class further evaporated, by the many entries absent, Mr. Foljambe "scratching" his nominations; although Mr. Outhwaite had still to encounter a number of not quite first-class animals like Her Majesty's Cold Cream, Lord Exeter's Moll Gwynne, Mr. Hutchinson's entries, and one or two more from the Strattons. The second best, however, turned up in a pretty milking kind of cow, but getting gaudy behind, from Mr. George Garne's herd; with another nice dappled roan bred by Mr. Hutchinson for third, the white from Catterick being too big to travel far. On the whole, it was a still a comparatively large rather than a particularly good class of Shorthorn cows.

"In the heifer class, Lady Pigot's red heifer, the famous Rose of Wytham, has been overdone, and, as she threatened last season, is now showing coarse, steery, and lumpy; so that she was well beaten by Messrs. Hosken's white, a straight symmetrical Oxford, showing rather light and lathy from having been a deal about of late, first at Barnstable in one week, and not only first again but the champion cow or heifer at St. Austell in the week following, and that immediately preceding Bristol. At Barnstable our report, written by an accomplished Shorthorn breeder, declared that 'in the heifers not exceeding three years old Messrs. Hosken exhibited a perfect gem—thick, mellow, tubular, and worthy of competition

anywhere,' as again, our special correspondent at St. Anstell, another Shorthorn breeder, said ' Moss Rose takes the cup as the best female in any class of cattle, and a charming heifer she is.' So that she goes on to Bedford with a character, not merely from about home, as she also beat here Baroness Conyers, the third prize to the Rose of Wytham at Hull, and now growing into quite a grand heifer, with a fine straight top, as considered by many the best of the class, which included two or three more smart things." It was thus that we wrote at Bristol a month or so since, and now the highly-commended heifer is placed first, and the then first only highly-commended; another example of Mr. Aylmer's inconsequential impartiality, as he did not appear to be making any great stand for the white at Bedford. With more scale Baroness Conyers was perhaps properly preferred to the Cornwall Moss Rose, but that so elegant a heifer as the white can be beaten again, just for size and coarseness, by the third or fourth prizes here, we do not believe; nor is there much to fancy in the flashy Irish heifer put second. If they all go on as they are going now, the transplanted Moss Rose will have her revenge, and yet do something for Bedfordshire.

Amongst the yearlings another Wytham was put out in favour of Lord Sudeley's improving Seraphina, although neither of these nor Mr. Statter's Moss Rose could make any stand against the Dorset Queen Mary, by Grand Duke of Oxford (28763), out of Queen Anne, by Lord Stanley 2nd (26745), still the champion Shorthorn of the time, if, as with the Sussex, a somewhat peculiar title for a heifer to maintain. There were two or three well-merited commendations in the class, but these were nothing to an animal which has already beaten Telemachus, Vivandiere, Victoria Victrix, Lord Godolphin, and Baroness Conyers on their merits. The heifer-calves have been put about again with inconsequential impartiality; but it is a significant sign that but few herds of any great eminence are represented here; and, as at Bristol, we question whether the lot will prove worth much hereafter. Colonel Lloyd Lindsay, however, holds these two small trumps—the best bull-calf and the best heifer-calf—in his hand.

Last year, and if we remember aright for some years previously, "the cattle of any breed" were specified to be cows and heifers "for breeding and milking purposes;" but the conditions have now been revised to cows and heifers "not eligible for entry in any Herd Book." We cannot say that this alteration is on the face of it an improvement, but rather an innovation opposed to the first principles of the Society. Cattle without pure pedigrees or mere crosses should not be recognised at our great national breeding show, where in any such extra classes the aim should be, as it was originally so intended, to encourage or to direct more attention to the development of milk-producing properties. With no such instructions the levellest-looking or best got-up win, and all the prizes in the two classes went to Shorthorns, some with high-sounding pedigrees attached to their names; whilst amongst the others opposed to this breed were crosses, Ayrshires, a Kerry, and a Jersey. It would be instructive to hear the grounds upon which the judges—the two odd men—arrived at the conclusions they did, and whether they took milk into much account? There is quite a sufficiency of beefy cows and heifers amongst the several breeds as so arranged, and these extras under the new arrangement are labouring under a mistake. Such classes would seem to have no purpose whatever, unless it be the inducement to drop half a pedigree or to substitute a pure-bred for a cross-bred. On the turf nothing ever led to the practice of so much petty rogery as cocktail racing, or, in other words, the introduction of stakes for horses *not* thorough-bred.

"There is a great entry of Alderneys," as we reported

from the ground on Monday last; as, in fact, for numerical strength the Jerseys are far away before the Devons or Sussex, as they count up to more than even the Herefords, although competing only in three classes against eight of the "established breeds." The merit, moreover, is proportionately great, as was demonstrated not only by the many proved good animals in the ring, but by the prizes going occasionally clean away from such famous herds as those of Messrs. Gilby, Simpson, Digby, and others. Thus, in the bull class the best of all was declared to be a grey two-year-old from the neighbouring herd at Luton Hoo, but *island-bred*, as by the best bull in all Jersey of a season or two since; and Fitz-Yankee looks his lineage, being full of style and courage. The second prize is of Mr. Simpson's sort, from which herd the well-known Crocus was placed third; but amongst the heifers Mr. Leigh again came to the front with a fawn, bred at the Hoo, very ladylike, straight, and taking, while Duchess was the preferred of Mr. Gilby's team, the judges further holding much to their reserve, Lord Braybrooke's Flame, the heifer of which we spoke so highly when she came out the other day at Stratford. Messrs. Simpson and Middleton were here doing their best, although the great show of Jerseys, the best perhaps ever seen in this country, was that of the cows, which was so good that it might have been reasonably and fairly commended. There was almost everything in it but old Milkmaid, which Mr. Gilby had entered amongst the other breeds, though he was still strong enough to take first and second in "the best of all good company," as the prize list will tell of Duchess, Medora, Tal, and Pretty Maid, further backed by the reserve, Mr. Morton Shaw's grandly-framed old cow, quite in show form, and, if anything, going too much to lead. The entry ran up to twenty-five, with Mr. Leigh, Lord Chesham, Mr. Ramsden, and Lord Braybrooke here making no mark. The decisions, it must be said, created a deal of discussion, while the judges themselves will make a formal protest through their report to the objectionable practice of "s'locking" the cows' udders, of which there were many cases at Bedford. There was, however, no colouring amongst the Guernseys, of which Mr. Watson was the only exhibitor, Lord Vernon's capital Jersey bull having been entered by mistake as a Guernsey; or against his own breed Billy might have done something. With many Jersey fanciers springing up, Mr. Gilby would be still much missed, although his herd may be dispersed should he leave Stanstead, as is now threatened.

Admirably arranged were the shedding for the horses and the three rings for judging and showing off their paces, while nothing could be in better taste than the stand, which was open from end to end at the same fee to the "dook" and the "mook dook." And this went a great way in making this part of the show so much more pleasant than dull, as when people are penned off like other breeds, which at an agricultural show, where landlord and a distinctive tenant are supposed to meet in friendly competition for the good cause, is almost as ridiculous as the introduction of caste into a cemetery. Great credit is due to the two Centaurs, Messrs. Leeds and Milward, for the manner in which they performed their onerous duties; but still we think the Royalists ought to set an example to other shows, as they need it, by fining the owners of skulking grooms who shuffle out of the parade: while one steward could not resist a practical exhibition of his sense of the ridiculous, by actually jumping up behind Mr. C. Wilson when on his grey cob, which, with two to one on him, entered round the ring! The melodious strains of the Arcadian nightingales, assisted by the mules, seemed to be the call of the roll, for during their trumpeting the thorough-bred, roaster and agricultural stallions marched into separate rings. The entry of

horses was one of the largest the Society has ever had, numbering 404; but of these there were several absentees, and we think the 384 at Manchester in 1869 a better show at least of thorough-bred stallions and hunters.

In fact, the thorough-bred stallions and hunters have fallen away, and we do not wonder at it, for as a rule the judges, like greedy little boys among the tarts, pounce upon the largest, and the owners of the right sort get disgusted; while tip-top hunters, well known in the Midlands and Yorkshire, have not stood a chance with some sleek, fed-up, heavy machiner, or gay, peacocky flatcatchers, which never did a day's work or saw a fence, because the tried good ones may have had a scar or two, or showed the effects of work, or thorns in the legs. If this is the way to encourage the right sort, we might as well choose our commander-in-chief by weight, and make generals of every man-milliner, so as to induce men of spirit to enter the army—or rather to keep out of it. There were seven thorough-bred stallions—viz., Christmas Carol, twelve years old, by Rataplan out of Mistletoe, by Melbourne, a deep compact-made horse, whose grand quarters, great thighs, and beautifully-placed hind legs almost make up for a tendency to take after his sire in the shoulders; but he went fumbling to what he did at Carliff, where he was second, as he was also to Gladiateur when nine-and-twenty started for the Derby, where he struck us as a remarkably nice stout-built horse. If Laughing Stock, by Stockwell out of Gaiety by Touchstone, had quarters, thighs, and hocks like Christmas Carol, and as well placed, with deep well-laid shoulders instead of short Touchstone ones, and his sternum below the elbow instead of above it, with longer arms and shorter cannon-bones—and if he struck out from the shoulder instead of that up-and-down pump-handle business which comes so natural to short-armed horses,—we might fall in love with him as a hunter stallion. Citadel, by Stockwell out of Sortie, is a great horse, but too long in the back while Masinissa, a nice-sized nag by the Flying Dutchman, out of Calpurnia by Ion, was preferred to him by some judges from a county which has gained greater fame for calves than horses. King John by Kingston, out of Dinah, by Clarion, is very handsome, and free from lumber, with capital loins. He looks like a gentleman, and when four years old was as gay a stepper as we ever saw. Some judges who have acted in the ring would have put him first, but it would take a side of the paper to put down the different opinions. Stockdale, by Stockwell, out of Hesse Homburg, by Robert de Gorham, and Thunderer, by Thunderbolt, out of Homily by Surplice, are not likely to increase their owners' store in the show ring; though still, we remember Laughing Stock as leggy as the chesnut, but Thunderer has not the flash, flat-catching, pump-handle action which may be attained with a lunging rein, sand-bags on the feet, and logs of timber placed three feet apart. Lessons daily! In a good class of hunting brood mares, the well-known prize mare, Lady Derwent, took first honours, seconded by Lady Line, which was not so great a favourite with us as The Wren, well known in Lincolnshire, or Mr. Spraggon's Jess. Mr. Horrocks Miller's Flora is a nice mare; and the well known Go-ahead as a prize mare was also among the lot, but she has seen her day in the ring. The two-year-old hunting fillies were not grand, and we preferred the second to the first. Tom King, in a little better class, is a good looking two-year-old gelding by Dalesman; and Mr. Westley Richards' gelding by Knight of Khars, very neat, with a hunting forehead. Mr. H. Miller's Victor II. has legs, and is more likely to gain a name in the Cocksire Cavalry than as a hunter, as for that he wants more of the cut of Mr. Cooper's Lord Liverpool. Ebor Witch, the first three-year-old hunting filly, is a strapping one, while the second, Honeydew, showed breed on a

short leg, and Sabina useful looks with action. The three-year-old geldings were headed by Sober Truth, a mover, and second at Alexandra Park; the Black Prince, which beat him, there being in the catalogue but "a *non est* man." Lord Spencer's chestnut by Dalesman, is quite a chip of the old block; Mr. J. Booth's Berwick deep-topped and up to weight, and Mr. H. Miller's Victor showing blood, but Mr. Chas. Cooper Hayward, on Wellington, did not remind us of the Iron Duke's varmint seat. There were three decent hunting four-year-old mares, and as many prizes: the first being a deep-topped one by King Christian; the second, Rosebud, very nice, with breed; and the third, Magic, with good hind-leg action. The four-year-old geldings, numbering sixteen, were a very fair class, the winner turning up in King of Diamonds, a second in the London district. He is an even-made, short-legged horse with a plain head, and his hind legs too far away from him. Cornishman—a gentleman to look at—galloped quick and even round the ring with his groom; but Mr. Jacob Smith, a good horseman, did not get the handling of his mouth, as he never went a yard while the judge was up in any paece. How often have we remarked that it is impossible for the finest horseman to get on friendly terms in a short time with some new mounts! and how long would a dealer's man hold office had he made such a show for a master! Yet, when talking about the nags to some judges, who for their country's sake and the breed of horses we should not like to see joining in polo, and still always feel more comfortable when they are on terra firma, they who wind up with "Ah! but I've ridden him." Reindeer, a long light one of Mr. True-man Mills, galloped in style with a reaching stride; and Mr. Horrell's Emperor, a neat, compact little horse went in a way to make one think it would be a pleasure to own such a nag; Mr. Hutchinson's Breakaway could move, and with breed was a very showy gentleman; while Mr. Westley Richards had some neat blood-like light weights in this class, and Mr. S. Jefferies' Black Prince, Mr. W. Bradburn's Gunstone, and Mr. C. Hayward's Richelieu were worthy of notice.

By the looks of those up in not an extraordinary class of five-year-olds we should say they could not see the joke of giving the Jester the red ribbon, though a first prize horse at Harrowgate, who also beat Joe Bennett at Alexandra. The second, Yellow Jack, is a tight-made hunting-like horse, and the third a capital goer, as a nag to be desired, being full of blood, the property of Mr. Westley Richards. Of his highly-commended, Weston, we are sorry we cannot speak in the same strain, as he is a fearful disher and if you look at him from behind, his fore-feet are at least a yard and a half apart. Mr. T. Percival's Dolly Varden, Mr. T. Battams' The Baron, Mr. R. Horrell's Gay Lass, and some others were worthy of notice; while Ruby, from Theford, was not to be daunted by his mishap at Islington. The five-year-olds and upwards were good, The Baron being a compact clever-looking horse, without lumber; and Rufus, also from the same stable, was a very nice stamp of horse, and we think the best goer, but Mullingar is a nice-made one, and a good goer; he has a good length of pastern, which some people consider an advantage to a horse, as they are generally very pleasant riding; but his pasterns are not near so long as Landmark's, the great prize-taker of a year or so back. Mr. Hutton's Iron King, a second weight-carrier at Islington and ridden by the judges, had no luck here or at Alexandra. Mr. Armstrong's The Banker was in the catalogue, but not present, as his owner parted with him at a good price, after a successful career in the show-ring.

This year there were no prizes for pony stallions,

although there were some for mares, which we think a mistake, as we do not see how the breed is to be encouraged without the stallion. Sir George, a constant attendant at the Royal, and a pony which we have so often described as a model, is well worth the £15 to show people the kind of nag required, and though there was no pony stallion prize, Mr. Wilson was not stalled off with four first Royals, and so entered him in the hackney stallions, and to his delight his fourteen hands of horseflesh for which he has refused £500 was king of the lot! looking like a pocket Hercules even by the side of the Great Gun, the Orson of roadsters, of which Sir George is Valentine. Mr. Lepper, the well-known veterinarian of the Vale of Aylesbury, was second with Rapid Roan, a refined specimen of the Norfolk roadster, and a grand easy goer, a nag pretty well known in the ring some years back, and once first at Islington. The third was a neat chesnut from Hasketon; and as there is a strike in that part of the country, we should think the Major had imported his groom from Holland. Mr. Branwhite's Defiance, Mr. Balderston's Norfolk Hero, Mr. Lockhart's Dick Turpin, and several other well-known show horses were in the gathering. There was a small but good class of hackney mares with foals; and Major Quentin, so well known in the lists, was declared the champion knight in a capital muster of hackney mares and geldings up to not less than 12 stone with Sparkling Moselle, a very high-stepping park hack, whose hind-leg action scarcely corresponded with that of her fore. Mr. Stephenson's Princess, a very stylish-stepping dark chesnut mare, which was second at Hull last year, and third at Alexandra Park this year was second here, while Mr. F. C. Matthews's handsome brown mare Ozone is a first at Hull, unnoticed at Islington, a queen at Alexandra, and nobody at Bedford. Does the mare lose her action at one place and gain it at another? or is it simply the freedom of opinion which we love so much? although that miserable poltroon, Mr. Toady, says, "It's absurd to differ with the judges," or, in other words, we should have a blind belief in everything. The third prize, Maud, was a very nice mare, and so was Ladylike from the same stable, as we noticed in our Essex report. Then Mr. Hornsby was represented by his stylish-stepping grey Ballet Girl, Mr. Spraggon with Duchess of Tyne, Mr. Purser with a three-year-old chesnut, Polly, and Mr. Day with Rockross.

In the hackney geldings or mares up to not less than 14 stone, it was "enter prize" when Mr. Harvey Bayly's thickest clever horse came into the ring, Mr. Frisby's old mare Filbert playing second, and Mr. W. Richards' nice black third, with the merry-going Kitty of Mr. Groul, the well-known dealer of Woodbridge, commended. There were two nice lots of ponies, the battle in the first lot being between Princess Louise and Princess Polo, well-known on the London circuit; the first, a very clever roan, and the second, a nice stepping iron grey, spoilt by a hog mane; while the third, Kingfisher, is a very showy, thick-set black.

One hundred pounds given for jackasses and mules, and nothing for stallion ponies! while the only benefit we derived from an inspection of the shaggy strangers was to make everything else appear more beautiful, and to be grateful that we lived in a country where such monsters are not required. Is it absolutely necessary that the ass for agricultural purposes should be the ugliest and dullest-looking brute to be found in creation? or that a cart-horse must have a large coffin head and a small pig eye, to make him docile? for in the noisy streets of London we see hundreds of nags that can do their twelve miles an hour with neat heads and a full, intelligent eye, driven up to customers' doors, all of which, with the exception of tossing their heads up and

down, showing they take a delight in the business, stand quieter than jackasses. In fact, there is no darkness but ignorance, and the more dull the animal the more difficult he is to manage; as we hope, when compulsory education gains a footing, that these old prejudices will be things of the past.

The agricultural horses made a strong show, but some of the decisions caused a little astonishment, not that we find fault with the judges for giving an unbiassed opinion, but rather admire them for it, right or wrong, as there is nothing so bad as a follow-my-leader bench, and nothing can do more injury to the good cause. Among the two-year-old agricultural stallions not qualified to compete as a Clydesdale or Suffolk, were some useful horses, Grand Prince, first at Cambridge and Essex, being a well-built horse, but Mr. Golden's Champion was light in his thighs, and Mr. Russell's dark bay not much to look at. Mr. Hipwell's red roan is nicely made, and Mr. Sander's Active very properly named, and a good stamp of light cart horse. A very grand class was the agricultural stallions, foaled before 1872, not including Clydesdale or Suffolk, where that model of a cart horse, Le Bon, and well-known rival of Honest Tom and Young Champion, of Stand Hall, was soon drafted, as was Mr. Stokes' Young Champion, in which we quite agree, and said as much in our notice of Alexandra Park, where he was first, Mr. Statter's Champion second, and Le Bon third; while Pride of England at the Park is highly commended, but not thought worthy of it here, and the commended King Tom at Alexandra comes in for third honours at Bedford. Such is the change in events in one short week. Yet it is absurd to differ with judges! The first youngster, Heart of Oak, preferred to the old horses, is a very fine-grown, good-looking three-year-old, bred by Mr. Foster, of Brooklands, Cambridge; and King Tom, also by Honest Tom, which was bought for £20 as a yearling, is a nice light, active colt, and the second two-year-old at Hull. There were many, very many, really nice horses in an entry of twenty-five, and if the judges had commended half of them they would not have been over gracious. The two-year-old Clydesdale colt was a level, short-legged animal, but his opponent Prince Arthur, the property of the Queen, was sent empty away as having no merit. Who shall say this is not a free country? Young Lofty, once the pride of the Clydesdales and the show yard, and now in his thirteenth year, does not look so grand, as he has begun to fade, as many country stallions do long before they get to that age. But we cannot always be young and gay, and his good looks have gained him some enemies, he and Sensation, the grand stepping grey, being the great aversion of one judge who breeds cart horses remarkable for their heavy sack—full looking tops, the weakest of thighs, short-horn forelegs, and infirm feet—flatcatchers in fact—Three years in succession, the Duke, a seven-year-old Clydesdale, well made, and a mover, takes the second honours against four others. The Suffolk two-year-olds were good with about ten of them. The Templar, a big colt, has the old-fashioned shoulder into the neck, and heavy at the points, with all the weight thrown forward, so that he appears to be always industrious whether in or out of harness, standing at ease or lying down. It may be the right conformation, but we always fancy a horse made so looks more like going on his head than going a-head. The second is a handsome colt, while another of Major Garrett's is a promising one, which we spoke favourably of in Essex, though only commended here. Defendant is a smart nag, and Mr. Byford's reserve could move. The Suffolk mares in foal or with foal at foot were a good class, and they pleased us better than the entire horses; while in the mares of any breed, in a small class the chesnuts played

second and reserve to Mr. G. Street's good-looking roan, Cardiff Lass. There were three or four nice two-year-old Suffolk fillies, one being a bay by Mr. J. Rist's Emperor, which Mr. Derham of Hazlewood, Southgate, says is a pure-bred one. There was a grand class of mares in-foal or with foals, the first being the well-known Lincolnshire Royal Duchess, and the second the quite-as-well-known free-stepping roan Beauty of Bedford, who was second in this class at Cardiff to Mr. Crowe's Smart, and again at Hull, in the same place, to his Flower, where she beat Royal Duchess, which was third. Honest Lass, about which there was such a to-do at Ipswich, as first in Essex, where Royal Duchess was highly commended, is the reserve number here. But if we keep on shifting them about in this way, we shall get into a muddle, so leave it to the next bench to decide which is the best. Diamond, a black cart mare for which we have often said a good word, is now the property of Messrs. James and Frederick Howard. A fair show of Clydesdale mares was headed by the celebrated Mrs. Muir, the late Mr. Muir having bred her. We do not quite see the joke of christening horses after the breeders and their wives, or those that might have sold them, as if jackasses and mules come into fashion, naming them after people who brought them into note, might give offence. There were two or three yearling cart fillies of any breed, a capital class of two-year-old fillies of any breed, the first and second being very good, and the third rather leggy; Mr. F. Street's highly-commended Smart, having a deep top with power, and Mr. Stamford's Belle, was very nice. The geldings of any breed, three-year-old, had Dragon, a very good-looking grey cart-horse, and Drayman might be more suited to the dray; while the third was the very useful, active Roger, of Messrs. J. and F. Howard. This firm had also a very handsome pair of agricultural horses, Colonel and Captain, which backed Mr. Charles Howard's very useful agriculturists, though not quite a pair, beat some of the most famous show horses in the kingdom, including Sensation, which has regained her action, and was highly commended, Warwick, Tommy Dodd, and several others. As there were three rings going at the same time, it is only fair to say it is very probable that we, like the judges, have left many a good horse unnoticed.

Immediately after the Hull meeting we insisted on the desirability of an occasional change in the composition of the Shropshire bench of judges, as that even Shropshire breeders might be in turn selected for the office; and at Bedford accordingly two judges were taken from the home county—the first time in eight years that a Salopian has been appointed. It is satisfactory to say that with a deal to do, for the shearing class was a bumper, the work has been rarely done better than by Messrs. Evans, Cureton, and Coxon. We heard of few mistakes, and we found none. Lord Chesham's first prize is at all points no doubt the best sheep they ever turned out at Latimer, as with plenty of high-breeding he shows more thorough Shropshire character than some of the "neater" rams which have figured in his Lordship's name on the prize list. For looks, mutton, scale, and wool, the great-grandson of the Duke of Manchester is equally admirable; although the flock went further for size and weight with a coarser sheep which reached to 18st. 5b., whilst one of Mr. Pilgrim's shearlings beat this by one or two stone. Messrs. Mansell's second prize is a particularly handsome sheep, beginning with a good head and lively eye, and altogether a very smart ample of the sort; while the Shrawardine third throws back a bit to the older type of Shropshire, and is full of useful qualities, but Mrs. Beach's reserve is but a moderate one, and far better have been reared at the Hattons. Indeed, after drafting out some incongruous lots, here

and there with faces as black as thunder, there were still many good rams to dwell over, such as those shown from that fast-rising flock in Herefordshire, if Mr. Pulley cannot yet manage to make them quite match, an objection which may be also urged against Lord Wenlock after a longer apprenticeship. In the older class the Mansells improve on their position with a very complete clever two-shear, carrying a famous fleece on a broad back; but the second prize, an animal of great size, looked to be rather overdone, though we did not see him up; and Lord Chesham was third with his Bristol sheep, who spent a season in Ireland. Two of the best-matched Shropshires in the show were both bred in Ireland, and from precisely the same strains; as they were so true to each other, that we should have a difficulty in distinguishing the high from the simple commendation with which they were severally and deservedly honoured. There is always a deal of good about the Shropshires which Mr. German shows, if with hardly fashion enough to stand very high on the prize list, but they are of a very serviceable sort. Mrs. Beach's ewes made up one of the handsomest and sortiest pens on the ground, and as one of Lord Chesham's five was in hospital, it was a nice thing as to which should have been put first, the failing ewe rather giving it against the Latimers, when both pens were otherwise so level and so good. They would seem to be growing sheep to more size at Sutton Maddock, and Mr. Farmer from Ludlow offers an illustration of what a Shropshire was once upon a time. It was a truly good show, well appraised, and with only one disqualification from a little too much fancy for the oil and colour trade—a dirty habit which the inspectors have determined to discountenance.

The show of Oxfordshire Downs was not so thoroughly strong as might have been expected, considering that these sheep are cultivated as carefully in Bedfordshire as in Oxfordshire, and the chief prizes went, as at Witney and Bristol, to the Duke of Marlborough, Mr. John Treadwell, and Mr. Milton Druce; such flockmasters as Mr. Charles Howard and Mr. Street being hardly up to their usual form. In fact, Bedfordshire was everywhere out of luck. Nevertheless the judges were very liberal with their commendations, passing a general compliment on the old rams, where Mr. Treadwell was first with the renowned Guildford and second with Gillett, a somewhat over-marked three-shear; as for use Mr. Druce's smart sheep of the same age should have the call. Amongst the ewes the Duke had lost one of his matches, and even the professional barber who travels the country could not pull the Shifford pen together, and so Eynsham won with a very pretty lot all of a stamp; the renowned Biddenham ewes for once reaching no nearer than a reserve. Some of the Oxfordshire Down flockmasters would seem to have gone more for the extra or special classes; but these odds-and-ends rarely tell much at a national meeting, and the pens of lambs and of wether lambs and of shearing wethers, and so forth, commanded but little attention.

It takes time, even with the clever people they have at Merton, to revive or re-establish a flock, and the supremacy of the Walsingham Southdowns is not yet again so generally acknowledged as of yore. Nevertheless, we should say they are going for a higher character of sheep, of more style and less weight, as illustrated by the handsome old ram put first, or the very bloodlike pen of ewes, which also accredited another first to Merton, against some capital ewes shown by Sir William Throckmorton, if at best but an odd lot, with one or two out of place; whilst another Norfolk pen from Carrow, also showing more fashion than mere mutton, were on the prize list. Amongst the rams, however, it was something of a see-saw between Hove and Merton, Mr. Rigden being first and commended twice over for shearlings,

and second for old rams; and Lord Walsingham second and third for shearlings and first for old sheep; as it was even said that the two Southdown judges agreed to split their differences in this way. The Hove shearling is famously furnished from his quarters down to his hock, and so good behind as to look a little weak forward, but he is a sheep which will go on; while the Mertons are here again of the same smarter type, set-off, as some said, by a suspicion of dark wool; but we hate a mealy-faced Southdown. The Heasman's reserve shearling took a prize at Reading, and Mr. Rigden's famous four-shear, the best at Bristol, was suffering much from the sting of a wasp on the ear, and so gave way to a companion, a useful ram enough, but not with the style of the old sheep. A two-shear from Sandringham reached to the reserve, and one of Mr. Fuljamb's shearlings was highly commended, but neither of these flocks showed to much advantage: they should be smarter in their looks, air, and carriage.

The Southdown judges also undertook the Hampshires as well as the Oxfords; but beyond the three prize shearlings, as shown by Mr. Morrison and the Messrs. Russell, there was very little merit; whilst Mr. Saunders' two old sheep encountered no opposition, and the four pens of ewes served mainly to remind one, by way of contrast, of the beautiful pens of Hampshire and Wiltshire Dows, with which Mr. Rawlence and the late Mr. Canning would set off these classes.

It says much for the school in which George Turner the younger was brought up, that he was only beaten in one class of Leicesters at Bedford, and then by his own father. In the shearlings the Thorpefolds flock took all the prizes, the first and second rams being placed again as at Bristol; as there can, indeed, be no question as to the superiority of the first, a deep robust sheep, showing great constitution, and at the same time all the blood-like points of a true Leicester—a combination not so easily achieved, for often enough, even the show sheep are either on the one hand too *fine*, or, on the other, bred away into coarse crossed-looking animals. These sheep, it was satisfactory to see, were all of the same type, while in the old class the elder Turner fairly turned the tables with a compactly-framed, still more high-bred looking ram, who proved his more manifest excellences by a capital firm touch, so that Leicester mutton may still be really worth eating. Mr. Borton was not up to his previous form, or more probably the Turners were in greater force than ever, and thus the famous Yorkshire flock, now about to be dispersed, had to be content with such honours as second, third, or simple commendations. Over the pens of ewes, however, it was quite a race with the four placed, as Mr. Turner's first are weak about their necks, and the third prize pen, also from Thorpefolds, wrong about their heads, so that either Mr. Borton or Mr. Hutchinson, with fresh judges, might have won. The Catterick ewes were, in fact, a very neat uniform lot, symmetrical in their frames, and of good thoroughbred character. But there were some curious samples of Leicesters about alike from the Midlands or further afield; while one Yorkshire exhibitor saw his pen of ewes put aside from an artistic tendency to colouring in oils.

The Royal show of Cotswolds now depends mainly for its merit on a Norfolk flock, which, however, is bred closely from the best hill-men who are well content to see themselves represented in this way. In short, as the Turners are with the Leicesters, so is Brown, of Marham, with the Cotswolds, taking all the prizes for shearlings, two for old rams, and not caring to show ewes. So uniformly good are these Norfolk—wolds that any of them are good enough to win, as we believe neither the first nor second shearlings at the Bedford Royal were ever noticed the other day in

Norwich; while the two prize old sheep in the East have now changed places. They are all of a great, grand type, with the strong recommendation of showing even better out than in, and there was nothing near them, although an up-and-down dreary-looking sheep from the Cirencester College intervened in the older class. By the way, is it not something of an anomaly that these College sheep and pigs should be continually entered and spoken to in the name of the farm manager, with no more reason to be thus paraded than that of any other farm steward? The few pens of ewes were all moderate, the Kilkennies having lost something of their Bristol bloom.

The judges of Lincolns, with only one Lincoln man amongst them, looked to get chiefly for size; at any rate their fancy in a large class of shearlings was a coarse, loose sheep of little or no style, as his main recommendations, like the bagman's brandy and water, seemed to centre on "hot, strong, and plenty of it." Still, it struck us that the shearlings, running them through, were but a rough lot, useful enough no doubt, and, perhaps, more true to the old original Lincoln than the finer-bred sheep seen about of late; but some heretofore-successful flocks were put out. The first prize old sheep, Mr. Pears' *four* shear, also in the prize list at Hull, was of a smarter stamp, his appearance being backed by a good skin and fleece, and, indeed, the few old sheep were altogether superior to the shearlings; while Mr. Gunnell's first pen of ewes were not well sorted, and as show sheep, for uniformity and character, Mr. Pears's third prize pen here and first prize at Doncaster looked still to have the best of it; as one is the more inclined to say so much before a mixed bench of magistrates. One pen of ewes were here again disqualified, and very properly too, as wool of any growth goes a long way in judging a Lincoln. The Border Leicester, further than as a curious compound, has not much business in the Midlands, or perhaps anywhere else on this side of the Border; although the wonder of the show was Mr. Foster's four shear, who had a class to himself, which he well filled. Of extraordinary weight, breadth, and height, this sheep is still more remarkable for his symmetry and activity; preserving a capital frame he manages to maintain a more cheerful air and carriage than many a shearling; and is in every way quite a model of a well-preserved, good-looking old gentelman.

So far as the respectability of the Society is concerned, there can be no question, but the Council must take immediate and strong action over the pig show. Some of the leading exhibitors were disqualified, in certain cases over and over again, although it is only fair to add that neither Mr. Duckering nor Mr. Sexton were amongst these offenders, as that there was only one disqualification in the Berkshire classes. Beyond this we may from our experience of the past assume that nothing will be done. The direction will take especial care that the names of these disqualified exhibitors shall not be published under its authority either in the *Journal* or elsewhere, and thus the penalty becomes little more than a farce. But we say that if the Council wishes to stand well with its members and the general public, it must institute inquiries into such matters as these: Were there pigs exhibited at Birmingham in December last at close upon six months old which were exhibited at Bedford last week as something over seven months old? Was there a pig exhibited at Bristol at about eight months old which had reached to just double that age at Bedford? Were there pigs competing, or even winning, as breeding pigs which had previously been exhibited as fat pigs? Were pigs entered as bred by men who did not breed them? Was the same pig entered in two classes, of course with a different age to suit either he

went for? All this and more was the common talk at Bedford, and coming as this did on numerous disqualifications, we say again that the Council is bound to make the fullest inquiries, and then to publish the fullest reports, giving the name with every disqualified number, and the reasons for such disqualification. Otherwise a Royal pig show will become a farce and a disgrace, where the awards of judges will be systematically stultified, and anything like fair or thorough criticism rendered impossible. In fact, we feel very much inclined to pass the section over, and leave it to an official prize list which does not tell half the story. Every disqualification should be registered in full as religiously as every commendation.

The young boars of the large white breed were an indifferent lot, not excepting the winner; but the best old pig, a very old one, was long, level, and good; while the Messrs. Howard's pigs have gone off, carrying little coat, and in no way so kindly or taking as they have been. In the pens of three young breeding sows, three pens exhibited by very successful men were disqualified, and the prizes went anyhow. As a contemporary mildly puts it, "some of the best lots were disqualified." What in the name of common sense does he mean by the best in a class with the age restricted to under eight months old, where pigs above that age were entered? The all-aged old sows were good, but with some funny stories floating about as to the difference between a breeding sow and a fat sow. In the young boars of a small white breed two were disqualified, and possibly these were the best again! In the older class—a very good one in places—Mr. Sexton's Disturbance repeated his Hall victory, and there were a few nice pens of three; while the older sows ran up to a smart class, marred by a disqualification, and the Duckerings getting second with a very good sow of capital quality. Over the young black boars Mr. Sexton had it pretty much to himself, nor in the older class of boars or with the pens of young sows did the competition extend much further; while some of the numbers were removed in the older class of black sows, and we decline to meddle with it further. Perhaps the stewards will explain? The judges went for the coarser, heavier-coated sort of Berkshires, and the best old sow looked to be something on a par with the notorious Cardiff award in the same class, as Mr. Walker's winner here was never noticed at Bristol; some other of the awards in the West being reversed, and Mr. Hewer's best boar, still far away the best of his class, "unaccountably" put out, as, indeed, was Mr. Stewart's beautiful sow. But, as somebody says, there is nothing like changing the judges, though exhibitors may be puzzled what to go for. Good generally as were the Berkshires, the sows of a middle breed ran up to one of the best classes in the show, as it was generally commended, and where the Duckerings won with perhaps the best pig in the show—finely-framed, with a capital top, and of admirable quality. The heat as well as the doctor, *alias* the veterinary inspector, thinned out the pig show, although there are people still about who would dispense with the services of these inspectors, either of shearing or teething! And what then?

P R I Z E L I S T .

H O R S E S .

AGRICULTURAL HORSES.

JUDGES.—N. G. Barthropp, Hacheston, Wickham Market.

T. Gibbons, Burnfoct-on-Esk, Cumberland.

H. Lowe, Comberford, Tamworth.

H U N T E R S .

W. Forster, Burradon, Morpeth.

F. Paddison, Ingleby, Lincoln.

HACKNEYS, COACH HORSES, PONIES, JACKASSES, AND MULES.

H. Beavor, Blyth, Workoop.

G. Botham, Wexham Court, Slough.

J. Parrington, Brancepeth, Durham.

Agricultural stallion, foaled in the year 1872 (not qualified to compete as Clydesdale or Suffolk).—First prize, £20, G. E. Daintree, Fenton, Huntingdon (Grand Prince); second, £10, C. Golden, the Grange, Ramsey, Huants (Champion); third, £5, T. Russell, Lower Shuckburgh, Daventry. Reserve and highly commended: W. J. Hipwell, Station Road, Rugby. Commended: T. Sanders, Wilby Hall, Wellingborough (Active).

Agricultural stallion, foaled before 1st January, 1872 (not qualified to compete as Clydesdale or Suffolk).—First prize, £25, T. Briggs, Babrahan, Cambridge (Heart of Oak); second, £15, T. Statter, Stand Hall, Manchester (Young Champion); third, £5, T. Statter (King Tom). Reserve and highly commended: C. Brookes, Claxby Grange, Alford, Lincolnshire (Honest Tom 2nd). Commended: Rev. J. N. Mickethwaite, Taverham Hall, Norwich (Prince of Wales).

Clydesdale stallion, foaled in the year 1872.—First prize, £20, R. Tweedie, The Forest, Catterick, Yorkshire (Tam o' Shanter).

Clydesdale stallion, foaled before the 1st of January, 1872.—First prize, £25, T. Tagg, Newhall, Burton-on-Trent (Young Lofly); second, £15, E. and A. Stanford, Eatons, Steyning, Sussex (The Duke); third, £5, E. Pease, Green-croft West, Darlington, Durham (Emperor). Reserve: J. F. Crowther, Knowl Grove, Mirfield, Yorkshire (Sir Roger).

Suffolk stallion, foaled in the year 1872.—First prize, £20, M. Biddell, Playford, Ipswich (The Templar); second, £10, R. Garrett, Carleton, Saxmundham; third, £5, J. Toller, Blaxhall, Wickham Market (Defendant). Reserve and highly commended: W. Byford, The Court, Glemsford, Suffolk. Highly commended: W. Toller, Gedgrave, Wickham Market.

Suffolk stallion, foaled before the 1st of January, 1872.—First prize, £25, C. Frost, Wierstead, Ipswich (Cupbearer 2nd); second, £15, Lieut.-Col. F. M. Wilson, Stowlangtott Hall, Bury St. Edmunds (Heir Apparent); third, £5, R. Garrett (Claimant). Reserve and highly commended: W. Byford (The Statesman). Highly commended: S. Wolton, Butley Abbey, Wickham Market, Suffolk (Royal Duke 2nd).

Stallion suitable for getting hackneys.—First prize, £20, C. W. Wilson, High Park, Kendal, Westmoreland (Sir George); second, £10, G. A. Lepper, Aylesbury (Rapid Roan); third, £5, F. Barlow, Hasketon, Woodbridge (President). Reserve and highly commended: F. Branwhite, Chapel House, Long Melford, Sudbury (Defiance). Highly commended: J. Tibbitt, Ashkam House, Dodington, Cambridgeshire (Cambridgeshire Cob).

Thoroughbred stallion, suitable for getting hunters.—First prize, £50, F. Barlow, Hasketon (Citadel); second, £25, R. Hutton, 74, Gloucester-place, Portman-square, London (Laughing Stock); third, £10, W. Blenkinson, Middle Park, Eitham, Kent (King John). Reserve: F. Barlow (Massanissa).

Agricultural mare, in foal, or with foal at foot (not qualified to compete as Clydesdale or Suffolk).—First prize, £20, C. Lister, Coleby Lodge, Lincoln (Royal Duchess); second, £10, F. Street, Harrowden House, Bedford (Beauty); third, £5, A. Tomlinson, Stenson House, Derby (Smiler). Reserve and highly commended: H. Purser, Wilmington Manor, Bedford (Honest Lass). Highly commended: J. Warth, Westmoreland House, Chatteris, Cambridgeshire (Diamond). Commended: W. Lavender, Biddeham, Bedford (Young Honest Lass); Commended: J. and F. Howard, Park, Clapham, Bedford (Diamond).

Clydesdale mare, in foal, or with foal at foot.—First prize, £20, T. Statter, Stand Hall, Whitefield, Manchester (Mrs. Muir); second, £10, Lieut. Colonel R. Loyd-Lindsay, V.C., M.P., Lockinge Park (Darling); third, £5, Lieut. Colonel R. Loyd-Lindsay. Reserve, W. Wilson, High Park, Kendal, Westmoreland (Highland Lassie).

Suffolk Mare, in foal, or with foal at foot.—First prize, £20, H. Wolton, Newbourn Hall, Woodbridge (Fride); second, £10, Sir W. Throckmorton, Bart., Buckland, Faringdon, Berks (Jolley); third, £5, G. A. Colson, The Faye, Fiugriug-hoe, Essex (Violet). Reserve and highly commended: Lieut.-Colonel Wilson (Violet).

—Mare and foal, of any breed, for agricultural purposes.—First prize, £15, G. Street, Maulden, Amphill, Beds (Cardiff Lass); second, £10, Marquess of Bristol, Ickworth Park, Bury St. Edmunds (Brisk). Reserve and highly commended: Marquess of Bristol (Diamond).

Mare, in foal, or with foal at foot, suitable for breeding coach horses.—First prize, £20, R. Hutton, Gloucester-place (Pauline); third, £5, J. Hornsby, Caslegate House, Grantham, Lincolnshire (Lady Trenborne).

Mare, in foal, or with foal at foot, suitable for breeding Hackneys.—First prize, £20, A. E. W. Darby, Little Ness, Shrewsbury (Kitty); second, £10, T. H. Miller, Singleton Park, Poulton-le-Fylde, Lancashire (Mabel Gray); third, £5, W. C. Branford, The Heritage, Upton, Southwell, Notts (Achernar). Reserve and highly commended: J. Warth, Westmoreland House, Chatteris, Cambridgeshire (Gentle Aooie). Commended: J. Walker, Goldington, Bedford (Fanny).

Mare, in foal, or with foal at foot, suitable for breeding Hunters.—First prize, £25, E. Hornby, Plotmanby, Ganton, Yorkshire (Lady Derwent); second, £15, J. Moffat, Kirklington Park, Carlisle, Cumberland (Lady Line); third, £5, G. S. Smith, Stowe Farm, Stamford, Lincolnshire (The Wren). Reserve and highly commended: T. H. Miller, Singleton, Poulton-le-Fylde, Lancashire (Flora). Highly commended: B. Spraggon, Wafferton, Stocksfield-on-Tyne (Jess).

Yearling gelding, of any breed, for agricultural purposes.—Prize, £10, G. Hine, jun., Oakley, Bedford (Royal).

Yearling cart filly, of any breed, for agricultural purposes.—First prize, £10, J. Walker, Goldington; second, £5, H. Purser, Willington Manor (Grand Duchess). Reserve: T. Statter, Stand Hall (Miss Honesty).

Agricultural gelding (including Clydesdale and Suffolk), two years old.—First prize, £15, D. Hennan, Keapston, Hardwicke, Bedford (Prince); second, £10, F. Allwood, Wardsworth Farm, Hitchin; third, £5, T. Arch, Bloxwich, Walsall, Staffordshire (Sampson). Reserve and highly commended: F. Allwood.

Agricultural filly (including Clydesdale and Suffolk), two years old.—First prize, £15, T. H. Vergette, Boro' Fen, Peterborough (Violet); second, £10, W. Nix, jun., White Hall, Somersham, St. Ives, Hunts; third, £5, S. Morton, Upwell, Isle of Ely, Cambs (Jewel). Reserve and highly commended: F. Street (Suart). Highly commended: J. Morton, New Bridge Farm, Stow Bardolph (Suart). Commended: E. and A. Stanford (The Belle).

Suffolk filly, two years old (County of Suffolk prize, offered by breeders of Suffolk horses). First prize, £25, M. Biddell, Playford (Jewel); second, £10, W. Wilson, Baylham Hall, Ipswich (Suart). Reserve and commended: R. E. Loft, Troston, Bury St. Edmunds (Blossom).

Agricultural gelding (including Clydesdale and Suffolk), three years old.—First prize, £15, T. Plowright, jun., The Hall, Pinchbeck, Lincolnshire (Dragon); second, £10, F. Cartwright, The Grove, Drakelow, Burton-on-Trent (Drayman); third, £5, J. and F. Howard (Roger). Reserve and highly commended: J. Bays, Chatteris, Cambridgeshire (Prince).

Agricultural filly (including Clydesdale and Suffolk), three years old.—First prize, £15, T. H. Vergette, jun., Peterborough (Gipsy); second, £10, J. Lester, Barway, Thetford (Blossom); third, £5, H. Middleton, Cottesloe, Oxford (Flower Girl). Reserve and highly commended: J. and F. Howard (Jess). Reserve: J. Toller, Blaxhall, Wickham Market, Suffolk (Scot).

Pair of agricultural horses (mares or geldings), not under four years old, used solely for agricultural purposes.—First prize, £20, J. and F. Howard (Colonel and Captain); second, £10, C. Howard, Biddenham, Bedford (Lion and Dodman); third, £5, C. W. Brierley, Rhodes House (The Shah and Dick). Reserve and highly commended: C. W. Brierley (Sensation and Honesty).

Hunter filly, two years old.—First prize, £15, C. Hickman, Cardington, Bedford (Silver Cloud); second, £10, J. B. Jones, Ensdon House, Baschurch, Shrewsbury (Bessie). Reserve: E. and A. Stanford.

Hunter gelding, two years old.—First prize, £15, W. Kenning, Braddon, Towcester, Northamptonshire (Tom King); second, £10, W. Richards, Ashwell, Oakham, Rutland. Reserve: T. H. Miller, Singleton Park, Poulton-le-Fylde, Lancashire (Victor II.).

Hunter mare, three years old.—First prize, £20, T. Darrell Spickers Hill, West Ayton, Yorkshire (Ebor Witch); second

£15, G. B. Lynes, Bedford (Honeydew); third, £10, E. and A. Stanford (Sabina).

Hunter gelding, three years old.—First prize, £20, T. F. Jackson, Tattenhall Hall, Chester (Sober Truth); second, £15, Earl Spencer, Althorpe Park, Northampton; third, £10, J. B. Booth, Kilerby Hall, Catterick, Yorkshire (Berwick). Reserve: J. B. Booth (Baldersly).

Hunter mare, four years old.—First prize, £30, L. T. White, Goldington; second, £20, J. T. Mills, Clermont, Thetford, Norfolk (Rosebud).

Hunter gelding, four years old.—First prize, £30, T. Darrell (King of Diamonds); second, £20, W. Wright, Wollaton, Nottingham; third, £10, F. Barlow, Hasleton (Cornishman). Reserve: T. H. Hutchinson, Manor House, Catterick, Yorkshire (Breakaway).

Hunter mare or gelding, five years old and upwards, up to not less than 12 stone.—First prize, £30, T. H. Hutchinson (Jester); second, £20, J. N. Sanders, Wollaton, Wellingborough, Northamptonshire (Yellow Jack); third, £10, W. Richards, Ashwell, Oakham (Viceroy). Reserve: W. Richards (Weston).

Hunter mare or gelding, five years old and upwards, up to not less than 14 stone.—First prize, £30, W. Whitehead, Wollaton, Wellingborough, Northamptonshire (Baron); second, £20, T. Percival, Wansford, Northamptonshire (Mullingar); third, £10, W. Whitehead (Roths). Reserve: L. Croson, Lidlington, Amphill (Young Rothschild).

Hackney mare or gelding, up to not less than 12 stone.—First prize, £20, Major G. A. F. Quantin, Woodleigh, Cheltenham (Sparkling Moselle); second, £10, W. Stephenson, Cottingham, Hull (Princess); third, £5, W. Gilbey, Hargrave Park, Stanstead, Essex (Maud). Reserve and highly commended: S. Day, St. Neots, Hunts (Rockrose). Highly commended: W. Purser, Cople, Wood End, Bedford (Polly). Commended: W. Gilbey (Ladylike); B. Spraggon, Nafferton, Stocksfield-on-Tyne, Northumberland (Duchess of Tyne); J. Hornsby, Grantham, Lincolnshire (Ballet Girl); J. Hall, Little Barford, St. Neots, Hunts (Colonel).

Hackney mare or gelding, up to not less than 14 stone.—First prize, £20, T. H. D. Bayly, Edwinstow House, Oller-ton, Notts (Enterprise); second, £10, H. Frisby, 13, James-street, Buckingham Gate, London (Filbert); third, £5, W. Richards (Black Friar). Reserve and highly commended: J. Grout, Woodbridge, Suffolk (Kitty).

Pony mare or gelding, above 13 hands 2 inches, and not exceeding 14 hands 2 inches.—First prize, £15, J. Higgins, Market Harborough, Leicestershire (Princess Louise); second, £10, H. Frisby (Princess Polo); third, £5, W. R. Cuckle, Hillrow, Haddenham, Cambs (Kingfisher). Reserve and highly commended: R. Weight, 72, Regent-road, Salford, Manchester (Young Apricot).

Pony mare or gelding, not exceeding 13 hands 2 inches.—First prize, £15, R. L. Parker, North Kilworth, Rugby (Whimsical); second, £10, W. N. Saberton, Wilburton, Ely Cambs. (The Shah); third, £5, T. L. Senior, Broughton, Aylesbury, Bucks (Pride of the Vale). Reserve and highly commended: C. W. Wilson, High Park, Kendal, Westmoreland (Bobby).

Jackasses, not under 13 hands, for getting mules for agricultural purposes.—First prize, £25, C. L. Sutherland, Coombe, Croydon (Jago); second, £15, S. Lang, 108, Pembroke-road, Clifton, Bristol (Lad of Poitou).

Mule, not under 15 hands, for agricultural purposes.—First prize, £25, C. L. Sutherland, (Ronssean); second, £15, S. Lang, (Lass of Poitou); third, £10, C. L. Sutherland (Blossom). Reserve: C. L. Sutherland (Robin).

CATTLE.

SHORTHORNS.

JUDGES.—H. Aylmer, West Dereham Abbey, Stoke Ferry.

E. Bowly, Siddington House, Cirencester.

H. Smith, Eske Hall, Durham.

Bull, above three years old.—First prize, £30, R. Bruce Newton-Struthers, Forres, Morayshire (Lord Irwin); second, £20, Marquis of Exeter, K.G., Burgley Park, Stamford, (Telemachus); third, £15, A. H. Browne, Doxford, Chathill, Northumberland (Duke of Aosta); fourth, £10, R. Stratton, The Duffryn, Newport, Monmouthshire (Protector). Reserve and highly commended: The Earl of Lichfield, Shugborough Hall, Stafford (Knight Templar the 3rd). Highly commended: J. W. Wilson, Ansteh House, Broadway, Worcestershire (Earl of Warwickshire 3rd). The class commended.

Bull, above two and not exceeding three years old.—First prize, £25, W. Linton, Sheriff Hutton, York (Sir Arthur Ingram); second, £15, W. and H. Dudding, Pantou House, Wragby, Lincolnshire (Robert Stephenson); third, £10, T. Statter, Stand Hall (Oxford Cheerboy); fourth, £5, T. Willis, Manor House, Carperby, Bedale, Yorkshire (Prince of Cashmere). Reserve and highly commended: B. St. John Ackers, Pricknash Park, Painswick, Gloucestershire (Cymbeline). Commended: R. Moss, Whisby, Lincoln (General Wharfdale).

Yearling bull, above one and not exceeding two years old.—First prize, £25, J. Outhwaite, Bainesse, Catterick, Yorkshires (Lord Godolphin); second, £15, Lieut.-Colonel R. Lloyd-Lindsay, V.C., M.P., Lockinge Park, Wantage, Berks (Prince Ruffert); third, £10, Emily, Lady Pigot, Branches Park, Newmarket (Rapid Rhone); fourth, £5, William G. Garne, Broadmoor, Northleach, Gloucestershire (Aachen). Reserve and highly commended: G. J. Day, Horsford House, Norwich (Charon). Commended: A. H. Browne, Boxford, Chatham, Northumberland (Rosario). Commended: T. Willis (Windsor's Crown).

Bull calf, above six and not exceeding twelve months old.—First prize, £15, Lieut.-Colonel R. Lloyd-Lindsay, V.C., M.P., (Lord Rockville); second, £10, J. Outhwaite (Duke of Chambergh); third of £5, W. G. Garne (Ranger Prince). Reserve and highly commended: C. J. Webb, Elford, Tamworth, Staffs. (Royal Oxford Gwynne). Commended: Emily, Lady Pigot (May King); T. Rose Melton Magna, Wymondham, Norfolk (Bright Knight).

Cow, above three years old.—First prize, £30, J. Outhwaite (Vivandiere); second, £10, G. Garne, Churchill Heath, Chipping Norton, Oxfordshire (Butterfly's Duchess); third, £5, T. H. Hutchinson, Catterick (Dairygirl). Reserve and highly commended: R. Stratton, The Duffryn (Rosvind), Highly commended: Marquis of Exeter, K.G. (Moll Gwynne). Commended: Her Majesty the Queen, Windsor Castle (Cold-cream Ath); E. Whitehouse, White House Farm, Kingsbury, Tamworth (Lady Margaret); W. Lavender, Biddenhams (Lady Valentine).

Heifer, in milk or in calf, not exceeding three years old.—First prize, £20, J. Outhwaite (Baroness Conyers); second, £15, J. Thom, Larkhill, Chorley, Lancashire (Royal Rose); third, £18, Emily, Lady Pigot, (Rose of Wytham); fourth, £5, R. Stratton (Nectarine Bud). Reserve: W. and H. Dudding (Blooming Bride). Highly commended: Emily, Lady Pigot (Victoria Matutina); B. S. John Ackers (Queen of the Georgias); J. How, Broughton, Huntingdon (Lady Butterfly); T. H. Hutchinson (Lady Playful); J. A. Mumford, Brill House, Thame, Oxon (Elith Emily); C. Magniac, Colworth, Bedford (Moss Rose II.).

Yearling heifer, above one and not exceeding two years old.—First prize, £20, Rev. R. B. Kennard, Maruhull, Blandford, Dorset (Queen Mary); second, £15, T. Statter, Stand Hall, (Robin's Rose); third, £10, Lord Suedley, Taddington, Winccombe, Gloucestershire (Seraphina Bella 2nd); fourth, £5, T. Statter (Robin's Stanley Rose). Reserve and highly commended: R. E. Oliver, Sholebroke Lodge, Towcester, Northamptonshire (Orange Chips). Highly commended: J. Downing, Ashfield, Fermoy, Ireland (Verbena Royal); Emily, Lady Pigot (Princess of Wytham).

Heifer calf, above six and under twelve months old.—First prize, £15, Lieutenant-Colonel R. Lloyd-Lindsay, V.C., M.P. (Diane); second, £10, Emily, Lady Pigot (Moorish Captive); third, £5 R. Stratton (Regalia). Reserve and highly commended: Sir P. C. Constable, Bart., Burton Constable Hall (Evelina). Highly commended: R. Lodge, The Thorns, Southport, Lancashire (Wild Rose 2nd).

HEREFORDS.

JUDGES.—F. Evans, Bredwardine, Hereford.
S. P. Newbury, Plympton St. Mary.

VETERINARY INSPECTOR.—Professor Brown, Royal Veterinary College.

HON. DIRECTOR OF THE SHOW.—B. T. Brandreth Gibbs, Half-Moon-street, Piccadilly, London.

THE IMPLEMENT TRIALS.

THE OPENING DAY.

The implements which come into competition this year are drills, horse-hoes, manure distributors, waggons, and carts; with further prizes for shepherds' huts, sleeping vans, and thrashing-machine safety-guards.

The last trials of waggons, carts, and manure distributors were at Manchester in 1869, when amongst the chief winners of premiums for waggons were W. Crosskill and Sons, Hayes and Son, and the Beverley Iron Works Company; while for carts the most successful competitors were Hayes, Corbett, Crosskill, Ball and Son, Milford, and the Beverley Company. For manure distributors James of Cheltenham and Baker of Compton took the prizes.

The drills and horse-hoes would seem to have lost their turn, as they have not been on trial since the Plymouth meeting in 1865, when amongst the prize-winners for drills were Hornsby and Sons, Priest and Woolnough, Coultas, Saintry, Holmes and Son, Gower and Sons,

Reeves and Germans; and of horse-hoes the best tried were exhibited by Saintry, Priest and Woolnough, Smith (of Kettering), Carson and Toon, Tinkler, Page and Co., and Eaton and Sons.

The following table shows the number of entries for trial at Bedford:

	Number for Trial.	Number in section.	Machines entered in two classes.
<i>Section I.—Drills.</i>			
Class.			
1. General purpose drills	7		
2. Corn drills	26		2

<i>Special prize.</i>		
33. Guard or appliance to the drum of a thrashing machine for preventing accidents to the people employed	15	15 guards to the drum of a thrashing machine.
Total	378	371

The following is a list of the exhibitors of implements at Bedford: Afleck; Agricultural and Horticultural Co-operative Association; Albion Iron Works Company; Allehin; Allecock; Alway and Son; Armitage, S. C.; Arnold and Sons; Ashby, Jeffery, and Luke; Ashton; Atmospheric Churn Company; Aveling and Porter; Bailey Brother; Baker and Co.; Baker, J.; Baker, T.; Ball; Ball and Son; Barford and Perkins; Barford, V.; Barnard, Bishop, and Barnard; Barnard; Barrows and Stewart; Barton; Bayliss, Jones, and Bayliss; Beach and Co.; Beare, Son, and Co.; Belcher, Gee, and Co.; Bell and Co.; Bellamy; Bentall; Beverley Iron and Waggon Company; Bickerton and Sons; Bigg; Biphosphated Guano Company (Limited); Boby; Boulton and Co.; Boyall; Bradford and Co.; Braggins; Brigham and Co.; Bristol Waggon Works Company; Broomhall; Brown and Co.; Brown and May; Burgess and Key; Burney and Co.; Burrell; Cambridge and Parham; Campion; Carson and Toone; Canter Brothers; Chambers, H.; Chambers, H.; Cheavin; Clarke and Odling; Clarke; Clarke; Clay; Clayton and Shuttleworth; Clewom and Co.; Coleman and Morton; Coleman; Cooch; Cooke; Corbett and Peele; Corbett, S., and Son; Coreoran, Witt, and Co.; Cottam and Co.; Cottis and Sons; Cottrell and Co.; Coulson and Weor; Coultas; Couteau; Cox; Cranston and Luck; Crawley; Crosskill and Sons; Crowley and Co.; Crump; Davies; Davis and Co.; Davey, Paxman, and Co.; Day and Sons; Day, Son, and Hewitt; De Leon and Co.; Dean; Denne and Son; Dell and Son; Dening and Co.; Dennis and Co.; Denton; Dodge and Co.; Dodman; Down and Co.; Driffield Linseed Cake Company; Duffield, Eagles; Eastwood; Edgington and Co.; Edgington and Co.; Edlington; Elliman and Co.; Fairbanks and Co.; Farmers' Supply Association; Faulks; Fiskin; Fison; Follows and Bate; Foster and Co.; Fowler, J., and Co.; Gardner; Garrett and Sons; Gatward; Gibbons; Gibbs and Co.; Gibson; Gilbert; Gillitt; Glover and Sons; Gooday; Gold Brothers; Gower and Son (Winchfield); Gower and Son (Market Drayton); Grant; Green and Sons; Guest; Hall and Co.; Hall; Hamilton and Co.; Hamilton, Woods, and Co.; Hancock, H., and Co.; Hancock, J. L., and Co.; Harrison McGregor Co.; Harrison; Hart and Co.; Hartley and Sugden; Hayes and Son; Hayes; Haynes and Sons; Hayward, Tyler and Co.; Head, Wrightson, and Co.; Heady and Son; Heard; Hempsted and Co.; Hepburn and Sons; Heron, Gresham, and Craven; Hill and Smith; Hollings, Brothers; Holmes and Sons; Hope; Hopperton; Horley; Hornsby, R., and Sons; Howard, J.; Howard, J. and F.; Howes and Sons; Hughes; Humphries;

Hunt and Tawell; Huuter; Hydes and Wigfull; Iles; Ingold; Inman; Inwood; James and Son; Johnston Harvester Co.; Jones, J. M.; Jordan, E.; Kearsley, H. and G.; Kell; Kennan and Sons; Keyworth and Co.; Kilpin and Billson; King, W.; Kittmer, B.; Koppel, L.; Larkworthy and Co.; Laughland and Co.; Le Butt, J.; Le Grand, A.; Lewis and Son; Lillie and Elder; London, Provincial, and Foreign-Sanitary Co.; Lyon, A.; Main and Co.; Maldon Iron Works Co.; Marsden; Marshall, Sons and Co.; Marston and Co.; Massey and Hill; Matthews, J.; Matthews, Son, and Co.; Mattison, W.; May and Mountain; Maynard, R.; Maythorn, J.; M'Kenzie and Sons; Mellard's Trent Foundry; Milburn and Co.; Milford and Son; Milford, Frank P.; Mills and Co.; Mitchell and Co.; Moore and Co.; Morgan and Co.; Morris and Griffin; Mortlock; Morton, Francis, and Co.; Moser; Mote, P.; Moule's Earth Closet Co.; Moulton, E. L.; Murray and Co.; Murton and Turner; Musgrave and Co.; Nalder and Nalder; Negus; Newton, Chambers, and Co.; Nicholson and Son; Nickerson; Nock; Norris and Co.; Ohlendorff and Co.; Oldham and Booth; Osborne and Co.; Packard and Co.; Page and Co.; Page and Girling; Parham; Parker; Payne and Son; Pearce, C.; Peiree, A. C.; Penney and Co.; Perkins and Co.; Phillips-Smith and Co.; Pickering; Picketsley, Sims, and Co.; Pinfold; Powis and Co.; Priest, Woolough, and Michell; Pyke; Rainforth and Son; Randell; Ransome, S. and E., and Co.; Ransomes, Sims, and Head; Ravensthorpe Engineering Company; Raywood; Reading Ironworks; Reeves and Son; Reid and Co.; Reudle; Reynolds and Co.; Riband Telegraph Post Company; Richards; Riches and Watts, Richmond and Chandler; Roberts; Robey and Co.; Robinson and Richardson; Rodway; Rollins and Co.; Russell and Co.; Ruston, Proctor, and Co.; Samuelson and Co.; Sawney; Schaffer and Budenburg; Sears and Co.; Sharman and Ladbury; Sheath; Sherwood; Silvester; Simpson and Co.; Smith and Grace; Smith, R., and Co.; Smith, W.; Smyth and Sons; Snowden; Spong and Co.; Staniland; Staynes & Sons; Stone; St. Pancras Iron Work Co.; Summerseales and Sons; Sutton and Sons; Symonds; Tange and Holman; Tasker and Sons; Taylor's Sewing Machine Co.; Thomas and Taylor; Thorn; Thorough Washing Machine Co.; Thwaites and Carbutt; Tipper; Tomlinson, Hayward, and Bishop; Tucker; Turner; Underhill; Unite; Vipian and Heady; Waide; Walker and Son; Walker, Fyfe, and Co.; Wallis and Steevens; Walworth and Co.; Wandley and Robb; Ward and Silver; Warsop and Hill; Watson; Watts and Co.; Webb and Son; Weighill; Weir; Welland Vale Co.; Wheeler and Son; Wheeler and Wilson; White and Co.; Whitehead and Co.; Whitehouse; Wilkerson; Willacy; Williams and Co.; Williams; Williams, Jones, and Co.; Williamson; Windover; Wood; Woods, Cocksedge, and Co.; Wray; Wright, H.; Wright and Co.; Wright, W. T.; Wurr and Lewis; Zimdars.

THE TRIAL WEEK.

The implement trials this year have been carried out under great personal inconvenience to the judges, exhibitors, and all concerned, from the intense heat of the weather, and the parched and dry nature of the ground, owing to the continued want of rain. The trial-fields were, however, conveniently chosen, some close to the show-yard and the others at no great distance; but marching over the ground was like walking on pebbles and the intense direct rays of the sun, with but seldom a breath of air, made the long day's labours scarcely bearable. The judges, however, stuck to their work unflinchingly from early morning to almost dusk—a measure

absolutely requisite to get through the numerous implements and vehicles submitted for trial, which numbered nearly four hundred. The fields selected were, for the trials of drills, two fields near the show-yard; and for the horse-hoes, two others reaching towards Elstow. The backward state of the turnip crop threw a difficulty in the way of the Society in obtaining a suitable plot for trial of turnip-thinners, as the plants in the field originally selected were not sufficiently forward; but arrangements were made with Mr. Poole for one of his fields better circumstanced, although by no means in a satisfactory condition for a good trial. The exhibition of implements coming on for competition this year is large, may be thus summarised:

Drills of various kinds	229
Horse-hoes and grubbers	45
Manure distributors	6
Carts and waggons.....	209
Movable huts.....	8

The trials of the general-purpose drills were limited to five makers, and did not give much trouble. The corn drills, however, in class 2 were very numerous, and occupied the judges several days in coming to a determination, after repeated trials and the free use of the dynamometer. The drills ranged in price from £19 up to £36—the charge for a Canadian patent made by Hollings Brothers, of Swindon. The trials of these were watched with great interest, although the work of burying the seed was performed under difficulties, but the poor judges, who had to follow the course of the implements over the hard knobby clayey soil, were to be pitied; they got through their work, however, on Thursday, and were able to announce their decision on Friday. By far the greater number of the seed drills work in the old-fashioned way—the corn, or turnips, or mangold seed being lifted in little cups, get round a disc, on short arms, the seed being spilled over from the highest point into two funnels, one at each side of the disc, and so conveyed to the land behind the coulters, which open the furrows. Many of the machines combine a manure with a seed-box; and several different devices are used for inducing guano and superphosphate to flow through a comparatively small aperture and fall down a spout in advance of the seed. The machines were tried, not with real manure, but with coal dust, which answers pretty well. A somewhat startling fact has already been arrived at, namely, that machines by good makers in the best adjustment will sow 7 oz. of seed in one drill while going a given distance, and perhaps 9 oz. in the next drill; this was discovered by the simple expedient of fastening small bags over the delivery spouts, so that the seed went into the bags and was weighed, instead of going into the ground and being covered up out of sight. This is a matter of the utmost importance, as too much care cannot be taken to distribute seed evenly. A great defect in all drills constructed on what may be termed the "Persian wheel" system, is that if the horses stop the seed falls out of the cups, and when they go on again the machine must move a foot or two before more seed can be picked up and brought to the top of the wheel. The feeding discs run slowly, and they must make half a revolution before they begin to sow again after a stoppage. This is not the case with various other systems of construction which appears to possess general advantages over the Persian wheel arrangement, although the latter is the most popular with agricultural implement makers at present.

The trials in class 3 for the best adaptation of a corn drill for hill-side delivery were made on Thursday, and there were eleven entries, only one maker sending two implements. The corn drills for small occupations, class 4, were also tried on Thursday. The range of price

for these implements varied between the extremes of £14 and £31. There were fifteen separate makers entered.

The drills for turnips and other roots on the flat, class 5, were tested in the field near the show-yard on Monday, and the trials completed of the twelve entries, so as to enable the judges to determine their awards on the following day. Nineteen makers competed, and there were twelve entries in the class.

The competitions in classes 6 and 7—drills for turnips and other roots on the ridge, with or without manure—were carried on in the fields at Elstow. In the first class there were eleven entries, and in the second twenty. The prices of these implements made by various makers vary widely. Those in class 6 range between the two extremes of £6 10s. and £20, and in class 7 from £5 5s. to £11 11s.

The water-drills tried in class 8 were very few, there being only five entries, and one maker sent two. The range of price of these implements was also wide, being between £25 and £41.

Class 9, drills for small seeds, included some cheap and useful implements; indeed, some very low priced.

The barrows for sowing small seeds, class 10, also contained some useful articles. Only three drill pressers, class 11, competed, and there were but six potato-drills tried. One or two of these are well known; but there was also a novelty in a French implement, shown by a M. Couteau. It consists of a travelling hopper, delivering potatoes of any size at distances varying at will, from 12 to 28 inches. A row is planted at a time, and the seed covered as deposited. The drill, 9 feet long and 4 feet wide, is worked by one horse. Bickerton and Sons, of Berwick, is constructed in toothed sections, and is only £8. Wright's machine, made by Coultas, of Grantham, plants, manures, and covers up two rows at one operation. The price is £31, a little more than the French implement. Murray's is £16, while Corbett and Peele supply one at £20, and that of Coultas is sold at £45.

The largest exhibitors of drills of various kinds for trial in the several classes were Messrs. Gower and Son, 28; T. Harrison, 10; J. Coultas, 10; Holmes and Son, and Corbett and Peele, 8 each; Rainforth and Sons, 6; Murton and Turner, and Underhill, 5 each; Denning and Co., J. F. Clemenow and Co., Walker and Son, G. W. Murray, and Kell, 3 each.

On Tuesday Messrs. J. and F. Howard commenced cutting a fine field of rye, near the road, with some of their reaping machines, and on Friday and Saturday they had several sets of their newest steam-cultivating apparatus at work in fields near the show-yard. Their iron works and farms were also thrown open to visitors.

Messrs. Barford and Perkins also exhibited on Wednesday two sets of their steam ploughing and cultivating tackle at work on strong land, half a mile from the show-yard, in the occupation of Mr. Risely, of Elstow. One set was driven by an ordinary 8-horse power portable engine, and the other, Savage's patent, on an entirely new plan, by a traction engine, the hind wheels of which are converted into winding drums, thus dispensing with the ordinary windlass, and two men can strip the wheels in half-an-hour.

On Tuesday the judges were occupied all the morning with the trials of class 7, small ridge drills with manure. In the afternoon they took up and finished class 6, then commenced with class 15, single row horse hoes for ridge and flat, which was resumed at 9 o'clock on Wednesday morning.

On Thursday morning the judges proceeded with the trials of horse-hoes for general purposes, and those combined with drills for small seeds, and those for thinning turnips, in Mr. Prole's fields, at Elstow. At 8 o'clock the corn drills trials were resumed, the following imple-

ments being taken in succession: B. Reid and Co., W. Walker, Denning and Co., Kells, Thos. Harrison, W. Gilbert, Holmes and Son, Gowers, W. Coleman, J. Coultas, W. Rainforth.

The judges of carts, &c., at 9 resumed the inspection of the vans in class 32.

The judges for miscellaneous objects for the silver medals commenced their labours at nine o'clock on Tuesday, and by one had got through 42 stands. They commenced at two o'clock with No. 43 stand, and by the evening had reached 100. On Wednesday morning they resumed their labours at stand 101, and got through more than 100 stands in the course of the day, recommencing on Thursday morning with stand 213.

This year, to avoid the former complaints made by competitors of only a few of the prize implements of the year having been exhibited in the centre of the show-yard, a special shed, prominently situated, has been set apart by the Society for their exclusive display, and to afford better facilities for the general inspection of the public.

Thos. Hunter's turnip-thinning machine had the honour of being the first placed in the shed on Thursday.

Turning now to "Section II.—Horse hoes," this embraced a large class of implements for the judges to deal with, there being 106 entries in the section, comprising 29 for general purposes (class 13), 5 combined with small seed drill (class 14), 29 single-row hoes for ridge and flat (class 15), 19 grubbers (class 16), and 24 turnip-thinners (class 17).

On Thursday morning the judges resumed the trials of turnip-thinners and of horse hoes for general purposes and those combined with drills for small seeds in Mr. Poole's field at Elstow. The awards in classes 5, 6, 7, and 15 and 16, were issued in the course of the morning.

On Friday, at nine o'clock, the judges commenced with horse hoes for general purposes in No. 5 field, and in the afternoon took up the trials of Class 19, distributors of dry manure. At 8 o'clock, Class 4, corn-drills for small occupations, were taken up.

At nine the judges in carts, vans, and butts, resumed their experimental trials and examinations. The miscellaneous judges had progressed so far as to be able to commence at nine with Stand No. 273, the other 80 or 90 stands being chiefly miscellaneous articles, not agricultural.

Last year a rotation of trials of implements, to extend over nine years, was commenced at the Hull Meeting, and this year the trials consist of implements suited for cultivation and carrying of crops; next year machines and implements used in the harvesting of grass crops, such as mowing machines, horse-rakes, haymakers, collectors, and elevators. In the following year, 1876, machines and implements used in the harvesting of grain and root crops will have their turn.

Gaining wisdom by experience, there has been issued and circulated this year in advance a programme of the points of merit to be awarded for perfection in various qualifications to the implements presented for trial. This is a manifest advantage not only to competitors, but to the public, and especially that portion which is most concerned in the perfection of machinery and implements for agricultural work.

Classes 13 and 15 mustered strong, there being nearly sixty entries of implements in the two classes. In horse-hoes for general purposes, class 13, several of the principal makers sent more than one, and there were some few novelties or improved implements by Wandley and Robb of Wisbeach, Barford and Perkins, Armitage, Smith and Grace, F. Mote, G. O. Gooday, Reid of Aberdeen, and Vipam and Headly. Wandley and Robb have done away with the long bar under the levers; Barford and Perkins

showed an improved Savage's hoe; Armitage had a patent parallel steeage, the share self-adapting to irregularities; Gooday's had an improved method of altering the depth; Reid's had a new arrangement for securing the blades to the shanks.

In class 14, horse-hoes combined with drill, for small seeds, the entries were but few, only five makers competing with implements varying in price from £11 10s. to £40.

Class 15, single-row horse-hoes for ridge and flat, was taken up at three o'clock on Tuesday in the Elstow field, but there were few weeds to operate upon. The implements were, however, fairly tested by the judges, and Corbett and Peele's new pattern hoes especially commended; while those of W. Ashton of Horncastle, one of Gillett's of Northampton (of wrought iron, for use on hard ground), and one of Snowden's of Doncaster (with three shares and two tines) did their work well.

For class 16, single-row grubbers, there was a good field of entries. Five were described as new implements; but there was not much novelty or advantage apparent in any of the so-called improvements. The leading makers were all represented.

Class 17, horse-hoes for thinning turnips, was one regarded with much interest, because no effective implement has yet been constructed, and, indeed, it is a difficult one to deal with. All varieties of plans for working the horse-hoes were shown; but a cross chop in this instance will not do. Mr. Prote's field of turnips—the best that could be obtained—was very thin and backward, and offered no fair test for the trials, and the dust and turnips were thrown about very extensively by most of the revolving machines.

Thomas Hunter, of Maybole, had two implements of Hanson's patent, for one and two drills respectively, which work by two revolving sets of hoes on a frame.

Smith, of Kettering, entered several thinners, in which the hoes are placed diagonally, and ranging in price from £6 10s. to £11 10s. Some of these will thin the width of a six-foot drill, and others do two rows at once. Holmes and Son, of Norwich, had several on trial: in one the motion was vertical on a horizontal shaft, in another horizontal on a vertical shaft, while in a third the cutting was done by fixed hoes worked on a crank.

The Dublin firm of Kennan's had three of what they call their Clydone hoe, with from 3 to 6 cutters each, the hoes covering different spaces of ground, and in the large ones having plants a foot or more apart.

Underhill, of Newport, had a two-row thinner, which he introduced more than 20 years ago, which works by two sets of revolving hoes or cutters.

Morton and Turner, of Theiford, had one which cuts on the principle of ordinary hand-hoeing.

Thomas Chambers, of Fakeham, had a patented implement of his own, made by Holmes and Son, which works two sets of their revolving hoes, and is easily reversed.

Ransomes brought forward a large and rather expensive implement, £20, working easily on the cross-cut principle, like an ordinary hand-hoe, and well under management. With some improvements, this implement may be found useful.

Baker and Co., of Kimbolton, entered one of their ordinary horse-hoes which works across the fields at right angles to the rows.

Class 18.—Distributors for Liquid Manures.—There were only nine entries for trial in this class, three exhibitors sending two carts each. The average price was about £21, the range being from £17 to £24 15s., one sent by Willacy without a cart at £5 scarcely needing notice. Baker's two were iron cylinders. Reeves and Son had two, and James and Son two wooden distributors.

In the next, Class 18, distributors for dry manure, the competition was more varied, for out of the ten entries only one maker sent two. The prices ranged from £12 10s. to £20 15s.

Passing to the next, "Section 4—Waggons," there was an active competition, and we have seldom seen such an effective display of strong, useful, and moderate-priced vehicles.

In the cart and waggon competition several of the large makers, such as the Bristol Waggon Company, the Beverley Iron and Waggon Company, Crosskill and Sons, and others did not enter. The entries comprised the following numbers from each maker: Hayes and Sons, 20; W. Ball and Son, 12; Woods and Cocksedge, 9; F. P. Milford, 8; J. S. Stone, 6; G. Ball, 4; Page and Girling, 4; Vipan and Headley, 3; W. Glover and Son, 3; Howes and Sons, 3; J. Fowler, 2; H. Inman, 2; J. Negus, 2; Allcock, 2; Corbett and Peele, 2; Lillie and Elder, 2; T. Baker, 3; Thos. Milford and Son, 2. All the carts and waggons entered for competition were severely tested by the consulting engineer's dynamometer, mounted on a pair of wheels, arranged to draw as nearly as possible from the same height and at the same angle as horses and two-wheeled carts, and the load on the horse's back was also determined. The carts were loaded according to their capacity, build, and strength, with straw, roots, or corn in sacks.

The results obtained by the dynamometer promises to put our knowledge of all that concerns the draught of wheel-carriages at last on a satisfactory footing. Thus it has been found that, with one form of vehicle hitherto considered very satisfactory, the act of drawing a ton brought up the load on the horse's back to about 160lbs. Four times as much power is required to drag a loaded waggon on a hard field as on a macadamised field. What the resistance would be if the field were soft may be imagined. It would appear that horses really do much more work in hauling than is generally supposed, and the results of these trials, when worked out, cannot fail to prove both interesting and useful in no ordinary degree, both to the designers and builders of waggons, carts, and other vehicles, and to all those who use horses, either for business or pleasure.

Class 20, pair-horse waggons. Out of the nine entries only two makers sent two waggons. They were all good serviceable vehicles, ranging in price from £29 to £53. To enter into detailed descriptions of those shown is unnecessary, for the awards will speak for themselves.

Class 21, light waggons on springs. The competition here was entirely between the two principal makers, Hayes and Son, of Stamford, who entered three, and W. Ball and Son, of Rothwell, Kettering, who entered one.

Class 22, other waggons. Here there were six entries by different makers.

Section V., Carts.—Class 23, single-horse carts for general agricultural purposes. The carts—taken as a whole—sent in by the principal makers were excellent, ranging in price from the lowest, £12 10s. (Woods and Cocksedge) to £19 (Hayes and Son). The competition in this class was severe, the entries for trial numbering twenty-one; and several makers sent in varieties, differing a little in price and general construction.

Class 24, harvest carts. There were only four competitors for the £10 prize, which was carried off by Hayes and Son for one of their already rewarded Society's prize-carts, with head and tail ladders, price £18 10s.; whilst one by F. Milford, of Devonshire, was highly commended by the judges.

Class 25, Market carts on springs.—The competition in this class laid among a few exhibitors, Howes and Sons, of Norwich, entering three; and Hayes and Son, of Stamford, four; the other competitors being J. S.

Stone, W. Ball and Son, and Corbett and Peele, of Shrewsbury, who exhibited the cheapest, £19 10s.; some of those shown ran up to £42.

Class 26, Carts for the conveyance of water with pump attached.—In the ten carts shown there were great varieties of form—some were square wooden low-bodied, others iron cylindrical revolving, and set on the frame in different ways. J. Fowler, T. Baker, Woods and Cocksedge, W. Allcock, Reeves, and Negus were the makers: several were taken out to the fields and practically tested by the judges.

Class 27, Other carts.—Several of the fifteen carts entered under this class were examined and reported upon in other classes for which they were found suitable. Woods and Cocksedge, of Stowmarket, showed several of their make, with the improved tipping apparatus, and of excellent materials, and they did not fall into the error of some makers of painting their carts, seeing that soundness and quality of materials count for 200 points with the judges. Ball and Son, T. Milford and Son, Hayes and Son, and other firms were exhibitors.

Section 6, Stock and implement carts.—In the first division of the section, Class 28, low bodied carts on springs for the conveyance of stock, there was only one entry, a good useful cart of Corbett and Peele's, of Shrewsbury, which had already received the £15 prize at Manchester, and also received the £10 prize on this occasion.

Class 29, lorries or other vehicles for the conveyance of implements, called out from makers who sent in 6 vehicles: Henry Inman, of Manchester, two; Hayes and Son, two; W. Ball and Son, and F. P. Milford one each, the latter carrying off the £10 prize for a lorry suited for harvest purposes in hill-side districts, the price of which was only £20.

Class 30, Carts with crank axle and low body.—This called out 7 entries, at prices ranging from £20 to £40, the £10 prize being awarded to the cheapest one, made by W. Ball and Son.

Class 31, Shepherd's huts on wheels.—A compact and well-constructed hut by J. P. Fison, of Cambridge, at £18, carried off the £10 prize; the second of £5, to one of Mr. H. Inman's construction at £12. G. O. Gooday showed a small miserable affair, intended more as a medium of showing his system of thatching than for any other special merit.

Class 32, Vans for men engaged in steam-cultivation, with fittings.—Only three illustrations of these were submitted to the judges: two by makers who have had experience in the necessary requirements; J. Fowler and Co., one at £95; Aveling and Porter one at £85; and the third by M. Faulks, of Bingham, was higher priced, being £110.

The last subject for notice is the competition for the gold medal special prize offered for a guard or protector to the drum of a thrashing machine. Fifteen different plans were submitted by thirteen makers. Woods, Cocksedge, and Co.'s fence consists of a wooden-spiked roller placed in the feeding mouth just over the drum, and driven by a belt from the stacker-shaft at about forty-five revolutions a minute. Ruston and Proctor's consists of three small wooden-spiked rollers, arranged side by side, parallel with the drum-shaft on the top. These are geared together by five wheels, and revolve all in the same direction. Messrs. Marshalls' guard consists of an elevated box mouth, down which the corn has to be thrown. Ransomes, Sims, and Head have as a guard a combination of rollers placed in the vertical mouth of a hood. The one, is a six-sided wooden roller, and is run at rather high speed by a strap. Above it and parallel runs a fixed shaft on which are loosely strung a number of heavy wooden discs about ten inches in diameter, covered with leather.

J. P. Fison uses a plain roller about one foot in diameter, with wood strips parallel to the axis running above the drum.

F. Savage, of King's Lynn, uses a curved hood of sheet iron of the simplest kind, which can be set at any required angle by moving it on hinges.

E. Ilumphries covers the drum with a hood, and provides a set of short chains and spikes which carry the corn into the hood.

Messrs. Hornsby have a regular rail fence or dock within which the man feeding sits.

These are some few of the plans adopted or suggested for safety; but the question for discussion was wide and complicated, it being necessary also to determine whether the guard, being a self-acting feeder, did or did not work so well as to allow the machine to be worked as efficiently with as without.

IMPLEMENT PRIZES.

Judges for drills, hoes, and manure distributors are Colonel Grantham, Messrs. Kimber, Savidge, Ogilvie, Hicken, and Outhwaite; for waggons, carts and moveable huts, Messrs. Colman, Wheatley, and Turnbull; Miscellaneous, Messrs. Cantrell, Ford, and Hemsley. The stewards of implements are Mr. J. C. Booth, Mr. Whitehead, Mr. Jabez Turner, and Mr. Bowen Jones.

Class. SECTION I.—DRILLS.

1. General purpose drills.
First prize, £10, James Coultas, Grantham (2790).
Second, £5, Thos. Harrison (851).
2. Corn drills.
First prize, £15, James Coultas.
Second, £10, Holmes and Son, Norwich.
Commended.—A. W. Gower and Sons, Winchfield; and Walker and Son, Tithby, Bingham.
3. Adaptation to a corn drill for hill-side delivery.
Prize, £10, C. Denning and Co., Chard.
4. Corn drills for small occupations.
First prize, £10, W. Walker and Son, Nottingham (3413).
Second, £5, A. W. Gower and Sons, Winchfield (2849).
Highly commended.—W. Gilbert, Abingdon (177); James Coultas, Grantham (2794); Wm. Coleman, Northampton (3001).
5. Drills for turnips and other roots on the flat.
First prize, £10, James Coultas (2795).
Second, £5, R. J. Reeves and Son (1587).
6. Drills for turnips and other roots on the ridge.
First prize, £10, James Coultas (2796).
Second, £5, R. J. Reeves and Son (1588).
7. Drills for turnips and other roots on the ridge, without manure-box.
First prize, £10, J. D. Snowden (364).
Second, £5, G. W. Murray and Co. (4265).
Commended.—Corbett and Peele (1375).
8. Water drills.
First prize, £10, R. J. Reeves and Son, Westbury.
Second, £5, J. Coultas, Grantham.
9. Drills for small seeds.
First prize, £10, J. Coultas, Grantham.
Second, £5, Walker and Son, Bingham, near Nottingham.
10. Barrows for sowing small seeds.
Prize, £5, Corbett and Peele, Shrewsbury.
Highly Commended, A. W. Gower and Son, Market Drayton.
11. Drill pressers.
Prize, £5, A. W. Gower and Son, Market Drayton.
12. Potato drills.
First prize, £15, J. Coultas, Grantham.
No second prize awarded.

SECTION II.—HOSE HOES.

13. Horse hoes for general purposes.
First prize, £10, Smith and Grace, Thrapston.
Second, £5, Fordham Mote, March.
Highly commended.—Vipan and Headley, Leicester.
Commended.—G. Lewis and Sons, Kettering.
14. Horse hoes combined with drill, for small seeds.
Prize, £5, Corbett and Peele, Shrewsbury.
Commended.—W. Smith, Kettering.
15. Single-row horse hoes for ridge and flat.
First prize, £10, Corbett and Peele (1386).
Second, £5, Vipan and Headly (779).
Highly commended.—Carson and Toone (4884); Corbett and Peele (1383).
Commended.—J. D. Snowden (365); James Gillett (739); W. Ashton (768).
16. Single-row grubbers.
Prize, £5, Mellard's Trent Foundry.
Commended.—Corbett and Peele, Shrewsbury.
17. Horse hoes for thinning turnips.
First prize, £15, W. Smith, Kettering.
Second, £10, W. Smith.
Highly commended.—W. Smith.
Commended.—W. Holmes and Son, Norwich.

SECTION III.—MANURE DISTRIBUTORS.

18. Distributors for liquid manure.
Prize, £10, R. J. Reeves and Son, Westbury.
Highly commended.—J. Coultas, Grantham.
19. Distributors for dry manure.
Prize, £5, Thomas Chambers, Fakenham.
Highly commended.—J. Coultas, Grantham.
Commended.—Reeves and Son, Westbury.
- SECTION IV.—WAGGONS.
20. Pair-horse waggons.
First prize, £15, Thos. Milford and Son, Cullompton.
Second, £10, W. Ball and Son, Kettering.
Highly commended.—W. Glover and Sons, Warwick.
21. Light waggons on springs.
First prize, £10, Hayes and Son, Stamford.
Second, £5, W. Ball and Son, Kettering.
22. Other waggons.
Prize, £10, W. Ball and Son, Kettering.
Highly commended.—George Ball, Rugby; Thos. Milford and Son, Cullompton.

SECTION V.—CARTS.

23. Single-horse carts for general agricultural purposes.
First prize, £10, W. Ball and Son, Rothwell, Kettering (1309).
Second, £5, F. P. Milford, Exeter (5039).
Highly commended.—Thos. Milford and Son, Cullompton (4877); George Ball, North Kilworth (1241); Hayes and Son, Stamford (1437).
24. Harvest carts.
Prize, £10, Hayes and Son, Stamford.
Highly commended.—F. P. Milford, Haldon, Devon.
25. Market carts on springs.
Prize, £10, Hayes and Son, Stamford (1440).
Commended.—Corbett and Peele, Shrewsbury (1392).
26. Carts for the conveyance of water, with pump attached.
First prize, £10, R. J. Reeves and Son, Westbury (1594).
Second, £5, Wm. Affleck, Swindon (1360).
Highly commended.—W. Affleck (1361), for carrying water to farm stock; J. Fowler and Co., Leeds (994), for steam cultivating purposes.

27. Other carts.
Prize, £10, F. P. Milford, Kenna, Exeter.
Highly commended.—George Ball, North Kilworth, Rugby.
Commended.—Hayes and Son, Stamford, Lincolnshire.

SECTION VI.—STOCK AND IMPLEMENT CARTS.

28. Low-bodied carts, on springs, for conveyance of stock.
Prize, £10, Corbett and Peele, Shrewsbury.
29. Lorries, or other vehicles, for the conveyance of implements.
Prize, £10, F. P. Milford, Haldon, Devon.
30. Carts with crank-axle and low body.
Prize, £10, W. Ball and Son, Kettering.
- SECTION VII.—MOVABLE HUTS.
31. Shepherds' huts on wheels.
First prize, £10, J. P. Fison, Cambridge.
Second, £5, H. Inman, Manchester.
32. Vans for men engaged in steam cultivation, with fittings.
First prize, £15, J. Fowler and Co., Leeds (992).
Second, £10, Aveling and Porter, Rochester (5047).
Highly commended.—Michael Faulks (5861), for ventilating and sleeping accommodation.

SPECIAL PRIZE.

- Appliance or guard to the drum of a thrashing machine for preventing accidents to people employed.
The Society's large gold medal.—[Prize withheld; judges recommend another year's trial.]

MISCELLANEOUS.

- Awards to agricultural articles not included in the ordinary rotation.
- Silver medals to
The Reading Iron Works, Limited, for their patent "Nozzle" vertical boiler with horizontal engine.
- J. Fowler and Co., Leeds, for their 4-wheel windlass for steam cultivation on the roundabout system, with self-moving or driving forward anchor and turning cultivators.
- W. N. Nicholson and Son, Newark, for their combined self-acting and manual delivery horse rake, which received the first prize at the competition at Chorley.
- Barford and Perkins, Peterborough, for Savages' Agricultural locomotive engine, adapted for steam ploughing, the driving wheels being utilised as winding drums.
- G. Lewis and Son, Kettering, for their new patent machine for elevating, shooting, loading and unloading sacks of corn, &c.
- Fairbanks and Co., of King William-street, London, for their 3-ton weighbridge for carts and waggons.
- W. R. Dell and Son, 26, Mark-lane, London, for their duplex grain-sorter for separating round seeds from wheat.
- Ransomes, Sims, and Head, Ipswich, for their 10-horse-power expansion portable steam-engine, fitted with Head and Schemioth's patent straw-burning apparatus.
- Clayton and Shuttleworth, Lincoln, for their 7-horse power portable steam-engine, with variable expansion gear, water-heater, and other recent improvements.
- Davy, Paxman, and Co., Colchester, for their water-heater, adapted to nearly all classes of high and low pressure and condensing engines.

The special or gold medal for an appliance to the drum of a thrashing machine was not awarded, the judges sending in a memorandum to the effect that they were unable to satisfy themselves as to the efficiency of any of the plans submitted as a guard or appliance to the drum of a thrashing machine for preventing accidents to the people employed; but they recommend that at any future trials two prizes should be offered—one for a combined guard and feeder, and another for a guard or protection only.

THE IMPLEMENT STANDS.

The show of implements increases year by year—an evidence of the growing importance of agricultural machinery and engineering skill, which has done so much already to lighten the manual work of the agricultural labourer. The farmer finds himself compelled to have the best, newest, and most effective machines, and every useful implement that will save hand-labour. Steam, too, has, and will continue, largely to supersede horse labour. The shedding, this year, for the implements and seeds covers 2,000 more feet, and the machinery in motion 600 more feet. The Society is doing all it can to keep down the increased demands for space from outsiders or dealers in miscellaneous articles, having little or no connection with agriculture; and there are 400 or 500 less feet given to them, notwithstanding the 10s. per foot space which they are willing to pay.

The following figures show the proportional space occupied at Bedford and Hull:

	Bedford.	Hull.
	Feet.	Feet.
Implement shedding	11,400 ...	9,000
Machinery in motion	2,600 ...	2,000
Lands and models' shedding ...	700 ...	1,100
Cattle shedding	2,900 ...	2,400
Sheep and pig shedding	3,150 ...	2,500

And there were enclosed boxes for 420 horses against 330 at Hull.

Let us now proceed to notice the principal stands, placing the names of exhibitors in alphabetical order for more easy reference of those interested.

Wm. Affleck, of Swindon, had a couple of his water carts, which were submitted for trial, and obtained the second prize and a high commendation; a small vertical engine and boiler; some loose tires on mowing machine wheels, with which the machine will travel with ease and smoothness, they are fixed or moved in two minutes; a double-action haymaking machine, suitable for light or heavy crops.

The Albion Iron Works Company, Rugeley, exhibited several of their chaff-cutters (one a new machine); several of their British grist mills, first introduced at the Wolverhampton meeting, and which will grind or kibble twice as fast as a mill with stones. They will also split large foreign beans and kibble Indian corn. The firm had also many excellent curd mills and cheese presses; some lawn cultivators; horse hoes; and a new horse rake, with improved tines.

W. Allechin, Northampton, an eight-horse portable engine, with steam-jacketed cylinder, with feed-water apparatus; a seven-horse steam-jacketed cylinder traction engine, with patent arrangement of driving gear; and a small 3½-horse portable engine, with water heater; also an improved corn-grinding mill, with 4-feet grey stones.

Alway and Son, of Pentonville, a fine collection of barrel and other churns, railway milk cans, pails, &c.

Abraham Armitage, Bury, two ten-row general purpose drills; and an improved 6 feet 6 inches corn drill, fitted with a corn barrel; and a set of press levers and chains.

S. C. Armitage, Chatteris, March, a lever steering horse hoe, and an improved turnip-thinner, which we described among the trial implements last week.

Ashby, Jeffery, and Luke, Stamford, showed numerous specimens of their celebrated prize haymakers; horse rakes, with high wheels; chaff cutters, with wrought iron frames and wrought angle iron legs, said to be the strongest and most durable machines in use. Our special attention was directed to the great advantages of their improved light-draught solid axle, double spring, and double-action haymakers; their special adaptability to heavy crops, from the fact of each fork having two strong springs arranged so as to take the bearing near the two ends of the fork bar instead of the middle, as in the case of the ordinary haymaker; the simple plan for cleaning the machine without taking it off its wheels, and the easy method of reversing the action. The new improved compound leverage lately introduced into their horse-rake renders this one of the lightest lifting rakes out. The introduction of wrought iron frame to chaff-cutters (as well as wrought-iron legs), was first adapted by this firm, and is, we believe, confined to them. The frequent breakages of cast-iron frames, especially in horse and steam-power machines, has been a constant source of annoyance and expense, and this is put forth as a likely step towards the remedy. The excellent vertical steam engines and powerful wrought-iron frame chaff-cutter, with an excellent plan of preventing accidents by a foot lever for reversing the rollers, attracted much attention.

Wm. Ashton, of Horncastle, had a general purposes horse hoe, a single row horse hoe, commended by the judges, and a grubber; several of Seel's patent duck-foot harrows, and chisel and other harrows.

Aveling and Porter, Rochester, besides their van for men, which carried off the second prize in competition at this meeting, had a 6-horse power road locomotive crane engine with spring tire driving wheels on Brydges Adam's patent, with compensating motion for turning sharp curves; an 8-horse and a 10-horse power agricultural locomotive, the latter adapted especially for steam ploughing on the roundabout system, for thrashing and the general hauling work of a farm, with a waggon, which received the first prize at the Wolverhampton meeting; one of a pair of 12-horse engines to work a double engine set of ploughing machines, and a 10-ton steam roller. This firm has received no less than seven gold medals, besides money prizes, during the past four years for their steam ploughing machinery.

J. L. Baker and Co., Hargrave, Kimbolton, had a good display of lever horse hoes, combined drills, &c.

John Baker, Wisbeach, several excellent corn dressing and screening machines.

Thomas Baker, Compton, is noted for his cylindrical water and manure carts, of which he exhibited several, besides two or three corn dressing and blowing machines.

George Ball, North Kilworth, near Rugby, had a waggon and several excellent carts, three of which were highly commended after trial by the judges.

W. Ball and Sons, of Rothwell, Kettering, made a magnificent display of waggons and carts, numbering about seventeen, and carried off no less than four first prizes and one second in the competition in Section 4.

Barford and Perkins, Peterborough, who have been so successful in different departments at previous Royal Shows, obtained the special silver medal for their 10-horse agricultural locomotive, manufactured by F. Savage, Lynn, the driving wheels being utilised as winding drums. Besides numerous other powerful steam cultivating

apparatus, they exhibited an improved general horse hoe and a single blast thrashing machine, also by Savage; several improved elevators or stacking machines, and their prize steam cooking apparatus, and various other useful articles.

V. Barford, of St. Neots, had some portable farmers boilers and steamers.

Barrows and Stewart, Banbury, showed double cylinder 12-horse power portable steam cultivating engine, and several thrashing and finishing machines, a straw and hay elevator, and one of Andrew's stacking machines which will elevate a waggon-load in five minutes.

Beare, Son and Co., of Newton Abbott, exhibited three new implements—a patent drill for roots with manure on the flat 7 feet wide, with a self-acting appliance to seed box to ensure a regular distribution in hilly districts; a machine for distributing manure broadcast in small or large quantities; and a double speed back-action haymaker, in which the working heads extend beyond the travelling wheels, thereby turning the hay after the wheels have passed over it, and turning a larger space.

John Bellamy, of Millwall, had on his stand a good many of his wrought-iron cisterns, feeding and drinking troughs, and water cart bodies.

E. H. Bentall, of Maldon, exhibited, as usual, a large collection of his chaff cutters, turnip cutters, root pulpers, and corn and seed crushers, in several of which improvements had been made. A set of horse gear was also shown in which no intermediate is required.

The Beverley Iron and Waggon Company had a large display on their stand of carts, waggons and railway trucks, sheaf-delivery reapers, field rollers and crushers.

R. Bickerton and Sons, Berwick-on-Tweed, besides a drill roller and presser, had several reaping and mowing machines, with new improvements in them.

Robert Boby, Bury St. Edmunds, had a new spring lever horse-hoe, two new horse-rakes, and some double-action haymakers, and a number of screens and other useful machines and implements.

Brigham and Co., Berwick, exhibited a grass-mowing machine, a self-acting reaper, and a drill roller or presser in separate sections, on the principle of the Cambridge rollers.

The Bristol Waggon Company had a good many of their solidly-made carts, waggons, and floats, several steel-tooth horse-rakes, and corn-dressing machines.

Brown and May, Devizes, exhibited four of their portable engines, ranging from 10 to 2½-horse power, working several of Nalder and Nalder's thrashing machines.

Burgess and Key, London, two of their self-raker reapers, with Hughes' hand corn-lifters, a two-horse mowing machine, a combined reaper and mower, and a one-horse manual delivery reaper. The width of cut is five feet.

Charles Burrell, Whitford, Norfolk, one or two road locomotives, several single cylinder traction engines, two 8-horse power portable engines working thrashing machines, a harvest elevating machine, and a straw elevating machine worked by horse gear.

Cambridge and Parham, Bristol, had a good assortment on their stand, comprising two portable engines of their own, driving one of Nalder and Nalder's combined thrashing machines, and an improved hay, corn, and straw elevator. In this the principle of raising the trough is entirely new, and done by drawing together the front and hind travelling wheels by a chain and windlass. The top can be half-turned back without lowering the elevator. Several of their notched-wheel rollers and clod-crushers, and of their Hull Royal prize chain harrows were shown. They are made in three parts, connected with the patent spreaders, which are so arranged as to bring each jointed

row of links in the three parts into separate tracks. They also showed some fine harrows and duck-foot scuffle drags.

George Campion, of Ramsey, had a great many novelties and varieties of drag harrows.

Carson and Toone, Warmminster, sent several horse-hoes and grubbers: one of the former was highly commended on trial by the judges. They also had several chaff-cutting engines, turnip-cutters, and cheese presses, and some sets of horse gear, besides their well-known automatic lamb creep.

Carter Brothers, of Mark Lane, showed several of Norton and Hawksley's grinding and disintegrating mills, worked by one of Lewin's 8-horse portable engines, a new flour mixer, and several other improved minor implements.

Thomas Chambers, Fakenham, a new turnip-thinner and two broadcast manure distributors, one of which carried off the £5 prize on the trials.

Wm. Clarke, Ipswich, exhibited several counterbalance horse-rakes, a Scotch cart, and some improved cultivators.

Clay, Wakefield, exhibited several of his cultivators, similar to that which took the Society's prize at Hull last year. One for general purposes had a width of cut of 5 feet, with 7 tines, the selling price being £15. Another with 5 tines and levers to wheels, width of cut with shares 4 feet, fitted with all improvements, was £13. He also showed a Norwegian harrow, and some chisel harrows, light in draught for the width taken.

Clayton and Shuttlesworth, Lincoln, had in the machinery in motion department a fine selection of their steam-engines, thrashing, and stacking machines. They also added to their former honorary rewards the silver medal of the Society this year, for the variable expansion gear, water-heaters, and other recent improvements to their engines. The price of the expansion gear separate is £7.

J. F. Clewley and Co., of Padstow, showed two new corn and seed drills, one 7 feet 6 inches wide, with 15 rows. Another 6 feet, with 13 rows.

Coleman and Morton, Chelmsford, made a good display of horse-hoes, liquid manure carts, prize cultivators, corn screens, hop syringing machine, and a horse pitchfork for unloading and stacking hay, straw, and loose corn.

W. Coleman, of Northampton, showed some Woburn corn drills, one of which, on trial, was highly commended by the judges; a turnip drill, some horse hoes, and scuffle harrows. The seed hopper of the corn drill is entirely self-acting, and preserves its level and even position when drilling up and down hills as on the flat, thus ensuring an equal delivery of seed.

J. Cooch, Harlestone, had two or three corn dressing machines, which gained the Society's prize at Cardiff, and a couple of elevators for working with them.

John Cooke, Lincoln, made a large display of 30 or 40 ploughs of various kinds.

Corbett and Peel, of Shrewsbury, not only had a large and varied number of implements and machines, but were remarkably successful in their competitive trials, carrying off one first prize, three other prizes, two high commendations, and two commendations. They were especially successful in root drills, horse hoes, and grubbers.

S. Corbett and Son, of Wellington, exhibited a 4-horse portable engine, several grinding mills, root pulpers and strippers, some new potato diggers, and ploughs.

W. Cottis and Sons, Epping, entered a single row horse hoe and a grubber for trial.

Cottrell and Co., of Hungerford, showed a patent folding

hay, corn, and straw elevator, with a horse-gear to work it.

Coulson and Wear, of Stamford, had a traction engine of 8-horse power, single cylinder, designed expressly for steam cultivation and thrashing, and a straw elevator with globular gear wheels, which will deliver straw to a height of 25 feet.

James Coultas, of Grantham, was one of the most successful of the exhibitors on the trial field, carrying off £78 in eight money prizes, and three high commendations; out of 16 implements entered for trial more than half were rewarded, principally drills and manure distributors, and Wright's potato planter. This valuable implement has already been rewarded with many prizes, and received the Society's silver medal at Hull. He also exhibited some horse hoes and grubbers, and an elevator for stacking.

W. Crosskill and Sons, Beverley, made a large display on their stand of clod-crushers and rollers, carts, waggons, and lorries, &c., but did not compete for the prizes offered.

John Crowley and Co., Sheffield, had several of S. Edwards's new safety lever chaff-cutters. In this the entire absence of any retaining pins to keep the starting lever in position, enables the man feeding the machine to stop it: even if both his hands were fast in the feed rollers, he could instantly stop it with his body, by bringing it in contact with the lever, which is placed in a convenient position for that purpose.

Davey, Paxman, and Co., Colchester, had several of their vertical engines and boilers, which occupy little room, and are highly efficient and economical. They also had on show several of their water-heaters, adapted to small or large power engines. A variety of contrivances, more or less perfect, have been suggested for this purpose, but none ever brought before the public which combine with these all the requisite qualities of a perfect water-heater, and which led the judges on this occasion to award it a silver medal. The water-heaters are of two descriptions—in one the steam is condensed and returned to the feed-tank, when the water is pumped into the boiler at a temperature of 200 Fah.; in the other the water is made hot between the pump and the boiler, and is therefore adapted to nearly all classes of high and low pressure and condensing engines. These heaters not only save fuel, but act as incrustation traps, thereby saving the boiler. A progress medal at Vienna and the silver medal at Bremen have been awarded to this heater.

Dietz and Co., lamp manufacturers, of St. Paul's Church-yard, had a farmers' tubular lantern, which has done good service the show-yard at the various tents at night, and in use by the local fire brigade.

W. R. Dell and Son, of Mark-lane, London, exhibited several smut machines and separators, Houghton's double aspirator, and some millstones. They were also awarded by the judges a silver medal for a French grain-sorter.

C. Denning and Co., of Chard, Somerset, besides some horse gear and miscellaneous articles, had several chain corn drills, one of which carried off the tenth prize on trial in class 3.

Dennis and Co., of Chelmsford, besides some good and cheap greenhouses, exhibited some new and ingenious steam or water valves for high pressures.

A. Dodman, of King's Lynn, had on his stand a portable 8-horse engine fitted with variable expansive gear, and a small 3-horse combined vertical engine and boiler.

F. Eastwood, of Blackburn, besides two small vertical engines of his make, exhibited several compound-action churns, tub, barrel, and other churns of various sizes.

W. and S. Eddington and Co., Chelmsford, had in motion a double-blast finishing thrashing machine (driven by one of their 8-horse portable engines), an as-

sortment of driving bands, and some powerful screw lifting jacks.

J. B. and T. Edlington, Gainsborough, had, besides several mowing machines, a self-raking, side-delivering reaper, on an entirely new principle, the frame-work wholly constructed of wood, and so arranged that the attendant can raise and lower the machine, or dip the platform up or down while at work to suit laid or uneven crops.

Fairbanks and Co., King William-street, London, who are celebrated for their different American weighing machines, steel-yards, &c., received from the judges a silver medal for their 3-ton weighbridge for carts and waggons, which was employed in the test trials.

T. R. H. Fiske, of Hunslet, sent a new double windlass, light set of steam-ploughing tackle, and a five-tined cultivator.

J. P. Fison, Cambridge, exhibited an 8-horse and a 4-horse engine, a double-blast thrashing machine, fitted with an Archimedian corn elevator and chaff-bagger, a simple safety feeder guard, several harrows and ploughs, and the shepherd's hut which received the £10 prize in competition.

Fallows and Bate, Manchester, had several improved implements, among others a cheap wheat-grinding mill for domestic use, a gorse-cutting and bruising machine for rendering furze safe and valuable as cattle-food, and a 3-horse vertical engine and boiler of their make.

J. Fowler and Co., Leeds, made a display of their machinery, much of which was in practical operation during the show. These are a collection of ten self-moving steam-engines, of various power and dimensions, and about thirty-five large implements, intended to perform every requisite operation on fields of every description. They had a 16-horse and an 18-horse steam ploughing engine. One of the features in these engines is the very extensive use of steel in the whole machinery, shafts, and gearing throughout, and every part more liable to wear and breakage being of this material. The advantages are greater strength and durability and lightness. A second noteworthy peculiarity is the exclusive employment of single-cylinder engines. The different implements worked by the engines are essentially of three classes—balance implements, turning implements, and implements which go backward and forward, without either turning or lifting, as ordinary harrows, &c. The balance principle is chiefly applied for ordinary ploughs. All these implements are entirely of wrought iron and steel, the skifes being cast steel, and only the shares of chilled cast iron. Each one can be fitted with different kinds of ploughs, by either exchanging the shares or the mouldboards, or both, to suit the peculiarities of the soil or the requirements of the crops. The width of the furrows, which can be altered by shifting the ploughs along the bevelled frame, whilst by simply substituting scari-fying or digging breasts for the mould boards, the ploughs can be transformed into cultivators and digging implements. The principal implements made to turn round at the headlands, working with one set of tools in both directions, are cultivators. Of these we found one 11, three 9, two 7, and two 5-tine cultivators. A perfectly new type of implement was represented by an 8-furrow turn-wrest plough, adapted for shallow work.

K. Garrett and Sons, Saxmundham, had 6, 8, and 12-horse portable engines working their thrashing and corn-dressing machines, some corn, seed, and manure drills. They have applied a self-acting drum-guard, which protects the feeder and other attendants on the stage of the thrashing machine while at work. The guard, on the man leaving the feeding-box, closes com-

pletely over the drum, leaving only a grating through which the loose corn can be swept, thus preventing the possibility of those accidents which so often occur whilst the machine is emptying itself, and the operation of clearing down the stage is going on.

John Gatwood, Hitchin, made a large display of cultivating implements, drills, horse hoes, harrows, and clod-crushers, ploughs, and horse rakes.

P. and H. P. Gibbons, Wantage, had three engines of their make, driving, thrashing, and dressing machines, in the machinery in motion division of the yard.

W. Gilbert, of Shippin, Abingdon, had several Suffolk corn drills for trial, one of which, a 9-row small occupation drill, was highly commended by the judges.

James Gillitt, of Northampton, entered a number of new implements, horse hoes, and grubbers for trial, one of which was commended by the judges.

W. Glover and Sons, Warwick, sent in two well-made carts, and a pair-horse general purpose waggon, which on trial was highly commended.

A. W. Gower and Son, Winchfield, exhibited four corn drills for trial, one carrying off the £5 prize, and another larger one being commended. Their barrow seed-sowing machine has received several special and distinguished awards. The same firm, at Market Drayton, had several drills for trial, and also carried off a £5 prize and a high commendation for their two-furrow drill presser, and their broadcast seed machine.

John Guest, Bedford, exhibited a few drills, and a model of an elevator to build three or more stacks at one standing, without moving the driving power, as it moves from right to left.

J. Hall and Co., of Lincoln, had several corn grinding mills, and a coprolite mill fitted with French burr stones, &c.

Hamilton, Woods, and Co., of Salford, exhibited four horizontal and vertical engines of moderate power, one of Turner's gas engines, some hop presses, and an improved malt mill.

Harrison, McGregor, and Co., Leigh, exhibited a number of their one and two horse mowers and reapers, chaff-cutters, root pulpers, and slicers. Their Albion mowers were very successful in competitive trials last year, against those of many of the leading makers.

Thomas Harrison, Lincoln, entered several new implements for trial, and his large general purpose drill carried off the second prize for these.

Hunt and Co., of the City Road, London, had several weighing machines of various kinds for stock, bags, &c.

H. Hayes and Son, Stamford, made a large display of excellent carts and waggons, and carried off in competition two ten-pound prizes, a commendation, and a high commendation.

Edward Hayes, of Stony Stratford, showed some steam-cultivating tackle, &c., comprising a twelve-horse power engine, two self-acting windlasses, a pair of self-moving actors, some rope porters, and a five-tined cultivator.

Head, Wrightson, and Co., of Stockton-on-Tees, exhibited several of Moore's patent pulley blocks, of 10 to 40 cwt., and some of their hand hoists with brake, to enable one man to lift heavy weights with ease.

Hempsted and Co., Grantham, had on their stand an eight-horse power driving and finishing thrashing machine, also a straw elevator and stacker, and swivel drills.

Hill and Smith, Brierley Hill, entered a couple of horse hoes and a grubber for trial, and had a display of gates and fencing.

Holmes and Sons, of Norwich, had a fine collection of drills, horse hoes, and manure distributors. They carried off the second prize in the trials for general purpose

drills, and their turnip thinner was highly commended by the judges after trial.

R. Horusby and Sons, of Grantham, had two of their engines at work driving their famous thrashing machines. By improved arrangements the whole of the machinery is driven with very few belts and without gearing. They also exhibited several mowers and reapers, and these are now constructed so as with ordinary management to be entirely free from breakages. Their self-rakers have all the latest improvements. Of their new patent double-furrow ploughs several were shown. These are constructed on principles differing materially from anything before known, and the important improvements introduced appear to be a great advance over those generally in use.

J. and F. Howard, being on their own ground, made an enormous display of machines and implements: not only were two entire sheds in the show-yard filled, but the fields and yards adjoining their works were filled with specimens of their implements; but they had at work, as we stated in our last, their reaping machines cutting rye, and their steam ploughs turning up the soil afterwards, for the information of visitors passing to and from the show-yard. The Howards manufacture four kinds of machinery for steam cultivating. The first kind is that which they have made for so many years, consisting of a detached windlass and tackle on the stationary system, which can be worked by an ordinary portable or traction engine of ten or twelve horse-power. This apparatus requires one engine-driver, two anchor-men, a ploughman, and two rope-porter lads. The second arrangement consists of an ordinary traction or portable engine, with a new patent self-coiling windlass and self-moving anchors. This apparatus has the advantages peculiar to the stationary system, but the labour and expense of working are reduced. The men required are one engine-driver, a ploughman, and two rope-porter lads. The third consists of two ploughing or traction engines, with a winding barrel to each, working along opposite headlands, and drawing a plough, cultivator, or other implement from one engine to the other alternately. This arrangement is worked with two engine-men, a ploughman, and one or two rope-porter lads. One of the novelties shown was an arrangement of windlass constructed so that it can be attached behind the portable engine by which it is driven, the power being communicated by a belt. The firm also show one of their self-coiling windlasses, in which the drums have a traverse motion on their shaft, so as to ensure the rope coiling properly. One of the most interesting novelties they have introduced is a balance plough for horses, intended to turn the furrow always the same way. It is an ordinary steam plough in miniature, and has been specially designed for use in Kent. Another substantial improvement is a new folding reaper with self-acting rakes. Hitherto it has been a troublesome job to get the self-rakers along a road, owing to the great width occupied; but in this new machine the whole delivery platform, rakes and all, can be turned up without trouble and secured by a couple of bolts, so that the machine can traverse the narrowest roads, and yet can be put to work in a very few minutes.

Howes and Sons, of Norwich, exhibited a market or baggage cart, which has received many first-class prizes, besides other carts and cars.

A. Hughes, of Market Harborough, exhibited several of his patent laid corn lifters, which can be applied to any reaping machine, self rakers or hand delivery by the drivers in the field, and adjusted to the nature of the ground, or the condition of the crop.

D. Humphries, Pershore, had in the machinery in motion department several single and double blast thrashing machines, and a portable elevator.

Hunt and Tawell, Earl's Colne, besides many sets of horse gears, had a varied assortment of machines, mills, pulpers, and other implements.

T. Hunter, Maybole, had a number of horse hoes, potato diggers, and other implements.

T. W. Inwood, St. Albans, had on his stand an agricultural one-horse cart, market car, and other vehicles.

James and Son, of Chilton, have made a good display of water carts and manure distributors, pumps, &c.

H. and G. Kearsley, Ripon, showed several mowers and reapers of their manufacture.

S. A. and H. Kelt, Gloucester, in their exhibits restricted themselves chiefly to corn drills. Several of their implements were entered for trial.

Kenman and Sons, of Dublin, confined themselves to their Clydone horse hoe of several patterns for thinning turnips.

B. Kittmer, of Louth, had three corn dressing and blowing machines, and an elevator for bagging the corn from the machine.

J. L. Larkworthy and Co., Worcester, had a variety of ploughs, harrows, and other useful implements, but calling for no special notice.

Laughland and Co., Warrington, showed a hand press for baling hay, straw, and esparto grass, and a machine for weighing the bales.

Josiah Le Butt, Bury St. Edmunds, exhibited a number of his corn screens, malt screen, and malt plough, and a hand seed drill.

Lewis and Son, Kettering, besides a corn drill for small occupations, showed several horse hoes, none of which was recommended. They also received from the Miscellaneous judges a silver medal for a cheap sack lifter, with which a strong lad (not able to lift or carry a sack of corn) can shoot sacks of corn at the rate of 12 or 15 qrs. per hour without any assistance, thereby saving the labour of two men, and doing the work without waste.

Lillie and Elder, Berwick-on-Tweed, exhibited a corn drill and turnip-sowing machine, one or two reapers and mowers, and two carts.

The Maldon Ironworks Company had several sets of horse gears, a mangel plough, chaff cutters, and disc pulpers. This company lately received the silver medal at Bremen for their food-preparing machinery.

Marshall, Sons, and Co., Gainsborough, made, as usual, a fine display of their engines, having no less than six on their stand, working thrashing machines and straw elevators.

Wm. Mattieson, Bedale, had three of his improved Yorkshire Champion reaping machines.

R. Maynard, Whittlesford, had a miscellaneous assortment of elevators, drills, horse-hoes, &c.

Mellard's Trent Foundry, Rugeley, had a very large collection of chaff-cutters, revolving mould-board ploughs, and a 3-tined grubber, which carried off the £5 prize in competition.

Milford and Son, of Cullompton, were very successful in their display of carts and waggons, carrying off the first prize of £15 and a high commendation.

F. P. Milford, of Kenn, near Exeter, also had a fine display of carts and waggons, receiving from the judges a £10 prize for a harvest cart, a £5 prize for a general purpose cart, and a commendation for a pair-horse wagon.

Mills and Co., Wellingborough, had several of their registered chaff-cutters and some cheese presses.

Morris and Griffin, of Wolverhampton, had an excellent display of the various artificial manures in the manufacture of which they are so largely engaged.

Murray and Co., Banff, entered, as we stated in our last, several new implements for trial, and carried off the £5 prize for ridge turnip-sowing machines. The delivery

is regular and certain in all descriptions of land, the cups in the brass delivery-dise never failing to fill evenly. Their tiny thrashing machines are most efficient. The construction is quite new, the thrashing, shaking, and dressing being put in a very compact form.

Murton and Turner, of Thetford, exhibited several corn drills and horse-hoes for general purposes and for turnip thinning.

The Ravensthorpe Engineering Company exhibit a 3-furrow balance plough, and a 5-tine turning cultivator on a new principle. The chief peculiarity of the plough is in the frame, which is composed of three parallel bars of Bessemer steel running from extreme end to end, swelled in the middle and bent to the proper angle. These frame bars are set to a proper width to turn a furrow ten inches wide, and they are strongly stayed and braced to one another by wrought-iron stayings placed in each case so as to relieve the frame of the twisted strain imparted by the skife coming in contact with impediments, such as stones or roots. The cultivator exhibited by this company is the invention of Mr. James Backhouse, and has been produced to meet a want long felt by owners of steam ploughing tackle (especially on the roundabout system) for an effective implement, to turn round at the headlands, and which, while being strong enough for moderate heavy work, shall be light enough for their small engines.

Nalder and Nalder, Limited, Wantage, had three of their finishing thrashing machines, drawn by some of Brown and May's engines.

W. N. Nicholson and Son, Newark, made a display of their haymakers and patent horse rakes, root-cutting pulpers, and other machines, and had six small power engines. The judges awarded this firm a silver medal for their combined self-acting and manual delivery rake. Inquiries for the future will doubtless be for self-acting rakes. They are labour-saving appliances that must follow in the wake of self-raking reapers.

Oldham and Booth, Kingston-on-Hull, had two bone-crushing machines, worked by one of Robey's 8-horse engines.

D. M. Osborne and Co., Liverpool, had three of their American Kirby combined mowers and reapers, and a Burdick independent reaper.

E. Page and Co., Bedford, had on their stand a large collection of implements of their own manufacture, and by other makers.

Page and Girling, Woodbridge, besides some carts and waggons, had several of Edward's improved drop drills or planting machines. The patent in these drills, for setting various seeds, consists in an arrangement whereby the seeds are deposited separately, and at equal distances apart.

Payne and Son, of Thrapston, exhibited a powerful 12-horse portable engine, suitable for contractors, and 4-horse combined vertical engine and boiler.

Penney and Co., Lincoln, made a good display of their corn and manure screens.

Perkins and Co., Hitchin, exhibited a couple of horse hoes and turnip thinners, some field rollers, harrows, and combined stacking machines.

Picksley, Sims, and Co., Limited, Leigh, had on their stand many examples of horse rakes, food-preparing machines, and mowers. Their new patent balance combined 2-horse mower and reaper carried off several prizes last year, and the gold medal at the United East Lothian Society, this month.

Priest, Woolnough, and Michell, Kingston, had several corn manure drills and horse hoes, for which they have obtained some deserved celebrity.

W. Rainforth and Son, Lincoln.—The exhibits of this firm consist chiefly of drills and screens.

F. and H. Randell, North Walsham, exhibited new patent double furrow plough, some liquid manure carts, and a turnip drill.

S. and E. Ransome, London, had a new form of shears, which any lad can use.

Ransomes, Sims, and Head, Ipswich, made an immense display of their ploughs and horse rakes. They had two single blast and two double blast thrashing machines driven by four of their portable engines. One of these fitted with Head and Schmidt's patent straw-burning apparatus received the silver medal at this show from the Miscellaneous judges. This is an application which is calculated to be very useful on the Continent and in the colonies, where other fuel is scarce, but where there is an abundance of rough vegetable matter available—reeds, cotton stems, maize and sorghum stalks, sugar cane trash, small branches of trees, furze, mustard and flax stalks, are all readily consumed if dry. Its application with straw was shown on engines by Clayton and Shuttleworth, Ruston and Proctor, and others. The new turnip hoe of this firm we alluded to last week, and with some more attention given to it in the way of improvement it may become a useful instrument.

The Reading Iron Works, Limited, had a number of their excellent steam engines working thrashing machines. These have received prizes at nearly all the Society's shows, and the grand prize at the Vienna Exhibition. At the Bedford meeting the judges gave the prize—a silver medal—for their nozzle boiler, which promises to be one of the most economical steam generators yet brought out. The tube chamber is square, and traversed by rows of tubes set horizontally at right angles to each other. At the end of these tubes are fixed cast nozzles, or circulators, the action being that as soon as the steam is quenched, it readily and necessarily passes off at the turned-up nozzles, the water rushing in at the turned-down nozzles to supply its place.

R. and J. Reeves and Son, Westbury, are most successful in the appreciation of their exhibits, especially drills and manure distributors. They received three £10 prizes, two £5 prizes, and two commendations.

B. Reid and Co., Aberdeen, had a great many of their disc corn and seed drills, horse hoes and other implements, for which they received the progress medal at the Vienna Exhibition.

Riches and Watts, Norwich, exhibited several steam engines, driving grist mills, and a new simple and efficient revolving gathering rake.

E. R. and F. Turner, of Ipswich, as usual, made a good display of their specialities, such as corn and seed crushers, from the smallest size suited for one-horse up to those requiring steam power, and capable of delivering a large quantity per hour. Grinding mills, with French stones; horse gears and oilcake breakers; one of their 8-horse power patent automatic variable expansion portable engines was driving a suitable thrashing machine. Another speciality of this firm is their small-sized thrashing sets, one of which of 5-horse power was also shown in motion. In hilly districts, and where farms are small, these machines are specially valuable—in fact, they may be used where, from their great weight, larger machines could not be transported from place to place.

Richmond and Chandler, Salford, made a fine exhibit of their chaffcutters, some of which were driven by one of Clayton and Shuttleworth's 4-horse engines. They had also several sets of horse gear, root washers, and turnip cutters. Their machine for cutting up straw into lengths for bedding is worth mention. Last year alone this firm carried off about two dozen prizes with their implements at home and abroad.

E. and H. Roberts, Stony Stratford, exhibited three of their straw elevators and corn stackers, which deliver at heights from 26 to 32 feet, and are easily worked by a pony. This machine received the silver medal of the Northampton Society last year.

Robey and Co., Lincoln, had four of their excellent engines working thrashing machines, mills, and straw elevators.

J. G. Rollius, London, had on his stand one of Hollingsworth's American horse rakes, specimens of hay and manure forks, hatchets, pumps, and some of Clinton's American corn shellers, which will shell from 10 to 15 bushels of Indian corn per hour.

Ruston, Proctor, and Co. had six of their steam engines running, from 2½ to 10-horse power, driving thrashing machines, grinding mills, and straw elevators.

Samuelson and Co, Banbury, exhibited seven reapers of various kinds, two combined reapers and mowers, and several turnip cutters.

J. N. Sears and Co., London, had at this meeting several American novelties, such as a millstone dressing machine, a gran duster for dressing the offal after leaving the silks, a model of an adjustable grain elevator, for lifting bulk grain in quantities ranging from 30 to 100 quarters or more per hour.; an American turbine water wheel, and one of their aspirators to clean corn.

Sharman and Ladbury, Melton Mowbray, exhibited several drag harrows and rakes, and some registered poultry houses and dog kennels.

Smith and Grace, Thrapston, had on their stand many chaff-cutters and other food-preparing implements, besides several excellent general-purpose steerage horse hoes, one of which on trial carried off the first prize of £10 at the meeting, and also a silver medal at the Derbyshire Society last year.

W. Smith, of Kettering, is not only famous for his horse hoes, one of which, a combined, was commended on trial, and he received a silver medal for it last year at the Northampton Agricultural Society's show, but in the turnip thinning trials his implements carried all before them, receiving both prizes and a high commendation.

J. Smyth and Sons, Peasenhall, showed a number of their Eclipse and Suffolk drills, but did not compete in the field trials.

J. D. Snowden, Doncaster, had a number of ploughs, one a new improved light-land double-furrow plough; for his two-coultter ridge drill he carried off the £10 prize of the Society; and his improved self-expanding horse hoe was also commended on trial.

J. S. Stone, of Newport, had a waggon and several carts entered for competition.

Tangye, Brothers, and Holman, of London, had two of their high-pressure steam engines and several of their steam pumps and hydraulic jacks.

W. Tasker and Sons, Andover, exhibited two of their engines driving thrashing and winnowing machines, some elevators and rickers, and liquid manure distributors.

Thomas and Taylor, of Stockport, had a fine collection of eccentric churus, and several of them were purchased by the Crown Princess of Prussia at her visit on the first day of the show.

W. S. Underhill, Newport, Salop, exhibited two portable engines, a thrashing machine, several double-furrow ploughs, horse hoes, grubbers, harrows, and turnip drills, and some ridging ploughs.

John Unite, of Paddington, who supplies the Society with the covering for the shedding, exhibited rick and cart cloths, horsecloths, tents, and a variety of other useful articles.

Vipan and Headly, Leicester, besides a large miscellaneous collection, exhibited several ploughs and harrows and carts. They carried off the £5 prize for a single row

horse hoe, and high commendation for a general purpose steerage horse hoe.

W. Walker and Son, Bingham, showed chiefly drills, for which they carried off a £10 and a £5 prize, and a commendation.

Wallis and Steevens, Basingstoke, in the machinery department had one of their 8-horse engines driving one of their prize thrashing machines, and two slow motion automatic folding elevators.

Waudley and Robb, Wisbeach, showed two improved horse hoes, and also an improved guard for a thrashing machine.

Ward and Silver, Sudbury, had on their stand a road waggon, several carts, a straw elevator, several chaff cutters, and numerous other useful implements.

Warsop and Hill, Nottingham, exhibited at work their rock drill, which is entirely self-feeding, certain in action, very light, easily fixed, and requires only a low pressure of steam or air to work it. The value of rock boring by steam power in all mining and quarrying operations is now universally acknowledged, and a simple and efficient tool of this kind in the rough operations of mining must be invaluable.

A. Watson, Andover, had a stacking elevator with horse gear working it and a bone crushing mill.

The Welland Vale Manufacturing Company, Canada, had an excellent collection of forks, spades, shovels, rakes, and other farm tools.

W. Whitehouse, Ampthill, exhibited several improved implements in cultivators, horse hoes, and grubbers; besides some good ploughs and harrows.

R. Wilney, Preston, who is well known for his shedding and fittings for cattle, showed also several other useful appliances for feeding stock, and a patent manure distributor.

W. A. Wood, London, made a good display of his well-known mowers and reapers. An iron frame has been adopted for the new self-delivery reaper. All the bearings are brass-bushed, unnecessary bolts and nuts dispensed with, and increased strength and simplicity gained. The gearing can be readily reached, and is covered, to protect from straws and dirt; patent spring oilers, so highly appreciated in the iron frame mower, are applied to all the bearings. Owing to the simplicity and perfection of the gearing and cutting apparatus, the direct or forward draught is lighter than that of any other self-raker, the work being easy for a pair of ordinary horses. It has no side-draught whatever, and is so perfectly balanced as to avoid any weight on the horses' necks. The platform is lengthened and the sweep of the rake increased, so that while laid grain is as effectually picked up as before, the sheaf is delivered in a neat compact bundle, leaving a full wide track, sufficient for the largest horses. The rakes are wider at the divider shoe end, which in long and laid crops grows increased power over the grain, and dispenses with wooden slats or iron rods.

Woods, Cocksedge, and Co., Stowmarket, besides a large collection of miscellaneous implements, had four engines on the ground, working thrashing machines, Andrew's stacker and elevator, many pulpers and root-cutters and mills, and some very cheap and well-made carts with their patent tippers, which we described last week.

John Wray, Bedale, had a new corn-reaping machine and an improved horse hoe for thinning turnips.

H. Wright, Boston, had several straw elevators and stacking machines and portable horse works.

W. T. Wright, Cardiff, a new prize hay and corn horse pitch-fork or elevator, which will carry its load and discharge it without assistance from the man.

One of the smartest and pleasantest features of the show is the seed section, where the stands, profiting by

Messrs. Sutton's example, are now always so tastily arranged. But the great Reading house has here nearly all the best of it, only the rising West-country firm, Messrs. Wheeler, Gloucester, caring to make any counter demonstration, as the Gibbs and Carters offer no sign. Shall we say again and again how richly these two rival stands were furnished with roots, seeds, plants, pictures, and so forth? Or how, in the tour through the ground, the Prince Imperial of Germany received from the hands of Mr. Martin Sutton a copy of his *Amateur's Guide*?

THE GENERAL MEETING

took place on the ground on Tuesday, Mr. Edward Holland, President, in the chair. There was a large attendance.

The SECRETARY, Mr. H. M. Jenkins, read the report of the judges appointed to award the farm prizes.

Votes of thanks were passed to the Mayor and Corporation of Bedford, to the Railway Companies, and to the Local Committee.

Mr. E. A. FAUCETT (St. Albans) said in the month of May he wrote to the Secretary in order that he might draw the attention of the Council to the observations he intended to make at this meeting, and in order that no gentleman might think he had any personal feeling against either the judges, or against any member of the Council, he deemed it necessary to make this explanation to put himself in a proper position. He had placed his suggestions upon paper, and he would read them. They were simply suggestions for the Council to take into consideration for its members to think carefully over, to adopt such as they approved, and reject those not worthy of attention: 1st. The judges at the Royal show ought not to act at any previous show in the same year. 2nd. At present the majority of the prizes are won by fat and not by breeding animals at all. 3rd. The Society ought to appoint men to take all the animals into the rings that can safely be led by them, as great dissatisfaction exists now with prizes being given to animals led into the rings by well-known men who ought to be excluded. 4th. The appointment of the judges is now made in the most objectionable manner, and is highly unsatisfactory to the great bulk of the exhibitors. 5th. They are frequently appointed by the influence of breeders or exhibitors who are members of the Council of the Society. 6th. The judges ought to be changed every year; no one should be allowed to act a second time, or oftener than once in six or ten years under any pretence whatever, and new blood should be continually brought forward. 7th. The ages of cattle should be calculated from the 1st of January, the same as horses, and not from the 1st of July on any account whatever. (In Scotland and Ireland the ages are always calculated from the 1st of January.) 8th. Let the exhibitors of all animals which have not gained prizes go home feeling assured they have at least been dealt with in a fair, honest, and honourable manner. In conclusion, he thought he had better explain what course he intended to take. In the show-yard he had heard a great many complaints made, to which his answer was, "Why not speak out?" It was no use grumbling and not bringing their complaints to the front in a straightforward manner. Like men they should come forward and tell the Council what they thought. The suggestions he had made he intended to publish, and when printed he would forward them to the members of the Society, who could then choose whether they would accept them or not.

Mr. T. WILLSON (Northamptonshire) said it would be remembered that at the last annual meeting he made a suggestion with regard to the elections of the Council, which, he understood, could not be carried out without an alteration of the Charter. In order to meet the difficulty he had now to propose—"That in order to enable the Council to prepare a more representative house list than heretofore, four clear weeks before the first Wednesday in May (when the house list is prepared in accordance with the 15th bye-law) a circular shall be sent to the members of society in those counties in which the retiring members of Council reside, inviting them to send up the names of gentlemen eligible for members of Council; and whenever it is proposed to nominate members of Council from counties which had not previously been represented upon the Council, a similar circular shall be addressed to all members resident in such counties." The Council was nearly a self-

elect-ed body, and Northamptonshire, Leicestershire, and Rutland were not represented on it at all. Next year they were going to invite the district in which those counties were situated to compete for the meeting of 1876, and therefore those counties ought to be represented on the Council. For the want of a more thoroughly representative character he was afraid the Royal Society was becoming less popular. Seven years ago he was able to obtain 72 members in one year, whereas now he had difficulty to get seven. He alleged that the competition for the show was not so keen as it used to be, stating that they had almost to beg and pray to go into the district of the Bath and West of England Society, and partly attributed the declension of the Society's popularity to the fact that its executive is not so thoroughly representative as it ought to be. No one wished better to the Royal than himself, and no man had worked harder for its success than he had. If the Charter required altering he hoped the Council would consider it as early as possible.

The Marquis of EXETER said he represented Northamptonshire on the Council, though he had not been able to attend, so that Mr. Willson was in error in saying that that county was not represented.

Mr. STRATTON seconded the motion. He submitted that nothing could be more anomalous than that the Executive of a Society numbering 6,000 members should be nearly a self-elected body. Virtually the great bulk of the members of the Society had no voice in its management. He did not complain of the general management of the Society. In fact, he dared say it could not be better than at present, but he contended that the Council were elected in an anomalous manner and quite contrary to the spirit of the age. Although a humble member of the Society, he yet claimed to have a voice in the management of its affairs. The Council was at variance with the majority of farmers throughout the country on the subject of the laws relating to contagious diseases of animals. The resolution the Council drew up respecting foot-and-mouth disease he considered to be unpracticable. The Central Chamber of Agriculture could claim to be a purely representative assembly, and he might offer it as something of an example.

The PRESIDENT said he must be allowed to state that at a general meeting he had no power to put such a proposition before the members. A bye-law compelled the Council to take notice of the suggestions made at a general meeting and to consider them, but nothing further. In regard to this and other matters it seemed that they were hampered by the clothes in which the Royal Society was first dressed. She still wore the same clothes; they had not been extended with her growth, and now that she had reached full age, perhaps the time had come when an alteration should be made in the Charter, and when she should be dressed as she ought to be dressed. In the meanwhile the Charter tied their hands, and all they could do was to take notice of the different suggestions made and consider them in Council. He hoped the time had come when they might also consider the question of the alteration of the Charter. He expressed his regret that he could not put the proposition from the chair, but with that explanation he hoped the reason would be understood, and also that to a certain extent he agreed with them.

Mr. CHAMBERS complained of the inconvenience occasioned to the exhibitors of implements by requiring them to be on the show ground on the opening day, when it was known that the trials would not come on for four or five days afterwards. He spoke feelingly, as he came to that show on the opening day at great inconvenience to himself, and had to wait until the Friday afternoon following before his implements were tried. He suggested that a week before the trials notice should be given to every exhibitor on which day his exhibits would be judged, and that he should not be required to be present before that day. As an honorary director of the Norfolk show he thought his request could be complied with, and submitted that there was nothing unreasonable in it.

Sir JOHN HERON MAXWELL moved a vote of thanks to the retiring President, and this was seconded by Mr. FAUCETT.

Mr. HOLLAND, in reply, wished them to allow him to express his sense of the value of the Council of the Society. It might not be exactly suited to the wishes and feelings of some of the members, but he must say that, accustomed as he was to work with public bodies, he knew no other that attended to business better than the Council of the Royal Society. The suggestions that had been made were rather matters of detail than of principle. He thought an improvement might be

made in the way the Council was elected; but while he said that he begged them to understand that he expressed himself with strong feeling when he said that no body of men with whom he had ever worked had been more pleasant to work with or more determined to do their duty by their constituents than the Council of the Royal Agricultural Society.

On the motion of the Marquis of EXETER, Lord Bridport was elected President for the ensuing year.

Lord BRIDPORT, who was very warmly received, esteemed it a very high honour to have been elected President of this great Society, in which he had long taken a great personal interest, especially in its financial affairs. He was happy to think that the Society was in a good condition, and that it was able to meet a rainy day whenever that might come. The Society had had and no doubt would have to meet with difficulties; but he had no doubt the Council would conduct the Society in a progressive spirit, and that the suggestions that had been made to-day would be very carefully considered.

THE BEDFORDSHIRE PRIZE FARMS.

(From a Special Correspondent.)

A few members of the Royal Agricultural Society of England, while at Bedford, agreed to visit the farms which gained the first two prizes as the best-managed in the county; and the following notes are submitted after a somewhat hasty inspection. The party was advised to visit, in the first instance, the farm of Mr. Richard Checkley, Brogborough, Woburn; and were told it would be found to commence at the foot of a steep hill some eight miles from Bedford. The visitors found the hill, and the first point of attraction was a gateway, minus a post, leading into a large fallow field, an untrimmed hedge fencing from the road. Doubting our position, we bailed a man at work in the field, and asked if this was the first prize farm? Answer: "Yes." "How long has the gatepost been down, before or since the judges inspected?" "Oh, before. Traction-engine smashed it, and master has not put another up since." We note the fallows are a black, loamy clay, free from couch, but not free from thistles: have been worked by steam culture. Ascending the hill, our Captain suggesting we should enjoy the beauties of the scenery more if we descended from our chaise, we did so, the stouter members of our party declaiming against hills in general, and this hill in particular. Note—Our Captain kept his seat on the box, as he said, "to help the coachman in case the horses turned restive." At the top of the hill we left the Queen's highway, and drove across a pasture field to the house of Mr. Checkley. Note—An attempt is being made to improve the road across the pasture, the material employed striking us as being of a sandy nature, tolerably free from stones. On reaching the premises we became immediately sensible of a pungent odour proceeding from a broken-backed haystack, which we unanimously pronounced *dangerous*, and decide we should not like to sleep within 500 yards of it. By the kind consent of Mr. Checkley, and piloted by a young gentleman, who modestly protests against too much "cross-examination" from our Captain, we explore the home buildings, which we found a heterogeneous lot, evidently enlarged as occasion required, and evincing great ingenuity of arrangement, but decidedly free from simplicity. After we had inspected the last of this curious set of buildings our Captain counted his party, which we considered a happy thought, the hot haystack being taken into account. We now note several stacks of wheat and beans, which induce our Captain to observe

the farmer's balance must be on the right side. We admire the cart-horses, seventeen in number, which are good and strong, adapted for a hilly country. We specially commend three mares with colts at foot, three of our party each selecting a different mare and foal for choice, and evincing a disposition to break the tenth commandment, which our Captain promptly and sternly checked. We critically examine forty-four Shorthorn dairy cows, which, with younger stock, we pronounce very useful. Note—All the calves are weaned, the cow-calves kept for stock, steer-calves sold. A breeding flock of 270 long-wool ewes is kept. Wether lambs are sold as fat tegs, ewe lambs kept for stock. On one of our party remarking he did not highly appreciate the sheep which came under our observation, our Captain suggested the speaker was comparing the flock with the pampered animals under the canvas in the distance, which judicious remark stopped further comment on sheep. We now examine a field of red clover and the cora, which we are advised to do by a gentleman, who accidentally turns up and speaks with authority. We are struck with the wide distance of the clover-seed drills—8 inches apart. We measure several drills, to be certain that we are right, and all agree that our occupations will not stand clover-seed drills so wide. Note—The land is thoroughly clean. We now pass through fields of wheat, white and red on either hand, and pronounce the wheat fine and very clean. We carefully examine the ears of each variety to find an ear set four, but we fail. Nearly all were set three. Notwithstanding this little drawback, the wheat is good—as much as can stand—and all wish we could look with as much satisfaction on our own wheat fields. With the barley we were, if anything, better pleased. It is a splendid crop, and one of our party naively remarked, the landlord was sure of his rent. We found some good mangel, and some gappy mangel, also some patchy kohlrabi: all very clean. We sought for swedes in vain. We admired the internal fences on the farm, which are white-thorn, planted in straight lines, well protected by post-and-rail fencing when young, and clipped into form. Our Captain remarked these fences had cost the tenant a round sum, when some one said the landlord had borne the expense, even to the *clipping* of the hedges. We unanimously hoped this system would become general with landlords. Mr. Checkley's occupation is about 600 acres, of which 240 are pasture. As we have remarked, the farm is hilly, and cultivated under difficulties. It is the property of the Duke of Bedford, who has erected a second set of buildings upon the farm, of a convenient character, with labourers' cottages adjacent. On our way back to Bedford one of our party asked the startling question, "Is a man entitled to the prize for the best-managed farm in Bedfordshire who carries part of his hay in such condition as to seriously injure it, and runs the risk of destroying the contents of a rick-yard, and an extensive set of farm-buildings?" Our Captain, who wore a badge connecting him in some-wise with the Council of the Royal Agricultural Society of England, declined to give an opinion. His troop, to a man, answered "No." A suggestion was thrown out that the Council of the Royal Agricultural Society of England ought to request the three farm judges to closely inspect the hottest part of the hot haystack, and report thereon forthwith. But as that body can only move as their Charter permits them, this investigation may not take place until the old home-stead of the first prize farm in Bedfordshire is reduced to ashes, and a verdict has been pronounced, "cause of fire unknown: supposed to be the act of unionists." In bidding farewell to Mr. Checkley, who is a farmer of the old-fashioned type, and of very simple habits, we thank him for his civility and hospitality.

THE SECOND PRIZE.

A short drive through lanes which should be green took us from the first to the second prize farm in Bedfordshire, occupied by Mr. Thomas Crouch, of Liddington, comprising 253 acres arable, and 204 acres pasture land; also the property of the Duke of Bedford. The farm premises and dwelling-house are comparatively new, convenient, and centrally situate. After passing through good wheat and barley, though not quite so heavy as Mr. Checkley's, we came to some fallows, which puzzled us not a little. The land had been ridged for swedes, and drilled on the ridge. The swedes not coming as quickly as the farmer desired, and a shower having fallen a few days previously, swedes had been again drilled, this time in the furrow. A lively discussion ensued as to this style of management, some of us asking what was to feed the roots if they grew in the furrow, as the dung would be above them; others, how the horse hoe was to operate, a great feature in strong land cultivation; others again asking how the roots were to be set out and singled, supposing half the crop came on the ridge, and half in the furrow. In our dilemma up rode Mr. Crouch, and we forthwith appealed to him. "Gentlemen," said he, "I wish to find the swedes, and I leave the swedes to find the dung, the land is full of it of one kind or other." Mr. Crouch admitted the impossibility of horse hoeing, and the difficulty of hand hoeing, but the season was exceptional, and the growth of roots a necessity. So far, however, the prospect for swedes is anything but cheering. The mangrel is good and clean, and we found a strong lot of ox cabbage, which, with favourable weather, will afford a deal of keep. There is more timber about Mr. Crouch's arable land than on Mr. Checkley's, which may in some measure account for the wheat not appearing so good as on the first prize farm. But the barley which we saw at Broughton End is very fine, and must prove a highly productive crop. Mr. Crouch said he had a portion of sandy land on his farm, on which the barley did not look so well; but much as we wished to see everything, time did not permit us to reach the sand. Mr. Crouch has followed in the steps of his now famous neighbour so closely, that he also has a heated haystack, but we did not consider it dangerous. Our keen-eyed Captain drew the attention of his troop to the singular fact that, in a season of drought so prolonged that neither farmer could show a swede or turnip, each could manage to sweat his hay. Here, again, we found ricks of wheat, barley, beans, and oats, which led to a discussion, from a pecuniary point of view, as to the policy of keeping so much unthrashed corn, and further, how far it is advisable to deprive the farms for a season of the large amount of manure the straw, if utilized, would produce. We admitted the occupiers of these farms were justified in keeping a reserve of oats, beans, and hay, but the majority of us opposed the retaining barley and wheat on pecuniary and productive grounds. It is just possible an extra amount of rotten farmyard dung would have given the swedes the farmers so anxiously sought. Mr. Crouch showed us thirty-two Shorthorn cows, which we pronounced very fine: they are of good size, style, and quality, and well adapted for the dairy. Six promising bull-calves were running with their dams, and in a few minutes a bargain was struck for one of them by one of our troop to improve dairy stock in the South. The produce of the cows is usually weaned, steers and surplus heifers sold fat at about two years old, and the best heifers retained for stock. All Mr. Crouch's cattle in the pastures pleased us much, and he has evidently crossed with bulls of pure and good blood. Two hundred and forty long-woolled ewes are kept. We understood Mr. Crouch to say, that after retaining sufficient ewe lambs to keep up his breeding flock he makes mutton of the rest, ewes and wethers. It struck us that the sheep farming

on each of the farms we visited is not a strong feature in the management. On the farm of Mr. Crouch our Captain called attention to a Cotswold ram which he thought had suffered from change of air. Mr. Crouch is young, active, energetic, fond of his farm and live stock; disputes with our Captain the points of a cow, and fairly holds his own; admits his cart-horses are not equal to Mr. Checkley's; is gratified to hear all of us say we consider his herd better than Mr. Checkley's; keeps some calves under a close-roofed building with fattening pigs, and, as he hurries us past them, says, "The calves are not quite right." No wonder! we have never known other animals do well under a close-roofed building with pigs. The fences we saw are chiefly bull-fences, not trimmed by the landlord, but in several instances they divide pasture from arable land. Mr. Crouch rides a good hackney, which a knowing man of our party attempts to disparage by saying he carries a large bread-basket. We try to induce the owner to set a price on his horse, but, like the ancient Arab, he laughs, and rides away. We highly commend his colley dog, and offer to treat with him for it, as the brute looks affectionately towards us. The master shakes his head, and in a trice the colley whisks his splendid tail, as good as saying, "I'm glad you've gone," and bounds after the hackney with the bread-basket belly. Mr. Crouch set us down to a round table large enough for a dozen, and we did justice to his generous hospitality. His excellent lady anticipated our wants, and treated us with extreme kindness. It was easy to see who tended the roses, who cared for the flowers, who imparted grace and charm to the cozy home. For once—and once only—our strict Captain yielded to influences which the greatest warriors in every age are powerless to withstand, and promised the lady all kinds of civilities if she would come to his quarters in the show-yard.

We were surprised to hear the labourers had struck, some weeks since, on the farms of Messrs. Checkley and Crouch. The men must have greatly miscalculated their position. Neither of the farmers are needy men. They can hold their corn without inconvenience. They can hire steam cultivating tackle, or purchase any implements, economical in a labour point of view, they choose to have; and the farms are in a condition, and the principal arable land of a nature which really require, at certain seasons, a minimum amount of manual labour.

On our route, to and from these farms, we saw no ploughs at work with pairs of horses abreast. We saw several three-horse teams, single, moving very dry fallows, apparently for the last time. We saw others, two horses, single—boys driving. Has a prophet no honour in his own country? Are the exertions of the Howards to extend the use of pair-horse double ploughs throughout Europe unappreciated in Bedfordshire?

Let it should be said that we are "disappointed competitors" who make these notes, I am permitted to say, by special permission of our Captain, that none of us hail from "the Shires," but from points very wide apart, extreme east to extreme west of England; and we visited the first and second Bedfordshire prize farms with the same object we visit the Royal Agricultural show—to obtain information.

EXPORTATION OF CLYDESDALE MARES TO AUSTRALIA.—Mr. James Fisher has just shipped to his brother in Australia, 17 Clydesdale mares. These mares have been selected with great care, and at much expense. Among these is the well-known mare Darling, one of the most successful prize-takers in Scotland, who finished her career here by the winning the Cup at Stirling, open to all comers. In selecting these Mr. Fisher has taken care that the mares are all of good descent and sound in every way.

SHEEP SALES.

MR. CHARLES HOWARD'S OXFORDSHIRE DOWNS AT BIDDENHAM, BEDFORD.—This sale took place under the direction of Mr. R. B. Stafford, of Bedford; Mr. Strafford, the Shorthorn auctioneer not being well enough to attend, while we regret to add that Mr. Charles Howard himself was absent from indisposition. Considering the short supply of feed the sale was considered a very good one, the average being over 13 gs.; while one sheep was sold to Mr. Z. Phillips, of Woburn, for 36 gs.; and another, the reserve in his class at the Royal, after a close contest between Mr. Stilgoe and Mr. John Treadwell to Mr. Stilgoe for 33 gs. Other sheep went all over the country, the buyers or hirers including the Duke of Portland, the Duke of Bedford, backed by a number of handy-home customers, and others from the Eastern Counties, Germany, Poland, and Scotland, a number of sheep going abroad.

MR. RAWLENCE'S HAMPSHIRE DOWN RAMS AT BULBRIDGE.—This sale took place, under the conduct of Messrs. Ewer and Winstanley, when 200 lots were offered. The business commenced with 10 lots of two-teeth rams, which realised the following prices: 75 gs. (Mr. Morrison), 58 gs. (Mr. Newton), 50 gs. (Mr. Dibben), 24 gs. (Mr. Homer), 15½ gs., 15 gs., 10½ gs., 10 gs. (two lots being sold at this figure), and 7½ gs. Two bidders claimed to have offered 42 guineas for lot 10, and "an advance" was accordingly asked. After a spirited contest between Mr. Homer and Mr. Newton, the sheep was knocked down to the latter at 58 guineas, amidst cries of "Well done, Wiltshire." Then came five lots of four-teeth rams, which fetched 42 gs. (Mr. Barton), 40 gs. (Mr. Parsons), 37 gs. (Mr. J. Taunton), 19 gs. and 14 gs. The lambs came next, and lot 3 was, after a most spirited competition knocked down to Mr. Morrison, of Fonthill, at the extraordinarily high figure of 150 guineas! Other lots realised 77 guineas (Mr. Morrison), 48 guineas, 42 guineas, down to 11½ guineas; Mr. R. Brine 70 gs., and Mr. Rigg, jun. 50 gs. The averages were as follows: 28 two-teeth rams, £15 7s. 9d.; 8 four-teeth ditto, £22 13s. 8d.; 177 ram lambs, £13 8s. 9d. The average of the entire sale was £13 12s. 2d. per head.

THE HATCHWARREN HAMPSHIRE.—Mr. Budd's sale took place in Basingstoke, Messrs. Downs and Awbery being the auctioneers. The ram lambs for sale fetched good prices, and every other lot was sold at satisfactory prices, averaging nearly £10 each.

THE LITTLESCOTT HAMPSHIRE.—At the first sale of Mr. John Moore's flock 100 ram lambs, 60 two and four-tooth rams, and 150 draft ewes were brought under the hammer of Messrs. Waters, Son, and Rawlence. One of the old rams, of great size and fine symmetry, was eventually knocked down at 40 guineas to Mr. Saunders, of Watercombe; the remainder ranged from 13½ guineas down to 4½ guineas, the average of the twenty-two being about £8 10s. There were only two six-tooth rams put up, one of which fetched 12½ guineas. The draft ewes, of which only 150 were offered, sold at an average of about 50s. each. Considering the season (which has happened most unluckily for Mr. Moore) the sale was considered very satisfactory.

MR. J. J. COLMAN'S SOUTH DOWNS AND NORFOLK POLLS.—This sale took place at Easton Lodge Farm, Norwich, for which city Mr. J. J. Colman is member. Heavy thunderstorms fell during the day, but the country all round had suffered much from the drought. Prices ruled low for the sheep, the ewes ranging from 49s. to 66s. per head. Mr. Beck for the Prince of Wales, Mr. Fulcher for Lord Sondes, Mr. Youngman for Mr. A. Hammond, and Mr. Parmeter being the principal buyers. No rams were let, and four only out of the fourteen sold; two being taken by Mr. Woods, Lord Walsingham's agent, at 8½ and 7½ guineas. A seven-year-old cow of Mr. Birkbeck's went for 36 guineas to Lord Sondes; Novelty, five years old, at 35 guineas, to Mr. A. Taylor; one 45 guineas; and others at fair prices—the average being nearly £23.

AGRICULTURAL INTELLIGENCE.

BAT AND BALL FAIR.—This, the second important cull lamb fair of the season held in East Sussex, took place in the well-known field near the Bat and Ball Inn. A large number of both buyers and sellers was present, but, as was anticipated, business was not so brisk as in some previous years, and prices exhibited a marked decline, the same as they did at St. John's. The number of sheep and lambs penned was a trifle over 10,000, being nearly 6,000 short of last year, when the supply was far above the average. Trade during the morning ruled very dull, but from what we heard those who sold early had the best of it, many preferring in the afternoon to part with their lambs at low prices rather than take them home again. The prices for sheep ranged from 29s. to 59s. Lambs, 12s. to 30s. Business slightly improved in the afternoon, but many pens remained unsold. In the store beast market there was a godly show, and we understand a general clearance was effected at prices the turn in favour of the seller. Mr. Sharp bought of Mr. Griffiths a half-dozen runt heifers at 13 guineas, and seven at 10 guineas. Mr. Uridge, of Chailey, sold early, but we did not hear the figures. There was a large number of horses on offer, and good useful nags commanded high prices, but most of those brought were "weeds."

BRISTOL ANNUAL COLT FAIR.—This annual fair has been held, and was rather thinly attended by purchasers. Holders brought a large number of cart colts and fillies to the fair, owing to the shortness of keep; in fact, in all cases where farmers and others had not work for their animals, they seemed anxious to dispose of them, owing to the dearth of fodder and the little prospect of any improvement. Under these circumstances, there was a reduction in value to the extent of something like 20 per cent., and this would apply to everything except animals of special merit. Cart colts, as a rule, ranged from 35 to 50 guineas, though in one exceptional case 120 guineas was given for a thoroughly good and useful pair of colts, and in another case 53 guineas was given for a filly. There was a good supply of Irish colts and nags, but they were not selling so briskly as usual, and they realised prices ranging from £28 to £50; but in one case £53 10s. was obtained for a very good animal. English nags were in fair supply, but in somewhat indifferent condition, and they changed hands slowly, at from 25 to 75 guineas. There was altogether less business done than usual.

CAMELFORD JULY LAMB FAIR.—At this fair, there was about an average number of lambs and sheep penned, the greater part of which exchanged hands, but at prices about 10s. per head less than last year, and at only half the price made two years ago. Small lambs sold from 9s. to 14s. per head, good store lambs from 18s. to 30s.; a few very good fetched from 35s. to 40s. each. Fat sheep sold at 7d. per lb. On Tuesday the fair was well supplied with cattle of every description, rather over the average as regards numbers, and many were of superior quality. A better lot of cattle has seldom been seen at this fair, and many head exchanged owners, but sales were very dull at the commencement, sellers being unwilling to part with their cattle at reduced prices. Those sold were at prices about £3 or £4 per head less than last year. Steers varied in price from 14 to 20 guineas, according to size. Fat cattle sold at from £4 to £4 5s. per cwt., cows and calves at £3 to £3 10s.

KIRTON LINDSEY FAIR.—The fair attracted a large company to the town. The day was excessively hot, and proved somewhat unfavourable to business. Very good horses were shown, for which, early in the fair, large prices were asked, and a good stroke of business was done at prices ranging from £30 to £50. At dinner time trade languished under the excessive heat, and during the afternoon 50 guinea animals were in some instances sold as low as 30 gs. Cart-horses were scarce, the few good ones on offer being quickly sold at high rates. The effect of the long drought was seen in the paucity of fat stock, none of the animals shown being fit for the butcher. The sheep fair was a failure both in the number penned and the sales effected. The few lambs on offer could hardly find customers at prices as low as 17s. per head. Altogether the fair was considered not equal to former years.

REVIEW OF THE CATTLE TRADE DURING THE MONTH.

A dull tone has prevailed in the cattle trade during the month. The extreme heat has militated against any approach to activity; whilst the large supplies offering have caused a weakness to be observable in prices. The supply of beasts has been numerically good. The Lincolnshire season has now fairly commenced; the arrivals have been decidedly in excess of the average, but the quantity has not been generally good. Owing to the scarcity of water in some districts stock has been prematurely forced upon the market in a half fat condition, hence supplies have exceeded requirements. Receipts continue to come to hand from the Eastern counties, but they are gradually being reduced in extent, and will shortly altogether cease. From abroad the arrivals have been moderate. As regards trade, a heavy tone has prevailed, and the tendency of prices has been unfavourable. At one time the best breeds were making 6s., but at present the top price cannot be said to exceed 5s. 8d. per 8lbs.

In the sheep pens there has been an abundant supply; as in the case of beasts, the trade has been very dull, but if anything the depression has been still more severe. Throughout, sales have progressed heavily, and the top quotation has fallen from 5s. 6d. at the commencement of the month to 5s. per 8lbs., the rate now current.

Lambs have been purchased cautiously, and have been drooping in value.

Calves have been in moderate supply and limited request at about late currencies.

Pigs have been dull.

The following table shows the imports of stock into London during the month of July, compared with the corresponding month of 1872 and 1873:

	1872.	1873.	1874.
Beasts	5,093	7,203	4,721
Sheep and Lambs.....	53,624	53,750	36,298
Calves	2,958	3,761	3,441
Pigs	1,544	2,439	4,303
From our own grazing districts, as well as from Scotland and Ireland, the receipts of beasts during the month thus compare with 1872 and 1873:			
	1872.	1873.	1874.
From Norfolk, Suffolk, Essex, &c.....	2,700	5,190	2,800
Lincolnshire, Leicestershire, &c.....	3,300	3,580	7,000
Other parts of England	1,500	2,190	3,200
Scotland.....	176	—	70
Ireland	411	500	—
The supplies of stock exhibited at the Metropolitan Cattle Market have been as under:			
	1872.	1873.	1874.
Beasts	18,790	21,305	21,690
Sheep and Lambs.....	127,650	150,550	169,850
Calves	3,500	4,910	4,130
Pigs.....	590	395	400

The following is a comparison of prices for July of the current and two previous years:

	1872.				1873.				1874.					
Beasts ... 3	2	to	6	2	4	0	to	6	6	4	6	to	5	0
Sheep ... 4	0	to	6	6	4	0	to	6	6	4	6	to	5	4
Lambs... 8	0	to	9	0	7	0	to	8	6	5	0	to	6	4
Calves... 4	8	to	6	0	4	0	to	6	2	3	10	to	5	6
Pigs..... 3	8	to	5	0	4	0	to	5	0	3	8	to	4	10

REVIEW OF THE CORN TRADE DURING THE PAST MONTH.

After extraordinary fluctuations in June—say from great summer heat to sharp morning frosts—the last week of that month indicated an improvement, which has been fully realised throughout the whole of July. The second week brought on a tropical temperature, which has often prevailed since, and, with occasional showers and thunderstorms, all vegetation has been rapidly advancing, and wheat-cutting has already commenced. Only the Talavera sort has yet appeared at market, which in quality was below the average, having perhaps been cut by the frosts while in bloom; but the later sorts and red qualities are expected to be fine. The impression of a great crop seems, however, passing away, and but little above an average is expected, with the finest weather. After so long a period of drought, however, we do not seem very safe against rain, which has commenced falling, and, should the past deficiency be made up at harvest-time prospects, would be sadly changed. In spite of all the fluctuations of a late spring, we are now about a fortnight early, and this circumstance alone is about equal to an importation of one million quarters. English qualities, from their scarcity, have been slow to decline, but have certainly fallen 2s. to 3s., while foreign has given way this month 7s. to 8s., and from the highest point 10s. to 12s.; fine Australian white, which once touched 70s., now being hardly worth over 60s.; and good Milwankie red lately quoted 61s., having been offered on the last Monday at 48s. 6d. But as English stocks are well-nigh exhausted, and the granaries show but small stores, a firmer feeling has sprung up with the broken

weather, as every bushel of old must soon be wanted. Of hay this year we have only gathered half a crop, and all spring corn is expected to be short and dear. How, therefore, the principal grain can become dog-cheap we cannot well see. Even New York seems to have passed her lowest, and though very large expectations are entertained this year as to the exports of California, they want confirmation, and Brother Jonathan is not likely to be content with working for nothing. Italy and Spain have finished, and done well. France has partly got in her produce, in fine order and of good quality. Hungary has completed her work, with a gathering something above the ordinary. Holland and Belgium are beginning, but never grand enough for themselves; and Germany is yet a fortnight or three weeks from harvest-work. All Europe, therefore, still depends on the weather as a means of great benefit or damage, and prices cannot be established before the sheaves are generally gathered. The following rates have recently been current at the several places named: new French white Anjou wheat at Paris 55s., red 53s., old Californian at Rouen 57s. 6d., Chili 55s. 6d., red spring American 51s., new at Bordeaux 60s., Berdianski at Marseilles 58s. Belgian and Dutch prices were too unsettled to quote. Fine native wheat at Hambro' 63s. 6d., the best white at Danzig 58s., red at Stettin 54s., at Cologne 48s., at Berlin 51s., fine Hungarian new at Pesth 53s., old white at San Francisco 52s. 6d. (cost, freight, and insurance), red spring at New York 45s. 6d. per 480lbs.

The first Monday in Mark-lane opened on a small English supply, but the foreign arrivals were good, about

two-thirds being from America, and 10,000 qrs. from Australia. The show of fresh samples of home growth was exceedingly small; but the weather having been remarkably fine, millers were very careless buyers at the previous rates. The foreign trade was very limited; white sorts were dull at the former rates, but the abundance of American red made sellers rather anxious, and they accepted a decline of 1s. to 2s. rather than land. Floating cargoes were little in demand. The weather continuing fine all through the week, made all the country markets dull and drooping, though very little was brought to market, from the scantiness of stocks. Prices tended downward, and several places noted a decline of 1s., as at Louth and Newcastle. Liverpool quoted a fall of 3d. per cental on Tuesday, and was 1d. to 2d. cheaper again on Friday. The principal Scotch markets noted a decline of 1s., as Leith, Edinburgh, and Glasgow. With nothing of home growth exhibited at Dublin, foreign descriptions of wheat were 1s. per brl. lower.

On the second Monday the native supplies were still smaller, and the foreign, though fair, were materially reduced. Again there was a very trifling show of English samples on the Essex stands, and none whatever on those of Kent; yet the weather having reached to almost tropical heat, English factors were glad to accept 1s. less money on the few samples for sale. White qualities of foreign gave way 1s. per qr., with but little progress in sales, and red American were again 2s. per qr. lower than on the previous week. Floating cargoes were a slow sale also at 1s. to 2s. decline. With the crops everywhere rapidly advancing, farmers were more willing to clear out their small stores at the several country markets. Early in the week there was little material change, though the tendency was downward; but on Saturday several country places noted a reduction of 1s. to 2s. per qr. Liverpool was 4d. per cental lower. Though markets were dull at Leith, Edinburgh, and Glasgow, there was no positive decline in wheat. At Dublin foreign qualities again gave way 6d. to 1s. per barrel.

On the third Monday the returns of English Wheat were the smallest of the season, but the foreign arrivals were unusually heavy, America supplying two-thirds and Australia a large quantity. As to the exhibition of English samples this morning, it scarcely reached to half-a-dozen, and those not of fine quality, and it was certainly fully 1s. per qr. cheaper to sell; while the heavy arrival from abroad, after such continued foreing weather, reduced business almost to a form. Fine foreign descriptions, both white and red, were offered at 2s. reduction, without attracting many buyers, and low red could only be sold at 3s. per qr. less money. With liberal arrivals off the coast, but little was done, and that at 1s. to 2s. decline. The lightness of supplies this week in many country markets kept values from being reduced for fine qualities, but Salisbury and Hull noted a decline of 1s. per qr., while Leeds, Birmingham, Barnsley, Spilsby, and Newark were lower 1s. to 2s. Liverpool was down 2d. per cental on Tuesday; on Friday the market was 1d. to 2d. lower. Though Glasgow only gave way 1s. per qr. for wheat, and spring corn was unaltered, Edinburgh was down 2s., barley and beans declining 1s. Dublin was again 6d. to 9d. per barrel cheaper for foreign wheat, and 6d. lower for oats, but maize rose 6d. per qr.

On the fourth Monday there was another light supply of English wheat, though rather more than on the previous Monday, the foreign arrivals being nearly as large as then, and about three-fifths from America, Australia doing also its quota. The show of English samples was again limited, without any fine among them; they therefore were still dull, at a decline of fully 1s., but rather more was doing in foreign than of late, at a decline of 1s. for

fine samples, and 1s. 6d. on inferior American red. Many holders then thought the lowest point had been reached. Floating cargoes during the week were a slow sale, and rather cheaper.

The imports into London for the month, were only 8,081 qrs. English, and in foreign they were 193,819 qrs., against 9,890 qrs. English, 206,145 qrs. foreign in 1873. The London exports were 9,565 qrs. wheat, 24,751 cwt. flour. The imports into the kingdom for the four weeks ending July 18th were 4,417,836 cwt. wheat, 525,260 cwt. flour, against 3,891,129 cwt. wheat, 502,936 cwt. flour in 1873. The London averages commenced at 62s. 6d., and closed at 60s. 5d. The general averages opened at 60s. 4d., and closed at 60s. 10d. These English prices, however, gave a very false view of the market, for the bulk of the business done has been in foreign; white qualities have fallen fully 8s. per qr. from the highest point, and red American fully 12s.; good Milwankie being offered at 48s. 6d. per qr., lately worth 60s. to 61s.

The flour trade necessarily has given way with such a change in the wheat trade, Norfolks being down fully 2s. per sack, and not worth over 41s., and barrels have been equally depressed, the best not being quoted over 30s. to 31s., while at New York extra State was quoted 25s. 6d. At Paris, too, rates have been so reduced that we may possibly have some imports thence. The London supplies in four weeks were: from the country 48,335 sacks, the foreign 8,235 sacks 63,127 barrels, against 53,320 sacks country made, 8,551 sacks 40,554 barrels foreign in 1873.

Maize has declined about 2s. to 2s. 6d. during the month, in consequence of the fine weather and increased supplies, the fourth Monday showing heavy arrivals. American mixed is not now worth over 34s. 6d., though it is still cheaper than barley, beans, or oats. The total supply for London in four weeks was 69,041 qrs. against 62,773 qrs. in 1873.

Of English barley only two small lots have appeared during the month, stocks being quite exhausted, but the foreign arrivals have been fairly kept up. In the absence of business on malting sorts no quotations could be available, and the supplies from abroad coming to hand, principally from the Black Sea, have been mostly for grinding, these being worth 31s. to 34s., and heavier sorts for distillation in proportion. A parcel of new has appeared from Kent, for which 45s. was demanded; but the sample, though good-coloured, was thin and steely, and prices cannot yet be settled. Fine sorts we expect will be scarce and dear, and this is also expected in the Saale districts in Germany. The London imports for the month were only 125 qrs. British, 38,401 qrs. foreign, against 1,030 qrs. British, 370 qrs. Irish, and 14,537 qrs. foreign in 1873.

The Malt trade has almost been in a state of suspense through the month, and rates have been reduced 1s. to 2s. per qr.

The English supply of Oats for the month has been very light, but the foreign was good, increasing as the month advanced. Yet such a demand has been experienced for this grain, Parliament still being in town and the stock of English corn exhausted, that prices have rather advanced—say 6d. to 1s. per qr.; fine black feed, weighing 40 lbs., being worth 32s. 6d., and 38lbs. 29s. 6d.; white, extra weights, might realise 34s. to 35s. A few new samples of winter corn have appeared from Kent, and were held at 34s. to 35s., being very fine and heavy. In France the crop is light as well as here, and stocks in Europe seem exhausted by the high rates quoted. We don't see for the present what can materially reduce them, for it will be long before the crops on the Continent can be gathered

LONDON AND COUNTY BANKING COMPANY.

THE LONDON AND COUNTY BANK opens—

DRAWING ACCOUNTS with Commercial Houses and Private Individuals, either upon the plan usually adopted by other Bankers, or by charging a small Commission to those persons to whom it may not be convenient to sustain an agreed Permanent Balance.

DEPOSIT ACCOUNTS.—Deposit Receipts are issued for sums of Money placed upon these Accounts, and Interest is allowed for such periods and at such rates as may be agreed upon, reference being had to the state of the Money Market.

CIRCULAR NOTES AND LETTERS OF CREDIT are issued, payable in the principal Cities and Towns of the Continent, in Australia, Canada, India, and China, the United States, and elsewhere.

The Agency of Foreign and Country Banks is undertaken.

The PURCHASE and SALE of Government and other Stocks, of English or Foreign Shares effected, and DIVIDENDS, ANNUITIES, &c., received for Customers of the Bank.

Great facilities are also afforded to the Customers of the Bank for the receipt of Money from the Towns where the Company has Branches.

The Officers of the Bank are bound not to disclose the transactions of any of its Customers.

By Order of the Directors, WM. MCKEWAN, } Joint General

IMPORTANT TO FLOCKMASTERS.

THOMAS BIGG, Agricultural and Veterinary Chemist, by Appointment to his late Royal Highness The Prince Consort, K.G., Leicester House, Great Dover Street, Borough, London, begs to call the attention of Farmers and Graziers to his valuable SHEEP and LAMB DIPPING COMPOSITION, which requires no Boiling, and may be used with Warm or Cold Water, for effectually destroying the Tick, Lice, and all other insects injurious to the Flock, preventing the alarming attacks of Fly and Shab, and cleansing and purifying the Skin, thereby greatly improving the Wool, both in quantity and quality, and highly contributing to the general health of the animal.

Prepared only by Thomas Bigg, Chemist, &c., at his Manufactory as above, and sold as follows, although any other quantity may be had, if required:—

4 lb. for 20 sheep, price, jar included.....	£0 2 0
6 lb. 30 " " " "	0 3 0
8 lb. 40 " " " "	0 4 0
10 lb. 50 " " " "	0 5 0
20 lb. 100 " " (Cask and measure	0 10 0
30 lb. 150 " " included)	0 15 0
40 lb. 200 " " "	1 0 0
50 lb. 250 " " "	1 3 6
60 lb. 300 " " "	1 7 6
80 lb. 400 " " "	1 17 6
100 lb. 500 " " "	2 5 0

Should any Flockmaster prefer boiling the Composition, it will be equally effective.

MOST IMPORTANT CERTIFICATE.

From Mr. HERBATH, the celebrated Analytical Chemist:—Bristol Laboratory, Old Park, January 18th, 1861.

Sir,—I have submitted your Sheep Dipping Composition to analysis, and find that the ingredients are well blended, and the mixture neutral. If it is used according to the directions given, I feel satisfied, that while it effectually destroys vermin, it will not injure the hair roots (or "yolk") in the skin, the fleece, or the carcase. I think it deserves the numerous testimonials published. I am, Sir, yours respectfully,

WILLIAM HERBATH, Sen., F.C.S., &c., &c.,
Professor of Chemistry.

To Mr. Thomas Bigg
Leicester House, Great Dover-street, Borough, London.

He would also especially call attention to his SPECIFIC, or LOTION, for the SCAB or SHAB, which will be found a certain remedy for eradicating that loathsome and ruinous disorder in Sheep, and which may be safely used in all climates, and at all seasons of the year, and to all descriptions of sheep, even ewes in lamb. Price FIVE SHILLINGS per gallon—sufficient on an average for thirty Sheep (according to the virulence of the disease); also in wine quart bottles, 1s. 3d. each.

IMPORTANT TESTIMONIAL.

"Scoulton, near Hingham, Norfolk, April 16th, 1855.

"Dear Sir,—In answer to yours of the 4th inst., which would have been replied to before this had I been at home, I have much pleasure in bearing testimony to the efficacy of your invaluable 'Specific for the cure of Scab in Sheep.' The 600 sheep were all dressed in August last with 84 gallons of the 'Non-poisonous Specific,' that was so highly recommended at the Lincoln Show, and by their own dresser, the best attention being paid to the flock by my shepherd after dressing according to instructions left; but notwithstanding the Scab continued getting worse. Being determined to have the Scab cured if possible, I wrote to you for a supply of your Specific, which I received the following day; and although the weather was most severe in February during the dressing, your SPECIFIC proved itself an invaluable remedy, for in three weeks the Sheep were quite cured; and I am happy to say the young lambs are doing remarkably well at present. In conclusion, I believe it to be the safest and best remedy now in use.

"I remain, dear Sir,

"For JOHN TINGEY, Esq.,

"To Mr. Thomas Bigg."

"R. RENNEY.

Flockmasters would be well to beware of such preparations as "Non-poisonous Compositions;" it is only necessary to appeal to their good common sense and judgment to be thoroughly convinced that no "Non-poisonous" article can poison or destroy insect vermin, particularly such as the Tick, Lice, and Scab Parasites—creatures so tenacious of life. Such advertised preparations must be wholly useless, or they are not what they are represented to be.

DIPPING APPARATUS..... £14, £5, £4, & £3.

FARMERS OF THE UNITED KINGDOM.

LONDON :

PUBLISHED BY ROGERSON AND TUXFORD, 265, STRAND.

PRICE TWO SHILLINGS.

LONDON AND COUNTY BANKING COMPANY.

ESTABLISHED IN 1836, AND INCORPORATED IN 1874, UNDER THE "COMPANIES' ACT, 1862."

Subscribed Capital, £3,750,000, in 75,000 Shares of £50 each. Report adopted at the Half-yearly General Meeting, 6th August, 1874:

The Directors, in presenting to the Proprietors the Balance Sheet of the Bank for the half-year ended the 30th June last, have the satisfaction to report that, after paying interest to customers and all charges, allowing for rebate, and making provision for bad and doubtful debts, the net profits amount to £125,530 16s. 1d. This sum added to £23,917 13s. 3d. brought forward from the last account, produces a total of £149,748 9s. 4d.

They have declared a Dividend for the half-year at the rate of 20 per cent. per annum, which will absorb £120,000, and after reserving £468 15s. to meet interest accrued on new Shares, there remains a balance of £29,279 14s. 4d. to be carried forward to Profit and Loss New Account.

The Dividend, £2 per Share, free of income-tax, will be payable at the Head Office, or at any of the Branches, on or after Monday, the 17th instant.

BALANCE-SHEET OF THE LONDON AND COUNTY BANKING COMPANY, 30th June, 1874.

To capital paid up.....	£1,200,000	0	0	
To instalment received in respect of new shares	74,870	0	0	£1,274,870 0 0

PLATE.

COMTESSE.

FROM THE THURGARTON STUD.

Our sketch is taken from one of Mr. Milward's varmint little hacks, whose annual sale at Tattersall's, in the Derby week, is now famous in story. Comtesse was in this year's lot, but having gone amiss a day or two before the lot started for Knightsbridge, she was left behind, and Miss Chatty put in her place, which, after some brisk bidding, was knocked down for 250 guineas. Comtesse is now herself again, and if all goes well will be sold at the next sale, and when we prophesy at a high price. On seeing her at Thurgarton, in the spring, we thus spoke of her: "Comtesse, a French lady, by Orphelim, dam Marquise by The Cossack, is as neat and varmint a little blood hack as ever was moulded, and, though full of hardy muscle, she is as free from dross as a genuine Damascus blade, and as merry a goer as her dam's sire, who we now see with Templeman up making all the running for the Derby, the second, third, and fourth

being by the game old Lancroost, a horse which has left his mark in France.

If we were giving a description of Comtesse for the *Hue and Cry*, we should say: "Lost, a blood hack; a good, hardy chesnut, fourteen hands two inches high, with a star in her forehead, and a white coronet on the near hind foot, and eight saddle marks. She has a full eye, and a nice head, tapering towards the muzzle, with plenty of width in the jowl; a beautifully formed neck, and a grand rise in the withers; deep, well laid shoulders, round barrel, good loins, buxom quarters, muscular arms and second thighs, clean legs, and good feet, with the most knowing of switch tails. She has a black spot, where the cantle of the saddle would come, and another at the base of the stifle-joint, near side. N.B. Whoever will bring her," &c., &c.

HOLIDAY TIME.

Holiday making is often enough hard work for those who do not "keep their hand in." Your bricklayer who has taken a day to see his baby christened or his mother-in-law married again, or for some other such joyous occasion, will be back to his mates, either listlessly looking on or far more cheerfully giving his aid, before his high festival is half over. The artist will pull out his pencil at your pic-nic, the citizen in all the abandonment of the sea-side can still never be quite happy until he has scanned to-day's Money Article; while no sooner is the Session over than the member of Parliament goes away into the country to make speeches. There is something, however, in this particular practice which reminds one much of "the Star" system of a provincial company. A man who was never heard at Drury Lane, never known at The Olympic, becomes a leading actor so soon as he only leaves London. And thus it is with your county member: if never heard in Westminster, he plays a prominent part directly he reaches home again; especially plaintive

as he is when touching on the hard work which he has just gone through. How "from the smoke-room, from the tea-room, from the dining-hall, from the library, from the pleasant terrace facing the river where he can sit on summer evenings and watch the stately coal barges go up to their haven at Fulham creek—has he come trooping at the sound of the division bell, and blocking up the bar, waiting for the signal 'Ayes to the right, noes to the left. Tellers for the ayes, Mr. Black and Mr. Yellow; tellers for the noes, Mr. White and Mr. Blue.' What is the question upon which the committee are going to divide? Happily for the silent member, he is not called upon to form an opinion or even to know what the division is about. His duty is to follow Black and Yellow or White and Blue into the lobby, record his vote, and go back to the terrace to finish his cigar and wait till the tintinabulation of the division bell once more calls him to arise and save the State."

But the local Star, the county member or the

heretofore silent member, will have a deal more to say when he takes the chair or finds himself toasted at the anniversary dinner of the Agricultural Society. And yet in reviewing the past session from a country-side point of view it is really difficult to surmise what the honourable gentleman will be able to say beyond the fact of his having consistently voted with White and Blue and resolutely opposed Black and Yellow. Shall he flourish again over the hazy platitudes of Local Taxation, and still tell of all which is to be done in this way? Or, shall he mourn with Mr. Pell the loss of a measure which promised so much for the rabbit interests of this great country? Or, shall he sympathise with Mr. Seeley in his somewhat unappreciated efforts to exempt all landlords from the action of Tenant-Right who do not understand the principle? Or, shall he take the opportunity of explaining how he for once defied the beck of Black and Yellow, or was deaf to the behest of White and Blue, and fairly ran away from his arm-chair and his cigar so soon as Mr. Fielden began to talk about the Malt-tax?

Whether he be Yellow or whether he be Blue, the honourable gentleman in addressing a body of agriculturists during the coming autumn will ever be touching on dangerous ground; for never had more been promised, and never has less been done to further the cause of the farmers than since the change of Government consequent on the last election. All that the Committees of the previous Session had done in the way of inquiry and recommendation has been shunted: the Game-Laws and their manifest abuses have been left alone, the Land Transfer Bill has been postponed, and somebody at some time or other will do something with the Landlord and Tenant Bill. There is nothing like having a friend at Court. But the Farmers' Friend will in his discretion hardly confine himself to all that which he did or did not do when in the well-drilled chorus at Westminster. He will, the rather, be anxious to find other topics to talk about, and will so touch on the labour question and the good harvest. But here, again, he is venturing on

dangerous ground. The Eastern Counties farmers, who were from the first in the front of the fight, have won the battle of the employers, with little or no thanks for the aid or interference of the landlords. The farmers, like the boxers of old, fought in grim silence, while the landlords indulged in demonstrations, where scarcely any two of them agreed, and the effect of which was mainly to direct more attention to their own shortcomings in the way of cottage accommodation, game preservations and rents still screwed up to the uttermost farthing. Suffolk farmers have sought us to say that some of these self-elected champions should above all look at home, and, no doubt, as we have maintained from the day of the outbreak, the labour difficulty must eventually be one for the landlord to deal with. High rents, a great head of game, restrictive lop-sided agreements, and tumble-down cottages are scarcely arguments, however abundantly supplied, which tenants will appreciate when their case is taken up through philosophical addresses or philanthropic exhortations.

But in any case there will be the capital corn crop to fall back upon, although even of this it will not be quite safe to talk too fast. Some returns collected a few weeks since have gone to show that the wheats in England are very generally above the average, although actual inquiry into the crop during the last few days has tended in some districts to qualify such an opinion, more particularly down eastward. Thus, our Essex county report, as given in this number, states that "the wheat crop has probably been over-estimated, as the ears will not bear close examination, at least those of white varieties grown in this county." We have similar advices from farther on in Suffolk and Norfolk, as we are ready to admit that we are not prepared to rate the wheat crop so generally good, or rather at so much above an average as up to the time of cutting had been calculated. The ears are occasionally only half "set," and once more people may have been deceived by outward appearances. As we wrote just a month since, the cutting alone can tell what effect the frosts have had.

T H E T E A T R A D E,

Amongst the agriculturists of this country there must be many to whom the limits of these Islands appear circumscribed, and who would gladly direct their attention to more distant fields, where they could discern some opening that invited them to carry into effect those predilections which have made of them the tillers of the laud. And to such we would commend the perusal of certain papers published recently by the India office, containing the history, present and past condition, of the tea plantations in Bengal. From a small experimental garden in Assam, they may learn how these plantations have grown up to occupy a space that is small compared to the vast area of India itself, and the scale upon which cultivations are there carried on, but which nevertheless numbers three-quarters of a million acres, and exercises a perceptible influence upon the tea market by its produce. At the present time there are some doubts as to who can claim the credit of having first discovered the capabilities of this part of the Himalayas for tea growing, but it is sufficient to know that the honour rests with one or two persons, and that the foundations of this industry were laid between 1856 and 1859. At first the prospects that surrounded the attempt were made to appear so brilliant that the planters themselves, although doubting whether it would ever pay to grow tea, had no doubt but that it would pay to make gardens. Beyond this, many specu-

lators took advantage of the ignorance and credulity of investors to palm off upon them what may be called shoddy gardens, to meet the requirements of a London or Calcutta promoter. But these misdeeds of the past would not be referred to were there not signs at the present time of the same state of affairs which made them possible ten years ago. The depression that then followed the natural collapse of many such comers was intensified by the ignorance of the general body of proprietors of tea shares, who showed as much folly in their haste to get out of tea as they had a few years before in their eagerness to undertake the speculation. This depreciation of tea property seems to have continued until about 1869, when things began to look brighter. It was seen that people who had worked steadily for years with a view to make gardens that would yield a profit had been rewarded, while much of the property of the collapsed companies had turned out well under careful management. In fact, it was again found that tea would pay, and ever since it has been steadily progressing in popular estimation, and as a general rule, in profit to those engaged in it.

This great and growing importance of the tea trade has led the Government of India to ask for certain statistics, somewhat similar to our agricultural returns, relating to the tea culture. The planters have been invited to state also what obstacles exist in their localities to the fullest

development of this branch of production, and what, if any, measures in their opinion would properly be adopted by government for their benefit. This inquiry, as may be supposed, has resulted in the acquisition of a very considerable amount of valuable and otherwise inaccessible information, and we learn for the first time that the extent of land held for the purpose amounts to 504,552 acres, and the area actually under tea culture is 70,341 acres. Those which are called mature plants cover 56,972 acres of this space, and the immature 13,369 acres. Although this classification, the best that can be adopted, is thought too uncertain for practical purposes one deduction may, it is thought, be confidently drawn from it. It is almost certain that all the plants classed as immature are under seven years old; in other words, that they have been planted since 1866. So that we may assume that at least one-fifth of the present tea cultivation has been commenced since the period of depression of the industry; and there can be no more satisfactory proof than this of its complete recovery. The whole yield of the province of Bengal, although somewhat conjectural may be taken at 15,000,000 lbs. The yield of immature plants can be fairly reckoned at 80 lbs. per acre, which would give 1,069,520 lbs., and the yield of the mature at 237 lbs., which would give 13,500,617 lbs.

At the head of the divisions comes Assam, where the first experiments were made and where the tea now grows in five districts—Seebasagar, Durrung, Luckimpur, Nowgong, and Kamrap. The total area taken up for tea planting is stated to be 364,990 acres, and the amount cultivated, exclusive of certain unreturned gardens of Luckimpur, to be 26,853 acres, or little more than 7 per cent. The area under mature plant is returned at 21,890 acres; that under immature as 4,963. The produce of both classes during the year 1872 was 6,150,764 lbs., of which 1,500,000 lbs. were produced by the Assam Company. Next to Assam comes Dacca, with two tea-growing districts—Silhet and Cachar. Then Kuch Behar, with two tea districts—Darjeeling and Goalpara. In the Chittagong division there is only one tea growing district—Chittagong itself. At Chota Nagpur the tea cultivation is very unimportant, though there are gardens in two districts—Hazaribagh and Lohardugga.

The difficulties that have arisen during the rise and progress of this cultivation have been chiefly owing to the paucity, in fact the absolute want of labour in the first instance. Tea planting, it seems, requires a larger supply in proportion to the area cultivated than most kinds of agricultural industry.

The population in almost all the districts suited for tea is very scanty, and the proportion even of this available for hard work is small; consequently, early in the history of tea planting the local labour obtainable in Assam and Cachar was found insufficient, and attempts were made to import labourers from more populous districts. But the surplus food produced in the tea districts is very little, and food for the imported labourers had consequently to be imported also. The means of communication are very imperfect, and when large numbers of coolies were thus imported the supply of food did not keep pace with the increase of mouths. The consequence was that tens of thousands died from diseases brought on by want of proper food, whilst others were so enfeebled that their labour failed to repay the employer the cost of importing them. The Government, at the present time, while dealing with the waste lands at their disposal, and for which they have many applicants, will be required to give the most careful attention to this question of labour, how it is to be obtained and how fed; otherwise a more liberal distribution of land would only aggravate the difficulties of the planters. The course marked out for the Government seems to be the encouragement of free

labour as opposed to any system in which special protection is given to the labourer on the one hand, and to the employer on the other. To this end there will need strong district administration, and officers should be made to feel that the tea industry was not excepted from the jurisdiction of the regular authorities and the ordinary law of the country, and that no tenderness for the interests of tea-planting should be allowed to interfere with the suppression of illegal practices. For the rest, roads and other means of communication towards and within the tea districts, should be pushed forward as rapidly as the resources of the empire may allow, and no means left untried to encourage the increase of the local population, and of the cultivation of food-staples in these districts.

The opinions of Mr. Campbell, who has derived great experience from his connection with Assam, with respect to tea planting as a commercial undertaking, are well deserving of attention. With suitable sale and good management the average yield of an acre of tea-plant in full bearing may be reckoned at 400lbs., which, if carefully prepared, would, in the English market, fetch about £10. The cost of forming a plantation, of cultivating it when formed, and manufacturing the tea, are high; nevertheless, with proper and careful management, a very satisfactory margin of profit may be relied upon. The amount of profit derivable from a well-planted and carefully-managed tea concern is liable to fluctuate from two causes only, viz., the prices of tea in the home-market and the cost of labour in the gardens; neither of these two causes is ordinarily liable to sudden and capricious changes. To a person with even so small a capital as two or three thousand pounds, tea planting would prove a most profitable undertaking. The revival of confidence has been extending slowly but steadily during the past three years, and at the present time the prospects of the industry are far brighter and better than they have ever been before. It is to be hoped that, with the experience gained by knowledge of the causes which led to former disasters, it will continue in its present healthy course and furnish an opening for the enterprising men of our own country.

THE PRICE OF SKILLED LABOUR NEAR LONDON.

—If this meet the attention of the agricultural labourers, they will not perhaps believe that there are hundreds of skilled "sons of the soil" working in market gardens, horticultural gardens, and in the great floricultural hothouses round about, and in the Metropolis, whose wages average from 18s to 12s a week without any perquisites, cheap cottages, or work in wet or frosty weather. Moreover, these men work harder than thrashers, plowmen, hedgers, sowers, mowers or other tillers of fields. I take first the men in market gardens, who in many cases are up three nights a week to market. Their wages on an average are but 18s a week. Then there are the Government hands in the parks, and their pay averages about 14s a week. I next arrive at the hands skilled in floriculture, horticulture, and arboriculture. These men are employed in London nurseries and exotic establishments for the low wage of 12s. Many of these gardeners are Latin scholars, botanists, landscape surveyors, and chemists. It is true that being employed in the London nurseries is but a step to employment as head gardeners in noblemen's gardens, where the wage may reach 300 guineas a year; but I know for a fact that steady, clever men have been for years awaiting an opening for their services. The majority of these 12s. a week men hail from Scotland, and have to subsist on onions, bread and oatmeal. The only flesh meat they come in contact with is outside butchers' shops. These facts should show that some of the "sons of the soil" are somewhat worse off in Middlesex than other counties.—*The Labour News.*

T H I N S E E D I N G .

The season is fast approaching for putting in the wheat seed for next year's crop. The general practice is to allow three bushels of seed per acre, and the average produce does not much exceed 28 bushels per acre—say, 9 or 10 for one. The question of the comparative results of thick and thin seeding is in the present state of agriculture a more important one than most farmers are aware of. If it readily can be proved that sowing one bushel per acre instead of three will produce as good or a better crop than three bushels, supposing the extent of the land sown is, in round numbers, four million acres, it gives an amount of eight million bushels saved in seed only; whilst some who have tried it say that the produce is greater. Now, we are importing from eight to eleven million quarters of wheat per annum—for the two last years it has amounted to eleven millions—and the question is a simple one, whether it would not be as well to reduce the proportion of seed wheat, besides increasing the produce, which all those who have tried thin sowing aver is the case, and thereby lessen the importations to the same extent? Every bushel imported is a dead loss to the country, if it can be proved that by a more economical culture—in whatever way—it is possible to produce this at home.

The first instance we shall adduce as to thin seeding is that of Jethro Tull, who, about the beginning of the last century, occupied a farm or farms of 200 acres of his own, which he cultivated on perfectly novel principles, the first and foremost of which was, "that thorough tillage is competent, with or without manure, to secure the profitable growth of any given species of cultivated plant year after year in succession." This theory he carried into practice for upwards of thirty years with so much success, that, instead of impoverishing the soil, he let off a part of it at one-third more rent than had previously been given for it. He introduced the practice, more recently adopted by the late Mr. Smith, of Lois Weedon, of sowing half the land in portions of three feet, embracing three rows, having *unsown* intervals of the same breadth between them, and he found that he could grow heavier crops on half the land than his neighbours did on the whole. Mr. Smith, too, practised this plan for nearly twenty years, and produced, on half the land, from 35 to 40 bushels of wheat per half acre. The amount of seed sown was from one to two pecks per acre, no more being ever applied. Mr. Hallett, of Brighton, offers another example of thin seeding. His farm or farms consist of about six hundred acres, a considerable portion of which consists of down land, having from four to six inches of soil lying on a chalk subsoil. It is unnecessary to go at length into the system adopted by Mr. Hallett, whose object is to produce a quality of wheat founded, like superior cattle, on an authentic pedigree. His system embraces thin-seeding as a first principle. Thus, sown early, one hundred acres are seeded at the rate of one bushel to six acres, whilst the latest sowing is one bushel per acre. Mr. Hallett's neighbours seed at the rate of three bushels per acre; he therefore saves in seed alone from 180 to 250 bushels. As a sample of what may be done by this system, Mr. Hallett hired a large field belonging, we believe, to the Corporation of Brighton. It was such a barren spot as to be considered actually incapable of growing wheat. We saw this field under wheat seeded at the rate of one peck per acre, the product of which was a crop of 48 bushels per acre. One good effect thin seeding is the entire absence of under-corn—that

is, weak and short plants holding inferior ears and containing thin and imperfect grain. Heavy seeding always produces this defect, which detracts from both the quality and quantity of the return. There was no such under-corn in Mr. Hallett's crop, the ears being all one height, and as level on the top as a table.

Another case is that of Mr. Piper, an Essex miller and farmer, who, for twenty-five consecutive years, grew wheat every year without manure, except a dressing of soot, and without ploughing the land, using only a hoe to scuffle in the seed, and planting in at the rate of $1\frac{1}{4}$ pecks per acre. It was said that the produce exceeded by a quarter per acre more than obtained by the neighbouring farmers, and in one season reached to seven quarters per acre. Like Mr. Mechi, Mr. Piper was accustomed to send annually a printed statement of the profit and loss accruing in the season. Mr. Miller, the curator of the Botanical Gardens at Cambridge, inserted an account of the experiment which he undertook, in the Philosophical Transactions of the Royal Society:—"In the month of June, 1766 sowed some wheat, and on the 8th August one plant was taken up and separated into eighteen parts, and replanted. These plants were again taken up and divided in the months of September and October, and planted separately to stand the winter, and this division produced sixty-seven plants. These were again taken up in March and April, and produced five hundred plants. The number of ears thus formed from one grain of wheat was 21,100, which gave three pecks and three quarters of corn, estimated at 576,840 grains. The land was of medium quality, and no manure applied."

An acre of land contains 43,560 square feet; three bushels of wheat contain, at the rate of Mr. Miller's wheat, 1,832,554 grains, which divided by 43,560, the number of square feet in the acre, gives 42 grains of seed to the square foot! Is it surprising that frequent failures of the crop should occur with such crowding of plants which, like human beings, can only be healthy and strong with plenty of room to develop their productive faculties?

THE POTATO.—The crop is in danger, although neither fungus nor beetle have as yet assailed it anywhere. The tubers have ripened prematurely, and, generally speaking, the crop is light, but good. Now, the danger it is in is this—that it is ready to start into a second growth in the event of rain occurring quickly and copiously. What is called "super-tuberating," or the growth of new tubers above the old ones, is a destructive process, for the old tubers that give birth to clusters of new ones above them are robbed of their fecula, and become flinty and tasteless in consequence. To prevent super-tuberating, the crop must be lifted and clamped in the coolest and driest place that can be found for it, and it will be safe for any reasonable length of time. To wait until it is dead ripe is not necessary. If done growing and beginning to ripen, it is perfectly safe and prudent to lift, for the momentary exposure to the atmosphere, and separation from the succulent haulm will hasten the ripening, and render the crop less disposed to grow than if allowed to ripen perfectly in the ground.—*The Gardeners' Magazine.*

THE LANDLORD AND TENANT BILL.

TO THE EDITOR OF THE MARK LANE EXPRESS.

SIR,—Landlords, their lawyers, their supposed interests, their arbitrary farm contracts and leases are at present thought to be the grand obstacles to high-farming and more productive husbandry. There is to be therefore a Landlord and Tenant Act for England, as there has been for Ireland, with the view of removing the anomaly. To the introduction of the Bill Mr. Disraeli is pledged. It is not, however, to contain the 12th clause of the Bill of the Messrs. Howard and Read. To that clause, of course, Mr. Disraeli and others of the "Farmer's Friends" profess an unconquerable dislike. Neither is the proposed Bill to be after the manner of the Marquis of Huntly's Bill, or of the complexion of an "exaggerated Irish Land Act," as the Huntly Bill was termed by the Duke of Richmond. The Duke has intimated *his* resolution that no such Land Bill shall become law. The promised Bill is likely therefore to be very much of that sort which the play of Hamlet would be with Hamlet left out, and not altogether a Parliamentary Bill in the common acceptation of the term; but rather, I should say, the *skase* of a Ministry of Landlords, which, thanks to the farmers of England, are, for the time being, omnipotent in the realm: in many respects more powerful therein than the Sovereign, and, at all events, in a position to dictate to those who raised them to their present altitude.

"By the grace" of these dictators the promised Land Bill may possibly contain a measure of good notwithstanding. It may contain the incalculable boon to tenants of a two years' notice to quit; it is certain to provide for "free contracts" as between landlords and tenants, and to continue to the former the power to evict the latter, as a leverage or "screw" necessary to make the said "free contracts" a success.

Important events are often the unexpected result of small and insignificant causes; and—

There is a *hand* that shapes our ends,
Rough-hew them as we may—

the promised Land Act may form no exception to the rule. The admitted necessity for such an Act is an immense stride onwards of itself and in its most carefully-constructed clauses, however undesigned may lie hid the seeds and incipient principles of the future, and entire destruction of what yet remains of an arbitrary and a harsh feudal landed system in England.

There is, indeed, no better authority than history; and history ever furnishes the proof that discontent and revolution follow resistance to reform as surely as effect follows cause or night follows day. What so much led up to the Reform Bill of 1832 as oppression? What ensured Corn-law repeal so much as opposition? And even in that "leap in the dark," and the *sham* Household Suffrage Bill that followed, is to be recognised the powerful incentive to that Liberalism which interfered to turn a measure of mere pretence into one of real reform.

As it was with this original Household Suffrage Bill, so will it be probably with the anticipated Land Bill. It will be Conservative nominally, but revolutionary in

reality. It will pretend a great deal, and yet give little. It will be at one and the same time positive and negative in character, and any advantage given by it to the tenant in one clause will be rendered nugatory in another. In one respect it is all but certain to be less fortunate ultimately than the Household Suffrage Bill; for whereas that encountered a Liberal majority in its progress through Parliament, by whose exertions it was so altered as to screen its authors from disgrace, the coming Land Bill is likely to receive merely the attentions of a Liberal minority, which, thanks to the farmers, will be powerless to change the incongruities that are sure to exist in the measure into those provisions of justice and security to the tenant, such as the exigencies of a densely-populated country demand.

The Act in question is to protect the landlords from "contracts from which human nature recoils." The idea is one of Mr. Disraeli's, and, of course, cuts in more directions than one. If, for instance, it is just to so protect the landowner, the rule must of necessity, in a land where equal laws prevail, be also applied for the protection of the occupier. Overboard then must ere long go every contract enforced upon the tenant in the matter of game; away must go those in connection with the law of distress; and next there will have to follow destruction to those feudal farm leases and penal contracts which have hitherto so much and so unduly obstructed the cultivator, and enabled the landlord at will to seize upon and to confiscate to his own use and advantage the property in the improvements of the occupying tenant.

Viewed in this light, "freedom of contract" may not, after all, be so bad a thing to have. Nay, but the admission of the principle is, as likely as not, to be the introduction of the thin edge of the wedge of the most sweeping land-tenancy reform. To insist upon "free contracts" in the letting and hiring of land is really to insist that the landlords and the tenants shall meet each other as common traders—that both shall be alike deprived of protection, and thus stand towards each other in contracting as independently as do merchants in contracting on the Exchange. Admit this, and who can object to it? And the necessity is admitted of free trade in land, of the restriction of the power of the landlord to evict, of the overthrow of the laws of primogeniture and entail, and, over and above all, of giving to the tenant the right to the property created by him in the improvement of his farm.

Such property is as tangible, and as much entitled to protection, as property in an estate. It has even the advantage over property which has been inherited, inasmuch as it is the result of the application of the capital, the skill, and of the industry of the accumulator. Why, then, should property so realised, and which can be proved to have been realised, be open to the seizure of a landlord? In short, if the landlords are not to be "forced into contracts" with regard to the letting of their farms, "from which human nature recoils," why, in the name of justice and fair play, should the tenants be "forced into contracts" with regard to the hiring of their farms and with respect to their tenures and improvements thereon, "from which human nature recoils"? Yours, &c., THOMAS ROBERTSON,

Narraghmore, Athy, Aug. 10.

M A N G O L D W U R Z E L.

BY THE NORTHERN FARMER.

It is absolutely impossible to overrate the value and importance of this plant as a source of cattle-food for the spring and summer months, or to substitute any other article, either home-grown or purchased, which will tide over with the same amount of plenty, economy, or satisfaction what is universally admitted to be the scarcest period of the whole year. The farmer who has had the industry and foresight to provide and hold over a large supply for early summer need care but little how the season turns out with regard to growth of grass, whether dry or moist, early or late, as he holds in his yards the material of superabundance, a comparatively small breadth of surface, if the land has been liberally treated, supplying an immense bulk of food, suitable alike for horses, cattle, sheep, and pigs, and of which all seem to be alike fond. Coming into season at the very period when the swede, however carefully kept, begins naturally to decay, lose its sap, and become worthless as food, it forms a connecting link between the old season and the new, which, combined with its extraordinary abundance, renders it one of the most useful and valuable plants known to modern husbandry. In situations where climate and soil are suited to its growth and successful culture it actually supersedes the swede, and is yearly increasing in favour with large stock-owners. It contrasts favourably with the latter in first of all, having fewer enemies in the earlier stages of its existence, therefore, if once fairly started, it is almost certain to progress uninterruptedly to successful maturity. Again, it is a plant that delights in a rich and highly-manured soil, and will stand any amount of forcing, giving an immense return for liberal treatment, the expense of which bears no comparison to the value of the crop in cash, or the advantages it confers on the owner of a heavy stock during the spring and summer months. Moderately good land, deeply stirred by grubber or plough, or with both—which makes the best work of all when performed in the autumn—the eradication of weeds being attended to at the same time, may fairly be expected to give a return of not less than forty tons of roots to the imperial acre, an amount in itself surely amply sufficient to encourage the farmer not only to lay out a considerable sum in applying dung and auxiliary manures, but in rigidly attending to carrying out in perfection the whole of the cultural details, from the preparation of the land for the seed, to the storing the roots in the end of October. Given, that all the preliminary operations of working and manuring have been done in the best possible manner, it is nevertheless truly astonishing how greatly the subsequent processes of cultivation affect the ultimate success of the crop, and increase or depreciate the weight per acre in an exact ratio to the way they are attended to, whether attentively and carefully or the reverse. A ley field broken up in autumn, or at latest early winter, suits admirably for a crop of mangolds; and this more particularly if the preparatory season happens to be dry and scorching, as the fresh mould retains the winter moisture longer and resists evaporation much more effectually than land which had been previously cropped. The earth in this instance may be compared to very fine meal in its appearance and nature, the finely comminuted particles attracting moisture from the air during the night, and its close consistence enabling it in a great measure to retain it during the day, however dry may be the weather. It is difficult, and often altogether impracticable, to render land which has been frequently

cropped so extremely fine, especially if ploughed out of the stubble in unfavourable weather; as however great the care which may be taken with it in spring, or however weighty the implements which are employed in its reduction, it bears more resemblance to crushed cinders than to the floury compound so ardently desired by the cultivator, and so absolutely necessary for an equal and vigorous start of the young plants. Although the preparation of land during showery weather is tedious and difficult, and, even in this case, dangerous to the work in hand, in so far as when it occurs at the period of sowing, which is very limited, the acreage under a very valuable crop may have to be considerably circumscribed and the general plan of the year's proceedings altered. On the other hand, a lengthened drought about the time of sowing, and extending to a couple of weeks after it, is eminently hazardous, inasmuch as many of the seeds will fall to vegetate in the dry soil, much of the land remaining blank, and rendering it necessary to fill up such spaces, either by transplanting, or sowing turnip seed, both processes being disagreeable and unsatisfactory, and at best compensating in a very inferior degree for the first loss. When the weather chances to be very dry, it is excellent policy to concentrate the whole available force of the farm in men and horses, on such a portion of land, as can by a smart push be ploughed, grubbed, harrowed again and again, chain-harrowed, weeds picked off if necessary, drilled, manured, and seeded all in one day. The various operations succeeding each other so rapidly gives spirit and animation to the workers, and a big day's work is done in the best manner, with a good prospect of a quick and equal start of the seed which has been deposited. The dung quickly spread, and covered at once with finely prepared earth, retains its moisture, communicating it gradually to the over-lying soil, thus materially assisting vegetation, and helping on the embryo plant in its first struggle for existence. Rolling the drills with a heavy Cambridge roller immediately after sowing is extremely useful in very dry weather, as it presses the seed down on the dung, and enables the earth to preserve its moist condition under the influence of a powerful sun and possibly drying wind; moreover its mechanical effect on the drill is to press it quite flat, exposing a large surface to the action of the air, from which it is thus enabled to absorb an appreciable amount of moisture during the night. Care and attention in this way will go far to obtain an even and healthy plant in almost the driest seasons. This secured, there is scarcely ever any further difficulty, as if the manual conditions are favourable success is almost certain, the plants having no insect enemies grow vigorously, speedily covering the ground, and seldom requiring a check until they reach maturity. In the cultivation of mangold-wurzel manure is all important, and no other consideration should be permitted to interfere with or prevent its being liberally used. Fifty cart-loads of dung made in the best manner under cake-fed beasts, is about a fair dressing for an imperial acre, supplemented by 70s. worth of Peruvian guano, kainit, and dissolved bones. As an economical source of ammonia farmers are now in a measure forced to turn their attention to nitrate of soda, and as it is now vastly cheaper by the ton than it was a few years ago, a portion of it may be substituted for an equal money value of guano. But for its evanescent nature nitrate of soda would be invaluable to the farmer; its effect, however, is

not lasting, as may be easily proved by the after-crops, therefore it must be used with caution, merely taking advantage of its stimulative powers on crops that will stand forcing. Deep stirring between the drills, both with plough and grubber, during the period of growth proves of immense advantage to this crop, and the time and trouble expended on these operations will be amply repaid by the luxuriant foliage and rapidly swelling bulbs, unfailing indications of a magnificent crop. Where the breadth grown is considerable, it is safe management to begin lifting the crops by the middle of October, sharp frosts almost invariably occurring about the first week of November, which are the cause of great anxiety when

such a valuable crop is in danger, and although it may not appear to have inflicted much injury at the time, yet in the months of April and May a rather heavy percentage of rotten bulbs will too truly show the effect of a few nights' sharp frost, and absolute necessity of getting them early placed in a safe position. In storing never place against a wall: it is the cause of much loss. Pits of seven feet in width, tapering to a sharp point at about the same height, being nearly as quickly built up, and when properly thatched and secured, keeping the roots over without perceptible loss from rotting, quite through the summer.

THE BIRMINGHAM HORSE SHOW.

On one or two previous occasions probably some of the classes may have been better filled, but as a whole the entries are about an average as to numbers, which is equivalent to saying that they are limited only by the size of the building. First in the order of the catalogue, as heretofore, were the thoroughbred stallions, of which there were six entries. One of these, however—namely Major Ballard's Reinfrid—was an absentee, and Mr. Green's Young Goldfinder was summarily disqualified as not being thoroughbred. Of the remainder, the contest lay between the two sons of Stockwell, Citadel and Laughingstock, which here met to try conclusions for the fourth time; the former, as usual, obtaining the precedence. The hunters exceeding 15½ hands, equal to fifteen stone, five years old and upwards, were pronounced to be a fair collection, with Mr. Goodliff's Marshal MacMahon first. His principal opponent, Mr. Hayward's Paramour, is a useful weight-carrier. The hunters exceeding 15½ hands high, without conditions as to weight, five years old and upwards, are only moderate, and those not exceeding 15½ hands in height are small but good, particularly Mr. Milward's mare, Emerald. The four-year-olds are the best hunter classes. The first prize was given to Sir George Wombwell's Cawton; the second to Mr. Armstrong's Cashier, the Islington champion. The animals which had taken the premier prizes in this and the three preceding classes were, as a matter of course, the only candidates for the cup; and it is a noteworthy fact that they are all of the same colour—chestnut. The race was between Marshal MacMahon and Cawton, and the Marshal was declared to be decidedly the more fashionable and taking horse. With the exception of the prize-takers, the three-year-old colts and fillies for hunting purposes are indifferent. The Duke, sent by Mr. Coath, of Walsall, is up to weight; and Mr. Goodliff's Lady Mary shows quality. The two-year-olds are, upon the whole, good. The hacks and roadsters 15 hands two inches high and upwards, are a small class, headed by The Prince, with a good back, quality, and action. The hacks and roadsters 14 hands and three inches and under 15 hands two inches high, are creditable. The cobs exceeding 14 hands are also fairly represented. The best of the few weight-carrying hacks exceeding 15 hands high is Sir George Wombwell's Enterprise, a famous prize winner. The first of the weight-carrying hacks not exceeding 15 hands, six in number—Mr. Frisby's Filbert—is another known prize-taker. Sir George Wombwell takes first honours for hacks exceeding 15 hands high with Miss Sykes, a previous prize winner. Among the hacks not exceeding 15 hands high was Ozone, the property of Mr. Matthews, always a winner. The harness horses 14 hands three inches high, and under 15 hands two inches high, were a moderate class. The harness cobs exceeding 14 hands and under 14 hands three inches, consisted mainly of draughts from other classes, Major

Quantu taking first prize with Sparkling Moselle; and of harness horses, 15 hands high and upwards, only three pairs came in. The muster of ponies was very large, the classes for animals not exceeding 14 hands being numerically the strongest. The classes for cart horses were this year struck out.

PRIZE LIST.

JUDGES.—THOROUGH-BRED HUNTERS AND HACKS: Colonel Luttrell, Badgworth Court, Axbridge, Somerset; R. G. F. Howard, Temple Bruer, Lincoln. HARNESS HORSES AND PONIES: Colonel Barlow, Hasketon, Woodbridge; J. M. K. Elliott, Heathenote, Towcester. VETERINARY REFEREES: Messrs. E. Stanley and Son, M.R.C.V.S., Islington and Birmingham.

Thoroughbred Sires.—First prize, £25, Colonel Barlow, Hasketon, Woodbridge (Citadel); second, £10, R. Hutton, 74, Gloucester-place, Portman-square, London (Laughingstock). Highly commended: The Earl of Stamford and Warrington, Enville Hall, Stourbridge (The Peer).

HUNTERS.

Exceeding 15½ hands high, equal to fifteen stone, five years old and upwards.—First prize, £30, and extra prize of £10 19s. as the best hunter in classes 2, 3, 4, and 5, J. Goodliff, George Hotel, Huntingdon (Marshal MacMahon); second, £10, C. C. Hayward, Southill, Biggleswade (Paramour); third, £5, A. H. Billington, Kennington House, Ashford (Lucifer). Commended: T. Pain, Lower Pertwood, Rindon, Salisbury (Westbury).

Exceeding 15½ hands high, without conditions as to weight, five years old and upwards.—First prize, £20, W. Whitehead, Woblaston, Wellingborough (Rutus); second, £10, T. B. Ashton, Temple Laugherne, Worcester (The Lancer); third, £5, A. H. Billington (Kate). Commended: T. P. Kempsou, The Oaklands, Handsworth (Claribel).

Not exceeding 15½ hands high.—First prize, £20, R. Milward, Thurgarton Priory, Southwell (Emerald); second, £10, B. Gilpin, Longford, Cannock (Glenhewer).

Four-year-olds.—First prize, £30, Sir G. Wombwell, Bart., Newburgh, York (Cawton); second, £10, W. Armstrong, Fairfield, Kendal (Cashier); third, £5, T. H. Foden, Givendale Grange, Ripon (Montillado). Highly commended: C. C. Hayward (Richelieu).

Three-year-old colts or fillies.—First prize, £15, W. Coath, Moss Close Farm, Walsall (The Duke); second, £10, J. Goodliff (Lady Mary); third, £5, J. Sankey, Metchley, Edgbaston.

Two-year-old colts or fillies.—First prize, £15, J. Everatt, Loughton, near Gainsborough (Sunshine); second, £10, R. Swanwick, Cirencester (Glengyle); third, J. Goodliff. Commended: W. Richards, Ashwell, Oakham (Claribel).

HACKS, ROADSTERS, AND COBS.

Hacks and roadsters, 15 hands 2 inches high and upwards.—First prize, £15, F. G. Haines, Upper Montague-street, London (The Prince); second, £5, Captain J. H. Mardon, the Craig, Grosmont, near Hereford (Fittou).

Hacks or roadsters, 14 hands 3 inches high, and under 15 hands 2 inches high.—First prize, £15, W. M. Hobbay, the Grange, Ashby Road, Leicester; second, £5, Miss Harrison, Eastland House, Leamington (Major). Highly commended: C. A. Jacobs, the Riding School, Clifton, Bristol (Cora).

Commended: F. G. Haines (The Marquis); R. N. Hooper, Stanhaws Court, Chipping Sodbury (Constance).

Cobs, exceeding 14 hands and under 14 hands 3 inches high.—First prize, £15, Major Quentin, Woodleigh Cheltenham (Sparkling Moselle); second, £5, R. Gold, Sharman's Cross, Solihull (Steel Grey). Commended: Mrs. Tyler, 23, Frederick-street, Birmingham (Safety); J. Wiggins, Market Harborough (Princess Louise).

Weight-carrying hacks, exceeding 15 hands high.—First prize, £15, Sir G. Wombwell, Bart., Newburgh Park, York (Enterprise); second, £5, R. B. Lewis, Walsall (Lawyer). Commended: W. E. Warden, Chad Road, Edgbaston (Tommy Dodd).

Weight-carrying hacks, not exceeding 15 hands high.—First prize, £15, H. Frisby, 13, James-street, Buckingham Gate, London (Filbert); second, £5, W. Sadler, 17, Hyde Terrace, Leeds (Cockney). Highly commended: W. E. Wiley, Birones Green, Erdington (Bob).

LADIES' HORSES.

Exceeding 15 hands high.—First prize, £15, Sir G. Wombwell, Bart. (Miss Sykes); second, £5, J. Gilman, jun., 148, Lancaster-street, Birmingham (Hinko). Highly commended: W. M. Hobday (Talisman).

Not exceeding 15 hands.—First prize, £15, F. C. Matthews, Easterfield House, Driffield (Ozone); second, £5, F. G. Haines (The Marquis). Highly commended: Mrs. L. F. Webb, Chapel Oak, Salford Priors, Evesham (Fire Fly). Commended: J. Gilman, jun. (Madeline).

HARNESS HORSES.

Horses, 15 hands 2 inches high and upwards.—First prize, £15, C. J. Shaw, Greenfield, Edgbaston (Billy); second £5, H. Hunt, Harvington, near Evesham.

Horses, 14 hands 2 inches high, and under 15 hands 2 inches high.—First prize, £15, J. C. Rogerson, 73, Oldham-street, Manchester (Bell-metal); second, £5, W. E. Warden (Tommy Dodd). Commended: W. Sadler, 17, Hyde Terrace, Leeds (Cockney).

Cobs, exceeding 14 hands and under 14 hands 3 inches.—First prize, £15, Major Quentin (Sparkling Moselle); second, £5, J. Tyler, 209, Broad-street, Birmingham. Commended: R. Gold, Sharman's Cross, Solihull (Steel Grey).

Pairs of horses in harness, 15 hands high and upwards.—First prize, £15, T. Statter, Stand Hall, Whitefield, Manchester (Sensation and Tom); second, £5, W. E. Tharme, Wolverhampton.

Tandems of horses, exceeding 14 hands high.—First prize,

£10, T. Statter (Sensation and Tom); second, £5, G. Tharme, Bradford-street, Birmingham.

PONIES.

Ponies in harness, not exceeding 14 hands high.—First prize, £10, R. Wright, 72 Regent Road, Salford (Young Apricot); second, £5, G. J. Leek, Cop Hill, Claverdon (Maggie). Highly commended: S. Sparrow, Downing-street, Cambridge (Tom). Commended: C. Smith, Kirk Langley, Derby.

Ponies in saddle, not exceeding 14 hands high.—First prize, £10, H. Frisby, London (Prince Polo); second, £5, R. Wright (Young Apricot). Highly commended: J. Chew, Thorpe, Northampton (Tommy). Commended, C. Smith, Kirk Langley, Derby.

Ponies in harness, not exceeding 13 hands high.—First prize, £10, H. Gameson, 81, Dale End, Birmingham (Beauty) second, £5, J. Eaton, Castle Gate, Grantham (Beauty). Highly commended: J. Taylor, 51, Great Hampton street, Birmingham (Tom Boy). Commended: T. J. Merrick, Northampton (Essex); R. Travell, Rumney Court, near Cardiff (Polly).

Ponies in saddle, not exceeding 13 hands high.—First prize, £10, C. A. Jacobs, Clifton, Bristol (Gem); second, £5, Miss Tyler, 28, Frederick-street, Birmingham (Billy). Highly commended: Captain P. P. P. Goodchill, Grange, Glen Parva, Leicester (Little Bob). Commended: R. S. Bowker, Newton Lodge, Tamworth (Lilly).

Ponies in harness, not exceeding 12 hands high.—First prize, £10, T. Mabbutt, Abingdon Works, Birmingham (Jimmy); second, £5, J. Allkins, 96, Summer Lane, Birmingham (Belle of the Ball). Commended: H. Mapplebeck, Bradford-street, Birmingham (Minnie); W. Pinder, Ropsley, Grantham, (Topsy)

Ponies, not exceeding 12 hands high, to carry children.—First prize, £10, C. A. Jacobs (Bronze); second, £5, J. Allkins, 96, Summer Lane, Birmingham (Belle of the Ball). Highly commended: J. Beebe, Birmingham Road, Walsall (Beauty). Commended: W. Pinder, Ropsley, Grantham (Topsy)

Pairs of ponies in harness, not exceeding 14 hands high.—First prize, £10, W. Frost, Stork Hotel, Birmingham (Alma and Globula); second, £5, withheld.

Tandems of ponies not exceeding 14 hands high.—First prize, £5, J. Beebe, Birmingham Road, Walsall (Gipsy and Beauty); second, £3, Mabbutt and Allkins, Birmingham (Belle of the Ball and Jemmy).

EAST CUMBERLAND AGRICULTURAL SOCIETY.

MEETING AT CARLISLE.

The show, on the whole, was very good; but the weather was so wretchedly bad that it undoubtedly kept many people away from the ground.

PRIZE LIST.

JUDGES.—SADDLE HORSES: J. Jardine, Dryfaholme, Lockerbie; W. Forster, Burradon, Morpeth. HARNESS HORSES: T. Kendal, Park House, Kirkby Lonsdale; J. B. Lee, Stockfield-on-Tyne. CART HORSES: W. Borthwick, Moncwear, Whitehaven; J. Blackstock, Hayton Castle, Maryport. SHORTHORNS AND SHEEP: J. Dean, Dalkeith Park, Dalkeith; A. Metcalfe, Ravenstonedale, Tebay. GALLOWAYS AND PIGS: G. Rome, Glinger Bank, Longtown; J. Grierson, Kirkland Haugh, Dalcaettie. BUTTER: Mrs. Mark, Durdar House, Carlisle; Mrs. Graham, Waterfoot Farm, Annan; Miss Steel, Cardew Hall, Dalston.

HORSES.

SADDLE HORSES FOR FIELD OR ROAD.

Brood mare, with foal at foot or in foal.—First prize, J. Moffat, Kirklington Park, Carlisle; second, G. F. Statter, Broomshills, Carlisle.

One-year-old gelding.—First prize, J. Rickerby, Wall Head, Crosby; second, T. Mark, Durdar House, Carlisle.

One-year-old filly.—First prize, J. Moffat; second, R. B. Faulder, Thursby.

Two-year-old gelding.—First prize, T. Kitching, The Close, Penrith; second, J. Moffat.

Two-year-old filly.—First prize, D. McAuley, Carlisle; second, T. Mark.

Three-year-old gelding.—First prize, T. Graham, Beansland Park; second, J. Armstrong, Stub, Kirklington. Highly commended: J. Brown, Wiggonby.

Three-year-old filly.—First prize, G. Shadwick, Aikton; second, J. Carrick, Brampton.

Four years old and upwards gelding or filly.—First prize, W. Armstrong, Kendal (Cashier); second, J. Lamb, Penrith (Silence). Commended: T. Bell, Brampton (Patience).

HARNESS HORSES.

Brood mare, with foal at foot or in foal.—First prize, J. Rickerby; second, T. Little, Thorn Tree, Lazonby. Highly commended: R. Brough, Rye Close, Irthington.

One-year-old gelding.—First prize, Executors of J. Railton, Hetherington, Carleton, Carlisle; second, W. Faulder, Briceo Hall, Carlisle.

One-year-old filly.—First prize, T. Sturdy, Thrustondel; second, T. Wannop, Broadwath.

Two-year-old gelding.—First prize, J. Wood, Boustead Hill; second, J. Tyson, Wormanby. Highly commended: J. Marshall, Long Park. Commended: R. Gibbons, Mossbank, Rockliffe.

Two-year-old filly.—First prize, J. Norman, Roe Banks; second, T. James, Stainton.

Three-year-old gelding.—First prize, L. Potts, Wigt

second, J. Carlisle, Tarraby. Commended: J. Bell, Carlisle; J. Liddell, Brownelson.

Three-year-old filly.—First prize, W. B. Gordon, Justus Town; second, W. Nichol, Cargo. Commended: J. Todd, Mireside.

Four years old and upwards gelding or filly.—First prize, G. Shadwick; second, H. A. Clarke, Prospect House, Aspatria. Commended: J. Rome, Robgill Mains, Ecclefechan.

CART HORSES.

Brood mare, with foal at foot or in foal.—First prize, G. H. Head, Rickerby; second, J. and G. Atkinson, Peepy, Stocksfield-on-Tyne.

One-year-old gelding.—First prize, R. Gibbons; second, Mrs. Barton, Morton, Carlisle.

One-year-old filly.—First prize, J. Dalziel, Tinwald Shaws, Dumfries; second, J. Percival, Kirkhampton, Carlisle.

Two-year-old gelding.—First prize, W. N. Hodgson, M.P., Newby Grange; second, J. Kerr, Flatts of Cargen, Troqueer, Dumfries.

Two-year-old filly.—First prize, J. Kerr; second, G. H. Head.

Three-year-old gelding.—First prize, R. B. Faulder; second, T. Donald, Sanden House, Abbetown.

Three-year-old filly.—First prize, W. and J. Little, Bowness Hall; second, H. Phillips, Craerop, Brampton.

Four years old and upwards gelding or filly.—First prize, R. Gibbons (Jolly); second, W. Armstrong, Tarn Ends, Brampton (Nelson). Highly commended: J. Thompson, Baley Knowes, Kelso (Kit).

HURDLE LEAPING.

Sweepstakes of 10s. each for horses of all ages suitable for hunting. Four-year-old horses to carry 11 stones.—First prize, £10, W. Armstrong, Kendal (Cashier); second, £5, J. Fearon, Whitehaven (Trump King). Highly commended: J. Reay, Kirkinton.

A whip was presented to Mr. Beesley, rider of Dr. Carlyle's colt, for neatest costume.

HACKNEY PRIZES.

A first prize of £5, and second of £3, together with a sweepstake of 10s. each, was given for the best hackney of any age, height not exceeding 15 hands 1 inch, to be brought into the ring mounted.—First prize, H. A. Clarke, Aspatria; second, Dr. Carlyle, Carlisle. Highly commended: Major Thompson, Kirkhouse. Commended: R. Benn, Newlands.

SWEEPSTAKES FOR HORSES FOR FIELD OR ROAD.

Sweepstakes of 10s. each for the best saddle or harness foal.—First prize, J. Moffat; second, R. Irving, Butchergate, Carlisle.

CATTLE.

SHORTHORNS.

Bulls above two years old.—First prize, W. Lambert, Eltrington Hall, Haydon Bridge (Heather-bred Lad); second, Sir R. C. Musgrave, Bart., Edenhall (Wallace Wynne). Highly commended: G. H. Head (Royal Edgar).

Bulls under two years old.—First prize, G. Smith, The Luham, Penrith (Prince Eden); second, W. Heskett, Plumpton Hall, Penrith (Prince Leopold). Commended: G. H. Head (King George).

Cows or heifers above three years old, in calf or in milk.—First and second prizes, J. and G. Atkinson, Peepy (St. Crispin 2nd). Highly commended: J. Lamb, Penrith (Laurestina). Commended: W. Lambert (White Stocks).

Heifers under three years old, in calf or in milk.—First prize, J. and G. Atkinson (O. B.'s Justitia); second, W. Lambert (Matchless). Highly commended and commended: J. Lamb (Laurestina 2nd).

Heifers under two years old.—First prize, J. Lamb (Laurestina 3rd); second, D. Bragg, Southwaite Hall (Mary).

GALLOWAYS.

Bulls above two years old.—First prize, G. Graham, Oakbank, Longtown (Forest King); second, M. and T. Teardale, Boggs, Knaresdale, Alston (Gallant Graham).

Bulls under two years old.—First prize, J. Graham, Parcelstown (Sim of Whitram); second, R. Benty, Howend, Longtown.

Cows or heifers above three years old, in calf or milk.—First prize, J. Cunningham, Tarbroch, Dalbeattie; second and commended, J. Graham.

Heifers under three years old, in calf or milk.—First and second prizes and commended, J. Cunningham. Highly commended: J. Graham.

Heifers under two years old.—First prize and commended, J. Cunningham; second and highly commended, J. Graham.

BULLOCKS.

The best pair of bullocks of any breed, calved in 1873.—First prize, J. Cunningham.

SHEEP.

Bluefaced Leicester tup of one shear.—First prize, J. Todd, Mireside, Aspatria.

Bluefaced Leicester tup of any age.—First prize, J. Todd. Border Leicester tup of one shear.—First and second prizes, T. Bell, Townfoot, Brampton. Highly commended: W. Lambert, Ellington Hall. Commended: T. J. Bell, Oughterside, Maryport.

Border Leicester tup of any age.—First prize, G. F. Statter, Broomhills, Carlisle; second, T. J. Bell. Highly commended: W. Lambert.

Pen of bluefaced Leicester ewes.—First prize, J. Todd. Pen of bluefaced Leicester gimmers.—First prize, J. Todd. Pen of Border Leicester ewes.—First and second prizes, H. Newby-Fraser, Hay Close. Highly commended: G. F. Statter. Commended: W. Lambert.

Pen of Border Leicester gimmers.—First and second prizes, H. Newby-Fraser. Highly commended: W. Lambert. Commended: T. J. Bell.

Longwool tup other than Leicester.—First and second prizes, W. Norman, Hall Bank, Aspatria.

Pen of longwool ewes.—First and second prizes, W. Norman.

Pen of longwool gimmers.—First and second prizes, W. Norman.

PIGS.

Boars under four years old.—First prize, T. Hodgson, Newton Arlosh; second, C. Wills, Brugh-by-Sands.

Sows under four years old, to be in pig or milk.—First prize, T. Hodgson; second, J. Bulman, Carleton Hill. Commended: J. Graham.

DONKEYS.

Donkey of any age that can leap over a hurdle 1½ feet high, age taken into consideration.—First prize, A. Coulthard, Caldwellgate, Carlisle; second, Miss Graham, Scagger Houses, Carlisle.

BUTTER.

Fresh pounded butter, not less than 5lbs.—First prize, Mrs. Wannop, Brunstock; second, Mrs. Wilson, Lockerbie. Highly commended: G. H. Head, Carlisle. Commended: Mrs. Story, Bleatarn.

Firkin butter.—First prize, Mrs. Wilson, Lockerbie; second, Mrs. Graham, Scotby. Commended: Mrs. Waugh, Carlisle.

TRIAL OF REAPERS IN SCOTLAND.—The United East Lothian Agricultural Society has taken up the question of field work, and had a trial of reapers on a field of wheat, sixty-five acres in extent. The crop was conveniently apportioned into lots of nearly two acres to each reaper. The judges for the manual delivery machines were—Mr. J. Lennie, Longnewton; Mr. J. Wilson, Sheriffside; Mr. J. F. Robertson, Newmains; Mr. J. Douglas, Athelstaneford; Mr. J. Henderson, Byres; Mr. J. Russell, Greendykes; and Mr. S. Shirreff, Saltcoats. The judges of the self-delivery machines were—Mr. A. B. Telfer, Ayr; Mr. Taylor, Ayr; and Mr. A. Tweedie, Coates. The awards were: Manual Deliveries.—1, £10, A. C. Bumblett, Thirsk, Yorkshire; 2, £5, Harrison, Macgregor, and Co., entered by A. Dodds, Haddington. Highly commended: Picksey, Sims, & Co., entered by A. Dodds. Commended: Samuelsons & Co., Banbury. Self-delivery Machines.—1, £10, W. A. Wood, London. Commended: J. & P. Howard, Bedford, entered by A. Dodds, Haddington. The judges recommended a working one-horse reaper, shown by Walter A. Wood, London, for a special prize. The machinery of the first and second prize manual scrapers is enclosed in a tidy wooden frame, which saves it considerably in wet weather. At the luncheon, Mr. Harvey (Whittingham Mains) remarked that there was a great improvement on the reaper since the last trial in the same field nine years ago. The work to-day, he said, was remarkably well done, and he did not envy the judges. They had a difficult task, but he had no doubt, as they were all good, practical men, they would give the prizes to the best articles. He trusted they would give due preference to the implement, which did its work best, and above all, with fewest stops.

PENISTONE AGRICULTURAL SOCIETY.

The entries of stock were 506, nearly 100 more than last year. The cattle were the best seen at Penistone, especially the aged bulls and the dairy cows. In the sheep, too, there were some good pens, but the horses were not so large a show as last year, neither were they so good, excepting the roadsters. Pigs were about double the number of last year.

PRIZE LIST.

JUDGES.—CATTLE, SHEEP, and AGRICULTURAL PRODUCE: W. Ulyott, Great Kelk, Southorpe, near Hull; F. W. Addy, Cudworth, near Barnsley; W. Rhodes, Swinton. PIGS, HORSES, and DONKEYS: R. Cowton, Southorpe, Hull; C. Speight, Millhouse, Sheffield; W. Gillatt, Woodseats, Sheffield. POULTRY: W. Cannan, Adolphus Works, Bradford. DOGS: H. Miller, Uppertorpe, Sheffield; J. Sykes, Huddersfield.

SHORTHORNS.

Bull, any age.—First prize, G. Fox, Wilmslow; second, J. Johnson, Crofts Stitting Mill Farm, near Staveley.

Bull under two years.—First prize and Cup, T. Statter, Manchester; second, W. B. Beaumont, M.P., Stocksfield-on-Tyne.

Cow or heifer, in calf or milk.—First prize, J. H. Rockett, Selby; second, T. Statter.

Two-year-old heifer.—Cup, T. Statter; second, M. T. Hopkinson, Chesterfield.

Heifer under two years.—First prize, T. Statter; second, J. H. Rockett.

Bull of any age.—First prize, R. Lowe, Sheffield; second, A. and R. Mann, Thornhill, Dewsbury.

Cow or heifer, in calf or milk.—First prize, H. Binder, Ecclesfield; second, G. Widdison, Ecclesfield.

Cow for dairy purposes.—First and second prizes, H. Binder.

Two-year-old heifer.—Cup, G. Widdison, Butterthwaite, Ecclesfield; second, W. Parkin, Bromley Farm, Wortley.

Heifer under two years.—First prize, H. Binder; second, G. Widdison.

SHEEP.

Ram of any age.—Cup and second prize, J. F. Moorhouse, Penistone.

Shearling ram.—Prize, J. F. Moorhouse.

Shearling gimmers.—First prize, J. Dransfield, Oxspring House; second, G. Swinden, Snowden Hill, Hunsell.

Ram, any age.—Cup, G. Swinden; second, R. Parkin, Pond Farm, Hunsell.

Shearling Ram.—First and second prizes, C. Marsh, Penistone.

Tup lamb bred in 1874.—First and second prizes, C. Walker, Roughbirehworth.

Pen of three ewes, having suckled lambs in 1874.—Cup, J. Nicholson, Eastfield, Thurgoland; second, C. Walker.

Shearling gimmers.—Cup, G. Swinden; second, J. Pearson, Snowden Hill.

Ewe lambs, bred in 1874.—First prize, R. Parkin; second, T. W. Stones, Roughbirehworth.

PIGS.

Boar, large breed.—First prize, C. R. N. Beswicke-Royds, Littleborough; second, J. Collins, Hillfoot.

Boar, middle breed.—First and second prizes, C. F. Hallas, Manchester Road.

Boar, small breed.—Cup, C. R. N. Beswicke-Royds; second, J. Nutter, Cleckheaton.

Sow, large breed.—First prize, C. R. N. Beswicke-Royds; second, W. Green, Wadsley Bridge.

Sow, middle breed.—First prize, C. R. N. Beswicke-Royds; second, S. C. Alderson, Barnsley.

Sow, small breed.—First prize, A. Coates, Halifax; second, C. R. N. Beswicke-Royds.

Store pig, large breed.—First prize, C. R. N. Beswicke-Royds; second, T. Lindley, Grimsthorpe.

Store pig, middle breed.—First prize, C. F. Hallas; second, S. Bankinshaw, Orkleton.

Store pig, small breed.—First prize, C. R. N. Beswicke-Royds; second, H. C. Littlewood, Sheffield.

HORSES.

Gelding or mare for agricultural purposes.—First prize, M. Wood, Pontefract; second, J. F. Crowther, Mirfield.

Brood mare for agricultural purposes, with a foal.—Prize, C. Uttley, Wortley.

Foal of 1871, gelding or filly, for agricultural purposes.—Cup, J. F. Crowther; second, J. Simmons, Huddersfield.

Foal of 1872, gelding or filly, for agricultural purposes.—First prize, J. Mills, Waitfield; second, W. Bevins and Son, Wadsley Bridge.

Foal of 1873, colt or filly, for agricultural purposes.—First prize, J. F. Crowther; second, G. Wood, Grenoside.

Foal of 1874, colt or filly, for agricultural purposes.—First prize, C. Uttley; second, W. Stead, Cleckheaton.

Roadster, not entire.—First prize, M. Wood; second, J. Fairbrother, Sheffield.

AN ENGLISH LANDLORD IN IRELAND.—The Earl and Countess of Portsmouth, with their two eldest children, Lady Catherine Wallop and Lord Lymington, have been visiting the Royal Agricultural Society of Ireland's Show at Wexford. Lord Portsmouth's Irish estate has long been pointed at as a model of prudent and enlightened management, and of the success which attends truly liberal dealing between landlord and tenant. His lordship's father, the late patriotic Newton Fellowes of the Devon "Reforms days," had scrupulously carried out the principle of Tenant-Right, and the result has been that for fifty years there has been a most cordial feeling of harmony between landlord and tenant, and an entire absence of those agrarian disturbances which have been the bane and curse of some parts of the Green Island. The system of tenancy is vastly different in the two countries. In Ireland the tenant erects the buildings and fences the land. He has to put a considerable portion of capital necessary to farm the estate, and without a legal protection would have to leave that capital on quitting it. Individual improvidence often rendered the best-hearted landlord unable to do his duty in protecting a tenant who had relied on his good feeling. Where creditors got "the pull" of the estate the landlord was powerless to do justice to the legitimate expectations of tenants, and this brought on the state of things which rendered the Gladstone legislative remedy necessary. Such were Lord Portsmouth's merits as a landlord and a legislator that we believe we reveal no secret in stating that the late Prime Minister wished to reward him with the coveted dignity of "the Garter" in token of his respect for the noble Earl's patriotic merits. But the self-denying spirit of the noble Earl led him to decline the proffered honour, wishing the great Minister to have the means of bestowing it, not where it would be more deserved, certainly, but where it might be more serviceable to the interests of the State. Lord Portsmouth not long since brought, at great expense, a bountiful supply of water to the town of Enniscorthy for the free use of the inhabitants. In taking the young Lord to Ireland the Earl and Countess are giving the best practical lesson of the great duties of proprietorship, and how by wise administration they may be made to conduce to the happiness and prosperity of all concerned.—*The Western Times*.

THE EASTERN COUNTIES LOCK-OUT.—The lock-out lasted 18 weeks, and cost the National Union alone about £25,000. There were altogether 2,400 men locked out, and of these 400 have migrated and 440 emigrated, and 870 returned to work without giving up their Union tickets. Since the resolution of the Executive of the National Union not to continue the lock-out pay, an additional 350 men have returned to work for their old masters, several have left the Union, and 340 out of the original 2,400 are still unemployed. The Union Secretary attributed the defeat sustained in the Eastern Counties of three causes—want of union among the men themselves, the locked-out men refusing to migrate, and thus becoming a burden on the funds, and the indiscreet admission into the Union of worn-out old men, who expected that they were to derive annuities from its funds.

MR. PROUT AND HIS SYSTEM.

Temple Bar is tumbling down ; and those who go to see the last of it may miss, as we did the other day, a small unpretending chemist's shop, on the Strand side, where you can buy a box of Blair's pills, a precious ointment, or any other ready-made medicament. There is nought of that magnificence in the way of height, width, plate glass and mahogany polish, with which Mechi and Co. give a grace even to Regent Street ; but it is, as history tells us, from these small City deus that men command

Space for their lakes, their parks' extended bounds ;
Space for their horses, equipage and hounds.

From over the narrow counter or in the little back-parlour do they cherish and establish the after-life when they shall have herds and flocks, and flowers and grateful shade. But our near neighbour at Temple Bar, when he takes to himself a place in the country, counts upon no such conventional enjoyments. He has few horses, he has no hounds ; he has not an Alderney from which to make his own butter, nor a Southdown whereof he can borrow a leg of mutton. He cultivates but scant flowers, and has carefully contrived how there shall be as little grateful shade as possible, for he has so broken his bounds that his domain is an extended plain of plough lands, without a hedge to intercept the view, and with scarcely a tree to relieve the prospect. The pastorals of Blount's farm have been swept away with the fences. The curly-headed plough-boy no longer whistles o'er lea, for the *whistle* of one of Fowler's engines is the only signal now heard on the heallaud ; Corydon has pawned his crook, and Phyllis has gone into domestic service. The world, in a word, has been turned upside down, and the harvest-home feast is celebrated before a sheaf of corn is cut, in a goodly granary where grain is never stored.

From all sides we have the promise of a great wheat year ; taking England throughout, the prospects are almost everywhere put above the average ; while from the Continent the reports of France, Belgium, Germany, and further on are equally favourable. And in such a year Mr. Thomas Scott, who publishes periodically his opinions on the crops, makes this emphatic declaration : " I have visited Mr. Prout's farm in Herts, and Mr. Middleditch's in Wilts, where deep steam cultivation is substituted for live stock and manure, and I must say that their wheat crops surpass anything I have seen or heard of this season. Either of these gentlemen might challenge England for wheat crops." This is a big word, no doubt, as the palpable moral would be that farmers who wish to grow great crops of wheat should grow them year after year, as Mr. Prout does in Hertfordshire and Mr. Middleditch does in Wiltshire. It is very probable that Mr. Scott's statement is over-coloured, or, at the utmost, there is not much proof in it, until we know how much Mr. Scott really has seen, and how far he is justified in launching a comparison with all England. Naturally, however, the issue of such a challenge provoked a desire to judge for ourselves, and on Tuesday last we joined a party at lunch in the granary previous to taking part in a procession which followed Mr. Sworder to sell as they stood " the excellent growing crops of corn on Blount's Farm, Sawbridge-worth, by direction of John Prout, Esq." In another part of this day's paper we give the results ; that is the number of lots offered, and the price per acre at which the wheat and oats were sold. The average reached was said not to be quite so high as last year, but it must be

borne in mind, that with the promise of so generally good a season, there was not so much room for speculation, while the expenses of harvesting may be fairly calculated at something more than they have been. Everybody, however, agreed, previous visitors and near neighbours, that the crops had never looked better ; some of the Revits were capital, and almost everywhere good ; whilst the oats, if patchy in places, were set-off by many a show-piece, which might have gone to warrant Mr. Scott's All-England challenge. The land was remarkably clean, and those who knew it the best and longest were the first to declare that it was worth comparatively little or nothing until it came into Mr. Prout's possession ; the secret of whose success has been the ability to do as he liked with his own, by draining the land, by clearing the way for the steam-plough, and continuing it in crop so long as he chose ; while his aid in the way of renovation has been the use to the extent of some £2 or £3 per acre of certain artificial manures.

Assuming, as we are certainly so far justified in doing, the legitimate success of Mr. Prout's system of taking crop after crop, it is nevertheless scarcely one which can be offered as an example, for the very simple reason that but few other farmers have the power to follow it out. Indeed, perhaps, the most noticeable feature in the day's proceedings was the demonstration made at luncheon in favour of Tenant-Right and open covenants. Mr. Scott, who was in the chair, broached the subject ; and Mr. Prout declared that " the question would have to be dealt with next Session. He would accept of no measure which did not include the 12th clause, and he could show how by going for it landlords might increase their rent-rolls by 25 per cent." Mr. Middleditch went further still, and said that " few of the landlords of this country were fit to have tenants. He himself farmed an estate which was mortgaged up to the last farthing—up to the hilt, but he would never become a tenant-farmer ; he would rather break stones on the road." Mr. Corbet, the author of the prize essay on Tenant-Right, was also called on, the general tone of a very suggestive discussion turning on the necessity for security of capital and freedom of action, the latter point being especially appropriate to the occasion. Indeed, when we compare what was said here with the more general run of agricultural utterances, we question whether the Hertfordshire farmers ever heard so many home truths in so short a time ; though the speakers, like Mr. Prout's practice, may be in advance of the age.

SALE OF MR. T. E. MIDDLEDITCH'S
STANDING CROPS,

AT BROAD BLUNSDEN, SWINDON, ON JULY 23RD.

By MR. DORE.

EAST LOTHIAN FARMERS' CLUB.
CO-OPERATION.

At the monthly meeting Mr. George Harvey, Whittinghame Mains, presided, and introduced the subject, "How far a system of co-operation in regard to the purchase of manures, seeds, and feeding cakes could be carried out amongst farmers by direct purchase."

Mr. HARVEY said that while he thought the principle of direct purchase a correct one, the farmers of Scotland would not combine to have it carried out. At present the farmers were very much at the mercy of seedsmen, some of them of repute, and some of them not. He thought it was exceedingly difficult to get the Scottish farmers to combine in any sensible thing whatever. He referred them as a proof of what he said to the poor support he got from the farmers at the last meeting of the Highland Society in regard to the chemical department. There was a meagre attendance of farmers at that meeting. He looked in vain for any of the members of their own club excepting Mr. Smith, Whittinghame, Mr. Paton, Standingstones, and Mr. Durie. When so much necessity existed for a first rate chemist it was a shame that so few farmers came forward to support the proposal to have one appointed. He asked the Hon. Mr. Strutt to open the discussion.

The Hon. H. C. STRUTT (Saltcoats) said they all knew what co-operation was—the combination of a number of buyers of any commodity to procure that commodity either from the manufacturers or from the wholesale merchants at wholesale prices. Besides the diminished cost of the articles, there was this advantage that the fewer hands the goods went through there was the less chance of adulteration, and it was all the more easy to obtain an analysis of any sample. The simplest form of society would be for a number of farmers to join together, and say at the beginning of the year what quantity of manures and cakes and feeding stuffs they would require, and then let them appoint a committee or a salaried manager to make the best bargain for these articles with the wholesale merchants and manufacturers. In this way he believed they would be able to effect a saving of from 15 to 20 per cent. There was a society which supplied seeds, manures, cakes, and machines. That association sold manures, which were mixed according to the advice of agricultural chemists, and they chartered ships to bring across cotton-cake, seeds, &c., from America. The principle on which that association carried on its business was not to sell the commodities at a remarkably cheap rate, but at the minimum prices charged by respectable dealers. The shares of the association were £1 each, and 5 per cent. was given on the capital. Of the net profits last year, one-fifth went towards paying the interest on the capital, and four-fifths were divided amongst the buyers in proportion to the amount of their purchases. He had heard it objected that this system would interfere with the division of labour, and take away the livelihood from many dealers. He liked the maxim of "Live and let live," but in the present condition of matters farmers must in the first instance look to get a living themselves. If farming was a prosperous trade they might suffer a few parasites to live upon them; but this was not the case, for the farmers had quite a hard enough battle to keep themselves above water. They had also heard the objection stated by Mr. Harvey, that the Scotch, especially the farmers, were rather backward in taking up any new scheme, in fact thought it too much trouble to combine.

The CHAIRMAN: I did not say too much trouble.

The Hon. Mr. STRUTT: That is my inference from what you said. The farmers must take the trouble in these days of greatly increased cost of production, compared with the price of the produce. There is great pressure from below by the movements of the labourers, and unless the farmers bestir themselves they cannot keep the equilibrium. It might be said they could press on the landlords. Well, that cannot be done just now, because the landlord has got his lease to protect him. The farmers must really see to their own interests.

Mr. DOUGLAS (Athelstaneford) thought the subject of co-operation might be the means of saving the farmers some

money, provided it could be properly worked. In East Lothian, he said, the farmers laid out a great deal of money on artificial manures, which they could not do without, because the home-made manure formed such a small bulk that they must make it up with artificial stuffs, and it was important that they should get a genuine material at a fair market price. It was most essential that these manures should be analysed, so that the farmers might know what they were buying, but he had been informed that if they subjected a certain manure to three or four different chemists, they were likely to find a great variation in the analyses. If that was so it was apt to lessen their confidence in chemistry. At the same time, chemistry was a well-accredited science, and with a painstaking man something like a correct opinion might be formed of the true value of the article. He did not like to speak rashly, but he was much afraid that they were spending a deal of money for insufficient value. He mentioned the case of a field of his own. In a large field of 50 acres growing swedes he had 4 acres in the centre, which got a mixture of artificial manures of an equal money value to that bestowed on the remainder of the field. Well, that small spot of four acres grew no better crop than though no manure at all had been applied; and it was noticeably deficient, not only in that, but in successive crops. He spoke to the party who supplied the manure, and he got out of the matter by saying: "That was strange, for So-and-so used the same material with the best results." There was no question that that manure was a bad one, and occasioned him a good deal of loss. If the farmers were to co-operate, they could buy at first hand; but they would be liable to bad debts, and still be subject to be imposed upon, although they bought wholesale, unless they had a competent chemist to guide them. He feared that the farmers would not go heart and hand into the co-operative principle; and in the meantime thought they should protect themselves by having the manure tested by a man in whom they had thorough confidence. While he did not object to co-operation, he thought it would take so much machinery and supervision to manage such a system that it would be more suitable for a company than a body of farmers to go into it. When so much was required in the way of artificials, something should be done to enable the farmers to get value for their money.

Mr. DURIE (Barney Mains) said the principle of co-operation would be beneficial if they could only get farmers to combine. But a difficulty arose in so far as many of the manure agents and middle-men were retired farmers, and if this occupation was gone what would become of those men? They would fall on the poor roll. A nobleman once asked him what became of all the retired farmers, for his lordship could never see any of them? He (Mr. D.) replied that they sold manures, and sometimes finished up by selling cart grease. After the collapse of the Farmers' Association for the sale of manures, recently formed in Edinburgh, he had no hope of anything of the kind succeeding. In the Haddington market there were often more manure and seed agents than farmers. If it paid these men to go about in that way the farmers might have some idea how much above the actual value of the stuffs they were charged before such expensive machinery could be supported. The best thing to do he thought was for a few farmers, or say that Club, to unite among themselves and through a secretary get some thirty or forty tons of a certain manure among them direct from the manufacturers, on a guaranteed analysis.

Mr. ROBERTSON (Newmains) said there was no denying that they had great reason for combining in order to protect themselves; but so far as his experience had gone, he must say this, that he had found no task more difficult than the attempt to get farmers to combine together. They might almost as soon think to wash a black man white as expect to get farmers to unite. If they could combine to get the feeding stuffs and manures analysed more than they did just now they would help one another a great way, and the best combination was for a few to join together and get the articles from the wholesale dealers.

Mr. SHIRREEF (Saltcoats) said that manures, in going from

hand to hand, did not improve in quality, and the times were such that the farmers must protect themselves. Rents were high, and there was much money spent in inferior manures which ought not to be, and could ill be afforded. He hoped that the tendency of this discussion would be to direct more attention to the quality and price of manures and feeding-stuffs, and that it would exercise a beneficial result.

Mr. T. S. MACDONALD (Craigielaw) factor for Lord Wemyss, said he started a co-operative association in the South of Scotland about sixteen years ago. Knowing the adulterations practised all over the country, from what he saw in Professor Anderson's laboratory, he called the farmers together and showed how they could protect themselves. The plan they adopted was for each farmer to give in a list of the manures he would require for a season, and then they contracted with a manufacturer to supply the articles, which were stipulated to contain a certain percentage of phosphates and ammonia. By this system they could save some 20s. to 30s. per ton, besides secure genuine articles. The society was still in existence,

but the manure agents had encroached considerably on its rank latterly. By dealing with all the agents in the country the farmers would get a great deal of rubbish.

The CHAIRMAN said the discussion had been an interesting one, and they had landed just about where they commenced. A great deal had been said about getting a proper and trustworthy analysis of the artificial stuffs. That was very desirable. He remembered once visiting at a farm not one hundred miles from Haddington, when the farmer said, "I don't know what is the matter with the cake," pointing to a certain sample, "the sheep are not eating it." He advised the farmer to send the cake to Dr. Anderson for analysis, which was done. It cost £10 a ton, and the report of Dr. Anderson was that it was not worth £5 a ton, and was perhaps dangerous to give to sheep. There was a great deal of wild mustard in it. Well, that cake was never paid for, excepting one ton. The farmers would never be right unless they had a chemist in whom they could place thorough confidence.

THE GALA WATER FARMERS' CLUB. ON THE CONTINENT.

At the quarterly meeting in the Town Hall, Stow, Mr. Frier, of Cathpair, in the chair—

Mr. THOMAS SWAN, Edinburgh, read a paper on "Impressions from a Seven Days' Trip on the Continent." A difference in the temperature is perceptibly felt immediately on landing in France, the atmosphere being pure and mild. On to Lille the land is rich, deep soil, well-farmed, but entirely in strips or patches, many different crops being grown in one field. The country, however, is void of fences, excepting wide and deep ditches or canals, upon which traffic is carried in small scows or cobbles; these traverse the entire country. Towards Blaindeau the crops are in larger patches, and look well, though beginning to suffer from want of rain. Here the entire passengers alight, and the luggage (except such as is booked through) subjected to a slight and polite examination as entering Belgium. Here, as in France, the railway-porters use a horn for instructing the driver—one, two, or three blasts indicating the signal, which possesses greater advantages than the silent system prevalent here, so frequently misunderstood or disregarded. Passing on to Brussels, which we simply skirt, sufficient is seen in the distance to assure us of its natural beauty of situation, while its environs through which we travel are particularly pretty; and here, as in France, and indeed throughout the Continent, special care seems to be bestowed on the trees, nearly every main road being availed by rows of poplars, affording shelter against the weather in all seasons. The staple crops appear wheat and rye, besides various descriptions of luxuriant clovers. Neither in France nor Belgium are oats or barley grown to any extent, while the red land we took to be intended at that time for beet or turnips. Reaching Liège at gloaming, we can only trace its importance by the glare from the numerous furnaces and works in full blast. Thence to Verviers, where a comfortable dinner is provided, we reach Cologne at 11.40, or fifteen hours' hard travelling from London. Neither in France nor Belgium, except on some isolated meadows, are many cattle or sheep grazing, the former being principally milk cows. The latter country, so far as we saw, not only seems particularly fine, but also splendidly farmed; the soil deep, and carrying weighty crops of all descriptions. The immense population, and their well-to-do appearance, are also noticeable. Two, and sometimes four, horses, are employed in the drays and carts, which are principally four-wheeled, while dogs are likewise used in barrows or light hurleys. Comfortably housed at the Hotel du Nord, we, before breakfast, visited the celebrated Cathedral of Cologne, upon which a large number of workmen have for years been engaged in restoring. This, excepting St. Peter's at Rome, is the largest in Europe, and is a magnificent building. After a slight survey of the town—which is the reverse of prepossessing, and where the English-speaking traveller is waylaid by touts, who volunteer their services as guides over the cathedral, or to show him the *bona fide* establishment at which to obtain eau de Cologne (a reply in German was quite sufficient to show them we were not in want of their services)

breakfasted, at which a couple of our friends thoroughly enjoyed a salmon steak. The sight of such a well-known dish in the bill of fare at once attracted their attention, for which the modest sum of 2s. was debited us. The waiter smilingly assured us it was "Rhine salmon;" and yet, though it was pronounced excellent, it was barely considered value for the money, being at least 30s. per lb. Leaving Cologne at 9.40 a.m., and crossing the magnificent bridge which here spans the Rhine into Westphalia—the land in which province seems lighter and scarcely so well farmed as that hitherto passed, but barley is more plentifully grown—proceeding north, pass Dusseldorf, an important town, we come into a wide mineral district, some of the stations being crowded by well-dressed workpeople, it being evidently a holiday. 90 per cent. of the men were smoking, with pipes of all sizes and shapes, and so far as we noticed in our travels only one man appeared to be under the influence of drink. As we get north towards Hanover, the scenery partakes more of the English character, fences dividing the fields, while cattle are more generally grazed and better bred than those we have yet seen. By a long ascent we reach Bielefeld, situated on a ridge of hills, and the seat of great linen manufactories—surprise being expressed by the natives that its importance in this respect had never been heard of by us. Descending the hill, the view from the train being extensive, we reach Minden, a strongly-fortified town, the platform of which is crowded with officers, whose *physique* and soldier-like appearance contrasted favourably with those of France or Belgium. Lunched here, and the loquacious waiter endeavoured to teach us a lesson in finance by modestly retaining something like 1s. 5d. out of the change; eventually, on checking it, we found even then he had a balance in his favour. The revenue of this class must be greatly increased by the opportunity afforded them by English travellers, ignorant alike of the language and currency, and they seem perfectly able and willing to take advantage of it. The land here seems in fewer hands; fields and crops in much larger acreage; while sheep, in flocks of 200 to 500, and cattle in lots of 50 to 100, are grazing; and batches of 20 to 40 outworkers occasionally observed at work on the drilled crops. Dined at Hanover, where the changes were again attempted to be rung on us—this time ineffectually. We got into a great stretch or poor land, a large proportion of which is valueless; in fact, all the way to Hamburg the country is tame and uninteresting. Twelve hours from Cologne we cross the Elbe by two splendid bridges, and reach Hamburg—the scene caused by the rush for luggage, cabs, and the shouting in all languages, being astonishing. In Hamburg, we spent Sunday visiting the principal parts of this fine city. Sailed up the Alster, dining at Uhlenhost, where a splendid band added to the beauty of the situation, and, Sunday though it was, contributed much to our enjoyment; left Hamburg at 9.30 p.m., through Holstein, for Kiel. A rush for berths, which, close and uncomfortable, we gladly relinquished for the more airy cabin. Crossing the

belts, we reach Korsø, in Zealand, and here a totally different system of stock-feeding is observable; the cattle and sheep being all tethered, principally in uniform lines extending parallel along the fields, those fattening having the front line, and shifting gradually forward to be supplemented by those in the second stage. In Zealand and Funen sometimes 100 to 150 dairy cows are seen thus tethered, explaining the capabilities of the country so far as the production of butter is concerned. Reaching Copenhagen at eleven, and fulfilling some engagements there, we take the steamer for Aarhuus at 6 p.m., which is crowded by people proceeding to the show; the captain, however, kindly placed his state room at our disposal. After ten hours' run up the Sound and across the Cattegat, we arrive at 4 a.m., accommodation being provided, and instructions that the judges were to meet at 8 a.m. in the committee rooms, into which the Cavalry Riding School had been transferred. Here the directors, committee, judges, and attending members were allocated to their respective posts, each section containing an English judge. The stock is completely catalogued, and the classes are distinguished by letters, not by numbers, as in this country. The arrangements were most complete, one side of the yard being allotted to the native, the other to the cross or mixed breeds, and include single animals as well as classes for lots. The only, to me, defective part of the arrangements being that in the latter classes, which contained from two to six animals, you were asked to judge them as a lot, and frequently a larger lot, which contained better animals individually than the smaller, was thrown from the average not being so good. It was proposed that we should base our decisions according to points of merit—the greatest number of points taking the prizes. I observe a similar mode of judging breeding animals was recently inaugurated by Lord Kinnaird at the Kinross show; but in the judging of fat cattle we speedily discovered this system unworkable. After awarding the society's prizes, those donors of special prizes who were judges retired, finding a substitute to act for them—mine being Mr. Elliott of Hollanbush. The awards being finished, the whole engaged breakfasted together, one or two toasts of a national character were given. The rest of the day is devoted to the inspection of the stock, and while the native breeds are not open to much, if any improvement, I was greatly struck by the immense strides the production of Shorthorns has wrought since (in 1866) I last visited Jutland. The Jutland cattle are famous dairy stock, and when well-fed are really good cattle. Though somewhat light of flesh, they have the objection that as a rule they cannot be made prime before four or five years old. The average value of the whole of this class I took to be about £26 each. In our annual reports to the Danish Government for the last few years, we have advocated the benefits to their native breeds the introduction of Shorthorn blood would effect; and though in many cases a prejudice existed in favour of maintaining their present breed intact, they not unreasonably believe that by producing meat they might sacrifice the milking properties of their native cows; and butter is an immense source of income there. During the show there were various discussions on the subject, while those who advocated it had a powerful help in the great superiority shown by the crossed over the native breeds, and the advantage of such crossing is now generally admitted. The best animal in the yard was pronounced a first cross; while two other animals, a first and second cross, sold at £130. About 60 of those shown possessed merit of no mean degree. A dinner—still confined to those engaged during the day—was given by the Committee, at which about eighty, sat down. The speeches were not of a national character, being mostly confined to subjects connected with the meeting, and, as is customary in Denmark, were delivered during the dinner. The evening was occupied by a trip to the forest, where the utmost cordiality was shown to the visitors from this country. Wednesday, at eleven, the prizes were awarded—a procession headed by a capital band, which played during the show, marching from the committee-room to the further end of the yard, where a platform was erected, each successful competitor coming up in front of his cattle which took the prizes, and passing aside after receiving them. After this there was a sale of imported Shorthorns, the property of Mr. Trolldahl, most of which were sent from the Southern Central Sale in May. These were eagerly competed for, and made high prices. At four o'clock a general dinner took place, at which about 350 of the leading landowners, farmers, and others

interested were present. The gist of the speeches related to the introduction of any systems likely to improve their country, and throughout one could not help observing the intense nationality of the Danes. This over about eight o'clock, and as if to give a practical finish to the show, the stock was removed and shipped to London, Newcastle, and Leith, in steamers waiting specially for the purpose. Other engagements unfortunately prevented our accepting an invitation to inspect the model farms of Consul-General Pontoppidau, where a large party met. We left Aarhuus about 11 p.m. on the Wednesday evening, via Fredericia and Nyborg, through Funen, admirably farmed, and aptly termed the Garden of Denmark; crossed the Great Belt to Korsø, reaching Copenhagen in time to see the cattle market. The stocks here at this season were principally rough-class cattle, the quotations being guided by the state of the English markets. The pigs shown were generally first-class. Spent Thursday pleasantly in Copenhagen, which, like Edinburgh, is intersected by tramways; but here the authorities have paid some respect to the amenity of the streets—the cars, where practicable, being run on the side of the roadway, and not on the centre of the streets as here. Visited Tivoli, and had an insight into the social enjoyments of the people. Went on Friday to Mr. Petersen's farm, near Copenhagen, which, as criticised by my friends, was well farmed, and worked by the best English implements. Left Denmark by the Iceland, from Copenhagen at 6 p.m., greatly pleased with our visit, and the kindness and hospitality everywhere extended us. With a three days' voyage, a good ship, and a most intelligent and obliging captain, the time at our disposal on board permitted us to reflect on what we had seen since leaving Scotland. It is impossible but to observe the application brought to bear by the foreigners on everything they undertake. Leaving Glasgow, as I did, on my way south, and passing through the great mineral districts of Scotland, the resources of our country neglected, the bulk of the furnaces out of blast, the men on strike, and many of them, notwithstanding their recent unexampled earnings, in misery, and passing through Belgium and Germany, hitherto only recently recognised as competing mineral-producing countries, everything here contrasted strangely favourable—the men everywhere employed, the country reflecting prosperity. In their futile endeavours to dictate to capital, and ignoring altogether the laws of supply and demand, by which unobtainably their remuneration must be regulated, the miners here, listening to the advice of their so-called delegates, have succeeded in driving their trade out of this country; and judging from the capabilities of the Continent, and the less cost of labour there, they seem willing and able to keep it. Now, gentlemen, I am aware that the subject of the introduction of foreign stock is not altogether a palatable one, more especially at such a meeting as this, as I believe that three-fourths of the farmers and landowners of this country would have all foreign stock slaughtered at the post of debarkation. In this I quietly concur, so far as those countries are concerned, which permit stock from the land-board of the Continent to enter. These are at present rightly classed as infected countries, and their exports compulsorily slaughtered here. But, gentlemen, you are all aware that your profits from cattle-feeding are, after deducting your artificial food accounts, frequently only nominal. The reason of this is, of course, the cost at which you have to buy stores, while your capabilities for fattening or wintering cattle are increasing. The area for breeding cattle is surely diminishing; the rapid strides in the science of agriculture are gradually penetrating into those high grass districts from which you used to derive supplies of cattle. Those now partly under tillage indirectly imply the production of meat; hence the at present irreconcilable relative values between lean and fat cattle. In the system now progressing in the wide cattle-producing district of Jutland, I can see shortly you may be able to calculate on an influx of really first-class cattle, and I venture to express the opinion that sooner or later you will gladly welcome these as a desirable adjunct to the cattle-feeding supply of this country. This I the more readily advocate, seeing that those native breeds which have been recently sold in this country have invariably left a more than comparative profit; but as the foreigners with shorthorns, your scruples in this respect will yet have to be overcome. On Monday at eleven o'clock the Cheviot Hills were sighted. Passing up the borders of East Lothian, looking its best, we reached Leith at three o'clock, inwardly feeling that after our progress up the Firth

and meeting our friends on arrival, that "there is no place like home."

Mr. SNOW, in proposing a vote of thanks to Mr. Swan for his paper (which was cordially responded to), remarked he had no doubt that by-and-by in crossing the Jutland cows with good Shorthorn bulls they might get a good class of cattle. However, this had taken a longer time than he anticipated, because it was many years since they began to introduce the Shorthorns amongst these foreign cattle; and he did not recollect of ever having seen a lot of anything like well-storing cattle of this kind. Most of them that came over to this country had been called *nondescripts*, having no great features about them.

Mr. SWAN thanked the members for their acceptance of his paper, and observed that he was quite prepared to hear from his friend, Mr. Snow, in regard to these Jutland cattle, that at present they were not valuable as stores, because anyone conversant with the different breeds of cattle would know that until they were improved they were not desirable for storing; but in the observations which he had made in his paper, he referred to the class of cattle they were likely to get by crossing. As an instance of the progress being made in that direction, he might say their firm (the Messrs. Swans) sent over to Jutland about fifty Shorthorn cattle this year, and the prospects of further importation showed that it was likely to be very much greater next year. He was sure it was perfectly apparent to every farmer in this country that it was impossible that they could produce meat to supply the increasing demands of the population, and one of the best things they could do was to encourage importation from countries where they could get lean cattle to reduce the value of the lean cattle in this country. In the foreign country referred to they could not feed one-third of the cattle they bought, and the best of their Shorthorn cattle were being sent to Hamburg to feed when they should be more likely to come here.

The CHAIRMAN said he had occasion to feed these Jutland cattle and they always paid him well. Of course, for their age they do not grow fast, but the best of them when they got fat were most valuable animals. They were something like our West Highland cattle.

AN ELOQUENT SECRETARY.—At the meeting of the Felton Agricultural Society last week a testimonial was presented to Mr. Robert Donkin of Felton, who from the first has acted as the secretary of the Society, was one of its principal promoters, and has been chiefly instrumental in bringing it to its present position. The testimonial consisted of a handsome service of silver plate. Mr. Robert Donkin, in acknowledgment, said: When he looked upon it, he could not but solemnly ask himself, "What is it I have done to have called forth such a solid testimony of public appreciation?" In all his relations through life—and these have not been a few—he had invariably found that the most safe and sure way to arrive at either popularity or success, was to study intimately all the varied phases of human nature, which in no instance would be found perfect, although all were of one flesh and one blood. He thought all would admit that dispositions would be found at times to vary as widely as the poles are asunder. Yet he might be pardoned for saying that without deviating in the least from the path of common courtesy and honour, there was, in his opinion, a conciliatory roadway, which would lead anyone successfully forward, notwithstanding any unforeseen obstacles which might arise as a huge barrier against a more smooth or honourable passage through life. It was now over forty-three years since he first saw the light of day in that immediate locality; and during thirty-five years of that period he had a vivid recollection of nearly all that happened around him.

When memory looks back o'er her record of years,
Ere reason and feeling decay,
Ere the footsteps we leave in this valley of tears
Are swept by oblivion away.

If he looked through the vista of time, what was it that he beheld? Pleasing recollections, dark and melancholy reflections, flitted across his mind. Old associations clung with fervour round his heart; but, that day, he hailed with joyous pleasure the friendship of his boyhood's youth gathered round him, while he wandered beyond the meridian of his manhood's stage. There were those amongst them who knew him then; and while others, dear unto him through years of unbroken

friendship, and who were closely associated with him in the formation of that society, had been gathered unto their fathers, yet the memory of their worth was as dear unto him now as was the value of the friendship of those now living, and who that day did him such splendid, but such undeserved honour. It had been said that

There is a tide in the affairs of men,
Which, taken at the flood, leads on to fortune.

Should he in that day's proceeding, discover any symptom of an evanescent flow of that tide towards him, let him trust while he pursued the "even tenour of his way" he would studiously avoid plunging an indiscreet foot within its waters whereby might be created an envious surge which in its briny bosom might swallow him. Let him hope that he would ever be found grateful for that overwhelming proof of their good will; and while he lived that day's proceeding should remain indelibly engraved upon his heart. Whatever might be his future, their generous kindness would never be forgotten. He was conscious beyond all doubt that he was far from being worthy of the magnificent honour they had bestowed upon him; yet whatever might be the error of his ways, let him trust that they would always find in him a sufficient amount of gratitude to well and truly appreciate the high honour they had bestowed upon him. He asked them to accept his sincere thanks for that costly expression of their regard. Might they long live to enjoy all the blessings of this life; might that bond of friendship which that day existed betwixt them and himself, and which they had sealed with that magnificent impress of their good will, never be ruthlessly rent asunder. He hoped and trusted that when he was warned he must quit this stage of mortal strife, he might be enabled honourably to discharge all those obligations which he might owe to society, and to gracefully fold his humble robes around him; and that, finally, before bidding adieu to this world, he might be permitted to cut that splendid testimony equally in twain—to hand it to his children who were as dear unto him as his own existence, and that while they lived, however humble might be their position in this life, while they looked upon that testimonial they might learn through it that the good opinion of the world alone was a brighter inheritance than any sullied reputation resting upon a pedestal of gold.

THE VICTORY OF THE EMPLOYER.—Translated into technical language, the victory of the employers means that there was in or near the scene of the struggle an extra supply of labour, or that there was an opportunity of reducing the demand. The farmers had never before desired to conduct their business according to the strict laws of the market, and when they were forced into the struggle they could only ascertain by experiment the existence of a surplus of labour. It may be hoped that their just confidence, both in their own resources and in the justice of their cause, will be rewarded by a period of exemption from external hostility. Many years must elapse before a candidate for a seat in the Eastern Counties will venture to declare himself in favour of an extension of the suffrage to the labourers. Mr. Gladstone and Mr. Trevelyan may be impressed with the anomaly of a difference of political rights depending on the place of residence; and Mr. Disraeli may condescend to profess implicit confidence in a loyal peasantry. The Suffolk farmer will long remember the breach between himself and his men, and their implicit and exclusive confidence in the strangers who denounced the masters as tyrants. Perhaps even sentimental politicians are beginning to learn that Mr. Arch is something short of an inspired prophet or benevolent apostle. Some allowance may be made for an uneducated orator suddenly raised into notoriety, and applauded, as demagogues are always applauded, by mobs in proportion to the extravagance of his statements and proposals; but it must be remembered that an excuse is not a justification. After his recent speeches, Mr. Arch must take rank with the Odgers and the Bradlaughs, who are not the less mischievous disturbers of social order because their violence may sometimes admit of explanation. If the Labourer's Union had succeeded in the Eastern Counties, the economy of agriculture throughout England would have been seriously and perhaps hopelessly deranged. The alleged lowness of wages in Suffolk was, even if it had been truly described, not the real cause of the agitation, for in Lincolnshire, where wages are considerably higher than in Suffolk, a strike was arranged by the Union at the same time. Demagogues will henceforth take notice that farmers, as a class, are not easily frightened or coerced.—*The Saturday Review.*

THE BEDFORDSHIRE PRIZE FARMS.

THE GOLD-MEDAL FARM.

The morning after visiting the first and second Prize Farms, some of our party, with our Captain at the head, took a drive over Mr. Charles Howard's farms. Close to the town of Bedford we came upon the Priory Farm, of ninety acres in extent, which Mr. Howard has had in hand some ten or twelve years—the subsoil of which we thought was good loam—consequently the season had not affected it so much, although some burnt patches appeared, which we were told had never been seen before on that field in the memory of a man. The first field we entered was Browick wheat, a kind which Mr. Howard has cultivated for many years, a large growth of which is sold by him rather above market price during seed-time. The next field was in roots—mangolds and swedes—late but very clean. Then we drove a couple of miles away to Biddenham, Mr. Howard's residence—not just now, by-the-bye, as the house is under thorough repair, and likely to be so for some time to come. Our criticising Captain finds a few faults inside the house, with which some of us agree; but the majority of us think we should like a dwelling as good as the Manor House promises to be. Having disposed of the house, we look through the homestead, which is nearly new, having been built after a fire a few years since. The arrangements on the whole are good, not exactly agreeing with all our views. We see two or three young Gwynnes, probably a foundation for another herd; it may be to beat the respectable average of seventy guineas a-piece made at Mr. Howard's Shorthorn sale some two or three years since. Leaving the premises, we meet two Frenchmen; but can we look and nod; though they are evidently pleased with our remarks, which can only be made by signs. Driving through the farm on a well-kept road, we notice first the crops, which are suffering from the continued drought; wheat and barley short in straw, and we fear the quality will not be very good. Mangolds show a good plant, rather late—very clean and looking healthy. At the far end of the farm we find the flock of 250 Oxford Down ewes, looking very well, though our guide tells us—“Been very short of keep.” In an adjoining close we see the ewe lambs, not looking so well or so big as they ought to do; while on our way back we see some ordinary keeping sheep, of which our sharp Captain says—“Not good enough for this farm; don't ought to be here.” We then review the ram lambs, looking very healthy, though we think hardly big enough. Our guide still tells us, “short of keep” is the reason. Something over sixty shearing rams next present themselves, which we all think show remarkably well, and bid fair to make a good average at the annual sale. The size of this farm is about 300 acres, mostly of a light gravelly soil, which this season has been affected considerably. Mr. Howard cultivates cabbage largely, without which we question very much if the shearing rams would have the “bloom” on them. Another drive, still of two miles more, takes us to the Bromham farm, which Mr. Howard has had in hand but four years, and, as we hear, was farmed by executors for four years before that. There has been a large sum of money spent with considerable judgment and enterprise to bring this farm into its present state in so short a time; about 450 acres in all, rather more arable than pasture land, the latter very good. The first thing we note on this farm is a lot of very well bred Shorthorn grazing cattle, for which our Captain, who knows something about grazing as well as cattle, offers 6s. per stone, a price which some of our party think would bring

them to close upon £30 each. We now come to the arable land, something of an Oxford clay subsoil, which is managed, like the Biddenham farm, on the four-course shift or Norfolk system; wheat and barley looking remarkably well; tare land smashed up by steam-cultivator to be left till after harvest. The best field of mangolds we have seen in Bedfordshire. On another grass field were some twenty-five good Shorthorn beasts grazing—making forty, worth from £25 to £30 a-piece. Getting on to Bromham Park another flock of Oxford Downs is seen, of not quite so long a pedigree as the Biddenham ewes, but very useful in their way; then come some more Shorthorns, and a lot of Welsh Runts, thirty or forty of them, worth hard upon £20 a-piece; with another score of younger animals, and calves, making altogether about 100, which we think, with the corn crops, bid fair to produce a large amount of food for the public. Wishing to have another look at the Royal show we make our visit to the Medal Farm rather short, but well pleased and satisfied with what we had seen. Mr. Howard farms altogether 850 acres—at the “Priory,” 90; at Biddenham 310, two miles apart; and at Bromham 450, again two miles further on; so that his business requires more judgment and thought than if it was all one farm; and he is not under the Duke of Bedford.

By-the-bye, “the broken-backed haystack,” on Mr. Checkley's first-prize farm at Brogborough, did take fire, as we had expected, and came to utter grief on Sunday week, fortunately without causing any further damage. The judges, however, should surely make one more call in order to enable them to duly report on this “blaze of triumph.”

THE HOP AND MALT EXCHANGE. — Under an Order in Chancery, in the case of “Grundy v. the Hop and Malt Exchange and Warehouse Company (Limited),” the extensive premises known as the Hop and Malt Exchange, in Southwark, were submitted to public auction, in one lot, by Messrs. Marsh, Yetts, and Milner, at the Mart, Tokenhouse-yard. The buildings occupy a ground area of 26,000 feet, the elevation being 95 feet, and the street frontage 350 feet, the total floor area being 221,169 feet. The premises were mortgaged for £50,000, and the equity of redemption sold yesterday reached £27,800. The value of the property as realised by the sale, therefore, was £77,800. The original cost of the ground on which the buildings stand was £60,000, and the erection of the premises cost £75,000, so that the price given for the whole yesterday was but little more than the original cost of the building alone, or about £3 per foot for the ground, including the premises erected upon it.

THE BEDFORD SHOW.—In his notices of the implement and other stands our representative for that department omitted to make any mention of that of Down's and Co., of Woburn, so well known for their true FARMERS' FRIEND, a dressing which prevents the smut in wheat and stays the attacks of the slug, grub and wireworm. Our reporter had certainly instructions to pass over exhibitions of a not strictly agricultural character, whereas the labours of Messrs. Downs tend to a strictly agricultural good.

THE PAST SHOW WEEK.—Mr. Marris took the second prize for aged Leicester rams at Grantham, and not Mr. Borton, as published in the prize list. At the East of England horse show Messrs. Phillips, Smith and Co.'s pony in addition to a high commendation took, as we are advised, a cup and medal for “speed action and high condition.” This last point of merit is something of a novelty.

MAIDSTONE FARMERS' CLUB.

HORSE *vs* STEAM POWER.

At a recent meeting Mr. B. S. Wilmot, of Goudhurst, spoke to this subject, Mr. T. B. Lovett presided, and Mr. J. Paine occupied the vice-chair.

Mr. WILMOT said that when he was first invited to read a paper to the members of the Club he hesitated for two reasons; first, because he remembered that they had already discussed most of the principal subjects connected with agriculture during the time he had known the Club; and, secondly, because he was mainly and almost entirely a book farmer, not having been born a farmer, and having taken to it somewhat late in life—learning all he knew by copying others and by reading. They might, therefore, feel sure that he hesitated to read a paper to the Club relating to agriculture, yet he could not help thinking that if he could help to raise a discussion for the purpose of bringing about any good to others and himself, it was his duty to do so. Among the questions connected with agriculture he had tried to find that which was most prominent, and one of the most difficult matters with which the farmer had to deal; he also tried to fix upon a subject upon which he knew there was a great difference of opinion, and he hoped that he should hear a good discussion upon the paper he had written. Mr. Wilmot then read the following address: The subject before us is one of deep interest and importance—both to the public at large and to those individuals who are more immediately concerned in it. During the past few years English purchasers of horses have had painful experience of their increased dearth; and this is notably the case with regard to horses employed in agriculture. The great increase in the cost of these animals does not arise from any growth of English demand, and the prevailing scarcity does not, I think, arise from any deficiency of supply. No proof exists that fewer horses are now annually produced in England than in former years. On the contrary, high prices have probably stimulated increased production, and the real cause of the present scarcity in England seems more to be found in the drain which has been made upon it by foreigners. According to the last Board of Trade return we exported 60 per cent. more horses in January and February of this year than during the same months in 1873. The late war had a great deal to do with this, for we find that France took 40 per cent. of these exportations, and the present deficiency of horses in France is estimated at not less than 180,000. In the present state of the animal labour market, therefore, any plan or power that can be substituted for animal labour—doing the work equally well and at less cost—must secure close attention. The spread of education likewise powerfully induces this attention; for as every year advances greater difficulty will of necessity be found in obtaining men to look after horses as well as boys to help them. New and more attractive sources of occupation will gradually open themselves to these classes. The development of education is a powerful item in the subject before us, as is signally shown in the Western hemisphere, America having done all she can to promote the use of every kind of machinery, and thus not only to lessen animal labour, but to make labour in general less burdensome and more agreeable and intellectual; and a great authority upon agriculture has said, "Never have a man to do what a horse can do, and never have a horse to do what a steam engine ought to do." How far, then, can we in this country substitute steam power for our present system, and upon what principles? There are very many ways in which the substitution can be employed with great benefit to the agriculturists in particular, and the country in general. It may be applied, as it is now almost universally, to thrashing. It may almost be applied to ploughing, as to some considerable extent has been the case already; and the various other departments of farm work may, and doubtless will, as times goes on and ingenuity is exercised, be brought in some measure within its scope. I believe, for instance, that the time is fast approaching when every large farm will have its steam engine, and horse labour will, instead of being the great power for carrying on a farm, be looked upon as the mere auxiliary to steam power, just as it now is to our great railway system. Animal labour now

feeds our railways and thus helps the great trade in which the country is engaged. How vast and incalculable are the benefits our railways have brought to agriculture! Not only have they made the carriage of the produce of the land more easy, but they have afforded to the tillers of the soil easier access to all parts of the kingdom, and thus enabled them to compare notes and do business with their neighbours in districts and counties which were formerly unapproachable. And so we may look forward to some great improvement in our railway system, we may confidently consider that agriculture has not yet received half the benefits it will be sure to reach under a more advanced and thoughtful management. There are, no doubt, many ways in which steam power would greatly benefit agriculture that have not yet received any attention whatever, while other improvements are in their infancy. Take, for instance, our traction engines. At present they are unsightly and very costly, and in many cases are so difficult to manage with our present roads that to use them generally is only to cause trouble and inconvenience. But I feel sure that the day will come when they will be of great service to this country, and to agriculture in particular, and will help to lessen the demand for heavy draught horses. I hope we shall likewise see some local lines of rail laid down on the tramway plan, connecting our villages and towns more closely together, only worked by steam instead of horse power. These lines might be used for the conveyance of goods as well as passengers—feeding our railways and make our produce in distant parts more valuable. I have this long time thought that a line of railway might be made by the side of our present roads at less than a tenth of the cost of making our present lines. It is true that they might not be able to travel quite so fast, but this would perhaps be better for both passengers and those concerned in the undertaking than our present reckless travelling. We should not want the unsightly engines now used, but something neat and compact. This would, I think, benefit all classes, and I should very much like to see the Government take our present railways in their hands, in the same way that they have taken the telegraph department, and follow up the wires which now go to almost every village in Kent by a serviceable line of railway. I believe in the end it would pay, because the more you facilitate the command of any nation, the greater will that nation become. In the same way in proportion as you make travelling easy-giving opportunities for exchange of thought and opinion—will you make the people prosperous and happy. Not only do different systems prevail in different counties, but in different provinces of the same county—in some cases their existence has been caused by a peculiarity of soil or climate, while in others they have arisen out of local habits, or they spring from improvements not generally known, and even in the rudest districts there may be some which merit imitation. Now it is quite evident both that some of those systems must be preferable to others, and that no man can determine which is best without being acquainted with all, nor can any farmer be said to be completely master of his business, until he has attained that knowledge. It is not sufficient that he already gets what he considers a fair return for his money and industry, if by other modes of culture he could obtain more; and if he neglects them, he injures himself, his family, and the public. In no country has husbandry been carried to higher perfection than in England, yet, even in our own land practices exist in some counties that are either wholly unknown or only imperfectly understood in others, and it is only by comparing them that their relative usefulness can be ascertained. Farmers being necessarily much confined to their own district by the care which their business demands can rarely under our present railway system inspect many of the improvements now going on in farming. The subject which I have brought before you this evening is, I feel sure, of great importance to the whole of the community, and there can be no doubt whatever but that it is the duty of everyone to try and substitute steam for horse power, when it can be profitably employed. The farmer has many expenses which greatly interfere with his profits, and I think I am right in saying that the following

quaint old doggerel lines, written in the early part of the reign of Queen Elizabeth, still hold good :

One part cast for the rent due out of hand,
 One other part for seed to sow thy land;
 One other part leave parson for his tith,
 Another part for harvest, sickle, syth;
 One part for ploughwrite, cartwrite, knacker and smith,
 One part to uphold thy teams that draw therewith;
 Another part for servants and workman's wages laid,
 One part, likewise, for fillbellie daie by daie,
 One part thy wife for needful things doth crave,
 Thyself and thy child the last part would have.

There is no question that it is the many calls which farmers have that prevent them buying many machines which they otherwise would have, with larger profits and more capital. Yet I think some plan of co-operation might be more generally adopted amongst farmers, so that they might buy machines which are now beyond the reach of many to purchase, either from want of capital, or because they have not sufficient land to warrant such a large sum being expended. I have referred to steam thrashing, and have said that it is almost universal. It is, and few, if any would care to go back to the thrashing floor. The cutting of chaff also, and the cooking of all kinds of food; the steaming of food before it is given to animals, the pumping of sewage upon land, are all of them good and useful ways in which steam power may be substituted for horse power, with profit to the farmer. In no way do I look for so much benefit as I do in the application of the steam plough, but the day, perhaps, is far distant when we may look for the universal use of the steam plough, because some farms and fields, and those of Kent in particular, are small and unsuited at present for its effective working, but the time is fast approaching, I think, when agriculturists will be fully alive to the importance its use. I know a gentleman who bought a steam plough and cultivating apparatus some few years since. It was one of Fowler's, and in a conversation I had with him some short time, he said to me, "I cannot speak too highly of the benefit of steam power. I am able to plough six acres per day, thus doing the work of six teams at a cost of about 9s. per acre. I have the advantage of being able to do it at any time and at any reasonable depth. My land before cost me about 20s. per acre for ploughing. It now costs me 9s., and then there are other great benefits arising from the system which must not be overlooked. The land can be worked at any time without fear of injury?" This is a most important matter, for in wet seasons, as we know, the treading of the soil with horses does a vast amount of injury. It is supposed that in ploughing an acre there are about a million steps taken in ploughing the land with an ordinary four-horse team. In the working and preparing of the seed-bed, moreover, there is not nearly so much labour required after the steam plough as after the ordinary horse plough, and there can be no question that the digging apparatus must do a great deal of good upon many lands. This, through cultivation and disintegration of the soil, is of the greatest consequence, for it is thus prepared for those chemical changes which are so necessary for the full development of seed. It is generally admitted that this is as good at least as a coat of manure. I have not yet touched upon the depths to which ploughing ought to be carried, nor is it needful to say much regarding it, for this, of course, depends more upon the nature of the land, and the judgment of the farmer, than upon any general rule. The usual depth of horse ploughing is from four to six inches; that of steam ploughing, from six to twelve inches. A notion is held that where deep cultivation is adopted more manure is necessary. It will be readily admitted that if this idea were well founded it would form a strong argument in favour of moderate depths. It is, however, only justly applicable to land of which the subsoil is of inferior character, for when the upper and lower strata are of the same quality not only can no injury arise from gradually incorporating the two, but benefit must be derived by all plants which penetrate far into the ground. Poor soils, perhaps, should not be ploughed deep for the reason that the vegetative mould with which the surface of land of that description is covered having been formed by the decomposition of the scanty herbage which grew upon it when in a state of nature, is proportionally thin, and the subsoil on which it reposes consists generally of sterile materials. It would be bad policy, therefore, at all events for some time, to mix them. Many instances, however, have been recorded, I believe, in which the subsoil when brought up to the

surface and exposed for some time has proved extremely fertile, but in all those cases the earth, when chemically analysed, has been found to contain a considerable portion of carbon; and unless afterwards sustained by a proportionate quantity of manure, its good qualities have been speedily exhausted. There are many here, perhaps, who will not fully agree with those views of mine either upon steam ploughing or deep cultivation, and I hope we shall hear the result of the practical experience of the members of this Club in the discussion which will follow this paper. There seems to be one thing which we ought to know as well as we can, viz., what return may be expected from land the subsoil of which has not yet been submitted to the plough, and what change will be occasioned by the admixture of the subsoil with the surface. In my own opinion, large operations of the nature of which I have been speaking, and which are intended to effect a permanent improvement in the soil, cannot be considered as coming within the scope of common farming, and can only be undertaken by the owner of the land, or on terms which will secure the tenant in the return of his outlay; for it should be clearly understood that in no case can it be effected without either the assistance of extraneous manure, or by the sacrifice of a portion of that which properly belongs to the usual cultivation of the farm, and might, therefore, probably be more advantageously applied to the support of the soil already under tillage. While then I hail with pleasure the progress steam ploughing is making in this country, I am not so greatly in favour of deep cultivation as I know many to be, and I know that many Norfolk farmers who have thin and light soil, with poor and barren subsoil, argue that it is easier to keep a small quantity of soil in good condition than a greater quantity which would be formed by deep ploughing. The subject of deep cultivation is a very valuable subject, and should be well considered by all tillers of the soil. In every turn in farming the farmer will find the subject of horse or steam power presents itself. Not only will he be led to believe more firmly in the latter, from the point of having more done for less money, but he will likewise see how much depends upon it for the greatness and good of our country. In every nation the condition of the people depends upon the degree of skilful labour which it can command, and the plough is the prime mover of all, for until a sufficiency of food is produced for the common consumption there can be no prosperity to the country, for it is obvious that in proportion to the perfection of the cultivation will be the result obtained and the spare hands left for the other purposes. The means of support in other branches of industry being needful, the demand for the produce of the land increases along with the increase of labour, and thus industry and wealth keep pace with agriculture, and each stimulating the other, contribute to the national weal and welfare.

The CHAIRMAN remarked that the subject which had been brought before them was a very wide one, and he trusted that each member present would tell his own experience. His own opinion was that they must use steam more than they had done. Why could not they reap and mow by steam? They might depend upon it that the farmers would be driven to use steam more than they had done.

Mr. STONHAM said that unfortunately he could not speak practically about steam ploughing, for he had never had an opportunity of getting a steam plough on his farm. He had, however, some doubt about the correctness of the statement made by Mr. Wilmot's friend as to the cheapness with which steam culture could be accomplished, for he remembered that some years ago when Mr. Aveling, who was the pioneer of steam culture in Kent, was presented with a purse of 100 guineas, he said that three acres could be moved for a guinea. He (Mr. Stonham) gave him a challenge to plough one acre for a guinea, and as no notice was taken of that he afterwards gave him a challenge to plough one hundred acres at the same price, but this challenge had never been acknowledged. He hoped to have a steam plough on his farm next year, but as he had not yet tried one he would not say anything about the treading and stamping of the land which was incidental to horse ploughing. With regard to deep cultivation, he agreed with Mr. Wilmot that it was possible to lay out a lot of money on deep culture, and get no benefit at all. When he and his brother were in partnership his brother had a notion that deep cultivation would effect a great deal, and an experiment was tried upon a piece of soapy chalk or grey chalk. Three horses were sent to plough at a moderate depth, and three were sent with a subsoil plough, moving the subsoil four or five inches deeper than usual. He called his brother's attention to the fact that they

were using a great deal of horse labour for nothing, and said he thought they had better spend money for manure. They cultivated half the field in the manner he described, but the result proved that the application of manures was better than subsoiling for this land. If they could manure highly, cultivate deeply, but if they could not do so, they should content themselves with moderate penetration of the earth.

Mr. HAYES said that if Mr. Wilmot had given them some strong opinions of his own they might have quarrelled with him, but he had expressed what they all hoped—that the day would come when the steam-engine would be at such a price, and in such a form, that they could use it more than they did now. He had used it a little and he liked it very much. But at present they were unwieldy things, and they left great headlands and were dear. He had hired them and had paid £1 an acre and had to find coal; there were other expenses which had made the cost go beyond a quinea per acre. If they could have them made so that a farm of a moderate size could have an engine and tackle of its own he should like it very much indeed. Two years ago he hired from the Staplehurst Company an engine and tackle, and the plough worked to and fro across the field with a windlass on each side. If they got that tackle they could work it themselves. But when he looked at it more he found that it strained an eight-horse engine all to pieces, and it seemed as if it wanted a 16-horse engine. Even then it cost £1 an acre, besides coal; with attendance and all extras it came to another 10s. If they could have steam so that they would find it was as cheap as horse-power—he would not say cheaper—he thought the Weald of Kent men would use it when the weather would allow them to do so. They could not get a steam-engine cheap enough to induce them to use it. It was not used in the Weald of Kent so much as he hoped it would have been. Mr. Wilmot's friend had told him that he could work it at 9s. per acre, whereas the other system cost him £1. He (Mr. Hayes) could not understand Mr. Wilmot's friend's calculations. Mr. Punnett went in very strong for the use of steam, but there were little items which escaped his calculation in the details which he gave them, and when he (Mr. Hayes) calculated the cost it caused him to have nothing to do with it, but to hire occasionally.

Mr. REEVES, in referring to some questions asked respecting the Staplehurst Company, said that during the first year of the existence of the company the steam ploughs worked in the marshes, but last year they did some work for farmers in the neighbourhood, and some good work was performed. The engine was now engaged at Peckham, and therefore the company was still alive, and they were likely to have plenty of work this summer. He believed, that the orders were very heavy, and any one who wanted the engine, &c., must look forward. He had the men to scarify a field of seven acres, and they made a good job of it. They scarified about nine inches deep, and moved some soil which had not been disturbed for he should say 20 years, and at the present moment his wheat was looking very nice in consequence. He was so well satisfied that he should not hesitate to repeat the experiment. One difficulty in the way of steam ploughing becoming general was that the landlords had not cut their timber down sufficiently, and the fields were hardly large enough. The cost of scarifying was 10s. per acre.

Mr. STONHAM remarked that under ordinary circumstances steam cultivation was at present discontinued by the expense of moving the tackle from place to place.

Mr. CURELL said that they had two sets of tackle at work in the place from which he came. They were purchased at the cattle show held a year ago last Christmas. Until the men got used to them there were a few breakages. They were at work all the year round in the hundred of Ho. He had purchased a tackle for ploughing, but he could not say anything about the cost per acre until they got the machine to work. He had been at work two years with the thrashing machinery, and if he could make steam answer for ploughing, he should be happy to perform work in the neighbourhood of Maidstone.

Mr. WATERMAN said that with regard to steam ploughing there were so many difficulties in this part of the country that it would never become generally adopted around Maidstone, their attention being for the most part directed to the growth of hops. Where it could be used, no doubt it would be more frequently carried on than it had been. Mr. Wilmot had stated the cost to be 9s. per acre. He (Mr. Waterman) had

an orchard ploughed up, and he paid 25s. per acre for the engine and tackle, but with extra expenses he calculated that the total cost was near £2. An ordinary piece of ploughing he had done at 20s. per acre, and he did not think they could get a larger piece of land ploughed for less than that. On some land in the neighbourhood of Faversham steam cultivation could be used with advantage, and in Romney Marsh, if they could get the land broken up in time, they could move it in winter to advantage; but anywhere in this district in the Weald of Kent, where the fields were small, and taking into consideration the difficulty of moving the machinery about, he did not think they could beat horses for ploughing. The work which he had done last year, however, was exceedingly well done. In his orchard roots large enough to stop the engine were pulled up, but the tackle was not broken.

Mr. PAINE said that five or six years ago some one called upon him, and he gave him a job. He had a piece of 15 acres, and he wanted it to be ploughed 2 feet deep. The man said he thought he could do it at 18 inches, but he would guarantee that it should be 15 inches deep. The man did the work, but he could not get deeper than 15 inches, and with the coals it cost 36s. per acre. The work was done in a very satisfactory manner, but the results had been poor, and he did not grow better crops. The land was drained 5 feet deep, but he did not find that the water got away quicker. He only ploughed about 40 acres in the Weald of Kent, but he could not see any difference in the crops where the steam ploughing left off and where it began. With regard to the application of manure, he thought that the top of the land was the proper place for manure to be put. He was a deep cultivator, and he was not speaking in opposition to steam ploughing. He had seen work which had been performed in a very satisfactory manner, and he should be glad to see a steam plough in this neighbourhood.

Mr. BRIDGLAND said the object of steam cultivation was to do away with a team of horses. Let them consider the case of a farmer holding 300 acres of arable land; if he had not the proper seed to lay down, would he not grow as much or more upon the 200 acres as he did upon the larger area, leaving the other 100 acres for grazing purposes. After referring to the manner in which a portion of the land belonging to Messrs. Russell, of Horton Kirby, was laid out for grazing, he suggested that the members of the Club should look around and see whether they could not adopt some of these plans. With regard to what had been said about the timber not having been cut down on some of the land in the Weald of Kent, the question might be asked, Was it meant for cultivation? If a man hired a farm with oak trees upon it he ought not to grumble. There was no other county where hops were cultivated to so large an extent as in Kent. He should like to ask whether Kent was rented higher than other counties?

Mr. COLEY approved of a great many of the remarks which had been made, and there was no doubt that they wanted a better method of cultivating the land. At the present time we had to send abroad for productions which our own could and would produce. It was generally said that most questions had two sides, but when bad farming was alluded to the blame was all put upon the landlords. Perhaps they might give better security, but a good farmer would farm well if he were a tenant-at-will. With regard to steam ploughing he was an advocate of it. Half of the land was not producing nearly so much as it ought to do, and if they could make it produce 20 per cent. more would they not save sums which were sent to foreigners? What farm could they go over and see land which could not be made more profitable? If they could see acres, they would find perches and rods which might be made more valuable. Mr. Coley, concluding, expressed his concurrence with the idea expressed by Mr. Bridgland that a farmer using 400 acres, if he were to set aside 300, and to expend the amount on the 300 which he spent on the 400, the farmer would have as much to go to market with from 300 acres as he raised from 400 acres, leaving him 100 acres for other purposes.

Mr. BARLING said he should confine his remarks chiefly to the principle of ploughing. Ploughing was a mechanical action, which was to bring about another action—a chemical action. A remark had been made that evening to which he attached much weight. It was possible to cultivate well without ploughing—that was, that by moving the soil sufficiently they could bring about fertility without ploughing. It was thus brought about. The organic matter within the soil

was capable of being dissolved and brought into a soluble condition if it be sufficiently exposed to the oxygen in the air, but if they kept that organic matter sealed up by earth—it might be kept as many generations as they liked—they would get nothing from it. The more they broke the soil and let in the oxygen of the air, the quicker would the organic matter which they, or perhaps their grandfathers, had placed in the soil, become soluble, and the food of seeds which had been placed in that soil. The question of steam-ploughing as against horse-ploughing seemed to come to this—it did not matter how they ploughed, whether by animal force or the force of machinery. They might plough by turning over the soil or by breaking it up, but whatever they did their object was to let in the air. In advocating deep cultivation, Mr. Barling said that if they broke the soil low down—he did not say turn it over—they altered the condition of that soil; they rendered it warmer, upon the whole. If they laid a thermometer on the land, it would be found that the better and the deeper the soil was broken up the warmer would be the land, and temperature was one of the elements favourable to the life of plants. Mr. Paine had remarked that they could not get rid of water by deep cultivation, but it would be better distributed, and land that had been thoroughly and deeply worked would, generally speaking, be moist, but not surcharged with water. Moisture was one of the elements upon which vegetable life so greatly depends; an excess was, however, harmful, but a certain quantity was needful. The land being warmer and moister, must, upon principle, be greatly improved by deep cultivation.

The CHAIRMAN said he thought that no farmer ought to be without a six-horse engine, and a useful tackle. The time was fast coming when labour would be a serious item, in fact, it was at the present time, and if they would economise labour, they ought to do so, and machinery would enable them to pay more for labour. He agreed with Mr. Barling that the soil might be benefited a great deal from the action of the atmosphere as well as by what they put into it. Mr. Weekes was applying his mind to the construction of an engine better suited to their wants than those which were used at present. He thought every farmer should have one, because they could not always hire one when they wanted it, and there was only one time when the land could be ploughed properly, viz., when it was dry. With regard to scarifying the land instead of ploughing it, he found that the more he scarified the soil the more weeds he got.

Mr. WILMOT, in replying to some of the remarks which had been made, said he was much obliged to Mr. Stonham for having fallen in with his ideas of not cultivating land deeper than they could manure it. Mr. Hlaves said he wished that he (Mr. Wilmot) had put forward some ideas of his own, but as he was not the owner of a steam-plough he could not throw out any idea respecting it. When preparing his paper he went to a gentleman who he knew used an engine, and he asked him what he found to be the result of three or four years' experience. This gentleman said that the engine had

been the greatest benefit he had had since he had been engaged in farming. He told him the amount of wages he paid, the cost of fuel, the carriage of water, and that was how he (Mr. Wilmot) calculated that the cost was 9s. per acre. He believed more in the digging apparatus than in ploughing. The engine he had referred to was one of Fowler's, and it worked on the anchor system. He found that the men were better pleased by working with a steam-engine than with horses; they were better paid, and instead of having their horses to look after when they left off work they went home at once. The gentleman to whom he had alluded used the engine for sawing wood, and for moving the tackle aloof. He had used to draw his wheat instead of his team. This was a step in the right direction, and he (Mr. Wilmot) thought that an engine like this every farmer should have who occupied a farm of any extent. He thought something should be done with regard to our railway system. He wished the subject had been ventilated, for he looked upon it as a national calamity that the railways should be so mismanaged. They ought to be in the hands of the Government, and he believed that if they were prosperity in the country would be considerably increased. He thought Englishmen should put their shoulder to the wheel to do something to alter the present railway system. Mr. Waterman said that his land cost him from 20s. to 40s. per acre, when he hired a steam plough, but he also said something about pulling up some roots, so that he not only had his land ploughed but grubbed (laughter). If Mr. Waterman had grubbed his land first he (Mr. Wilmot) questioned whether some of the ploughing would not have come cheaper to him and have been better done. There was another thing which required attention, and that was deep drainage. With regard to deep cultivation, he thought the same as he did respecting deep cultivation, that it was impossible so lay down any fixed plan. They must be guided by the nature of the soil. Some of the land he had seen would have been better if it had not been drained so deep. He thought his paper agreed with what Mr. Barling had said. Unless the land was thoroughly broken up they could not get a good return for their labour. He agreed with Messrs. Bridgland and Coley that if a farmer had 400 acres it would be more profitable to him to let 100 acres lay by for a short space of time, say one year, and used the whole of his capital on the 300 acres. Mr. Coley said that they spent a certain sum of money out of the country to buy produce. Steam cultivation would alter this, because now they keep hundreds of horses more than they ought to keep, and the food the horses consumed would feed as many individuals. Farmers would have to give more consideration to the point he had raised with regard to co-operation in the purchase of machinery. They must remember that they lived on each other, they were all brothers, and if they could do anything to help each other forward in this world and the world to come, it was their duty to do so.

A vote of thanks to Mr. Wilmot concluded the proceedings.

THE USE OF SEWAGE AND THE PROSPECTS OF FARMING.

At a general meeting of the Essex Chamber of Agriculture at Braintree, Major VALZEY, President, in the chair, read the following paper on the Disposal and Utilisation of Town Sewage:

The subject which I have the honour of bringing before you this morning is one—not by any means the most agreeable for discussion I could select—but yet at the present time of such great national importance that I have felt no hesitation in choosing it. But although somewhat uninviting it is a subject of great utility, as it not only directs our attention to the necessity of saving from utter waste a large amount of material very useful to the agriculturist, but also aims at preserving our rivers and streams from a pollution that must be a source of disease to our cottage population, no less than to the herds that have the misfortune to graze upon their banks, and drink of their waters. To us agriculturists, therefore, there is a special interest in the consideration and discussion of any facts which may help us to a satisfactory solution of the difficult question of the disposal and utilisation of sewage. The gradual and yet rapidly increasing aggregation of the popula-

tion of this country to large centres has, during the past few years, added numerously to the difficulty of disposing of the sewage, for what in rural villages is a simple and easy task to perform, in such cities as London, Manchester, or Leeds, becomes almost an impossibility. Met as we are, as a Chamber of Agriculture, and not as a Sanitary Board, it will, I think, be unnecessary for me to occupy your time by enlarging on the several plans adopted in the first instance for the collection, and afterwards for the conveyance, of the sewage of a town to land, for the purpose of its utilisation as manure. I may, however, mention some of the more usual plans employed. There is, first, the open midden system, which is, I suppose, the oldest of all, the cause frequently of epidemic diseases, and the one most liable to abuse. Then there is the cesspool, or dead well, so common still in country towns and rural districts, and one which, when carried out properly, the cesspool well constructed, well trapped, and suitably placed for periodical emptying, seems to me a simple and satisfactory plan. Next we have the earth closet, patented by Mr. Moule, where we see the plan of nature's own invention, adapted on the most ap-

proved principle, but failing, I may state in passing, on account of the impossibility of obtaining an adequate supply of dry earth—*i.e.*, on a large scale, witness the fact that for the population of Birmingham upwards of 690 tons a day would be required. To these I may add what is termed the Rochdale system, wherein, by the application of a chemical disinfecting fluid to each closet seat, the excreta are collected and removed to the manure manufactory without any nuisance being caused to the surrounding neighbourhood. To this class also belong the Goux system, in partial and satisfactory use at the town of Halstead, in this county, as well as at other places, in which an absorbent substance is introduced in lieu of the chemical disinfecting fluid. Finally, we have the water, or water-closet system, now in such general use, and to meet the requirements of which is really one of the great problems of the day as regards the reception and utilisation of the sewage therefrom. I will, therefore, now direct your attention to the consideration of this branch of the subject, and would state that there are three principal methods which have been and are employed for this purpose:

- I. Precipitation.
- II. Filtration.
- III. Irrigation.

I. PRECIPITATION.—This consists in adding to the sewage various chemical re-agents, with the object of precipitating or throwing down a portion of the dissolved constituents, and of assisting the precipitation of the suspended constituents, and ultimately of realising the value of the precipitate as manure. Processes to carry out this plan are numerous, amongst them I may mention—

- (1.) The lime process.
- (2.) The lime and chloride of iron.
- (3.) The sulphate of alumina.
- (4.) Lenk's process, consisting chiefly of alum.
- (5.) Forbes' process; and
- (6.) The A. B. C. process, consisting of alum, blood, clay, and charcoal.

We will now for a few moments consider briefly the more important of these systems, and (1), the lime process. This consists in adding to the sewage a certain proportion of the milk of lime, about one ton to one million gallons, agitating the sewage to ensure a thorough mixture, and then allowing it to flow into a settling tank, where the suspended solid matter is quickly precipitated; the water is then drawn slowly off, considerably clarified, the deposit is taken out, and after being dried is sold for manure; but this is a tedious and offensive process. This plan is the simplest and least costly of all, but according to the opinion of the Rivers Pollution Commission the effluent water, though clarified, is not sufficiently purified to be fitly admitted into a running stream, as it still contains one-half of the putrescible organic matter, which it is, of course, most important to keep out; for the same reason the deposit when used as manure is of small value. From a sanitary point of view, this process, if very carefully carried out, is to some extent successful, but not commercially so. It has been, I may add, employed at Tottenham, Leicester, and Blackburn.

(2.) The lime and chloride of iron process.—As to this system, I need only remark that it is much the same as the one I have just described, with the addition of chloride of iron, the result being a rather more thorough defecation of the sewage. Still, I believe, as a practical result, the effluent water is not sufficiently pure to be allowed to enter a running stream.

(3.) Bird's process—sulphate of alumina.—The result similar to the last.

(4.) Lenk's process.—This comprises the use of alum as a precipitant. Dr. Voelcker reports favourably of its effects, stating that the effluent water might with safety be turned into a river; but it is too expensive for general use. It was for a while, I understand, tried at Tottenham by the patentee himself, but not continued on account of the expense, and also the uncertainty of the value of the manure produced.

(5.) Forbes' process.—This consists in treating the sewage with a solution of phosphate of alumina dissolved in sulphuric acid, and the great difference between it and other precipitating processes is that the agent employed itself contains most valuable fertilising properties. It is also a powerful disinfectant, so that the drying the deposit for manure is less offensive than in the other plans. For subsequent irrigating purposes also, the effluent water, while clear and inodorous, is besides

highly valuable, being enriched by the addition of soluble phosphates, and its manurial value is thus greatly increased. Indeed, according to Dr. Voelcker's report, the effluent water is more valuable, bulk for bulk, than the raw sewage for irrigation purposes. When, however, it is not intended to irrigate, a quantity of milk of lime is added in the subsiding tank, thus precipitating the phosphates in solution by afterwards filtering the effluent water through a filter of some carbonised substance: any organic matter may be pretty surely eliminated, and it may be safely turned into a watercourse.

(6.) Phosphate sewage process.—Lastly, under this division of our subject, we come to the A.B.C. (so named from the initial letters of the precipitates used), or Sillar's process of treating sewage by precipitation—*viz.*, by the admixture with it of alum, blood, clay, and charcoal. I believe the report of the Rivers Pollution Commission was somewhat unfavourable as to its results, the effluent water not being satisfactorily purified, the manure obtained having a very low market value, and the manipulations required in its preparation being attended with a nauseous odour. We are bound, nevertheless, to admit that this process commands a large share of popular favour, and with the improvements in its manufacture which the Company are continually making, we may fairly hope it will prove itself successful.

In conclusion, under this head, I would remark that while some of the systems I have thus briefly attempted to describe may under favourable circumstances be adopted with advantage, all seem more or less to fail in extracting satisfactorily the fertilising matters held in solution. The most valuable constituent of sewage, *par excellence*, is the ammonia which still escapes in the effluent water, and so far as the precipitating process is concerned is lost to the manure; the substances precipitated being those which are held in suspension, and which would have just as well have been retained by a mere mechanical process of filtration. This brings us to the consideration of the next branch of our subject, *viz.*,

(II.) THE FILTRATION OF SEWAGE.—The object in view in filtration processes is to arrest the suspended matter, and to subject it to a rapid process of oxidation—in other words, to convert the carbon of organic matter into carbonic acid, and the nitrogen into nitric acid and ammonia, all of which are soluble and inoffensive in water; at all events so far as to allow such water to be turned into a running stream. In a well-constructed filter, the pores are filled with atmospheric oxygen, and when the sewage matter is first introduced into it the conversion or oxidation of the organic matter goes on rapidly, but thereby the oxygen soon becomes exhausted, and the filter must then be properly drained to allow the oxygen in the air again to have free access to its pores. Charcoal is usually considered to be the best filtering medium for sewage, because it possesses the peculiar property of absorbing many times its volume of oxygen and other gases. The best system of this principle, is that called Weare's filtration process. It is, or was three years ago, when I saw it in action, practised at the workhouse at Stoke-upon-Trent. I was informed by the master of the workhouse that it was a success, and I believe since that period the company have introduced several improvements into the process, doubtless with the view of rendering it more efficient. The sewage coming from the house, inhabited by 800 persons, passes through a succession of deodorising tanks of coke and charcoal, each tank being filled with finer charcoal than the last, until the liquid finally comes out nearly clear and almost tasteless, superior, so far as I could judge, to a sample I saw at the Sewage Farm, at Romford. There was no offensive smell near the filtering tanks, which were cleaned at various intervals—the first set about once a fortnight. The charcoal used came from the steel manufactories, but I was informed that the company was engaged in making peat charcoal at their works at Ilworwich, in Lancashire. The manure was free from any offensive odour—indeed, it smelt like newly-turned up mould; it was taken to the company's yard, mixed with soot, bone dust, and ammonia, and sold at £4 per ton. The charcoal is supplied by the company, and the quantity used is about one ton a week. About the same quantity of cinders from the workhouse, sifted and washed for the purpose, is also used. Thus fifty-two tons of charcoal and the same quantity of cinders are required for the purification of the sewage of 800 persons, with an ordinary daily flow of 10,000 gallons. The estimated yield of manure, with the addition of ashes, &c., is about 250 tons a year. The system is now, I believe, in use

at Bradford (140,000), and other places are, it is said, likely to adopt it. One ton of charcoal when added to the sewage and with the other ingredients I have mentioned, would make three tons of the manure, which sells at 80s. a ton. In my opinion, on a moderately large scale, and under favourable local circumstances, this system is likely to succeed, the objection to it on a large scale, like the precipitating processes, is the expense and the quantity of the ingredients required. Still, after all, I must confess I lean a good deal to Weare's patent. To deliver charcoal in this district from the north would, I believe, cost something like 60s. a ton altogether—a heavy charge to start with.

III. We now come to the only other method yet known of purifying sewage—viz., by irrigation, *i.e.*, by passing it through the natural soil. Land is a natural filter, and if the purification of sewage alone is contemplated, a comparatively small area used simply as a filter-bed may suffice, if the filtration is intermittent, to purify sewage, so as to allow of its admission into a running stream; but if it is also required to utilise the elements of fertility which the sewage may contain, a vastly larger area is necessary if the sewage is to be applied so as to produce the greatest return in the shape of marketable crops, without injuring the permanent fertility of the soil.

Now, we will first consider the second of these cases, where utilisation is the primary object. In considering this branch of the subject, the following questions present themselves for solution:

1. Does ordinary sewage possess a manurial value sufficient to induce persons to incur the very considerable expense of laying out land for its reception by irrigation?

2. Can it be applied continuously without injury to the permanent fertility of the soil?

3. What area of land is necessary for the perfect utilisation of sewage of given quantity and strength, so that no fertilising element in the sewage shall be wasted?

In the present state of knowledge upon these questions, I feel it would be the height of presumption in me to offer any decided opinion to this Chamber. Indeed chemists of the highest scientific attainments hold opinions in direct contradiction to each other, and engineers of the greatest eminence are equally at variance. This being the state of the question, I will content myself with giving you, as well as I can, a very brief *resumé* of the results of the experience of this system as tried at several places; and I may first mention Mr. Hope's farm at Romford, to which I myself, in company with many members of this Chamber, had the pleasure of paying a visit some three years ago. The farm is (or at that time was), I believe, about 120 acres in extent, and takes the sewage of 7,000 people, *i.e.*, 58 persons to an acre. The farm is laid out on what is called the narrow-bed system, *i.e.*, 15 feet on each side of the carrier, which is lined with concrete; the sewage is conveyed by gravitation from the town, and discharged into tanks, from which it is pumped up 25 feet, and conveyed thence all over the farm by the iron troughs and carriers I have referred to. The character of the soil of the farm is well adapted for irrigation, being poor and light, with a gravelly subsoil, thus requiring a maximum amount of moisture, while its comparative close proximity to London offers great facilities for the disposal of rye-grass and green vegetables, best adapted to produce good financial results from sewage farming. But with all these advantages, I am told Mr. Hope considers more land still wanted, as the sewage of 35 persons to an acre is what he considers the maximum satisfactory amount. I need not say that everything at the Romford farm is done in the best manner possible, and I may also add that in dry seasons especially very heavy crops are grown. I will now cite the case of Warwick. The sewage farm in connection with this town of 11,000 inhabitants is 135 acres in extent, *i.e.*, in the proportion of 85 persons to an acre. The crops are chiefly rye, cabbages, mangold, and potatoes, with a small proportion of cereals (oats and wheat), but little or no sewage is applied to the corn crops while growing. In the winter the fallows are heavily irrigated, and some old pasture lands are also treated with the sewage, but in a raw state it cannot be applied to grass after the plant has attained a certain growth—in that case it must first have its solid matters suspended. As in other places, so at Warwick, the arrangement at the sewage farm are somewhat interfered with by the quantity of storm water introduced into the sewers. For complete utilization or purification of sewage, a separate system of drains for surface

and storm water is really indispensable. Altogether, the Warwick farm appears to be well and efficiently conducted. No perceptible smell is said to exist, and the effluent water is fairly purified. I may just state that the account for the year 1871 stood somewhat as follows:

Crops sold	£666
„ stored, value	765
„ growing, value	640
	<hr/>
	£2,071

While the total annual outlay, including interest on capital, coals, and all expenses of pumping, rent, and the ordinary expenses of working a farm, amount to £1,900, thus leaving a balance on the right side of £171. As regards the application of sewage to the meadow lands at Edinburgh, there is no doubt that larger amounts of sewage are applied there, and a larger amount of produce obtained per acre than elsewhere, but this is at a great waste of manurial constituents and very imperfect purification of the sewage. The general result appears to be that sewage can only be profitably applied for the growth of heavy crops of rye and other grasses, and roots; and that probably the application of about 5,000 tons of sewage per acre per annum to meadow or Italian rye-grass would in the majority of cases prove to be the most profitable mode of utilisation; the price per ton not to exceed one-half or certainly three-quarters all the year round, for sewage of the average strength of that of the Metropolis (excluding storm water). But I will not occupy your time by any longer dilating upon the several instances I might mention of other towns which have put this system of sewage irrigation into practice. I have said enough, I think, to show that in many cases, with careful arrangement and planting on land naturally adapted for the application of sewage, as at Aldershot, the system is a successful one; although at the same time we must confess that the financial results are not always what we could desire. The high price generally required for land near a large town suitable for the purpose, the great outlay necessary in the first instance for laying out the farm, and the difficulty of obtaining a sufficiently large sale for the green crops which, as we have seen, must form the larger proportion of the produce of such farm—all these points unite in making the utilisation of sewage by this method a somewhat costly one. By a system, however, of what is termed “intermittent downward filtration,” as recommended, I believe, by Mr. Hope to the town of Birmingham, a large quantity of sewage can be deodorized on a smaller proportion of land than would otherwise be necessary, and by planting root or green crops on ridges—provided a sufficient market for them can be obtained—a fair return can be looked for. The more solid portions of the sewage deposited in the hollows must be from time to time removed or mixed with the soil by the use of the scarifier; but at all times under such a system as this the sanitary question must be placed above the agricultural, and to prevent a nuisance it might at times be indispensable to plough up the land while under crops—a dreadful alternative of course to the farmer, naturally desirous of seeing a fair return for his outlay. In conclusion, I would remark with all diffidence that it appears to me, as the result of my inquiries into this question, the course to be pursued must in each case depend on the local and special circumstances of that case. In the outlying districts of a town I should recommend well-constructed cesspools, or some mechanical disinfectant process may be satisfactorily employed—as the Goux system, or the plan I mentioned before as in use at Rochdale. In places where land cannot be obtained in sufficient quantities or at a fairly remunerative price, or where a sewage farm would, from the number of surrounding more or less isolated dwellings, be likely to be a nuisance, I should suggest the introduction of Weare's charcoal system, or the phosphate sewage process (referred to above under the name of Forbes' patent), and I am told now employed with great success in connection with the Lodge Farm, at Barking, in this county. I think as a rule, too, the use of some precipitate (as the milk of lime) is very much recommended; this diminishes the amount of solid matter, which otherwise would be poured on the irrigated land, and at the same time creates in the settling tank a deposit, which, when mixed with cinders, earth, or ashes, can be easily removed and sold as solid manure. That good water and pure running streams are essential to the well-being both of man and beast, is a point which, though

generally admitted, is not always sufficiently regarded. In a letter lately received from Professor Wyvill Thompson, of her Majesty's ship Challenger, describing the Islands of the Bermudas group (which they visited in the course of their voyage of scientific investigation), I find an illustration and confirmation of this fact. After enlarging upon the sylvan beauty of the scenery, with its luxurious tropical vegetation, he remarks that the climate is peculiarly genial, but not so healthy as it would be if the plans of sewage could be rendered more effective, and if there were a greater supply of good water and running streams; and he afterwards proceeds to say: "There is but little live stock upon the islands; cattle and sheep do not thrive well, probably mainly owing to the want of a plentiful supply of good water, so that instead of being able to supply ships calling there with fresh meat, even the butchers' meat for the consumption of the inhabitants is almost all imported from America." I think I have said enough to recommend to your approval the resolution I have appended to this paper. As regards the importance of the question, looking at it either from a sanitary or an agricultural point of view, there can be no doubt; nor, as I have shown, is the solution of the question at all easy how best to utilise and preserve from waste this enormous amount of manurial products so full of ingredients which are greatly needed by the soil. Surely, gentlemen, it would be worthy the attention of any Government, and be quite befitting their position, to make such an inquiry of the most eminent scientific men—chemists, civil engineers, and agriculturists, as shall enable them not only to order local authorities to abate the nuisance frequently created by the sewage in their respective districts, but also to direct them how best both to dispose of it and also to utilise it. The subject is still, however, in its infancy, and great will be the honour accruing to the agricultural chemist who can unravel the difficulty, and who is able to discover a method by which the riches of our native soil, each day drawn from her bosom by the processes of agriculture to satisfy the wants of her children, may in a ten-fold measure be restored to her perennially green and fruitful. Gentlemen, I thank you for your kind attention, and I trust the few remarks I have ventured to make, and the brief *resumé* of this important subject which I have endeavoured to present to you, may now form the basis for an interesting discussion. I beg to move: "That in the opinion of this Chamber the question of the disposal of the sewage of towns is of such national importance, and at the same time of such great difficulty, as to justify the Government in taking measures to enable it to furnish local authorities with an approved plan or plans for the utilisation of the sewage of their respective districts."

Mr. J. S. GARDINER seconded the resolution. It appeared to him that a great mistake was made in allowing so large an amount of water in the sewers, by which means the expense of removing the night soil was much increased. Our streams and rivers were now rendered perfect channels for disseminating ill health and infectious diseases, putting on one side the fact that by allowing sewage to run into streams a great mass of useful manure was wasted; and he thought that when the rising generation came to find that they had been paying £14 a ton for guano from South America while they had allowed their sewage to run to waste or worse, to pollute their rivers, they would set them down as a lot of stupid pigs. He mentioned that he had adopted a plan of his own for utilising night soil, namely, by mixing it with a little water, and using a little coprolite and some sulphuric acid, which mixture made a very valuable manure. He did not, of course, say that it was so good as the £14 guano, but he did believe that one ton of that was as good as half a ton of guano. He believed if they collected the night soil, brought it by some process into a dry state, and then put it on their land, they would find it a very valuable manure indeed. Their president had mentioned sewage farms. Now, there was one objection he had, and that was to so large a quantity of sewage being placed upon so small a space of land, for he knew enough of stock feeding to find out that butter made from cows fed on sewage-grown vegetable productions, was in nineteen cases out of twenty bad in itself, and he should as soon think of making butter from animals so fed as he should from cart sewage.

Mr. J. PERTWEE said Mr. Vaizey had said that it was impossible to introduce the dry-earth system into towns. Certainly it was a gigantic scheme, but looking to the value the deposit would be he did not think they ought to say it was impossible. He believed no scheme was entitled to greater

respect than Moule's dry-earth system, and those only knew its value who had adopted it. He quoted the military establishments in India, where the system was in operation, and said with regard to its utilisation that the hearth droppings and dust bins of each house would be sufficient for its adoption. The subject was one well worthy of consideration, and he hoped more attention would be paid to it in future.

Mr. W. BROWN said the great question undoubtedly was, how to economise town sewage. He quite agreed with Mr. Gardiner that one of the principal difficulties in the way was the accumulation of storm-water in the sewers, and the man who would solve the difficulty would be a public benefactor. Mr. Brown took exception to Mr. Gardiner's remarks upon cattle fed on sewage grass, and said that in the town of Braintree he believed it was notorious that butter made from cows fed on sewage vegetable productions was some of the finest. He believed with regard to the purification of our streams that the only means of keeping sewage from the rivers was by pumping it.

Mr. J. SMITH, sen., said their President had read one of the most elaborate and best papers he had heard since he had been a member of the Chamber, and he had well dealt with a question which was of deep interest to the nation at large. He incidentally mentioned reading an article in a monthly periodical the other day, which suggested a scheme for the utilization of town sewage which had not been touched upon by any speaker, namely, by what is called the "hot-air system," and probably if it was worked in England as well as it seems to be in many cases on the Continent it appeared to be more feasible than any scheme he had yet heard of. Mr. Vaizey's proposition did not commit them to anything, and he should therefore support it; and he should further propose that as this was such an excellent and elaborate paper a number of them should be printed and distributed amongst those members of the Chamber interested in this subject.

Mr. E. GARDINER also supported the proposition. He spoke strongly against water-closets, more particularly in farm-houses, and said they were most mischievous when considered in connection with sewage irrigation.

The PRESIDENT, in reply, mentioned several places, some in Essex, where the authorities were in great trouble about their sewage, and explained that he probably might not have gone so deeply into the subject but for the fact that when he was Chairman of the Halstead Local Board the subject was brought somewhat painfully under their notice. He thanked the Chamber heartily for the kind way in which they had received his paper, and said he was amply rewarded if he had been the means of doing any good.

The motion was then put to the Chamber, and carried unanimously; as was also a resolution to have 250 copies of the paper printed and circulated amongst the members.

Mr. HENRY SMITH, of Great Bardfield, then read the following paper upon the Present Prospects of Farming: In bringing this subject before your notice it is my wish to do it briefly, and also as clearly as I can, that if, as has been said (although I do not think it applies to our Chamber), "the Chambers of Agriculture have become political engines for the landlords to air their eloquence at," they may be induced to look at the position of the tenant-farmer, and help to make his prospects brighter than they are at present. But let him at the same time try to help himself; and I believe that if he looks round he will find these Chambers of Agriculture of more benefit to him than he is aware of in accomplishing that object. An extract from a notice of the London Farmers Club says: "Each succeeding year furnishes fresh proofs of the necessity of union among farmers, as it behoves them to adopt the means pursued by other classes of society, viz., that of associating with each other as well for the purpose of mutual information as for the general good of the body." Now, taking the farmers' prospects as regards his means of getting a living, to say nothing of interest for his capital, and some to lay by for a rainy day, every farmer will confess that they are anything but cheerful. First, the unfavourable seasons of the last two years, the great increase in price of all kinds of stock and machinery, the rise in rents, and lastly, the great agitation in the labour market. It will very likely be said that they had bad seasons years ago. No one will deny it, and this is one of the things that no farmer, however clever, can contend against. The increase in the price of all kinds of live stock will of necessity find its own level, but it must be well-known to the mind of every practical farmer that there is not and

cannot be the same money got out of stock, sheep, and cattle more particularly, when they are high as when they are at a low price, leaving out of consideration altogether the much greater loss in the event of disease and death, which cannot be avoided. The price of machinery has also gone up very much during the last two or three years; but even with this increase I believe it is cheap compared with what it was years ago, owing to the simplicity of many of our most useful implements, and the great perfection that many of them are arriving at. I must now touch for a minute or two on that very delicate question, the labour of the farm, this being, as I think most will allow, the greatest obstacle the farmer of the present day has to contend with. That great authority on farming matters, Mr. Clare Sewell Read, says that he has saved £100 per year since the advance in wages, but he goes on to say, "The days of neat and tidy farming are over." To a certain extent this must be so. When men were kept on during the winter months more out of charity than anything else, farmers could do the odd jobs that never really paid for doing. But now the case is altered. There is not the surplus labour there was years ago, in fact, it is no use hiding it, there is in some parts really a scarcity. Then comes the question, what is scarcity? An old farmer who had farmed 40 or 50 years ago, if he had not a lot of men standing about doing nothing all winter would say he had a scarcity, but I think he could manage to do without them. The other day, I was talking to an old man who had been on the farm 50 years, and he said, "I recollect when there was four of us cobbing clover seed in this barn and four more drawing it in, and that for two months; now you can get it all done in a fortnight." That is just the point I want to come to. With the increased improvements in machinery and steam power at the back, the work can be done in less than half the time, with fewer men, and if not any cheaper at any rate not much dearer. Then as to the uniform rate of wages. That must be acknowledged to be a bad system. If the work is put out by the piece it makes better men and better masters than if all is done by the day; of course there are jobs which must be done by the day. But as the old labourer once said, "He'd got a two-shilling stroke and he'd got an eighteenpenny stroke." For example, I had two men land-draining in one field—the one with a boy, the other without; they were both engaged exactly the same time; the one without a boy earned £4 16s. 8d., the one with £3 17s. 3d. I have avoided touching on the great conflict now raging between masters and men on our borders, because I think as there is so much difference of feeling on the subject, and as the meeting of this Chamber appointed to be held to consider the subject was abandoned, it is not worth while to introduce this meeting to a question upon which its members differ so widely. Every class of society seems to me to be having a kick at the farmer now he is down. The Church, which gets rich from his tithes, has a kick through one of her bishops; the landlords have kicked him for some time, and now give him one extra; his faithful London paper kicks him, and hints that he ought not to drink claret in his dining-room, but small beer in the kitchen. If he wants his children educated, he should send them to the parish school instead of having a governess, and be content with his weekly trip to market, and leave Continental cities for his landlord and the city merchants. If the very powerful influence of the London press is so brought to bear against the farmers, surely we ought to take steps to prove the gross injustice of these statements, and to ask the world whether farmers have made more progress or gone more ahead of their position than any other class of society. Look at the city merchant, whose father used to live over the shop, and now see his house at Croydon or Norwood; who used to take his family to Greenwich once a year, and now gets as far as Scotland by 12th August. A late chancellor has a kick, and thinks his cart-horses want taxing. Would that we had more clear-sighted sound common-sense ladies like Lady Stradbroke to announce to the country the altogether false position in which tenant-farmers are represented, and to challenge the world to show one man who has made a colossal fortune by farming. As Mr. C. S. Read says, "Where one man has retired on farming are there not twenty who ought to be candidates for admission into the Royal Agricultural Benevolent Institution?" Most of you have probably seen Mr. Mechi's paper, read at the Farmers' Club in February last, on "The Commercial Principle as applied to Farming." These principles are very good, and no doubt would benefit the farmer, but

it is impossible to carry them out under the present existing laws relating to land. Every farmer ought to be allowed to conduct his business in the way by which he can get the best return for his money. This I take it stands A 1 among commercial principles; but how can this be done with an unsecured tenancy, no compensation for improvements, restriction as to cropping and selling, and the refusal of the right to kill game, &c., &c.? There was published a month or two since the draft of a lease to be signed by the tenants of Lord Bateman. I wonder whether his lordship has found anybody in his senses to sign it. It tells how much dung is to be put on per acre—so much if long, so much if short; what weeds are to be taken off the land; how much and how often to fallow; how many acres to sow with clover; what not to sell, leaving nothing but corn available; how to clean the ditches out and stop the gaps—in short, just such a lease as his lordship's tailor might require. What commercial man would have anything to do with a business under these conditions? Mr. Mechi says the want of book-keeping is the weak point of British agriculture. This I think quite true, in spite of the old saying that there was not profit enough to pay for the paper. The progress of agriculture must always keep pace with each succeeding generation. One of our greatest agriculturists, the late John Grey, of Dilston, said, "Let no one speak of perfection in agriculture, rather let him be perfectly assured that perfection will not be attained in his time." There is one thing I think ought to be combined with a farmer's education. Every young man intending to follow farming ought to serve his time at the Veterinary College, and so get an insight into the anatomy as well as the diseases of live stock, with which he has so much to do. This would be a great help to a farmer, and save a deal of expense. Another thing, I would encourage every farmer to take an agricultural paper every week, and study it. Mr. James Howard once said he believed it was a very dear paper from which enough could not be learned to pay the expense. It is often said, "Farming must be a good trade; look at the applications for a farm as soon as there is one to let; often 30 or 40 for a 300-acre farm." Well, in the first place, are all the applications made by persons who require a farm as a means of getting a living? Certainly not. As soon as a merchant or other man of business gets a fortune together, he looks out for a farm as a pleasant means of getting rid of it. He does not look out for a grocer's or a draper's shop, but considers that a farm can easily be managed, and looks upon it to a certain degree as a gentlemanly calling. Another reason is that while the population keeps steadily increasing the acreage does not. Farming is a pleasant and to some extent independent life, hence the great demand for land. The question was asked in *The Mark Lane Express* a month or two since: "Can you inform me how many candidates in their addresses make any reference to agriculture?" I would venture to ask the same question with regard to our own ten members. I cannot find one in this purely agricultural county who alludes either to the farmer or his interests. As long as the farmer is content by sitting still and only grumbling, no one will think he is so badly off as is really the case. If they, like other parties in the country, would insist on being represented in Parliament by their own men, or some who had their affairs equally at heart, instead of, as *The Mark Lane Express* says, gross offenders in the over-preservation of game and raw lads fresh from school, better times would be in store for them, and they would gain that independence which they have never yet known. What other business or profession in which so many hundreds of thousands are engaged can be found that is represented in the House of Commons by one member out of 650? If every county were to return one member only whom the farmers could depend on the measures affecting his interest would not be pushed aside to make room for some of far less importance to himself and the country at large. But now, as an "East Essex Farmer" in *The Mark Lane Express* truly says, "The farmers are mere political nonentities in the House of Commons, their rights trampled on, and their interests neglected." In conclusion, I will just give a resolution proposed by the Newbury Chamber: "That this Chamber requests its members to give their earnest support to any measures embracing the following subjects—Tenant-Right as embraced in Howard and Read's Bill, Local Taxation, alteration of the Game-Laws, Repeal of the Malt-tax, and the appointment of a Minister of Agriculture;" and beg to move one similar to it: "That this Chamber resolves

to promote such measures, especially Parliamentary, which in its opinion will tend to benefit the tenant-farmer."

Mr. HENRY PERTWEE seconded the resolution, and characterised Mr. Smith's paper as a most excellent one.

Mr. J. S. GARDINER said he so entirely agreed with Mr. Smith's paper, that it really left him nothing to say. There was, however, one subject upon which he should like to say a word, namely, upon the labour question, which was a subject concerning them all, and one which, however much they might desire to see it put on one side, would have to be met, and he hoped would be met like men by the farmers. Mr. Gardiner then went on to comment in somewhat strong language upon the position assumed by the N.A.L.U., and the labourers under the guidance of that institution, and quoted numerous extracts of an exciting and violent character from the *Labourers' Union Chronicle*, which, he said, instead of healing the differences now existing between the farmer and his men, had tended only to widen the breach, and to make further and further recede in the distance the prospect of an amicable settlement. He anathematised Messrs. Morley and Dixon, who, he said, had no more right to dictate to the farmers the terms upon which they were to employ their men than they had to go to the factories owned by those gentlemen and dictate to them what wages they should pay their operatives. The delegates, some of whom had ventured to abuse him close to his own house, also came in for some sharp strictures, Mr. Ball being particularly characterised as one who made it his business to go from village to village, stirring up strife between employers and employed. In conclusion, Mr. Gardiner said the farmers had a most kindly feeling towards the men, but they could not pay them more than supply and demand justified, although some of them often did; but he thought they were called upon as employers of labour to discountenance altogether the National Agricultural Labourers' Union.

Mr. YOUNGMAN expressed an opinion that commercial principles between employer and employed must ultimately be established. With regard to the present unhappy dispute, he hoped it was not the general opinion that the violent expressions used by a few gave a fair estimate of the agricultural labourer of the present day. The violent language, too, had not been all on one side, for such, he had no doubt, had been used by the advocates of the farmers, and even the Lady Stradbroke, who had been so highly spoken of, had gone almost as far as some of the labourers' delegates in a recent letter to the *John*

Bull. They must admit that a good deal of temper had been shown, and hard things said on both sides; but he hoped that in the course of a few weeks all difficulties would be smoothed away, and that the time was not far off when they would begin to forget all that had been said; and as no doubt the labourers wanted the farmers quite as much as the farmers wanted the labourers, a settlement would be arrived at.

Mr. SMITH, who was warmly applauded, said he was much obliged to the Chamber for the kind way in which they had received his paper, which it had given him great pleasure to read. He, however, wished their meetings were better attended, for he believed that Chambers of Agriculture were of the utmost benefit to the tenant-farmers, although that benefit might be indirect.

The PRESIDENT quite endorsed Mr. Smith's last remarks. It certainly was no fault of the Executive that the meetings were not better attended. He was sorry their friends round Braintree had not attended so largely as they could wish, but those who had come must have been greatly pleased with the capital way in which Mr. Smith dealt with the subject he had introduced. But there was one remark he should like to make, namely, that he thought farmers should be better represented in the House of Commons, and this might be accomplished if they took a long and strong pull together as other classes did. He regretted the absence of one of their own members, who was very regular in his attendance, but who, he presumed, was engaged in Parliamentary duties and so unable to come. He then put Mr. Smith's motion to the meeting and it was carried unanimously.

Mr. SMITH, sen., proposed a vote of thanks to the President for presiding over them that day. Speaking upon the subject of Parliamentary representation, he said he thought that they should send as many farmers' candidates to Parliament as they could, but what was more necessary was that they should help themselves. He also read extracts from a recent speech by Mr. Clare Sewell Read, who, he said, Norfolk ought to be proud of, and who was one of the few who did put the tenant-farmer in his proper position before the public.

Mr. J. S. GARDINER seconded the vote of thanks, and took occasion to express a wish that gentlemen of their President's own class, who, he said, were conspicuous by their absence, would make it convenient to attend their meetings.

The motion was carried unanimously; and, thanks having been accorded to Mr. Smith and Mr. Vaizey for their respective papers, the meeting separated.

THE BATH AND WEST OF ENGLAND SOCIETY, AND SOUTHERN COUNTIES ASSOCIATION.

The monthly Council meeting was held at the Grant Hotel, Bristol, on July 28, under the presidency of Mr. R. Benyon, M.P. There were also present Messrs. Bremridge, J. Gray, Neville-Grenville, M.P., and J. C. Moore Stevens (vice-presidents); Messrs. C. T. D. Acland, J. T. Boscawen, H. Badoock, C. Bush, R. H. Bush, T. Danger, J. T. Davy, T. Duckham, T. Dyke, Gilbert, C. Gordon, A. R. Grenfell, J. Hallett, H. M. Holdsworth, J. F. Lennard, H. A. F. Luttrell, H. Middleton, R. Neville, S. P. Newbery, J. Quarterly, G. Simpson, H. St. John Maule, R. Trood, and J. Goodwin, secretary and editor.

THE BRISTOL MEETING.—Mr. Herbert Williams, as chairman of the Finance Committee, brought up a statement of the receipts at the recent annual meeting, and asked the sanction of the Council to the payment of prizes and other claims to the amount of £9,930 18s. 9d., and the purchase of £2,800 stock, raising the funded capital of the Society to £10,000. These several proposals were adopted and ordered to be carried out.

On the motion of Mr. Herbert Williams, chairman of Finance, it was resolved that the salary of Mr. William Smith, the official accountant of the Society, be increased to £100 per annum.

The stewards and officers for the ensuing year were nominated for election at the next council meeting. To the Stock Prize-sheet Committee Mr. J. Quarterly was added; to the Judges Selection Committee, Mr. T. Duckham; to the Arts Committee, Mr. G. Simpson, of Wray Park, Reigate. Messrs.

H. M. Holdsworth and C. T. D. Acland were nominated stewards of the yard; Mr. R. Neville and Mr. C. A. W. Troyte, stewards of implements (yard); Messrs. Knollys, Jones, and Dyke, stewards of implements (field); Messrs. T. Davy, H. Fookes, T. Duckham, and A. Grenfell, stewards of stock; Colonel Luttrell and Mr. C. Gordon, stewards of horses; Messrs. R. H. Bush and C. Edwards, stewards of poultry; the Hon. and Rev. J. T. Boscawen, steward of horticulture; Mr. Jonathan Gray, steward of music; Col. Luttrell, Mr. Grenfell, and Mr. Maule, committee of the mess; Mr. H. St. John Maule, steward of refreshments; Mr. J. Gray, Mr. Knollys, and Mr. Moysey, stewards of plant; and Colonel Luttrell, Colonel Lennard, Mr. R. Neville, Mr. C. A. W. Troyte, and Mr. Arthur Grenfell, stewards of arrangements.

The official superintendent was directed to secure the services of a competent storekeeper, who shall also have charge of the weigh-bridge henceforth to be provided.

CROYDON MEETING.—An addition of £100 was made to the amount granted for stock at the Bristol meeting, thus raising it in the aggregate to £1,800. The amount allowed to the stewards of poultry was £215; to the steward of horticulture £130.

Communications from Mr. H. Compton, of Manor House Lyndhurst, Hants; Mr. B. St. John Ackers, of Prinknash-park, Gloucestershire; and Mr. Hudspeth, agent to Mr. W. Nicholson, of Basing-park, Alton, were ordered to be referred to the stewards of stock.

New members: C. B. Worsnop, South Kensington Museum; W. Coles, Wellow; E. B. Hooper, Wellow; T. G. Meeten, Taunton; C. A. R. Hoare, Fleet-street, London; A. Wansley, Bristol; Wills, London.

LEICESTERSHIRE AGRICULTURAL SOCIETY.

MEETING AT LEICESTER.

The horse classes were well filled, and the hunters and hacks good. The agricultural classes included some powerful horses, and a number of promising foals. Of cattle there was a very short show. There were but 29 entries, and several of these did not make an appearance. Mr. J. N. Beasley, of Brampton Farm, carried off the prize for the best fat ox; and Mr. F. Cartwright, of Drakelow, that for the best fat cow. There was only one young Shorthorn bull, Mr. W. F. Woodroffe's, of Normanton; and only two older bulls; the best of which was that of Mr. R. Wade, Ashley. Mr. J. J. Sharp, of Broughton, took the first prizes in the three next classes, for Shorthorn cow in milk, in-calf Shorthorn heifer, and Shorthorn stirk. The long-horn classes were chiefly remarkable for the absence of a name formerly among the most successful exhibitors, Mr. Chapman. There was no entry for Alderney or Guernsey cows in the classes, and only a small Alderney shown as extra stock. The sheep, Leicester and long-wooled, were on the whole better represented. Mr. G. Turner, jun., of Thorpelds, took the two prizes for Leicester rams; those for long-wooled shearlings being taken by Mr. R. Johnson (Kirk Ireton), and Mr. R. Wright (Norton Heath); with those for older rams were taken by the same exhibitors in reverse order. There was some competition in Shropshire Rams, the prize for which was taken by Mr. W. H. Clare; in the other classes of Shropshires Mr. S. C. Pilgrim carried off the honours. The pigs were a fair show, though several of the theeries did not arrive; and Mr. M. Walker, Mr. R. E. Duckering, and Mr. J. Wheeler were the successful exhibitors. Messrs. Vipan and Healdy had a large show of agricultural implements; and Mr. F. Johnson also exhibited an assortment of agricultural machinery. The meeting on the whole was a tame one, the Leicester fixture being rather "harried" by the Society.

PRIZE LIST.

HUNTERS.

JUDGES.—Hon. A. Pennington, Captain Whitmore, and Mr. John Holiday.

Hunter, gelding, or mare, not less than five years old and under ten, open to all England.—First prize, £20, W. P. Hubbersty, Wirksworth, Derby (Sultan); second, £5, J. Smeeton, Husbands, Bosworth Lodge, Rugby. Commended: G. Pilkington, Stoneleigh, Wootton, Liverpool.

Gelding or filly (four years old), adapted for hunting purposes, bred within the limits of the Belvoir, Quorn, Mr. Tailby's Cottesmore, Atherstone, and Pychley hunts.—First prize, £20, J. E. Bennett, Husbands Bosworth Grange, Rugby (Melrose); second, £5, J. E. Bennett (K.C.B.).

Hunter, not less than four years old, belonging to a tenant-farmer (residing or occupying within the limits of Mr. Tailby's Huut) or his son living with him, and following the same occupation.—First prize, £10, J. Smeeton; second, £5, A. Innocent, Kibworth. Commended: A. Innocent.

Gelding or filly (three years old), adapted for hunting purposes, bred within the limits of the Belvoir, Quorn.—First prize, £10, Rev. E. Bruxner, the Holt, Thurlaston, Hinckley; second, £5, J. W. Jenkins, Husbands Bosworth, Rugby.

Gelding or filly (two years old), adapted for hunting purposes, bred within the limits of the Belvoir, Quorn, Mr. Tailby's Cottesmore, Atherstone, and Pychley Hunts.—First prize, a silver cup or money, value £10, Rev. G. E. Bruxner; second, £5, W. E. Oakley, Cliff House, Atherstone. Commended: W. E. Oakley.

Yearling colt or filly for hunting purposes.—First prize, £10, W. E. Oakley; second, £5, J. E. Bennett. Commended: Rev. G. E. Bruxner.

Hack, not less than fourteen hands two inches, and not exceeding 15 hands two inches high.—First prize, £10, J. Hornsby, Castle Gate House, Grantham (Ballet Girl); second, £5, A. Dabbs, Humberstone-gate, Leicester (Star Thistle). Commended: G. W. Sykes, the Pines, Gaddesby; W. Doyley, 106, Higher-cross-street, Leicester; J. E. Bennett.

Cob, not exceeding fourteen hands and a-half.—First prize, a silver cup or money, value £5, J. Wiggins, Market Harborough (Prince); second, C. Montagu, Manor House, Newton Harcourt.

Pony, not exceeding thirteen hands and a-half.—First prize, a silver cup or money, value £5, J. H. Smith, Oldby; second, £2, J. T. Jacques, Welford-road, Leicester.

Mare, calculated to breed hunters, that shall have suckled a foal up to the 1st of July, 1874, or is now in foal.—First prize, £10, T. H. Smith, Curborough, Lichfield; second, £5, J. D. Cradock, Quorn, Loughborough.

JUDGES.—J. H. Wood and G. Smith.

Gelding or filly (two years old), best adapted to the general purposes of agriculture.—First prize, a silver cup or money, value £10, H. Burgess, Middleton, Rockingham; second, £5, H. Bond, Walcote, Lutterworth. Highly commended: T. H. Simpkin, Hoby.

Gelding or filly (one-year-old), best adapted to the general purposes of agriculture.—First prize, a silver cup or money, value £10, H. Doughty, Sutton Grange, Long Sutton (Thumper); second R. Timms, Braunstone, Rugby. Highly commended: W. Barber, Congerstone, Atherstone. Commended: R. Timms.

In-foal mare, best adapted to the general purposes of agriculture.—First prize, £15, W. Barber, Congerstone, Atherstone; second, £5, T. Stokes, Caldecote, Leicester. Highly commended: T. Marchant, Great Easton Park, Leicester. Commended: H. Burgess, jun.

Foal, adapted to the general purposes of agriculture.—First prize, £5, T. Marchant; second, H. Burgess. Highly commended: T. Stokes. Commended: R. Wade, Manor House, Ashley, Market Harborough.

Cart gelding or mare, four years old and not exceeding seven best adapted for dray purposes.—First prize, £15, H. Burgess; second, £5, G. Bass, Bagworth Park, Leicester. Highly commended: T. Allen, Thurmaston. Commended: J. Sheild, Uppingham.

CATTLE.

JUDGES (Sheep and Pigs).—R. J. Newton.

J. S. Turner.

J. Caswell.

Fat ox.—First prize, £10, J. N. Beasley, Brampton Farm, Northampton; second, £5, Sir W. de Capell Brooke, Bart. Reserve: S. Wallis, Barton Seagrave, Kettering.

Fat cow or heifer.—First prize, £10, F. Cartwright, The Grove, Drakelow, Burton-on-Trent; second, £3, R. Wright, Nocton Heath, Lincoln.

Shorthorn bull, above one year and under two years old.—First prize, £7, W. S. Woodroffe, Normanton-ou-Soar.

Shorthorn bull, over two years.—First prize, £7, R. Wade, Manor House, Ashley; second, £3, W. H. Johnson, Braunstone, Leicester.

Shorthorn cow, in milk.—First prize, £5, J. J. Sharp, Broughton, Kettering; second, £2, F. Cartwright, The Grove, Drakelow. Reserve: R. Wade, Manor House, Ashley, Harborough.

In-calf Shorthorn heifer, above two and under three years old.—First prize, £5, J. J. Sharp, Broughton; second, £2, C. Marriott, Cottesbach, Lutterworth.

Shorthorn stirk, above one and under two years old.—First prize, £5, J. J. Sharp; second, £2, C. Marriott, Cottesbach.

Longhorn bull.—First prize, £5, W. T. Cox, Spordon Hall, Derby.

Longhorn cow, in milk.—First prize, £5, S. Forrest, The Chase, Kenilworth. Reserve: J. Godfrey, Wigston Parva.

Longhorn heifer, in calf above two and under three years old.—First prize, £5, S. Forrest, The Chase. Reserve: W. T. Cox.

SHEEP.

Pure-bred Leicester shearling ram, the property of or hired by the exhibitor.—First prize, £7, G. Turner, jun., Thorpe-

lands, Northampton; second, £3, G. Turner, jun. Reserve: S. Spencer, Snaresstone.

Long-woolled shearing ram, whether hired or not.—First prize, £7, R. Johnson, Kirk Ireton, Wirksworth; second, £3, R. Wright, Nocton Heath, Lincoln. Highly commended: T. W. D. Harris, Wootton, Northampton. Commended: T. W. D. Harris.

Long-woolled ram of any age, the property of or hired by the exhibitor.—First prize, £7, R. Wright, Nocton Heath, Lincoln; second, £3, R. Johnson, Kirk Ireton, Wirksworth. Highly commended: R. Wright.

Pen of three under twenty months old long-woolled fat wether sheep.—First prize, £5, H. J. Hopkins, Moulton Grange Farm, Pitsford, Northampton; second, £2, L. Willmore, the Newark, Leicester.

Pen of five long-woolled ewes.—First prize, £5, T. W. D. Harris, Wootton; second, T. W. D. Harris.

Pen of five long-woolled theaves, under twenty months old, intended for breeding purposes.—First prize, £5, T. W. D. Harris, Wootton; second, £2, L. Willmore.

Shropshire shearing ram, whether hired or not.—First prize, £5, W. H. Clare, Twycross, Atherstone. Highly commended: W. H. Clare.

Pen of three under twenty months old Shropshire fat wether sheep.—First prize, £5, S. C. Pilgrim, the Outwoods, Burbage, Hinckley.

Pen of five Shropshire ewes.—First prize, £5; S. C. Pilgrim. Highly commended: W. H. Clare, Twycross.

Pen of five Shropshire theaves under twenty months old, intended for breeding purposes.—First prize, £5, S. C. Pilgrim.

PIGS.

Boar of the large breed, whether hired or not.—First prize, £5, M. Walker, Stockley Park, Anslow, Burton-on-Trent; second, £2, J. Wheeler, Long Compton, Shipton-on-Stour. Commended: R. E. Duckering, Northorpe, Kirton Lindsey.

Boar of the small breed.—First prize, £5, R. E. Duckering; second, M. Walker.

Berkshire boar pig, not exceeding eighteen months old.—First prize, £5, M. Walker; second, £2, J. Wheeler.

Breeding sow of the large breed.—First prize, £5, J. Wheeler; second, £2, M. Walker. Highly commended: R. E. Duckering.

Breeding sow of the small breed.—First prize, £5, R. E. Duckering; second, £2, M. Walker. Highly commended: J. Wheeler and M. Walker.

Three breeding pigs, of any breed, of one litter, not exceeding seven months old.—First prize, £5, R. E. Duckering; second, £2, M. Walker.

At the luncheon, Mr. HEYGATE, M.P., the Chairman said: In this county and district they had been happily entirely

free, he hoped he might say, from those unfortunate circumstances which they so much regretted to have seen occurring in the Eastern Counties of England. They might think themselves very fortunate that the relations between capital and labour, as far as agriculture was concerned, were of a very much more happy description here. He did not take especial credit for either the labourer, the farmer, or the landlord for that circumstance; it was probably owing to the fact that they had had in this county and district for many years past a much greater competition for labour, having side by side with the agricultural interest large manufacturing and mineral interests which had competed for labour, and consequently raised the rate of wages. In the Eastern Counties, as they knew, agriculture was almost the only industry, and consequently the demand for labour, increasing as it had done during the last few years, came upon them suddenly, and the result was, as they were aware, a disturbance of those relations between tenant farmer and labourer, which they so much regretted. He only hoped that now things would work themselves square, that they would settle down, and that those disturbed relations, of which he spoke, would become by degrees arranged in a happy and satisfactory manner. Whichever side might be considered to have gained the victory in this struggle, he hoped would use their success with moderation, and that they might see again those good feelings between all classes, landlord, tenant, and labourer, which had existed so long in this country, and which he hoped might still continue to exist. Referring to the agricultural implements, he might say that it must be an increasing source of interest every year to the occupier of land to see to what an extent he could utilize the machinery so as to make himself more and more independent of strikes. Old prejudices as regarded machinery had without any question very generally passed away. He was only reading, a few days ago, a story of the late Sir Robert Peel, who had a show at Tamworth, some thirty or forty years since, and purchased a number of iron ploughs, and presented them to his tenants, and at the end of the year he was greatly disappointed that scarcely any of them would use them, as they said they would be sure to make the weeds grow. He thought they had got beyond that, and that there was an increasing feeling that they must take advantage of every agricultural implement which the ingenuity of science could invent.

Mr. T. H. SIMPKIN: He wished to make a remark about the labour question. He thought the chairman set it rather low when he said that they had nothing at all to do with strikes here. He thought they had. They took the bull by the horns at once: they saw the danger, and paid their men better, and they had been paid better here for the last eight or nine years than in any other district. Had the same thing been done elsewhere, when they found railways and manufactures to contend with, they might have avoided strikes also. He was not saying there were not great difficulties; they had been short of men; but he was glad to see that for the harvest there appeared abundance of labour.

THE GLOUCESTERSHIRE AGRICULTURAL SOCIETY.

MEETING AT TEWKESBURY.

There were 48 entries of Shorthorn, and in bulls above two years old there were four competitors—viz., Mr. B. St. John Ackers's Cymbeline, Mr. R. Stratton's Protector, Mr. W. Wilson's Earl of Warwickshire III., and the Rev. E. T. Williams's Earl of March, with Protector put first. In the class 2, for bulls above one and under two years old, there were ten competitors. The three animals on which attention was concentrated included two Royal prize-winners, Mr. William Garne's Aachen, and Col. Loyd Lindsay's Prince Rupert; the first honours being here awarded to Aachen, and the second to Bountiful Duke, one year two months and a day old, bred by Mr. W. Woodward. Of the bull calves Col. Lindsay's Lord Rockville fairly distanced all the rest. He was first at the Royal and also at the Bath and West of England and the Reading Shows. Of breeding cows ten competed, but it cannot be said that the class was good. The competition in the class for

heifers under three years old was better, and Mr. Bruce Kennard's celebrated Queen Mary, which ran away from everything else in her class at the Royal, was once more the Champion Shorthorn, as in Essex. The entries in the classes for Herefords were not numerous, but the bulls were declared by the judges to be equal to any ever exhibited. The competition in regard to these animals was so near that the judges were obliged to invite the assistance of the Shorthorn judges. There were only three entries—Mr. H. J. Bayley's King of the Dale, two years and six months old; Messrs. T. Fenn and Harding's Bachelor, seven years two months one week and three days old; and Mr. Philip Turner's Provost, five years and a week old. After a long consultation the judges awarded the reserve number to King of the Dale, and ultimately Bachelor was put first. The bull-calves were the weakest lot among the Herefords. In the class for breeding cows the first prize was awarded to Mr. T. Thomas's Rosalind,

and also the 5-guinea challenge cup, for the best pure-bred Hereford in any of the classes, she having taken the same cup last year at Bristol. The competition for three dairy cows was watched with much interest, and there was a display of a tolerably even lot of good animals; but the judges had not much difficulty in making their awards, and the prize, by general consent, went to Mr. Joseph Stratton; while the Channel Islands cattle were just a good useful lot. Over the horses the awards of the judges did not receive the general approbation they generally do. Taken throughout, the horse show was a great improvement on those of previous years; and of sheep and pigs there was an average display.

PRIZE LIST.

JUDGES.—**SHORTHORNS:** S. Rich, The Cedars, Fearnall Heath, Worcester; R. Doig, Lillingstone Hall, Buckingham. **HEREFORDS:** T. Rogers, Coxall, Brampton Bryan; W. Evans, Llandowais Court, Usk. **SHEEP:** W. Rigden, Hove, Brighton; R. Garne, Aldsworth, Northleach; R. H. Masfen, Pendeford, Wolverhampton. **PIGS:** C. Randell, Chadbury, Evesham; E. Little, Lanhill, Cluppenham. **CART HORSES:** R. Craddock, Leynham, Chipping Norton; J. Rogers, Letchmore, Presteigne. **HUNTERS AND ROADSTERS:** Major Heywood, Ocle Court, Hereford; T. H. Hutchinson, Manor House, Catterick; J. C. Croome, Bagendon House, Cirencester. **CHEESE:** C. Brunsdon, Holm, Hereford; D. Long, Whaddon, Gloucester.

CATTLE.

SHORTHORNS.

Bulls above two years old.—First prize, £20, R. Stratton, The Duffryn, Newport; second, £10, B. St. John Ackers, Prinknash Park. Reserved: J. Wilson-Wilson, Austin House, Broadway.

Bull above one and under two years old.—First prize, £20, W. Garne, Broadmoor, Northleach; second, £10, W. Woodward, Tewkesbury. Reserved: Lieutenant-Colonel Loyd Lindsay, C.B., M.P.

Bull above six months and under one year old.—First prize £10, Lieutenant-Colonel Loyd Lindsay; second, £5, W. Garne. Reserved and highly commended: Earl Beauchamp.

Cow in calf, or in milk, having had a calf at its full time within twelve months of the day of exhibition.—First prize, £10, J. Stratton, Alton Priors; second, £5, R. Stratton. Reserved and commended: J. Wilson-Wilson.

Heifer in calf, or in milk, under three years old.—First prize, £10, R. Stratton; second, £5, B. St. J. Ackers. Reserved and highly commended: Earl Beauchamp.

Heifer under two years old.—First prize, £5, Rev. R. B. Kennard, Blandford; second, £3, Viscount Sudeley. Reserved: J. Bickford, Bushbury.

Heifer calf above six months and under one year old.—First prize, £5, Lieutenant-Colonel Loyd Lindsay; second, £2 10s., O. Viveash, Strensham. Reserved: B. St. J. Ackers.

For the best pure bred Shorthorn in the yard.—Challenge cup, value 100 gs., Rev. R. B. Kennard.

HEREFORDS.

Bull above two years old.—First prize, £15, Fenn and Harding; second, £7 10s., P. Turner, Pembridge. Reserved: H. J. Baily, Rosedale.

Bull above one and under two years old.—Prize, £15, H. N. Edwards, Leominster.

Bull above six months and under one year old.—First prize, £6, T. Fenn, Ludlow; second, £3, H. N. Edwards, Leominster.

Cow in calf or in milk, having had a calf at its full time within twelve months of the day of exhibition.—First prize, £6, T. Thomas, Cowbridge; second, £3, T. Thomas. Reserved: T. Cadle.

Heifer in calf or in milk, under three years old.—Prize, £6, T. Fenn.

Heifer under two years old.—First prize, £4 10s., P. Turner.

Heifer-calf above six months and under one year old.—First prize, £3, H. N. Edwards; second, £1 10s., H. N. Edwards. Reserved: E. J. Morris.

For the best pure-bred Hereford in the yard.—Challenge cup, value 25 gs., T. Thomas.

DAIRY COWS.

Three dairy cows in milk.—First prize, £20, J. Stratton; second, £10, Earl Beauchamp. Reserve: J. Bickford, Moseley Hall, Bushbury.

CHANNEL ISLANDS CATTLE.

Bull of any age.—Prize, £4, Rev. C. W. Grove, the Mythe. Reserve: N. N. Dyer, Bredon.

Cow or heifer in calf or in milk.—First prize, £4, Healing and Sons, Tewkesbury; second, £2, N. N. Dyer, Bredon. Reserve: C. Andrew, Ham Court. Commended: S. J. Martin, Upton-on-Severn.

BREEDING SHEEP.

LONG-WOOL.

Yearling ram.—First prize, £7, R. Swanwick, Royal Agricultural College Farm, Cirencester; second, £3, R. Swanwick. Reserve: J. Gillett, Tangley, Chipping Norton.

Ram of any other age.—First prize, £7, R. Swanwick; second, £3, J. Wheeler, Long Compton. Reserve: H. E. Raybird, Basingstoke. Highly commended: R. Swanwick.

Five yearling ewes.—First prize, £8, R. Swanwick; second £4, T. Thomas.

SHORT-WOOLS.

Yearling ram.—First prize, £7, H. S. Waller, Farmington; second, £3, Sir W. Throckmorton, Buckland. Reserved: H. S. Waller.

Ram of any other age.—First prize, £7, Sir W. Throckmorton; second, £3, H. S. Waller.

Five yearling ewes.—First prize, £8, Sir W. Throckmorton second, £4, H. S. Waller.

OXFORDSHIRE DOWNS.

Yearling ram.—First prize, £7, G. Wallis, Old Shifford; second, £3, G. Wallis. Reserved: C. Hobbs, Maiseyhampton.

Ram of any other age.—First prize, £7, G. Wallis; second, £3, G. Wallis.

Five yearling ewes.—First prize, £3, G. Wallis; second, £4, W. T. Horniblow, Ripple.

SHROPSHIRE DOWNS.

Yearling ram.—First prize, £7, Mrs. Beach, Brewod; second, £3, J. Pulley, Hereford. Reserved: J. H. B. Lutley, Brockhampton.

Ram of any other age.—First prize, £7, W. Baker, Atherton; second, £3, W. Baker.

Five yearling ewes.—First prize, £8, Mrs. Beach; second, £4, J. Pulley. Reserved and commended: W. Baker.

PIGS.

UNDER A YEAR OLD.

Boar of the Berkshire breed.—First prize, £5, R. Swanwick; second, £2, W. Hewer, Sevenhampton. Reserved and highly commended: A. Stewart, Gloucester.

Boar of any other breed.—First prize, £5, J. Dove, Bristol; second, £2, M. Walker, Burton-on-Trent. Reserved: J. Dove.

Sow of the Berkshire breed.—First prize, £4, A. Stewart, Gloucester; second, £2, R. Swanwick. Highly commended: R. Swanwick.

Sow of any other breed.—First prize, £4, M. Walker; second, £2, J. Dove. Reserved and commended: M. Walker.

OVER A YEAR OLD.

Boar of the Berkshire breed.—First prize, £5, W. Hewer, Highworth; second, £2, R. Swanwick. Reserved and highly commended: W. Hewer. Highly commended: H. Humfrey. Commended: H. Humfrey and A. Stewart.

Boar of any other breed.—Prize, £5, J. Dove. Reserved: J. Wheeler

Sow of the Berkshire breed.—Prize, £4, A. Stewart; second, £2, R. Swanwick. Reserved and highly commended: H. Humfrey. Commended: H. Humfrey and R. Swanwick.

Sow of any other breed.—First prize, £4, J. Wheeler; second, £2, J. Dove.

Three sow pigs of the same litter, under nine months old.—First prize, £5, A. Stewart; second, £2 10s., R. Swanwick. Reserved and highly commended: H. Humfrey. Commended: J. Wheeler.

Sow and pigs (not less than six), her own produce, the pigs under twelve weeks old.—First prize, £5, A. Stewart; second, £2 10s., R. Swanwick. Reserved and highly commended: J. Wheeler.

HORSES.

Stallion for agricultural purposes, above two years old.—First prize, £20, J. Yeomans, Wolverhampton; second, £10, S. Davis, Pershore. Reserved: W. Wynn, Alcester.

Mare and foal, her own offspring, for agricultural purposes.—First prize, £10, W. Friday; second, £5, R. Cochrane, Naunton. Reserved: I. James.

Gelding or filly for agricultural purposes, above two and under three years old.—First prize, £10, H. Reynolds, Dauntsey; second, £5, S. Davis, Woolashill. Reserved: W. Baker. Commended: E. Passey.

Gelding or filly for agricultural purposes, under two years old.—First prize, £8, withheld; second, £4, S. Davis.

Stallion calculated to get hunters or hacks.—First prize, £25, Earl of Coventry; second, £10, M. Biddulph, M.P. Reserved: Major J. Ballard.

Mare calculated to breed hunters, with her foal at foot, by a thoroughbred horse.—First prize, £10, C. Andrew, Upton-on-Severn; second, £5, H. Carter, Almondsbury.

Hunting mare or gelding of any age.—First prize, £20, T. H. Ashton, Temple Laigherne; second, £10, F. P. Jones, Cheltenham. Reserved: T. Cook, Taddington.

Hunting mare or gelding under five years old.—First prize, £15, W. Smith, Queenhill; second, £6, T. H. Ashton. Reserved: T. W. Brain. The class highly commended.

Hackney, equal to carry 15 stone, not exceeding 15 hands high.—First prize, £10, withheld; second, £5, W. Nicks, Gloucester.

Hackney, equal to carry 12 stone, not exceeding 15 hands high.—First prize, £10, Major Quantin; second, £5 5s., C. A. Jacobs, Clifton. Reserved: A. Perret.

Pony, above 12 and not exceeding 13 hands high.—First prize, £7, C. A. Jacobs; second, £4, C. Allen, Cirencester. Reserved: J. Bennett, Berkeley.

Pony, not exceeding 12 hands, to be ridden in the ring by boys.—First prize, £5 5s., C. A. Jacobs; second, £3, F. B. Jones, Cheltenham.

Ladies' hack, to be ridden by ladies, exceeding 15 hands high.—Prize, £5, C. A. Jacobs.

Harness horse, to be driven in harness round the ring.—Prize, £5, withheld.

CHEESE.

Hundredweight of thick cheese, not more than three cheeses to the hundred weight, made from land in his own occupation.—First prize, £5, S. M. Harding, Almondsbury; second, £2 10s., J. Smith, Nupdown. Highly commended: S. M. Harding. Commended: H. Reynolds.

Hundredweight of double cheese, not more than six nor less than four cheeses to the hundredweight, made from land in his own occupation.—First prize, £5, C. Harris, Berkeley; second, £2 10s., T. Witchell, Nympsfield. Highly commended: J. Smith. Commended: H. Reynolds.

Hundredweight of thin cheese, made from land in his own occupation, in the county of Gloucester.—First prize, £5, J. Smith, Thornbury; second, £2 10s., E. Wilkins, Bourton-on-the-Water. Highly commended: C. Hadley. Commended: W. Harris.

At the dinner, Mr. J. R. YORKE, M.P., said: You may ask "What has been done this session for agriculturists?" I am afraid I cannot say we have done very much; but then you must consider the circumstances under which the present Government came into office. They were called upon to propose their measures with very little time for deliberation; they were surrounded by claimants of every description, some reasonable and others unreasonable; and I am sure that in a session in which the ladies themselves have clamoured in vain for admission to the franchise the farmers of England will not be so ungracious as to regret that they were not preferred before the ladies. We have at any rate done something for the farmers this session—we have made an onward step in the matter of the relief of the grievances of the local taxpayers. The tax upon horses has been taken off, which in some cases will prove a considerable relief to the farmers, though they were not compelled even heretofore to pay for the beasts they used for their own purposes. I hope that in the next session we shall be able to give you a better account of our proceedings. There are, however, one or two matters on which I may congratulate you. In the first place we have a better prospect of a good

wheat crop than we have had for several years past; and in the next place news has lately reached us of what I hope will prove to be the final settlement of the agricultural labourers' dispute in the Eastern Counties. It is owing to the undaunted courage and perseverance of the farmers in those counties that that dispute has been brought to a final termination. I can only express a hope that the farmers will be as moderate in their victory as they have been determined in the fight, and that they will recollect that the men who have been counselled to take a course which in the end has proved so disastrous to them, are kindly, honest, and simple folk, who have been misled by the men who have deluded them for their own purposes. Now the battle is over I trust that both parties will shake hands, and go on in the future as good friends as they have been in the past.

Sir E. H. LECHMERE, the President, expressed a hope, with regard to the over-fatted pigs, that the Royal Agricultural Society, or one of the local societies, would some day devise a means by which they might have some standard in accordance with which such animals as pigs should be sent for exhibition, instead of their being exhibited as at present in a frightful state of obesity. He suggested the desirability of three such societies as the Hereford, the Worcester, and the Gloucester Agricultural Associations sometimes holding a united meeting.

Mr. E. BOWLY said: I hope this labour question is now settled. There is one thing which Mr. Arch and some of his people have been trumpeting about the country which I must deny. They say that if the land were divided into four-acre pieces we should be in a much better state than at present. I can only tell you that if you come to four-acre pieces you will be starved; everybody knows that who knows anything they are talking about; but these labourers, and a parcel of shopkeepers, shoemakers, and tailors, who go spouting about the country don't know any better. Let any practical man come to me, and I will take him a drive of fifty miles and show him that the largest farms are the best cultivated and produce the best crops (Shouts of "No, no," from outside the tent, and "Quite right," from within). Come up to me and I will show you; it is a parcel of humbug to tell me differently. It was tried by Fergus O'Connor years ago, and he brought ruin on every parish in which he tried it.

A CAUTION TO BUYERS.—A case has been in dependence for some time before Sheriff Shirreff, which may prove useful as a hint to farmers to exercise as much caution as possible in their transactions at cattle markets. At last, Hallow Fair, Mr. Johnston, Letham Mains, accompanied by one of his sons and Mr. Cameron, a son-in-law, were in the market looking after cattle. While there they were accosted by Aaron Sisson, a reputed cattle dealer, who showed them a lot of stirks, ten of which Mr. Johnston purchased for £95, £50 being at once paid in cash, and credit being given for the remainder. Some time afterwards, Sisson met Andrew, another son of Mr. Johnston's, and asked him for a bill for the remainder of the price of the cattle, which, on application to Mr. Cameron, was granted, and cashed by Sisson, Mr. Cameron duly meeting it at maturity. So far, to all appearance, the transaction seemed closed; but Mr. Johnston, after the bill had been granted, was applied to by Messrs. Robert and David Campbell, farmers and cattle dealers, Whitehough, Roxburghshire, for payment of the balance of the price of the cattle, founding their claim on the fact that the cattle sold were not the property of Sisson, but belonged to them at the time of the sale, and that Mr. Johnston, when he bought them, was aware of the real ownership. The claim resulted in an application to the Sheriff, who took a long proof in the case, and heard a good deal of evidence on both sides. The other day he issued his interlocutor, in which, after narrating the facts as they came out in the evidence, he finds that the balance of proof is in favour of the defender, and that the pursuers have failed to prove that at the time of the sale Mr. Johnston was warned by them that the cattle belonged to them, and not to Sisson. He therefore leaves the pursuers to find their remedy against Sisson, who on his side asserts that he was part owner of the cattle, and assuizes Mr. Johnston from the conclusion of the summons with expenses.

MALTON AGRICULTURAL SOCIETY.

PRIZE LIST.

JUDGES.—HUNTERS and HAKCS: R. Botterill, Waudby Brough; J. Hall, Sedgfield, Durham; J. Holliday, Barnston, Burlington. COACHING and AGRICULTURAL: S. Robson, Deighton, Wetherby; J. Stephenson, Wheldrake, York; W. Stephenson, Cottingham, Hull. CATTLE, SHEEP, and PIGS: T. Dodds, Wakefield; W. Brown, Holme-on-Spalding Moor; B. Topham, Bainton, Driffield. IMPLEMENTS: W. Smith, Mowthorpe; R. Ellerby, Salton.

HORSES.

Hunting colt foal.—First prize, Miss Starkey, Ilutton; second, W. Muzeen, South Holme.

Hunting filly foal.—First prize, W. Muzeen; second, H. Watson, Filey.

Coaching colt or filly foal.—First prize, J. Wood, Gilling; second, J. Reader, Holme-on-Spalding Moor.

Roadster colt or filly foal.—First prize, J. Hickson, Swinton; second, W. Harrison, Stingsby.

Agricultural colt foal.—First prize, T. Scooby, Rook Barugh; second, W. Tennant, Selby. Commended: F. C. Lett, Leavening.

Agricultural filly foal.—First prize, G. Oliver, Old Malton; second, J. Elsworth, Yedingham.

Yearly hunting gelding.—First prize, W. Muzeen; second, J. Inman, Boroughbridge.

Yearling hunting filly.—First prize, R. Barker, Malton; second, H. Bleasby, Carlisle.

Yearling coaching gelding or filly.—First prize, J. Houlden, Langton; second, W. Welburn, Whitley.

Yearling roadster gelding or filly.—First prize, W. Harrison; second, R. Yates, Malton.

Yearling agricultural gelding or filly.—First prize, T. Scooby; second, H. Brown, Stensall.

TWO-YEAR-OLDS.

Hunting gelding.—First prize, J. Sedman, Pickering; second, Sir G. Cholmley, Howsham. Commended: L. Parker, Thorpebasset.

Hunting filly.—First prize, S. B. Robson, Ganton; second, W. Halton, Oswaldkirk.

Coaching gelding or filly.—First prize, J. White, Easingwold; second, W. Peacock, Bulmer. Commended: J. Miles, West Heslerton.

Roadster gelding or filly.—First prize, J. Champion, Thorpebasset; second, L. Parker.

Agricultural gelding or filly.—First prize, W. Preston, Burythorpe; second, G. Harrison, Newton-on-Derwent. Commended: J. Stillborn, Ilutton.

THREE-YEAR-OLDS.

Hunting gelding.—First prize, J. P. Crompton, Burton Agnes; second, S. B. Robson, Ganton. Highly commended: H. Watson, Filey.

Hunting filly.—First prize, H. Brigham, Settrington; second, J. Lett, Scampston.

Coaching gelding or filly.—First prize, G. Leefe, Fryton; second, T. Stamper, Nunnington.

Agricultural gelding or filly.—First prize, J. Cussons, Oswaldkirk; second, W. Duggleby, Duggleby. Commended: W. Duggleby.

BROOD MARES.

Mare, with foal at foot, for hunting purposes.—First prize, H. Watson; second, J. T. Robinson, Helperby. Highly commended: W. Muzeen.

Mare, with foal at foot, for agricultural purposes.—First prize, T. H. Hutchinson, Catterick; second, W. Tennant.

Mare, with foal at foot, for coaching purposes.—First prize, J. Reader; second, J. Wood.

PONIES.

Pony not exceeding 14 hands.—First prize, W. H. Blackman, Howden; second, T. Mitchell, Bradford. Highly commended: H. Smithson, Malton.

Pony not exceeding 12 hands.—First prize, J. Robson, Old Malton; second, Rev. R. J. Cooper, Whitley. The class generally commended.

Four-year-old hunting gelding or filly.—First prize, R. Holtby, Driffield; second, R. Ellerby, Salton.

Five-year-old hunting gelding or filly.—First prize, F. P. Newton, Norton; second, W. Johnson, Norton. For jumping: First prize, F. Robson, Thoroton Marshes; second, J. Burnett, Langton.

Lady's hack.—First prize, J. Welburn, Seackleton Grange; second, R. Barker, Malton.

Gentleman's hack.—First prize, W. H. Crauswick, Burton Agnes; second, C. Rose, Malton.

Pair of agricultural horses, mares, or geldings, that have been regularly worked by a tenant-farmer, and used exclusively for farming purposes.—First prize, T. Ellerby, Whitwell; second, W. Tennant.

Horse or mare of any age, that has been regularly used for carting purposes in the borough of Malton.—First prize, W. and J. Metcalfe, Malton; second, W. and G. Lovel, Norton.

Gelding or mare for single harness, to be driven on the ground.—First prize, T. G. Mallory, Great Habton; second, C. Rose, Malton. Highly commended: W. Muzeen.

SPECIAL PRIZES.

Foal, colt, or filly, by Black Douglas.—First prize, G. Oliver, Old Malton; second, W. Thorpe, Scagglethorpe. Commended: J. Hicks, Scagglethorpe.

Foal, colt, or filly, by George Osbaldeston.—First and second prizes, W. Muzeen.

Foal, colt, or filly, by Dear Tom.—First prize, Miss Starkey; second, J. Hickson, Swinton.

Foal, colt, or filly, by Dalby.—First prize, W. Boyes, Slingsby; second, W. Smith, High Mowthorpe. Commended: E. Woodward, Welburn.

Foal, colt, or filly, by Blooming Heather or Wellington.—First prize, F. C. Lett; second, W. Bradshaw, Amotherby.

Three-year-old agricultural gelding or filly.—Prize, silver cup, J. Headley, Catterick. Highly commended: J. Smith, Helperby.

CATTLE.

Bull, over one and under two years old.—First prize, C. and J. Smith, Westerdale; second, C. Leonard, Sledmere. Highly commended: Rev. W. B. Prest, Ampleforth College.

Bull, under twelve months old.—First prize, W. Smith, High Mowthorpe; second, T. Stamper, Nunnington.

Cow, in calf or milk.—First prize, T. H. Hutchinson, Catterick; second, executors of F. Jordan, Driffield. Highly commended: T. Stamper. Commended: J. Snarry, York.

Heifer, over two and under three years.—First prize, T. H. Hutchinson (objected to); second, T. Strickland, Thirsk. Highly commended: C. and J. Smith, Yarm.

Heifer, over one and under two years old.—First prize, T. H. Hutchinson; second, T. Strickland. Highly commended: J. Corner, Slingsby. (First prize objected to on account of having won prize at the Royal or Yorkshire Show.)

Heifer, under twelve months.—First prize, W. Smith, High Mowthorpe; second, J. Corner.

Beast of any age or breed.—First prize, J. Key, Musley Bank; second, J. Fenwick, Swinton.

Cottager's cow.—Prize, J. Walker, Coneysthorpe.

Bull of any age.—First prize, G. Jackson, East Ayton, York; second, executors of F. Jordan. Highly commended: I. Garbutt, Farndale.

Cow for dairy purposes.—First prize, J. Borton, Barton-le-Street; second, F. Coates, Little Habton. Highly commended: J. Russell and Sons, Malton.

Best female animal in the yard.—Prize, T. H. Hutchinson.

SHEEP.

Aged ram.—First prize, T. H. Hutchinson; second, W. Coverdale, Helmsley (Leicester).

Shearing ram.—First and second prizes, T. H. Hutchinson.

Tup lamb.—Second prize, W. Coulson, Gatherley, Castle Howard.

Five gimmer shearlings.—First prize, executors of F. Jordan; second, T. H. Hutchinson. Highly commended: R. Tarbottom, Cawton.

Five gimmer lambs.—First prize, A. Robson, Howe Bridge; second, F. Coates.

Five wether lambs.—First prize, H. Robson; second, F. Coates.

EXTRA STOCK.—First prize, W. Coulson; second, G. Wright, Broughton.

Five ewes that have suckled lambs up to the 1st July.—First prize, cup, W. S. Lovel, Knapton; second, T. H. Hutchinson. Highly commended: W. Coverdale, Lund Court.

Three shearling rams.—First prize, piece of plate, T. H. Hutchinson; second, W. Kendall, East Ness. Highly commended: W. Coverdale.

Best pen in classes 51, 52, and 53.—Prize, piece of plate, executors of F. Jordan.

PIGS.

Sow, middle breed.—First prize, H. Blanchard, Malton; second, Major Worsley, Hovingham; extra, — Graham, Leeds.

Boar, middle breed.—First prize, W. Lister, Arnley, Leeds; second, G. Sedgwick, York.

Sow, small breed.—First prize, W. Lister; second, G. Sedgwick.

Boar, small breed.—First prize, — Graham; second, G. Sedgwick.

Three store pigs.—First prize, R. Smeeton, Mennithorpe; second, T. Strickland, Thirsk Junction.

Cottager's pig, rent under £12 per year.—First prize, — Graham; second and third, E. Lawson, Elswell; fourth, I. Dobson, Swinton.

IMPLEMENTS.

Corn hoe.—First prize, H. Bushell, York (Priest and Woolnough's R.A.S. prize horse-hoe); second, R. Yates, Malton.

Dog-cart or Whitechapel.—First prize, Pickering and Co., Beverley; second, F. Houlgate and Co., Scarborough.

Swing-gate.—First prize, H. Bushell; second, Read, Malton.

Blacksmith, shoeing horses for riding.—First prize, J. Yorke, Malton; second, J. Waller, Malton.

Stand of implements.—First prize, R. Yates; second, T. Read.

Single-horse waggonette.—Prize, Pickering and Co.

THE DORCHESTER AGRICULTURAL SOCIETY.

MEETING AT DORCHESTER.

PRIZE LIST.

JUDGES.—CATTLE AND HORSES: J. Ford Rushton; J. Coate, Hammoor; Walter Farthing, Bridgwater. SHEEP: E. Cave, Almer, Blandford; Culverwell, North Petherton, Bridgwater; and G. Tett, Chesilborne.

CATTLE.

Bull under two years.—Prize, £3, J. A. Smith, Bradford Peverell.

Three heifers, under two years old.—Prize, £5, J. A. Smith.

Bull, above two years old.—Prize, £5, C. Davy, Horn Park, Beaminster. Highly commended: S. Bennett, Wareham.

Three dairy cows, under seven years old.—Prize, £5, J. A. Smith.

Three heifers under three years old.—Prize, £3, J. A. Smith.

SHEEP.

Dorset ram.—Prize £2, A. J. Pitfield, Eype.

Southdown ram.—Prize, £2, G. W. Homer, Athalhamp-ton.

Short-woolled ram, otherwise than horned or Southdown.—Prize, £2, and highly commended, T. C. Saunders, Watercombe.

One-year Dorset ram.—Prize, £2, A. J. Pitfield.

One-year Southdown ram.—Prize, £2, G. W. Homer.

One-year old short-woolled ram, otherwise than horned or Southdown.—Prize, £2, T. C. Saunders.

Pair of Dorset ram lambs.—Prize, £1, A. J. Pitfield.

Pair of Southdown ram lambs.—Prize, £1, G. W. Homer.

Pair of short-woolled ram lambs, otherwise than horned or Southdown.—Prize, £1, G. W. Homer.

Horn stock ewes (100) under two years old.—Prize, £5, W. S. Hull, Druce.

Twenty Southdown full-mouthed ewes.—Prize, £5, Harding, Waterson.

Twenty short-woolled ewes, otherwise than horned or Southdown, under two years old.—Prize, £5, T. C. Saunders.

Down stock ewes (100), under two years old.—Prize £5, E. Baunton, West Knighton.

Twenty Dorset full-mouthed ewes.—Prize, £5, A. J. Pitfield.

Twenty Dorset ewes, under two years old.—Prize, £5, A. J. Pitfield.

Twenty short-woolled full-mouthed ewes, otherwise than horned or Southdown.—Prize, £5, G. Wood Homer.

Twenty Southdown ewes, under two years old.—Prize, £5, E. Baunton, West Knighton.

Twenty chilver lambs.—Prize, £5, J. H. Saunders, Forston.

PIGS.

Boar.—Prize, £5, H. W. Hawkins, Martinstown.

Three breeding sows.—Prize, £5, J. A. Smith. Highly commended: T. Walden, Came.

HORSES.

Pair of cart horses, not exceeding five years of age.—Prize, £5, T. Chick, Stratton.

Cart stallion.—Prize, £5, T. Chick.

Hackney colt or filly, under four years old.—Prize, £5, Chamen, Charmister. Highly commended: Mr. Hooper, Turner's Puddle.

Cart, colt or filly, under three years old.—Prize, £5, J. H. Saunders, Forston. Highly commended: J. A. Smith.

Cart mare and foal.—Prize, £5, J. Chick, East Compton. Highly commended: T. A. Homer, Tolpuddle.

THE BRIDLINGTON AGRICULTURAL SOCIETY.

PRIZE LIST.

JUDGES.—SHEEP, CATTLE, PIGS, AND AGRICULTURAL HORSES: J. Simpson, Staveley, Tibthorpe, Driffield; W. Brown, Holme-on-Spalding-Moor; T. Barber, Sproatley Rise, Hull. Hunting, Roadster, and Coaching Horses: T. Ellerby, Whitwell, York; J. T. Robinson, Leckby Palace, Thirsk; T. Robinson, Nuthill, Hedon.

SHEEP.

Shearling ram adapted for the district.—First prize, S. Tatham and C. T. Leake, Brough; second, J. J. Simpson, Hunmanby.

Pen of three shearling rams adapted for the district.—First prize, T. H. Hutchinson, Catterick; second, J. J. Simpson.

Pen of five shearling gimmers.—First prize, T. H. Hutchinson; second, R. Tarbotton, Cauton Gilling.

The entries were more numerous than at any previous show of the Society: sheep 34, cattle 25, horses 205, pigs 30. The sheep included shearlings from Mr. Hutchinson's flock at Catterick, and many from farms in this district, and Mr. Hutchinson was also a large exhibitor of Shorthorns. Sir Talbot Constable, was another successful exhibitor of stock bred on his own estate. The principal award for aged Shorthorns, however, went to Knight of the Vale. The hunters included among their number the majority of prize-takers, King of Diamonds, Palmerston, Rover, and some 16 others being entered for the silver cup for the best hunter.

Ten wether lambs.—First prize, J. and C. Nesfield, Buckton; second, E. A. Hay, Buckton.

Ten gimmer lambs.—First prize, E. H. Bowser, Reighton; second, J. J. Simpson.

EXTRA STOCK.—Ten gimmer lambs: First prize, E. H. Bowser; second, J. J. Simpson.

SHORTHORNS.

Two years old or aged bull.—First prize, G. Jackson, Ayton; second, G. Harrison, Newton-on-Derwent.

Yearling bull.—First prize, Sir T. C. Constable, Hull; second, J. T. Robinson, Driffield.

Bull-calf under twelve months old.—Prize, Sir T. C. Constable.

Cow in calf or in milk.—First and second prizes, T. H. Hutchinson.

Two years old heifer.—First prize, T. H. Hutchinson; second, F. Strickland, Thirsk.

Yearling heifer.—First prize, T. H. Hutchinson; second, F. Strickland.

Fat ox, cow, or heifer of any age.—Prize, T. Crompton, Lowthorpe.

HORSES.

Hunting mare and foal.—First prize, H. Watson, Filey; second, Sir G. Cholmley, Bart., Boynton Hall.

Three years old hunting gelding.—First prize, J. P. Crompton, Bridlington; second, S. B. Robson, York.

Two years old hunting gelding or filly.—First prize, H. Watson, Newbegin, Filey; second, J. J. D. Jefferson, Thicket Priory, York.

One-year-old hunting gelding or filly.—First prize, Sir G. Cholmley, Boynton Hall; second, W. Hall, North Burton, York.

Coaching mare and foal.—First prize, J. Reader, Holme on Spalding Moor, York; second, J. Tran, Anlaby, Hull.

Three years old coaching gelding.—First and second prizes, J. Johnson, Brigham, Driffield.

Three years old coaching filly.—Prize, J. Kirby, Burton Fields, Stamford Bridge.

Mare or gelding for agricultural purposes.—First prize, cup, W. H. Cranswick, Thirpholme; second, W. Stephenson, Cottingham.

Hackney mare and foal.—First prize, Mrs. Cook, Huggate, Pocklington; second, Mr. Agnello, Kirby, Market Weighton.

Three years old hackney gelding or filly.—First prize, W. Stephenson; second, J. Major, York.

Two years old hackney gelding or filly.—First prize, J. Wilde, Holme, York; second, J. Taylor, jun., Burton Agnes.

Mare or gelding for agricultural purposes.—First prize, cup, W. Tennant, Barlow, Selby; second, W. Tennant.

Mare and foal for agricultural purposes.—First prize, R. Wise, Bridlington; second, Mrs. Woodcock, Flæmbro' Head Farm.

Three years old agricultural gelding or filly.—First prize, T. Hornby, Wansford; second, J. Sawden, Bessingby.

Two years old agricultural gelding or filly.—First prize, G. Everingham, Brough; second, E. Nesfield, Scarbro'.

Nag or mare pony, not exceeding 14 hands high.—First prize, cup, J. W. Jordan, North Burton; second, J. Scott, South Cliff, Brough.

Nag or mare pony, not exceeding 12 hands high.—First prize, C. B. Hudson, Harpham; second, A. Blanshard, Whitton Brigg.

Hunting stallion.—First prize, W. H. Simpson, Market Weighton; second, H. Trowell, Preston, Hull.

Roadster stallion.—First prize, G. and D. Bourdas, Bridlington; second, R. Cowton, Kelk, Lowthorpe.

Coaching stallion.—First prize, R. Harper, Kisby, Beverley; second, J. Sherbourne, High Calton, York.

Stallion for agricultural purposes.—First prize, W. Robson, Old Malton; second, J. Johnson, Bampton.

SPECIAL PRIZES.

Hunting mare or gelding, any age.—First prize, cup, H. Jewison, Raisthorpe, York (Palmerston); second, T. Darrell, Spicker's-hill, West Ayton, York. Highly commended: J. P. Crompton, Thornhole, Bridlington.

Hunting mare or gelding, four years old.—Prize, cup, T. Darrell.

Best jumper of any description.—First prize, cup, W. W. Lovel, Nafferton Grange, Driffield; second, J. P. Crompton.

Lady's hack that has not won a prize.—Prize, 2 gs., W. Simpson, Bridlington.

PIGS.

Boar, large breed.—First prize, W. Lister, Armley, Leeds; second, G. Chapman, Scamer, Scarborough.

Sow or gilt, large breed.—First prize, Mr. Graham, Leeds; second, W. Lister.

Boar, middle breed.—First prize, Mr. Graham; second, G. Chapman.

Sow or gilt, middle breed.—First prize, W. Lister; second H. Blanshard, Malton.

THE HIGHLAND AND AGRICULTURAL SOCIETY OF SCOTLAND.

MEETING AT INVERNESS.

It must be a matter of wonder to the older Highland Chiefs and the members of their clans, of whom there are here some grand specimens dressed in their picturesque costume, to see in this their Highland capital, 200 miles north of Edinburgh, such an exhibition of implements and stock as is now shown brought together. The first Agricultural Show which was held at Inverness was in 1831, at which time the total stock shown was 428, implements 4, premiums offered £318; whilst now the total stock is 1,597, implements 1,000, premiums £2,030: such has been the effect upon the Highland Society of the progress of enterprise and civilisation—aided, doubtless, most materially by the indefatigable exertions of the Society's past and present secretaries, who, with a small private staff of assistants, appear to bear or have borne upon their shoulders the whole management.

A great number of the implements were despatched by the exhibitors early in last week, and many of the cattle arrived on Saturday night; and thus, notwithstanding the limited facilities afforded by a single line of railway, and a little grumbling on the part of passengers, when the judges entered the yard on Tuesday everything appeared orderly and in its place. After a short committee-meeting, the judges were handed over to the care of attending members, policemen, and an army of men with

ropes; and so despatched to their duties in a most methodical and characteristic manner. In the midst of their labours occurred a thunderstorm of almost tropical violence; the rain fell in torrents; the field being flat, was almost flooded; and directors, attending members, and judges might be seen clambering about from hurdle to hurdle in a most undignified manner, to escape the pools of water which threatened to swallow them up. The roof of the Grand Stand was struck with lightning, and then blown clean off by the wind; happily, without damage to man or beast.

The Shorthorn classes were well represented, and although there were several blank stalls amongst the aged bulls, yet that class cannot be said to have been badly represented, when two such bulls as Lord Irwin and the Duke of Aosta were in it. As might have been expected when two such champion met, each one had its admirers and friends; and we suspect that the judges themselves were somewhat divided in opinion as to which they should put first. We rather faucied the younger one, for he has beautiful quality, straight back, well-sprung ribs, and good flanks; whilst the old one is a little inclined to be gummy, and therefore, too, does not look so good in the flank; still, he is a great animal. Mr. Linton's two-year-old is a good quality beast, but what we

thought the most promising bull in the Show was Mr. Browne's (of Chathill) yearling bull-calf Rosario, by Duke of Aosta. He is quite worthy of his sire, and, if lucky, will soon equal if not excel him. He is a trifle coarse in his horn, but will improve of that.

In the old cow class Her Majesty shows a very good-looking animal—Coldcream 4th; but she was not noticed by the judges; and Mr. R. Bruce took first prize with a very pretty little cow—good quality and back. Mr. Lawrence's entry is a fine, long, good-coated beast, and one not easy to beat in a competition. Her Majesty's first prize heifer is "little and good;" whilst Mr. Cran, a local breeder, does credit to his county by bringing forward Nectar in this class, and bearing off third prize. Mr. Marr shows a very beautiful heifer-calf, and the Duke of Richmond brings out a very nice couple. Indeed, the Shorthorns on this side of the Border are very good, and England will have to "look to herself;" for the Scotch have in their Shorthorns, not only size and quality, but also constitution, from the healthy manner in which they keep their stock.

Thus, on our road here, we stayed at Fisher's Hotel, Pitlochrie (well-known to tourists), and hearing Mr. Fisher had been a breeder of Shorthorns for twenty years, we asked him to show them to us. After a walk of about a mile, we arrived at a field of clover on a mountain-side, really divided only by a wall from the hill pasture of heather and woods. Here, to our astonishment, we found a splendid herd of Shorthorn cows and calves grazing, of pure Booth and Knightley blood, looking in good bloom and condition. And Mr. Fisher assured us that they had no artificial food, but only what they could pick up for themselves; adding that he had made up his mind to sell off the whole herd in October. We could not help thinking that those who want quality, size, and constitution should attend the sale.

One great feature in this show is the splendid class of Polled Angus: as we were told it was the best display ever seen. They have size and quality, and are also said to have good feeding and milking qualities—are hardy and appear to come early to maturity. The friends of the Galloway cattle, however, claim for them superiority in hardihood, milking, and feeding properties; but they appear to us to be coarser in quality and hair, and altogether not such "taking" animals. The first beast in the class was an old bull, which had won first prize at Kelso in 1872, a very large, long animal, but not in show condition, probably because in this class, as also in other classes, the bull and cow which have taken the Society's prize at a previous show appear to be brought up at the ensuing show to receive a gold medal without competition.

The Duke of Buccleuch bore off most of the prizes in the Galloway and Ayrshire classes, there not being a great show of Galloways. The Ayrshire entries were not large, but very good. The first-prize old bull is a fine beast, with capital quarters, but a little want of rib. Amongst the cows in milk cases were discovered in which their udders and teats had been "doctored" before entering the show-yard, for the purpose of improving their appearance. We are sure, in some cases, that the owners had not lent themselves to such a proceeding, and that the directors need only promulgate their views on the matter to exhibitors, and the practice will be stopped, especially if it were publicly notified that all cows would be examined by competent judges on their entry into the show-yard. Perhaps the best cow of this class was the Duke of Buccleuch's Modesty, though in point of size she was distanced by the second-prize cow belonging to Mr. Graham, of Paisley: to an Englishman's eye the latter appeared the more useful animal to breed from; but she

is said to be almost too large for the pastures in the West.

The Highlanders were grand beasts, and a large class, Mr. John Stewart taking the gold medal for a magnificent black cow, seven years old. There appears to be some difficulty in this class, on account of the animals' wildness, in ascertaining their ages, and in making sure that no animal is shown in a class to which it is not entitled. The first-prize four-year-old fat ox, belonging to Sir W. Gordon Cumming, is a perfect mountain of flesh.

The show of Clydesdales was quite up to the average, especially when we remember that the breed has only of late years penetrated so far north as Inverness. We think Mr. Riddell's Never-Mind-Him a good horse, and fairly entitled to the first prize; but in the three-year-old class we can scarcely coincide with the judges' decision. Honest Sanday is a nice colt, but wants middle; whilst the second-prize horse is bigger and better in most of his points. The mares in foal were a very good class; and amongst the two-year-olds Mr. Hurdie's filly was quite admirable. We thought Mr. Clarke's first-prize carriage horse looked more like hunting than "machinery;" while Sir Dudley Marjoribanks shows two nice harness horses, two roadsters, and a very good pony under 14 hands. But the chief sight of the day was a little roan pony under 12 hands, belonging to Miss Norton, Rannoek Lodge—a perfect picture, like a beautiful miniature coach-horse, for which we understand the fortunate owner had £300 bid at Islington. The hunters were not good, and the leaping a failure.

The sheep at the show consisted chiefly of Cheviot, Border Leicester, and Blackfaced or Mountain sheep; of which three classes there was a good and large display. To begin with the Cheviots, it struck us that no animal appeared more capable of improvement by care and breeding than this. One could scarcely suppose that some of the prize animals here were of the same genus as those one occasionally sees hawked about at markets under the name of Cheviots. The first-prize tup above one shear was a beautiful short-legged, good-wooled animal, full of mutton, really almost fit, as far as shape went, to compete as a Southdown. The first-prize shearing tup was a pretty sheep; but evidently his owner, Mr. Johnson, of Moffat, for some reason best known to himself had not given sufficient time or pains to get him into show condition, and we fancied the judges had shown considerable discrimination in selecting this sheep for the first prize. Amongst the blackfaced sections, Mr. Archibald, of Overshiels, showed some grand sheep, such as might produce first-class four-year-old wether mutton; and the Border Leicester was a good class. Mr. Thomas Foster, Northumberland, carried off the first prize amongst the tups above one shear with a fine large sheep, good quality and wool; whilst among the shearing tups we fancied Mr. Andrew Smith's sheep, who took the third prize, and also thought that if Sir George Dunbar could have brought up five gimmers as good as were four of his lot, he might have had a chance of bearing off the highest honours instead of only third. Mr. Colman showed two good tups in the Southdown class; if both first and second-prize sheep were somewhat deficient behind, and the latter also inclined to "run to gut," whilst his ewes were a very nice lot and of good character. We thought Mr. Colman's shepherd entitled to great credit for the way in which his sheep were got up. We observed in the Shropshire tup class that the judges did not award a first prize; as we presume they considered Lord Strathmore's sheep to which they awarded second prize did not come up to the mark with regard to his back whilst possibly they considered the third prize sheep, somewhat coarse and short, and doubtless he had large slugs or horns. There was another very good three-shear

sheep of Lord Strathmore's in the yard, but he was not qualified to compete, as he had won the Society's prize last year. The Strathmore gimmers (first prize) were good; but in this class, and in several other sections, the sheep's tails were cut off so short that it is impossible to know whether they would or not have had good docks. Amongst the cross-bred hogs, there were three very good sheep exhibited by Mr. Sutherland, and got by a Shropshire tup out of Cheviot-Leicester ewes.

The implement show was large, but with nothing very worthy of noting for its novelty. There were Hughes' patent laid-corn lifter, a very useful-looking implement, invented by a Midland Counties tenant-farmer; Hope's improved stone-crusher, and the Sutherland plough, which we hope, by his Grace's kind invitation to the directors and judges, to see at work at Laing. We understand the Duke intends to bring into cultivation by means of this plough one thousand acres a year at a cost of about £24 per acre, and it is supposed the rental value of the land afterwards will average about £1 per acre. His Grace is said to have 40,000 acres to work on.

The Inverness Show has certainly been a success in one way if not in another. Up to Wednesday evening the receipts were £600 short of those at Stirling last year, at the same period of the show; and yet Stirling meeting entailed a loss. We cannot conclude this letter without acknowledging the extreme kindness and courtesy with which we have been treated by every member of the Society with whom we have been brought in contact.

PRIZE LIST.

JUDGES.—CATTLE—Shorthorns: J. Reid, Greystone, Alford, Aberdeen; J. Wood, Harewood Hill, Darlington; A. Young, Keir Mains, Dumblane. Polled Angus or Aberdeen: The Hon. Charles Carnegie; R. Hampton, Castle Fraser, Aberdeen; G. J. Walker, Portlethen, Aberdeen. Galloways: M. Clark, Culmain, Crocketford; W. Routledge, Elrig, Port William. Ayrshire: H. D. B. Hyslop, Tower, Sanquhar; H. Kirkwood, Killermont, Maryhill, Glasgow; D. Tweedie, Castle Crawford, Abington. Highland: D. Fayer, Knowehead, Campsie, J. McArthur, Accurach, Inverary; D. Stewart, Achalader, Tyndrum. Fat stock: M. Elliot, fletcher, Inverness; J. Geddes, Orbliston, Fochabers; A. Mitchell, Alloa. HORSES—For agricultural purposes: S. Clark, Manswrae, Kibbarchan; J. Dove, Crosshall, Coldstream; L. Drew, Merryton, Hamilton. Hunters, roadsters, and ponies: J. Hope, Duddingston, Edinburgh; N. Milne, Faldenside, Melrose; A. Gillon, Wallhouse. SHEEP—Cheviot: G. Maccall, Burrance, Lockerbie; J. Miller, Dowareay, Thurso; J. Scott, Delorain, Selkirk. Blackfaced: [As for Highland cattle.] Border, Leicester, and other longwooled sheep; T. Ferguson, Kennoctay, Coupar Angus; R. Hardie, Harrietfield, Kelso; T. Harris, Stoneylean, Bromsgrove. Southdown, Shropshire, and other shortwooled sheep: R. Scot Skirving, Camptown, Drem; R. C. Yeoman, Marske Hall, Marske, Yorkshire. PIGS: J. Gibson, Woolmet, Dalkeith; C. Small Keir, Kindrogan, Pitlochrie; P. B. Swinton, Holyon Bank, Haddington. COLLIE DOGS: Cluny Macpherson, Cluny Castle, Kingussie. J. Blake, Dunsrobin Mains, Golspie. IMPLEMENTS—The Society's inspecting committee: W. Iluiter, Thurston; D. Stevenson, C.E.; J. D. Park, Edinburgh; Professor Wilson, Edinburgh; J. Munro, Fairnington, Kelso; T. Mylne, Nyddrie Mains; R. Wilson, Durn, Perth; R. Hutchinson, Carlowie, Kirkliston.

CATTLE.

SHORTHORNS.

Bulls calved before 1st January, 1873.—First prize, R. Bruce, Newton of Stuthers, Forres; second, A. H. Browne, Duxford, Chathill, Northumberland; third, W. Marr, Uppermill, Targes; fourth, W. Scott, Glendronach, Huntly.

Bulls calved after 1st January, 1873.—First prize, W. Linton, Sheriff Hutton, York; second, J. Fletcher, Rosehaugh Avoch; third, E. Baillie, Dochfour, Inverness.

Bulls calved after 1st January, 1873.—First prize, A. H.

Browne; second, J. Bruce, Burnside, Fochabers; third, E. Baillie; fourth, R. Scott, Maubean, Elgin.

First prize cows at former shows, exhibited for medium gold medal (Stirling, 1873), when the property of present exhibitors.—A. H. Browne.

Cows of any age.—First prize, R. Bruce; second, W. Mitchells, Auncagathie; third, J. Cran, Kirkton, Inverness; fourth, J. Laurence, Thornhill, Forres.

Heifers calved after 1st January, 1872.—First prize, The Queen; second, W. S. Marr, Uppermill; third, J. Cran; fourth, A. Longmore, Retrie, Banff.

Heifers calved after 1st January, 1873.—First prize, W. S. Marr; second, The Duke of Richmond, Gordon Castle, Fochabers; third, J. Bruce; fourth, J. J. Sharpe, Broughton, Kettering, Northampton.

POLLED ANGUS OR ABERDEEN.

First prize bulls at former shows, exhibited for medium gold medal (Kelso, 1872), Sir G. Macpherson Grant, of Ballindalloch, Bart. (Adrian).

Bull calved before 1st January, 1873.—First prize, A. Bowie, Mains of Kelly, Arbroath; second, the Earl of Fife, K.T., Duff House; third, Sir G. Macpherson Grant; fourth, W. Robertson, Burnside, Ballindalloch.

Bulls calved after 1st January, 1872.—First prize, J. Scott, Easter Tulloch, Stonehaven; second, G. Reid, Baads, Paterculter; third, G. Gordon, Tullochhallum, Duftown; fourth, J. Morrison, Auchlen, Turriff.

Bulls calved after 1st January, 1873.—First prize, The Earl of Fife; second, G. Reid; third, W. McCombie, Easter Skene; fourth, W. J. Taylor, Rothiemay House, Huntly.

First prize cows at former shows, exhibited for medium gold medal (Stirling, 1873), when the property of the present exhibitor, Sir G. Macpherson Grant (Bertha).

Cows of any age.—First prize, W. Taylor, Rothiemay House; second, Earl of Fife; third, Sir G. Macpherson Grant; fourth, Marquis of Huntly, Aboyne Castle.

Heifers calved after 1st January, 1872.—First and second prizes, Earl of Fife; third, W. M. Skinner, Drumlin, Ballindalloch; fourth, G. Reid.

Heifers calved after 1st January, 1873.—First and second prizes, G. Reid; third, the Earl of Fife; fourth, the Marquis of Huntly.

GALLOWAYS.

First prize bull at former shows, exhibited for medium gold medal (Stirling, 1873), when the property of the present exhibitor, J. Cunningham, Tarbreoch, Dalbeattie (Pretender).

Bulls calved before 1st January, 1873.—First prize, The Duke of Buccleuch; second, R. Jardine, Castlemilk; third, G. Graham, Oakbank, Longtown (breeder of the best bull).

First prize cows at former shows exhibited for medium gold medal (Stirling, 1873), when the property of the present exhibitor, The Duke of Buccleuch (Lonisa 2nd).

Cows of any age.—First and second prizes, the Duke of Buccleuch; third, F. Graham, Parcelltown, Longtown.

Heifers calved after 1st January, 1872.—First prize, the Duke of Buccleuch; second and third, J. Cunningham.

Heifers calved after 1st January, 1873.—First and second prizes, the Duke of Buccleuch; third, J. Cunningham.

AYRSHIRE.

Bulls calved before 1st January, 1873.—First prize, the Duke of Buccleuch; second, R. Wardrope, Garraff, Cunnock; third, D. Edmond, Ballochruin, Balfrou; fourth, Sir M. S. Stewart, Ardgowan.

First-prize cows at former shows, exhibited for medium gold medal (Stirling, 1873), when in milk, and the property of the present exhibitor.—R. Wilson, Forehouse, Kibbarchan (Hlorie).

Cows in milk, of any age.—First prize, Duke of Buccleuch; second, R. Wilson; third, Duke of Buccleuch; fourth, Duchess Dowager of Athole.

Cows in calf, of any age, or heifers in calf, calved before 1st January, 1872.—First prize, Duke of Buccleuch; second, J. Graham, Oldsmithhills-street, Paisley; third, D. Ross-fourth, J. Stewart, Burnside Cottage, Strathaven.

Heifers calved after 1st January, 1872.—First prize, Duke of Buccleuch; second, W. M. Ure, Bogton, Falkirk; third, J. Stewart; fourth, Duke of Buccleuch.

Heifers calved after 1st January, 1873.—First, second, and third prizes, Duke of Buccleuch; fourth, J. Stewart.

HIGHLAND.

First-prize bulls at former shows, exhibited for medium gold medal (Kelso, 1872), when the property of the present exhibitor.—The Hon. Lady Menzies, Rannoch Lodge, Pitlochrie (Rannoch).

Bulls calved before 1st January, 1871.—First prize, Duke of Athole; second, A. Stevenson, Lochawe; third, Cluny Macpherson; fourth, Duke of Sutherland.

Bulls calved after 1st January, 1871.—First prize, J. Grant, Inverlaidan, Carbridge; second, the Earl of Seafield; third, W. Fraser, Lairg; fourth, Duke of Sutherland.

Bulls calved after 1st January, 1872.—First prize, J. Stewart, Bochastle, Callander; second, Lord Middleton, Lycharron; third and fourth, J. Stewart, Portree.

Bulls calved after 1st January, 1873.—First prize, A. Stewart, Ensay, Stornoway; second and third, Earl of Seafield; fourth, Colonel Greenhill Gardyne, Mu1.

Cows of any age.—First and second prizes, Duke of Athole; third, J. Stewart; fourth, Earl of Seafield.

Heifers calved after 1st January, 1871.—First prize, Duke of Athole; second, J. Stewart; third, Hugh Mann, Meadowfield, Nairn; fourth, Earl of Seafield.

Heifers calved after 1st January, 1872.—First prize, J. Stewart; second, Duke of Athole; third, Earl of Seafield; fourth, C. M. Campbell, Ballinore.

Heifers calved after 1st January, 1873.—First prize, J. Stewart; second, third, and fourth, Earl of Seafield.

FAT STOCK.

Shorthorn oxen calved after 1st January, 1871.—First prize, R. Bruce, Newton-ol-Struthers; second, J. Cran, Kirkton, Inverness.

Shorthorn oxen calved after 1st January, 1872.—First prize, R. H. Harris, Earnhill, Forres.

Highland oxen calved after 1st January, 1870.—First prize, Sir W. G. Cumming, Altyre; second, Duke of Sutherland; third, Earl of Seafield. Commended: Sir D. C. Majoribanks, Guisachan, M.P.

Highland oxen calved after 1st January, 1871.—First prize, Sir W. G. Cumming; second, Sir D. C. Majoribanks; third, E. Baillie, Dochfour. Commended: Sir D. C. Majoribanks.

Oxen of any other pure or cross breed calved after 1st January, 1871.—First prize, A. Mathieson, Ardrross, M.P.; second, A. Munro, Ord, Invergordon; third, J. and W. Martin, Aberdeen.

Oxen of any pure or cross breed calved after 1st January, 1872.—First prize, Messrs. J. and W. Martin; second, J. Cran, Kirkton; third, W. Brown, Linkwood, Elgin.

Cross-bred heifers calved after 1st January, 1871.—First prize, G. Grant, Pollo, Invergordon.

Cross-bred heifers calved after 1st January, 1872.—J. Cran, second, J. and W. Martin.

ENTIRE CATTLE.

Highly commended and minor gold medal: R. H. Harris, (Short-horn). Highly commended and silver medal: R. H. Harris (Devon). Commended and medium medals awarded: Earl of Seafield (Highland).

HORSES.

HORSES FOR AGRICULTURAL PURPOSES.

Stallions, foaled before 1st January, 1871.—First prize, D. Riddell, Kilbowie; second, J. Duncan, Methlick, Aberdeen; third, D. Riddell; fourth, P. Crawford, Drumgoyle, Strathbarne.

Entire colts, foaled after 1st January, 1871.—First prize, D. Riddell; second, R. Andrews, Allen, Paisley; third, R. Brewster, Bridge of Weir; fourth, A. M. Ogilvy, Tillinaght, Portsoy.

Entire colts, foaled after 1st January, 1872.—First prize, R. Brewster; second, D. Riddell; third, R. Andrews; fourth, the Earl of Strathmore, Glamis.

Entire colts, foaled after 1st January, 1873.—First prize, D. Riddell; second, A. Weir, Newhouse Mill, Kilbridge; third, J. Lawrence, Thornhill, Forres; fourth, Sir W. G. Gordon Cumming of Altyre.

Mares (with foal at foot), foaled before the 1st January, 1871.—First prize, J. Sutor, Collie, Orton, Fochabers; second, A. Munro, Ord, Invergordon; third and fourth, J. Lawrence.

Mare (in foal) foaled before 1st January, 1871.—First prize, R. Murdoch, Hallside, Newton, Cambuslang; second, A. K. Leitch, Inchsteely, Forres; third, A. Montgomery, Boreland, Castle Douglas; fourth, J. Hendrie, Castle Heather, Inverness.

Fillies foaled after 1st January, 1871.—First prize, A. Buchanan, Garscadden Mains, New Kilpatrick; second, P. Beattie, Dunnydeer, Inch; third, E. Baillie of Dochfour, Inverness; fourth, A. Munro.

Fillies, foaled after 1st January, 1872.—First prize, W. Hardie, Borrowstonn Mains, Litching; second, Earl of Strathmore; third, J. R. Mitchell, Dryaie, Inverness; fourth, P. Beattie.

Fillies, foaled after January, 1872.—First prize, H. D. Adamson, Dalquharn, Alford; second, Earl of Strathmore; third, D. G. Forbes of Milburn, Inverness.

Draught geldings, foaled after 1st January, 1872.—First prize, J. Miller, Seafield, Cullen; second, D. G. C. Scott, Park of Inches, Inverness; third, J. McLennan, Fortnightly, Nairn.

HUNTERS AND ROADSTERS.

Mares or geldings, suitable for the field, foaled before January, 1871.—First prize, E. Mather, Glendruich, Inverness; second, A. M. McIntosh, Moyhall, Inverness; third, R. Walker, Altyre, Forres.

Mares or geldings, suitable for carriage, foaled before 1st January, 1871.—First prize, A. M. Clark, Middat, Parkhill; second, R. Walker; third, Sir D. C. Majoribanks, M.P., of Guirachan.

Mares or geldings, suitable as hackneys or roadsters, between 14 and 15 hands high.—First and third prizes, Sir D. C. Majoribanks; second, A. G. Dallas, Dunan, Inverness.

PONIES.

Mares or geldings, between 13 and 14 hands high.—First prize, Sir D. C. Majoribanks; second, D. A. McRae, Fernaig, Strone Ferry; third, M. E. Mather.

Mares or geldings, between 12 and 13 hands.—First prize, F. Walker, Ness Castle, Inverness; second, T. P. Biscoe, Newton, Inverness; third, A. G. Dallas.

Entire stallions, 12 hands and under.—First prize, Miss A. Norton, Rannoch Lodge, Pitlochrie; second and third, Hon. Lady Menzies, Rannoch Lodge.

Mares or geldings, 12 hands and under.—First prize, E. McIntosh, Daviot, Inverness; second, L. McLean, V.S., Inverness; third, R. Anderson, of Lochdu Nairn.

ENTIRE HORSES.

Thorough-bred stallion.—T. Bland, Greystone, Alford (Blucher) winner of the Society's £50 prize at Inverness in March last. Highly commended and silver medal awarded—D. Davidson, of Tulloch, Dingwall, for a mare and gelding; commended and medium silver medal awarded—J. Cameron, Kingussie.

SHEEP.

CWEIVIOTS.

Tups, above one shear.—First prize, T. Welsh, Eriestane, Moffat; second, J. Archibald, Glengelt, Lauder; third, J. A. Johnston, Archbank, Moffat; fourth, J. Brydon, Kinnelhead, Moffat.

Dinnont or shearing tups.—First, second, and fourth prizes, J. A. Johnston; third, J. Brydon.

Pens of ewes, above one shear, with lambs.—First prize, J. Brydon; second, W. Mitchell, Ribegill, Tongue; third, T. Elliott, Hindhope; fourth, D. Mundell, Strathbran, Dingwall.

Lambs.—First prize, T. Elliott; second, J. Brydon.

Pens of five shearing ewes or gimmers.—First prize, A. James, Glengelt; second, J. Boydon; third, T. Elliott; fourth, W. Mitchell.

Blackfaced tups, above one shear.—First and second prizes, J. Archibald, Overshiels, Stow; third and fourth, J. Greenshields, Westown, Lesmahagow.

Dinnont or shearing tups.—First and third prizes, J. Archibald; second and fourth, J. Greenshields.

Pens of five ewes, above one shear, with lambs.—First and second prizes, J. Archibald; third and fourth, J. Macpherson, Clunas, Cawdor.

Lambs.—First and second prizes, J. Archibald.

Pens of five shearing ewes or gimmers.—First and second prizes, J. Archibald; third, P. Robertson, Achilty, Dingwall; fourth, J. Macpherson, Clunas.

BORDER LEICESTERS.

Tups above one shear.—First prize, T. Foster, Ellingham, Northumberland; second, third, and fourth, Capt. Warrant, Ferintosh.

Dinnont or shearing tups.—First, second, and fourth prizes, G. Torrance, Sisterpath, Dunse; third, A. Smith, Castlemains.

Pens of five ewes, above one shear.—First prize, T. Simeonson, Blainsbie; second, J. Nisbet, Lamblen, Greenlaw; third, Sir G. Dunbar, Ackerhill Tower.

Pens of five shearling ewes or gimmers.—First prize, G. Torrance; second, J. Hunter, Dipple; third, Sir G. Dunbar; fourth, J. Nisbet.

LONGWOOLLED, OTHER THAN BORDER LEICESTERS.

Tup, above one shear.—First prize, J. Gibson, Woolmet; second, E. Sutherland, Tannachie House, Fochabers; third, Lord Kinnaird, Rossie Priory.

Dumont or shearing tups.—First prize, J. Gibsou; second E. Sutherland.

Pens of five shearling ewes or gimmers.—J. Gibson.

SOUTHDOWNS.

Tups of any age.—First and second prize, J. J. Coleman, M.P., Eastern Lodge Farm, Norwich.

Pens of five ewes, of any age, or gimmers.—J. J. Coleman, M.P.

SHROPSHIRE.

Tups of any age.—First prize, Earl of Strathmore, Glamis Castle, Forfar; second, E. Sutherland.

Pens of five ewes, of any age, or gimmers.—First prize, Earl of Strathmore; second, J. Gibson, Woolmet, Dalkeith; third, Earl of Strathmore.

EXTRA SECTIONS.

Pens of five Cheviot wethers, not above three shears.—First and second prizes, Duke of Sutherland.

Pens of ewes, blackfaced wethers, not above four years.—First prize, J. and W. Martin, Newmarket, Aberdeen; second, Earl of Seafield, Balmacaan, Drumadrochit.

Pens of five wether hogs, of any cross, not above one shear.—First prize, Sir W. G. Gordon Cumming, of Altyre; second, E. Sutherland.

Goat.—Commended, The Hon. Lady Menzies, Rannoch Lodge, Pitlochrie.

PIGS.

Boars, large breed.—First prize, R. E. Duckering, Nerthorpe, Kirton Lindsey; second, H. C. R. Davidson, younger of Tulloch, Inverbroom House, Lochbroom; third, W. Macdonald, Woodlands, Perth.

Boars, small breed.—First prize, R. E. Duckering; second, third, and fourth, J. Moir, Clark, Gartdee, Aberdeen.

Sows, large breed.—First prize, R. E. Duckering; second, J. M. Clark; third and fourth, W. Macdonald.

Sows, small breed.—First prize, J. M. Clark; second, R. E. Duckering; third, the Hon. Lady Menzies, Rannoch Lodge; fourth, J. M. Clark.

Pen of three Pigs, not exceeding eight months old, large breed.—First prize, J. M. Clark; second, R. E. Duckering; third, W. Macdonald.

Pen of three pigs, not above eight months old, small breed.—First prize, J. M. Clark; second, Lord Lovat, Beaufort Castle, Beaulieu.

COLLIE DOGS.

Dogs not exceeding six years old.—First prize, R. Bruce, Newton of Struthers, Forres; second, Sir G. Macpherson Grant, of Ballindalloch.

Bitches, not exceeding six years old.—First prize, J. Sinclair, Kintessack, Forres; second, J. Ogilvy, Rosevalley, Elgin.

The following are the implement awards:

SILVER MEDALS.—Alfred Hughes, Brompton Ash, Market Harborough, Northamptonshire, for set of corn lifters attached to a self-raking reaper; D. M. Osborne and Co., 41, Foxstreet, Liverpool, for Kirby's two-wheel combined mower and reaper, fitted with jointed or hinged frame, by which breakage is avoided when cutting over rough land; Samuelson and Co., Britannia Works, Banbury, Oxfordshire, for patent original self-raking reaper; Walter A. Wood, 36, Worship-street, London, for new self-delivery reaper; Lillie and Elder, Tweedmouth, Berwick-on-Tweed, for patent mangold and turnip sower; G. W. Murray and Co., Banff, for "Tiny" hand thrasher, with new shaker; Naughty and McKimmie, Dingwall, for Lorne dog-cart, with registered shaft adjuster to suit any size of horse; Ficksley, Sims, and Co., Bedford Foundry, Leigh, for general collection; Richmond and Chandler, Miller-street, Salford, for chaff-cutter No. 65; J. Sellar and Sons, Elgin, for collection of agricultural implements, &c.; Thomas Gibson and Son, Bainfield, Edinburgh, for wrought-iron fieldgate, with framework of T iron and collection; Maclavish and Mackintosh, implement merchants,

Inverness, for collection; the Northern Agricultural Implement and Foundry Company, Inverness, for collection; John Fowler and Co., Leeds, for Sutherland plough for reclamation of waste land and roundabout set of implements for steam cultivation; d'tto, for collection; Arthur Hope, Victoria Foundry, Edinburgh, for stone-breaking machine; Robey and Co., Lincoln, for collection.

MEDIUM SILVER MEDALS.—Williamson Brothers, Kendal, for three-horse-power fixed combined thrashing, shaking, and winnowing machine; A. J. Main and Co., Glasgow and Edinburgh, for Ransomes, Sims, and Head's Star horse-rake; Murray and Co., Banff, for turnip sower; Hughton and Thomson, Carlisle, for new patent self-acting hay-rake and collector; John Kennedy, Balmacaan, Inverness, for the Glen Urquhart straining posts, &c.; Lindsay and Anderson, Lilliehill Fire-Clay Works, Dunfermline, for pressure pipes, irrigation pipes, and collection; Robert Mitchell and Son, Peterhead, for collection; T. Pirie and Co., Kinnuady, Aberdeenshire, for collection; Ben. Reid and Co., Aberdeen, for collection; George Sellar and Son, Huntly, for collection.

MINOR SILVER MEDALS.—John Crowley and Co., Sheffield, for chaff-cutter, invented by Samuel Edwards, Salford; John Unite, Edgware-road, London, for horse cloths.

RECOMMENDED FOR TRIAL.—John Richardson, Carlisle, grass seed dressing machine; Thomas Hunter, Maybole, Ayrshire, patent double-drill turnip-thinning machines; George Sellar and Son, Huntly, turnip-raiser; Robert Willcay, Preston, cart fitted with patent manure spreader, and machine for spreading artificial manures; John Fowler and Co., Leeds, turnip-lifter. The above are recommended by the Inspecting Committee for trial in a convenient locality, and at a season of the year suitable for their operation. The Local Committee have selected the reaping machine in the yard and Hughes' patent lifter for trial, the arrangements for which will be carried out by the committee.

THE DUKE OF SUTHERLAND'S RECLAMATIONS.

[SPECIALLY COMMUNICATED.]

On Friday, the last day of July, by the invitation of the Duke of Sutherland, a deputation from the Highland Society, accompanied by a large number of others interested in agriculture went by special train from Inverness to view the extensive operations which his Grace is carrying on for the purpose of bringing under cultivation a large tract of his moor land at Lairg.

The train left Inverness at 8.10 a.m., but on account partly of the stoppages made on the way to pick up fresh and numerous passengers, and partly on account of the sublime indifference to time which characterises the Highland Railway Company, we did not arrive at Lairg until considerably after the expected time. Having then proceeded by road from the station to the Loch (Shin) we sailed up to the scene of operation in his Grace's steam yacht "The Midge"—at least that was we understood the English of the Gaelic characters emblazoned on her flag—our progress being somewhat slow owing to a large barge being lashed to us full of enterprising agriculturists.

The first operation (where required) is to clear the land of trees. This is done apparently with the utmost facility by means of steam power. A chain attached to the rope belonging to the steam engine, and composed of steel wire, is fastened round three or four trees, which are then torn up, roots and all, by the engine, and taken away with as much ease as a man would pull up mushrooms. Nothing we had previously seen gave us such an idea of the stupendous power of steam—though of course the trees were not very large, nor their roots very deeply fixed. The plough has a sort of double share with one breast turning on a hinge, so that it can work both ways. At each end in front of the share there is a large steel wheel, which cuts through the turf or heather, and makes a line in which the share follows; in addition, at each end, behind the plough, there is a drag—something like a ship's anchor—which pulls up the stones, and also acts as

a subsoiler. The plough has four wheels (two on each side), perhaps three feet broad, which prevent it from overturning, and one of which acts as a presser on the furrow after being turned up by the plough. This presser is on the whole necessary and advantageous, as it consolidates the land, and keeps in its proper place the enormous furrow, one, we should say, 18 inches broad by 10 inches deep, which might otherwise fall back again; still we fancied this presser with its enormous weight left the land laid almost too flat, and would thereby prevent the winter frost from having its full effect in mellowing the soil. The plough is said to be able to turn up about 1½ acre per day, which we think probable; because, although the pace does not appear much greater than that of an ordinary horse plough, the furrow is considerably broader.

It was wonderful to see the plough going over stony ground, turning up many large stones, and passing over, without any apparent damage to the machine, the rocks that were too large for it to move. The work was well done, though once or twice we observed in soft places the soil was pushed along for a *short distance* in front of the plough, instead of being turned clearly over.

After the plough followed a number of labourers to pick the stones out of the open furrow and throw them back.

Another very simple, but most useful implement was the machine for gathering the stones off the land; also worked by the steam engines. It is something like a box, without a lid, covered in at the ends, open in the middle, and slightly curved, like the rockers on a rocking-chair. This is dragged over the land upside down, and collects a large number of stones underneath it. It is then turned over by steam power; the stones are thrown into it by hand; and it is then dragged away, and discharges its load where stones are required for fencing or building.

Wide open drains are being made, as *main* drains, in various places by manual labour to carry off the water; whilst an implement, again worked by steam, is used to assist in making the sub-drains. This is also something like an anchor, with two small wheels in front, and by bringing it along the same line twice, the soil is *loosened* to a depth of about three feet. The rest of the cutting and the throwing out of the soil is done by labourers. We thought this implement still in its infancy, and capable of great improvement. The rocks and roots of trees, which are too large to be taken out by steam power, are blasted with dynamite.

The cost of the works, including clearing, ploughing, draining, buildings, fencing, and road making, is estimated at from £23 to £25 per acre; while the Duke deserves great credit for his energy and public spirit in undertaking such enormous works, by which he will confer considerable benefit on the country; but as to whether, as a mere question of profit and loss, these works will be a success we do not venture to express an opinion; certainly the crops on the land which was cultivated last year are very good, both oats and turnips, and we thought some of the land where the turnips were growing appeared of a very nice mixed soil. The land which is at present under cultivation varies much in character and quality: some of the stuff which is turned up is clayey, some mixed with a sort of a weak whitish sand, some peat (which, by-the-by is burned in the engines), and did we not know by experience that mow land is sometimes much better than it appears, we should say that a good deal of it would scarcely pay for cultivation.

The climate is probably better than a stranger would imagine in such a northern region, as the land does not lie at a high elevation, and the severity of the frost is mitigated by its proximity to the Gulf Stream and the sea.

Both the Duke and the chief directors of the works were most kind and anxious that we should see and understand everything, and after the inspection was over his Grace entertained the whole party at luncheon.

The deputation appointed by the directors of the Highland Society consisted of Colonel Fraser, of Aldowie; Mr. Robertson, of Kindrace; Sir Kenneth Mackenzie, of Gairloch; Sir G. Macpherson Grant, of Ballindalloch; Mr. Erskine, of Cardross; Mr. Muuro, Farnington, Kelso; Mr. Swinton, factor for the Marquis of Tweeddale; Mr. Hutchison, Carlourie; Mr. Park, engineer to the Society; Principal Williams, New Veterinary College, Edinburgh; Mr. Henderson, Steamster; and Mr. Wilson, The Duru, Perth. Among others were Lord Middleton; Mr. Dallas, of Dunain; Captain Fraser, of Palmair; Mr. Dunbar, Brawl Castle; Mr. Purves, Rhifail; and Wm. Strong, W.S., Edinburgh; Mr. Tait, C.E., Thurso; Mr. Win. Reid (of Messrs. B. Reid & Co.), Aberdeen; Mr. Mackay, Melness; Mr. Murray, Banff Foundry; Mr. Mackay, Shepiek; Mr. Smith, Whittingham; Dr. Carruthers, Inverness; and many more.

AGRICULTURE IN INVERNESS.

Perhaps in no quarter of Great Britain could there be found so great a diversity of climate, soil, and configuration of the land. Not only is Inverness-shire the largest county in Scotland, but it has the largest area of land under heath, and contains the loftiest mountain in the United Kingdom. The shire is divided into two nearly equal parts by the great glen of Albyn or Glenmore, in the basin of which has been constructed the Caledonian Canal. North-west of the canal are to be found rugged hills, heathery moors, and treacherous morasses; while a large proportion of such agriculture as the county can boast is to be found in the south-east, besides stretches of well-cultivated land in the north-east. Notwithstanding the repeated visits of the Highland and Agricultural Society, and the exertions of reputable local associations, the system of farming pursued in the district may be regarded as third or even fourth rate. This remark applies, it should be explained, simply to arable farming. Only in a few parishes immediately surrounding Inverness can the tillage of the soil be said to be carried on according to scientific principles. Undoubtedly of late years considerable improvement has been effected, and, apart from the more immediate causes of this—such as a growing interest in agriculture as an art, the more scientific education of farmers, and the necessity engendered by keen competition—the opening of the Highland Railway in 1863 has no doubt had a great influence on the prosperity of the district. It is a noticeable circumstance, and at the same time a sad one, that with the improvements in tillage there has simultaneously been going on a decrease in the population. This statement, however, is as applicable to the Lothians as Inverness-shire. In 1841 the population of the county, which comprises an area of 4,256 square miles, or 2,723,501 acres, was 99,242; ten years later it was 96,500; in 1861 it had decreased to 88,889; and at the last census the number was 87,480. But while men have disappeared, wealth has accumulated; for, whereas at the Revolution the rental of the entire county only reached £6,099, it was in 1872 £296,353. It has been said that the soil is variable, and the truth of this may be judged from the fact that, while in Beaulie there is excellent coarse land, upon which heavy crops of wheat and other cereals are raised; and in Strathglass and Strathfarar rich alluvial soil, which bears splendid crops of oats, barley, and turnips, the county also embraces the soil of Petty, which sometimes disappears with all the crops upon it before a stiff gale, and the barren rocks and shingle of the Western Isles. Agriculture never can advance unless good roads intersect a country, and the splendid macadamised roads which have been constructed in Inverness-shire during the last thirty years have in no small degree contributed to the steady progress of the country. Hovels which were the disgrace of Highland proprietors, and in a less degree of Highland farmers, are gradually giving place to

spacious and commodious steadings. In the uplands, indeed, very little has yet been done to make farm buildings comfortable or commodious. Of course it may be said that the leading branch of enterprise in these higher districts is sheep farming, for which expensive buildings are unnecessary, and that, even where other stock is kept, Highland cattle form the bulk of it, and these require no stall feeding or warm housing to induce growth. There are, however, still far too many of the wretched shielings which belong properly to a past age. "In Badenoch, and especially in the Laggan district," says a recent agricultural writer, "not only the huts in which the cattle are sheltered from the winter blast, but also the dwelling-houses of some of the people, are constructed of at least three parts of turf. In the West Highlands, Skye included, it is no rarity to meet with the kitchen, parlour, bed-rooms, byre, barn, stable, pigsty, and poultry-house all under one roof, and in a very small compass." Previous to 1845 a complete farm court was only now and then to be met with, even in the best cultivated and highest-rented districts; but the noble example set by the Master of Lovat, the Earl of Moray, and the Earl of Seafield, has been followed by many of the great landed proprietors, and fair proportioned farm offices and houses are springing up in the straths and glens of Inverness. Although leases have been common in the Lowlands of Scotland for two or three hundred years, it is not more than fifty years since they were granted in this county. As might be expected, during the reign of the chief of clans, feudal tenure prevailed and the patches of corn raised in the uncertain periods of peace between rival clans were cultivated jointly. After the attempt of the Young Chevalier to regain the throne of his fathers in 1745-46, an individual tenancy was introduced; but the occupants of the soil remained tenants at will till the absolute necessity of enterprise and capital to bring out of the soil the riches thereof induced the landlords, between 1810 and 1830, to grant leases. At first these ranged from five to fourteen years, but gradually as the short "tacks" expire, new leases are being granted for nineteen years. Even the crofters, who for a century or more have snatched a scanty livelihood from their small holdings by pursuing agriculture on the rude rig-and-furrow system, are beginning to feel the advantage of the impulse given by leases, and, especially on the mainland, these small farmers are now receiving a guaranteed tenure for ten or fourteen years. As a matter of course, they are thereby not only enabled to cultivate their ground under a better and more profitable system, but they are being gradually assisted to increase their holdings by the reclamation of waste land from the surrounding moors or bare hill-sides. All that can be said of the system of farming pursued before the introduction of leases was that the farmers took white crop after white crop off the land till the soil was quite impoverished, and then it was fallowed till it had sufficiently recovered to enable the ruinous system to be resumed. With the introduction of leases, however, the five-course rotation was brought into practice with benefit not only to the land, but to the tenants. In many places in the uplands and in the islands the tillage is as rude as the appliances are primitive. Indeed, it may be questioned whether even in the newest colony there are not more facilities for raising, ingathering, and preparing the crops. In the lowlands and fertile valleys of the Ness and Spey, thrashing machines are commonly to be met with, and of late years reaping machines have been employed in cutting the grain; but in Lochaber, Badenoch, and Glenelg most of the grain is thrashed by the flail, and, in the absence of barn fanners, advantage is taken of the passing breeze to separate the chaff from the corn. Even more primitive are the processes practised in some of the isles. There grain, raised by painful hand and spade labour, is cut with the sickle or scythe, and the stooks when ripened carried to the crofters' houses on the backs of women and children. And in the long winter evenings, instead of thrashing out the grain, the family sit around the glowing peat fire and pick the corn from the straw and chaff! Instead of the clumsy implement by courtesy entitled the plough, the drill plough and grubber are being introduced with advantage, and handsome farm carts are taking the place of the ancient wooden-axled box-cart, little larger than a wheelbarrow, or the creels which were slung over the backs of Highland ponies. As may have been gathered from the foregoing remarks, a large extent of land has during the past twenty or thirty years been reclaimed in the county. For instance, about 1845, not more

than 40,000, out of the 2,723,501 acres in the county, were under a course of crops; whereas in 1872 the acreage cropped was 83,950, or, including bare fallow grass, 118,786. It must be remembered, in looking at these figures, that there are in the county 124,240 acres of rivers and lakes, 500,000 acres of wood, natural and planted, and 260,000 acres enclosed as deer forests. There are 1,700,000 acres covered with heath or bare rock, and the most of this land is of no value whatever except for grouse shooting, many portions being even useless for that. Among the districts where the most noteworthy reclamation of land has taken place are Moy, Croy, Ardersier, Drumore, Ness Castle, Dunnaglass, Dores, Stratherrick, the Valley of Glass, Glen Urquhart, Glenormiston, and Strathspey. The process in nearly all the districts has been that, after enclosing the land, the heather was burned, surface drainage secured, and the ground trenched and ploughed, the great difficulty being often experienced in removing stumps of ancient trees and large boulders which had got fixed in the soil. The land was then freely limed, and after being allowed to lie in a maiden-furrow for a year, was cropped. It should not be forgotten that in the island of Lewis Sir James Matheson has brought under cultivation over 3,000 acres which were formerly barren. Waiving the vexed question of deer *versus* sheep, we turn to a few statistics as to the grain produced in the county. In 1872 there were 1,778 acres under wheat, and that principally in the Aird and Beaulie districts, as compared with 1,031 acres in 1866; 7,083 under barley or bere, 30,006 under oats, 1,081 under rye, 40 under beans, and 111 under peas—giving a total of 40,999 acres under corn crops. There were in the same year 19,254 acres under green crops, of which 8,423 acres were potatoes, 10,657 were turnips, 8 mangold, 2 carrots, 5 cabbage, and 159 vetches. In the county there were at the same date 8,371 horses, 47,938 cattle, 788,001 sheep—the highest number maintained by any county in Scotland except Argyll—and 5,099 pigs. The breed of cattle natural to the county is the Highland, and there are probably more animals of this type in Inverness-shire than in any other district north of the Tweed. The most extensive herd of pure Highlanders is at Faillie, seven miles south of Inverness, and there are herds of repute at Leys, Raigmor, Daltulloch, Castle Grant, Inverlaidan, South Kiurara, Invertronic, Ballochroan. These are all on the mainland, but in the Western Islands are found not only the largest but probably the best Highland cattle. Perhaps the finest herd in Skye is that belonging to Mr. Stewart, at Duntulm, who can enumerate no fewer than a hundred grand, shaggy, and massive kyloes. At Claigan, Watermish, and Balranald, South Uist, there are also large and important herds. There are few Shorthorns in the county, but small herds have been established with beneficial effect at Kirton and Dochfour. Polled cattle are even fewer than Shorthorns, and only in one or two of the most advanced districts are there any Ayrshires. Among the sheep farmers of the county the breeds most in repute are blackfaces and Cheviots, the latter stock having of late years advanced much in favour with farmers. The rich pastures of Strathglass carry perhaps as fine Cheviots as are to be found in Britain, while other noteworthy districts are the Loch Arkaig Range, Inverloch, Passifern, and Erochd. The finest flocks of blackfaces are found in Laggan, Craighu, Aberarder, Glenspean, and Glenroy. Few Leicesters are to be met within the county, though on the lowlands and in the highly cultivated land a large number of half-breds are fed.—*The Scotsman*.

REAPING MACHINES IN FRANCE.—At another trial, held near Lubeck, where nineteen machines competed, Messrs. Johnston's harvester and reaper received each a first prize, Messrs. Williams and Wood second prize, and Messrs. Burdick and Buckeye a third prize.

REAPER TRIAL IN RUSSIA.—After six days' trial at Tamboff in Russia, the first prize, a gold medal, with 250 roubles, was awarded to W. A. Wood, of London, making eighteen prizes gained by these machines in 1874, including one in Germany, after a three days' trial.

THE YORKSHIRE AGRICULTURAL SOCIETY.

MEETING AT SHEFFIELD.

There is no place like Sheffield—at least we hope not—and fear the perpetual cloud of smoke in which it is always enveloped must have had something to do with the mapping out of the show ground, about the worst arranged that we have seen of the Yorkshire Society; for, with plenty of room for a nicely-connected exhibition of live-stock, the ground which ought to have been occupied by the cattle, sheep, and pigs was usurped by machinery and implements, and thus the cattle were shut off from the horses, and, in fact, made a show of themselves, not to be found without first looking at the plan in the catalogue. There, too, out of sight of the horse-ring and the stand, were most of the agricultural and coaching classes judged, instead of as heretofore, in a ring adjacent to that of the nags, where the public, with an eye to what was going on, could stroll from ring to ring, while the judges were debating over their verdicts. Then, on Thursday, the cattle were paraded at the same time as the nags, but in different rings, instead of before the stand, in the same ring as the horses. Surely, if the Royal can get judged, in one day an entry of 412 horses and 410 cattle, and on each consecutive day of the show parade the 822 in the same ring class after class, so that the public may see something for their money, the Yorkshire Society might have done as much with an entry of 264 horses and 107 cattle only, instead of spinning out the parade of horses from half-past ten in the morning until half-past three in the afternoon. Even then many a horse came out without a breast number, while others never made their appearance at all. Then the cattle had no breast numbers, and those on their heads, during the parade, were kept towards the official in the ring for his own special information. Adding to this that many a stall of an absentee was filled up by some animal sent for sale, and not in the catalogue, we must say that the management was very slack and a great falling off to the days when we had the pleasure of holding up the Yorkshire Society's show as a pattern for all. "Sims Reeves, this evening!" was posted all over the walls of the smoky town, and though rather an old and favourite star, still many an animal in the show-yard had been all over the country starring it, and was quite as well known as the great vocalist and his Pretty Jane. In fact, there are too many shows going by half; and as the Yorkshire comes on late in the year, it is but an abbreviated third, fourth, or fifth edition of some of the others, and consequently to the show-goer stale, flat, and unprofitable; while farmers from the horse part of the great county round Driffield did not hesitate in pronouncing it a very bad show of horses, and the aged hunters a disgrace to the county. We look for better things at Driffield next year; and if the public must go through the machinery and implements on their way to the show of live stock, do not let it be at the sacrifice of the animals, but keep them together by all means, and let us have no more unconnected, disjointed affairs.

The show of Shorthorns was good for Yorkshire, which does not mean a strong muster, although it will be seen many of them were old stagers, and the three prizes in the bulls of any age above three were an echo of the Royal verdict, the other competitors being Master Blithe, from Downham Market, whose rump was bare through being so often manipulated by the professors of touch, and Leeman, from Harefield. A novelty in

the Shorthorns was the giving of prizes for the best family of Shorthorns, not including John Bull, the family man, but only Mrs. Bull and her offspring—a cow's offspring! O dear, how this world improves as we grow older; The tug of war laid between the fatherless families from Singleton Park and Bainesse, the first lot being Lancashire Ringlet, a nice cow, and two very taking daughters, Ringlet 4th by White Duke (32849) and Ringlet 5th by Flag of Ireland (28613), which have both been out before, but not the old lady who is by Bywell Victor (21353), dam by Lord of the Valley (14837), granddam Rose Duchess, by Red Duke (13571). The Catterick family was the well-known Sylvia and two daughters, Baroness Conyers by Baron Killerby, and Miss Fox by Royal Windsor. The other families were from Duffryn, Newport, The Manor House, Carperby, Broughton, and Kettering. In a good class of seven bulls above two and not exceeding three years old it was another repetition of the Royal edict, with the exception of Oxford Cherboy, he third Royal, which was here beaten by General Wharfdale, though the General was only commended at Bedford, but he beat Robert Stephenson at Grantham. The other three were Newburgh 4th, King of Trumps, and Superb from the Halls of Thureroff, Killerby, and Keele. The eight bulls above one and not exceeding two years old were headed by a Royal winner, the very good-looking Lord Godolphin, with Rapid Rhone taking second place in the absence of Prince Rupert, the third being the very good-looking Rosario; in fact, it was a good class, the others were Mr. B. St. Acker's Prince of the Blood, Baronet from Farnley, Otley, Telemachus VI., Windsor Crown from Carperby and Cambridge Duke IV. of Mr. Sharp, Broughton. In the bull-calves the second Royal was first, with Bright Knight, a small but neat third, at Lincoln, who here beat May King, the first there. Then there was Telemachus 9th, good looking, with quality, and three others.

Vivandere, Victoria Victrix, and Dairy Girl were the first three in the catalogue, and placed as they stood; the same thing occurring for the Oaks this year, the fillies coming in 1, 2, 3, as placed on the card. But we think it was a much nearer thing with the cows, as Vivandere looked shelly, and Victoria Victrix the grander animal and of more wealthy appearance, while Dairy Girl made a very good third, backed by Lady Louisa from the same herd, with Moll Gwynne, Seagull, and Prize Bud well up. We could not see that that little bit of quality, Queen of Georgians, ought to have been put before Lady Playful or Rose of Wytham, while Baroness Conyers being in attendance on her dam Sylvia, let Royal Rose, who played second to her at the Royal, in for first honours. There were eight very nice heifers not exceeding two years old, five heifer-calves, three or four good dairy cows, and a couple of nice Alderneys.

The sheep were good, but the entries in many of the classes small. The Lecesters were represented by the well-known flocks of Messrs. George Turner, John Borton, T. H. Hutchinson, and W. Brown's, with an entry or two from Messrs. Kendall and Coulson. In the shearing rams some good sheep from the Manor House, Catterick, did not gain a place, but in the rams of any age a two-year-old bred by Mr. Hutchinson, and his only entry, beat three of the Thorpeplands flock and the same number

from Mr. Borton. The pens of five shearling gimmers were very neat and matchy with representatives from the same flock. The Lincolns, mustering about sixty shee—all told, were good, and the following flockmasters com-peted: Messrs. Dudding, Cartwright, Wright, Newcomb-Pears, Howard, Byron, Lister, F. T. Turner. The shearling rams were the best class, Mr. Cartwright winning with a fine sheep. There were only six old rams, the second being a coarse sheep. Messrs. Bosanquet, Tweedie, and Forster sent a few nice specimens of the Border Leicesters, the Ellingham ram of any age being a grand sheep. Of Shropshire Downs there were only a dozen—three shearing rams, four of any age, and a pen of five gimmers from the flocks of Messrs. Baker and Pilgrim, who sent some fair specimens. A few of Sir Edwin Landseer's models made up the show.

The pigs made a fair show, with a few remarkable specimens in the large breeds, with here and there one with a fleece of hair, but most of them of the useful type. Then there were some sleeping beauties of the small breed, while others to our mind were not improved by snouts like unto a Blenheim spaniel's, and a few neat ones of the black breed, but scarcely a representative of the real Berkshire. There were chosen champions to do battle for the prizes from the piggeries of Lords Wharnclyffe and Ellesmere, Messrs. Dove, Beswicke, Matthew Walker, Duckering, Garbutt, Nicholson, and Rose. Leaving the hogs to dream of milk and barley-meal, with critics occasionally rapping them over the shins, in the vain endeavour of getting them on their legs, by the assistance of the plau we get back to the horse ring, where we find the thoroughbred stallions Knowsley, Citadel, and Laughing Stock, three sons of Stockwell; Ploughboy, by Van Galen, out of Village Maid by Stockwell; Dickey Sam, by Oberon, dam by Stockwell; Cromwell, by Blair Athol, and Kelbourne, by Knowsley. "Blam me, it's nought but Stockwell!" says a Yorkshireman; while we are thinking whether horses have gained as much in constitution as they have in inches since the days of some of the little ones, when Cartouch was only fourteen hands high, but could beat anything with 8 or 12 stone up when six and four-mile heats were in fashion—and which was the preferable horse, he or the *greatest* miler ever known? Although the thoroughbred, upon which we depend so much for the breed of our horses—and one may affect the whole breed of a kingdom in time—does not now run heats and long distances, still many of them do more galloping than the old ones ever did, and before they are anything like matured. In fact, they are oftentimes said to be fit when their insides have been nearly galloped out of them; and there have been instances when, through accident, a horse was obliged to be indulged with rest, so that the trainer could not *finish* him, that with 50, 60, and 70 to 1 against him, and no takers, he has won the great race of the year. It is not altogether the racing itself that has done so much to injure the constitution of our breed of horses as the ignorant training groom (we don't apply this to all) who, if he can get a goer with a constitution and legs of iron to stand his preparation, and win a race by a head, is an awful clever fellow, as there is nothing so successful as success with the world; but the world does not take the trouble to count upon its fingers how many patrons of the turf have sunk fortunes to keep such clever fellows going. Clever, indeed, for we recollect the time when race-horses, no matter of what constitution or the state of their bodies, were all put through the same strong physic to commence with, backed by the customary gallops and sweats, and we have seen stout-built high-spirited youngsters return washy, jaded, heartless things, like unto poor Smike, that Mrs. Squeers, of Yorkshire notoriety, over-dosed with brimstone and treacle. Of the winner, we said in

our notice of the Grautham meeting—"Mr. Chaplin deserves the thanks of the county for the thoroughbred stallions he introduces into Lincolnshire, and Knowsley by Stockwell is really a grand horse, and none the worse for a heap of flesh taken off since we saw him at Oxord." The Hermit, Dalesman, and Snowstorm, with a slight stain in his pedigree, are also at Blanckney. Citadel we gave a full account of a few weeks back, when a winner in the London district and at Bedford; and so we have of Laughing Stock since he was first shown at Newcastle. Kelbourne is a neat horse, and Ploughboy useful, but Dicky Sam as leggy as a stork; while Cromwell might do some good, as there are many worse about, and lots of half-bred brutes, but he has not bone enough for getting weight-carrying hunters. He is a short, deep horse, rather high on the leg, very gay and showy, with wonderful flashy action for a thorough-bred, and if caparisoned as a light charger would be invaluable to any young swell fond of playing at soldiers, and winning glances from the eyes of the fair. Now come the hunters. O dear, O dear! what a falling-off is here to shows of yore! Take Beverley, when Dalesman was head man and there were 440 horses. To compare the two catalogues one would think the Society must be in a state of bankruptcy at the end of the week; but never was show-yard more crowded, and Sheffield young and old shove and push as if a disturbed wasp's nest was behind them. But it is the fashion in those parts, and nothing goes like "Fashion" in the coaching stallions, though Landmark is the more fashionable of the two, and Palestine useful, though scarcely with breed enough for the day, while Emperor could go as could Oma Pacha, which, with four more, made anything but a good class. Young Fireaway is a nice-sized roadster, and a good stepper, and three-year-old, but he had an old and a formidable rival in Merrylegs, a nice clean-made roadster, and a grand goer, of which stamp we should like to see more about. Young Lord Derby and several others were present, but not equal to the two placed.

Poor again were the cart horses for Yorkshire, though Young Champion from Stand Hall, a knight errant turns up everywhere, and we think it is time he started for Palestine. He here headed a baker's dozen, including the gaudy coloured Young Honest Tom, stepping out like a ballet-girl with his white stockings and blazing face, followed by Lincolnshire, a nice stamp of light cart-horse, if a little light in his second thighs; while Georgie, a neat moving Clydesdale, Honest Tom 2nd, and some other useful ones, made up the class. We should like to see some of these heavy fellows and their lasses in the traces at a standing pull just to ascertain if they have any pluck. Royal Tom, at the head of six two-year-old agricultural colts, is a stout-built horse with one toe in; Rainbow was nicely made and moved, and Mr. Johnson's colt was rather high on the leg. Jewell, a good-looking brood mare, headed five other useful active cart mares. The geldings, or mares not less than four years old or more than seven, for dray or lurry purposes numbered but eight, Prince being a compact, fine-looking horse with a grand forehead; the second and third were good, and so were Mr. Mappin's Stead and Mr. Thom's Bess. There was one very useful couple of two-year-olds, and two of the three-year-olds were good. Then the coaching classes were very small, and three nice mares and foals had as many prizes, and a couple of two-year-old geldings, the same while of fillies there were none. The three-year-old geldings were a stylish class, with some nice horses out of the eight; and the fillies of that age, numbering three, were a fair sample. Miss Polly, a cobby mare, and Fingall, a curious name for a mare, by Fingall, had form and action, and headed a class of five hackney brood mares and foals. It was next to a walk over for Mr. Harvey

Bayly's Enterprize, which, after a successful career, never having been beaten, goes to Newburgh. The hackney mares and geldings made a fair show if not a large one, with Ozone or Zone, the Hull mare, first; but the mare of all others that shone on the Thursday was Mr. Stephenson's Princess, which is a well-known and nicemade mare, and a wonderful goer when let out, so much so that a Yorkshireman exclaimed, "That would make a sister of mercy look round." Mr. P. Hosrny had a showy chesnut by False Alarm, that would suit the Shah. There were some fair ponies, and the son of Mr. James Hornsby, of Grantham, whose sky-blue agricultural implements are so well-known to travellers on the Great Northern, a very quiet, clever little horseman with good hands on a nice mannered pony, won his second pair of spurs, which will no doubt qualify him to act as a judge, so we hope to see him in the ring with both pair on. The Society must have had a suspicion of a short gathering as there were a few match pairs, and considering the ring was on the slope, and as they went bumping over ridge and furrow, it was undoubtedly a novelty. In the first of Mr. Holmes won with a nice pair of bay carriage-horses fit for my Lady in town, but if we had a choice we should have taken Mr. Watson's browns, with nice character and easy, true steppers. The others were not a pair, but two odd ones, one having quiet gentlemanly action and the other being a very high, sharp, and angry goer. Mr. Holmes was again to the front with a neat pair of browns, backed by two decent pairs and an ordinary one. Mr. Horrocks Miller, with a very clever matchy pair of roan cobs, and a nice turn out altogether, could not have been more popular with the crowd had he been member for Sheffield, and was followed by two pretty white ponies with a dash of the Arabian in them, as well as being extraordinary steppers, and a nice pair of cobs from Beverley. Several of the pairs were very fresh and inclined to kick over the traces, but there was no runaway match, when the horse bolts with his rider, or the rider with the horse, and Lothair with Miss Love or Miss Love with Lothair, which upon mature consideration will be found not a distinction without a difference. The two-year-old hunters, as a class, were poor and small in numbers, although Mr. Hutchinson's Chatsworth is a fine grown colt, with action, and likely to grow into a weight-carrier, but we know not his sire Baron Cavendish although we do Cavendish well. It sounds to us like Shorthorn nomenclature, and hope the Baron is not a bull; while Sunshine, a first at Grantham, we said "is of good form, and could go, but has not wearing looking legs." Prince Imperial is a dark chesnut, and finely built, with the use of his legs, and out of the good-looking Lady Decanter, a first at Grantham, but here beaten by that gay deceiver Lady Derwent, a taker of hundreds of prize money, which we hope may gain more fame as a brood mare than she did as a hunter. Then, Mr. Hornby was in luck, getting third honours with the very prettily-made blood lack Lioness, but of no substance to breed hunters up to any weight. Undoubtedly this was an error in putting her before Go-ahead, as old as she is, or the slashing looking, blood-like mare of Mr. Stephen Kirby, though her shoulder might be faulty, and her pedigree, which is imperfect in this form, "brown, ten years old, s. Newminster, d. by Melbourne." Mr. Hutchinson was again to the fore with a very nice brown two-year-old filly by Honest, a winner of many races, beating Golden Horn, a chesnut of some form, with action, and a rather nice one of Mr. Preston's by Windham, and two others. In the three-year-olds, Talisman, a nag we met at Hull and Gainsborough last year, is a big-framed horse, very taking in spite of his bad colour, and here scores another first prize, seconded by a compactly-built brown from Killerby, and the rather

plain Brackendale by Theobald. Mr. Danby's The President by Cain was worthy of notice.

Out of five three-year-olds the Gem was a neat stiff-built mare with a good action, and Lady Mary a very symmetrical blood-like filly; and of both we said a good word for at Grantham, where they were not placed. The four-year-olds were poor, and only nine in, with Cawton at their head, King of Diamonds second, and Duke of Connaught third. Cawton and King of Diamonds have been out several times this year, and we said we were not in love with them. The Duke of Connaught, Court Card, and Prize-taker can go. Seabreeze, Fairy, and Mr. Goodlass' mare were of fair form in a small class of six. The Jester and Marshal McMahon, two well-known prize horses, headed a very poor class, the Marshal shirking the parade, but he was not the only one absent. Mr. Nelson's King Charming moved, and to look at is very much of a gentleman and quite a man of business, and goes to Hasketon. Mr. Goody's Marguerite, a brown of nice form by the neat Grandmaster, could use her legs well. In the six-year-olds and upwards, up to not less than fifteen stone, Mr. Brady Nicholson's neat horse Wallet, by Wamba, that we said knew how to use his legs at Grantham, was fancied by several here; and a useful old-fashioned horse of Mr. Kitchin's, up to great weight at a certain pace, and with Emperor, a very middling one to look at, and two others, were headed by Iron King, started this year at Islington, and ridden by Lord Waterford on the sawdust, and here by Mr. Richardson, the well-known steeple-chase rider, whom he took unawares and sent over his head. We did not see this; but when the huntsman had dined, two or three got on him and galloped him round the ring, and wethink he is one of the most wooden nags we have seen since the days of Master of Arts and Voyager. As a standstill horse, no doubt he is up to more weight than the varnait Wallet, and so is the horse which George the Fourth srides in Trafalgar-square; but we doubt if they took Brummel's fat friend to a meet he would see much of a run in his slippers with no girths or stirrups. Amos Clarke, a goer and prizetaker of Sir George Wombwell's, a nice chesnut Flotany that we fancy we have seen before; and the merry-going Treasurer, with a stout one from Raistorpe, but not like his namesake and well-known prizetaker Captain Heygate's Mountain Dew, which, with one or two more made up the class; barring Marmalade and Joe Bennett, two well-known prizetakers which the judges considered fifteen stone hunters, and were very properly ignored, as they ought to have been in the heavy-weights. Mr. A. L. Maynard, of Newton Hall, Durham, acted for Mr. H. Bolton; otherwise, it would have been Colonel Luttrell and Mr. Bolton, as at Hull last year and at Grantham a few days back. Now let the judges be the best or the worst in the world, it spoils all interest in a show to have the same on continually; and really it is not fair to defeated exhibitors who come in the expectation of having their cause tried over again before other judges.

There being no prizes for implements this section is never a very prominent one at a Yorkshire show but with the meeting on such a site as Sheffield, there was a better display in this way than is usually seen, the town itself being very strongly represented. The following firms had stands: Ashby, Jeffery, and Co., T. H. Ashton, R. Awdas, G. Bagshaw, J. G. Bass, Belcher, Gee, and Co., Beverley and Terry, E. and C. Blyde, J. Blyde, Boulton and Co., C. Bownes, R. J. Boyall, T. Bradford and Co., Burgess and Key, T. Burke and Co., H. Bushell, Bush and Co., Burys and Co., W. Carson and Son, J. Carter and Co. (seeds), G. Chevin, W. Clarke, Clayton and Shuttleworth, Coleman and Morton, J. Cooke, M. Cooper, J. Coultas, J.

Cowley, J. Crowley and Co., W. Dale, Davis and Co., J. Davis and Co., Day, Son, and Hewitt, T. H. P. Dennis and Co., A. A. Dixon, Driffield Cake Co., H. Duffield, Easterbrook and Co., J. B. and T. Edlington, J. C. and J. S. Ellis, A. Fletcher, W. Foster and Co., Foster and Smurthwaite, T. Foster, J. Fowler and Co., E. P. Gilling, A. M. Graham, W. Genu, R. H. Haggard and Son, R. Hall (Stockton), R. Hall, Head, Wrightson, and Co., Heaps and Robinson, J. Heselwood, W. Hill and Co., W. H. Hilton, C. Hopkinson, W. Hopperton, R. Hornsby and Sons, R. Howard, J. Howard, Howes and Sons, J. Howlden, E. Humphreys, Hunt and Tawell, Hydes and Wigfull, H. Inman, H. and G. Kearsley, B. Kittmer, Lawrence and Co., J. Littlewood, H. C. Littlewood, Lyon and Co., J. T. McGrah, W. McKay, Maldon Iron Co., J. T. Markall, H. R. Marsden, R. Marsden, Marshall and Son, F. C. Matthews, W. Mattinson, T. Myers, J. G. Needham, Newton, Chambers, and Co., J. Pickering, Pickley and Sims, Penney and Co., W. Rainforth and Son, Ransomes and Sims, W. S. Redfern, T. Redmayne, W. E. Rendle, Reynolds and Co., Riches and Watts, W. Richardson and Co., Richmond and Chaudler, Rimmington and Co., Robey and Co., Ross and Horrocks, Ruston and Procter, W. Sawney, R. Scholefield, J. W. Sears and Co., J. Shaw, jun., E. Sherwood, W. Smith, J. D. Snowden, Spear and Jackson, T. R. Starey, B. Stead, Steel and Garland, R. Store, Tasker and Son, Taylor and Co., Taylor Brothers, Taylor Sewing Machine Co., Thomas and Taylor, Thornton and Co., Tomlinson and Co., E. Tong, J. Turner, Wade and Cherry, W. Waide, T. B. Wales and Son, Wheeler and Wilson, B. Wheeler and Co., J. White and Co., S. Witkinson, Wilson and Sons, S. Windover, J. Winkley and Co., Winder Brothers, Wingfield and Co., E. B. Wood and Co., W. A. Wood, Wood and Cocksege, W. Wray and Sons, J. Yeardley,

LIST OF PRIZES.

JUDGES.—CATTLE—A. Mitchell, The Walk House, Alloa, N.B.; S. Rich, The Cedars, Fearnhall Heath, Worcester; T. Wetherell, Clay-path, Durham. SHEEP—J. H. Caswell, Loughton, Folkingham; C. Randall Chadbury, Evesham; F. Spencer, Alma House, Claybrook. PIGS—E. Little, Lanhill, Chippenham; J. Fisher, Carhead, Crosshills; J. Crabtree, Branch Hotel, Shipley, Leeds. HORSES—Hunters and roadsters: Col. Luttrell, Bagworth Court, Axbridge, Somerset; A. L. Maynard, Newton Hall, Durham; J. M. Richardson, Limber Magna, Ulceby, Lincolnshire.

CATTLE.

SHORTHORNS.

Families of Shorthorns, to consist of cow of any age, and two or more of her offspring.—First prize, £50, J. Outhwaite, Baines, Catterick (Sylvia, and her offspring Baroness Conyers and Miss Fox); second, £25, T. H. Miller, Singleton Park, Lancashire (Ringlet II., and her offspring Ringlet IV. and Ringlet V.).

Bulls of any age above three years old.—First prize, £25, R. Bruce, Newton of Struthers, Farres (Lord Irwin); second, £10, Marquis of Exeter, Burghley Park, Stamford (Telemachus); third, £5, A. H. Browne, Doxford, Chathill (Duke of Aosta).

Bulls above two and not exceeding three years old.—First prize, £20, W. Linton, Sheriff Hutton (Sir Arthur Ingram); second, £10, Messrs. Dudding, Panton House, Wragby, Lincoln (Robert Stephenson); third, £5, R. Moss, Whisby, Lincoln (General Wharfedale).

Bulls above one and not exceeding two years old.—First prize, £20, J. Outhwaite (Lord Godolphin); second, £10, Lady Pigot, Branches Park, Newmarket (Rapid Rhone); third, £5, A. H. Browne (Rosario).

Ball calves above five and not exceeding twelve months old.—First prize, £15, J. Outhwaite (Duke of Chamburg); second, £10, Lady Pigot (May King); third, £5, T. Rose, Melton Magna, Wymondham, Norfolk (Bright Knight).

Cows of any age above three years old, in calf or milk.—First prize, £25, J. Outhwaite (Vivandiere); second, £10,

Lady Pigot (Victoria Victrix); third, £5, T. H. Hutchinson, Manor House, Catterick (Dairy Girl).

Heifers not exceeding three years old in calf or milk.—First prize, £20, J. Thom, Lark Hill, Chorley (Royal Rose); second, £10, B. St. John Ackers, Priknash Park, Painswick, Gloucestershire (Queen of the Georgians); third, £5, T. H. Hutchinson (Lady Playful).

Heifers not exceeding two years old.—First prize, £20, Lady Pigot (Rose of Lincoln); second, £10, T. Statter, Stand Hall, Whitefield, Manchester (Robin's Rose); third, £5, T. H. Hutchinson (Lady Alicia).

Heifer calves above five and not exceeding twelve months old.—First prize, £15, B. St. John Ackers (Lady Carew); second, £10, Lady Pigot (Moorish Captive); third, £5, Marquis of Exeter (Queen of Ithaca).

DAIRY CATTLE.

Cow for dairy purposes.—First prize, £10, J. Fawcett, Beeston, Leeds (Moggey); second, £5, T. Statter.

Alderney, Jersey, or Guernsey cow or heifer, in calf or milk.—First prize, £10, and second £5, J. Brown, Rossington Hall, Bawtry (Landscape and Honey).

SHEEP.

LEICESTERS.

Shearling rams.—First prize, £20, G. Turner, jun., Thorpe-lands, Northampton; second, £10, W. Brown, Highgate House, Holme-on-Spalding-Moor, York; third, £5, I. Borton, Bartou House, Barton-le-street, Malton.

Rams of any other age, £15, T. H. Hutchinson, Manor House, Catterick; 2 and 3, £7 and £3, G. Turner, jun.

Pen of five shearling gimmers, £7, G. Turner, jun.; 2, £3, J. Borton.

LINCOLNS.

Shearling rams.—First and second prize, £15 and £7, T. Cartwright, Dunstan Pillar, Lincoln; third, £3, J. Pears, Mere, Lincoln.

Rams of any other age, £10, J. Pears; 2, £5, R. Wright, Nocton Heath, Lincoln.

Pen of five shearling gimmers, £10, J. Pears; 2, £5, W. Hesselstine, Braumont Cote, Barton-on-Ilumber.

BORDER LEICESTERS.

Shearling rams.—First and second prize, £15 and £7, Rev. R. W. Bosanquet, Rock, Alnwick.

Rams of any other age, £10, T. Forster, jun., Ellingham, Chathill; 2, Rev. R. W. Bosanquet, Rock, Alnwick.

Pen of five shearling gimmers, £10, Rev. R. W. Bosanquet; 2, £5, R. Tweedie, The Forest, Catterick.

SHROPSHIRE DOWNS.

Shearling rams.—First prize, £15, W. Baker, Moor Barns, Atherstone; second, £7, S. C. Pilgrim, The Outwoods, Hinckley, Leicestershire.

Rams of any other age, £10, W. Baker; 2, £5, S. C. Pilgrim.

Pen of five shearling gimmers, £10, W. Baker.

MOUNTAIN SHEEP.

Rams of any age.—First prize, £10, J. Pickup, Rose, Cottage, Warter, Newchurch, Lancashire; second, £5, T. Waind, Ankness, Kirby-Moorside.

Pen of five breeding ewes, with lambs sucking, £5, T. Briggs, Guard House, Keighley.

PIGS.

TWELVE MONTHS OLD AND UPWARDS.

Boars of large breed.—First prize, J. Dove, Hambrook, Bristol; second, Earl of Ellesmere, Worsley Hall, Manchester.

Sows of large breed, in pig or milk, £5, C. R. N. Beswicke-Royds, Pyke House, Littleborough; 2, £2, R. E. Duckering, Northorpe, Kirton-in-Lindsey.

Boars, small breed, £5, C. R. N. Beswicke-Royds; 2, £2, Earl of Ellesmere.

Sows, small breed, in pig or milk, £5, C. R. N. Beswicke-Royds; 2, £2, R. E. Duckering.

Boars of best or Berkshire breed, £5, R. E. Duckering. Sows, black or Berkshire breed, in pig or milk, C. R. N. Beswicke-Royds; 2, R. E. Duckering.

Boars of any breed, not qualified to compete in classes 26, 28, and 30, £5, Earl of Ellesmere; 2, £2, J. Collis, Hillfoot, Sheffield.

Sows of any breed, in pig or milk, not qualified to compete in classes 27, 29, and 31, £5, R. E. Duckering; 2, £2, C. R. N. Beswicke-Royds.

NOT EXCEEDING TWELVE MONTHS OLD.

Boar of large breed.—First prize, £5, J. Simpson, Freecgate, Cowling, Skipton; second £2, Earl of Ellesmere, Worsley Hall, Manchester.

Sows of large breed, £5, Earl of Ellesmere; 2, £2, J. Garbatt, jun., South Cave, Borough.

Boars of small breed, £5, Earl of Ellesmere; 2, £2, J. Dove, Hambrook, Bristol.

Sows of small breed, £5, C. R. N. Beswicke-Royds; 2, £2, Earl of Ellesmere.

Boars, black or Berkshire breed, £5, T. Rose, Melton Magna, Wymondham, Norfolk; 2, £2, C. R. N. Beswicke-Royds.

Sows of black or Berkshire breed, 1, £5, and 2, £2, C. R. N. Beswicke-Royds.

Pens of three breeding sows of any breed, from four to nine months old, £5, Earl of Ellesmere; £2, T. Rose.

HORSES.

Stallions, thoroughbred, for getting weight-carrying hunters.—First prize, £50, Henry Chaplin, M.P., Blankney Hall, Lincoln (Knowsley); second, £20, F. Barlow, Hasketon, Woodbridge, Suffolk (Citadel); third, £10, R. Hutton, Gloucester-place, Portman-square, London (Laughing Stock).

Stallions for getting roadsters.—First prize, £10, W. Vary, Buckthorpe, Stamford-bridge, Yorkshire (Young Fireaway); second, £5, J. Gil, Howden Park, Silsden, Leeds (Merrylegs).

HUNTERS.

Two-year-old gelding.—First prize, £15, T. H. Hutchinson; second, £5, J. Everatt, Laughton, Gainsbrough (Sunshine).

Two-year-old filly.—First prize, £10, T. H. Hutchinson (May Queen); second, £5, S. R. Robson, Windle Beck, Ganton (Golden Horn).

Three years old geldings.—First prize, £25, J. M. Tattersall Musgrave, Beverley (Tasman); second, £10, J. B. Booth, Killyber, Catterick (Berwick); third, £5, J. P. Crompton, Thornholme, Burton Agnes, Hull (Braekendale).

Three years old fillies.—First prize, £15, J. Latt, Seampston, York (The Gem); second, £5, J. Goodhill, George Hotel, Huntingdon (Lady Mary).

Four years old geldings.—First prize, £30, Sir G. O. Wombwell, Bart., Newburgh, Easingwold, Cawton; second, £15, T. Darrell, West Aytun, York (King of Diamonds); third, £5, R. Nelson, Barton Hill House, York (Duke of Connaught).

Four years old mares.—First prize, Mrs. A. H. Browne, Doxford Hall, Chathill (Sea Breeze); second, C. Rose, Market Hill, Maltou (Fairy); third, R. Goodlass, Willerby Ganton.

Five years old geldings or mares.—First prize, £30, T. H. Hutchinson, Manor House, Catterick (Jester); second, £15, J. Goodhill, George Hotel, Huntingdon (Marshal MacMahon); third, £5, P. Hornsby, 9, Castlegate, Grantham (White Stockings).

Geldings or mares, six years old and upwards, and qualified to carry at least 15 stone with hounds.—First prize, £30, R. Hutton (Iron King); second, £10, B. Nicholson, Sturton Grange, Garforth, Leeds (Wallet); third, £5, T. W. Jeffcock, Shire House, Sheffield (Emperor).

Geldings or mares, six years old and upwards, and qualified to carry not less than 12 stone with hounds.—First prize, £20, Sir G. O. Wombwell, Newburgh, Easingwold (Amos Clark); second, £10, G. Ringrose, Flixton House, Ganton, Yorkshire (Flotmanby); third, £5, C. E. S. Cook, St. Catherine's, Doncaster (The Treasurer).

Stallions for getting coach horses.—First prize, £20, G. Burton, Thorpe Willoughby, Selby (The Fashion); second, £10, G. Holmes, Bar House, Beverley (Landmark); third, £5, F. Leake, Iotham Carrs, North Cave, Brough (Emperor).

Stallions for getting agricultural horses, three years old and upwards.—£20, T. Statter, Stand Hall, Whitfield, Manchester (Young Champion); second, £10, J. F. Crowther, Knowle Grove, Mirfield (Young Honest Tom); third, £5, J. Forshaw, Burley in Wharfedale, Leeds (Lincolnshire Hero).

Entire agricultural colts foaled in 1872.—First prize, £20, F. Long, Cliff House, Wetherby (Royal Tom); second, £10, S. Barker, Mart Hall, Doncaster (Rainboro); third, £5, W. and E. Johnson, Hatfield, Doncaster.

Brood mares for breeding hunters, with foals sucking.—First prize, £30, E. Hornby, Flotmanby, Ganton, Yorkshire

(Laly Derwent); second, £15, H. Watson, Newbegin, Fley (Laly Decanter); third, £10, E. Hornby (Lioness).

Brood mares for breeding coach horses, with foals sucking.—First prize, £25, J. Reader, Beacon Farm, Holms, York; second, £10, J. T. Whitmoor, Selby (Wasp); third, £5, W. B. B. Bank, Sheffield (Fanny).

Brood mares for breeding roadsters, with foals sucking.—First prize, £15, T. E. Morrell, Hellaby Hall, Rotherham (Miss Polly); second, £5, F. Cook, Thixendale, York.

Brood mares for breeding agricultural horses, with foals sucking.—First prize, £30 T. Appleyard, jun., Wistow Lordship, Selby (Jewel); second, £15, J. Thom, Sark Hill, Chorley (Jeanie); third, £10, T. H. Hutchinson (Jean); fourth, £5, C. Utley, Stansfield Ash, Sheffield (Depper-).

HORSES FOR DRAY OR LURRY PURPOSES.

Geldings or mares, not less than 4 and not exceeding 7 years old.—First prize, £20, P. Stephenson, Rainton, Thirsk (Prince); second, £10, G. Wood, Hayfields, Doncaster (Violet); third, £5, T. Ward, Parkhouse Farm, Intake, Sheffield (Farmer).

HORSES FOR AGRICULTURAL PURPOSES.

Two-year-old agricultural geldings or fillies.—First prize, £15, W. Baker, Moor Barns, Atherstone.

Three-year-old agricultural geldings or fillies.—First prize, £15, W. Bramley, Amcotts Villa, Doncaster, Lincoln; second, £10, J. Stanforth, Padlocks Farm, Sheffield Park (Flower); third, £5, J. Smith, Humbarton, Borough Bridge (Prince).

COACH HORSES.

Two-year-old geldings.—First prize, £10, T. Jackson, Deep Dale, Cayton, Scarborough (Talbot); second, £5, C. and J. Smith, Harthill, Kiveton Park, Sheffield.

Three-year-old geldings.—First prize, £20, J. Johnson, Brigham, Hull (Prince Charlie); second, £10, T. Plummer, Birdorth, Easingwold; third, £5, J. Kirby, Stamford Bridge, York (Royalty).

Three-year-old fillies.—First prize, £10, D. Wilson, Park House, Cottingham, Hull (Wild Flower); second, £5, J. Kirby (Flora).

CARRIAGE HORSES AND PONIES.

(To be exhibited in harness.)

Match pairs, not less than 15½ hands high.—First prize, £30, G. Holmes, Bar House, Beverley; second, £10, H. E. Watson, Shirecliffe Hall, Sheffield; third, £5, J. Rogers, Abbeydale, Sheffield.

Match pairs, not less than 14½ and not exceeding 15½ hands high.—First prize, £20, G. Holmes; second, £10, G. Wilson, Banner Cross, Sheffield; third, £5, C. H. Firth, Givendale.

Match pairs of ponies, not exceeding 14½ hands high.—First prize, £20, T. H. Miller, Singleton Park, Poulton-le-Fylde; second, £10, Mrs. Frickett, Brinkland House, Sheffield; third, £5, G. Holmes.

ROADSTERS, HACKNEYS, AND PONIES.

Hackney or roadster, gelding or mare, from four to eight years old, equal to carry 15 stone.—First prize, £25, T. H. D. Bayley, Edwinstone House, Ollerton (Enterprise); second, £10, J. Fairbrother, Attercliffe, Sheffield (Bob).

Hackney or roadster, gelding or mare, from four to eight years old, equal to carry 12 stone.—First prize, £15, F. C. Matthews, Driffield (Ozone); second, £10, W. H. Cranswick, Thornholme, Burton Agnes (The Pet).

Pony, gelding or mare, from four to eight years old, and not less than 12½ and not exceeding 14½ hands high.—First prize, £10, W. H. Blackman, Wressle, Howden, Yorkshire (Fairy); second, £5, R. Barker, Malton (My Lady).

Pony, any age or sex, not exceeding 12½ hands high, suitable for children, to be ridden in the ring by boys under fifteen years of age.—First prize, £10, H. T. Newcome, Kirkleatham Hall, Redcar (Jot); second, £5 and spurs, J. Hornby, Castlegate House, Grantham (Little Wonder).

HOUNDS.

JUDGES.—Colonel Fairfax, John Farrington, John Walker.

Unentered hound, pupped since 1st December, 1872, £15; to huntsman, £5.—First prize, the Quorn (Governor); second, the Grove (Ambrose).

Two couples of entered hounds, no hound being older than a seven-season hunter, £10; to the huntsman £3.—First prize, Earl of Eglinton (Lincoln, Gambler, Furrier, and Tauer); second, Lord Yarborough (Aider, Nathan, Gumcrack, and Rocket).

Stallion hound, not less than a two-season hunter, £5; to the huntsman, £2.—Prize, the Quorn (Alfred).

Unentered hound, pupped since the 1st December, 1872, £15; to the huntsman, £5.—First prize, the Burton (Alice); second, the Grove (Amazon).

Two couples of entered hounds, no hound being older than a seven-season hunter, £10; to the huntsman, £3.—First prize, the Grove (Bridesmaid, Captive, Spuister, Languish); second, Earl of Yarborough (Glory, Gandy, Namesake, and Nimble).

Brood bitch, having reared a litter since the 1st December, 1873, £5; to the huntsman, £2.—First prize, the North Shropshire (Racket); second, Earl of Yarborough (Gandy).

The champion cup, value twelve guineas.—Prize, the Burton (Alice).

SHOEING SMITHS.—Judges: T. Bowman, Croome, Sledmere; and W. Gadsby, Harewood, Leeds.—First prize, £5, J.

Page, 5th Brigade Royal Artillery, Sheffield; second, £3, J. York, Malton; third, £2, Watson and Hodgson, White Hart-yard, Wakefield; £3 for apprentice, T. Riley, Halifax.

At the meeting of the Council, Lord Auckland in the chair, there were three deputations—viz. from Driffield, Bridlington, and Howden. The show, it was pointed out, had never been at Driffield, but it had at Howden and Bridlington. Earl Cathcart proposed Howden, and Mr. Robert Swann seconded it. Major Worsley proposed that the 1875 show should be at Driffield, and Mr. Legall seconded. Mr. F. Bacon Frank proposed Bridlington, which found a seconder in Mr. Moorsome, of Harewood. The question was then put to the vote and taken by a show of hands, when by a large majority Driffield was selected for the show in 1875.

BELLE VUE CATTLE SHOW, AT MANCHESTER.

Ten Shorthorn bulls over two and under four years old were shown, and the first prize went to Mr. George Fox, Harefield, Wilmslow, for Leeman, bred by Mr. Liuton, of Sheriff Hutton. The second prize of £10 was obtained by Mr. Charles Beart, Stow Westhead Farm, Norfolk; and the third by Mr. Willis, Manor House, Carperby, Bedale, who was also commended. The class of yearling bulls was good, and the winner was Lord Godolphin. In the general competition for the champion bull of the show, Lord Godolphin carried off the prize cup. Second to him in his class was Baron Barrington III., shown by Mr. Thompson, Mythop Lodge, Blackpool; and Lady Pigot was third with Rapid Rhone. In the class of bull-calves, Hero, shown by Mr. Statter, was first; Baron Tregunter, shown by the Rev. P. Graham, Turncroft, Over Darwen, second; and Cheerboy II., shown by Mrs. Atkinson, Ribchester, third. For cows over three years old, Mr. Outhwaite's Vivandière was placed first in her class, and also obtained the silver cup offered for the best cow in the yard. Victoria Victrix was placed second, and Mr. Statter's Lady Graceful was third. The remaining prizes in the cattle classes were awarded as follow:

Heifer, exceeding two and not over three years old.—First prize, Lady Pigot (Rose of Wytham); second, T. Statter (Rosabina 6th); third, J. R. Patterson, Hallebeck, Barrow-in-Furness.

Heifer, exceeding one and not over two years old.—First and second prizes, T. Statter (Robin's Rose and Robin's Stanley Rose); third, Lady Pigot.

Heifer calf.—First prize, G. Fox; second, C. W. Brierley, Rhodes House, Middleton; third, W. J. Legh, M.P.

Hereford bull.—First prize, H. N. Edwards, Broadward, Leominster; second, R. Tanner, Frodesley, Durrington, Silop, Devon, in calf or milk.—First and second prizes, T. L. Senior, Broughton, Aylesbury.

Hereford, in calf or milk.—First prize, R. Tanner; second, T. Nott, Seltou, Brampton Brian, Hereford.

Other Breeds.—Bull: First prize, T. Statter. Cow: First and second prizes, T. Statter.

Channel Island cow.—First and second prizes, J. Pilling and Co., Davenport Green, Old Hall, Holes, Cheshire.

In the other classes the entry was very indifferent.

HORSES.

Thorough-bred stallion for getting hunters.—First prize, E. Stanley, The Height, Grange, Carnforth; second, Ambery and Cocklin, Wilmslow; third, T. Statter.

Thorough-bred stallion for getting agricultural, dray, or lorry horses.—No first prize awarded; second, J. and J. Wyde, Worth Hall, Poynton, Stockport.

Stallion colt foaled in 1872.—Prize, J. Braid, Bell Vue, Garstang.

Stallion for getting roadsters.—First prize, J. Gill, Howden Park, Leeds; second, T. Statter.

Brood mare for breeding hunters.—Prize, J. Moffat, Kirkburton Park, Carlisle.

Mare for breeding draught horses.—First prize, J. Waterworth, North Ashton, Wigan; second, T. Statter.

Brood mare for breeding hackneys or roadsters.—First prize, T. E. Morrell, Rotherham; second and third, F. Cook, Thexendale, York.

Cart gelding or mare, four years old or upwards.—First, second, and third prizes, C. W. Brierley, Rhodes House, Middleton.

Gelding or filly, three years old.—First prize, E. Waterworth, Wigan; second, W. Kirkham, Poulton-le-Fylde; third, H. Nield, Worsley.

Gelding or filly, under three years old.—First prize, D. Partington, Kersal; second, J. Cheers, Cheshire.

Gelding or filly under two years old.—Prize, T. Statter.

SUROPESHIRE SHEEP.

Ram.—E. Nock, Sutton House, Shifnal. Shearling ram.—Prize, J. Coxon, Freeford Farm, Lichfield.

Ram of any other age.—W. Baker, Moor Barns, Atherton, Warwickshire.

Two ewe lambs.—E. Nock.

Two shearling ewes.—J. Wilkes, Brewers' Oak, Shifnal.

Two ewes, any other age.—Sarah Beach, The Hattons, Brewood, Stafford.

SOUTHDOWN OR HAMPSHIRE DOWN.

Shearling ram.—Prize, S. Ashton, Timperley.

Two shearling ewes.—First, second, and third prizes, S. Ashton.

Long-wooled ram lamb.—Prize, F. T. Turner, Armthorpe, Doncaster.

Shearling ram.—First, second, and third prizes, W. Norman, Hall Bank, Aspatria.

Two ewe lambs.—First prize, F. J. Turner; second and third, W. Norman.

Two shearling ewes.—First and second prizes, F. T. Turner.

Six Irish lambs.—First prize, T. Reed, Hope Farm, Eccles; second, C. Reed, Eccles.

Tenant farmers' classes: Ram lamb.—Prize, S. Ashton.

Ram lamb, over one year old.—Prize, S. Ashton.

Two ewe lambs.—Prize, S. Ashton.

Two ewes over two years old.—Prize, S. Ashton.

PIGS.

Boar, large white breed, over one-year-old.—Prize, Earl of Ellesmere.

Sow, large white breed, over one-year-old.—Prize, Earl of Ellesmere.

Boar, small white breed.—Prize, Earl of Ellesmere.

Sow, small white breed.—First and second prizes, Earl of Ellesmere.

Boar, black or Berkshire breed.—Prize, M. Walker, Burton-on-Trent.

Sow, black or Berkshire breed.—First prize, M. Walker; second, H. Nield; third, J. Garvell, The Grange, Bolton.

Boar, middle breed.—First and second prizes, Earl of Ellesmere.

Sow, middle breed.—First and second prizes, Earl of Ellesmere.

Boar, large white breed, under one-year-old.—Prize, Earl of Ellesmere.

Sow, white breed, under one-year-old.—Prize, J. Nuttal, Heywood.

Boar, middle breed.—First and second prizes, Earl of Ellesmere.

Sow, middle breed.—Prize, Earl of Ellesmere.

Boar, black or Berkshire breed.—Prize, W. H. Brady, Stockport.

Boar, small white breed.—Prize, Earl of Ellesmere.

Sow, small white breed.—Prize, M. Walker.

Litter of two pigs, small breed.—Prize, Earl of Ellesmere.

Litter of two pigs, large breed.—Prize, M. Walker.

CHEESE.

Two cheeses, over 40lb.—Prize, G. W. Prescott, Minshall Vernon, Newhall Grove.

Two cheeses under 40lb.—Prize, G. Harris, Lower Cain, Dursley, Gloucestershire.

BUTTER.

Six-and-a-half pounds fresh butter.—Prize, J. Partington, Francill, Castleton, near Heywood.

Six-and-a-half pounds of fresh butter, the production of a tenant farmer resident within ten miles of Manchester.—Prize, H. Nield, Worsley.

VEGETABLES.

Collection of vegetables.—First prize, T. Broadhurst, Prestwich; second, H. Simcock, Brighton Grange, Barton Moss.

Stand of seeds and roots.—Prize, G. Yates, Royal Oak Mills, Stockport.

IMPLEMENTS.

Collection of machinery for agricultural purposes.—First prize, J. Higson; second, F. and W. Richmond.

Collection of agricultural implements and tools.—First prize, J. Higson; second, F. and W. Richmond.

Collection of articles for domestic use.—Prize, Thomas and Taylor, Salford.

Stable and cow-house fittings.—First prize, St. Pancras Ironworks Company; second, F. W. Richmond.

THE SHORTHORN IN AMERICA.

TO THE EDITOR OF THE MARK LANE EXPRESS.

SIR,—The bull 2nd Duke of Hillhurst has gone back to his old quarters; although with a good back, he was, like all the rest of the Dukes, thin through the heart, and consequently inheriting the constitutional failing. The general impression is, that Mr. Robins, who purchased the 2nd Duke of Hillhurst at Mr. King's sale, did it to make a sensation, and to lead fanciful men on to a state of enthusiasm very far beyond the bounds of reason. As to the famous cows, you are aware that the forty-thousand dollar cow is dead; and her daughter, purchased by Mr. Alexander for 20,000 dollars at the same sale, is gone after her. Mr. Murry's cow of the same family, and which he valued at ten thousand dollars, was too precious to have her hide taken off, and ought to have been hurried with a long procession of carriages. How many more are gone, kept in secret, is yet a myth, but such deaths will out. Shorthorn bulls are so numerous in this country that they are quite a drug at sales as well as privately, and I have seen capital bulls and good stock-getters sold from a hundred to one hundred and fifty dollars. Still fashion even controls the show-ring to such an extent that a Kentucky breeder suggests whether it would not be as well to send the pedigree without the animal, and let the judges make the award on that. I know a breeder in Kentucky who had as fine and uniform a herd of Shorthorns as any man in that State—compact, beautiful in symmetry, quality, on short legs, fine bone, possessing strong constitutions, and they lay on as much flesh for food consumed as could be desired. He was persuaded by the fanciful, fashionable breeder to sell them. "You must have pedigree, or they will not do,"

said they. He took their advice, and sold them for less than half their value. Another writer in *The National Live Stock Journal*, speaking of him, says: "The last we heard of our friend was, he was looking out among some light, leggy animals for pedigrees. We suggested that, having made some reputation by the excellence attained in his old herd, he certainly should not begin now by selecting animals that were far inferior to them. 'To tell you the truth,' said he, 'I have not been able to find their equals at any price.'" Pedigree and pampering for speculative purposes are the ruin of good breeding.

Yours,

WM. H. SOTHAM.

Cass Hotel, Detroit, Michigan, July 16th.

EMIGRATION AND IMMIGRATION. — There is at present a great falling off in the number of emigrants from this country as compared with last year. We observe in *The Standard* a statement that the reduction in the number of emigrants from the Mersey in the month of July was 3,990, and the decrease for the seven months of the year which have now elapsed, is 49,355, which shows a very great falling off indeed. Similarly the accounts from New York refer to a great falling off in the immigration there, the amount of this falling off being so great that it is expected the number for the year 1874 will be about 100,000 only, as compared with an average of about 250,000 annually. Something has thus evidently happened to checked emigration, and it is impossible not to connect the facts with statements which are repeated in many quarters as to the number of emigrants who are now returning—from the United States especially—disappointed with the reality which they find as compared with their anticipation. The effect of the last crisis in the United States has been most severe, and has aggravated the evils of a protective tariff and want of capital which have long helped to make the United States much less of a paradise to the working man relatively to his condition in older countries than was formerly the case. The rise in wages in England and on the Continent during the last few years has no doubt also helped to diminish, if not altogether to remove, the relative advantages which the United States possessed for rude labour, not even excepting, perhaps, the rudest kind of agricultural labour, which is the sort that has hitherto had the most advantage in changing from an old to a new country. Whatever the explanation may be, the question of this re-immigration, as well as of an immigration of foreigners into this country, appears to us so interesting that we would again repeat a suggestion we have more than once made—that the statistics of both movements, the inward as well as the outward current of population, should be collected and published with equal care by those who are charged with the duty. Statistics of emigration by themselves, if there is any return current of importance at all, are entirely misleading; and that there is such a current at the present moment is beyond a doubt. We showed lately that the comparison of the census returns for 1861 and 1871 indicated that an immigration on a very large scale had taken place in that decade, and the reports now current as to the extent of the immigration in progress make it the more important that all the facts should be noted at the time, instead of one portion of them only.—*The Economist*.

DESTRUCTION OF AGRICULTURAL MACHINERY. —It would seem, that the outrages which characterised the conduct of numerous bands of agricultural labourers many years ago, upon the introduction of machinery into farming work, have not yet entirely died out. At Preston Wynne, in the county of Hereford, there was at work, in the early part of the month, in a field on the farm of Mr. Henry Perry, a reaping machine. During the night time it was broken to pieces and the pole and some other important parts of the machine carried off and thrown away altogether, so that it was rendered completely useless, and the workmen employed with it were stopped. Inquiries are being by the police, and a reward for the apprehension and conviction of the offenders offered.—*Hereford Times*.

THE ROYAL AGRICULTURAL SOCIETY OF ENGLAND.

MONTHLY COUNCIL, Wednesday, August 5.—Present: Viscount Bridport, President, in the chair; Mr. Amos, Mr. Edmonds, Mr. Brandreth Gibbs, Mr. Hemsley, Mr. Holland, Colonel Kingscote, M.P., Mr. Leeds, Mr. Pain, Mr. Sanday, Mr. Whitehead, and Professor Simonds.

The following members were elected:

Addington, Thomas, Wyboston, St. Neots
 Andrews, Henry, Court Lodge Farm, Great Chart, Ashford, Kent
 Arnot, James, Woodcote, Carshalton, Surrey
 Barnard, Thomas, Cople House, Bedford
 Bingley, Joseph, Beckingham, Gainsborough, Notts
 Bourne, John, Hankelow House, Nantwich
 Brydone, Henry Gray, Petworth, Sussex
 Carey, Arthur, Rochford, Essex
 Davies, Thomas William, Sugdon, Wellington
 Davis, Francis Charles, Wichford, Long Compton
 Eardley, John, Norton Farm, Market Drayton
 Eder, Carl, Norfolk Farm, Windsor Great Park, Staines
 Edwards, Charles, The Grove, Wroughton, Somerset
 Evans, John, Abernant, Llanwrtyd, Brecon
 Fawkes, Ayscough, Farnley Hall, Otley
 Glover, James William, Warwick
 Goodall, Brittain, Heshaw Grange, Market Drayton
 Hague, Jenkin, Biddenden, Staplehurst, Kent
 Hammer, Wyndham E., Stockgrove, Leighton Buzzard Hill, Lord Arthur, Wakehurst-place, Hayward's Heath
 Hoare, Charles A. R., Eden, Beckenham, Kent
 Hutchence, William A., Northallerton, Yorkshire
 Ivimy, Edward Thomas, Herriard Grange, Basingstoke
 Jones, John, Higher Grange, Ellesmere, Salop
 Lester, Thomas, Ollerton, Market Drayton
 Lewis, George, Mickley Farm, Prees, Salop
 Lloyd, John, The Queen's Hotel, Oswestry, Salop
 Lloyd, jun., Richard, Broad-street, Newtown, Mont.
 Macan, Turner A., Elstow, Bedford
 May, George, Harton Collieries, South Shields
 Meysey-Thompson, Bart., Str Henry M., Kirby Hall, York
 Needham, John Louth, Hutloft Grange, Alford, Lincoln
 Neve, Thomas, Sissinghurst, Staplehurst, Kent
 Packard, jun., Edward, Bramford, Ipswich,
 Pinder, Robert, Whitwell, Oakham, Rutland
 Rast, George John, Alconbury House, Huntingdon
 Rutherford, George, Pintonan, Coldstream, N.B.
 Scriven, Charles Herbert, Castle Ashby, Northampton
 Scriven, Richard G., Castle Ashby, Northampton
 Scott-Chad, Joseph S., Thursford Hall, East Dereham
 Stafford, Robert Barry, Bedford
 Talbot, George C., Temple Guiting, Winchcombe
 Theobalds, Hope, Boughton Alaph, Ashford, Kent
 Waterman, jun., James, Tenterden, Ashford, Kent
 Wittingham, Lewis Browne, Llandrinio Hall, Oswestry
 Whitton, Joseph W., Potcote, Towcester

FINANCE.—Col. KINGSCOTE, M.P., presented the report, from which it appeared that the Secretary's receipts during the past month had been examined by the Committee and by Messrs. Quilter, Ball, and Co., the Society's accountants, and were found correct. The balance in the hands of the bankers on July 31 was £7,258 12s. 3d., the sum of £2,000 remaining on deposit.

The Committee recommended that the Secretary be authorised to transfer the amount of £2,000 now on deposit to the current account. They also proposed to make a special report to the Council in November, on the state of the Society's funds, and to call attention to the desirability of appointing local agents throughout the country, for the purpose of increasing the number of members of the Society.—This report was adopted.

GENERAL BEDFORD.—Mr. B. T. BRANDRETH GIBBS reported that the Committee had examined various bills connected with the Bedford meeting, and recommended their payment by the Finance Committee. They also re-

commended that the contractor be paid £1,222, as his fourth instalment on account, in accordance with the surveyor's certificate; also that the surveyor's account, amounting to £101 6s. 9d. in addition to a year's salary of £100, be paid, together with £10 10s. for expenses and report upon the Harrogate show of the Yorkshire Society.—This report was adopted.

GENERAL TAUNTON.—Mr. HOLLAND (Chairman) reported the recommendation of the Committee that the surveyor be instructed to inform the Taunton local authorities what levelling and other works require to be done to the site of the Taunton showyard.—This report was adopted.

HOUSE.—Col. KINGSCOTE, C.B., M.P., reported that the Committee recommended that the estimate for painting the inside of the house, sent by Messrs. D. G. Laing and Son, be accepted, and that the usual white-washing and house-cleaning be done during the recess.—This report was adopted.

SELECTION.—Col. KINGSCOTE, C.B., M.P. (chairman), reported that the Committee recommended the election of members of Council to fill the existing vacancies being postponed until November.—This report was adopted.

VETERINARY.—Col. KINGSCOTE reported that a letter from Colonel Coryton's agent, requesting part payment of Professor Axe's fees for inspecting and reporting upon an outbreak of splenic apoplexy among his cattle in Cornwall had been laid before the Committee, and that they did not recommend that the request be complied with, as the outbreak was not in any way unusual or remarkable. The Committee had received a report from Professor Simonds on "the health of animals of the farm" during the past six months, including descriptions of experiments in reference to splenic apoplexy and pleuropneumonia, accompanied by reports of five investigations of special outbreaks of disease; and they recommended that these reports be published in the next number of the *Journal*.—This report was adopted.

The President reported the death of the Earl of Egmont, a Vice-President of the Society; and of Mr. James Webb, of Fladbury, Pershore, a member of the Council.

On behalf of Earl Cathcart and himself, as representatives of the Society on the governing body of the Royal Veterinary College, Colonel Kingscote called attention to a proposed college charter, with a view to its consideration, and asked for instructions, inasmuch as they did not regard themselves as substantive governors of the college, but as representatives of the council of the Royal Agricultural Society. Professor Simonds thereupon explained that the college having accumulated a considerable sum of money, the governing body were now applying for a charter to enable them to hold property, and to sue and be sued; and they were endeavouring to take advantage of this opportunity to increase the scope of the college by obtaining powers to hold matriculation and other examinations, and to award scholarships, without interfering with the examining body which already had the power of conferring degrees vested in it by Royal Charter, namely, the Royal College of Veterinary Surgeons. The President stated that, in his opinion, the two institutions (the College and the Society), though perfectly distinct, were mutually useful; and Mr. Holland congratulated the governors on the step they were taking with a view to increase the usefulness of the college as an educational institution. Finally, it was moved by Mr. Brandreth Gibbs, seconded by Mr. Leeds, and carried unanimously,

"That the Council requests that Lord Cathcart, in conjunction with Colonel Kingscote, will continue to act as representatives of this Society on the governing body of the Royal Veterinary College."

Mr. Holland gave notice, on behalf of the Earl of Lichfield, that at the Council-meeting on November 4, he will move for the appointment of a Committee to take into consideration the Society's Charter, and to suggest what alterations, if any, are advisable to be made therein, for the purpose of bringing members of Council into more frequent communication with members of the Society, also for permitting the discussion in Council of measures of a practical agricultural nature, although pending or to be brought forward in either of the Houses of Parliament. The suggestions made by members of the Society at the General Meeting held in the showyard at Bedford having been read, it was moved by Mr. Brandreth Gibbs, seconded by Mr. Whitehead, and carried unanimously, "That in order to ensure the suggestions made by members of the Society at the last general meeting having thorough consideration, these suggestions be referred to a special committee to report to the Council thereon, such committee to consist of the chairmen of the standing committees, the stewards of live stock, implements, and finance, and the honorary director."

A communication from the Society of Arts, enclosing a prospectus of examinations in the technology of Agriculture and Rural Economy, was referred to the Education Committee.

THE ROYAL AGRICULTURAL SOCIETY OF IRELAND.

At the monthly meeting of the Council in Sackville-street, Dublin, Sir George Hodson in the chair, the other members present were: Hon. Bowes Daly, Sir Allan Walsh, Bart.; William Owen, Phineas Riall, C. U. Townsend, James Robertson, Charles Cannon, George A. Rochford-Boyd, Major Borrowes, Rev. R. W. Bagot, Hans H. Woods, Alderman Purdon, and Laurence Waldron.

JUMPING PRIZES.—Sir ALLAN WALSH reported that he had, at the solicitation of the local committee of the Wexford show—who had been under a wrong impression—recommended a mode by which jumping prizes would be provided for horses not entered in the stipulated time. This was to be done by creating a new class for jumping horses, not entered for exhibition, and also for leaping prizes. He now moved that his suggestion, which had been adopted by the local committee, should be ratified by the Council. If the Council approved of the payment of half-fees, those horses would compete for the £5 prize offered by the local committee, or paying a fee of 5s. on entrance into the yard.

Mr. BAGOT asked if that was not practically opening the jumping prizes?

Sir ALLAN WALSH replied in the affirmative. The jumping prizes were not closed, but the others were.

Mr. TOWNSEND inquired who, in that case, was to receive the money.

Sir ALLAN WALSH said their secretary would receive the money and give the prizes, which latter were given by the local committee.

Mr. BAGOT conceived that they should pause before practically adding to the premium sheet.

Major BORROWES opposed the proposition, on the ground that it opened up competition which, by all their rules, had been long ago closed.

Mr. OWEN also expressed himself as opposed to giving extra jumping prizes. They would have quite enough to do in attending to the competition already fixed upon, without imposing additional responsibility upon themselves.

The CHAIRMAN, after the subject had been discussed at considerable length, said it appeared to be the general feeling of the members of the Council that the request should not be acceded to, and he would make an entry to that effect on the minute book.

A communication was received from the Earl of Clancarty, expressing regret at learning that the Royal Agricultural Society of Ireland were likely to withdraw the support which they

A letter was read from Mr. J. S. Parker, in reference to the awards of the judges in class 107 at Bedford, and the Secretary was instructed to inform Mr. Parker that in accordance with the terms of the prize-sheet, all protests must be sent in before six o'clock on the Monday of the show week, unless a satisfactory reason can be assigned for the delay.

Letters were read in reference to the price of Messrs. Ball and Sons' waggon, No. 1306, and the Secretary was instructed to state that Messrs. Ball and Sons had undertaken to execute all orders for that article at the catalogue price, in compliance with the conditions on which the entry was made.

A letter was read from Messrs. Sharman and Ladbury in reference to the title of their second prize chisel Harrow (Hull Trials, 1873), and the Secretary was instructed to inform them that any references to the Society's prizes must be in conformity with the terms of the judges' awards.

A letter was read from Mr. T. H. Vergette, asking for two silver cups in place of the money prizes gained by him at Bedford, and the Secretary was instructed to inform him that the prizes having been offered in money must be awarded in money.

The usual holiday having been granted to the Secretary and clerks, the Council adjourned over the recess until Wednesday, November 4.

had heretofore kindly given to the Ballinasloe Farming Society, and urgently impressing on the Council the necessity of paying the amount of its claims. It having appeared that the particulars had not been sent in within the time specified by the rules, the application was refused.

Lieutenant-General Hall, C.B., and Mr. Anthony Lefroy, D.L., being head of the supplemental list, were elected members of the Council in the room of Sir Richard Musgrave and Sir Percy Nugent, deceased.

The report of the Financial Committee was laid on the table, from which it appeared that after payment of current expenses, there remained to the credit of the Society a balance of £539, being £100 more than was in their favour that time twelve months ago.

Mr. TOWNSEND said as the business was now disposed of, he desired to draw attention to the course adopted at the English shows. He had been lately speaking to several members of the Council, who agreed with him in thinking that it would be very judicious if they could give some encouragement in the Poor-law union or district wherever the show was held, by offering prizes for the best-cultivated farms. He thought if something of the kind could be brought forward in connection with their annual shows, it would be very desirable. He proposed that a sub-committee should be appointed to consider the matter, as he was in a position to offer £20 in furtherance of the object. No doubt, it was too late to commence at the Wexford show, but they might begin at Londonderry, and follow the rotation at subsequent shows.

Mr. ROCHFORD-BOYD, in seconding the motion, said he was persuaded that the proposition, if carried out, would give more local interest, and spread the name of the Society throughout the country more than anything that could be done.

Major BORROWES: This is the most practical resolution that has been brought before the Council for a long time. I think it will be calculated to open up a new field of usefulness and popularity for the Society.

The CHAIRMAN remarked that as the question was one which required consideration, it should be postponed till the next meeting of the Council.

Mr. TOWNSEND having assented to the suggestion, the further consideration of the matter was postponed.

NEW MEMBERS.—Nugent T. Everard, Randalstown, Navan; Walter Gilbey, Hargraves Park, Stanstead, Essex; Alfred Gilbey, Woodburn Park, Beaconsfield, Bucks.

MEETING AT WEXFORD.

The entries are more numerous than at Waterford last year, but still in some classes there is a marked scarcity of animals. In the cattle and sheep departments alone there are six empty sections, the best filled division being the Shorthorns, the heifer class, and the Border Leicesters; the Shorthorns being really good. As, perhaps, was not anticipated the blue ribbon has been won by an English breeder—Mr. A. H. Brown, of Doxford, Chathill, Northumberland, with the well-known bull Duke Aosta. In the stall next but one to him was Mr. Wm. Bolton's two-year-old, now the first in his class, as he was at the Royal Dublin Society's Show in April last. To his owner was also given the challenge cup of the County Wexford Stock Improvement Society, a local association, whose object it is to promote the rearing of thoroughbred Shorthorns, thus recognising Mr. Bolton's acknowledged position as chief among the leading agriculturists of the county Wexford. Lady Pigot carried off Mr. Purdon's second challenge cup, with two shorthorned heifers calved in 1873. The Herefords were a poor class, but it contained one animal of merit, Mr. P. J. Kerney's Braudon. The Channel Island cattle are only scantily represented, but the mixed breeds and Keries are better; and Mr. James Robertson's Kerry cow, Snowflake, rising four years, was considered by the judges to be the finest of the breed ever exhibited. She took a first prize last year at Tralee, in the country of Keries, and a like honour at the April show in Dublin. The sheep pens were well filled, and for the most part with fair specimens, the Long-wool and Leicester sections being the best. Mr. George Turner, of Northampton, took the challenge cup offered for the best shearling ram, scoring another victory to the English exhibitors. The horses shown were numerous, but it surprised many to find such a poor display of animals suited for agricultural purposes. Indeed it would appear that the horse sections are, now-a-days, swelled by the introduction of hunters, in view of the prizes offered in the jumping competition, an innovation objected to by many, and which, if it tended to detract from the interest previously attached to the agricultural sections should be carefully guarded against by an association having in view the promotion of agriculture. This absurd business, however, was very properly put off until the fog end of the meeting, as it is quite beneath the dignity of a "Royal" society.

Of implements there are fifty-one stands. Those stands include over thirty smaller stands. Twenty-five hail from England—Manchester, London, Warrington, Cheshire, Reading, Bedford, Dudley, and Oxon; while eighteen are from the locality and provinces of Wexford, Gorey, Carlow, and Drogheda; and only eight from Dublin. Among the English exhibitors are Bradford, of Manchester; Pickles, Sims, and Co., Samuelson and Co., Page and Co., Bedford; Thomas and Taylor, Cheshire; Richmond and Chandler, Walter Wood, and the Reading Iron Works Company. On the whole this department is not quite up to the mark of former years.

PRIZE LIST.

JUDGES.—SHORTHORNS: C. P. Gell; G. Atkinson. **OTHER BREEDS:** G. Hewson; R. H. Masfen. **SHEEP** (Leicesters and Lincoln): T. Harris; A. Warburton. **Border Leicesters:** G. Hogarth; J. Clarke. **Shropshire and other Downs:** C. Keeling; R. H. Masfen. **HORSES** (thoroughbred): H. Thurnall; and St. George Mausegh. **Agricultural Horses:** A. Darker; J. Byrne. **Pigs:** H. Thurnall; A. Darker. **DAIRY PRODUCE:** J. Byrne. **CEREALS:** J. Robertson.

SHORTHORNS.

Bull calved on or after 1st January, 1869.—The Purdon Challenge Cup, value 60 gs., A. H. Brown, Doxford, Chathill, Northumberland (Duke of Aosta).

Heifers calved in 1873.—The Purdon Challenge Cup, value 60 gs., Lady Pigot, Branches Park, Newmarket (Rose of Lincoln and Moorish Captive.)

Bull, calved on or after the 1st January, 1869, and previous to the 1st of January, 1872.—First prize, A. H. Brown (Duke of Aosta); second, M. O'Reilly, M.P., Knock Abbey, Dundalk (King Richard II.). Highly commended: W. Day, Garryhack, Ballycoogley (Wild Boy); W. S. Garnett, Williams-town, Kells (Marinaanke).

Bull, calved in the year 1872.—First prize, £10, W. Bolton, The Island, Oulart (White King); second, M. O'Reilly, M.P. (Prince Royal). Highly commended: Rev. H. B. Hill, St. John's, Enniscorthy (King Cock).

Bull, calved in 1873.—First prize, £10, Major Barton, Straffan (Conqueror); second, R. Chaloner, Kingsford, Moy-nalty (Alfred). Commended: J. Wilson, Rooske, Dunboyne (Master Frank); Lady Pigot (May King).

Cow, in calf or in milk, calved previous to 1st January, 1872.—First prize, £8, Lady Pigot (Victoria Victrix); second, A. H. Brown (Primrose). Highly commended: W. Day (Venus). Commended: J. Meadows, Thornville, Wexford (Ruth); W. Bolton (Patty Gwynne).

Heifer, calved in 1872.—First prize, £8, W. Bolton (Pansy Gwynne); second, Lady Pigot (Princess of Wytham). Commended: W. Day (Blossom).

Heifer, calved in 1873.—First prize, £8, Lady Pigot (Rose of Lincoln); second, R. J. M. Gumbleton, Glanatore, Tallow, co. Waterford (Princess of Wales). Highly commended: W. Bolton (Glossy the Eighth); Lady Pigot (Moorish Captive).

HEREFORDS.

Bull of any age.—Prize, £8, P. J. Kearney, Miltown House, Clonmellon (Brandon).

Cow, in calf or in milk.—Prize, £4, P. J. Kearney (Cherry Blossom).

POLLED ANGUS.

Polled Angus or Galloway bull of any age.—Prize, £5, W. Owen, Blesinton, Wicklow (The Earl).

Polled Angus or Galloway cow, in calf or milk.—Prize, £4, W. Owen (Jennie).

KERRY.

Bull of any age.—Prize, £5, J. Robertson, La Mancha, Malahide (George Frederick).

Cow, in calf or in milk.—First prize, £4, J. Robertson (Snowflake); second, Hon. Mrs. Keane, Castletown House, Churchtown, Wexford (Polly).

Heifer calved in 1872 or 1873.—First prize, £4, J. Robertson (Pollie); second, J. Robertson (Snowdrop).

CHANNEL ISLANDS.

Bull of any age.—First prize, £3, Mrs. Lane, Munfu, Ballyearney (Brown Stout); second, Marquis of Ormond, The Castle, Kilkenny (Duke).

Cow or heifer, in calf or milk.—First prize, £3, J. P. Devereux, Rocklands, Wexford (Daisy); second, Marquis of Ormond (Minerva).

Cow in calf or milk (limited for competition to tenant-farmers whose Poor-law valuation is under £100 per annum).—First prize, £8, P. Murphy, Ballinkee, Oylegate, Enniscorthy (Fanny); second, F. Cullen, Killisk, Castle Ellis (Mayflower). Highly commended: F. Cullen (Daisy).

Heifer calved in 1872.—Prize, £4, F. Cullen (Rosy).

Heifer calved in 1873.—First prize, £4, P. McGill, The Island, Oulart, Gorey (Queen of Trumps); second, P. Murphy (Lilly).

SHEEP.

LEICESTERS.

For the best shearling ram, Leicester or Border Leicester.—Cork Challenge Cup, value £50, G. Turner, Northampton (shearling Leicester).

Shearling ram.—First prize, £10, G. Turner; second and third, G. Turner. Highly commended: T. Marris, The Chase, Uleby, Northampton. Commended: W. R. Meade, Ballymartle, Ballinhasig.

Ram of any age.—First prize, £7, W. Turner, jun.; second, T. Marris. Highly commended: W. Owen, Blesington; W. R. Meade, Ballymartle. Commended: W. Owen.

Pen of five shearling ewes.—Prize, £7, J. Murphy, Mount Loftus, Goresbridge.

BORDER LEICESTERS.

Shearling ram.—First prize, £10, Duthie and Beat, Ballykileavan Mills, Stradally, Queen's County; second, T. Foster, jun., Ellingham, Chathill, Northumberland; third,

F. A. Leigh, Rosegarland, New Ross. Commended: T. Foster, jun.

Ram of any other age.—First prize, £7, T. Foster; second, A. H. Smith-Barry, Fota Island, Newtown, Cork. Commended: F. Cullen, Killisk, Castle Ellis.

Pen of five shearling ewes.—First prize, £7, Duthie and Beat; second, M. H. Franks, Westfield, Mountrath. Commended: Earl Fitzwilliam, Coolattin Park, Shillelagh.

ROSCOMMONS.

Shearling ram.—First prize, £8, O. Kavanagh, Killisk, Ballymurrin; second, Major J. Blood Smyth, Fedamore, Limerick. Highly commended: Major J. Blood Smyth. Commended: J. E. Maylor, Harristown, Ballymitty, Wexford. Ram of any age.—First prize, £7, M. Crowley, Coolmain, Oylegate; second, Major J. Blood Smyth.

LINCOLNS.

Shearling ram.—First prize, £8, J. L. Bland, Blandsford, Abbeyleix; second, J. L. Bland. Highly commended: J. L. Bland. Commended: J. L. Bland.

—Ram of any other age.—First prize, £7, F. Cullen; second, M. Crowley.

SHROPSHIRE AND OTHER DOWNS.

Short-wooled shearling ram.—Prize, challenge cup, value £20, J. L. Naper.

Shearling ram.—First prize, £10, J. L. Naper, Loughcrew, Oldcastle; second, J. L. Naper; third, A. H. S. Barry, Fota Island, Queenstown, Cork.

Ram of any age.—First prize, £7, T. Marris; second, R. Cosby, Stradbally Hall, Queen's County.

Pen of five shearling ewes.—First prize, £7, Sir A. Walsh, Bart., Ballykilcavan, Stradbally; second, A. H. S. Barry.

Pen of five ewes which have reared lambs for not less than six weeks in 1874 (limited for competition to tenant-farmers whose Poor-law valuation is under £100 per annum).—First prize, £5, J. Crowley, Coolmain, Oylegate; second, F. Cullen, Killisk, Castle Ellis. Highly commended: J. Hayes, Johnstreet, Wexford. Commended: F. Cullen.

Pen of five shearling ewes.—Prize, £5. No award.

PIGS.

COLOURED.

Boar under eighteen months old.—First prize, £5, C. H. Peacocke, Belmont, Wexford; second, P. Marnane, Ballyryan West, Tipperary.

Boar over eighteen months and under thirty-six months old.—First prize, £5, C. H. Peacocke; second, P. Marnane.

Breeding sow under eighteen months old.—First prize, £5, J. Dove, Hambrook House, Hambrook, Bristol; second, J. Molloy, 72, Mountjoy-street, Dublin. Commended: J. Molloy.

Breeding sow over eighteen months old.—First prize, £4, G. Cosby; second, M. Williams, Ballingore, Castle Ellis. Commended: E. A. Byrne, Rosemount, New Ross.

Berkshire sow and litter of not less than six pigs under five months old.—Prize, £4, G. Cosby.

Three breeding pigs of the same litter above four and not exceeding eight months old.—First prize, £5, J. Molloy, Mountjoy-street, Dublin; second, C. H. Peacocke. Commended: A. Byrne.

WHITE.

Boar under eighteen months old.—First prize, £5, Earl of Wicklow, Shelton Abbey, Arklow (Snowdrop 2nd); second, J. Dove, Hambrook House. Highly commended: J. L. Naper, Loughcrew, Oldcastle. Commended: C. W. Wise, Rochestown, Cahir, county Tipperary.

Boar over eighteen months and under thirty-six months old.—First prize, £5, J. Dove; second, J. Molloy. Highly commended: H. A. Bolton, Brook Lodge, Waterford (Snowdrop 2nd).

Breeding sow under eighteen months old.—First prize, £5, J. Dove; second, R. W. Boyle, Milltown House, Dublin. Commended: J. Dove.

Breeding sow over eighteen months old.—First prize, £4, H. A. Bolton; second, R. W. Boyle. Highly commended: J. Molloy.

Sow and litter of not less than six pigs under five months old.—Prize, £4, J. Molloy. Highly commended: C. W. Wise, Rochestown, Cahir.

Three breeding pigs of the same litter above four and not exceeding eight months old.—Prize, £5, J. L. Naper.

Breeding sow over six and under eighteen months old (limited for competition to tenant-farmers whose Poor-law

valuation is over £50 and under £100 per annum).—Prize £4, M. Williams, Ballingore, Castle Ellis.

Breeding sow over eighteen months, in pig or with a litter under five months old.—Prize, £4, M. Williams.

Breeding sow (limited for competition to tenant-farmers whose Poor-law valuation is under £50 per annum).—First prize, £4, M. Marnane, Ballyryan, Tipperary; second, M. Crowley, sen., Coolmain, Oylegate.

HORSES.

The Croker Challenge Cup, value £50 sovs.—M. Douoghue, Fullerstown, Taghmony (Aeronaut).

THOROUGHBRED STALLIONS.

For the thoroughbred sire in the Stud-book, best calculated to improve and perpetuate the breed of sound and stout thoroughbred horses, weight-carrying hunters, and horses for general stud purposes.—First prize, £20, M. Douoghue (Aeronaut); second, J. M'Mahon, Colt Raheen, Mountrath, Queen's County (Roman Bee); third, and silver medal, J. Moffat, Ballyhyland, Ennisceorthy (Pole Star).

AGRICULTURAL STALLIONS.

Clydesdale or Suffolk breed.—First prize, £15, R. Good, Aherlow, Farren, Cork; second, W. Moody, Rathaspeck, Wexford.

AGRICULTURAL STALLIONS OF ANY BREED.

Prize, £15, J. W. Tarr, West Park, Middleton, Cork. Mares calculated to produce weight-carrying hunters, in foal, or having produced foals in 1873 or 1874.—First prize, £10, M. A. Maher, Ballinkee, Ennisceorthy; second, J. Walsh, Eastlands, Ballycogley. Highly commended: J. Breen, Ballyhyland; W. Boxwell, Sarshill, Kilmore. Commended: J. Jeffans, Ring, Broadway; A. Byrne, Connagar, Kilkenny. Agricultural brood mares, in foal or having produced a foal in 1873 or 1874.—First prize, £10, J. Cooke, New Ross; second, A. Kavanagh, M.P., Borris, Carlow. Commended: W. Moody; C. and A. Cameron, Tottenham-green, Taghmon, Wexford.

Weight-carrying hunters, not less than five years old, fit to carry 14 stone and upwards.—First prize, £10, M. A. Maher; second, F. King, Woodville, Wexford. Highly commended: W. Boxwell.

Hunters, not less than five years old, fit to carry 12st. 7lb. to 14st.—First prize, £10, G. M. Maher, 7th Dragoon Guards, Curragh; second, W. H. West, Farnley, Ferns. Highly commended: R. Cousins, Hill of Kanturk, Kilmore.

Colts or fillies calculated to make hunters, foaled in 1870 or 1871.—First prize, £10, J. Jeffans; second, W. M. Gibbon, Templeselin, Adamstown, Ennisceorthy. Highly commended: F. King, Woodville, Wexford. Commended: M. A. Maher; R. Rickard, Ballydonfin, Ennisceorthy.

LOCAL PRIZES.

THE COW CHALLENGE CUP.

Shorthorn Cows.—First prize, W. Day, Garryhack, Ballycogley. Highly commended: W. Bolton, The Island, Oulart, Wexford.

Shorthorn heifers, calved on or since the 1st January, 1872.—First prize, W. Bolton. Highly commended: W. Day.

Shorthorn heifers.—First prize, W. Bolton. Highly commended: J. Meadows, Thornville, Wexford.

Shorthorn heifer calves, calved on or since the 1st of January, 1874.—First prize, A. W. Cannon, Cremorne, Oulart; second, J. Meadows.

Extra special prize for best bull in classes 5, 6, and 7.—Prize, £3, W. Bolton.

Shorthorn bulls, calved in 1870 or 1871.—Prize, £7, W. Day. Highly commended: P. Murphy, Ballinkee, Ballymurrin.

Shorthorn bulls, calved in 1872.—Prize, £7, W. Bolton. Highly commended: Rev. II. B. Hill, St. John's, Ennisceorthy.

Shorthorn bulls, calved in 1873.—Prize, £7, J. Moffat, Ballyhyland, Ennisceorthy. Highly commended: J. Meadows.

SHEEP.

Leicester or Border Leicester ram, not exceeding four-shear.—First prize, £3, M. Redmond, Killisk, Ballymurrin; second, £2, F. Cullen, Killisk, Castle Ellis. Highly commended: F. A. A. Leigh, Ballinkee, Ballymurrin; W. Webster, Garrybrit, Clondaw; J. Brien, Killeenooly, Kilmuckridge.

Other pure breeds, not exceeding four-shear.—First prize, £2, M. Crowley, jun., Coolmain, Oylegate; second, £1, F. Cullen. Highly commended: O. Kavanagh, Killisk, Ballymurrin; M. Redmond.

PIGS.

Pure black boar, not exceeding two years.—First prize, £3, C. H. Peacocke, Belmont, Wexford; second, £2, C. H. Peacocke.

Pure white boar, not exceeding two years.—Prize, £3, F. A. Leigh, Rosegarland, New Ross.

HORSES.

Thoroughbred stallion.—Silver medal, J. Moffat.

Agricultural stallion.—Silver medal, J. Malcolm, V.S., Enniscorthy.

Foal by Polestar.—Prize, £3, W. Leit, Balbriggan, Enniscorthy.

At the dinner, the Lord Lieutenant, the Duke of ABERCORN, said: Ireland has a pretty good balance at her banker's. We have the satisfaction of knowing that the prosperity of Ireland is flowing, and is likely to flow as far as human prescience can see in no doubtful or uncertain streams. That there are certain difficulties in the Irish atmosphere, and that some clouds, though in a measured way still darken its horizon no one can deny, but no one who has studied that horizon for the last ten years can doubt that those difficulties and clouds are only transient, or, at all events, of no alarming magnitude. It is now six years since I had the pleasure of attending one of your annual gatherings in my official capacity. In a country progressing so rapidly as Ireland does, six years is a large epoch in its agricultural history, and it is impossible for one deeply interested as I am, both privately and officially, in the development of the resources of Ireland, not to be struck with the great improvement which has taken place in those years both in the cultivation and reclamation of waste lands, in the improvement of farm-buildings and labourers' houses, and in the more general diffusion of thoroughbred stock, and the following of a higher class of farming by our agricultural communities. I assure you that it is with no ordinary pleasure that I again meet so many familiar faces and so many friends, both personal and official, whose labours have been uniformly directed towards the improvement of Irish agriculture in this society, nor is that pleasure diminished by one meeting being held in a locality which, if not familiar to all of us, is yet deserving of especial notice and approval, both for its agricultural merits and for the order and peace of its population. We can still see in the county of Wexford what Arthur Young saw 100 years ago, when he said that the land in Wexford is better tilled, and the houses of the peasantry of Wexford are of a higher class, than those which he had seen in most parts of Ireland. Well, gentlemen, we shall not have far to seek for the causes of this comfort and prosperity in the fair county of Wexford. I believe we shall find them in the friendly relations that have existed for a long period between the occupiers of the soil and the large and intelligent body of landlords. In the regular and permanent residence of those landlords on their estates, the county of Wexford has been singularly fortunate, and I am informed that, by the spirited exertions of the proprietors of this county, a new harbour at Rosslare is in course of formation, which will be of great benefit to the surrounding districts. I have also great pleasure in adding what has lately come to my knowledge, that the sobriety and order of this district have been greatly promoted by the excellent regulations made by the much respected Roman Catholic bishop of the diocese, who, in a manner which reflects the greatest credit both on himself and his spiritual jurisdiction, has induced the closing of public-houses on all Sundays and holidays throughout the year to the great advantage of the peace, sobriety, and order of the population. With regard to the exhibition of to-day, I think we may consider the show of Shorthorns to be exceedingly good, and though we must regret that an Irish bull did not carry away the first prize, yet Mr. Bolton and Mr. Barton and the other Irish breeders fully sustained their reputation in the other classes. The show of horses was good, and that amongst a number of very excellent pens of sheep perhaps not the least most interesting was those of the tenant-farmers. I think that the result of the show to-day may convince us that Ireland is not only not deteriorating in its agricultural progress but that every year brings further advance and improvement. There are, no doubt, many things in which we could wish further advance. We should look for a demolition of useless fences. We should like to see a better clearance of weeds. We should like to see more capital put in the soil and invested in superior stock as well as in im-

proved houses for the farmer and labourers in different portions of the country. But I think, looking at the improvements that have taken place in the last fifteen or twenty years, we can have no cause to doubt that the progress of time will bring out all these essential elements of improvement, but that which is most essentially necessary for any agricultural association is the certainty and confidence of corresponding and increasing national wealth. I have ventured to express an opinion in accordance with my noble friend's idea that the prosperity of Ireland is running in no doubtful stream; and if you will give me your attention for a few minutes to what I fear, in spite of its importance, may be rather a dull array of figures, I think I shall be able to prove that rarely, if ever, at any period of our history, has the wealth and resources of Ireland been as satisfactory as they are at the present moment. Gentlemen, I begin with that which is most important, and certainly the most interesting. I may term it our population and human wealth. I am happy to be able to state, from the returns that have just been made to me, that the emigration lists of the year ending 30th June, 1874, show a decrease of 14,000 over the corresponding term in 1873. The usual average, as it is called, at the close of the year 1874, will show more than 21,000 decrease over the year 1873, the number in 1874 being calculated 68,000, whilst those of 1873 amounted to 90,000. The numbers also in 1873 are some thousands less than any year of the preceding five years, except 1869, which is slightly below it. We have also the satisfactory fact that looking at the number of able-bodied males for 15 years in workhouses, the year 1874 shows a decrease of some hundreds, the number for the year ending June, 1874, being 1,200 against 1,500 in 1873, the numbers in 1874 being also a little more than one-half what they were in 1863, and little more than one-seventh what they were in 1873. I think, gentlemen, that these figures will show us that the working population of this country, the bone and sinew of the country, is in no depressed or diminished state; and if we turn to that monetary and funded wealth which can best insure for that population the blessings of a complete competence, we shall find that it is in a more satisfactory state. We find that the aggregate Irish investments for the year ending June, 1873, in Government and India Stock, in Irish Joint Stock Banks, and in trust, and savings banks, amounts to £67,000,000, showing an increase of £2,500,000 over the average of the last five years, and an increase of £8,500,000 over the averages of the five years preceding, we find that the amount of deposits in Irish Joint Stock Banks, which I include in the amount, for the year ending June, 1874, amount to £29,800,000, which shows an increase over the averages of the five preceding years of £4,000,000, and over the five years preceding that of £10,000,000. The deposits in the Irish saving banks for the year ending June, 1874, amount to £784,000, which also shows an increase of £150,000 over the averages of the last five years, and of no less than £550,000 for the five years previously. We find also, on looking over the reports of the amount of money passing under probate business for the year 1873, that it amounted to £7,300,000, and that shows an increase of £1,500,000 over the preceding five years. Taking these figures into proper account, there cannot be any doubt that they are signs of increasing wealth in Ireland. If we look to the agricultural statistics of this country we find them to be satisfactory. We find for the year ending 1874, that the estimated value of cattle, sheep, and pigs in Ireland amounts to £7,440,000, and that shows an increase of £1,550,000 over the average of the five preceding years, and an increase of no less than £4,900,000 over the average of the five years preceding that beginning in 1863. In connection with that, I received two or three days ago an interesting report from Professor Ferguson, in which he states that at no time has the health of agricultural stock in Ireland been in a more satisfactory state than at the present moment, the only exception being a slight reappearance of foot-and-mouth disease of a mild nature. The whole number of farms in Ireland under restriction for contagious disease amounts only to 69, showing a very agreeable contrast to the year 1872, when 4,470 farms were under restriction for contagious disease. The reports for the year ending June, 1874, show a slight decrease in the number of cattle—about 29,000 under 1873, but this is most satisfactorily accounted for by the very large exportation of cattle, amounting to 684,000, which took place in 1873—an exportation which was 68,000 over the exportation of the preceding year. We find also in 1871

that the number of sheep have slightly decreased—about 47,000, but this is also most satisfactorily accounted for by the enormous exportation of sheep that has taken place within the twelve months, amounting as the report shows, to 163,000 more sheep than were exported in the twelve months previous. Gentlemen, if we come to the statistics of crime, I am really afraid that you will think that I resemble the famous violinist who played a concert during the whole evening on one string. When I say that I must continue, it is my pleasing duty to say that they are extremely satisfactory. We find that the number of offences in 1873 not summarily disposed of were only 6,900, which shows a decrease of 1,780 over the average of the preceding five years, and not less than 2,900 over the average of the five years before that. While upon this subject I must congratulate the county of Wexford upon showing one of the very lowest calendars of crime, in proportion to its population, of any county in Ireland, the amount of outrages during the year 1873 amounting to 32, and there not being a single agrarian outrage in the county, either in the year 1873 or 1874. Gentlemen, I fear that these details of figures may have been rather wearisome, but I was unwilling to give any assurances of progress and prosperity which I could not state upon undeniable evidence. There is no one in this room, there are few, I believe, in Ireland, that would not look with pride and gladness on any sound evidence of wealth and advancement in Ireland. But we must remember that it is not alone by the credit of the husbandman or by the skilled science of the breeder of cattle,

or by the hoarded wealth of the successful merchant or tradesman, that national progress and advancement can be attained. Important as are all those elements, they are as yet comparatively valueless unless we are able to combine with them a respect and veneration for the law. A perfect security for person as well as for property, and that general confidence among all classes of the population that will best give due scope to the profitable diffusion of whatever capital is already amongst us, as well as give an inducement to foreign and extraneous capital to find in Ireland a fructifying stream. I believe that the people of Ireland have now those advantages lying easy of access before them. Already the quiet state of a great portion of the country has been the means of bringing over fruitful streams of capital into Irish channels, and of developing many of those sources of wealth which, bountiful as nature has made them, require only guarantees of national peace, order, and abstinence from disturbances to become of double value.

Lord FITZWILLIAM (the chairman) said: Although the entries were not numerous, the quality of the stock was of high character. Not only were the cattle admirable, but the sheep were creditable to the owners of the soil and the tenant-farmers. His Excellency had alluded to the progress made in Ireland of late years, which was an undoubted fact. In fact they had advanced in some respects more in proportion than England or Scotland. With regard to the Shorthorns, Mr. Belton, Mr. Meadows, and other local men had accomplished much, although the former had been beaten by a lady.

“ T H E S P E N C E R S C H E M E . ”

PRIZES FOR BEST MANAGED SMALL FARMS IN IRELAND.

The Prize Scheme to which the following reports for the year 1873 relate, is explained in the subjoined extract from a letter addressed in March, 1872, by his Excellency's private secretary, H. Y. Thompson, to the Commissioners of National Education: His Excellency has long taken an especial interest in the welfare of the very numerous class of Irish small tillage farmers, and has held the opinion, which personal observation of their condition and prospects in various parts of the country has amply confirmed, that their present style of farming and the management of their homesteads admit of considerable improvement. It appears that more than half of all the holdings in Ireland—namely, 317,457 out of 608,864 (from both of which figures, however, some deductions must be made for the cases in which two or more separate holdings being in the occupation of the same individual are enumerated separately) were valued in 1866 at less than £8 a year. His Excellency thinks it will not be disputed that in a vast majority of cases these holdings are imperfectly cultivated, and that the habitations upon them are, speaking generally, both inferior and ill-kept. Under these circumstances, and considering that the settlement of the land question, under the Act of 1870, has turned the attention of the public to the general condition of the farming classes, and has given an impetus to many improvements in the management of farms, the present has seemed to his Excellency a favourable occasion for an endeavour to direct attention to this very large and important class of agriculturists. In doing so, I am to state that he does not desire to raise or to pronounce any opinion on the very difficult question of the proper size of farms. He would carefully avoid that; but, at the same time, he is confident that that most interesting question cannot be satisfactorily solved in this country until the small farmers of Ireland avail themselves of the means at their disposal for careful tillage much more extensively than they do now. Among the methods employed to promote good agriculture, his Excellency is of opinion that nothing has been more calculated to benefit the small farmers than the school-farms or gardens under the inspection of the National Board of Education, which, he is glad to observe, are gradually increasing in number. Accordingly, it has occurred to him—more in the hope of seeing his action, if successfully carried out, imitated by others, than from any notion that so small a contribution can have any very considerable effect in itself—to offer, on certain conditions, prizes to be adjudged in connexion with certain of these school-farms. He has selected eight of them in various parts of the country, viz:

- In LEINSTER, Garryhill and Ballinavally;
- In ULSTER, Cornagilla and Parkanour;
- In MUNSTER, Tervoe and Grange;
- In CONNAUGHT, Castlehacket and Killsolan;

and, taking round each of them a radius of five or six miles, he proposes to give annually for the next five years three prizes to be called “The Spencer Small-farm Prizes,” and consisting of £3 10s., £2 10s., and £1 10s. respectively, to the occupiers of the three holdings in each of the areas above described, and valued under £8 a year, which shall be adjudged to be the most commendable on the score of (1) the neatness and cleanliness of the house; (2) the amount and quality of the produce of the land; (3) the character and condition of the live stock of all sorts, from horses and cows down to poultry and bees; (4) any other circumstances that may attract the favourable attention of the judges. These prizes should be adjudged about the month of September in each year. In no case should the same individual obtain a prize more than three times in the five years, nor should any prize be given unless there be both competition and merit, as to the requisite extent of which the judges should decide. I am to state that his Excellency's object in addressing the Commissioners on this subject is to solicit the co-operation of the Board to the extent of allowing their agricultural school inspectors—than whom assuredly none could be better qualified, both by their special acquaintance with the subject and by the confidence that would be generally felt in the fairness of their award—to adjudge these prizes, commencing from September next. If this proposal is adopted by the Board, his Excellency believes that, in addition to any direct benefits that may accrue from increased exertion on the part of individuals, it is possible that indirectly a good deal of valuable information may be obtained as to the wants and position of a very large and important class; and that it may be found desirable to have a short yearly report by the inspectors, conveying their impressions on the subject.

No. 1.—PARKANOUR, Co. TYRONE, 1873.—We have visited Parkanour School District, Co. Tyrone, for the purpose of adjudicating on the farms entered in competition for the Spencer prizes. We were accompanied in our inspection by Mr. Y. Burgess, son of Mr. Y. H. Burgess, D.L., the proprietor of the Parkanour estate. His father is most desirous of rendering every assistance in his power in furthering the efforts of His Excellency the Lord Lieutenant. Should the three Spencer

prizes be won by his tenants, he would contribute a sum equal to the Spencer premiums, and in addition he has offered a sum of £7 10s. to be competed for by his own tenants on the Spencer plan, with this difference, that he puts no limit to the valuation, thus leaving it open to all his tenants to compete. After a short conference, we decided on making the awards in accordance with a scale of marks. This scale, and the results of our inspection in the Parkanour district, will be seen in the accompanying tables. Our awards of the Spencer prizes are as follows: First prize, £3 10s., won by Dickson Leslie, a tenant on the Parkanour estate, whose valuation is £6 15s.; second prize, £2 10s., won by George Frizelle, who holds from the Earl of Charlemont a holding valued at £4 10s.; third prize, £1 10s., won by Anne Thornbury, who holds under Lord Charlemont a holding valued at £4 10s. The first of the Burgess prizes is awarded to John Wilson, who holds twenty acres at a rent of £20; second prize, Dickson Leslie, who wins the first of the Spencer prizes; third prize, Anne Murphy, who holds fifteen acres at a rent of £15. To some persons the Spencer prizes, taken individually, have looked small; but to the persons intended to be reached they appear very differently. Dickson Leslie, with a valuation of £6 15s., obtains £6 in two prizes; and had he succeeded in winning the first of the Burgess prizes, the amount of the two prizes would have exceeded his valuation by 5s. To a man in his position the amount thus won in prizes must be a great boon. But the interest created in the district by the prizes far exceeds their pecuniary value. On all the farms we notice with satisfaction indications of improvements made in the hope of winning a Lord Lieutenant's prize. John Wilson has his farm in a creditable state: his home and offices are still more so, and the arrangements for collecting and preserving manure are, for a man in his circumstances, as near perfection as need be desired. He has two heifer-calves which show far more quality than the cows. A garden has been laid out, and new approach has been commenced, and a respectable gate and set of pillars already erected. Dickson Leslie's farm is cultivated with skill, and his home is a model of neatness and comfort. Possibly the most remarkable of all the competitors is George Frizelle. He labours under a physical infirmity, which unfits him for undergoing much fatigue; yet his little holding is in a high state of fertility, and it is tilled with skill and care, and his house, yard, and offices, which adjoin the public road, attract the attention of every passer by. During the year, and stimulated in a great measure by the ambition to win one of the Lord Lieutenant's prizes, he has enlarged and improved his dwelling, enclosed it from the road by a good wall, and provided two new gates. This man submitted to one of us papers which show that by the exercise of intelligence and skill in the management of his holding he has been enabled to put apart a sum which is regarded as a fortune by persons in his rank of life, and this is exclusive of the capital invested in his land, offices, and dwelling. We take leave to draw attention to the circumstance that the third of the Spencer prizes is won by a female. It has been urged that women influence the agriculture of a country like Ireland to a greater extent than is generally supposed. When the head of the family is taken away by death, the sole care of the farm may fall on the widow, or, as in this case, on the daughter. This circumstance shows that it is desirable to impart to females in rural schools a certain amount of instruction in the elements of agriculture.

No. II.—BALLINVALY, Co. WESTMEATH, 1873.—The Ballinvaly School is on the estate of the Right Hon. Col. Tighe, in County Westmeath, who has lent his co-operation in furthering His Excellency's view. He from the outset has offered to advance an equal sum to the value of any prize which may be won by any of his tenants. The school is attended by children from several adjoining estates, but as yet the proprietors of these estates have not contributed to the scheme in any way. Possibly they, like other proprietors, believe that the system is calculated to encourage the subdivision of the land of Ireland into excessively small holdings. His excellency has guarded himself from putting forward his scheme with any intention of favouring small as distinguished from large farms. He takes the small farms as he finds them, and aims at rendering them more productive. As evidence of the improvement effected in the competitors' holdings during the year, we would refer to the fact that while the farm which obtained the first prize last year has not gone back, but on the contrary has improved, the farm which obtained third prize in 1872 now wins for its occupier, Mrs. Anderson, the first prize. Mrs. Anderson

has well merited this honour. She has made several improvements, and has put her farm and offices into a very satisfactory state. She does credit to the estate on which she lives. The first prize was obtained last year by Mr. John Potterton, a tenant of Colonel Tighe's. Death has removed him since then, but his widow continues to manage the farm very well, and obtains the second prize. It will be seen from the tabulated result that the farmers who rank second, third, and fourth in order of merit are very close in the sum total of marks. The numbers are as follows: Second, Bridget Potterton, 273 marks; third, James Johnston, 272 marks; fourth, James Kavanagh, 271 marks. The fifth in the order of merit, Mr. Garrett, Kieruan, is only 15 marks below the fourth. Altogether, the competition in this district has been very spirited.

No. III.—LOUGHLIN, Co. ROSCOMMON, 1873.—We have inspected the farms which have been entered this year in competition for the Spencer prizes in this district. The Loughlin estate contains some 100,000 acres, and is occupied chiefly by small farmers. It is an estate peculiarly well fitted to test the efficacy of any scheme for improving the condition of our small farmers. We have visited altogether the holdings of seventeen persons, some of whom competed for an old established system of garden prizes as well as for the Spencer prizes. The systems of farming pursued on several of their holdings are so bad that it would be quite useless to go into full details regarding them. We give a tabulated result of our inspection of farms, which shows meritorious features, from which it will be seen that two of them score equal marks. It so happens that for want of merit in one section of another prize scheme in connexion with this school, in which one of us took part, that a sum of 12s. 6d. came to be added to the Spencer prize money, making in all £82s. 6d. It was decided to distribute this amount into five prizes—viz., £2 10s. to each of the two at the head of the list who are equal; third prize, £1 10s.; fourth prize, £1; fifth prize, 12s. 6d. In accordance with this arrangement we submit the merit list: First and second, John Jordan and Peter Crawley, 453 marks each; third, Charles Sampey, 395 marks; fourth, Thomas Conway, 260 marks; fifth, Martin Moloney, 255 marks. Jordan obtained first prize last year: his farm and garden display great skill and industry. Crawley obtained third prize last year; since then he has improved his holding very much. Last year he had neither artificial grass nor roots—this year he has laid down a field in a most creditable manner with a judicious mixture of clover and rye-grass, and he has a plot of turnips which has been very well cultivated. His potato crop is one of the cleanest and most productive we have seen this year in the entire district. The progress made by this man during the year in the cultivation and management of his holding affords most gratifying evidences that His Excellency has adopted a correct system of exciting a spirit of improvement among the small farmers of this country. Here is a small farmer who in a short space of time has come to put into practice the most essential feature of improved agriculture. He got advice last year, and he acted upon it to the fullest extent. He was not asked to do anything beyond his means. What he has done will turn out so profitable that there is not the slightest fear that he will ever abandon it. Sampey retains the position he held last year. A suggestion was made to him then regarding his offices which is of primary importance, but on which he has not yet acted. We trust he will act on the suggestion before next year. His farm is cultivated with considerable skill, and his garden is quite a model for the class of small farmers to which he belongs, and, indeed, for occupiers of larger holdings. Several of the unsuccessful competitors deserve credit for their gardens and the neatness of their places, among whom we would mention Friel and Healy.

No. IV.—KILLASOLAN, Co. GALWAY, 1873.—The Killasolan National School is on the estate of Lord Clonbrock. A circle of five miles radius embraces parts of the estates of Lord Clan-carty and Mrs. Grattan Bellew, and others who are anxious to promote agricultural progress. It is not a small farm district in the same sense that Loughlin may be said to be one. It includes, however, a great many small farmers whose agricultural practices are extremely bad. Last year the first prize was awarded to John Gilmore, who holds a farm of 14 statute acres from Lord Clonbrock at £6 a year. As will be seen in the accompanying table, he also ranks highest this year. His holding is a *bona fide* model in many respects. His farm embraces three classes of soil. There is a piece of good land kept in permanent grass, which is the best of all; there is

one field in tillage, which is not so well suited for grazing; and there is a piece of reclaimed land, now bearing indifferent pasture, which Mr. Gilmore says it would not pay him to break up at the present rate of labour. The whole farm is very productive, and enables Mr. Gilmore to live comfortably, and to save something for his family. Partrick Potter, a tenant of Mrs. Gratton Bellew, obtained second prize last year; this year, owing to ill health, he ranks fifth on the list. The second and third and fourth places are won by tenants on the Clonbrock Estate. It will be seen that several others come out well in the tabulated return. We were glad to find that the scheme has created very considerable interest among the people in the district. Lord Clonbrock is good enough to place £3 at our disposal, which enables us to give a few extra prizes. We have reason to believe that some additional local subscriptions will be forthcoming next year.

No. V.—GARRYHILL, CO. CARLOW, 1873.—The Garryhill Agricultural National School is on the Carlow estate of the Earl of Bessborough, who, as is well known, has devoted much personal attention to the improvement of the condition of his tenantry. He undertook to add to any, or all, of the prizes which may be won by his tenants a sum equal to his Excellency's contribution. This year he proposes to meet the several competitors at Garryhill, to deliver to them an address and to distribute the prizes. Twenty-four holders of land sent in their names in the usual way, intending to compete; of these, two subsequently withdrew, feeling that they had no chance of winning the prizes. We have carefully examined the farms, gardens, houses, and offices of the remaining twenty-two persons, all of whom entered into the competition with great eagerness. The first prize is won by Peter Fox, a tenant of Lord Bessborough. Fox's holding is a *bona fide* model. The tillage is good, sundry improvements have been made, and there are evidences throughout of skill, care, and thrift. The second prize goes to Michael Hogan, who holds under Mr. P. Newton, D.L., and who is a most deserving man. We would draw attention to a feature in the agriculture of this district which is most creditable to all concerned—we refer to the circumstance that there is a greater number of persons who scored high than in any other district we have visited. In other words the agricultural practices of the farmers are uniformly better than elsewhere. This gratifying result is due to the increased attention bestowed on the improvement of agriculture by the gentry. The County Carlow Agricultural Society has lent its aid. The Society has divided the county into five districts, and give premiums to small farmers in each. The mode in which the Spencer Prizes have been awarded is different from that adopted by the Society, but both systems tend in the same direction. All the intelligent persons we have met in this district agree in thinking that in order most effectually to reach the smaller occupiers, the limits of each competing district ought to be as small as possible. We append the usual detailed list, which cannot fail to afford matter for reflection. We have had ample evidence that there are in the Garryhill district many small farmers who are prosperous and happy. The Spencer Scheme is well calculated to aid in bringing all up to this level.

No. VI.—TERVOE, CO. LIMERICK, 1873.—The Tervoe National Agricultural School is on the estate of the Right Hon. Colonel Monsell, M.P. It is six miles from the City of Limerick, and three from the larger Agricultural School at Mungret. A circuit of five miles round the school includes a great many proprietors, most of whom are non-residents. It includes land of various degrees of quality, and farms of very different sizes. There are several large holdings of rich land; but the vast majority of the occupiers near Tervoe and Mungret Schools are small farmers, the greater number of whom manage their land very badly and are extremely poor. It is strange that the agricultural practices of farmers so close to the city of Limerick should be so defective. It is, however, a fact. Several crops of grain have been raised in succession without manure on land not able to bear it. The land was not tilled with proper skill. The live stock is not of the quality it ought to be. In many parts of the district the small farmers' dwellings are as bad as in the remotest districts of the west. The manure heap is generally in front of the entrance-door. The Spencer Scheme is the best, and indeed it may be almost said the only means by which those people can be influenced. They regard agricultural societies, and to a less extent Government model farms, as instruments set up by the gentry for promoting their own interests. A notion

of this kind, no matter how unfounded the grounds on which it is based, does incalculable harm. The Spencer Scheme has brought agricultural education before the people in a new light. They see the officers of the Board of Education going among them offering advice and encouraging and rewarding the best of them. We are glad to find that the number of entries has increased since last year. It is our pleasing duty also to report that the local gentry appreciate the scheme.

No. VII.—GRANGE, CO. WATERFORD.—The district surrounding the Grange National School is part of a strip of land lying between the Blackwater and the sea. It may be described as a backward district. The holdings are, generally speaking, small. It is, therefore, a district in which a scheme for ameliorating the condition of small farmers may be tested. Last year the prizes were awarded by one of us who reported that the scheme excited considerable interest. We are in a position to state that an extremely keen degree of interest has been manifested in it this year. Twenty-seven persons gave their names to the teacher. Five of them withdrew, believing they would have no chance of obtaining any of the prizes. We have inspected twenty-two holdings which, as the merit list will show, are scattered over the estates of several proprietors. It is worthy of note that Grange is an Irish-speaking district. Of the heads of families we have met, the greater number do not speak English. One of us was able to converse with these people in the Irish language. The agricultural practices of the district vary very considerably. In the neighbourhood of Ardmore, most of the occupiers of land combine fishing with farming. Their land is of a sandy character. It has been well manured for years and made to yield heavy crops. There are few districts in Ireland which yield a larger amount of human sustenance than the tract of sandy ground in the hands of these people. In all other parts of the district the occupiers live exclusively by farming, and their land is for the most part very unproductive. We find that the Rev. P. Wall, P.P., Ardmore, is very much interested in the scheme. He proposes to contribute towards a fund for increasing the number of prizes. We are in hopes that the landlords of the district will also subscribe for this purpose. As an illustration of the influence of the scheme in promoting improved modes of management, we would cite the case of Patrick Mulcahy, who has obtained the second prize. Last year his farm was extremely dirty; this year it is one of the cleanest we have seen. His root crops are very fine. The garden is in a creditable state. We would repeat what was stated by one of us last year—viz., that there is a very large number of small farmers in this district who cannot maintain their ground unless they adopt a system of farming more in accordance with the times. Their system does not materially differ from that followed before the introduction of free trade. It is very evident that the most immediate and effectual way of reaching these people is through the medium of the educational machinery of the country. The prize list is, in one or two respects, very suggestive.

No. VIII.—CORNAGILTA, CO. MONAGHAN, 1873.—The Cornagilta National Agricultural School, Co. Monaghan, is attended chiefly by the children of small farmers. The district is populous. There is great need for improvement in the agricultural practices of the farmers. The population embraces the several religious denominations. The radius of five miles from the school includes parts of the estates of several proprietors. The school is on the estate of Miss Rose, of Mullaghmore, Monaghan. The competitors include tenants of Sir George Foster, Bart., the Rev. Lord Plunket, and Mr. George Greer. The Scheme has excited a lively interest among the small farmers of this district. The number of competitors would be very great were it not for the dread of failing that prevails. This feeling influences the number of entries in all districts. Partrick Connolly, a tenant of Miss Rose's, who heads the list this year, won first prize last year. His holding does him credit, and is in many respects a model for neighbouring farmers. The second prize goes to Peter Connolly, who holds 2½ a. 1 r. 7 p. from Sir George Foster, at a yearly rent of £8 17s. 6d. Part of this farm is reclaimed bog, and part reclaimed heathery ground. He has expended upon it much labour. The Poor-law valuation, which is £7 10s., throws light on the former condition of this farm, which is upwards of a mile away from the public road, and approached by a rough boheen. The farm is most unfavourably circumstanced; yet, the tenant, by the application of labour, skill, and thrift, has managed to rear a family upon it

most respectfully. His dwelling does him great credit. He has built a substantial barn, and contemplates further improvements. All external appearances go to show that this family is well off. The Spencer Scheme has brought this man to the front. His farm will be visited by small farmers for several miles around, who cannot fail to derive profit from his example. Patrick Rainy, who obtains third prize, holds his land from Miss Rose. The farm is well cropped; the garden and dwelling admit of improvement, which we hope to see effected next year. We are glad to be able to say that each of the competitors in this district can show some feature of merit. The agriculture of the district is, however, capable of very great improvement. We feel justified in saying that we see no better way of stimulating a taste for effecting it among the small farmers than by extending the Spencer Scheme of Prizes, which comes home to every man who competes.

(Signed), THOMAS BALDWIN, } Judges.
M. BLOGAN, }

THE SCOTCH HARVEST.—The general belief appears to be that on the whole the harvest will be a favourable one throughout the kingdom. Winter-sown wheat will be,

roughly speaking, from ten to fifteen per cent. above the average, but not so much for spring sown. Barley, of the spring-sown cereals, will be by far the best crop; and though in a few districts it is said to be thin, the heads are invariably heavy, and the average yield will be from $7\frac{1}{2}$ to 10 per cent. over ordinary years. Oats in almost every county will be below the average, though the ear has filled better and the straw has shot out more within the last ten days than was ever anticipated. This indeed will be the weak crop of the season. Beans suffered from the drought of the early summer, but recent rains have added strength and vigour to the haulms, and the pods are rapidly filling, so that a full average crop may be gathered. Cutting has commenced in nearly all the early districts, and in the Lowlands ten days will see harvest general. Wages of labourers and reapers it is said will be higher than last year, and as yet there appears to be a scarcity of hands. All early-sown turnips have braided well, and the bulbs are filling the drills, and presenting a luxuriant appearance, but in late-sown fields the crop will not be so heavy, as the braird was irregular and patchy. Potatoes have never looked better, and only in one instance—namely, Caithness—has even the slightest appearance of disease been traced. Hay has been well secured; and though the first crop has been light, it is generally conceded that the aftermath is splendid.—*The Scotsman.*

HEREFORD AGRICULTURAL SOCIETY.

MEETING IN HEREFORD.

The cattle entries numbered 77 Herefords, 15 Shorthorns, and a few other breeds; while nearly all the best animals have been out this year. The number of sheep entries was 71, Shropshires being at the top with 49 pens, Cotswolds second with 19 pens, and the others Ryelands, the Shropshires being especially good. The horse entries reached 96, and so many have never before been exhibited in Hereford. Amongst the exhibitors of implements and manures were the Herefordshire Manure Company; Walker, of the Smithfield Ironworks, Shrewsbury; Kell, of Ross and Gloucester; Alexanders and Lovelidge, of the Lion Works, Leominster; Perkins and Bellamy, of Ross; Hollings Brothers, of Swindon; Day, Son, and Hewitt, Dorset-street, Baker-street, London; J. Cadle and Co.; H. and T. Proctor, Cathay, Bristol; Robey and Co., Lincoln; B. C. Tipper, Balsall Heath, Birmingham; J. Morgan, of New Market Place, Shrewsbury; Lister and Co., Victoria Works, Dursley; Llewellyn and Son, coopers, Haverfordwest; Ashby, Jeffery, and Luke, Stamford; J. Meredith, and Co., Kington Iron Foundry; Hindley, of Bourton, Dorset; J. Miller and Co., Chemical Works, Tewkesbury. The show on the whole was considered to be better than any held for some few years.

PRIZE LIST.

JUDGES.—HEREFORDS—Downes, Maisemore; E. H. Davies, Peyton, Much Wenlock. **SHORTHORN CATTLE AND LONGWOOL SHEEP.**—R. J. Newton, Woodstock; J. H. Butt, Doodhill House, Taunton. **SHROPSHIRE AND OTHER SHORTWOOLS AND PIGS.**—Cureton, Beam House, Shrewsbury, and G. Bedford, Milton, Pembridge. **CART HORSES.**—Allen, Hartpur, Gloucester;—Yeomans, Stretton Court. **HUNTERS.**—Thirlwall, Poynton, Kent; Captain Helme, Master of the North Hereford Hounds. **CIDER AND PERRY.**—H. C. Beddoe and W. H. Apperley.

CATTLE.

HEREFORDS.

Bull, cow, and offspring.—First prize, £10, J. Thomas, St. Hilary, Cowbridge (Sir John and Sunflower); second, £7, Mr. Thomas, Lawton Bury (Long Tom and Red Cap); third, Mr. Taylor, Showle (Mercury and Dainty).

Bull, calved on or after the 1st of July, 1873.—First prize, £10, W. Tudge, Adforton (Regulator); second, £5, W. Tudge (Lord Winton); third, Mrs. Edwards, Wintercote (Commodore).

Bull, calved on or after the 1st of July, 1872.—First prize, £5, H. N. Edwards, Broadward, Leominster (Alfred); second, £3, G. Child, Weston Pembridge (Treasure Trove).

Bull, calved previous to the 1st July, 1872.—First prize, £5, Mrs. Edwards (Winter de Cote); second, £3, P. Turner, the Leen (Provost).

Heifer, calved on or after the 1st July, 1873.—First prize, £5, Mr. Edwards; second, £3; Mr. Carwardine, Leominster.

Heifer, calved on or after 1st July, 1872.—First prize, £5, and second, £3, Mr. Turner.

Heifer in calf or in milk.—First prize, £5, Mr. Fenn, Ludlow.

Breeding cow, in calf or in milk.—Prize, £5, Mr. Thomas, St. Hilary, and special of £25 (Rosaine).

Steer, calved on or after 1st July, 1873.—First prize, £5, and second, £3, Mr. Hill, Orleton.

Steer, calved on or after 1st July, 1872.—First prize, £5, Mr. Taylor, Showle; second, £3, Mr. Hill, Orleton.

Ox or steer, calved previous to 1st July, 1872.—First prize, £5; Mr. Arkwright, Hampton Court; second, £3, Sir J. R. Bailey, M.P.

To the tenant-farmer, being a subscriber, who shall exhibit the best lot of beasts, bred by himself, above one year and under two years and six months old, in proportion to the quantity of land that he occupies as follows: (The tenant-occupier of not exceeding 100 acres, to show two beasts; the tenant-occupier of not exceeding 150 acres, to show three beasts; the tenant-occupier of not exceeding 200 acres, to show four beasts; and in the same proportion for every additional 50 acres, up to 500 acres.—First prize, £3. *No entry.*

Four breeding cows or heifers, not under three years old, that have had a calf within six months, or shall be in calf at the time of showing.—First prize, £10, Mr. Arkwright; second, £5, Rev. A. Clive, Whitfield.

SHORTHORNS.

Cow and her offspring to be bred by the exhibitor, and to be calved on or after 1st July, 1873.—First prize, £10, J. Pulley, Lower Eaton; second, £5, J. Pulley.

Bull, calved on or after the 1st July, 1873.—Prize, £10, Stratton, Duffryn, Newport, (Meteor).

Bull, calved previous to the 1st July, 1873.—Prize, £10, Stratton, (Protector).

Heifer, calved previous to the 1st July, 1873.—Prize, £5, Stratton.

ANY BREED.

Pair of cows in milk, for dairy purposes.—Prize, £10, O. Vivicash, Strensham.

SHEEP.

SHERBOROUGHSHIRES.

Pen of five breeding ewes that have suckled lambs to 1st June, 1874.—First prize, £5, W. Baker, Moor Barnes, Athertonstone; second, £3, T. Jowitt, the Weir. Highly commended: J. Pulley.

Shearling rams.—First prize, silver cup, value £7, J. Pulley; second, £3, J. Pulley. Highly commended: J. Pulley.

Ram of any other age.—First prize, £5, J. Pulley; second, £3, J. E. Farmer, Felton, Ludlow.

Pen of five wether lambs.—Prize, £5, H. Turner, Eardisley. Commended: J. E. Farmer.

Pen of five ram lambs.—Prize, £5, W. Baker. Commended: J. E. Farmer.

Pen of five shearling ewes.—Prize, £5, J. E. Farmer. Reserve: J. Pulley. The class commended.

Pen of five ewe lambs.—Prize, £5, J. Pulley. Highly commended: W. Baker. The class commended.

COTSWOLDS.

Shearling ram.—First prize, £5, T. Thomas, St. Hilary; second, £3, J. Wheeler. Reserve: W. J. Davies, Webton.

Ram of any other age.—First prize, £5, J. Wheeler; second, £3, W. J. Davies. Reserve and commended: W. J. Davies.

Pen of five wether lambs.—Prize, £5, Yeomans, Stretton Court, Hereford.

Pen of five ram lambs.—Prize, £5. No entry.

Pen of five ewe lambs.—Prize, £3, T. Thomas.

COTSWOLDS OR OTHER LONGWOOLS.

Pen of five breeding ewes that have suckled lambs to the 1st June, 1874.—First prize, £5, T. Allen, Thurmaston, Leicester; second, £3, W. J. Davies.

Pen of five shearling breeding ewes.—First prize, £5, W. Yeomans; second, £3, T. Thomas.

IRELANDS, OR OTHER WHITE-FACED CLOSE-WOOLS.

Shearling rams.—First prize, £5, J. B. Downing, Holm Lacey; second, £3, J. B. Downing.

Ram of any other age.—First prize, £5; second, £3, J. B. Downing.

Pen of five ewes.—First prize, £5, T. Pinches, Hardwick; second, £3, T. Pinches. Highly commended: T. Pinches.

PIGS.

Boar, exceeding 9 months old, of the black breed.—Prize, £3, J. Wheeler, Long Compton.

Breeding sow, in or with pigs, of the black breed.—Prize, £3, D. Peplow Peplow, M.P.

Boar, exceeding 9 months old, of the large white breed.—Prize, £3, Wheeler.

Breeding sow, in or with pigs, of the large white breed.—Prize, £3, Wheeler.

Boar of the middle breed.—Prize, £3, Rev. Sir G. H. Cornwall, Bart. Highly commended: Wheeler.

HORSES.

Cart stallion.—Prize, £20, Messrs. Yeomans, Pennymore Hay, Wolverhampton (Pride of England). Reserve: J. Hyde, Riffin Mill (King of the Dale).

Cart mare, with foal at foot.—First prize, £10, W. Priddy, Podsmead House, Gloucester; second, £5, W. J. Downing, Clehonger. Reserve: G. Stanbridge, Dimedor.

Three-year-old cart gelding or filly.—Prize, £5, J. B. Downing, Holme Lacey. Reserve: W. Taylor, Thingehill.

Two-year-old cart gelding or filly.—Prize, £5, T. Bailey, Hagley. Reserve: R. W. Bridwater, Porthamel; and J. B. Downing.

Thoroughbred stallion, calculated to produce sound and stout weight-carrying hunters, and that have served in the county of Hereford during the present year, or that shall serve during the year 1875 (see for covering half-bred mares not to exceed £5), prize £20.—Only one entry, and that withdrawn.

Stallion calculated to produce sound and stout roadsters or carriage horses.—Prize, £15, W. Broad, Lampeter (Young Prickwillow). Reserve: M. Biddulph, M.P. (The Mallard).

Weight-carrying hunter, up to 14 stone.—First prize, £15, T. H. Ashton, Temple, Laugarne, Worcester (The Laucer); second, £5, T. H. Ashton (The Publican).

Hunter up to 12 stone.—First prize, £10, W. S. Armitage

the Field (Sweetheart); second, £5, T. H. Ashton (Sedgwick Reserve: A. Edwards (Alice Grey).

Four-year-old hunter.—First prize, T. H. Ashton (Hawardware); second, £5, T. H. Ashton (Fusilier). Highly commended: J. Theyer, jun., Walford (Czarewitch).

Three-year-old colt, gelding, or filly, suitable for hunting purposes, bred by a tenant farmer resident in the county.—First prize, £10, W. Hawkins, Weston, Bredwardine. Reserve: G. Morgan, Llandinabo, Ross.

Cob of any age, not exceeding 14 hands 2 inches.—First prize, £5, W. Williams, Broomy Hill (Little Charley).

Nag mare, not less than 13 hands 1 inch, with her foal at foot.—First prize, £10, J. S. Mason, Ledbury (Belladonna); second, £5, W. Morris, Dewesall (Polly Jones).

Pony of any age or sex, not exceeding 14 hands high, suitable for harness purposes.—First prize, £5, W. S. Armitage (Don Carlos); second, £2, S. Smith, Woodmanton (Jack). Reserve: Sir H. Stanhope (Ruby).

CIDER AND PERRY.

Dozen of cider, made by the exhibitor, and from fruit grown on land in the exhibitor's occupation.—First prize, £2 10s., Yeomans, Pyon (from White Norman and Cowarne Red fruit); second, £1, F. W. Herbert, Credenhill (from Foxwhelp).

Dozen of perry, made by the exhibitor, and from fruit grown on land in the exhibitor's occupation.—First prize, £2 10s., Hill, Egletton (from Taynton Squash and Huffcap); second, £1, Hill (from Oldfield).

SPECIAL PRIZES.

Bull of the Hereford breed.—Prize, £25, Mrs. Edwards (Wiuter de Cote).

Cow or heifer of the Hereford breed.—Prize, £25, Thomas, St. Hilary. (Rosaline).

Ram.—Prize, £10, J. Wheeler.

Best pen or lot of ewes exhibited.—Cup, value £10—Farmer.

At the dinner, Mr. BOUGHTON KNIGHT, the Chairman, said: I don't mean to say that I am simple enough to suppose that the condition of the animals which you exhibit here today is dependent upon the abundance or scarcity of grass. You no doubt tell your friends, the cattle buying agriculturists from distant counties, that the Hereford cattle will grow fat upon a bare soil, but I know very well that not only all the skill and attention you can give but also the most liberal expenditure of money is necessary to bring cattle to the condition in which we have seen them exhibited in our show-yard today, and therefore I think more credit is due to those gentlemen who have contributed to its success in sending their cattle to the show in such high condition in the face of a deficient season, and also I am sorry to say in the face of increased disadvantages in all directions which agriculturists have to bear at the present time. He thought they might take it that the prosperity of the Society depended on the prosperity of the three classes interested in agriculture—viz., the landlord, the tenant-farmer, and the labourer. The interests of the landlord and tenant-farmer were identical; it was certain that those two classes must sink or rise together. He trusted there were none present who voted the landlords to be an almost useless class, considering nobody, but sitting still and receiving their rents. They had duties to perform in various ways and they had tried to discharge them, but perhaps the best of us found that we often did not accomplish the half of what we desired to do. The prospects of the farmers were uncertain at present. Although prices were satisfactory, what were higher rates to be compared with deficiency of produce? They might be fortunate to hold by a staff of labourers who were wise enough to turn a deaf ear to those charmers who were now stumping the country. Moreover, there was an idea abroad that the back of the farmer was strong enough to bear any addition that might be made to the rates. The latest infliction which had been cast upon him had been the management of the turnpike roads through Highway Boards, and the creation of a sanitary authority. These were burdens which eventually would have to be borne by the landlords. The land could have but a certain value—an increase in value no doubt there was in consequence of the increased prosperity and wealth of the country—but the more they took out of the annual value the less was left in the shape of rent. These payments therefore eventually came out of the land practically, though at present they were on the tenant-farmer; and he trusted that in the next session of Parliament they

would have an Act passed to make woods and mines and such like property liable to pay its share of the rates (A Voice: "It is passed"). He should very incompletely fulfil the task he had set himself when he rose if he omitted to refer to the third class interested in agriculture—viz., the labourers; but he would do so briefly, because it was a subject that had been over much discussed of late. The labourers were no doubt fully entitled to use every legitimate means to improve their condition. But the mistake which they had made was the suffering themselves to be led away by persons whose profession it was to discover for their especial benefit grievances of which the labourers were not before aware. Those persons were unable to estimate what the farmers' profits were, and there-

fore they were unable to form an opinion as to what wages he was able to give to his labourers. After all the wages paid to the labourer were but a part of the question. There were a hundred and one little kindnesses which a farmer could do for his labourer, and if these kindnesses were withdrawn and a money payment alone, according to a hard and fast line, paid to him, it would be a very grievous thing for the labourer. The time had once been when he thought the labourers were beginning to distrust their advisers, and in the Eastern Counties they had already discovered the truth of the old maxim that supply and demand regulated the wages of labour.

PRESTON AGRICULTURAL SOCIETY.

PRIZE LIST.

JUDGES.—HORSES: Major Ballard, W. Tenant, and W. S. Atkinson. CATTLE: M. Walker and J. Knowles. SHEEP, PIGS, ROOTS, &c.: S. Walker and J. Irving. POULTRY: R. Teebay. PIGEONS: W. T. Tegetmeir. DOGS: W. Lort and R. J. L. Price. IMPLEMENTS: A. Tomlinson, W. Boulton, J. C. Stevenson, and S. Barge.

HORSES.

Thoroughbred stallion.—Special prize, cup or £10, R. Hutton, London; second, E. Stanley, Grange.

Roadster stallion.—First prize, J. Gill, Silsdon; second, T. Statter.

Draught stallion.—First and second prizes, T. Statter. Commended: E. Musgrove and J. H. Crowther.

Brood mare for draught purposes, being in foal or having produced a foal in 1874.—First prize, T. Statter; second, J. Thom, Chorley. Commended: J. Waterworth; W. Kirkham, Preesal.

Brood mare for harness purposes.—First prize, T. Fox, Singleton; second, E. Fearnside, Wakefield.

Brood mare, for breeding hunters.—Special prize, S. Kirkly, Manchester; second, E. Cartmel, Lytham.

Pair of horses for draught purposes, three years old.—First and second prizes, C. W. Brierley.

Mare or gelding for draught purposes, three years old.—First and second prizes, C. W. Brierley. Commended: W. Kirkham.

Mare or gelding for draught purposes, any age, to be shown in cart and gears.—Silver cup, T. Cartmel, Clifton; second, J. Milner, Myerscough.

Three years old gelding or filly for draught.—First prize, T. Cartmel; second, J. Milner.

Two years old gelding or filly for draught purposes.—First prize, T. Seed, Bashall Town; second, W. Shaw, Thornton. Highly commended: J. Walsh, S. Michales. Commended: Mrs. Hothersall and Sons; Rev. J. Funnington; T. Cartmel; R. J. Cornthwaite, Myerscough; T. Statter; R. C. Richards; G. Hawley, Sawley; G. Catterall, Preston.

Yearling colt or filly for draught purposes.—First prize, T. Walker, Barnacre; second, T. Statter. Highly commended: W. Gardner, Lea.

Three years old gelding or filly for other purposes, not being thoroughbred.—First prize, T. Rigg, Grange; second, R. Bowling, Scotforth.

Two years old gelding or filly for other purposes.—First prize, W. Taylor, Poulton; second, E. Fearnside.

Yearling colt or filly for other purposes.—First prize, T. Fox; second, P. Blundell, Weeton.

Colt or filly foal, for draught purposes.—First prize, W. F. Sumner, Singleton; second, G. Catterall. Commended: R. Saul.

Colt or filly foal for other purposes.—First prize, S. Kirkby, Manchester; second, T. Fox.

Road or field mare or gelding, four years old.—First prize, T. Powell, Preston; second, T. Grigg.

Cob above 13½ hands high, and not exceeding 15 hands.—Cup or £7 7s., J. Camps, Stonyhurst; second, R. Wright, Salford; third, J. Mandsley, Aughton.

Cob, above 12 and not exceeding 13½ hands.—First prize, L. Pilkington, Liverpool; second, J. Hall, Darwen.

Mare or gelding 15 hands and upwards, and to be shown

and driven in harness.—Cup or £7 7s., J. C. Rogerson, Manchester; second, T. Statter; third, T. Heaps, Preston.

Cob, above 13½ and under 15 hands high, to be shown and driven in harness.—First prize, R. Settle, Bolton; second, R. Wright; third, H. Hawkins, Preston.

Pony, not exceeding 13½ hands high, to be shown and driven in harness.—First prize, T. B. Pye, Longton; second, J. Higson, Preston.

Hunter mare or gelding, any age, to leap over hurdles and water.—First prize, R. Hutton; second and third, J. Fearon, Whitehaven.

Fencer, any age, to carry not less than 11 stone over hurdles and water.—First prize, J. Fearon; second, Captain Wing, Fulwood.

CATTLE.

SHORTHORNS.

Bull, three years old.—Prize, E. Musgrove, Aughton. Highly commended: W. Handley, Green Head.

Bull, two years old.—First prize, B. St. J. Ackers, Painswick; second, T. Statter. Highly commended: A. W. Shephard, Barton.

Bull, above one and under two years old.—First prize, R. Thompson, Mythop; second, S. Parker, Farington. Highly commended: B. Bee, Goosnargh.

Bull-calf, under one year old.—First prize, Mrs. Atkinson, Dutton; second, R. Thompson. Highly commended: G. Ashburner.

Cow or heifer, above three years old.—First prize, T. Statter; second, E. Musgrove. Highly commended: E. Ball, Longton.

Heifer, above two and not exceeding three years old.—First prize, J. Thom; second, T. Statter. Highly commended: B. St. John Ackers. Commended: J. R. Patterson, Barrow.

Heifer, not exceeding two years old.—First and second prizes, T. Statter. Highly commended: Mrs. Atkinson; W. Handley, Milathorpe.

Heifer calf, not exceeding one year old.—First prize, B. St. John Ackers; second, Mrs. Atkinson and Sons. Highly commended: J. Harrison, Hoole.

TENANT FARMERS' CLASS.

Bull, three years old and upwards.—First prize, J. Grimshaw, Penwortham; second, R. Holt, Ribblesdale. Highly commended: W. Handley. Commended: J. Taylor, Ormskirk.

Bull, two and under three years old.—First prize, B. Fletcher, Carlton, Yeadon; second, A. W. Shephard, Barton.

Bull, above one and under two years old.—First prize, R. Thompson, Mythop Lodge; second, S. Parker, Farington. Highly commended: B. B.

Bull calf, under one year old.—First prize, Mrs. Atkinson, Dutton; second, R. Thompson. Highly commended: G. Ashburner.

Cow or heifer, above three years old, and in calf or milk.—First prize, G. Ashburner; second, R. Spencer, Blackburn. Highly commended: R. Saul, Woodplumpton. Commended: J. Laud, Ingol.

Heifer, above two and not exceeding three years.—First prize, J. R. Patterson; second, R. Saul. Highly commended: J. Woodhouse, Lancaster.

Heifer, not exceeding two years old.—First prize, Mrs.

Atkinson and Sons; second, J. R. Patterson. Highly commended: W. Handley.

Heifer calf, not exceeding one year old.—First prize, Mrs. Atkinson and Sons; second, J. Lund.

Three dairy cows, above three years old.—First prize, N. Rothwell, Great Lever; second, R. Saul.

For the best male animal.—Silver Cup, E. Musgrove.

For the best female animal.—Silver Cup, J. Thom.

SHEEP.

Shearling ram, Leicester breed.—First prize, J. W. and T. Parker, Kendal; second, J. Cock, Bolton-le-Sands.

Leicester ram, any other age.—First prize, Messrs. Dovenor, Bedale; second, J. W. and T. Parker.

Loag-wool ram.—First and second prizes, J. and R. Earnshaw, Grindleton.

Shearling ram of the Down breed.—First prize, W. Dodgson, Kirkham; second, W. Handley.

Ram of the Down breed, excepting shearling.—First and second prizes, S. Ashton, Timperley.

Ram of any breed, adapted to a mountain district.—First prize, G. Dewhurst, Rawtenstall; second, J. Pickup, Newchurch.

Three shearling gimmers.—First prize, Messrs. Dovenor; second, W. Handley.

Three Leicester ewes, not to exceed four shears.—First prize, Messrs. Dovenor; second, M. Lamb, Otley.

Three shearling ewes, of the Down breed.—Prize, S. Ashton.

Three ewes of the Down breed, not to exceed four shears.—First prize, E. Musgrave; second, S. Ashton.

Three blackfaced Scotch ewes, not to exceed four shears.—First and second prizes, A. W. Long, Kendal.

Three ewes, of any other breed, and adapted to a mountain district.—First and second prizes, T. Brigg, Keighley.

Whitefaced tup lamb.—First prize, Hon. J. B. Ogilvy, Kirkham; second, J. Woodhouse, Seale Hall.

Tup lamb of the Down breed.—First prize, E. Musgrave; second, S. Ashton.

Three whitefaced gimmer lambs of the Leicester breed.—First prize, Hon. J. B. Ogilvy; second, M. Lamb.

Three gimmer lambs of the Down breed.—First prize, S. Ashton; second, W. Dodgson.

Three cross bred (first cross) gimmer lambs.—First prize, M. Lamb; second, P. Grime, Preston.

Three gimmer lambs adapted to a mountain district.—First prize, T. Brigg; second, A. W. Long.

Best ram in the show yard.—Tradesmen's Cup, J. and R. E. Earnshaw.

Best pen of ewes in the show yard.—Prize, S. Ashton.

PIGS.

Boar of large breed.—First prize, J. Chapman, Preston; W. C. Rainford, Preston.

Boar of small breed.—First prize, C. R. N. Beswicke-Royds, Littleborough; second, J. Parker, Preston.

Boar of Berkshire breed.—First prize, Rev. J. Pennington, Stonyhurst; second, J. Garnett, Bolton.

Breeding sow of large breed, in pig or milk.—First prize, T. Geddes, Ashton; second, J. Carr, Leyland.

Breeding sow of small breed.—First prize, C. R. N. Beswicke-Royds; second, C. Mercer, Preston.

Breeding sow of Berkshire breed.—First prize, D. Ashcroft, Haughton; second, J. Garnett.

ROOTS AND SEEDS.

Vegetables, six varieties.—First prize, J. B. Jones, Fulwood; second, G. Smith, Wheelton.

Swedish turnips.—First prize, J. B. Jones; second, G. Smith.

Turnips (except Sacdes).—First and second prizes, G. Smith.

Long red mangolds.—First prize, T. Birkett, Weeton; second, J. Rigby, Farrington.

Mangolds.—First prize, J. B. Jones; second, J. Rigby.

Round potatoes.—First prize, W. Blackhurst, Whittingham; second, J. Rigby.

Kidney potatoes.—First prize, J. Walmsley, Broughton; second, G. Smith.

Carrots.—First and second prizes, G. Smith.

BUTTER AND CHEESE.

Butter, not less than 5lbs., made up in half-pounds.—First prize, G. Bargh, Warton; second, R. Whittaker. Highly

commended: G. Bargh; R. Whittaker; J. Rigby; G. Rollet, Preston; J. Salesbury, Goosnargh; W. Clegg, Goosnargh; L. Uttley, Preston; G. Haworth, Darwen; and C. Seaward, Ashton.

Cheese.—First prize, H. Blundell, Whittingham; second, W. Milner, Iasbip.

IMPLEMENTS.

Mowing machine.—First prize, H. and G. Kearsley, Ripon; second, Picksley, Sims, and Co., Leigh; special medal, Harrison, McGregor, and Co. Highly commended: W. A. Wood, London; W. A. Fell, Bridge Iron Works, Windermere.

Haymaking machine.—First prize, J. S. Warburton, Preston; second, Carruthers and Bagnall, Lancaster. Highly commended: T. Standing, Preston.

Horsrake.—First prize, Picksley, Sims, and Co.; second J. S. Warburton. Highly commended: Haughton and Thompson, Carlisle.

Collection of agricultural implements.—Prize, T. Standing. Highly commended: J. S. Warburton.

Thrashing machine in motion.—First prize, T. Standing; second, Clayton and Shuttleworth.

Chaff-cutter.—Prize, T. Standing. Highly commended: J. Crowley and Co., Sheffield; Harrison, McGregor, and Co.

Turnip pulper.—Prize, Picksley, Sims, and Co. Highly commended: J. S. Warburton; Harrison, McGregor, and Co.

Turnip-cutter.—Prize, Corbett and Peele, Shrewsbury. Highly commended: J. S. Warburton.

Grinding mill and crusher.—Prize, T. Standing. Highly commended: J. S. Warburton.

Winnowing machine.—Prize, Corbett and Peele. Highly commended: J. Richardson, Carlisle.

Oilcake mill.—Prize, Corbett and Peele. Highly commended: J. S. Warburton.

Churn.—Prize, W. Wade, Leeds. Highly commended: The Domestic Washing Machine Co., Accrington.

Washing machine.—Prize, Taylor and Wilson, Accrington.

Wringing and mangling machine.—Thomas and Taylor, Stockport.

Collection of carriages.—Prize, J. Walmsley, Preston. Highly commended: W. Penny, Preston.

Special medals were awarded as follows: Rustic Gardenhouse, H. Inman. Riband Telegraph Company, medal for Dutch barn. Denis and Company, medal for heating apparatus and greenhouse, and for water and steam valves. W. Heap, for collection of horse shoes. J. A. Wade, for interlocking roofing tiles. W. H. Peake, Liverpool, for iron-fencing. Reynolds and Co., woodcutting machinery. Marsden and Co., stone-breaker. Corbett and Peele, horse hoe clover drill. Slack and Brownlow, water filter. Standing, for potato setter. Warburton potato digger. J. F. Cox, Abyssinian pump. J. S. Warburton, apparatus for unloading.

THE NEW LAW ON RATING.—An Act, which has just received the Royal assent, to amend the law as to the valuation of property to the poor and other rates has just been printed. Certain exemptions in the Poor-rate Act of 43rd of Elizabeth are abolished, and lands used as plantation, or a wood, or for growth of saleable underwood, and not subject to any right of common, also rights of fowling, of shooting or taking or killing game or rabbits, when severed from the occupation of the land, and mines of every kind not mentioned in the recited Act, are to be liable to be rated to the poor and other rates. There are provisions as to deductions and the manner in which such property is to be rated. The commencement of the Act, to enable a valuation to be made in a list to be in force after the 6th April next, is to be on the 6th April, 1875. A definition is given of the terms used in the statute, which is not to apply to Scotland or Ireland. It will however, produce a large sum in poor and other rates.

THE BORDER UNION AGRICULTURAL SOCIETY.

MEETING AT MELROSE.

The cattle exhibited were all Shorthorns with the exception of a few crosses. The display of entire horses was not nearly so grand as might have been expected; but the show of Leicester shearing rams was good. There were three or four stands of implements belonging to Border firms.

PRIZE LIST.

JUDGES.—**SHORTHORNS:** J. Boyd, Simprim Mains, Coldstream; J. Dickinson, Bemersyde Cottage, St. Boswells; C. Smith, Whittingham, Prestonkirk. **HORSES:** T. Hume, Wormerlaw, Coldstream; D. Aitchison, Maidenhall, St. Boswells; A. Calder, Yetholm Mains, Kelso. **HUNTING STOCK:** A. Turnbull, Coldstream; W. Ford, Hardengreen, Dalkeith; W. Shore, St. Boswells. **PIGS:** Same as for Shorthorns. **BORDER LEICESTER SHEEP:** J. Dinning, Belford; J. Lees, Marvingston, Haddington; A. Bell, Linton, Kelso. **CHEVIOT SHEEP:** J. Brydon, Kinnelhead, Moffat; W. Aitchison, Brieryhill, Hawick. **HALF-BRED AND SHEEP OF ANY BREED:** Same as for Cheviots. **IMPLEMENTS:** —. Munro, Fairnington, Kelso.

SHORTHORNS.

Bulls calved before 1st January, 1872.—First prize and silver medal, W. Lambert, Erlington Hall, Haydon Bridge. Highly commended: N. Milne, Faldonside, Melrose. Commended: J. Tweedie, Deuchrie, Prestonkirk.

Bulls calved before 1st January, 1873, and after 1st January, 1872.—Prize, the Duke of Buccleuch, Carterlaugh, Selkirk.

Bulls calved after 1st January, 1873.—First prize, J. Nisbet, Rumbleton, Greenlaw; second, J. Bell, Fans, Earlston. Commended: A. Thomson, Mainhill, St. Boswells.

Cows not exceeding ten years old.—First prize, J. Bell; second, J. Atkinson, Bywell Hall Farm, Stockfield-on-Tyne. Highly commended: Lord Polworth, Broomhall Farm, St. Boswells. Commended: W. Lambert and J. Atkinson.

Cows not exceeding ten years old and not eligible in preceding class.—First prize, G. Whitelaw, Yetholm Mill, Kelso; second, A. Brownlee, Haughead, Earlston; third, J. Bell.

Two years old heifers.—Prize, J. Atkinson. Highly commended: W. Lambert. Commended: J. Bell.

One year old heifers.—First prize, J. Bell; second, J. Tweedie. Highly commended: J. Tweedie. Commended: N. Milne.

Pen of five one year old heifers.—First prize, R. Logan, Birkinside, Earlston; second, W. Riddell, Hundalee, Jedburgh.

Pen of five oxen, one year olds, suitable for laying on to turnips.—G. Whitelaw; second, W. Riddell.

HORSES.

Draught stallions.—First and second prizes, P. McRobbie, Sunnyside, Aberdeen.

Cart mares, with foal at foot, or in foal at the time of exhibition.—First prize, J. Atkinson; second, J. Lawrie, Mitchelson, Stow. Highly commended: J. Atkinson. Commended: A. Smith, Stevenson Mains, Haddington.

Cart mares or geldings above three years old.—First prize, S. Jack, Mersington, Coldstream; second, A. Bain, Legars, Kelso. Highly commended: T. E. Boog, Timpendean, Jedburgh, and T. E. Scott, Buckholm, Galashiels.

Colt and fillies for agricultural purposes, two years old.—First and second prizes, J. Lawrie. Highly commended and commended: J. Scott, Dudgeon, Longnewton-place, St. Boswells.

Pairs of horses for agricultural purposes (mares or geldings).—Prize, J. Thompson, Baillieknowe, Kelso. Highly commended: J. Scott.

Hackneys (geldings or mares).—Prize, C. J. Cunningham, Morebattle Tofts, Kelso. Commended: W. Watson, Easter Softlaw, Kelso.

Hunting stock, four years old, likely to make good hunters.—First prize, G. Riddell, Crosehope, Herriot; second, A. Calder, Yetholm Mains, Kelso.

Three years old likely to make good hunters.—First prize, G. Riddell; second, A. Haddon, Honeyburn, Hawick. Commended: J. Purves, Thornieclaykes, Lauder.

Brood mares.—First prize, J. Usher, Stodrig, Kelso; second, A. Logan, jun., Hownam Grange, Morebattle.

Hunting colts and fillies, five years old and upwards.—Prize, J. C. Cunningham.

Made hunters.—Prize, J. C. Cunningham.

Jumpers.—First prize, G. Borthwick, Frogden, Kelso; second, J. T. Primrose, Saughlands, Dalkeith; third, G. Dove, Crossflat, St. Boswells.

EXTRA STOCK.—Highly commended for brown filly one year old, J. Usher; for piebald pony, W. L. Blaikie.

PIGS.

Boars of the large breed.—Prize, N. Milne, Dryhope, Selkirk.

Boars of the small breed.—Prize, Lord Polwarth.

Brood pigs of the large breed.—Prize, D. Aitchison, Maidenhall, St. Boswells.

Brood pigs of the small breed.—Prize, R. Turnbull, Faldonash, Hawick.

Litter of pigs of any breed under sixteen weeks old, not less than eight of one litter.—Prize, N. Milne.

SHEEP.

Border Leicester shearing rams.—First and second prizes, with Roxburgh silver medal and bronze medal, J. and T. Clarke, Oldhamstocks Mains, Cockburnspath. Highly commended: Clarke and Torrance, Sisterpath, Dunse.

Rams to shear.—First prize, T. Elliot, Hindhope, Jedburgh; second, J. T. Primrose.

Pen of five gimmers or shearing ewes.—First prize, G. Torrance; second, W. Purves. Commended: —. Nisbet, Lambden, Greenlaw.

Pen of five ewes which have had lambs and nursed them in 1874.—Prize, —. Nisbet. Highly commended: T. Stinson, Slainslie, Lauder.

Pen of five gimmers or shearing ewes which have been fed upon turnips and grass only, and undressed.—Prize, J. Henderson, Cornhill, Coldstream. Commended: T. Hume, Wormerlaw, Coldstream.

Pen of five ewes, fed upon grass and turnips only, and undressed.—Prize, J. Henderson. Highly commended: A. Bain.

CHEVIOTS.

Rams not above one shear.—First and second prizes, T. Elliot.

Rams not above five shear.—First and second prizes, T. Elliot.

Pen of five ewes.—Prize, T. Elliot.

Pen of five gimmers.—Prize, T. Elliot.

HALFBREDS.

Rams not above one shear.—Prize, W. L. Blackie, Holy dean, St. Boswells.

Rams not above three shear.—Prize, W. L. Blackie.

Pen of five ewes.—Prize, A. Thompson.

Pen of five gimmers.—W. L. Blackie.

ANY BREED.

First and second prizes, Lord Polwarth.

IMPLEMENTS.

Collections of implements.—Prizes to Lillie and Elder, Berwick-on-Tweed; Bickerston and Sons, Twedmouth; W. Turnbull, St. Boswells; J. Carrie, St. Boswells, and Stuart and Mein, Kelso. Special prizes to Lillie and Elder, for a combined turnip slicer; W. Turnbull, for an improved grubber-harrow; and J. Carrie, for an improved vice for reaper knives.

SCOTTISH CHAMBER OF AGRICULTURE.

At the half-yearly meeting, held in Perth, Mr. Bethune, of Blebo, in the chair,

Mr. D. CURROB, the secretary, laid on the table a statement of the financial transactions of the Chamber, which showed that at present, if the arrears of subscriptions were got in, the balance in hand would be £1,436 17s. 1d.

Mr. DUN (Baldinnes) submitted the following motion, which had been adjusted by the directors and himself: To add to Rule XX.—“But when it appears to the directors to be expedient they shall have power to collect the opinions of the members of the Chamber upon such questions as may in their opinion have been sufficiently ventilated by previous discussion, and for that purpose to adjust and issue voting papers for each member of the Chamber by post.” In doing so he said that he did not think it necessary to say much with a view to induce the meeting to support the motion. The matter had been under the attention of the Chamber for a number of years, and it had come to be known that from the small number of members usually taking part in divisions, the Chamber was thought by those not belonging to it to be a very small body. Were the motion submitted adopted, however, the Chamber would be placed in a much more advantageous position with regard to the public, and particularly in the sight of members of Parliament. Lord Elcho, in the House of Commons last year, had taken opportunity to make a remark not at all complimentary, but which he (Mr. Dun) did not know exactly how to characterise, with reference to the Chamber, so that it was evident that something required to be done in order to afford members of the Chamber additional facilities for expressing their opinions.

Mr. ANDERSON (Fowls) proposed that the motion should be adopted, remarking that at present members of Parliament, in speaking of the Chamber, were apt not by any means to magnify their body, while, on the other hand, politicians who had an end to serve might, on the occasion of a vote being given by a small number of the members, take hold of the opinion of such a section of the Chamber and represent it as being very influential.

Mr. DINGWALL (Ramovnic) seconded the motion, which on being put to the meeting was unanimously adopted.

There was laid on the table a report on the action taken by the Chamber in connection with the Land Tenancy Laws. The principal part of this report was occupied with a long statement of the opinions of the committee appointed to examine and report upon the form of leases issued by Sir Patrick Murray, of Ochertyre, in which certain provisions as to unexhausted improvements are made. The chief of these are:

The tenant, at the natural expiry or earlier termination of the lease, shall be entitled to compensation from the landlord for unexhausted extraneous manure brought to the farm, purchased and paid for by the tenant, according to the undernoted scales, the actual purchase of such manure being proved by duly-authenticated vouchers, and its application by the solemn declaration of the tenant, corroborated by such further evidence as the arbiters may see fit to require; and during the last three years of a lease, the tenant shall be bound to produce, for the inspection of the landlord or his factor, at each term of Whitsunday and Martinmas, if required, the vendor's account for all manures and feeding-stuffs supplied to the tenant during the previous six months, and he shall also point out at the ground to which the manure has been applied, as a condition of receiving compensation for the same.

ALLOWANCE FOR LIME.—Lime applied to arable land shall be held to last for ten years; applied to permanent pasture on grazing farms for twelve years.

Proportion of the Original Value held to be exhausted in each Year, allowance to be made accordingly.

ALLOWANCE FOR OIL-CAKE FEEDING.—For oil-cake, or any similar substance of equal manurial value, purchased by the tenant, and used in feeding sheep or cattle on the farm, one-sixth part of the entire cost of all the material used during the last three years of the lease will be allowed, except grain in any shape, for which no allowance will be made. These rates of compensation for unexhausted manures are not to include the cost of the carriages and laying on performed by the tenant, for which no allowance will be made.

COMPENSATION FOR CARRIAGES DRIVEN BY THE TENANT, ON LEAVING BEFORE THE NATURAL TERMINATION OF THE LEASE.—In the event of the tenant ceasing to occupy the farm before the natural termination of the lease, he shall have right to compensation from the landlord for the value of any carriages of materials for the permanent improvement of the farm performed by the tenant, under the provisions of the lease, or with the written consent of the landlord. The amount of compensation to be in proportion to the number of years of the lease unexpired at the date of the tenant's removal from the farm; but under no circumstances shall the amount for value of carriages, at the time of the performances thereof, be estimated by the arbiters at more than 14 per cent. on the amount paid by the landlord for these permanent improvements at the time of their execution.

BUILDINGS OR FENCES ERRECTED BY TENANT AT HIS OWN COST.—If the tenant shall, at his own cost, erect any buildings or fences on the farm, the landlord shall be entitled, if so disposed, to take such erections at valuation of arbiters, or to decline taking them, and in the latter case the tenant shall be obliged to make them over to the incoming tenant, or to remove them, on condition that he restores the ground, or the other buildings to which they are attached, to their original condition.

LANDLORD'S HYPOTHEC.—The landlord renounces all preferable rights as against other creditors of the tenant conferred upon him by the law of hypothec.

Mr. GOODLET writes: I hope the directors will not commit themselves to any fixed rule or scheme of compensation for improvement, such as that adopted by Sir Patrick Murray, or any improved scheme that may be devised. I believe no rule can be laid down that will do justice in all cases, and I think it would be a great mistake in us to commit ourselves to St. Patrick's, or any other scheme of the kind. We cannot, I believe, do better than adhere to the resolution the Chamber has already come to, in which the principle on which compensation ought to be allowed is clearly defined, the compensation in every case being to be determined by arbitration.

Mr. WILLIAM SMITH, West Drums, Brechin, writes: I am of opinion that we ought to stand fast to the general principle of being paid for “whatever is proved to add to the letting value of the subject.” I think if this were made the groundwork of this Tenant-Right agitation, it would much simplify the whole affair, and would carry justice and equity along with it.

Mr. GEORGE HOPE, of Borlands, writes: I have made several careful experiments in growing crops during a rotation of four years, with Peruvian guano, Ichaboe guano, bones, fresh and decomposed, and other manures, testing them with farmyard manure, and I found Peruvian and Ichaboe guano equally lasting with farmyard manure, and that a hundred-weight of guano was about equal in manurial value to three

tous of farmyard manure. The crops, after the fresh bone dust or meal, were inferior to the others during the first two years, but rather superior to them in the last two years of the rotation. The weight of the bones applied was a half more than of guano. Doubtless, on different qualities of soil, different results might be obtained, but this is not a matter we require to settle, as it would be absurd to propose inserting in an Act of Parliament the value of manures and the period they are supposed to last. Our duty is plainly to demand that all improvements effected by tenants, which are "suitable to the farm, and add to its letting value," should be paid for by the landlord or incoming tenant, as valued by arbiters. The immense superiority of crops grown on land in really high condition is universally admitted, but then this condition can only be obtained by a large expense, during a long course of years, while, under the present tenancy laws, there is a strong probability of the tenant being called on to pay additional rent for his own outlay.

Mr. SCOT-SKIRVING: I think Sir P. Murray ought to be thanked by the Chamber for his disinterested attempt to meet the expressed wishes of the Chamber. Mr. Goodlet, taking his observations as a whole, seems to think Sir P. Murray has not gone far enough. I venture to think, on the contrary, he has gone much too far. I think twenty-one years would be a better duration for a lease than nineteen, and that it might be held as giving a larger and indeed sufficient compensation to the tenant for manorial benefits, except such as are brought to the farm during the last rotation. These I would have sustained by proper vouchers, and the unexhausted value proved by arbitration. Both the sliding scale of Sir P. Murray and the annuity of Mr. Goodlet I would reject as too complex.

JOHN CLAY (Kerchesters, Kelso): The agriculturists of Scotland are much indebted to our President and Mr. Goodlet for the manner in which these gentlemen have brought up this most important question. Security of capital and payment of tenants' improvements is a question of vital importance, not only to the tenant, but to the landlord and to the nation, as it is the best mode of securing the fertility of the soil, and the productive powers of the land being kept up for this fast-growing age. Sir Patrick Murray is far in advance of most landlords. In my opinion, however, some of his compensation clauses, meant to be equitable, will be found unworkable in practice. What we, as a Chamber, have urged is, to have the principles of compensation admitted as just between landlord and tenant, and beneficial to the nation; and Sir Patrick deserves our thanks for the progress he has made in that direction. Soils and climates differ so much that it would be difficult, and I think unwise, to attempt laying down a scale for the whole country. But there are in every district many practical men, whose experience in their trade makes them expert in fixing, in any year of a rotation, what values of draining, liming, cakes and manures of all kinds remain in the land unexhausted; and valuations may, with perfect safety, be left with them—with this direction, that they will allow only for "what has proved to have added letting value to the farm."

It was the opinion of the following gentlemen, given in evidence in the Echline case, recently decided, that a fully manured green crop, grown and removed, would exhaust manures applied to it as under:

George Thomson, Pursuer.—One-third of common farmyard manure would be exhausted; $\frac{1}{2}$ of guano exhausted; $\frac{2}{3}$ of potato manure exhausted.

Professor Wilson.—I have seen Sir Patrick Murray's model conditions, and I see no reason to object to them.

Wm. Smith, West Drums.—Estimated the exhaustion at about $\frac{1}{3}$ of substantial manure, and $\frac{2}{3}$ of the artificial.

John Clay, Kerchesters, Kelso.—One-half farmyard manure exhausted in the crop. The amount of guano depends on quality. If high-class ammoniacal there would not be much left. I would put it below $\frac{1}{2}$, perhaps $\frac{1}{3}$. Of bones, $\frac{1}{2}$ would be left; potato manure about $\frac{1}{3}$ left.

James Stenhouse, South Gyle, Corstorphine.—One-third of farmyard manure exhausted in crop; $\frac{2}{3}$ of guano, but it depends on kind of guano; $\frac{2}{3}$ potato manure.

James Brash, Hallyards, Kirkliston.—About $\frac{1}{2}$ farmyard manure exhausted; guano and bones a little more. My calculation $\frac{1}{2}$ of whole exhausted.

Charles Rintoul, Easter Craigie and Kingston.—Farmyard manure, $\frac{1}{4}$ exhausted; guano, $\frac{2}{3}$ exhausted, and the same in the case of artificial manures, except bones, which are more lasting.

The PRESIDENT, Mr. McNeel Caird, sums up in these terms: It appears to me, as the general results of the discussion, that differences of climate, soil, condition, and treatment, and the varying qualities of manures, and of the quantities applied, make such differences in the rates of exhaustion of fertilisers, that no fixed rules of proportion can with safety be adopted. But these differences are quite recognisable by experienced men in each particular case. Qualified valuers or arbitrators, checking the vouched expenditure by their practical knowledge, and by their personal observation of the results on the particular farm, with the aid of such inquiry as they can easily make (especially on the spot), will be able to arrive at conclusions fair to the outgoing tenant, without injustice to his successor. And this leads me to remark, that in practice these compensations will in general not be paid by the landlord, but will be ascertained and settled between the outgoing and the incoming tenant. The landlord can always, and will usually, make stipulations to that effect in letting his farm to a new tenant, unless he sees that he can get a better rent by paying the compensation himself. The measure of compensation ought never to exceed the letting value added to the farm by the tenant's improvements as at the date of his removal, taking into account all deteriorations which can be brought against him. The unstinted expenditure in manures, which a just system of compensation will encourage the tenant to make, and to continue till the close of his occupation, will be a new security to the landlord (of which he cannot be deprived) for payment of the rent, and fulfilment of the tenant's obligations. It is of high public policy that a state of the law should be amended, which, by causing insecurity, hinders the full use of capital to increase the productiveness of the soil. To amend that state of the law in a wise spirit with due consideration of all the interests involved, will result in a vast enlargement of growth, especially of food, and, by consequence, will add immensely to the annual income and wealth of the country, to the fund for the employment of labour to the prosperity of manufactures and commerce, to the comfort and contentment of the people, and thus to the security of property, and the general welfare of the nation.

Mr. DUNN moved that a vote of thanks should be accorded to Sir Patrick Murray for the action which he had taken, there being, he remarked, a feeling general throughout the county that Sir Patrick deserved all the credit that could possibly be given him. This motion was seconded by Mr. Anderson and unanimously agreed to.

The SECRETARY explained that the Marquis of Huntly's Agricultural Tenants Improvement Bill had not been before the directors, as they had had no opportunity of meeting since it had been introduced into Parliament. He had no doubt, however, that it had come under the notice of all the members of the Chamber through being published in the newspapers. The bill had not succeeded in getting through Parliament this year, but he believed that it was to form the basis of a measure to be introduced next session if the proposals contained in it met with any encouragement.

The CHAIRMAN remarked that he agreed with what had been said by the noble Marquis in moving the second reading of his bill in the House of Lords. "This bill," his Lordship had said, "may not attain that object (the affording of security for capital invested or improvements made), but at all events I may claim that it is an attempt to settle in a practical way a question which on all sides is acknowledged to be surrounded by great difficulties and complications." He (the Chairman) thought that at any rate the meeting should express thanks to the Marquis of Huntly for his endeavour to bring about a solution of the question dealt with, although he for one was not prepared to express very strongly his opinions as to the merits or demerits of the bill.

Mr. BALLINGALL (Dunborg) said that his Lordship's bill was certainly a step in the right direction—an attempted solution of a question which the Chamber of Agriculture had a great interest in, and he therefore moved, in accordance with the Chairman's suggestion, that they should instruct the Secretary to convey the thanks of the meeting to the Marquis of Huntly, without committing themselves to the practical details of the bill.

Mr. NICOLL (Littleton, Kirriemuir) seconded the motion.

Mr. SMITH (Balzeordie) was of opinion that the noble Marquis had introduced his bill into the House of Lords this session in order that tenant-farmers throughout Scotland might express their opinion on it before Parliament met again

next year. In these circumstances it seemed a mistake simply to move a vote of thanks to his lordship. There was one part of the bill which he (Mr. Smith) thought the Chamber might express an opinion on at once—namely, that which took the management of the land out of the hands of the owners and put it into the hands of the Enclosure Commissioners. He thought that any proposal of that kind was a great mistake, and the Chamber should therefore, in his opinion, come to a resolution to that effect as soon as possible.

The CHAIRMAN said he did not suppose that the directors would take any notice of the bill before the next meeting of Parliament.

Mr. SMITH said he was inclined to move that so far as taking the land out of the hands of the owners was concerned, the bill had not the support of the meeting. The Prime Minister had said that Government was giving attention to the question, and in all likelihood there would be a Government bill introduced next year. He was of opinion that there was a great probability of a moderate measure being carried, if farmers did not insist upon the condition to which he objected—namely, the taking of the land out of the hands of landlords and putting it into the hands of the Enclosure Commissioners, which was surely as great an interference with freedom of contract as anything could well be.

Mr. GARDNER (Chapelbank) expressed his willingness to second Mr. Smith's motion, provided there was a clause added stipulating that after the law was made no individual should have a right to make a private contract which would interfere with that law.

Mr. DINGWALL pointed out that it would be inadvisable, taking into consideration the smallness of the meeting, to enter at all into the discussion of the details, and Mr. Smith having consented to withdraw his motion on the understanding that the matter would be brought before the Chamber at the November meeting, the following motion, proposed by Mr. Ballingall, was unanimously agreed to: "Without committing the Chamber to details, the Secretary is instructed to convey the thanks of the meeting to the Marquis of Huntly for the consideration which his Lordship has given to the Land Tenancy Laws, and the attempt that has been made to solve admitted abuses in these laws."

The SECRETARY said he had received from Sir Robert Anstruther, M.P. for Fifeshire, a draft of a bill for the abolition of hypothec, which the hon. gentleman proposed to introduce next session. The draft was as follows:

1. This Act may be cited as "The Hypothec Abolition (Scotland) Act, 1874," and the same shall extend to Scotland only, and shall apply to all lands and heritages, including dwelling-houses, shops, and other subjects, whether rural or urban.

2. The following words and expressions, when used in this Act, have the meanings herein respectively assigned to them: "Lands" or "premises" mean any lands, houses, or other heritable subjects rented or let on lease; "landlord" means the grantor of a lease of any lands or premises for any term of not less than one year; and "tenant" means any occupier under any such lease; "goods" shall comprehend all that was subject to the landlord's right of hypothec prior to the passing of "The Hypothec Law Amendment (Scotland) Act, 1867," and in addition thereto, in both rural and urban subjects, all household furniture and other personal estate and effects of the like kind on the premises, actually belonging to any tenant.

3. From and after the passing of this Act, and subject to the provisions thereof, the Law of Hypothec in Scotland shall be, and the same is hereby abolished: provided, nevertheless, that it shall be lawful for any tenant to grant in favour of his landlord, or to any other lawful creditor, a right of hypothecation over his goods, in security and for payment of rent, or of any debt or sums of money due or to become due by such tenant: provided, further, that a definite amount shall be specified in the deed or writing conferring such right of hypothecation as the consideration or true cause of granting such right, beyond which amount the right itself, together with the expenses of recovering or enforcing the same, shall not extend.

4. Rights of hypothecation may be included in any lease, or may be granted by any deed or other writing, executed according to the law of Scotland, and the same may be in like

manner assigned and discharged; provided that every such right or discharge thereof, in order to be valid, shall be recorded within one week of the time of granting the same in the register to be kept for that purpose provided by this Act.

5. Every right of hypothecation, on being recorded, shall confer on the grantee, his executors and assignees, with respect to the goods thereby hypothecated and to the extent of the sum thereby secured, the same rights, powers, and remedies as under the existing Law of Hypothec at present belong to any landlord.

The remaining clause provided for a register of hypothecations being kept by sheriff clerks.

The reading of this bill was the occasion of some merriment being evinced by several members of the Chamber, and on discussion being invited, Mr. Dun asked, amid some laughter, whether anyone would propose a vote of thanks to Sir Robert, Mr. Storrar remarking that the hon. gentleman would be better occupied in looking after the Church.

The bill was remitted to the directors without further conversation, and on the motion of the Chairman the meeting agreed to take means to urge the introduction of Mr. Vans Agnew's Hypothec Abolition Bill next session.

This concluded the business before the meeting.

THE STATE OF THE MONEY MARKET.—The rise in the Bank rate has been successful in its object—it has succeeded in retaining here the gold which was imported. And in consequence the aggregate coin and bullion in the Bank and the reserve in the Banking Department have both risen considerably. Since the account was made up a considerable sum of bullion has also been sent into the Bank, and any more which arrives will probably have a similar destination. But it must not be inferred from this that money is likely soon to go down. In the first place the state of the Bank is much weaker than it was this time last year.

The coin and bullion last year were ...	£23,950,000
Now are	21,858,000
Less this year	2,092,000
The reserve in the Banking Department last year was	12,713,000
Now is	9,902,000
Less this year	2,811,000

It is true that this year there is no such probable demand as was to be expected last year from Germany for the coinage. The demand for France is essentially a demand caused by cheapness of money here. The Bank of France want to augment their store of coin and bullion, but they want to augment it with as little perturbation in Paris and in the Money Market as possible. It will not answer their purpose to create any kind of confusion, for that might postpone the resumption of cash payments, which they wish to accelerate. In this respect the present prospect is undoubtedly clearer than it was last year. But, on the other hand, we must remember that the banking reserve was found to be insufficient last year. The American panic suddenly came and found the Bank entirely unprepared; the most serious excitement we have seen since 1866 was the consequence, for the reserve in the Bank ceased to be such as to give confidence to the public. After such an experience it would be a very grave error for the Bank not now to act with sufficient caution. The amount they hold as a provision not only against expected, but against unexpected events, is much smaller this year than last, and last year at an unexpected crisis it proved wholly insufficient. Although, therefore, it is probable that for the next week or two the accounts of the Bank of England will show an increase of strength, we must believe that no downward movement is likely to be made, for the funds in hand are plainly not more than enough to meet the usual autumn outgoings, and to provide a proper security against possible though unforeseen contingencies.—*The Economist*.

THE LOCAL AUTHORITIES AND THE DISEASES OF STOCK.

At the general meeting of the Royal Agricultural Society of England, as held on Bedford racecourse, somebody who "claimed to have a voice in the management," said "the Council was at variance with the majority of farmers throughout the country on the subject of the laws relating to the diseases of animals. The resolution which the Council drew up respecting foot-and-mouth disease he considered to be impracticable." And then he went on with all due gravity to declare how "the Central Chamber of Agriculture was a purely representative assembly," and to offer it as an example to the Royal Agricultural Society of England! It is only fair to say that the meeting was too well bred to laugh in the speaker's face, although every one in any way conversant with the public life of Agriculture knew that of all its associations none was so hopelessly landlord-ridden as this self-same Central Chamber. The point, however, of the attack centred on the charge that the Royal Council of England does not agree with the farmers of England as to the treatment of foot-and-mouth disease. And that is a bold word, too; for what is it that the farmers of England do precisely agree to in this way? There are many who would deal resolutely with the matter, and stamp it out; and there are as many more who would carefully leave it alone, as not worth troubling about; while a third, and particularly busy party, would regard foot-and-mouth as something very venal when found about home, and proportionately terrible when imported from abroad. Authorities, either central or local, are certainly occasionally "at variance" as to how any outbreak of foot-and-mouth disease should be encountered.

Over pleuro-pneumonia there should be no such difficulty, generally acknowledged as the disease is to be of a far more serious character. Nothing, indeed, can speak stronger in this way than the Report of the Commons Committee, and yet even pleuro is often regarded more as a matter of inconvenience than anything else. Thus, at Keith the other day the cattle show of the Banffshire Farmers' Club was stopped at the last moment, much to the annoyance alike of the exhibitors and directors. There were 215 entries, which would have gone to make up the best show of Shorthorns and black polls ever seen in the county; as the story of the prohibition is thus told by Mr. Geddes Brown, the secretary of the Club and manager of the meeting: "The farm of Claypots last February or last spring was declared to be affected. On 26th May last, the same farm was declared to be free. I appeal to you all as farmers, or interested in agricultural matters, if it will not stand to common sense and common reason that the neighbours round Claypots would have looked upon that place as nothing but a plague-stricken spot. Do you think that they would allow their cattle for a moment to remain among those at Claypots? No: it bears absurdity on the face of it. I do believe—and I am perfectly satisfied of the truth of what I say—that there has not been a single beast sent off the farm of Claypots from 26th May to the present date. Last year we showed the county of Banff, and the North of Scotland generally, that we were perfectly able to guard ourselves, and not only to guard ourselves, but to guard the county interests also. I do think, with all deference to the Local Authority, that they might very safely have trusted us with the same power this year, instead of interdicting us as they had done." Now, it really does seem on the face of this statement that it would have been far more judicious not

to have determined to hold the show on or handy to what was at best but tainted ground. It, indeed, sounds almost incredible that the owners of the best stock in the district should have been so ready to run the risk which it appears they were quite willing to do: "Much disappointment was caused to farmers who had stock in preparation for the valuable premiums offered." Claypots may have a clean bill of health since May last, but under any circumstances it would have been far better to have chosen a show ground in some other locality.

The gravamen of the complaint, however, against the Banffshire Local Authority would look to be that so little notice was given, or that the prohibition was deferred until all the preparations had been made for the exhibition, a delay not reasonably to be accounted for if the place had been declared affected in February and free in May. Clearly the Local Authority should have sooner arrived at its determination, and so have saved the Club considerable labour, expense, and annoyance. But according to *The Banffshire Journal*, a new case of pleuro-pneumonia was reported, and under such circumstances it is difficult to see how any other course could have been taken. With the knowledge of this fact, the Farmers' Club itself would hardly have dared to admit the cattle in defiance of every law of the land and of common safety; and yet at the dinner it will be noticed there were continual complaints, although, as Mr. Brown Geddes honestly admitted, "the interdict may have saved many a herd from total destruction." Naturally enough, when an able, energetic man has done his best to make a good meeting and his friends have responded to his call in such a way as to ensure a success, it is a hard blow indeed to be knocked down just as he is about to enter the ring; but if a new case was discovered, then we cannot but think that the tone of the discussion was somewhat inconsiderate. Only last year the Club had to take a precisely similar step on its own account to that which the Local Authority was now compelled to repeat; as the only question is whether this interference should not be carried further and the markets also be stopped. At a meeting, however, in Aberdeen, on Wednesday, a suggestion from the Banffshire Local Authority to prohibit the cattle markets in the northern division of Aberdeenshire was not adopted, although numerous fresh outbreaks are reported. But as some people invariably end by tracing every source of disease to foreign importations, others, and we include ourselves amongst these, see more danger from the trade with Ireland. Thus, at Aberdeen the other day, Mr. Barclay maintained that it was chiefly through the importation of Irish cattle and not by the holding of markets that the disease was spread, and it was resolved to ask the local authorities of Banff, shire and Elginshire to co-operate with Aberdeenshire in sending a deputation to the Duke of Richmond, President of the Privy Council, to urge upon him certain amendments on the Contagious Diseases (Animals) Act, more especially with reference to the extension of time for the removal of cattle, after the last attack of disease on a farm, from thirty to sixty days. A committee, including Mr. J. W. Barclay, M.P., and Mr. W. McCombie, M.P., was appointed to carry out the resolution; and it only remains to be seen how far these proceedings may tally with the views of that model institution the Central Chamber of Agriculture, which so far has not made any very forcible demonstration as to our regular supply of disease from Ireland.

THE CENTRAL BANFFSHIRE FARMERS' CLUB.

THE PROHIBITION OF THE CATTLE SHOW.

The third summer meeting in connection with this Club was held at Keith. Last year the Club, in deference to a fear of cattle disease, voluntarily refrained from including cattle in the exhibition, although large numbers of entries had been announced. This season preparations were made for a full show, and very much interest was manifested throughout the county in the prospective gathering. Mr. James Geddes Brown, the Secretary of the Club, spared neither thought nor labour in maturing plans for the safety and comfort of the stock, and for the advantage of visitors. The show is held on the Market Stance, and to prevent any possibility of danger of disease lingering on the soil, the upper half of the ground was fenced off a month ago. Considerable expense and very much trouble were incurred in this closing the ground, and in erecting stalls for the cattle entered. Circumstances arose which prevented the cattle from being shown. It was known that pleuro-pneumonia had existed on the farm of Claypots, in Keith parish, but it was stated at the Club dinner that no animal had come off that farm since it was declared to be free from disease in May last. A new case of pleuro-pneumonia at Claypots was reported to the Local Authority, and the Local Authority passed an order prohibiting the holding of the exhibition of cattle. The resolution met in the central part of the county with strong feelings of disapproval, and although efforts were made to have the order countermanded, the result was that the show did not take place. Much disappointment was thereby caused to those farmers who had stock in preparation for the numerous and valuable premiums offered. There had been 215 entries of cattle, which would have included one of the largest entries of Shorthorn and polled cattle ever seen in the county.

At the dinner, Mr. R. W. DUFF, M.P., said: Every day I live, and every day I mix more with men who are employed in agriculture, the more convinced I am that whatever the Legislature may do for you—I have long been of opinion that for most of the grievances which you complain of, such as want of proper application to the soil and want of proper farm buildings, whatever may follow afterwards, the first thing to do is as far as possible to relax those absurd laws of entail which tie up the landlord's capital. These are no new sentiments for me, and I will not prolong them upon the subject. Other things may be necessary; I do not say that will be sufficient; but the longer I live, the more satisfied I am that that is one of the first things that ought to be done to redress those grievances which are felt by the agricultural constituencies.

Mr. TAYLER (Glenbarry) gave the Central Banffshire Farmers' Club: I must begin my observations by expressing the regret which I know all of us feel at the misfortune which has befallen this club this year. It has only had three meetings; that is, it is only three years since the time of its institution, and two of its meetings have been unfortunate by successive outbreaks of disease in the county. Last year, the committee of the society came itself to the conclusion that the show of cattle must be stopped on that ground. This year the show of cattle has been imperatively forbidden at the last moment by the Local Authority of the county, and whatever we may think of the strength of the reasons which brought them to that conclusion, we had of course no alternative but to submit. I may mention here that my friend Sir George Macpherson Grant, who, from what he said to me at Inverness, I confidently expected to have seen here, has, I am sorry to say, been prevented from attending. He and I have been specially unfortunate in respect to the shows of this club, for not only have our animals been entered and suffered in connection with the other intending exhibitors by the prohibition of showing cattle, but he and I were prevented from exhibiting at the first and only complete show the Club had had, the year before last, by the fact of our cattle having contracted foot-and-mouth disease at another show. However we may regret what has taken place, you will be glad to hear that it has not interfered with the progress of the Club.

Mr. J. GEDDES BROWN, said: In rising to return thanks for the Central Banffshire Farmers' Club, I do so with mingled feelings—feelings of disappointment in our show to-day; and yet with feelings of gladness at the success of our partial show

this day. Probably, some of you may wish me to make a few remarks with reference to the untoward circumstances which have befallen us so lately and so suddenly. Of course, I refer to the interdiction of the cattle for the show by the Banffshire Local Authority. I do not wish to make any uncourtteous remarks—such would be entirely out of place—but I think I may very safely say that really more courtesy might have been shown to me as Secretary to this Society in giving me a little more timely notice of what was actually to take place, or intended to take place, at Banff last Friday. I speak, gentlemen, for the Club in speaking for myself. Kindly bear that in mind. With reference to the existence of pleuro-pneumonia, or of restrictions relating to a case of pleuro-pneumonia, permit me briefly to state to you all the actual facts of the recent outbreaks. You will recollect that the farm of Claypots last February or last spring was declared to be affected. On 26th May last, the same farm was declared to be free. I appeal to you all as farmers, or interested in agricultural matters, if it will not stand to common sense and common reason that the neighbours round Claypots would have looked upon that place as nothing but a plague-stricken spot. Do you think that they would allow their cattle for a moment to remain among those at Claypots. No: it bears absurdity in the face of it. I do believe—and I am perfectly satisfied of the truth of what I say—that there has not been a single beast sent off the farm of Claypots from 26th May to the present date. Last year we showed the county of Banff, and the North of Scotland generally, that we were perfectly able to guard ourselves, and not only to guard ourselves, but to guard the county interests also. I do think, with all deference to the Local Authority, that they might very safely have trusted us with the same power this year, instead of interdicting us as they had done. You will kindly forgive me, gentlemen, for speaking thus, but bear in mind the preparation we had made for this show, and the extent of preparations for the number of entries that we had of all kinds of stock. When I saw that those preparations were so thoroughly knocked on the head, I can assure you I felt a direct personal blow, as well as a blow to the Club. However, probably the interdict served a certain and very good purpose; for all we know it may have served many a herd from total destruction. I do not like to say more upon the subject, though probably my feelings would carry me farther than my sense in my cooler moments would warrant me in saying. But allow me to say, that I hope this partial failure of our show this year will not act as a detriment to us, but on the contrary will bind us more closely together—and show the wisdom of adherence to that good old Scotch proverb, "A stout heart to a stey brae."

Mr. LESLIE (Corskellie) said: Whether the Local Authority were justified in issuing such an order, I am not in the meantime prepared to say, but I have no doubt they have been actuated by the same motives as we would have been ourselves, namely, preventing as much as possible the spread of disease among our stock. If such was their intention on the present occasion, and I have no reason to think otherwise, then they ought to have gone a step further, and hit the nail on the head by stopping the markets. When cattle are congregated together from all parts of the country, it will be a more fruitful source of disease than the few choice animals that would have been brought here to-day. I hope, however, with Mr. Brown, that such proceedings as this will not have a damaging effect upon this Club.

Mr. HENDRY (Maryhill) said: The Local Authority in their great wisdom saw fit to step in between us and our cattle. I have read of a Justice Shallow, who before giving a decision always asked his clerk what the decision was to be, and invariably acted upon the advice. I am not aware if this is the way that the Banffshire Local Authority have acted—or if they have allowed their clerk, who happens to be the Secretary of a rival society to this, to dictate to them.

Mr. R. W. DUFF, M.P., said: The toast I have been asked to propose is to the Agricultural Interest. The other day, at an agricultural meeting in Kincardineshire, there was a subject mooted which I think is of considerable interest to you all here. It was a subject which had been taken up by a neighbour of mine in that county, and it was with regard to the traffic of fat cattle to London. It is a very common thing we all know to see very fine cattle in the byres about Christmas time. But it very often happens that these cattle, having been taken a great deal of care of, are taken out of their comfortable houses and put into a cold exposed truck, and arrive

in London a good deal affected in condition. Such has been the experience hitherto. My neighbour, Mr. Baird, of Ury, had a model, which appeared to me to be a useful thing. It would only cost the railway companies a few pounds to put it into operation, and as I am sitting beside two gentlemen connected with the railway interest, I beg to bring it under their notice. I think it is very important for you who send up good beasts, such as exist in the upper districts of Banffshire, that they should be taken proper care of. The model to which I refer simply provides for a few hurdles being put across the trucks, so that each beast is enclosed, and stands in its own compartment. I will send to the Secretary, if he will permit me, the model, and my friend on the right, Mr. Longmore, has undertaken to take some notice of the subject. The other practical subject which occurred to me was mentioned some time ago in the House of Commons. I dare say many of you may know that there is an annual vote in the House of Commons for Queen's plates in Scotland. Now these Queen's plates, as far as I know, although I do not know much about the sporting world, do not do a great deal of good. It has been suggested that the money given for that should be handed over to the Highland and Agricultural Society, in order that they may be able to provide grants to local societies. Now, this is a matter of interest which occurs to me as a practical suggestion. It was suggested to me by my friend Mr. Hamilton, of Dalziel. I supported him, and if it meet with your approbation, I will support it again. I think it is a good suggestion, and one worthy to be adopted. It is of course

only step by step in these small things that we can do any good, and promote the agricultural interest. I am happy to state, so far as I know, that the agricultural interest of Scotland was never—well I will not say never so prosperous, but is very prosperous. As I came along in the train, I was reading reports detailing the prospects of the harvest, and although it admitted that, on the coast of Banffshire, there was a deficiency, yet, in the upper districts there was every promise of a good harvest. I beg to couple with this toast the name of Mr. George.

Mr. GEORGE (Haugh) said: I quite believe myself that the interests of the landlord and tenant are identical. I have never myself entertained any democratic feelings in the least, but at the same time, with all deference to the worthy member, Mr. Duff, there are much wider questions connected with the interests of agriculture which might be alluded to. Out of deference to the meeting, I should at this late hour have great delicacy in alluding to these. There has been a measure introduced lately into the House of Lords by the Marquis of Huntly. I humbly believe that measure would be equally advantageous to the landlord and to the tenant. Certainly it bears marks of crudeness in its details, not every one of which I would be inclined to homologate, but at the same time I think it contains the germ of a very important measure on agriculture; and I hope at some future day that these views may be so elaborated that they may be made a practical measure, which I say would be equally advantageous to the proprietors as to the tenants.

BOROUGHBRIDGE AGRICULTURAL SOCIETY.

FARM LABOUR.

At the last quarterly meeting, Mr. Jacob Smith in the chair, Mr. R. BROGDEN read the following paper:

In introducing a paper for this day's discussion, I have chosen a subject which is of the greatest impotence to all practical farmers of the present day; in fact, the labour question is one that of necessity occupies a great amount of public interest in all trades. In the past as well as the present time the large employers of labour have had disputes with their men; strikes, lock-outs, &c., have been the result, and what has been in many cases the consequence of the strikes? Which ever way the dispute has ended, it has been attended by a great loss of money, and, in many cases, ruin to the employer; poverty, want, and misery to the employed. It is not my intention to enter upon the strikes and disputes in the different trades in the kingdom, as my present idea is to see how the present aspect of the agricultural labour market will affect the good understanding that now exists in our part of the kingdom and the farming interest generally. First, let me say, I am very sorry, and I am sure all well-thinking farmers are, at the unhappy dispute that is now taking place in the Eastern Counties, and that the tone of that dispute has assumed the character that it has. So far as I understand the matter, the labourers, with some amount of justice on their side, simply asked for an advance of wage, and the farmers there generally would have agreed to it, but when the Labourers' Unions were formed, and when agitators from Leamington and elsewhere sent word down to Union men that they must have a certain wage or "knock off" work, and try to bring all the power of union to bear upon an agricultural employer of labour, I think the farmers there had a right (though no doubt they deplored the necessity), when they proceeded to the extreme measure of a lock-out. I think there is no analogy between a trades' union and an agricultural labourers' union, and I cannot see how farming operations can be carried on successfully where an agricultural labourers' union is in force. Farming operations differ essentially from any business that can be carried on under cover. A man may shut up his shop or his warehouse, and so close his doors against his employés, but that rule cannot apply to an arable land farmer. Every week brings its particular work with it, and to miss the opportunity would be

serious to the produce. In the face of the turnip hoing season or harvest for instance, if a union was in force, and orders came down from the "head centre" that it was to be done at a certain price, the farmer would be bound to have it done, or be simply ruined, and have all his year's labour on his hands, and wasted at the eleventh hour. The only remedy I see for this state of things, in case agricultural labourers' unions become general, is a six months' agreement, drawn up in proper form, by different Chambers of Agriculture; price simply a matter of arrangement between masters and men; in fact A has to sell what B has to buy. A certain amount of wages ought to be left in the hands of employers, and all disputes to be settled by magistrates, as in the case of household servants. I think there can be little doubt in the minds of my brother farmers in this part of England that the labourers in the Eastern Counties were badly paid, and that the principle of paying in kind is also equally bad, though I believe a good many of us in this part of the world do pay a little in kind, but more in kindness, as well as paying a top price for our labour in money. By so doing I think we promote that good understanding between the farmer and his labourers that prevails in this district, and I shall be sorry to see the day when that understanding is broken. I am convinced it never will be so here, unless the labourer deserts his true friends for the false teaching of the paid agitator. Situated as we are here, near the great manufacturing districts where many of our young men go (and whence many of them are now returning), I think it speaks well for this district that we can keep sufficient labourers on our farms, and compete with the prices earned by labourers in our towns. We don't keep them because, as some say, they were born on the spot, not from any particular love to their calling, but because they now earn as much money, all things taken into consideration as an unskilled labourer can in a town. I think the labourer in this neighbourhood is well and adequately paid, and is, as a rule, contented. Anyhow, I find that the most discontented men are those that are of the least worth, and have no principle beyond seeking Saturday nights. The principle of take work, or letting the work of a farm, is, I think, deservedly popular, both with masters and

men, and answers well in three ways: First, the work is more quickly done; secondly, it is generally done at the time it ought to be; and thirdly, the labourers make more money and the farmer as well, as it saves time. There is one thing shows to me that farming work is becoming popular, by the great number of men who have been working in towns who are now seeking work in the country. Several have applied to me within the last month. I suppose one reason is that trade has been rather dull in the West Riding, and that consequently we are having an influx into the agricultural districts; but I have also an idea that they like the agricultural work in summer, yet they are not so fond of it as to take 3s. here when they could get more in towns. As I said before, a good steady man, considering the difference in cost between living in town and country, does as well here as he can in a town. Should I be far wrong in fixing the average earnings of a good agricultural servant at 20s. per week in this part of Yorkshire, including turnip hoeing and harvest? Much has been written in the papers some time ago, that the agricultural labourer is wedded to the soil where he was born. I take it that he has a pretty good idea about the value of his labour, and if he knows that he can better himself in another parish or in another county, he would very soon go; if he is dissatisfied with the remuneration he receives at any particular farm, there are other farms elsewhere where labour is wanted. Let every man, I say, do the best he can for himself, but when a man has worked a long time on any particular farm, he suits his master, and, if you like, his master suits him, and there has grown up between the two an amount of respect for each other. I say, then, would it be well to interfere with that relation, to bring a third party in, and make a new rule that he must not work on the old place without a stated remuneration, irrespective of what is his particular wish? There was a time when old servants about particular farms used to class the horses, sheep, crops, &c., as "ours" and compared "ours" with their neighbours, and were as much offended if anyone said or did anything against their masters as if they had done it to themselves. But the days of strikes and lock-outs have altered these things altogether. Class against class seems to me the motto of trades unions. Long may they keep away from us. I believe that only on good and well-managed farms can be had a decent rate of interest, say eight per cent., and that only once a year, as the farmer has no means of turning his capital over oftener, and it is only by looking very smartly after his work and using sound judgment that that result can be obtained. I know that in a great many cases even that cannot be obtained, and then it is only three per cent. more than can be made of his capital in good security, and surely a man's whole time applied to farming operations, risks in stock, &c., is worth three per cent. on his capital. Labour has risen considerably, but has the farmer's produce kept pace with it? My idea is that the cost of working arable land runs about 40s. per acre in labour, exclusive of horse keep, but that varies according to the district in which the farm is situated. I think the class of work that an agricultural labourer has to do will compare very favourably with his brother labourer in our manufacturing and large towns. Machinery has very considerably lightened his manual labour, and is being daily improved, as the fact is before our eyes that we must have the best and newest implements, every implement that will save hand labour. Steam must and will in a great measure supersede horse labour, or profitable farming be a thing of the past. I am aware that it is a very common remark from townsmen when in the country to say, "what nice times you have" in farming, but they don't see the disagreeable part of it. As all practical men know, the farmer has to contend with the elements, insect life, grub, wireworm, &c., in his crops, and in his cattle lung disease, foot-and-mouth disease, and cattle plague, before he lands his profit into a safe haven; but when, in addition to all, he is to be in fear of strikes, that much-enduring man, the British farmer, will be like the camel in the old fable—the last stray will be too much for him. In conclusion I would just bring before this meeting the subject of labourers' cottages. The desirability of having good dwellings on or near every farm, and also of every cottage not having less than three bedrooms, and a good garden, will be admitted. I believe that by so doing you will elevate the moral tone of the labourer, give him a certain pride in his cottage and garden, and in every sense of the word make a better man of him.

Mr. GREEN agreed with Mr. Brogden generally in his re-

marks with regard to the labour question. Labourers, he was sure, were as well off, or perhaps better, than labourers in towns. The farm labourer, with 18s. per week, with a comfortable cottage and small garden attached, with perquisites of milk and potatoes, and so on, which he received from the farm-house, was in a better position than the labourer in town who had no such advantages, and only his wage of 24s. per week. Then there were extra allowances at turnip hoeing, hay time, and harvest. He himself employed a good deal of labour in brick-making, but his men were not better off than farm labourers generally in that neighbourhood. They had more wages in summer than farm labourers, but then there was broken time on account of the weather, and in winter they might be out of work for weeks together. He had heard of no discontent, and as long as the present good feeling prevailed between masters and labourers, they would get on pleasantly without any fear of strikes or lock-outs.

Mr. BENNETT approved of Mr. Brogden's address, and rejoiced that in that district they had not even had the outer wave of the strikes and lock-outs which had agitated the south and other districts. The strikes amongst the pitmen and miners had caused an immense amount of suffering and misery and pecuniary loss, and he hoped that as regarded the agricultural strikes the vast extent of misery would be prevented. As to piece-work it was often a difficult matter for farmers to let their work in this way, for the generality of labourers preferred working by day rather than by task or piece-work. Farmers would have to pay their men entirely in money and not in kind, the latter being a very bad system, and the sooner it was abandoned the better.

Mr. LOFTHOUSE, with regard to payments in kind, took the same view as Mr. Bennett. Labourers forgot the value of their perquisites, looking merely at their wages, and therefore it would be far preferable to pay them the legitimate value of their labour, and nothing else. The rent of cottages could be deducted from the wage, and the milk and other things from the farm paid for by the labourers.

Mr. GREEN considered that the only way to attach labourers to any locality was to give them good cottages and gardens. By these means they succeeded in chaining them to the soil.

Mr. CROW said that he was most certainly in favour of money payment instead of in kind, the latter being generally overvalued by the masters and undervalued by the men. He found much difficulty in inducing labourers to live in cottages near to the farm, as they preferred to live in towns or villages. He only charged 1s. per week for a good cottage and garden, and yet he had at the present time two cottages empty. They were good dwellings, with three rooms upstairs and two downstairs, and he kept them in good repair, and as he could not secure tenants it proved that the men did not value them. He was not surprised that there had been no strikes in that neighbourhood, as such had been the increase in the pay of the farm labourer in that locality that he was on a par with the unskilled labourer in the towns. The farm labourers had evidently not considered the consequences of their act in striking. There was a great difference between labour in towns and in the country. The farmer had had weather to contend with, and had to go on with his work as best he could. He had sympathy with the underpaid men in the Southern Counties. In conclusion he referred to the importance of good grass cultivation, England being a splendid grass-growing country, and having a monopoly as it were in this respect, by which we should increase our supply of beef. By great importations of corn, and the extended use of agricultural machinery, less farm labour would be required than at the present time.

Mr. McCASKIE thought that in a national and also in a domestic point of view it would be an unsatisfactory state of things if unions prevented the good feeling which ought to subsist between farmers and their labourers.

Mr. FORD said that the question of cottage accommodation was one of the myths in connection with labour. He knew rows of cottages which were built with proper sleeping accommodation, three or four bedrooms, and yet they were never made use of. He had seen these cottages, one room being filled with potatoes, another stored with apples, and so on, and all the family sleeping in one room. How far improved education would tend to the welfare of the labourer was the puzzle, the nut to crack. The question was, how far superior education would be consistent with the position of the labourer. What he complained of was that the paid professional

spokesman drew pictures of the misery and wretchedness of the agricultural labourer of the present day, the truth of which he most respectfully denied. The English agricultural labourer was living in peace, if not in contentment, with the necessities about him rendering life desirable. Where the man was sober and the wife thrifty the home would exhibit some signs of comfort not unworthy of the age in which we lived. He was sure that no farmer present would be in favour of the wretched wages which were paid in the South of England, and it was no wonder that at Newmarket and in Cambridgeshire the labourers were trying to emancipate themselves from wages of such low amount. He next spoke of the advantages of piece-work, stating that one of his

labourers earned £56 18s. in the year, within a small fraction of 23s. per week. If this system were generally adopted both farmers and men would be benefited.

The CHAIRMAN was pleased with Mr. Brogden's paper, which contained much useful information. Some six or eight months ago the aspect of the labour question was of a serious character in that district, for trade was so good in the manufacturing districts that it seemed likely to absorb the greater part of the work of the agricultural labourer. That crisis, however, had passed, and at present they had no fear as to the supply of labour.

A vote of thanks was accorded to Mr. Brogden for his address.

STEAM CULTIVATION IN NORFOLK.

At the rent audit of Mr. H. E. Lombe the following paper was read by Mr. T. ROSE, of Melton Magna.
